- C. Installer Qualifications: An employer of workers trained and approved by manufacturer.
 1. Installer's responsibilities include fabricating and installing metal wall panel assemblies and providing professional engineering services needed to assume engineering responsibility.
- D. Fabricator Qualifications: Certified by metal wall panel manufacturer to fabricate and install manufacturer's wall panel system.
- E. Source Limitations: Obtain each type of metal wall panel through one source from a single manufacturer.
- F. Fire Test Performance for Exterior Wall: Passes NFPA 285, Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components.
- G. Preconstruction Compatibility and Adhesion Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.

1. Use manufacturer's standard test methods to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
- H. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01. Review methods and procedures related to metal wall panel assemblies including, but not limited to, the following:
1. Meet with The Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, metal wall panel Installer, metal wall panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal wall panels including installers of doors, windows, and louvers.
 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 3. Review methods and procedures related to metal wall panel installation, including manufacturer's written instructions.
 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that will affect metal wall panels.
 6. Review governing regulations and requirements for insurance, certificates, and testing and inspecting if applicable.
 7. Review temporary protection requirements for metal wall panel assembly during and after installation.
 8. Review wall panel observation and repair procedures after metal wall panel installation.
 9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.
- I. Mockups: Provide mock-ups as specified in Section 14000 – QUALITY REQUIREMENTS, coordinate with all other trades.
- 1.6 DELIVERY, STORAGE, AND HANDLING
- A. Deliver components, sheets, metal wall panels, and other manufactured items so as not to be damaged or deformed. Package metal wall panels for protection during transportation and handling.
 - B. Unload, store, and erect metal wall panels in a manner to prevent bending, warping, twisting, and surface damage.
 - C. Stack metal wall panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal wall panels to ensure dryness, with positive slope for drainage of water. Do not store metal wall panels in contact with other materials that might cause staining, denting, or other surface damage.
 - D. Store metal-faced composite wall panels vertically, covered with suitable weathertight and ventilated covering. Store metal-faced composite wall panels to ensure dryness, with positive slope for drainage of water. Do not store metal-faced composite wall panels in contact with other materials that might cause staining, denting, or other surface damage. Do not allow storage space to exceed 120 deg F.
 - E. Protect strippable protective covering on metal wall panels from exposure to sunlight and high humidity, except to extent necessary for period of metal wall panel installation.

1.7 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal wall panels to be performed according to manufacturers' written instructions and warranty requirements.
- B. Field Measurements: Verify locations of structural members and wall opening dimensions by field measurements before metal wall panel fabrication and indicate measurements on Shop Drawings.
 - 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, either establish framing and opening dimensions and proceed with fabricating metal wall panels without field measurements, or allow for field trimming of panels. Coordinate wall construction to ensure that actual building dimensions, locations of structural members, and openings correspond to established dimensions.

1.8 COORDINATION

- A. Coordinate metal wall panel assemblies with rain drainage work, flashing, trim, and construction of girts, studs, soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal wall panel assemblies that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures, including rupturing, cracking, or puncturing.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - 2. Warranty Period: Two years from date of Substantial Completion.
- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal wall panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Finish Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 FOAMED-INSULATION-CORE METAL WALL PANELS (INSULATED METAL PANELS)

- A. General: Provide factory-formed and -assembled metal wall panels fabricated from two metal facing sheets and insulation core foamed-in-place during fabrication with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.

1. Panel Performance:

- a. Flatwise Tensile Strength: 30 psi when tested according to ASTM C 297.
- b. Humid Aging: Volume increase not greater than 6.0 percent and no delamination or metal corrosion when tested for 7 days at 140 deg F and 100 percent relative humidity according to ASTM D 2126.
- c. Heat Aging: Volume increase not greater than 2.0 percent and no delamination, surface blistering, or permanent bowing when tested for 7 days at 200 deg F according to ASTM D 2126.
- d. Cold Aging: Volume decrease not more than 1.0 percent and no delamination, surface blistering, or permanent bowing when tested for 7 days at minus 20 deg F according to ASTM D 2126.
- e. Fatigue: No evidence of delamination, core cracking, or permanent bowing when tested to a 20-lbf/sq. ft. positive and negative wind load and with deflection of L/180 for 2 million cycles.
- f. Autoclave: No delamination when exposed to 2-psi pressure at a temperature of 212 deg F for 2-1/2 hours.
- g. Fire-Test-Response Characteristics: Class A according to ASTM E 108.

2. Isocyanurate Insulation-Core Performance:

- a. Density: 3.1 lb/cu. ft. minimum when tested according to ASTM D 1622.
- b. Compressive Strength: Minimum 20 psi when tested according to ASTM D 1621.
- c. Shear Strength: 26 psi when tested according to ASTM C 273.
- d. Thermal Value: R-24.1 (U=.045)

- B. Concealed-Fastener, Pressure equalized Foamed-Insulation-Core Metal Wall Panels: Formed with tongue-and-groove panel edges; designed for sequential installation by interlocking panel edges and mechanically attaching panels to supports using concealed clips or fasteners.

1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:

- a. Aluma Shield Industries, Inc., a Member of Metecno Group.
- b. CENTRIA Architectural Systems.

1) Basis of Design:

- a) Flat Panels: Centria Formawall Dimension Series FWDS Panel.

- c. Metl-Span.
- d. Or equal

2. Facings: Fabricate panel with exterior and interior facings of same material and thickness.

- a. Material: Zinc-coated (galvanized) G90 steel sheet, 22 gauge thick at exterior panel and 26 gauge at interior panel.
 - b. Exterior Finish, Fluoropolymer Two-Coat System: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605. Color and gloss: Color to be chosen from manufacturers full range including metallics and mica.
 - c. Interior Facing Finish: Manufacturer's standard 0.2 mil primer with 0.6 mil acrylic.
 - d. Exterior Surface: Smooth, flat.
3. Panel Thickness: 3.0 inches.
 4. Panel Module: 30 in., Custom modules as shown in the architectural drawings.

2.2 EXPOSED-FASTENER, LAP-SEAM METAL WALL PANELS (CORRUGATED METAL SIDING)

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. ATAS International, Inc.
 2. CENTRIA Architectural Systems.
 - a. Basis of Design: Centria Concept Series wall panels - CS-260.
 3. Englert, Inc.
 4. Fabral.
 5. MBCI Metal Roof and Wall Systems, Division of NCI Group.
 6. McElroy Metal, Inc.
 7. Morin, a Kingspan Company
 8. Or equal
- B. General: Provide factory-formed metal panels designed to be field assembled by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps. Include accessories required for weathertight installation.
- C. Aluminum Sheet: Coil-coated sheet, ASTM B 209, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 1. Thickness: 0.040 inch minimum.
 2. Surface: Smooth, flat finish.
 3. Exposed Coil-Coated Finish:
 - a. Exterior Finish, Fluoropolymer Two-Coat System: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605. Color and gloss: Color to be chosen from manufacturers full range including metallics and mica.
 4. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil.

- D. Corrugated-Profile, Exposed-Fastener Metal Wall Panels: Formed with alternating curved ribs spaced at 2.67 inches o.c. across width of panel.

- 1. Rib Spacing: As indicated on the Drawings.

2.3 ACCESSORIES

- A. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, stainless steel sill flashing, and similar items. Match material and finish of metal wall panels, unless otherwise indicated.
- B. Trim: Formed from 0.0179-inch-thick, zinc-coated (galvanized) steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating. Provide flashing and trim required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal wall panels.

2.4 METAL FRAMING

- A. Steel Sheet Components, General: Complying with ASTM C 645 requirements for metal and with ASTM A 653, G60, hot-dip galvanized zinc coating.
- B. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches wall attachment flange of 7/8 inch, minimum bare metal thickness of 0.0179 inch and depth required to fit insulation thickness indicated.
- C. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

2.5 FABRICATION

- A. General: Fabricate and finish metal wall panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
 - 1. Form panel lines, breaks, and angles to be sharp and true, with surfaces free from warp and buckle.
 - 2. Fabricate wall panels with panel stiffeners as required to maintain fabrication tolerances and to withstand design loads.
- B. Sheet Metal Accessories: Fabricate trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to the design, dimensions, metal, and other characteristics of item indicated.
 - 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 - 2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.

3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
4. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.
5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended by metal wall panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.6 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. High-Performance Organic Finish (2-Coat Fluoropolymer Mica Finish System): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color coat, with color coat containing mica and not less than 70 percent polyvinylidene fluoride resin by weight, with a minimum total dry film thickness of 1.2 mil). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions.
 1. Metallic Color and Gloss: As selected by the Architect from manufacturer's full range including Metallics and Mica..

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal wall panel supports, and other conditions affecting performance of work.
 1. Examine primary and secondary wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.

2. Examine solid wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.
 3. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.
- B. Examine roughing-in for components and systems penetrating metal wall panels to verify actual locations of penetrations relative to seam locations of metal wall panels before metal wall panel installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
- 3.2 PREPARATION
- A. Clean substrates of substances harmful to insulation, including removing projections capable of interfering with insulation attachment.
- B. Miscellaneous Framing: Install subgirts, base angles, sills, furring, and other miscellaneous wall panel support members and anchorage according to ASTM C 754 and metal wall panel manufacturer's written recommendations.
- 3.3 METAL WALL PANEL INSTALLATION, GENERAL
- A. General: Install metal wall panels in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts and subgirts, unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.
1. Field cutting of metal wall panels by torch is not permitted.
 2. Shim or otherwise plumb substrates receiving metal wall panels.
 3. Rigidly fasten base end of metal wall panels and allow eave end free movement due to thermal expansion and contraction. Predrill panels.
 4. Flash and seal metal wall panels with weather closures at eaves, rakes, and at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until weather barrier and flashings that will be concealed by metal wall panels are installed.
 5. Install screw fasteners in predrilled holes.
 6. Locate and space fastenings in uniform vertical and horizontal alignment.
 7. Install flashing and trim as metal wall panel work proceeds.
 8. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 9. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated or, if not indicated, as necessary for waterproofing.
 10. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 11. Provide weatherproof escutcheons for pipe and conduit penetrating exterior walls.
- B. Fasteners, Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior and aluminum or galvanized steel fasteners for surfaces exposed to the interior.
- C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal wall panel manufacturer.

3.4 WALL PANEL INSTALLATION

- A. General: Install attachment system required to support wall panels and to provide a complete weathertight wall system, including subgirts, perimeter extrusions, tracks, drainage channels, panel clips, and anchor channels.
 - 1. Include attachment to supports, panel-to-panel joinery, panel-to-dissimilar-material joinery, and panel-system joint seals.
 - 2. Do not begin installation until weather barrier and flashings that will be concealed by metal panels are installed.
- B. Track-Support Installation: Provide manufacturer's standard horizontal and vertical tracks that provide support and complete secondary drainage system, draining to the exterior at horizontal joints. Install support system at locations, spacings, and with fasteners recommended by manufacturer. Attach panels to wall by interlocking tracks with perimeter extrusions attached to wall panels. Fully engage integral gaskets and leave horizontal and vertical joints with open reveal.
 - 1. Attach routed-and-turned flanges of wall panels to perimeter extrusions with manufacturer's standard fasteners.

3.5 ACCESSORY INSTALLATION

- A. General: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
 - 1. Install components required for a complete metal wall panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
- B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
 - 1. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
 - 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

3.6 ERECTION TOLERANCES

- A. Installation Tolerances: Shim and align metal wall panel units within installed tolerance of 1/4 inch in 20 feet nonaccumulative, on level, plumb, and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.7 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and to prepare test reports.
 - 1. Additional Testing: All units evidencing failure shall be re-tested until satisfactory results are obtained.
- B. Water-Spray Test: After installation, test area of assembly as directed by Architect for water penetration according to AAMA 501.2.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal panel installation, including accessories.
- D. Remove and replace metal panels where tests and inspections indicate that they do not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- F. Prepare test and inspection reports.

3.8 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal wall panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal wall panel installation, clean finished surfaces as recommended by metal wall panel manufacturer. Maintain in a clean condition during construction.
- B. After metal wall panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- C. Replace metal wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 074210

ALUMINUM COMPOSITE METAL PANELS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Aluminum composite Metal Panels (ACM), soffit panels, and cornices.
- B. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 070800 – THERMAL AND MOISTURE PROTECTION SYSTEM COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- C. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110 - SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 054000 - COLD-FORMED METAL FRAMING for secondary support framing supporting metal panels.
 - 2. Section 072100 - THERMAL INSULATION for insulation behind metal panels.
 - 3. Section 076200 - SHEET METAL FLASHING AND TRIM for copings, flashings, and other sheet metal work not part of metal panel assemblies.
 - 4. Section 077700 – WALL CLADDING SUPPORT SYSTEM
 - 5. Section 079200 - JOINT SEALANTS for field-applied sealants not otherwise specified in this Section.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design metal composite material panel assembly, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. General: Provide metal composite material panel assemblies that comply with performance requirements specified as determined by testing manufacturers' standard assemblies similar to those indicated for this Project, by a qualified testing and inspecting agency.

- C. Structural Performance: Provide metal composite material panel assemblies capable of withstanding the effects of gravity loads and loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 330.
 - 1. Wind Loads: As required by Code or shown on Structural drawings, whichever is more stringent.
 - 2. Deflection Limits: Engineer metal wall panel assemblies to withstand test pressures with deflection no greater than 1/180 of the span and no evidence of material failure, structural distress, or permanent deformation exceeding 0.2 percent of the clear span, at code required loading.
 - D. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:
 - 1. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa).
 - E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
 - F. Fire Propagation Characteristics: Aluminum composite metal wall panel system passes NFPA 285, Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components.
- 1.4 SUBMITTALS
- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.
 - B. LEED Submittal:
 - 1. Credit MR 2 Building Product Disclosure and Optimization, Environmental Product Declarations (EPD):
 - a. Option 1: For aluminum composite metal panel, submit industry-wide (generic) EPDs or product specific Type III EPDs.
 - C. Shop Drawings:
 - 1. Include fabrication and installation layouts of metal composite material panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment assembly, trim, flashings, closures, and accessories; and special details.
 - 2. Accessories: Include details of the flashing, trim and anchorage, at a scale of not less than 1-1/2 inches per 12 inches.
 - 3. Distinguish between factory- and field-assembled work.

- D. Delegated-Design Submittal: For metal panel assembly indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- E. Exterior Wall Certification: Submit manufacturer's certification that exterior wall panels, as designed in the assemblies indicated on the Drawings, has been tested to meet the requirements of NFPA 285 and passed.
- F. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
 - 1. Aluminum Composite Metal Panels: 12 inches long by actual panel width. Include fasteners, closures, and other metal panel accessories.
 - a. Include 4-way joint for panels.
 - 2. Exposed Sealants: For each type and color of joint sealant required. Install joint sealants in 1/2-inch-wide joints formed between two 6-inch-long strips of material matching the appearance of metal panels adjacent to joint sealants.
- G. Qualifications: Qualifications of Professional Engineer and Installer.
- H. Product Test Reports: For each product, tests performed by a qualified testing agency.
- I. Field quality-control reports.

1.5 QUALITY ASSURANCE

- A. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer.
- B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the state the project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of panels that are similar to those indicated for this Project in material, design, and extent. C. Installer Qualifications: An employer of workers trained and approved by manufacturer.
 - 1. Installer's responsibilities include fabricating and installing metal panel assemblies and providing professional engineering services needed to assume engineering responsibility.
- D. Fabricator Qualifications: Certified by metal panel manufacturer to fabricate and install manufacturer's wall panel system.
- E. Source Limitations: Obtain each type of metal panel through one source from a single manufacturer.
- F. Fire Test Performance for Exterior Wall: Passes NFPA 285, Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components.

- G. Preconstruction Compatibility and Adhesion Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.
 - 1. Use manufacturer's standard test methods to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
- H. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01. Review methods and procedures related to metal panel assemblies including, but not limited to, the following:
 - 1. Meet with The Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels including installers of doors, windows, and louvers.
 - 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
 - 4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 - 5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that will affect metal panels.
 - 6. Review governing regulations and requirements for insurance, certificates, and testing and inspecting if applicable.
 - 7. Review temporary protection requirements for metal panel assembly during and after installation.
 - 8. Review wall panel observation and repair procedures after metal panel installation.
 - 9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.
- I. Mockups: Provide mock-ups as specified in Section 014000 – QUALITY REQUIREMENTS, coordinate with other trades as required.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, sheets, metal composite material panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal composite material panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Store aluminum composite metal panels vertically, covered with suitable weathertight and ventilated covering. Store metal composite material panels to ensure dryness, with positive slope for drainage of water. Do not store metal composite material panels in contact with other materials that might cause staining, denting, or other surface damage.
 - 1. Do not allow storage space to exceed 120 deg F.
- D. Retain strippable protective covering on metal composite material panels during installation.

1.7 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal composite material panels to be performed according to manufacturers' written instructions and warranty requirements.
- B. Field Measurements: Verify locations of structural members and wall opening dimensions by field measurements before metal panel fabrication and indicate measurements on Shop Drawings.
 - 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, either establish framing and opening dimensions and proceed with fabricating metal panels without field measurements, or allow for field trimming of panels. Coordinate wall construction to ensure that actual building dimensions, locations of structural members, and openings correspond to established dimensions.

1.8 COORDINATION

- A. Coordinate aluminum composite metal panel installation with rain drainage work, flashing, trim, and construction of girts, studs, soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel assemblies that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures, including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.
 - 2. Warranty Period: Two years from date of Substantial Completion.
- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal composite material panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 ALUMINUM COMPOSITE METAL WALL PANELS

- A. General: Provide factory-formed and -assembled, aluminum composite metal wall panels fabricated from two metal facings that are bonded to a solid, extruded thermoplastic core; formed into profile for installation method indicated. Include attachment assembly components, panel stiffeners, and accessories required for weathertight system.
- B. Aluminum Composite Material Panels: Formed with 0.020-inch- (0.50-mm-) thick, aluminum sheet facings.
 - 1. Acceptable Products: Subject to compliance with requirements, provide one of the following products:
 - a. 3A Composites USA, Inc.; Alucobond Plus (Basis of Design, product specific Type III EPD).
 - b. Arconic, Inc.; Reynobond FR.
 - c. Alpolic Materials, a division of Mitsubishi; Alpolic/pe Alpolic/fr.
 - d. Alucoil North America; Alucoil FR.
 - e. Firestone Building Products, LLC; UNA-FAB Series 1500, with fire-rated core.
 - f. Or equal
 - 2. Panel Thickness: 0.157 inch (4 mm).
 - 3. Fire-Retardant Core: Noncombustible, with the following surface burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspection agency acceptable to authorities having jurisdiction.
 - a. Flame-Spread Index: 25 or less.
 - b. Smoke- Development Index: 450 or less.
- C. Attachment Assembly Components: Formed from extruded aluminum.
 - 1. Include manufacturer's standard perimeter extrusions, panel stiffeners, panel clips and anchor channels.
- D. Attachment Assembly: Manufacturer's standard rainscreen system.

2.2 MISCELLANEOUS MATERIALS AND ACCESSORIES

- A. Miscellaneous Metal Subframing and Furring: ASTM C 645, cold-formed, metallic-coated steel sheet ASTM A 653/A 653M, G90 (Z275 hot-dip galvanized) coating designation or ASTM A 792/A 792M, Class AZ50 (Class AZM150) aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal composite material panel system.
- B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal composite material panels unless otherwise indicated.
- C. Flashing and Trim: Provide flashing and trim formed from same material as metal composite material panels as required to seal against weather and to provide finished appearance. Locations

include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers.

1. Match material, finish, and color as facings of adjacent panels, unless otherwise indicated.

D. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal composite material panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.

E. Panel Sealants: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal composite material panels and remain weathertight; and as recommended in writing by metal composite material panel manufacturer.

1. Comply with requirements of Section 079200 - JOINT SEALANTS.

2.3 FABRICATION

A. General: Fabricate and finish metal composite material panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

1. Factory form panels with sharply cut edges, with no displacement of face sheets or protrusion of core material.

2. Fabricate panels with panel stiffeners, as required to comply with deflection limits, attached to back of panels with structural silicone sealant or bond tape.

3. Dimensional Tolerances:

a. Length: Plus 0.375 inch.

b. Width: Plus 0.188 inch.

c. Thickness: Plus or minus 0.008 inch.

d. Panel Bow: 0.8 percent maximum of panel length or width.

e. Squareness: 0.2 inch maximum.

B. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.

2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.

3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flatlock seams. Tin edges to be seamed, form seams, and solder.

4. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.

5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.

6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended by metal panel manufacturer.

- a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal panel manufacturer for application but not less than thickness of metal being secured.

2.4 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- C. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- D. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- E. High-Performance Organic Finish (2-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions.
 1. Color and Gloss: Provide custom colors as selected by Architect, including metallics.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal composite material panel supports, and other conditions affecting performance of the Work.
 1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal composite material panel manufacturer.
 2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal composite material panel manufacturer.
 - a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
 3. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.

- B. Examine roughing-in for components and assemblies penetrating metal composite material panels to verify actual locations of penetrations relative to seam locations of metal composite material panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal composite material panel manufacturer's written recommendations.

3.3 ALUMINUM COMPOSITE ALUMINUM PANEL INSTALLATION

- A. General: Install aluminum composite metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to supports unless otherwise indicated. Anchor metal composite material panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 - 1. Field cutting of metal panels is not permitted.
 - 2. Flash and seal metal composite material panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal composite material panels are installed.
 - 3. Install screw fasteners in predrilled holes.
 - 4. Locate and space fastenings in uniform vertical and horizontal alignment.
 - 5. Install flashing and trim as metal composite material panel work proceeds.
 - 6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 - 7. Align bottoms of metal composite material panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 - 8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
- B. Fasteners, Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized steel fasteners for surfaces exposed to the interior.
- C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal composite material panel manufacturer.
- D. Attachment Assembly, General: Install attachment assembly required to support metal composite material wall panels and to provide a complete weathertight wall system, including subgirts, perimeter extrusions, tracks, drainage channels, panel clips, and anchor channels.
 - 1. Include attachment to supports, panel-to-panel joinery, panel-to-dissimilar-material joinery, and panel-system joint seals.
 - 2. Do not begin installation until weather barrier and flashings that will be concealed by metal panels are installed.

3.4 ACCESSORY INSTALLATION

- A. Accessories, General: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
 - 1. Install components required for a complete metal composite material panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal composite material panel manufacturer; or, if not indicated, provide types recommended in writing by metal composite material panel manufacturer.
- B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
 - 1. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
 - 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (605 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).

3.5 ERECTION TOLERANCES

- A. Installation Tolerances: Shim and align metal composite material wall panel units within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m), non-accumulative, on level, plumb, and location lines as indicated, and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and to prepare test reports.
 - 1. Additional Testing: All units evidencing failure shall be re-tested until satisfactory results are obtained.
- B. Water-Spray Test: After installation, test area of assembly as directed by Architect for water penetration according to AAMA 501.2.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal panel installation, including accessories.
- D. Remove and replace metal panels where tests and inspections indicate that they do not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

- F. Prepare test and inspection reports.

3.7 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as aluminum composite metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of aluminum composite metal panel installation, clean finished surfaces as recommended by metal composite material panel manufacturer. Maintain in a clean condition during construction.
- B. After aluminum composite metal panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- C. Replace aluminum composite metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 074456
MINERAL FIBER REINFORCED CEMENTITIOUS PANELS

PART 1 GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Installation of through color high density fiber cement panels.
 2. Cladding attachment system.
- B. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 070800 – THERMAL AND MOISTURE PROTECTION SYSTEM COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- C. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 061000 - Rough Carpentry.
 2. Section 072100 - Thermal Insulation.
 3. Section 072700 - Air Barriers.
 4. Section 076200 - Sheet Metal Flashing and Trim
 5. Section 092110 – Gypsum Board Assemblies
 6. Section 099000 – Painting and Coating

1.3 REFERENCES

References are product specific. See specific product in Part 2 to see which testing applies.

- A. ASTM - ASTM International:
1. ASTM C1185 - Standard Test Methods for Sampling and Testing Non-Asbestos Fiber-Cement Flat Sheet, Roofing and Siding Shingles, and Clapboards.
 2. ASTM C1186 - Standard Specification for Flat Fiber-Cement Sheets.
 3. ASTM E84 - Surface Burning Characteristics of Building Materials.
 4. ASTM E136 - Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750-degree C. Determination of Non-Combustibility.
- B. CEN - European Committee for Standardization:
1. EN 12467 - Fiber Cement Flat Sheets-Product Specifications and Test Methods.

1.4 SUBMITTALS

- A. Submit under provisions of Section 013300 – Submittal Procedures.
- B. Product Data: Manufacturer's data sheets on each product to be used, including:
 - 1. Preparation instructions and recommendations.
 - 2. Storage and handling requirements and recommendations.
 - 3. Installation methods.
- C. Shop Drawings: Provide detailed drawings of non-standard applications of fiber cement materials which are outside the scope of the standard details and specifications provided by the manufacturer.
- D. Attachment System Engineered Drawings:
 - 1. Provide engineered design for attachment and back-up framing to support exterior cladding.
 - 2. Provide static calculations verifying sizing of members, attachment devices and fasteners to support the exterior cladding with a safety factor required by Authority Having Jurisdiction (AHJ).
 - 3. Provide Installation drawings and details.
 - 4. Design criteria: Refer to structural drawings
- E. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.
- F. Verification Samples: For each finish product specified, two samples, minimum size 6 inches (150 mm) square, representing actual product, color, and patterns.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Minimum of 5 years experience with installation of similar products.
- B. Color Evaluation: Insignificant change after 3000 hours of QUV test (EN 20105).
- C. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.

1. Finish areas designated by Architect.
2. Do not proceed with remaining work until workmanship, color, and sheen are approved by Architect.
3. Remodel mock-up area as required to produce acceptable work.

1.6 FABRICATION, DELIVERY, STORAGE, AND HANDLING

- A. All cladding materials to be finished and fabricated in the United States with backup inventory in residence in the United States to support job in-progress.
- B. Store products in manufacturer's unopened packaging until ready for installation in accordance with manufacturer's recommended guidelines.

1.7 PROJECT CONDITIONS

- A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's recommended limits.

1.8 WARRANTY

- A. Warranty: Provide manufacturer's 10-year limited warranty against manufactured defects in fiber cement panels. Manufacturer warrants that its products are manufactured in accordance with its applicable material specifications and are free from defects in materials and workmanship.
 1. Only products that are installed and used in accordance with applicable manufacturer's instructions and specifications are warranted.
 2. The warranty is applicable only to claims made in writing and received by the manufacturer within sixty days after the defect was discovered and within ten years after the date of the shipment of the product by the manufacturer.

PART 2 PRODUCTS

2.1 MANUFACTURER/SUPPLIER

- A. Basis of Design: AFC Cladding Fiber Cement Panels by American Fiber Cement Corp.; 6901 S. Pierce St. Suite 180, Littleton, CO 80128. ASD. Toll Free Tel: (800) 688-8677 ext. 102. Tel: (303) 978-1199. Fax: (303) 978-0308. Email: danglada@afcccladding.com. Web: <http://www.americanfibercement.com>.
- B. Acceptable manufacturers: Swiss Pearl, Equitone, Cembrit or equal.

2.2 THROUGH COLOR HIGH DENSITY FIBER CEMENT PANELS

- A. Through Color High Density Fiber Cement Panels:
 1. Product: Solid as manufactured/supplied by American Fiber Cement Corp.
 - a. Application: Exterior.
 - b. Application: Interior.
 - c. Thickness: 5/16 inch (8 mm).
 - d. Finish: Through-colored, baseboard fully covered with matching acrylic coating. Color to be determined by Architect from Manufacturer full range.
 - e. Physical Characteristics: ASTM C1185/C1186, EN 12467 'Fiber-cement flat

MINERAL FIBER REINFORCED CEMENTITIOUS PANELS

- 1) sheets'.
 - 1) Density Dry: 1770 kg/m³.
 - 2) Bending strength at with grain: 39.0 MPa.
 - 3) Bending strength at across grain: 24.8 MPa.
 - 4) Modulus of elasticity at with grain: greater than 16.3 GPa.
 - 5) Modulus of elasticity at across grain: greater than 13.8 GPa.
 - 6) Durability classification (EN 12467): Category A.
 - 7) Strength classification (EN 12467): Class 4.
 - 8) Fire reaction (EN 13501-1): A2-s1-d0.
 - 9) Warm water test: Ok.
 - 10) Soak dry test: Ok.
 - 11) Freeze thaw test: greater than 100 cycles.
 - 12) Thermal conductivity e: 0.5 W/mK.
 - f. Fire Testing:
 - 1) ASTM E84
 - 2) ASTM E136
 - 3) CAN/ULC S102
 - 4) CAN/ULC S114
 - 5) EN 13501-1
 - g. IAPMO-UES Evaluation Report:
 - 1) UES- 553 Cembrit Fiber-Cement Façade Panel System
2. Product: Patina as manufactured/supplied by American Fiber Cement Corp.
- a. Color to be determined by Architect from Manufacturer full range.
 - b. Physical Characteristics: ASTM C1185/C1186, EN 12467 'Fiber-cement flat sheets'.
 - 1) Density Dry: 1405 kg/m³.
 - 2) Bending strength at with grain: 36.0 MPa.
 - 3) Bending strength at across grain: 24.5 MPa.
 - 4) Modulus of elasticity at with grain: greater than 14.7 GPa.
 - 5) Modulus of elasticity at across grain: greater than 12.6 GPa.
 - 6) Durability classification (EN 12467): Category A.
- 07450-4
- 7) Strength classification (EN 12467): Class 4.
 - 8) Fire reaction (EN 13501-1): A2-s1-d0.
 - 9) Warm water test: Ok.
 - 10) Soak dry test: Ok.
 - 11) Freeze thaw test: greater than 100 cycles.
 - 12) Thermal conductivity e: 0.4 W/mK
- c. Fire Testing:
 - 1) ASTM E84
 - 2) ASTM E136
 - 3) CAN/ULC S102
 - 4) CAN/ULC S114
 - 5) EN 13501-1
 - d. IAPMO-UES Evaluation Report:
 - 1) UES- 553 Cembrit Fiber-Cement Façade Panel System

2.3 MISCELLANEOUS CLADDING MATERIALS

- A. Aluminum Joint Closures and Decorative Corner Profiles: Manufacturer's standard products
- MINERAL FIBER REINFORCED CEMENTITIOUS PANELS

as detailed. Maximum thickness of finishing profile to be 0.8 mm or 21-gauge. Install per manufacture's recommendations. Provide the following profiles:

- a. External corner peak used as corner trim
- b. Horizontal L profile (At every 8" panel height)
- c. Vertical Joint Caulking Profile, double leg
- d. Vertical joint caulking profile, single leg
- e. Stainless steel 316 perforated trim 15/16" x 1-1/4" angle height & as recommended by manufacturer. Install at starter course, at sills, at all headers and above metal soffit (concealed from view).

2.4 ATTACHMENT SYSTEMS

- A. Attachment System, Steel Supporting Members:
 1. Product: "Z" profiles supplied by others.
 - a. Material: Steel, minimum 16-gauge, minimum G90 coating. Z girts to be installed horizontally.
 2. UV Protective Membrane: per section 072700 air barriers
 - a. For open joint ventilated rain screen systems.
- B. Attachment System, Wood Supporting Members Attached to "Z" profiles:
 1. Product: Wood profiles supplied by others.
 - a. Material: Pressure treated wood 5/4 X 4" Select 24" O.C. or as indicated on elevations and as coordinated on shop drawings. Adhere EPDM to all members and paint black.
 2. UV Protective Black EPDM Tape or Manufacture's EPDM profiles adhere to all vertical wood members.

2.5 FIXING ACCESSORIES FOR ATTACHMENT SYSTEMS

- A. Screws: Color-matched stainless-steel screws (for use with wood supporting members). Use manufacturer's recommended washer. Seal all panel holes per manufacturer's instructions. Use A4 Marine Grade Stainless steel.
- B. Perforated SS 316 angle min 20 GA metal drip edge at bottom starter course, at sills (including louvers), at headers (including louvers), and above metal soffits (concealed from view).
- C. Black EPDM UV resistant tape or manufacturers rubber spacer at every vertical wood support member.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Do not begin installation until substrates have been properly prepared.
- B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

- A. Clean surfaces thoroughly prior to installation.

- B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

- A. Install in accordance with manufacturer's instructions and approved submittals.
- B. For exterior applications, comply with local codes and structural engineer's fastening calculations along with manufacturer's recommendations for fastener spacing

3.4 EXTERIOR CLADDING FOR RAINSCREEN APPLICATIONS

- A. Detailing Requirements:
 - 1. Air space at top and bottom of building or wall termination shall be 3/4 inch (20 mm) to facilitate airflow from behind the panels. Do not block vertical airflow at windows, doors, eaves, or at the base of the building. Airflow shall be continuous from bottom to top so there is air movement behind each panel. For walls over 60 feet high (18 m), the ventilated cavity between rear of panels and exterior wall shall be increased to 1-5/8 inches (40 mm). Air flow behind the cement fiber panels is critical to the performance of the rain screen constructions.
 - 2. Fasteners in profile shall accommodate thermal expansion/contraction of metal and not interfere with panel application.
 - 3. Install panels from bottom of building to top of building.
 - 4. For straight walls, start panel installation in center and work outward.
 - 5. Pattern: Straight pattern with vertical panels. Panel size as indicated.
 - 6. Pattern: Straight pattern with horizontal panels. Panel size as indicated.
 - 7. Seal all field cut panel edges per manufacturer's instructions.
 - 8. Paint all rigid insulation with a water base acrylic paint, color flat black.
- B. Rain Screen Installation: Comply with manufacturer's installation requirements.

3.5 Attachment System: Comply with manufacturer's engineered design for cladding support framing. PROTECTION

- A. Protect installed products until completion of project.
- B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 075400

THERMOPLASTIC MEMBRANE ROOFING

(Part of Work of Section 070002 - ROOFING AND FLASHING, Trade-Bid Required)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Mechanically fastened membrane-roofing system, as indicated on the Drawings.
 2. Adhered membrane-roofing system, as indicated on the Drawings.
 3. Comply with all manufacturer's photovoltaic array requirements for a fully warranted roof system for portions of roofs that will be furnished with photovoltaic arrays
 4. Preformed sumps
 5. Specialty joints covers for roof expansion joints
 6. Coordination with other trades for roof mounted items including but not limited to mechanical, electrical, hatches, specialties and other items indicated.
 7. Cover board over insulation.
 8. Membrane integrity testing system and testing as specified in Section 077273
 9. Roof insulation.
 10. Vapor retarder.
 11. Deck flute filler to provide flat surface to support vapor retarder where splices occur at flutes
 12. Membrane clad metal flashing.
 13. Flashing for equipment mounted on roofing and roofing penetrations.
 14. Metal roof edge system
 15. Slip sheet at photovoltaic array solar ballast.
 16. Roof Concrete Pavers specified in Section 323000-SITE IMPROVEMENTS paragraph 2.06 ROOF CONCRETE PAVERS.
 17. Roof Rubber Tiles specified in Section 323000-SITE IMPROVEMENTS paragraph 2.07 ROOF RUBBER TILES.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 070800 – THERMAL AND MOISTURE PROTECTION SYSTEM COMMISSIONING REQUIREMENTS for additional requirements affecting this section.

D. Items To Be Installed Only: Install the following items as furnished by the designated Sections:

1. Section 220001 - PLUMBING:
 - a. Roof drains.
2. Section 230001 - HEATING, VENTILATING, AND AIR CONDITIONING:
 - a. Roof curbs for HVAC equipment.

E. Related Work: The following items are not included in this Section and are specified under the designated Sections:

1. Section 061000 - ROUGH CARPENTRY for wood nailers, curbs, and blocking.
2. Section 077273 – MEMBRTEST SECTION for ELD
3. Section 075565 – EXTENSIVE GREEN ROOF SYSTEMS
4. Section 076200 - SHEET METAL FLASHING AND TRIM for metal roof flashing
5. Section 079200 - JOINT SEALANTS for sealants that are not part of the Work of this section
6. Section 116800 - PLAYGROUND EQUIPMENT
7. Division 22 - PLUMBING for roof drains.
8. Division 23 - HVAC for roof curbs and equipment.
9. Section 321816 - PLAYGROUND PROTECTIVE SURFACES
10. Section 321823 - SYNTHETIC TURF
11. Section 323000 - SITE IMPROVEMENTS

1.3 DEFINITIONS

A. Roofing Terminology: Refer to ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" for definition of terms related to roofing work in this Section.

B. ELD: Electric Leak Detection – membrane integrity testing method

C. Roof System Types

Roof Type A: Induction-Welded PVC Membrane Roofing System: Sloped steel deck areas:

- Sloped Steel Deck
- Self-Adhered Vapor Barrier
- Flat polyisocyanurate insulation with tapered crickets as shown on drawings
- ½" cover board mechanically fastened with TPO-coated insulation plates
- .060 PVC (white) induction welded system

Roof Type B: Induction-Welded PVC Membrane Roofing System: Flat steel deck areas:

- Flat Steel Deck
- Self-Adhered Vapor Barrier
- Tapered polyisocyanurate insulation as shown on the drawings
- ½" cover board mechanically fastened with TPO-coated insulation plates
- .060 PVC (white) induction welded system

Roof Type C: Adhered PVC Membrane Roofing System:

- Structural Concrete Deck Areas
- Self-Adhered Vapor Barrier
- Tapered polyisocyanurate insulation adhered with low-rise insulation adhesive
- ELD Screen

- 1/2" cover board adhered with low-rise insulation adhesive
- .060 PVC (white) adhered system
- Overburden as indicated on the drawings

Roof Type D: Adhered PVC Membrane Roofing System: Steel deck areas with ELD/ Overburden:

- Steel Deck Areas requiring ELD system
- Self-Adhered Vapor Barrier
- Polyisocyanurate insulation as indicated on drawings mechanically fastened to roof deck
- ELD Screen
- 1/2" cover board adhered with low-rise insulation adhesive
- .060 PVC (white) adhered system
- Overburden as indicated on the drawings

1.4 PERFORMANCE REQUIREMENTS

- A. General: Provide installed roofing membrane and base flashings that remain watertight; do not permit the passage of water; and resist specified uplift pressures, thermally induced movement, and exposure to weather without failure.
- B. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by roofing manufacturer based on testing and field experience.
- C. Roofing System Design: Roofing system shall be designed to withstand loads and wind pressure as indicated on Structural Drawings, see Sheet S0-0-1, but not less than loads required by Code. Provide membrane roofing system that is identical to systems that have been successfully tested, by a qualified testing and inspecting agency, to resist uplift pressure calculated according to ASCE/SEI 7-10.
- D. Flashings: Provide base flashings, perimeter flashings, detail flashings and component materials that comply with requirements of roof system manufacturer for warranted system.
- E. Energy Performance: Provide roofing system with Solar Reflectance Index (SRI) not less than the following when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency:
1. Low-sloped roof (less than or equal 2:12) - 82 minimum (initial); 64 (3-year aged).
 2. Steep-sloped roof (greater than 2:12) - 39 minimum (initial); 32 (3-year aged).
- F. Energy Star Listing: Roofing system shall be listed on the DOE's ENERGY STAR "Roof Products Qualified Product List" for low-slope roof products.
- G. Exterior Fire-Test Exposure: ASTM E 108 or UL 790, Class A;

1.5 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
1. Building Product Disclosure and Optimization Environmental Product Declarations (EPD):

- a. Option 1: For membrane roofing, submit product-specific Type III EPDs.
 - C. Shop Drawings: For each roofing system and level. Include plans, elevations, sections, details, and attachments to other Work. Include manufacturer's reviewed and approved details that are project-specific and include dimensions, scaled layouts, assembly profiles, and similar items. Manufacturer generic details will not be accepted. At a minimum, include the following:
 - 1. Base flashings and membrane terminations.
 - 2. Transitions to air barrier membrane.
 - 3. Tapered insulation, including slopes.
 - 4. Insulation fastening patterns for corner, perimeter, and field-of-roof locations and note zone dimensions on shop drawing plans.
 - 5. Requirements for meeting specified uplift requirements.
 - 6. Tapered insulation layout, including amount and direction of slopes and drain sumps.
 - 7. Overburden plan and details as required
 - 8. Locations where electrical leak detection (ELD) will be provided
 - 9. Walkway pad plan and detail, as required.
 - 10. Proposed temporary, watertight, tie-off details for each substrate type.
 - D. Provide Manufacturer's Roof Assembly Letter indicating products used, including membrane integrity test system, proposed wind rating, warranty terms and required fastening rates for each type of roof.
 - E. Qualification Data: From Installer and manufacturer stating that the roof installer is acceptable to the manufacturer to install the specified system.
 - F. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article Product Test Reports: For components of roofing system, tests performed by manufacturer and witnessed by a qualified testing agency.
 - G. Product Test Reports: For components of roofing system, tests performed by manufacturer and witnessed by a qualified testing agency.
 - H. Inspection Report: Copy of roofing system manufacturer's inspection report of completed roofing installation.
 - I. Maintenance Data: For roofing system to include in maintenance manuals.
 - J. Sample Warranties: For manufacturer's special warranties.
 - K. Closeout Submittals: Following completion of Work, submit roofing system manufacturer's inspection report of completed roofing installation and completed warranty; submit Installer's completed warranty.
- 1.6 BUILDING COMMISSIONING:
- A. The work of this Section is subject to full building commissioning testing performed by the Owner's Commissioning Agent. Trade Contractor shall fully participate in building commissioning. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 070800 – THERMAL AND MOISTURE PROTECTION SYSTEM COMMISSIONING REQUIREMENTS

1.7 QUALITY ASSURANCE

- A. Source Limitations: Obtain components for roofing system from or approved by roofing system manufacturer.
- B. Manufacturer Qualifications: A qualified manufacturer shall have minimum of ten years of experience in manufacturing of specified membrane.
- C. Installer Qualifications: A qualified firm with at least five years project experience and at least three projects with size and complexity similar to the Project, that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.
- D. Roofing Inspector: Owner may engage a full-time roofing inspector during installation of the deck, insulation assembly, membrane, flashing and other appurtenances, and when a survey of the roof and roof drains is conducted. Cooperate with Owner's roofing inspector and allow unlimited access to roofing during construction.
- E. Preinstallation Conference: Conduct conference at Project site. Comply with requirements in Division 01. Review methods and procedures related to roofing system including, but not limited to, the following:
 - 1. Meet with the Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing including installers of roof accessories and roof-mounted equipment.
 - 2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
 - 3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
 - 5. Review structural loading limitations of roof deck during and after roofing.
 - 6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect roofing system.
 - 7. Review governing regulations and requirements for insurance and certificates if applicable.
 - 8. Review temporary protection requirements for roofing system during and after installation.
 - 9. Verify membrane integrity test system project requirements, manufacturer's installation instructions and coordination with installation requirements for membrane, and overburden including vegetated roof assemblies.
 - 10. Review roof observation and repair procedures after roofing installation.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, and directions for storing and mixing with other components.
- B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.

1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.
- C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
- D. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

1.9 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.10 WARRANTY

- A. Roofing Contractor's Warranty: The roofing subcontractor shall supply Owner with a minimum two-year workmanship warranty for each roof. In the event any work related to the roofing, flashing, or metalwork is found to be defective within two years of substantial completion, the roofing contractor shall remove and replace such at no additional cost to the Owner. The roofing subcontractor's warranty obligation shall run directly to the Owner, and a copy the roofing signed warranty shall be sent to the roofing system's manufacturer.
 1. The duration of the Roofing Contractor's two-year warranty shall run concurrent with the roofing system's manufacturer's 25-year warranty.
- B. Roofing Systems Manufacturer's Warranty: The roofing manufacturer shall guarantee roof areas to be in a watertight condition for a period of 25 years from the date of issuance of the Certificate of Substantial Completion. The warranty shall be a 25-year no dollar limit (NDL), non-prorated total system labor and material warranty for a wind speed of 72 miles per hour. Total system warranty shall include all roofing materials, related components and accessories including, but not limited to the substrate board, vapor retarder, insulation board, cover board, roofing membrane, membrane flashings, fasteners, adhesives, metal roof copings, metal roof edges and termination metals and roof drain assemblies. The manufacturer shall repair defects in materials and workmanship as promptly after observation as weather and site conditions permit. Warranty shall include the removal and reinstallation of roof overburden required to address any roofing issues.

PART 2 - PRODUCTS

2.1 PVC ROOFING MEMBRANE

- A. Manufacturers: Provide one of the following systems, as approved by the Architect.
 1. Sarnafil, Inc. Single Ply, Thermoplastic, PVC. (Basis of Design)
 2. G.A.F. Materials Corp., Everguard Single Ply Roofing Systems
 3. Carlisle Sure-Flex PVC
 4. Or equal
- B. Basis-of-Design

1. Flat Roof (low slope) and wall curbs:
 - a. Membrane: Sarnafil G410 - 60mil
 - b. Color: White
 - c. Insulation - Fastened and adhered
 - d. Cover Board – Fastened and adhered
 - e. Roof Membrane - Adhered and Mechanically fastened

C. PVC Sheet: ASTM D 4434, Type III, fabric reinforced.

1. Thickness: 60 mils (1.5 mm), nominal.

D. As manufactured, membrane shall conform to the following physical properties:

<u>Parameters</u>	<u>ASTM Test Method</u>	<u>Sarnafil Typical Physical Properties</u>
Reinforcing Material	-	Polyester
Overall Thickness, min., inches (mm)	D751	60 mils
Breaking Strength, min., lbf/in. (KN/m)	D751	230 (40.0)
Elongation at Break, min.	D751	25%
Seam strength, min. (% of breaking strength)	D751	85
Retention of Properties After Heat Aging	D3045	-
Breaking Strength, min., (% of original)	D751	95
Elongation, min., (% of original)	D751	90
Tearing Strength, min., lbf (N)	D1004	45 (200)
Low Temperature Bend, -40°F (-40°C)	D2136	Pass
Accelerated Weathering Test (Xenson Arc)	D2565	10,000 Hours
Cracking (7x magnification)	-	None
Discoloration (by observation)	-	Negligible
Crazing (7 x magnification)	-	None
Linear Dimensional Change	D1204	0.1%
Weight Change After Immersion in Water	D570	2.5%
Static Puncture Resistance, 33 lbf (15 kg)	D5602	Pass
Dynamic Puncture Resistance, 14.7 ft-lbf (20 J)	D5635	Pass

2.2 AUXILIARY MATERIALS

A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with membrane roofing.

1. Liquid-type auxiliary materials shall meet VOC limits of authorities having jurisdiction.
2. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the following limits for VOC content:
 - a. Plastic Foam Adhesives: 50 g/L.
 - b. Gypsum Board and Panel Adhesives: 50 g/L.

- c. Multipurpose Construction Adhesives: 70 g/L.
 - d. Fiberglass Adhesives: 80 g/L.
 - e. Single-Ply Roof Membrane Adhesives: 250 g/L.
 - f. Single-Ply Roof Membrane Sealants: 450 g/L.
 - g. Nonmembrane Roof Sealants: 300 g/L.
 - h. Sealant Primers for Nonporous Substrates: 250 g/L.
 - i. Sealant Primers for Porous Substrates: 775 g/L.
 - j. Other Adhesives and Sealants: 250 g/L.
3. Adhesives and sealants that are not on the exterior side of weather barrier shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Sheet Flashing: Manufacturer's standard sheet flashing of same material, type, reinforcement, thickness, and color as sheet membrane.
- C. Bonding Adhesive: Manufacturer's standard bonding adhesive for membrane, and solvent-based bonding adhesive for base flashings.
- D. Metal Termination Bars: Manufacturer's standard predrilled stainless steel or aluminum bars, approximately 1 by 1/8 inch thick; with anchors.
- E. Fasteners: Factory-coated steel fasteners and metal or plastic plates meeting corrosion-resistance provisions in FMG 4470, designed for fastening membrane to substrate, and acceptable to membrane roofing system manufacturer.
- F. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, deck flute fillers, preformed inside and outside corner sheet flashings, T-joint covers, termination reglets, cover strips, spray foam insulation, and other accessories.
- G. Slip Sheet: Provide no less than 60mil or as required by membrane manufacturer under solar ballast for a solar-ready roof as required by manufacturer.
- H. Provide ELD system beneath adhered cover board and enable ELD testing for quality control in areas indicated on Drawings. Refer to Section 077273 MEMBRANE INTEGRITY TESTING
- 2.3 VAPOR RETARDER
- A. Self-Adhering Sheet Vapor Retarder: ASTM D 1970, minimum *31 mil- thick* film laminated to layer of rubberized asphalt adhesive; maximum permeance rating of 0.1 perm; cold-applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.
- B. Completely seal vapor retarder at side laps, end laps, terminations, obstructions, and penetrations to prevent air movement into roofing system.
- 2.4 ROOF INSULATION
- A. General: Provide preformed roof insulation boards that comply with requirements and referenced standards, selected from manufacturer's standard sizes and of thicknesses indicated.

- B. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, felt or glass-fiber mat facer on both major surfaces.
1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Atlas Roofing Corporation.
 - b. Carlisle SynTec Incorporated.
 - c. Firestone Building Products Company.
 - d. GAF Materials Corp.
 - e. GenFlex Roofing Systems.
 - f. Johns Manville International Inc.
 - g. Sarnafil brand insulation (basis of design).
 - h. Or equal
 2. Compressive Strength:
 - a. Provide compressive strength of 20 PSI minimum unless noted otherwise.
 - b. At pedestrian terraces and play-areas compressive strength as required to support a minimum live load of 100 psf in accordance with ASCE 7-05, "Minimum Design Load for Building and other Structures". Use 40PSI insulation for when pavers are on pedestals and exclusive of planters and other heavy concentrated loads such as heavy wheeled traffic.
 3. Minimum Long Term Thermal Resistance (LTTR) = R5.7/Inch.
- C. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches unless otherwise indicated. Roof crickets shall be 1/2" per foot.
- D. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.
1. Sump Basis of Design: Gemini DST Drain Set, or equal.
- E. Mineral Wool Blanket Insulation:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Roxul Inc.
 - b. Isolatek International.
 - c. Owens Corning; Thermafiber
 - d. Or equal
 2. Unfaced, Mineral-Wool Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.

2.5 INSULATION ACCESSORIES

- A. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatible with membrane roofing.
- B. Fasteners: Factory-coated steel fasteners and metal or plastic plates meeting corrosion-resistance provisions in FMG 4470, designed for fastening roof insulation to substrate, and acceptable to roofing system manufacturer.
- C. Cold Fluid-Applied Adhesive: Manufacturer's standard cold fluid-applied adhesive formulated to adhere roof insulation to substrate.
- D. Cover Board (Protection Board): ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, 1/2 inch thick.
 - 1. Basis-of-Design Product: Georgia-Pacific Gypsum LLC; Dens-Deck Prime Roof Board.

2.6 WALKWAYS

- A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, solid-rubber, slip-resisting, surface-textured walkway pads or rolls approximately 12/125 inch thick, and acceptable to membrane roofing system manufacturer.

2.7 METAL ROOF EDGE

- A. Metal Roof Edge: Fabricate in minimum 96-inch-long, but not exceeding 10-foot- long, sections.
 - 1. Basis of Design: Metal-Era Anchor-Tite HG fascia system or approved equal
 - 2. Fascia Cover 0.050 aluminum
 - 1) Custom color, submit color sample on actual fascia material for architect's approval, resubmit samples as required until architect approves sample.
 - 2) Joint cover width as indicated on Drawings
 - 3. Concealed splice plate:
 - 1) Material: same a cover material
 - 2) Finish and color: same as exterior fascia covers
 - 4. Extruded aluminum anchor bar
 - 5. Anchor bar splice plate, provide manufacturer's recommended to be compatible with all roof system components
- B. Termination Bar: Provide termination bar per manufacturer's requirements
- C. PAVERS
 - 1. Furnish and Install Concrete Pavers and Rubber Tiles as specified in Section 323000-2.06 and 2.07

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:
 - 1. Verify that roof openings and penetrations are in place and set and braced and that roof drains are securely clamped in place.
 - 2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
 - 3. Verify that surface plane flatness and fastening of steel roof deck comply with requirements in Section 053100 - STEEL DECKING.
 - 4. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
 - 5. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
 - 6. Verify that concrete curing compounds that will impair adhesion of roofing components to roof deck have been removed.
 - 7. Proceed with installation only after unsatisfactory conditions have been corrected.
 - 8. Perform fastener pull tests as directed by manufacturer prior to membrane installation.

3.2 PREPARATION

- A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
- B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
- C. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
- D. Install deck flute fillers, coordinated with vapor-retarder seams and splice locations.

3.3 VAPOR-RETARDER INSTALLATION

- A. Self-Adhering Sheet Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering sheet vapor retarder over area to receive vapor retarder, side, and end lapping each sheet a minimum of 3-1/2 inches and 6 inches, respectively. Seal laps by rolling.
- B. Completely seal vapor retarder at side laps, end laps, terminations, obstructions, and penetrations to prevent air movement into roofing system.
- C. Provide deck flute sealer at splices occurring at flutes to provide a flat surface to support the Work.
- D. Tie vapor retarder to wall air barrier. Coordinate construction sequence to ensure air barrier continuity at roof to wall interfaces.

3.4 INSULATION AND COVERBOARD INSTALLATION

- A. Coordinate installing membrane roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
- B. Comply with membrane roofing system manufacturer's written instructions for installing roof insulation.
- C. Install tapered insulation under area of roofing to conform to slopes indicated.
- D. Install one or more layers of insulation under area of roofing to achieve required thickness. Install 2 or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches in each direction.
- E. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.
- F. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch with insulation.
 - 1. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
- G. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
 - 1. Fasten insulation to resist uplift pressure at corners, perimeter, and field of roof, see Structural Drawings for wind and wind pressure information
 - 2. For insulation applied in multiple layers, loose-lay first layer and mechanically fasten top layer.
- H. Mechanically Fastened Cover Boards: Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches in each direction. Loosely butt cover boards together and mechanically fasten to roof deck.
 - 1. Mechanically fasten cover boards, unless otherwise indicated.
 - 2. Fasten insulation to resist uplift pressure at corners, perimeter, and field of roof, see Structural Drawings for wind and wind pressure information
- I. Adhered Cover Boards: Adhere cover boards to resist uplift pressure at corners, perimeter, and field of roof, see Structural Drawings for wind and wind pressure information. Install cover boards over mechanically-fastened insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches in each direction. Adhere cover boards to mechanically-fastened insulation in ribbons of bead-applied adhesive or full-spread adhesive, as required to comply with performance and warranty requirements.

3.5 ADHERED ROOFING MEMBRANE INSTALLATION

- A. Install roofing membrane over area to receive roofing according to membrane roofing system manufacturer's written instructions. Unroll roofing membrane and allow to relax before installing.
- B. Start installation of roofing membrane in presence of membrane roofing system manufacturer's technical personnel.
- C. Accurately align roofing membrane and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- D. Bonding Adhesive: Apply solvent-based bonding adhesive to substrate and underside of roofing membrane at rate required by manufacturer and allow to partially dry before installing roofing membrane. Do not apply bonding adhesive to splice area of roofing membrane.
- E. Mechanically or adhesively fasten roofing membrane securely at terminations, penetrations, and perimeter of roofing.
- F. Apply roofing membrane with side laps shingled with slope of roof deck where possible.
- G. Seams: Clean seam areas, overlap roofing membrane, and hot-air weld side and end laps of roofing membrane according to manufacturer's written instructions to ensure a watertight seam installation.
 - 1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of roofing membrane.
 - 2. Verify field strength of seams a minimum of twice daily and repair seam sample areas.
 - 3. Repair tears, voids, and lapped seams in roofing membrane that does not meet requirements.
- H. Spread sealant or mastic bed over deck drain flange at deck drains and securely seal roofing membrane in place with clamping ring.

3.6 MECHANICALLY FASTENED ROOFING INSTALLATION

- A. Mechanically fasten roofing over area to receive roofing according to roofing system manufacturer's written instructions. Unroll roofing and allow to relax before retaining.
 - 1. Install sheet according to ASTM D 5082.
 - 2. For in-splice attachment, install roofing with long dimension perpendicular to steel roof deck flutes.
- B. Start installation of roofing in presence of roofing system manufacturer's technical personnel.
- C. Accurately align roofing, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- D. Mechanically fasten or adhere roofing securely at terminations, penetrations, and perimeter of roofing.
- E. Apply roofing with side laps shingled with slope of roof deck where possible.

- F. In-Seam Attachment: Secure one edge of PVC sheet using fastening plates or metal battens centered within seam, and mechanically fasten PVC sheet to roof deck.
- G. Seams: Clean seam areas, overlap roofing, and hot-air weld side and end laps of roofing and sheet flashings according to manufacturer's written instructions to ensure a watertight seam installation.
 - 1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet.
 - 2. Verify field strength of seams a minimum of twice daily, and repair seam sample areas.
 - 3. Repair tears, voids, and lapped seams in roofing that do not comply with requirements.
- H. Spread sealant bed over deck-drain flange at roof drains, and securely seal roofing in place with clamping ring.

3.7 BASE FLASHING INSTALLATION

- A. Install sheet flashings and preformed flashing accessories and adhere to substrates according to membrane roofing system manufacturer's written instructions.
- B. Apply solvent-based bonding adhesive to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply bonding adhesive to seam area of flashing.
- C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
- D. Clean splice areas, apply splicing cement (except for heat-welded application), and firmly roll side and end laps of overlapping sheets to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of sheet flashing terminations.
- E. Terminate and seal top of sheet flashings.

3.8 WALKWAY INSTALLATION

- A. Flexible Walkways: Install walkway products in locations indicated. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

3.9 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform roof tests and inspections and to prepare test reports.
- B. Manufacturer's Technical Representative: Engage a qualified manufacturer's technical representative to perform roof tests and inspections and to prepare test reports as required for warranty issuance.
- C. Electronic Leak Detection (ELD): Engage a qualified testing agency to perform ELD testing of all membrane that will be below overburden and as indicated on plans in accordance with ASTM D7877 and ASTM D8231.

1. ELD testing requires the addition of a conductive grid placed beneath adhered coverboard.
 2. medium, such as the conductive primer, directly below the membrane. Placement below the coverboard is not acceptable.
 3. To verify membrane does not leak before placing overburden all testing to occur immediately prior to placing overburden
 4. Breaches found must be repaired and re-tested.
 5. Submit a daily field report after each day of testing.
 6. Re-test the area if left exposed to trade traffic.
- D. Final Roof Inspection: Engage roofing system manufacturer's technical personnel to inspect roofing installation on completion and submit report to Architect.
1. Notify Architect and the Owner 48 hours in advance of date and time of inspection.
- E. Owner will engage a qualified independent testing and inspecting agency to perform infrared testing of entire installed roof according to ASTM C 1153 Standard Practice for Location of Wet Insulation in Roofing Systems Using Infrared Imaging.
- F. Repair or remove and replace components of membrane roofing system where test results or inspections indicate that they do not comply with specified requirements.
- G. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- 3.10 PROTECTING AND CLEANING
- A. Protect membrane-roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and the Owner.
 - B. Correct deficiencies in or remove membrane-roofing system that does not comply with requirements, repair substrates, and repair or reinstall membrane-roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.
 - C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

SECTION 075565

EXTENSIVE GREEN ROOF SYSTEM

(Part of Work of Section 070002 – ROOFING AND FLASHING, Filed Sub-Bid Required)

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. All of the Contract Documents, including General and Supplementary Conditions, Division 0 and Division 1, General Requirements, apply to the work of this Section.

1.1 SECTION INCLUDES

- A. Extensive green roof system including the following:
 - 1. Vegetation layer according to project specific plant list:
 - a. Pre-cultivated vegetation mats.
 - 2. Growing media
 - 3. Filter sheet
 - 4. Inspection chambers
 - 5. Water retention layer
 - 6. Drainage layer
 - 7. Protection layer / separation layer
 - 8. Root barrier
 - 9. Related products

1.2 RELATED SECTIONS

- A. Section 075400 THERMOPLASTIC MEMBRANE ROOFING systems under vegetated roof system
- B. Section 075500 ROOF PAVERS

1.3 DEFINITIONS

- A. Green roof: Multi-layered exterior system of growing media and plant materials for installation over membrane roofing and waterproofing systems.
- B. Extensive green roof: Vegetated ecological protection layer that is lightweight, has low growing media depth, uses diverse and drought resistant plant communities, with low maintenance.

1.4 SUBMITTALS

- A. Submit in accordance with Division 01 Section "Submittal Procedures".
- B. Product data: Submit manufacturer's current published data including component materials, dimensions, standard details, and installation instructions.
- C. Shop drawings: Include the following:
 - 1. Details of green roofing system, plantings, and paving.
 - 2. Relationship to substrate, perimeter, and penetrating items.
 - 3. Location of roof drains and slopes.
 - 4. Average weight of green roof system.

- D. Range Samples: Full size sample of each planting selection in trays minimum 1 x 1 feet by full thickness.
- E. Closeout Submittals: Maintenance instructions and warranties.

1.5 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Manufacturer qualifications: Minimum ten years' experience producing green roof systems of the size with the production facilities capable of meeting the project schedule.
 - 2. Installer Qualifications: Minimum 2 years' experience with green roof systems and acceptable to the manufacturer, with adequate equipment and skilled workers.
- B. Mock-Up:
 - 1. Provide mock-up of each type of assembly including associated components, accessories, and methods of adjoining construction.
 - 2. Minimum size: 3 x 3 feet.
 - 3. Accepted mock-up may remain as part of the completed work.
- C. EFVM Leak Detection Testing
 - 1. If roofing system is compatible, conduct an EFVM (Electric Field Vector Mapping) test to confirm membrane watertightness. Test should be carried out no more than one week before installation of green roof protection components.
- D. Pre-Installation meeting: Convene on project site min. one week before beginning work to:
 - 1. Verify project requirements and site logistics.
 - 2. Coordinate between trades.
 - 3. Assess the integrity of the roofing system and building structure.
 - 4. Complete EFVM testing
 - 5. Review manufacturer's installation instructions and warranty requirements.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Coordinate delivery schedule to minimize on-site storage. Verify roofing installation system is tested and accepted prior to delivery. Do not overload roof.
- B. Store materials in a dry area, out of direct sunlight, protected from freezing, staining, contamination, or damage.
- C. Water plants and expose plant materials to daylight. Unpack trays for even daylight distribution.

1.7 WARRANTY

- A. Manufacturer's warranty: Provide manufacturer's 5-year limited warranty against deficiencies in materials or fabrication.
- B. Installer's warranty: Provide installer's 2-year growing warranty which provides periodic inspections and maintenance service to ensure vegetation is properly installed, is becoming established, and is of sufficient density over the roof area.

PART 2 PRODUCTS

2.1 MANUFACTURER

- A. To establish a standard of quality, design, and functionality desired, drawings and specifications have been based on the green roof system:

BioRoof Inc, Chicago, IL 866-377-5177 www.bioroof.com

- B. Additional approved manufacturer's include:
1. Skyscape Extensive System by Elevate (www.holcimelevate.com). Rep Contact: Steve Facticeau (sfacticeau@easternmar.com) Mobile: (781) 572 6631
 2. ZinCo USA, Inc. 471 Page St, Unit 5, Stoughton, MA 02072. 866-766-3155. www.zinco-usa.com
- C. Green Roof System vendor to provide documentation that their system is compatible with the roofing system and their warranty prior to submitting.

2.2 COMPONENTS

- A. Vegetation layer: species, sizes, and qualities according to project specific plant list. Delivery and appropriate installation in growing media, incl. suitable watering regime after installation.

1. Sedum Mats:

- a. Sedum mat supplier: Sempergreen USA Contact: Ivo van Breukelen – ivo@moeringsusa.com 312-995-3725, or an approved equal able to meet the performance criteria.
 - 1) Additional approved manufacturer include:
 - a) "Skyscape Sedum Mats with Drainage Panel and Growing Media System" by "Elevate" roofing system (www.holcimelevate.com). Rep Contact: Steve Facticeau (sfacticeau@easternmar.com) Mobile: (781) 572 6631
- b. Biodegradable vegetation blanket produced on a coir mat, a substrate mix and a plant mix consisting out 12 to 16 varieties of succulents. At the start of the production cycle of the standard sedum mat, shallow rooting creeping Sedums like Sedum album, Sedum Stefcu, Sedum Sexangulare, Sedum Hispanicum and Sedum Acre make up approximately 10-30 percent of the assortment to provide minimum winter coverage. The remaining 70-90 percent portion consists of a mixture of mostly deciduous broadleaf Sedums. Vegetation blankets shall be produced in accordance with FLL guidelines.
- c. Grown for a minimum of 9-12 months in outdoor field conditions. No greenhouse grown material will be permitted. Nursery shall have a minimum of 5 years of experience growing commercial Sedum crops with a minimum of 20 acres per year. Broadleaf Sedums shall be matured into clumps prior to shipping, no more than 10 broadleaf Sedums per square foot. Sedum Blanket growing media on the mat shall be mineral based, no peat based media will be permitted. Nursery shall be able to ship to all USDA zone 5+ regions throughout winter.
- d. Coverage When Shipped: 85%. Weight Dry: 3.5-4lbs/sf. Weight Saturated: 4.5-5lbs/sf. Thickness: ½" – ¾". 25sf per roll. Roll: 47" wide, 77" long.
- e. Succulent species shall include primarily green color sedum cultivars that are proven to perform in Zone 5:

Phedimus spurium 'Fuldglut'
Phedimus spurium 'John Creech'
Phedimus spurium 'Red Carpet'
Phedimus kamt 'Variegatum'
Phedimus takesimensis 'Golden Carpet'
Sedum acre 'Gold Moss'
Sedum acre 'Aureum'
Sedum album 'Coral Carpet'

- Sedum album 'Murale'
 - Sedum stefco
 - Sedum floriferum 'Weihenstephaner Gold'
 - Sedum hispanicum
 - Sedum reflexum 'Blue Spruce'
 - Sedum rupestre 'Angelina'
 - Sedum sexangulare
 - Sedum x Immergrunchen
- B. Growing media: Engineered growing media purpose made for extensive green roofs.
1. Growing medium typical for extensive green roofs consisting of lightweight mineral and organic components.
 - a. Water holding capacity (maximum): 35% - 65%
 - b. Saturated weight: 70 – 85 pounds per cubic foot (lbs/ft³)
 - c. Water permeability (saturated hydraulic conductivity): 0.025 – 2.85 in./minute
 2. Average depth according to requirements of selected species and according to drawings, for sedum cuttings, sedum plug plants, vegetation mats approx. 2.5 in. (approx. 60 mm). Delivery and installation on the Filter Sheet SF.
- C. Water Retention Layer: Mechanically engineered mineral based blanket. 100% natural rock product. Mineral wool fibers needled together to form a non-woven blanket layer free from all binders or fiber coatings.
1. Thickness: 1 inch minimum.
 2. Length: Roll 16'-0" length minimum
 3. Width: 3' wide minimum
 4. Water retention: 0.50 gallon per square foot minimum
 5. Weight (Saturated): Maximum 7.0 pounds per square foot
- D. Filter Sheet: Filter Sheet SF made of non-rotting thermally strengthened polypropylene. Water flow rate according to ASTM D4491 approx. 160 gpm/sq. ft. Apparent opening size according to ASTM D4751: approx. 70 US Sieve; Weight approx. 0.02 lbs/sq. ft. Delivery and installation on the drainage elements
- E. Inspection chamber: Inspection Chamber, made of plastic-coated aluminum with lateral slots for water passage. Detachable and walkable cover made of galvanized, plastic-coated steel with two finger holes. Color: old silver-antique. Height: approx. 2.4 in. (approx. 60 mm) (H). Outer dimension of chamber: approx. 11.8 x 11.8 in. (approx. 300 x 300 mm) (O) (at transportation). Incl. flange: approx. 11.8 x 20.9 in. (approx. 300 x 530 mm) (F). (extended, including chamber) . Aperture dimension: approx. 9.4 x 9.4 in. (approx. 240 x 240 mm) (A). Slot width: approx. 0.1 in. (approx. 3 mm). Weight: approx. 5.7 lbs (approx. 2.6 kg). Delivery and installation on the drainage elements above the roof outlets to ensure accessibility of the outlets at any time.
- F. Drainage layer: Drainage and water storage element made of polyethylene, height 2.5cm or 1", pressure resistance > 270 kN/m², water storage cells and openings for aeration and evaporation as well as multidirectional drainage channel system on underside.
- G. Protection layer / Separation layer:
1. Protection Mat, made of synthetic fibers for water- and nutrient retention as well as a protection layer. Thickness approx. 0.15 in. (approx. 3.8 mm); Weight approx. 0.11 lbs./sq. ft. (approx. 543 g/m²); Water retention capacity approx. 0.12 gal/ sf (approx. 5 l/m²). Bitumen resistant – biological and chemical neutral. Delivery and installation on top of the root barrier or root resistant waterproofing.
 2. For inverted roofs: Separation Membrane, made of thermally bound polypropylene.

Bitumen resistant – biological and chemical neutral. Vapor opening size ≤ 0.03 ft. (≤ 0.01 m); Thickness approx. 0.02 in. (approx. 0.55 mm); Weight approx. 0.02 lbs/sq. ft. Delivery and installation on top of the thermal insulation.

- H. Root barrier: Root Barrier WSF 40 made of high-pressure polyethylene; compatible with bitumen and polystyrene; without plasticizer; UV-stabilized. Thickness approx. 0.01 in. (approx. 0.36 mm); Weight approx. 0.07 lbs/sq. ft. (approx. 330 g/m²). Delivery and installation on the waterproofing.
 - 1. A root barrier is not required if written authorization from membrane manufacturer representative can be provided.
 - 2. For inverted roofs: Root barrier to be installed below insulation.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions:
 - 1. Confirm work by others is installed per the project requirements. Do not cover work by others prior to inspection or acceptance.
 - 2. Inspect seams, penetrations and details. Identify defects in writing to the Architect.
- B. Do not proceed until unacceptable conditions are corrected.

3.2 INSTALLATION

- A. General: Install green roof system in strict accordance with manufacturer's instructions and in proper relationship with adjacent materials and the following.
 - 1. Root barrier: Install the Root Barrier WSF 40 above the non root resistant waterproofing with an overlap of at least 5.0 ft. The root barrier has to be taken above the growing media along edges and at roof penetrations. Cut the root barrier in situ at roof penetrations. Consider an allowance for overlap and wastage of approx. 20–30 %.
 - 2. Protection mat / separation membrane:
 - a. Install the Protection Mat SSM 45 above a waterproofing or root barrier with an overlap of 4.0 inch. The protection mat has to be taken above the growing media along edges and at roof penetrations. Cut the protection mat in situ at roof penetrations. Consider an allowance for overlap and wastage of approx. 10–15 %.
 - b. In case of inverted thermal insulation, install the Separation Membrane TGV 21 above the thermal insulation with an overlap of approx. 4.0 in. Cut the slip sheet in situ at roof penetrations. Consider an allowance for overlap and wastage of approx. 10–15 %.
 - 3. Drainage layer: Install the drainage element Floradrain® FD 25-E on the protection mat or separation membrane. The drainage elements are installed butt jointed, in vegetated areas with the evaporation holes facing up, for hard landscape applications with the evaporation holes facing down and filled with Zincoblend M. Cut the drainage element in situ at roof penetrations. Consider an allowance for wastage of approx. 3 %.
 - 4. Inspection chambers in vegetated areas: Install the ZinCo Inspection Chamber KS 6 on top of the drainage layer above the roof outlets. Install the ZinCo Filter Sheet SF on top of the flange of the inspection chamber.
 - 5. Filter sheet: Install the Filter Sheet SF with an overlap of approx. 8 inch above the drainage element. The filter sheet has to be taken above the growing media along edges and at roof penetrations. Cut the filter sheet in situ at roof penetrations. Consider an allowance for overlap and wastage of approx. 15–25 %.

6. Water Retention Layer: Install the water retention layer loose-laid with no overlap, butt joints tightly. Begin next row with partial roll to stagger end joints. Continue water retention layer up side of edge treatment to reduce washout of growing medium. Cover immediately to avoid displacement by wind.
7. Growing media: Install the Growing Media for the "Sedum Carpet" Green Roof System on the water retention layer equally in a depth of approx. 2.5 in. (approx. 60 mm) for sedum cuttings or sedum plug plants vegetation mats. Check the depth in several places to ensure a continuous thickness. A tolerance of 0.5 in. (13 mm) is acceptable. Consider an allowance of approx. 20 % for settlement of the growing media.
8. Vegetation layer: (note to specifier: please select according to project requirements)
 - a. Pre-cultivated Vegetation Mats: Level growing media Zincoblend E, apply coated slow release fertilizer, roll out vegetation mat and install on growing media with tight butt joints pressing together seams to avoid air gaps. Avoid stretching of vegetation mats. After installation, thoroughly water the vegetation mats. Mat joints can be covered with growing media Zincoblend E to ensure seamless installation. Vegetation mats must be installed immediately upon delivery. Avoid delivery and installation of vegetation mats during periods of frost or hot weather condition.
 - b. Plug Plants: Apply plug plants at recommended application rate and according to the project specific plant list and drawings. Water and fertilize as required by the specific plant lists and local climate.
 - c. Sedum Cuttings: Apply in the recommended application rate. Water and fertilize as required by the specific plant lists and local climate.

3.3 CLEANING

- A. Remove all debris from the project site in accordance with the owner's construction waste management requirements.

3.4 PROTECTION

- A. Protect green roof planting and components from dirt and damage caused by subsequent construction activities.

3.5 MAINTENANCE

- A. Initial Irrigation: Immediately after installation ensure the plants have sufficient water to root successfully. Other initial irrigation depends on weather, location, and on requirements of the project specific plant material. The use of automated irrigation for the initial period is required. Minimum duration: planting – 3 to 4 weeks, vegetation mats – 4 to 5 weeks, seeding – 6 to 8 weeks (avoid any drying out after germination). Irrigation in intervals: Evaporation losses from the growing media will occur with unclosed vegetation. It is possible that rooting is not yet complete. Watering in intervals can be necessary until handover, especially in areas with low amounts of precipitation or during periods of drought.
- B. Monitor the first two growing seasons carefully. Replace dead plants within the warranty period to ensure vegetation coverage and prevent weed growth. Remove coarse or unwanted plants and tree seedlings.
- C. Initial Fertilization: After seeding or planting an initial fertilization with a slow release fertilizer is recommended.
- D. Visually inspect outlets to maintain a functional drainage layer.

END OF SECTION

SECTION 076100
SHEET METAL SIDING

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the Contract and General conditions and all Sections within Division 1 – GENERAL REQUIREMENTS, which are hereby made a part of this Section of the Specifications.
- B. Examine all other Sections of the Specifications for requirements that affect work of this Section whether or not such work is specifically mentioned in this Section.
- C. Coordinate work with that of all other trades affecting, or affected by work of this Section. Cooperate with such trades to assure the steady progress of all work under the Contract.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Factory-formed and field assembled, zinc flat-lock tiles.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council
 - 1. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 070800 – THERMAL AND MOISTURE PROTECTION SYSTEM COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- D. Related Sections include the following:
 - 1. Section 051200 – STRUCTURAL STEEL FRAMING, for structural steel supports for metal wall panels.
 - 2. Section 054000 – COLD-FORMED METAL FRAMING for secondary support framing supporting metal wall panels.
 - 3. Section 055000 – METAL FABRICATIONS for attached ladders.
 - 4. Section 061000 – ROUGH CARPENTRY for shims, and blocking.
 - 5. Section 072100 – THERMAL INSULATION for mineral wool insulation.
 - 6. Section 076200 – SHEET METAL FLASHING AND TRIM for fasciae, copings, flashings and other sheet metal work not part of metal wall panel assemblies.
 - 7. Section 077700 – WALL CLADDING SUPPORT SYSTEM for thermally broken cladding support system.
 - 8. Section 072500 –AIR BARRIERS, for air vapor barrier materials that require tie-into wall

panel systems.

9. Section 079200 – JOINT SEALANTS for field-applied sealants not otherwise specified in this Section.
10. Division 8 – OPENINGS for windows and curtain wall.

1.3 PERFORMANCE REQUIREMENTS

- A. General: Provide complete sheet metal siding panels system, including, but not limited to, custom-fabricated metal siding pans, cleats, clips, anchors and fasteners, sheet metal flashing and drainage components related to sheet metal siding, fascia panels, trim, underlayment, and accessories as indicated and as required for a weathertight installation.
 1. Wind Loads: As required by Code or shown on Structural drawings, whichever is more stringent.
 2. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
- B. Air Infiltration for insulated metal panel: Air leakage through assembly of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) of wall area when tested according to ASTM E 283 at a static-air-pressure difference of 1.57 psf (76 Pa).
- C. Water Penetration: No water penetration when tested according to ASTM E 331 at a minimum differential pressure of 20 percent of inward-acting, wind-load design pressure of not less than 6.24 lb/sq. ft. (300 Pa) and not more than 12 lb/sq. ft. (575 Pa).
- D. Structural Performance: Provide metal wall panel assemblies capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 330:
 1. General: The intent of these specifications is to meet or exceed the requirements of the local State Building Code.
 2. Wind Loads: As required by Code or shown on Structural drawings, whichever is more stringent.
 3. Deflection Limits: Engineer metal wall panel assemblies to withstand test pressures with deflection no greater than 1/180 of the span and no evidence of material failure, structural distress, or permanent deformation exceeding 0.2 percent of the clear span.
 - a. Test Pressures: 150 percent of inward and outward wind-load design pressures.
- E. Seismic Performance: Provide metal wall panel assemblies capable of withstanding the effects of earthquake motions determined according to the New Hampshire State Building Code.
- F. Thermal Movements: Provide metal wall panel assemblies that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

1.4 SUBMITTALS

- A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal wall panel and accessory.
- B. LEED Submittal: For each product specified, complete the PRODUCT DATA REPORTING FORM for LEED v4 PRODUCTS – See Section 018110 – SUSTAINABLE DESIGN REQUIREMENTS. All columns of information must be completed, and back-up documentation provided for all attributes being claimed as pertaining to the following credits:
 - 1. MR Credit: Building Product Disclosure and Optimization (BPDO) – Environmental Product Declarations (EPD); See Section 018110 - 2.3B.
 - 2. MR Credit: Building Product Disclosure and Optimization (BPDO) – Sourcing of Raw Materials; See Section 018110 - 2.3C.
 - 3. MR Credit: Building Product Disclosure and Optimization (BPDO) – Material Ingredients; See Section 018110 - 2.3D.
- C. Shop Drawings: Show project specific fabrication and installation layouts of metal wall panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories, expansion and control joints, and special details. Distinguish between factory- and field-assembled work.
 - 1. Details for forming sheet metal siding panels, including seams and dimensions.
 - 2. Details for joining and securing sheet metal siding panels, including layout of fasteners, clips, and other attachments. Include pattern of seams.
 - 3. Details of termination points and assemblies, including fixed points.
 - 4. Details of expansion joints, including showing direction of expansion and contraction.
 - 5. Details of edge conditions, including eaves, ridges, valleys, rakes, crickets, and counter flashings.
 - 6. Details of special conditions.
 - 7. Details of connections to adjoining work.
 - 8. Accessories: Include details of the following items, at a scale of not less than 6 inches per 12 inches:
 - a. Flashing and trim.
- D. Calculations: For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- E. Coordination Drawings: Exterior elevations drawn to scale and coordinating penetrations and wall-mounted items. Show the following:
 - 1. Wall panels and attachments.
 - 2. Stud framing.
 - 3. Wall-mounted items including doors, windows, louvers, and lighting fixtures.
- F. Samples for Initial Selection: For each type of metal wall panel indicated with factory-applied color finishes.
 - 1. Include similar Samples of trim and accessories involving color selection.
 - 2. Include manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each sealant exposed to view.

- G. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
1. Metal Wall Panels: 12 inches (300 mm) long by actual panel width. Include fasteners, closures, and other metal wall panel accessories.
 2. Trim and Closures: 12 inches (300 mm) long. Include fasteners and other exposed accessories.
 3. Corner Treatment: 12 inches (300 mm) long each side of corner, by 12 inches (300 mm) high, showing panels, inside and outside corner trim and related accessories.
 4. Accessories: 12-inch- (300-mm-) long Samples for each type of accessory.
 5. Exposed Gaskets: 12 inches (300 mm) long.
 6. Exposed Sealants: For each type and color of joint sealant required. Install joint sealants in 1/2-inch- (13-mm-) wide joints formed between two 6-inch- (150-mm-) long strips of material matching the appearance of metal wall panels adjacent to joint sealants.
- H. Qualification Data: For Installer, professional engineer and testing agency.
- I. Compatibility and Adhesion Test Reports: From sealant manufacturer indicating the following:
1. Materials forming joint substrates and joint sealant backings have been tested for compatibility and adhesion with joint sealants.
 2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
- J. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for the following:
1. Metal Wall Panels: Include reports for air infiltration, water penetration, and structural performance.
- K. Maintenance Data: For metal wall panels to include in maintenance manuals.
- L. Inspection Report: Copy of siding system manufacturer's inspection report of completed siding installation.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers trained and approved by manufacturer.
1. Installer's responsibilities include fabricating and installing metal wall panel assemblies and providing professional structural engineering services, certified in the state of New Hampshire, needed to assume engineering responsibility.
 2. Engineering Responsibility: Preparation of data for each metal wall panels system type, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.
- B. Testing Agency Qualifications: Required tests shall be performed by agencies qualified according to ASTM E 329 for testing indicated.
- C. Source Limitations: Obtain each type of metal wall panel through one source from a single

manufacturer.

- D. Product Options: Drawings indicate size, profiles, and dimensional requirements of metal wall panels and are based on the specific system indicated. Refer to Division 1 Section "Product Requirements."
1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.
- E. Preconstruction Compatibility and Adhesion Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.
1. Use manufacturer's standard test methods to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
 - a. Perform tests under environmental conditions replicating those that will exist during installation.
 2. Submit no fewer than nine pieces of each type of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
 3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 4. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures, including the use of specially formulated primers.
- F. Mockups: Provide materials for and build mockups to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution.
1. Build mockup of typical wall panel 4'-0" x 8'-0", or as shown on Drawings; full thickness, including insulation, supports, attachments, and accessories.
 2. Do not apply wall panel materials to the mock-up until the Pre-Installation Conference, described in this section, has commenced.
 3. Approval of mockups is for other material and construction qualities specifically approved by Architect in writing.
 4. Air Barrier Quality Control: Before the metal siding has been installed, this mockup may also be used to comply with requirements for air barrier quality control, as specified in Section 072500 – AIR BARRIERS
 5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless such deviations are specifically approved by Architect in writing.
- G. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination." Review methods and procedures related to metal wall panel assemblies including, but not limited to, the following:
1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, metal wall panel Installer, metal wall panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal wall panels including installers of doors, windows, and louvers.
 2. Schedule conference after wall panel product data & shop drawing submittals have been approved and before wall panel materials have been applied to the required mockup(s).
 3. Review and finalize construction schedule and verify availability of materials, Installer's

- personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review methods and procedures related to metal wall panel installation, including manufacturer's written instructions.
 5. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
 6. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that will affect metal wall panels.
 7. Review governing regulations and requirements for insurance, certificates, and testing and inspecting if applicable.
 8. Review temporary protection requirements for metal wall panel assembly during and after installation.
 9. Review wall panel observation and repair procedures after metal wall panel installation.
 10. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, sheets, metal wall panels, and other manufactured items so as not to be damaged or deformed. Package metal wall panels for protection during transportation and handling.
- B. Unload, store, and erect metal wall panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal wall panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal wall panels to ensure dryness, with positive slope for drainage of water. Do not store metal wall panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Protect strippable protective covering on metal wall panels from exposure to sunlight and high humidity, except to extent necessary for period of metal wall panel installation.

1.7 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal wall panels to be performed according to manufacturers' written instructions and warranty requirements.
- B. Field Measurements: Verify locations of structural members and wall opening dimensions by field measurements before metal wall panel fabrication and indicate measurements on Shop Drawings.
 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, either establish framing and opening dimensions and proceed with fabricating metal wall panels without field measurements, or allow for field trimming of panels. Coordinate wall construction to ensure that actual building dimensions, locations of structural members, and openings correspond to established dimensions.

1.8 COORDINATION

- A. Coordinate metal wall panel assemblies with rain drainage work, flashing, trim, and construction of studs, soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.9 WARRANTY

- A. Special Installer's Warranty: Siding Installer's warranty, signed by Siding Installer, in which Siding Installer agrees to repair or replace components of custom-fabricated sheet metal siding that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures.
 - b. Loose parts.
 - c. Wrinkling or buckling.
 - d. Failure to remain weathertight, including uncontrolled water leakage.
 - e. Deterioration of metals, metal finishes, and other materials beyond normal weathering, including nonuniformity of color or finish.
 - f. Galvanic action between sheet metal siding and dissimilar materials.
 - 2. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 ZINC FLAT LOCK TILES

- A. General: Provide factory-formed diamond shaped metal wall tile assembly designed to be installed with flat-lock seams.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
 - 1. (Basis of Design) RHEINZINK Canada Ltd.
 - 2. UnitedZinc, by IMETCO.
 - 3. VM Zinc.
 - 4. Or equal
- C. Zinc Alloy Sheet/Coils:
 - 1. Zinc Alloy whose base is electrolytic high grade fine zinc (DIN EN1179) with a 99.995 % Zn degree of purity and alloying additives of + 0.1% copper and + 0.1% titanium in accordance with DIN EN 988.
 - a. Pre-Weathered: pickling process (no phosphating)
 - 1) Color: As selected by Architect from manufacturer's full range.
 - 2. Minimum Panel Thickness: 1.0 mm.
 - 3. Minimum Flashing Thickness: 0.7 mm (24 ga.)
- D. Slip sheet: Provide manufacturers recommended slip sheet to separate Zinc Panels from backup galvanized deck equal to Grace Ultra Peel and Stick by GCP applied Technologies, Inc.

2.2 MISCELLANEOUS METAL FRAMING FOR METAL TILES

- A. Provide metal utility deck and attachment systems (refer to Section 077700) for metal wall panels as recommended by manufacturer to meet indicated design loads.
- B. Steel Sheet Components, General: Complying with ASTM C 645 requirements for metal and with ASTM A 653, G60, hot-dip galvanized zinc coating.
- C. Galvanized Utility Deck, 9/16" as shown in the Drawings.
- D. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

2.3 MISCELLANEOUS MATERIALS

- A. Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Provide exposed fasteners with heads matching color of metal wall panels by means of plastic caps or factory-applied coating.
 - 1. Fasteners for Wall Panels: Self-drilling or self-tapping 410 stainless or zinc-alloy steel hex washer head, with EPDM or PVC washer under heads of fasteners bearing on weather side of metal wall panels.
 - 2. Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws with hex washer head.
 - 3. Blind Fasteners: High-strength aluminum or stainless-steel rivets.
 - 4. Clips: Manufacturer's standard clips as required for installation of panels.
- B. Panel Sealants:
 - 1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
 - 2. Joint Sealant: ASTM C 920; elastomeric polyurethane, polysulfide, or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal wall panels and remain weathertight; and as recommended in writing by metal wall panel manufacturer.
 - 3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.
- C. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.
- D. Provide mineral wool insulation in accordance with Section 072100 – THERMAL INSULATION.

2.4 ACCESSORIES

- A. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal

wall panels, unless otherwise indicated.

1. Closures: Provide head closure piece and closures at eaves and rakes, fabricated of same metal and thickness as metal wall panels.
 2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
- B. Insect Mesh: Fused, entangled polymer filaments heat-bonded to each other to form a rigid mat comprising an open, three-dimensional geomatrix.
Product:
1. Colbond Industries, *Enkamat*, or equal by approved manufacturer.
- C. Custom Closure, Flashing and Trim: Formed from same gauge as panels, Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal wall panels.

2.5 FABRICATION

- A. General: Fabricate and finish metal wall panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
1. Form panel lines, breaks, and angles to be sharp and true, with surfaces free from warp and buckle.
 2. Fabricate wall panels with panel stiffeners as required to maintain fabrication tolerances and to withstand design loads.
- B. Fabricate metal wall panels in a manner that eliminates condensation on interior side of panel and with joints between panels designed to form weathertight seals.
- C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
- D. Exposed Mitered/Welded Corners shall be fabricated from same gauge as panels. These corners shall be furnished in the same profile and width as the panels. Leg length of each corner shall be 13".
- E. Where indicated, fabricate metal wall panel joints with factory-installed captive gaskets or separator strips that provide a tight seal and prevent metal-to-metal contact, in a manner that will minimize noise from movements within panel assembly.
- F. Sheet Metal Accessories: Fabricate flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to the design, dimensions, metal, and other characteristics of item indicated.
1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges

folded back to form hems.

2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
4. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.
5. Exterior only: Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended by metal wall panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.6 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal wall panel supports, and other conditions affecting performance of work.
 1. Examine primary and secondary wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
 2. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.
- B. Examine roughing-in for components and systems penetrating metal wall panels to verify actual locations of penetrations relative to seam locations of metal wall panels before metal wall panel installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrates of substances harmful to insulation, including removing projections capable of interfering with insulation attachment.
- B. Install flashings and other sheet metal to comply with requirements specified in Section 076200 – SHEET METAL FLASHING AND TRIM.
- C. Miscellaneous Framing: Install subgirts, base angles, sills, furring, and other miscellaneous wall panel support members and anchorage according to ASTM C 754 and metal wall panel manufacturer's written recommendations.
- D. Coordinate work with the installation of air vapor barrier specified in Section 072700 – Air Barriers, and mineral wool insulation specified in Section 072100 – Thermal Insulation.

3.3 METAL TILE PANEL INSTALLATION, GENERAL

- A. General: Install metal wall panels in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts and subgirts, unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 - 1. Field cutting of metal wall panels by torch is not permitted.
 - 2. Shim or otherwise plumb substrates receiving metal wall panels.
 - 3. Rigidly fasten base end of metal wall panels and allow eave end free movement due to thermal expansion and contraction. Predrill panels.
 - 4. Flash and seal metal wall panels with weather closures at eaves, rakes, and at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until weather barrier and flashings that will be concealed by metal wall panels are installed.
 - 5. Install concealed screw fasteners in predrilled holes.
 - 6. Locate and space fastenings in uniform vertical and horizontal alignment.
 - 7. Install flashing and trim as metal wall panel work proceeds.
 - 8. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 - 9. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated or, if not indicated, as necessary for waterproofing.
 - 10. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 - 11. Provide weatherproof escutcheons for pipe and conduit penetrating exterior walls.
- B. Concealed Fasteners:
 - 1. Steel Wall Panels: Use stainless-steel fasteners for surfaces exposed to the exterior and galvanized steel fasteners for surfaces exposed to the interior.
- C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent

separation as recommended by metal wall panel manufacturer.

- D. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of metal wall panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal wall panel manufacturer.
 - 1. Seal metal wall panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal wall panel manufacturer.
 - 2. Prepare joints and apply sealants to comply with requirements in Division 7 Section "Joint Sealants."
- E. Provide support framing where not indicated to be provided by others.

3.4 ACCESSORY INSTALLATION

- A. General: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
 - 1. Install components required for a complete metal wall panel assembly including trim, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
- B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
 - 1. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
 - 2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (600 mm) of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).

3.5 ERECTION TOLERANCES

- A. Installation Tolerances: Shim and align metal wall panel units within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m), nonaccumulative, on level, plumb, and location lines as indicated and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: The Owner will engage a qualified independent testing and inspecting agency to perform the following field tests and inspections and prepare test reports. The Contractor shall notify the Owner when the installation is ready for testing, and shall cooperate with the Owner's testing agency as needed to test siding in a timely manner.
 - 1. Water-Spray Test: After completing the installation of 75-foot- (23-m-) by-2-story minimum area of metal wall panel assembly, test assembly for water penetration according to AAMA 501.2 in a 2-bay area directed by Architect.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect completed metal wall panel installation, including accessories. Report results in writing.
- C. Remove and replace applications of metal wall panels where inspections indicate that they do not comply with specified requirements.
- D. Additional tests and inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.7 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as metal wall panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal wall panel installation, clean finished surfaces as recommended by metal wall panel manufacturer. Maintain in a clean condition during construction.
- B. After metal wall panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- C. Replace metal wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 076100
STANDING SEAM METAL ROOFING ASSEMBLIES

(Part of Work of Section 070002 - ROOFING AND FLASHING, Trade Bid Required)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- B. Carefully review and examine all other Contract Documents for requirements therein affecting the work of this Section. Furthermore, coordinate and sequence the work of this Section with all other trades affected.
- C. Sub Bid Requirements: Provided under Section 070002 – Roofing and Flashing and supplemented under the Bidding Requirements, and Contracting Requirements, and applicable parts of Division 1 - GENERAL REQUIREMENTS.
 - 1. The work of this Section shall be included in its entirety in Section 07 00 02.
- D. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 070800 – THERMAL AND MOISTURE PROTECTION SYSTEM COMMISSIONING REQUIREMENTS for additional requirements affecting this section.

1.2 SUMMARY

- A. Furnish and install metal standing seam architectural roofing system, including:
 - 1. Prefabricated and factory-finished metal roofing and fascia.
 - 2. Continuous extruded vinyl weather-seal inserts in standing seams.
 - 3. Clips, cleats, anchors, fasteners, inside closures and other accessories.
 - 4. Flashing directly related to metal roof system.
 - 5. Rosin-surface slip sheet.
 - 6. 100 percent coverage of high temperature ice and water underlayment.
 - 7. Gutter and downspout.
 - 8. Snow-Guard Rail.

1.3 RELATED WORK

- A. Examine Contract Documents for requirements that affect work of this Section. Other Specification Sections that directly relate to work of this Section include, but are not limited to:
 - 1. Section 076200, Sheet Metal Flashing and Trim: for custom-formed metal flashing and trim required at roof-wall interface.
 - 2. Section 077100, Roof Specialties: for Gutters, Downspouts and Snow-Guard Rails.
 - 3. Division 7 Section "Joint Sealants": for sealant at perimeter of metal roof installation.

1.4 REFERENCES

- A. Comply with applicable requirements of the following standards and those others referenced in this Section, under the provisions of Division 1 Section "References".
 - 1. ASTM A 361 - Steel Sheet, Zinc Coated (Galvanized) by the Hot-Dip Process for Roofing and Siding.

Standing Seam Metal Roofing Assemblies

2. ASTM A 446 -Steel Sheet, Zinc Coated (Galvanized) by the Hot-Dip Process, Structural (Physical) Quality.
3. ASTM A 525 - Specification for Sheet Steel, Zinc Coated (Galvanized).
4. NRCA - Roofing Manual.

5. SMACNA - Architectural Sheet Metal Manual

1.5 SUBMITTALS

- A. Submit the following under provisions of Section 01 33 00 - SUBMITTAL PROCEDURES:
 1. Literature: Manufacturer's data sheets for each metal type and accessories furnished hereunder, include material specifications, performance data, physical properties and finishes.
 2. Certification: Provide the following certifications:
 - a. Certify that materials and systems comply with the specified requirements for the use indicated.
 - b. Certify that roof system as designed, engineered and installed meets specified requirements regarding system performance.
 3. Shop drawings:
 - a. Layout drawings and sections showing adjacent construction, and keyed into benchmarks and grid lines established on the Architectural Drawings.
 - b. Fully dimensioned large scale design details showing material profiles, splices, flashing terminations and other jointing details, fastening methods and installation details. Indicate material type, sizes, and weights or gages. Indicate extent of adjacent work specified under other Sections of the Specifications.
 - c. Fully detail methods of relieving stresses due to thermal movement.
 4. Selection samples:
 - a. Finished metal sample chips, indicating Manufacturer's full range of finish colors available for selection by Architect.
 - b. Provide additional samples as requested by Architect to facilitate initial selection of colors and finishes
 5. Verification samples:
 - a. 36 by 36 inch samples of metal roofing mounted on plywood packing illustrating typical standing cap seam, edge condition, illustrating material and finish.
 - b. 12 by 12 inch samples illustrating metal finish color.
 6. Submit the following under provisions of Division 1 Section "Closeout Submittals".
 - a. Manufacturer's field quality control reports of field inspections, including, revised "as-built" shop drawings and manufacturer's final punch list.
 - b. Manufacturer's warranties: Include coverage of materials and installation and resultant damage from failure of installation to resist penetration of moisture.

1.6 QUALITY ASSURANCE

- A. Installer: Company with a minimum of 5 years documented experience demonstrating previously successful work of the type specified herein, and approved by product manufacturer.
 1. Submit a list of installations of scope and complexity equivalent to the work of this Section.
- B. Perform work in accordance with AA, SMACNA, and NRCA standard details and requirements.

1.7 ROOF SYSTEM PERFORMANCE

- A. Provide roof panel system including supports to meet wind and seismic loads as required by code and shown on Structural, whichever is more stringent.
- B. Provide roof system with no water penetration as defined in test method, when tested in accordance with ASTM E331 at an inward static air pressure differential at 12.5 psf.
- C. Roof system shall provide for independent movement of all roof components consistent with a thermal range from minus 20 to plus 180 degrees Fahrenheit and consistent with anticipated movement of building structure.
- D. Flashing assemblies related to the roof shall be designed to be watertight without reliance on sealant or elastomeric membranes.
- E. All loads incurred by the snow retention system will be transferred to the roofing panels; therefore, proper panel attachment to substrate/structure shall be engineered and fabricated to prevent roof panels from sliding under snow load. Roofing attachments shall withstand the retained snow loads without failure.

1.8 DELIVERY, STORAGE AND HANDLING

- A. Store preformed and prefinished material to prevent twisting, bending, or abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.
- B. Prevent contact with materials during storage which may cause discoloration, staining, or damage.

1.9 WARRANTY

- A. Provide the following warranties:
 - 1. Manufacturer's written warranty for sheet metal roofing and related components, covering repair or replacement of any portion of system that shows signs of water penetration or exhibits defects in materials or system design within 10 years from date of Substantial Completion.
 - 2. Manufacturer's written 20-year guarantee on polyvinylidene fluoride enamel finish against color fading, chipping, crazing, pitting, delamination, or other visible defects.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Subject to compliance with the requirements specified herein, manufacturers offering products which may be incorporated in the work include the following:
 - 1. Berridge Manufacturing Company, Houston, TX.
 - 2. Englert, Inc., Perth Amboy, NJ.
 - 3. MBCI, Architectural Metal Systems Inc., Houston TX.
 - 4. Butler Manufacturing, Kansas City, MO. Butler's MR-24 roofing system.
 - 5. Or equal.
- B. Basis of Design: "Double-Lok" Standing Seam Panel as manufactured by MBCI, Architectural Metal Systems Inc., Houston TX.
- C. Design roof system to withstand Wind Loads: As required by code and shown on structural drawings, whichever is more stringent.

2.2 SHEET MATERIALS

- A. Prefinished Metal shall be Hot-Dipped Galvanized - ASTM A446-85 Grade C G90 Coating A525-86, min. 22 Gauge core steel or prefinished Galvalume - ASTM 792-86.
- B. Unfinished Metal shall be ASTM A446-85 Grade C Galvalume ASTM 792-86.
- C. Finish: Coil applied Polyvinylidene Fluoride (PVDF) resin based, high performance thermoplastic organic coating conforming to AAMA 605.2, NAAMM - Metal Finishes Manual, and the following:
 - 1. Resin base of 70% PVDF by weight, Atochem North America, Inc., product "Kynar 500" or Ausimont USA. product "Hylar 5000."
 - 2. Finish Coating shall be manufactured as one of the following products:
 - a. Akzo Chemical; product "Trinar".
 - b. Glidden Company; product "Nubelar."
 - c. Morton International; product "Fluoroceram."
 - d. PPG Industries Inc.; product "Duranar."
 - e. Valspar Corp., product: "Fluropon."
 - 3. System Dry Film Thickness: Averaging 0.9 to 1.1 mil dry film thickness. Two-coat system.
 - 4. Color and Appearance: Color to be selected by Architect from full range of manufacturer's colors including metallics.
 - 5. Strippable film shall be liquid applied to the top side of the painted coil to protect the finish during fabrication, shipping and field handling. This strippable film must be removed before installation.

2.3 STANDING SEAM ROOFING PANEL

- A. Panels shall have 3" high vertical legs, spaced 24" on center.
- B. Standing seam to be of an interlocking, "double-lok" design.
- C. Panels shall be Pre-formed with the MBCI Portable Roll Former in continuous lengths from ridge to eave as approved by manufacturer or factory-formed to maximum 40'.
- D. Continuous Cee Rib to be 1-3/8" wide and 2-1/8" in height. Rib shall be connected to purlin with two #12-14 x 1" self-drilling/tapping fasteners [Cee-Clips at 3'-0" max.].
- E. Vinyl Weatherseal shall be factory/machine-installed
- F. Panel assembly to bear Underwriter's Laboratories Label UL90, pursuant to Construction Number 334 and applicable Fire Ratings.
- G. Certification shall be submitted, based on independent testing laboratory, indicating no measurable water penetration or air leakage through the system when tested in accordance with ASTM E-1680-95 and ASTM E-1646-95.

2.4 PROTECTION MEMBRANE

- A. Membrane for High Temperature ice-dam and wind-blown rain protection: Sheet barrier of rubberized membrane bonded to sheet polyethylene, minimum 40 mil (1.13 mm), one total thickness, with strippable treated release paper; having the following minimal characteristics:

1. Minimum tensile strength (tested in accordance with ASTM D 412, Die C modified) of 250 pounds per square inch,
2. Minimum elongation to ultimate failure of 250 percent, and unaffected pliability when tested per ASTM D 146 over 180 degree bend at minus 25 degrees Fahrenheit (-32°C.).
3. Minimum adhesion of 3 pounds per inch width (528 N/m), tested per ASTM D903 to plywood.
4. Maximum permeance when tested in accordance with ASTM D96, 0.05 perms (2.9ng/m²sPa).
5. Subject to conformance with the above requirements, acceptable products include the following:
 - a. W.R. Grace Company, Cambridge MA., product "Vycor Ice & Water Shield".
 - b. Nicolon/Mirafi Group, Norcross GA., product "Miridri WIP".
 - c. Polyken Technologies, Division of Kendall Company, Mansfield MA., product "Polyken 640 Underlayment Membrane, Ice-O-Late".
 - d. Or equal

2.5 FASCIA AND FLASHING FABRICATION

- A. Form sections square and accurate to profile, in maximum possible lengths, free from distortion or defects detrimental to appearance or performance. To the greatest extent applicable, fabricate sheet metal components in shop, and thoroughly clean all joints on both sides of the sheet metal work.
- B. Fabricate cleats and starter strips of same material as sheet, interlockable with sheet.
- C. Form fascia and flashings as required, or to profiles indicated on the Drawings, to protect materials from physical damage and shed water.
- D. Fabricate corners from one piece with minimum 18 inch long legs, seam for rigidity, seal with sealant.
- E. Fabricate vertical faces with bottom edge formed outward 1/4 inch and hemmed to form drip.

2.6 ACCESSORIES

- A. Sealant in conjunction with metal work: One-part acrylic terpolymer sealant, Tremco Mono, Pecora Unicrylic, Sonneborn Sonac, or equal, in color to match the color of the metal.
- B. Plastic cement as recommended by roofing manufacturer.
- C. Bedding Compound: Rubber asphalt butyl type.
- D. Additional materials: Provide components required to complete roof system, including trim, copings, fascia, mullions, sills, corner units, ridge closures, clips, seam covers, battens, flashings, sealant, gaskets, fillers, closure strips, scupper, downspout and similar items. Match materials and finishes of panels. Install standing seam roof panels over rosin paper.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Inspect all surfaces and verify that they are in proper condition to receive the work of this Standing Seam Metal Roofing Assemblies

DRA Project No. 20202.00
August 28, 2023

Northeast Metropolitan Regional Vocational High School
Wakefield, MA

Section.

- B. Verify edge nailers, curbs and penetrations are in place prior to roofing, so that the roof system can be installed as continuously as possible.
- C. Verify the roof deck, and related surfaces are clean, smooth, flat, free of depressions, waves, or projections, properly sloped to drains, and suitable for installation of roof system.
- D. Verify deck surfaces are dry and free of snow or ice.
- E. Any condition requiring correction or completion shall be corrected or completed prior to the installation of the roofing system. Notify Contractor of unacceptable conditions.
- F. Do not proceed until defects are corrected.
- G. Beginning of installation means acceptance of substrate and site conditions.

3.2 PREPARATION

- A. Field measure site conditions prior to fabrication.
- B. Install starter and edge strips, and cleats before starting installation.
- C. Install surface mounted reglets true to lines and levels. Seal top of reglets with sealant.
- D. Insert flashings into reglets to form tight fit. Secure in place with lead wedges at a maximum of 8 inches on center. Pack remaining spaces with lead wool. Seal flashings into reglets with sealant.
- E. Seam and seal all joints. Apply plastic cement compound between metal flashings and felt flashings, asphalt shingle roofing or asphalt roll roofing.
- F. Fit flashings tight in place. Make corners square, surfaces true and straight in planes, and lines accurate to profiles.
- G. During the installation of work of this Section, protect the work of other trades against undue soilage and damage by the exercise of reasonable care and precautions. Repair or replace any work so damaged and soiled.

3.3 EMERGENCY MATERIALS AND PROCEDURES

- A. Maintain continuous temporary protection prior to and during installation of roofing system. Do not leave unfinished roof areas uncovered over-night or during inclement weather.
 - 1. Provide temporary protective sheeting over uncovered deck surfaces.
 - 2. Turn sheeting up and over parapets and curbing. Retain sheeting in position with weights or temporary fasteners.
 - 3. Provide for surface drainage from sheeting to drainage facilities.
 - 4. Do not permit traffic over unprotected or repaired deck surface.
- B. Maintain on site equipment and materials necessary to apply emergency temporary coverage in the event of sudden storms or inclement weather.
- C. Do not install more insulation than can be covered by roofing system in the same workday. Do not apply more roofing than can be properly fastened and sealed in the same workday. Ensure that water does not flow beneath any completed sections of the roofing system, provide temporary closures.

3.4 INSTALLATION – GENERAL

- A. Except as otherwise shown on the reviewed shop drawings or specified herein, the workmanship of sheet metal work, method for forming joints anchoring, cleating, provisions for thermal movement, etc., shall conform to the standard details and recommendations of the sheet metal producer and those of producer organizations and research institutions and associations concerning the sheet metal used, in addition to the standards and details set forth in the referenced materials specified this Section.
- B. Fill all slip joints and overlapping surfaces in the assembly with specified sealant material, removing all excess sealant material from the prefinished surfaces immediately, to prevent staining the finish.

3.5 INSTALLATION OF MEMBRANE UNDERLAYMENT

- A. Preparation: Remove all dust, dirt, loose nails and other protrusions from the deck/sheathing.
- B. General: Apply underlayment over entire (100 Percent) roofing plywood sheathing substrate in accordance with manufacturer's instructions, starting application at low point and working upwards. At ridges and valley, start a center and work outwards. Lap sides a minimum of 3-1/2 inches (90 mm) and lap ends 6 inches (150 mm).

3.6 INSTALLATION – ROOFING AND FASCIA

- A. Comply with manufacturers standard instructions and conform to standards set forth in the Architectural Sheet Metal Manual published by SMACNA, in order to achieve a watertight installation.
 - 1. Install panels over rosin surface slip sheet in such a manner that horizontal lines are true and level and vertical lines are plumb.
 - 2. Install starter and edge trim before installing roof panels.
 - 3. Remove protective strippable film prior to installation of roof panels.
 - 4. Attach panels using manufacturer's standard clips and fasteners, spaced in accordance with approved shop drawings.
- B. Install accessory components required for a complete roof panel system including, trim, copings, fascia, mullions, sills, corner units, ridge closures, clips, seam covers, battens, flashings, gutters, downspouts, sealant, gaskets, fillers, closure strips, and similar items.
- C. Installation tolerances: Shim and align panel units within tolerance of 3/8 inch in 40 feet on level/plumb/slope and location line as indicated and within 1/8 inch offset to adjoining faces and of alignment of matching.
- D. Install sealant for preformed roofing panels as approved on shop drawings.
- E. Do not allow panels or trim to come into contact with dissimilar materials.
- F. Do not allow traffic on completed roof. If required, provide cushioned walk boards.
- G. Protect installed roof panels and trim from damage caused by adjacent construction until completion of installation.
- H. Remove and replace any panels or components which are damaged beyond successful repair.

3.7 INSTALLATION - FLASHINGS

- A. Clean and seam all joints. Apply plastic cement compound between metal flashings and felt flashings, asphalt shingle roofing or asphalt roll roofing.
- B. Fit flashings tight in place. Make corners square, surfaces true and straight in planes, and lines accurate to profiles.
- C. Seal joints watertight.

3.8 CLEANING

- A. Upon completion of the work of this Section in any given area, remove tools, equipment and all rubbish and debris from the work area; leave area in broom-clean condition.

3.9 PROTECTION

- A. Protect finished work; do not permit traffic over unprotected roof surfaces.

END OF SECTION

SECTION 076200
SHEET METAL FLASHING AND TRIM

(Part of Work of Section 070002 - ROOFING AND FLASHING, Trade Bid Required)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Sheet metal flashing and trim for the following applications:
 - a. Formed wall flashing and trim.
 - b. Formed low-slope roof flashing and trim.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 070800 – THERMAL AND MOISTURE PROTECTION SYSTEM COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 061000 - ROUGH CARPENTRY for wood nailers, curbs, and blocking.
 2. Section 072700 - AIR BARRIERS for perimeter terminations at air and vapor barrier assembly.
 3. Section 074200 - METAL WALL PANELS for factory-formed metal wall panels and flashing and trim not part of sheet metal flashing and trim.
 4. Section 075400 - THERMOPLASTIC MEMBRANE ROOFING for installing sheet metal flashing and trim integral with roofing membrane.
 5. Section 076100 – STANDING SEAM METAL ROOFING ASSEMBLES for installing sheet metal flashing and trim integral with roofing.
 6. Section 079200 - JOINT SEALANTS for field-applied sheet metal flashing and trim sealants.
 7. Section 079500 - EXPANSION CONTROL for manufactured sheet metal expansion-joint covers.

1.3 PERFORMANCE REQUIREMENTS

- A. General: Install sheet metal flashing and trim to withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failing, rattling, leaking, and fastener disengagement.
- B. Fabricate and install roof edge flashing and copings capable of resisting Wind Zone forces required by Code according to recommendations in FMG Loss Prevention Data Sheet 1-49.
- C. Thermal Movements: Provide sheet metal flashing and trim that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of sheet metal and trim thermal movements. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F material surfaces.
- D. Water Infiltration: Provide sheet metal flashing and trim that do not allow water infiltration to building interior.
- E. Interface with Other Systems:
 - 1. Do not proceed with installation of flashing and sheet metal until completion of curb and substrate construction, cants, blocking, reglets and other construction required to receive flashing.
 - 2. Coordinate flashing with other Work for correct sequencing of items comprising entire membrane or system of roofing or waterproofing and rain drainage.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. LEED Submittals:
 - 1. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For factory-applied metal finishes, submit Declare product labels.
- C. Shop Drawings: Show layouts of sheet metal flashing and trim, including plans and elevations. Distinguish between shop- and field-assembled work. Include the following:
 - 1. Identify material, thickness, weight, and finish for each item and location in Project.
 - 2. Details for forming sheet metal flashing and trim, including profiles, shapes, seams, and dimensions.
 - 3. Details for fastening, joining, supporting, and anchoring sheet metal flashing and trim, including fasteners, clips, cleats, and attachments to adjoining work.

4. Details of expansion-joint covers, including showing direction of expansion and contraction.

- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:

1. Sheet Metal Flashing: 12 inches long. Include fasteners, cleats, clips, closures, and other attachments.
2. Trim: 12 inches long. Include fasteners and other exposed accessories.
3. Accessories: Full-size Sample.

1.5 QUALITY ASSURANCE

- A. Sheet Metal Flashing and Trim Standard: Comply with SMACNA's "Architectural Sheet Metal Manual." Conform to dimensions and profiles shown unless more stringent requirements are indicated.
- B. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.
1. Meet with the Owner, Architect and Owner's insurer if applicable, Installer, and installers whose work interfaces with or affects sheet metal flashing and trim including installers of roofing materials, roof accessories, unit skylights, and roof-mounted equipment.
 2. Review methods and procedures related to sheet metal flashing and trim.
 3. Examine substrate conditions for compliance with requirements, including flatness and attachment to structural members.
 4. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver sheet metal flashing materials and fabrications undamaged. Protect sheet metal flashing and trim materials and fabrications during transportation and handling.
- B. Unload, store, and install sheet metal flashing materials and fabrications in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack materials on platforms or pallets, covered with suitable weathertight and ventilated covering. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.

1.7 COORDINATION

- A. Coordinate installation of sheet metal flashing and trim with interfacing and adjoining construction to provide a leakproof, secure, and noncorrosive installation.

1.8 WARRANTY

- A. Special Warranty: Installer agrees to repair or replace flashing and trim that does not comply with requirements or that fails in materials or workmanship within specified warranty period.
1. Warranty Period: Two years from date of Substantial Completion.

- B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal flashings and trim assemblies that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures, including rupturing, cracking, or puncturing.
 - b. Deterioration of metals and other materials beyond normal weathering.
 - 2. Warranty Period: Two years from date of Substantial Completion.
- C. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal composite material panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SHEET METALS

- A. Aluminum Sheet: ASTM B 209, Alloy 3003, 3004, 3105, or 5005. Thickness as specified in this Section. Temper suitable for forming and structural performance required, but not less than H14, finished as follows:
 - 1. High-Performance Organic Finish (2-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color coat, with color coat containing not less than 70 percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions.
 - a. Available Products: Sherwin-Williams Coil Coatings; Valspar Fluropon Pure; approved equal.
 - 1) Building Product Disclosure and Optimization, Material Ingredients: Declare product label.
 - b. Color and Gloss: Custom color and gloss by Architect, submit samples as required for Architect's approval.
- B. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, with No. 2D dull, cold-rolled finish. Thickness as specified in this Section.
- C. Zinc Sheet: Zinc, 99 percent pure, alloyed with 0.08 to 1.00 percent copper, 0.06 to 0.20 percent titanium, and up to 0.015 percent aluminum; with manufacturer's standard factory-applied, flexible, protective back coating.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Contrarian Metal Resources; Alloy 710 Zinc.
 - b. IMETCO; United Zinc.
 - c. Jarden Zinc Products; Solid Zinc Strip.
 - d. Rheinzink America Inc.; RHEINZINK.
 - e. Umicore Building Products USA, Inc.; VM ZINC series.
2. Finish: Preweathered gray.

2.2 UNDERLAYMENT MATERIALS

- A. Felts: ASTM D 226, Type II (No. 30), asphalt-saturated organic felt, nonperforated.
- B. Slip Sheet: Rosin-sized paper, minimum 3 lb/100 sq. ft.

2.3 MISCELLANEOUS MATERIALS

- A. General: Provide materials and types of fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation.
- B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads.
 1. Exposed Fasteners: Heads matching color of sheet metal by means of plastic caps or factory-applied coating.
 2. Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws, gasketed, with hex washer head.
 3. Blind Fasteners: High-strength aluminum or stainless-steel rivets.
- C. Solder for Stainless Steel: ASTM B 32, Grade Sn60, with acid flux of type recommended by stainless-steel sheet manufacturer.
- D. Solder for Zinc: ASTM B 32, 40 percent tin and 60 percent lead with low antimony, as recommended by zinc manufacturer.
- E. Sealing Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealing tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape.
- F. Elastomeric Sealant: ASTM C 920, elastomeric polyurethane polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
- G. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.
- H. Isolation Coating: ASTM D 1187, cold-applied asphalt emulsion, VOC compliant, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.
- I. Asphalt Roofing Cement: ASTM D 4586, asbestos free, of consistency required for application.

2.4 FABRICATION, GENERAL

- A. General: Custom fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated. Shop fabricate items where practicable. Obtain field measurements for accurate fit before shop fabrication.
- B. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
- C. Fabricate sheet metal flashing and trim without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems.
 - 1. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength. Provide 2 in. min. end dams at terminations (riveted and sealed watertight).
 - 2. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 - 3. Soldered Seams in Stainless Steel: Prefabricated inside and outside corners and 2 in. min. end dams at terminations (riveted and soldered watertight).
- D. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA recommendations.
- E. Expansion Provisions: Where lapped or bayonet-type expansion provisions in the Work cannot be used, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with elastomeric sealant concealed within joints.
- F. Conceal fasteners and expansion provisions where possible on exposed-to-view sheet metal flashing and trim, unless otherwise indicated.
- G. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.
 - 1. Thickness: As recommended by SMACNA's "Architectural Sheet Metal Manual" for application but not less than thickness of metal being secured.

2.5 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

- A. Copings: Fabricate in minimum 96-inch-long, but not exceeding 10-foot-long, sections. Fabricate joint plates of same thickness as copings. Furnish with continuous cleats to support edge of external leg and drill elongated holes for fasteners on interior leg. Miter corners, seal, and solder or weld watertight.
 - 1. Joint Style: Butt, with 12-inch-wide concealed backup plate.
 - 2. Fabricate copings from the following material:
 - a. Aluminum: 0.050 inch (1.27 mm) thick.
 - b. Zinc: 0.059 inch (1.50 mm) thick.
- B. Roof and Roof to Wall Transition Expansion-Joint Cover: Fabricate from the following material:
 - 1. Aluminum: 0.050 inch (1.27 mm) thick.

2. Zinc: 0.039 inch (1.00 mm) thick.

C. Base Flashing: Fabricate from the following material:

1. Aluminum: 0.040 inch (1.02 mm) thick.
2. Stainless Steel: 0.019 inch (0.48 mm) thick.
3. Zinc: 0.039 inch (1.00 mm) thick.

D. Counterflashing: Fabricate from the following material:

1. Aluminum: 0.032 inch (0.81 mm) thick.
2. Stainless Steel: 0.019 inch (0.48 mm) thick.
3. Zinc: 0.039 inch (1.00 mm) thick.

E. Roof-Penetration Flashing: Fabricate from the following material:

1. Stainless Steel: 0.019 inch (0.48 mm) thick.

F. Roof-Drain Flashing: Fabricate from the following material:

1. Stainless Steel: 0.016 inch (0.40 mm) thick.

G. Splash Pans: Fabricate from the following material:

1. Stainless Steel: 0.025 inch thick.

2.6 WALL SHEET METAL FABRICATIONS

A. Through-Wall Flashing, Typical: Fabricate continuous flashings in minimum 96-inch-long, but not exceeding 12 foot long, sections, under copings, at shelf angles, and where indicated. Fabricate discontinuous lintel, sill, and similar flashings to extend 6 inches beyond each side of wall openings. Form with 2-inch-high end dams. Fabricate from the following material:

1. Stainless Steel: 0.016 inch (0.40 mm) thick.
2. Zinc: 0.039 inch (1.00 mm) thick.

B. Wall Expansion-Joint Cover: Fabricate from the following material:

1. Aluminum: 0.040 inch (1.02 mm) thick.
2. Zinc: 0.039 inch (1.00 mm) thick.

2.7 FACTORY FABRICATED ACCESSORIES

A. Two Piece Metal Flashing

1. 2-Piece Counterflashing **Through-Wall Version** by Metal-Era Accessories or Architect approved equal
 - a. Stainless Steel two-piece through-wall metal flashing, all flashing shall be stainless steel unless noted otherwise, see drawings
 - b. Aluminum two-piece through-wall metal flashing, custom color by architect, submit color samples as required for architect's approval

- c. Zinc two-piece through-wall flashing, shall match zinc wall panels, submit color samples as required for architect's approval

B. Two Piece Metal Flashing-Surface Mounted

- 1. 2-Piece Counterflashing, **Surface-Mounted Version** by Metal-Era Accessories or Architect approved equal
 - a. Stainless Steel two-piece surface mounted metal flashing, all flashing shall be stainless steel unless noted otherwise, see drawings
 - b. Aluminum two-piece surface mounted metal flashing, custom color by architect, submit color samples as required for architect's approval
 - c. Zinc two-piece surface mounted flashing, shall match zinc wall panels, submit color samples as required for architect's approval

2.8 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions and other conditions affecting performance of work.
 - 1. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
 - 2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system. Unless otherwise indicated, install sheet metal flashing and trim to comply with performance requirements, manufacturer installation instructions, and SMACNA "Architectural Sheet Metal Manual". Anchor units work of work securely in place by methods indicated, providing for thermal expansion of metal units; conceal fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints and seams that will be permanently watertight and weatherproof.

1. Torch cutting of sheet metal flashing and trim is not permitted.
- B. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by fabricator or manufacturers of dissimilar metals.
 1. Coat side of stainless-steel sheet metal flashing and trim with isolation coating where flashing and trim will contact wood, ferrous metal, or cementitious construction.
 2. Underlayment: Where installing metal flashing directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip-sheet or install a course of polyethylene underlayment.
 3. Bed flanges in thick coat of asphalt roofing cement where required for waterproof performance.
- C. Install exposed sheet metal flashing and trim without excessive oil canning, buckling, and tool marks.
- D. Install sheet metal flashing and trim true to line and levels indicated. Provide uniform, neat seams with minimum exposure of solder, welds, and elastomeric sealant.
- E. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.
 1. Space cleats not more than 12 inches apart. Anchor each cleat with two fasteners. Bend tabs over fasteners.
- F. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently watertight, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with elastomeric sealant concealed within joints.
- G. Fasteners: Use fasteners of sizes that will penetrate substrate not less than 1-1/4 inches for nails and not less than 3/4 inch for wood screws.
 1. Aluminum: Use aluminum or stainless steel fasteners.
 2. Stainless Steel: Use stainless-steel fasteners.
- H. Seal joints with elastomeric sealant as required for watertight construction.
 1. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is moderate, between 40 and 70 deg F set joint members for 50 percent movement either way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F.
 2. Prepare joints and apply sealants to comply with requirements in Section 079200 - JOINT SEALANTS.
- I. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tem edges of sheets to be soldered to a width of 1-1/2 inches except where pre-tinned surface would show in finished Work.

1. Do not solder aluminum sheet.
2. Stainless-Steel Soldering: Pre-tem edges of uncoated sheets to be soldered using solder recommended for stainless steel and phosphoric acid flux. Promptly wash off acid flux residue from metal after soldering.
3. Do not use open-flame torches for soldering. Heat surfaces to receive solder and flow solder into joints. Fill joints completely. Completely remove flux and spatter from exposed surfaces.

J. Aluminum Flashing: Rivet or weld joints in uncoated aluminum where necessary for strength.

3.3 ROOF FLASHING INSTALLATION

- A. General: Install sheet metal roof flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, set units true to line, and level as indicated. Install work with laps, joints, and seams that will be permanently watertight.
- B. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending a minimum of 4 inches (100 mm) over base flashing. Install stainless steel draw band and tighten.
- C. Counterflashing: Coordinate installation of counterflashing with installation of base flashing. Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing 4 inches over base flashing. Lap counterflashing joints a minimum of 4 inches and bed with elastomeric sealant.
 1. Secure in a waterproof manner by means of snap-in installation and sealant.
- D. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Install flashing as follows:
 1. Seal with elastomeric sealant and clamp flashing to pipes penetrating roof except for flashing on vent piping.

3.4 WALL FLASHING INSTALLATION

- A. General: Install sheet metal wall flashing to intercept and exclude penetrating moisture according to SMACNA recommendations and as indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.

3.5 CLEANING AND PROTECTION

- A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
- B. Clean and neutralize flux materials. Clean off excess solder and sealants.
- C. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain in a clean condition during construction.

- D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 077100
ROOF SPECIALTIES

(Part of Work of Section 070002 - ROOFING AND FLASHING, Trade Bid Required)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Roof-edge drainage systems and downspouts.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 070800 – THERMAL AND MOISTURE PROTECTION SYSTEM COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 061000 - ROUGH CARPENTRY for wood nailers, curbs, and blocking.
 2. Section 079200 - JOINT SEALANTS for sealants.

1.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Roof specialties shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
1. Wind Loads: Wind Loads: As required by Code or shown on Structural drawings, whichever is more stringent.
- B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of thermal movements. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): 120 deg F, ambient; 180 deg F material surfaces.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For roof specialties. Include project specific plans, elevations, expansion-joint locations, keyed details, and attachments to other work. Distinguish between plant- and field-assembled work. Include the following:
 - 1. Details for expansion and contraction; locations of expansion joints, including direction of expansion and contraction.
 - 2. Pattern of seams and layout of fasteners, cleats, clips, and other attachments.
 - 3. Details of termination points and assemblies, including fixed points.
 - 4. Details of special conditions.
- C. Samples for Verification: For roof-edge drainage systems made from 12-inch lengths of full-size components including fasteners, cover joints, accessories, and attachments.

1.5 QUALITY ASSURANCE

- A. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical roof edge, including gutter and downspout approximately 10 feet long, including supporting construction, seams, attachments, and accessories.
 - 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- B. Preinstallation Conference: Conduct conference at Project site.
 - 1. Meet with Owner, Architect, Owner's insurer if applicable, Installer, and installers whose work interfaces with or affects roof specialties including installers of roofing materials and accessories.
 - 2. Examine substrate conditions for compliance with requirements, including flatness and attachment to structural members.
 - 3. Review special roof details, roof drainage, and condition of other construction that will affect roof specialties.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Do not store roof specialties in contact with other materials that might cause staining, denting, or other surface damage. Store roof specialties away from uncured concrete and masonry.
- B. Protect strippable protective covering on roof specialties from exposure to sunlight and high humidity, except to extent necessary for the period of roof specialties installation.

1.7 WARRANTY

- A. Special Warranties:
 - 1. Installer agrees to repair or replace components of roof-edge drainage systems and downspouts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

2. Warranty Period: Two years from date of Substantial Completion.
- B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 EXPOSED METALS

- A. Aluminum Sheet: ASTM B 209, Alloy 3003, 3004, 3105, or 5005. Thickness as specified in this Section. Temper suitable for forming and structural performance required, but not less than H14, finished as follows:
1. High-Performance Organic Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Fluoropolymer 3-Coat System: Manufacturer's standard 3-coat, thermocured system consisting of specially formulated inhibitive primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight, with a minimum total dry film thickness of 1.5 mil; complying with AAMA 2605.
 - 1) Color: As selected by Architect from manufacturer's full range.

2.2 CONCEALED METALS

- A. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304.

2.3 MISCELLANEOUS MATERIALS

- A. General: Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.
- B. Fasteners: Manufacturer's recommended fasteners, suitable for application and designed to meet performance requirements. Furnish the following unless otherwise indicated:
1. Exposed Penetrating Fasteners: Gasketed screws with hex washer heads matching color of sheet metal.
 2. Fasteners for Copper Sheet: Copper, hardware bronze, or passivated Series 300 stainless steel.

3. Fasteners for Zinc-Coated Copper Sheet: Series 300 stainless steel.

C. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.

D. Solder for Copper: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead.

2.4 ROOF-EDGE DRAINAGE SYSTEMS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ATAS International, Inc.
2. Berger Building Products, Inc.
3. Cheney Flashing Company.
4. Hickman Company, W. P.
5. Merchant & Evans, Inc.
6. Metal-Era, Inc.
7. Metal-Fab Manufacturing, LLC.
8. MM Systems Corporation.
9. Or equal

B. Gutters: Manufactured in uniform section lengths not exceeding 12 feet, with matching corner units, ends, outlet tubes, and other accessories. Elevate back edge at least 1 inch above front edge. Furnish flat-stock gutter straps, gutter brackets, expansion joints, and expansion-joint covers fabricated from same metal as gutters.

1. Fabricate from the following exposed metal:

a. Aluminum: 0.050 inch (1.27 mm) thick.

2. Gutter Profile: As indicated according to SMACNA's "Architectural Sheet Metal Manual."
3. Corners: Factory mitered and soldered.
4. Gutter Supports: As indicated with finish matching the gutters.
5. Gutter Accessories: Bronze wire ball downspout strainer,

C. Downspouts: Plain round complete with mitered elbows, manufactured from the following exposed metal. Furnish with metal hangers, from same material as downspouts, and anchors.

1. Aluminum: 0.040 inch (1.02 mm) thick.

D. Conductor Heads: Manufactured conductor heads, each with flanged back and stiffened top edge and of dimensions and shape indicated, complete with outlet tube that nests into upper end of downspout.

1. Fabricate from the following exposed metal:

a. Aluminum: 0.040 inch (1.02 mm) thick.

2.5 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

- B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.
- B. Examine walls, roof edges, and parapets for suitable conditions for roof specialties.
- C. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. General: Install roof specialties according to manufacturer's written instructions. Anchor roof specialties securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required to complete roof-specialty systems.
 - 1. Install roof specialties level, plumb, true to line and elevation; with limited oil-canning and without warping, jogs in alignment, buckling, or tool marks.
 - 2. Provide uniform, neat seams with minimum exposure of solder and sealant.
 - 3. Install roof specialties to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before manufacture.
 - 4. Torch cutting of roof specialties is not permitted.
 - 5. Do not use graphite pencils to mark metal surfaces.
- B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
- C. Expansion Provisions: Allow for thermal expansion of exposed roof specialties.
 - 1. Space movement joints at a maximum of 12 feet with no joints within 18 inches of corners or intersections unless otherwise shown on Drawings.
 - 2. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures.
- D. Fastener Sizes: Use fasteners of sizes that will penetrate wood blocking or sheathing not less than 1-1/4 inches for nails and not less than 3/4 inch for wood screws.
- E. Seal joints as required for watertight construction. Place sealant to be completely concealed in joint. Do not install sealants at temperatures below 40 deg F

- F. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets to be soldered to a width of 1-1/2 inches except reduce pre-tinning where pre-tinned surface would show in completed Work. Tin edges of uncoated copper sheets using solder for copper. Do not use torches for soldering. Heat surfaces to receive solder and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.

3.3 ROOF-EDGE DRAINAGE-SYSTEM INSTALLATION

- A. General: Install components to produce a complete roof-edge drainage system according to manufacturer's written instructions. Coordinate installation of roof perimeter flashing with installation of roof-edge drainage system.
- B. Gutters: Join and seal gutter lengths. Allow for thermal expansion. Attach gutters to firmly anchored gutter supports spaced not more than 24 inches apart. Attach ends with rivets and solder to make watertight. Slope to downspouts.
 - 1. Install gutter with expansion joints at locations indicated but not exceeding 50 feet apart. Install expansion joint caps.
- C. Downspouts: Join sections with manufacturer's standard telescoping joints. Provide hangers with fasteners designed to hold downspouts securely to walls and 1 inch away from walls; locate fasteners at top and bottom and at approximately 60 inches o.c.
 - 1. Provide elbows at base of downspout to direct water away from building.
- D. Conductor Heads: Anchor securely to wall with elevation of conductor top edge 1 inch below gutter discharge.

3.4 CLEANING AND PROTECTION

- A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
- B. Clean and neutralize flux materials. Clean off excess solder and sealants.
- C. Remove temporary protective coverings and strippable films as roof specialties are installed. On completion of installation, clean finished surfaces including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain roof specialties in a clean condition during construction.
- D. Replace roof specialties that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 077200

ROOF ACCESSORIES

(PART OF WORK OF SECTION 070002 - ROOFING AND FLASHING, TRADE BID REQUIRED)

PART 1 -

PART 2 - GENERAL

2.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

2.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Roof hatches and safety rails.
 - 2. Free-standing non-penetrating rooftop railing system.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 070800 – THERMAL AND MOISTURE PROTECTION SYSTEM COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 055000 - METAL FABRICATIONS for metal vertical ladders, ships' ladders, and stairs for access to roof hatches, and from roof to roof.
 - 2. Section 061000 - ROUGH CARPENTRY for wood cants and wood nailers
 - 3. Section 076200 - SHEET METAL FLASHING AND TRIM for shop- and field-fabricated metal flashing and counterflashing, roof expansion-joint covers, and miscellaneous sheet metal trim and accessories.
 - 4. Division 23 - HEATING, VENTILATING, AND AIR CONDITIONING for roof-mounted ventilators.
 - 5. Division 26 - ELECTRICAL for power supply and final connections for automatically operated heat and smoke vents.

2.3 SUBMITTALS

- A. Product Data: For each type of roof accessory indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

- B. Shop Drawings: Show fabrication and installation details for roof accessories. Show layouts of roof accessories including plans and elevations. Indicate dimensions, weights, loadings, required clearances, method of field assembly, and components. Include plans, elevations, sections, details, and attachments to other work.

2.4 QUALITY ASSURANCE

- A. Sheet Metal Standard: Comply with SMACNA's "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated.

- 1. Wind Loads: As required by Code or shown on Structural drawings, whichever is more stringent.

2.5 DELIVERY, STORAGE, AND HANDLING

- A. Pack, handle, and ship roof accessories properly labeled in heavy-duty packaging to prevent damage.

2.6 PROJECT CONDITIONS

- A. Field Measurements: Verify required openings for each type of roof accessory by field measurements before fabrication and indicate measurements on Shop Drawings.

2.7 COORDINATION

- A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.

PART 3 - PRODUCTS

3.1 ROOF HATCHES

- A. Available Products: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- 1. Babcock-Davis/Nystrom; ThermalMAX roof hatch.
 - 2. Bilco; Thermally Broken Roof Hatch.
 - 3. Acudor
 - 4. Or equal

- B. Roof Hatches, Thermally Broken Types: Fabricate roof hatches with insulated double-wall lids and insulated double-wall curb frame with integral deck mounting flange and lid frame counterflashing. Fabricate with welded or mechanically fastened and sealed corner joints. Provide continuous weathertight perimeter gasketing and equip with corrosion-resistant or hot-dip galvanized hardware.

- 1. Loads: Fabricate roof hatches to withstand 40-lbf/sq. ft. external and 20-lbf/sq. ft. internal loads.
 - 2. Type and Size: Lid type and size as indicated on Drawings.
 - 3. Curb and Lid Material: Galvanized steel or aluminum sheet, 0.079 inch thick.

4. Insulation: Manufacturer's standard board insulation, R-18 min.
 5. Curb: Fabricate units to minimum height of 12 inches.
 6. Thermal Break: Fabricate with thermal break between interior and exterior surfaces.
 7. Hardware: Galvanized steel spring latch with turn handles, butt- or pintle-type hinge system, and padlock hasps inside and outside.
 8. Ladder Safety Post: Manufacturer's standard ladder safety post. Post to lock in place on full extension. Provide release mechanism to return post to closed position.
- C. Safety Railing System: Roof-hatch manufacturer's standard system including rails, clamps, fasteners, safety barrier at railing opening, and accessories required for a complete installation; attached to roof hatch and complying with 29 CFR 1910.23 requirements and authorities having jurisdiction.
1. Height: 42 inches above finished roof deck.
 2. Posts and Rails: Galvanized-steel pipe, 1-1/4 inches in diameter or galvanized-steel tube, 1-5/8 inches in diameter.
 3. Flat Bar: Galvanized steel, 2 inches high by 3/8 inch thick.
 4. Maximum Opening Size: System constructed to prevent passage of a sphere 21 inches in diameter.
 5. Chain Passway Barrier: Galvanized proof coil chain with quick link on fixed end.
 6. Self-Latching Gate: Fabricated of same materials and rail spacing as safety railing system. Provide manufacturer's standard hinges and self-latching mechanism.
 7. Post and Rail Tops and Ends: Weather resistant, closed or plugged with prefabricated end fittings.
 8. Provide weep holes or another means to drain entrapped water in hollow sections of handrail and railing members.
 9. Fabricate joints exposed to weather to be watertight.
 10. Fasteners: Manufacturer's standard, finished to match railing system.
 11. Finish: Manufacturer's standard.

3.2 FREE-STANDING ROOFTOP SAFETY RAILING SYSTEM

- A. Free-Standing Rooftop Fall Protection Systems: KeeGuard Roof Edge Protection System as manufactured by Kee Safety Inc., or equal.
1. Description: Permanent, modular, free-standing, roof edge railing system that does not penetrate the roofing system; including but not limited to
 2. Provide components including but not limited to pipe railings, uprights, bases, counterweights, fittings and accessories as indicated or required to match design indicated on Drawings and to provide complete installation.
 3. Compliance: OSHA Standard 29 CFR 1910.23. 42 inch (1067 mm) minimum height to provide a pedestrian egress barrier on the roof to withstand a minimum load of 200 lb (90719 g). OSHA Standard 29 CFR 1926.501. OSHA Standard 29 CFR 1926.502.
 4. System Design: Designed for applications with flat or low slope roof up to 10 degrees. Counterbalances: PVC, with one fixing collar per counterbalance
 5. System Configuration: As indicated on Drawings.
 6. Top and Intermediate Rails: 1.9 inches outside diameter with 0.109 inch wall thickness.
 7. Fittings: Galvanized malleable cast iron, ASTM A 47 with ASTM A 153 galvanizing.
 8. Fasteners: Type 304 or 305 stainless steel.
 9. Components: In-fill panels and toeboards as required.
 10. Finish: Powder coat or baked-enamel in colors as selected by Architect.

3.3 MISCELLANEOUS MATERIALS

- A. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, complying with AWPAC2; not less than 1-1/2 inches thick.
- B. Isolation Coating: ASTM D 1187, cold-applied asphalt emulsion, VOC compliant, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.
- C. Fasteners: Same metal as metals being fastened, or nonmagnetic stainless steel or other noncorrosive metal as recommended by roof accessory manufacturer. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners.
- D. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, or PVC; or flat design of foam rubber, sponge neoprene, or cork.
- E. Elastomeric Sealant: ASTM C 920, polyurethane sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

PART 4 - EXECUTION

4.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of work.
 - 1. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored and is ready to receive roof accessories.
 - 2. Verify dimensions of roof openings for roof accessories.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

4.2 INSTALLATION

- A. General: Install roof accessories according to manufacturer's written instructions. Anchor roof accessories securely in place and capable of resisting forces specified. Use fasteners, separators, sealants, and other miscellaneous items as required for completing roof accessory installation. Install roof accessories to resist exposure to weather without failing, rattling, leaking, and fastener disengagement.
- B. Install roof accessories to fit substrates and to result in watertight performance.
- C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
 - 1. Coat concealed side of uncoated aluminum roof accessories with isolation coating where in contact with wood, ferrous metal, or cementitious construction.
 - 2. Underlayment: Where installing exposed-to-view components of roof accessories directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip-sheet, or install a course of polyethylene underlayment.

3. Bed flanges in thick coat of asphalt roofing cement where required by roof accessory manufacturers for waterproof performance.
 - D. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.
 - E. Roof Hatch Installation:
 1. Check roof hatch for proper operation. Adjust operating mechanism as required. Clean and lubricate joints and hardware.
 2. Attach safety railing system to roof hatch curb.
 3. Attach ladder safety post according to manufacturer's written instructions.
 - F. Seal joints with elastomeric sealant as required by manufacturer of roof accessories.
- 4.3 TOUCH UP
- A. Touch up factory-primed surfaces with compatible primer ready for field painting in accordance with Section 099000 - PAINTING AND COATING.
 - B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

END OF SECTION

SECTION 077273

MEMBRANE INTEGRITY TEST SYSTEMS

(Part of Work of Section 070002 - ROOFING AND FLASHING, Trade Bid Required)

PART 1 - GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Electrical Field Vector Mapping (EFVM) roof membrane leak detection system at locations indicated on drawings, including the following:
 - a. EFVM conductor cable and accessories
 - b. Vector Mapping Grid for leak detection system
 - 2. Leak detection testing of installed membrane at locations EFVM has been provided.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Sections
 - 1. Section 075400 – THERMOPLASTIC MEMBRANE ROOFING for roof membrane roof systems
- D. Definitions:
 - 1. ELD: Electric Leak Detection – a membrane integrity testing method

1.3 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Integrate layout of membrane integrity test system with rooftop structures and equipment and roof penetrations for building utilities and services.
 - 2. Coordinate membrane integrity test system with work of other Sections.
- B. Preinstallation Meetings: Conduct preinstallation meeting in coordination with the roofing preinstallation conference to verify project requirements, manufacturer's installation instructions,

MEMBRANE INTEGRITY TEST SYSTEMS

and coordination with installation requirements for membrane and for coordination with requirements of overburden including vegetated roof.

1.4 SUBMITTALS

- A. Product Data: For each type of product required for a complete membrane integrity test system.
- B. Shop Drawings: Include plans, sections, details, and attachments to other Work. Include manufacturer's reviewed and approved details that are project-specific and include dimensions, scaled layouts, assembly profiles, and similar items.
- C. Qualifications: For manufacturer and installing and testing firm.
- D. Field Quality Control Reports: Digital drawings, digital photographic documentation, and written report detailing location and nature of membrane breaches, defects found, and verification of corrective actions taken.
- E. Maintenance Data: for leak detection system to include maintenance manuals.
- F. Sample Warranties: for Manufacturer's special warranties.
- G. Closeout Submittals: Digital record drawings, photographic documentation, and written report detailing installed location of components of membrane integrity test system

1.5 QUALITY ASSURANCE

- A. Source Limitations: Obtain system components from roofing system manufacturer or from or manufacturer approved by roofing system manufacturer.
- B. Manufacturer's Qualifications: Manufacturer of membrane integrity test systems with minimum of ten years of experience of satisfactory manufacturing and support of installed systems comparable to system required as Work of this Section.
- C. Installing and Testing Firm Qualifications: Approved or certified by membrane integrity test system manufacturer, with minimum five year record of satisfactory experience.

1.6 LEAK DETECTION TESTING OF INSTALLED MEMBRANE

- A. Perform field quality control testing for correction of work immediately preceding placement of overburden.
- B. Perform field quality control testing at end of one year period from Substantial Completion for correction of Work.
 - 1. Repair defects in membrane and retest to demonstrate membrane integrity.
 - 2. Submit test and retest reports.

PART 2 - PRODUCTS

2.1 MEMBRANE INTEGRITY TESTING SYSTEM

- A. Membrane integrity test System: Conductor cable, placed under adhered cover board, delivering direct current tension to membrane surface, enabling inspection and isolation of points of moisture infiltration through membrane to conductive substrate under membrane.
1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Basis of Design: International Leak Detection (ILD)
 - b. New England Leak Detection
 - c. Sentinel Leak Technologies
 - d. Or equal
 2. Vector Mapping Grid: Highly conductive stainless steel wire measurement grid located under membrane and above non-conductive membrane substrate, connected through contact plate and cable to connection box accepting applied low-voltage charge from portable pulse generator.
 3. Conductor Cable: Nine strands of 0.06 inch (1.5 mm) diameter highly-conductive stainless steel wire interwoven with braided polyethylene strands, placed on weather side of membrane.
 4. Vector Mapping Grid: Highly conductive, corrosion resistant, geometrically stable mesh placed under adhered coverboard. Stainless steel mesh, 2 by 2 inch (50 by 50 mm) screen mesh in 47 inch by 160 foot (1.2 by 50 m) rolls.
 5. Conductor Wire Assembly: Provide grounding plate for connection to Vector Mapping Grid, suitable for connection to terminals at connection box.
 6. Connection Box: For each discrete system, provide area a weatherproof, corrosion-resistant electrical enclosure with permanent terminal connections for connecting diagnostic and testing equipment, NEMA 4X with the following characteristics:
 - a. Permanent connections for attachment of diagnostic and testing equipment without opening contact box.
 - b. Weatherproof cover to seal terminals when membrane integrity test system is not in use.
 - c. Hardware, brackets, and fittings required to permanently mount contact box to building structure.

2.2 ACCESSORIES

- A. Provide corrosion-resistant fasteners and hardware, electrical terminations, sealants, and other items required to provide complete installation.
- B. Lap Joint Tape: Provide self adhesive aluminum tape, minimum 2 inch (50 mm) wide.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Examination: Verify that substrate complies with roofing manufacturer's and integrity test manufacturer's requirements. Proceed with installation once substrate complies with requirements.
- B. Vector Mapping Grid: Install Vector Mapping Grid on membrane substrate immediately under membrane and immediately prior to installation of membrane.
 - 1. Fasten Vector Mapping Grid in accordance with leak detection system manufacturer's requirements.
 - 2. Do not place Vector Mapping Grid where it will be in continuous direct contact with structural components.
 - 3. Provide minimum 2 inch (50 mm) overlap where adjacent sheets meet, including side laps and end laps.
 - 4. Vector Mapping Grid is to be cut as close as possible to the perpendicular strand at both end and side edges
- C. Conductor Wire: Install conductor wire on top of membrane at spacing and layout indicated on approved shop drawings.
 - 1. Secure conductor wire using method recommended by manufacturer.
- D. Installation Testing: Verify continuity and functioning of conductor wire [and measurement grid] upon completion of installation.

3.2 FIELD QUALITY CONTROL

- A. Engage Installation and Testing Firm to perform membrane integrity testing. Perform testing in accordance with membrane integrity test system manufacturer's recommendations.
 - 1. Perform testing following adequate precipitation or wet membrane [and membrane overburden] adequately to enable accurate testing.
 - 2. Identify locations of membrane leaks; record locations and document with photographs. Submit test reports to Architect.
 - 3. Confirm completed repair of identified leaks and retest to verify water tightness of membrane.
- B. Initial Membrane Test: Perform initial membrane integrity test test upon completion of membrane and integrity test system installation and prior to installation of above-membrane components.
- C. Assembly Test: Repeat membrane integrity test following installation of above-membrane components.
- D. Final Testing: Repeat membrane integrity test if roof assembly is exposed to traffic or construction operations prior to Substantial Completion.

3.3 PROTECTION

- A. Protect tested membrane according to requirements of Division 07 [roofing] [waterproofing] section.

END OF SECTION

SECTION 077700
WALL CLADDING SUPPORT SYSTEM

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Non-combustible thermally-broken continuous insulation and cladding support system at exterior.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 070800 – THERMAL AND MOISTURE PROTECTION SYSTEM COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 019113 - GENERAL COMMISSIONING REQUIREMENTS for commissioning
 - 2. Section 054000 – COLD-FORMED METAL FRAMING for exterior wall framing.
 - 3. Section 072000 - THERMAL INSULATION for insulation.
 - 4. Section 074200 – METAL WALL PANELS for exterior cladding.
 - 5. Section 074210 – ALUMINUM COMPOSITE METAL PANELS for exterior cladding
 - 6. Section 076100 – SHEET METAL SIDING for exterior cladding.
 - 7. Section 079200 - JOINT SEALANTS for field-applied sealants not otherwise specified in this Section.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design support system and framing, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Provide support system and framing capable of withstanding design loads within limits and under conditions indicated.

1. Design Loads: As required by Code or shown on Structural drawings, whichever is more stringent.

1.4 SUBMITTALS

- A. Product Data: For each product.
- B. Shop Drawings: Show layout, spacings, sizes, thicknesses, and types; and fastening and anchorage details, including mechanical fasteners. Show opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
- C. Delegated-Design Submittal: For framing indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- D. Qualification Data: For professional engineer.

1.5 QUALITY ASSURANCE

- A. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer.
- B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of framing that are similar to those indicated for this Project in material, design, and extent.
- C. Mock-Up: Provide labor and materials for mock-ups specified in Section 014000 – QUALITY REQUIREMENTS.
- D. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.

PART 2 - PRODUCTS

2.1 COMPOSITE FRAMING SUPPORT

- A. Non-Combustible, Thermally Broken Continuous Insulation and Cladding Support System: Coordinated with exterior insulation, engineered to support exterior cladding dead loads and project specific wind loads, and without thru-insulation thermal bridging other than brackets and/or fasteners. Acceptable systems are limited to the following:
 1. Stand-Off PV Bracket by ExoTec Mfg.
 2. KnightWall MFI-System.
 3. Alpha VCI or HCI Sub-Framing System by ECO Cladding.
 4. Or equal

2.2 ACCESSORIES

- A. Fasteners: Corrosion-resistant, self-tapping and self-drilling screws, bolts, nuts, and other fasteners as recommended by panel support system manufacturer for project application.
- B. Sealants: Provide sealants as recommended by exterior wall panel manufacturer for openings within wall panels and perimeter conditions.
 - 1. Refer to Section 079200 – JOINT SEALANTS for requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas of this work, and project conditions with installer present for compliance with requirements for installation tolerances, substrates, wall panel support conditions, and other conditions affecting performance of this Work.
- B. Examine structural wall framing to ensure that angles, channels, studs, and other structural support members have been installed within alignment tolerances required by continuous insulation wall panel support system manufacturer.
- C. Verify that water resistive barrier has been installed over exterior sheathing to control air infiltration or water penetration as indicated for project.
- D. Examine rough-in for components and systems penetrating wall panel support system to coordinate actual locations of penetrations relative to exterior wall panel joint locations prior to installation.
- E. Proceed with installation only after exterior walls have been properly prepared and unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean surfaces thoroughly prior to installation. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION, GENERAL

- A. Install wall panel support system in accordance with manufacturer's installation instructions, approved submittals, and in proper relationship to adjacent construction.
- B. Install wall panel support system in compliance with exterior wall panel orientation, sizes, and locations as indicated on Drawings.

3.4 TOLERANCES

- A. Shim and align wall panel units with installed tolerances of 1/4 inch in 20 feet, non-cumulative, on level, plumb, and location lines as indicated.

3.5 PROTECTION

- A. Protect installed products from damage until date of Substantial Completion.

END OF SECTION

SECTION 078100
APPLIED FIREPROOFING

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Standard Durability sprayed fire-resistive materials for concealed spaces not exposed to view or weather, non-high-rise construction.
 2. Medium Durability sprayed fire-resistive materials for interior spaces exposed to view and abrasion (in final construction) but not to weather. These spaces shall include but not limited to Vocational Shop Areas located on the Lower Level and First Floor - at the Floor Structure and Roof Structure above, All Mechanical Spaces including but not limited to Mechanical penthouses, Mechanical Rooms, Electrical Rooms and Storage Rooms unless noted otherwise, all Locker Rooms, Fitness Room, and Weight Room.
 3. High Durability sprayed fire-resistive materials for exposed spaces, including where exposed to weather, loading docks, and at the elevator shafts, unless noted otherwise..
 4. Exposed thin-film mastic and intumescent fire-resistive coatings for all exposed to view locations unless noted otherwise..
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 033000 - CAST-IN-PLACE CONCRETE for concrete protecting structural steel.
 2. Section 042000 - UNIT MASONRY for masonry protecting structural steel.
 3. Section 051200 - STRUCTURAL STEEL FRAMING for surface conditions required for structural steel receiving sprayed fire-resistive materials.
 4. Section 078410 - PENETRATION FIRESTOPPING for firestopping and firesafing insulation.
 5. Section 092110 - GYPSUM BOARD ASSEMBLIES for fire-resistance-rated assemblies.
 6. Section 092120 - GYPSUM BOARD SHAFT-WALL ASSEMBLIES for fire-resistance-rated assemblies.
 7. Section 099000 - PAINTING for painter's finishes to be applied to systems, installed under this Section.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
 - 1. For paints and coatings, documentation including printed statement of VOC content.
 - 2. Laboratory Test Reports for Credit EQ 4: For paints and coatings used inside the weatherproofing system, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Structural framing plans indicating the following:
 - 1. Locations and types of surface preparations required before applying sprayed fire-resistive material.
 - 2. Extent of sprayed fire-resistive material for each construction and fire-resistance rating, including the following:
 - a. Applicable fire-resistance design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.
 - b. Minimum thicknesses needed to achieve required fire-resistance ratings of structural components and assemblies.
 - 3. Treatment of sprayed fire-resistive material after application.
- D. Samples for Verification: For each type of colored, exposed sprayed fire-resistive material, two Samples, each 4 inches square, of each color, texture, and material formulation to be applied. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected.
- E. Qualification Data: For Installer, manufacturer, and testing agency.
- F. Compatibility and Adhesion Test Reports: From sprayed fire-resistive material manufacturer indicating the following:
 - 1. Materials have been tested for bond with substrates.
 - 2. Materials have been verified by sprayed fire-resistive material manufacturer to be compatible with substrate primers and coatings.
 - 3. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
- G. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for proposed sprayed fire-resistive materials.
 - 1. Engineering Evaluation: Provide engineering evaluation of modification of submitted fire-resistance design, if required to comply with required fire-test-response characteristics, specified under Quality Assurance Article herein.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: A firm or individual certified, licensed, or otherwise qualified by sprayed fire-resistive material manufacturer as experienced and with sufficient trained staff to install manufacturer's products according to specified requirements. A manufacturer's willingness to sell its sprayed fire-resistive materials to Contractor or to an installer engaged by Contractor does not in itself confer qualification on the buyer.
- B. Testing Agency Qualifications: An independent approved testing agency, acceptable to authorities having jurisdiction, with the experience and capability to conduct the testing indicated, as documented in accordance with local State Building Code.
- C. Source Limitations: Obtain sprayed fire-resistive materials through one source from a single manufacturer for each type of material.
- D. Sprayed Fire-Resistive Materials Testing: By an approved testing and inspecting agency engaged by Contractor or manufacturer to test for compliance with specified requirements for performance and test methods.
 - 1. Sprayed fire-resistive materials are randomly selected for testing from bags bearing the applicable classification marking of UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
 - 2. Testing is performed on specimens of sprayed fire-resistive materials that comply with laboratory testing requirements specified in Part 2 and are otherwise identical to installed fire-resistive materials, including application of accelerant, sealers, topcoats, tamping, troweling, rolling, and water overspray, if any of these are used in final application.
 - 3. Testing is performed on specimens whose application the independent testing and inspecting agency witnessed during preparation and conditioning. Include in test reports a full description of preparation and conditioning of laboratory test specimens.
- E. Compatibility and Adhesion Testing: Engage a qualified testing and inspecting agency to test for compliance with requirements for specified performance and test methods.
 - 1. Test for bond per ASTM E 736 and requirements in UL's "Fire Resistance Directory" for coating materials. Provide bond strength indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
 - 2. Verify that manufacturer, through its own laboratory testing or field experience, has not found primers or coatings to be incompatible with sprayed fire-resistive material.
- F. Fire-Test-Response Characteristics: Provide sprayed fire-resistive materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify bags containing sprayed fire-resistive materials with appropriate markings of applicable testing and inspecting agency.
 - 1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another testing and inspecting agency acceptable to authorities having jurisdiction, for sprayed fire-resistive material serving as direct-applied protection tested per ASTM E 119.
 - a. Steel members shall be considered restrained unless specifically noted otherwise. Structural design capacity for framing members shall be assumed as "fully-loaded". Non-load restricted fire-resistance designs shall be utilized for steel beams and

- joists requiring more than a 1 hour rating. Fire-resistance designs that indicate a load restriction factor are not permitted for steel beams and joists requiring more than a 1 hour rating.
- b. As required by Code, the individual beam and joist must match the assembly rating ratings.
2. Surface-Burning Characteristics: ASTM E 84, limits in accordance with applicable local Building Code.
- G. Provide products containing no detectable asbestos as determined according to the method specified in 40 CFR 763, Subpart E, Appendix E, Section 1, "Polarized Light Microscopy."
- H. Code-Required Inspections: Notify Architect and Owner's independent testing agency a minimum of 72 hours prior to commencing work of this Section, for Code-required special inspections.
- I. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01. Review methods and procedures related to sprayed fire-resistive materials including, but not limited to, the following:
1. Review and finalize construction schedule and verify sequencing and coordination requirements.
- 1.5 REFERENCES
- A. Comply with applicable requirements of the following standards and those others referenced in this Section. Where these standards conflict with other specified requirements, the most restrictive requirements shall govern.
1. ASTM E 84 - Test for Surface Burning Characteristics of Building Materials
 2. ASTM E 119 - Fire Tests of Building Construction and Materials
 3. ASTM E 605 - Thickness and Density of Sprayed Fire-Resistive Material Applied to Structural Members
 4. ASTM E 736 - Cohesive Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members
 5. ASTM E 759 - Effect of Deflection of Sprayed Fire-Resistive Material Applied to Structural Members
 6. ASTM E 760 - Effect of Impact on Bonding of Sprayed Fire-Resistive Material Applied to Structural Members
 7. ASTM E 761 - Compressive Strength of Sprayed Fire-Resistive Material Applied to Structural Members
 8. ASTM E 859 - Air Erosion of Sprayed Fire-Resistive Materials Applied to Structural Members
 9. ASTM E 937 - Corrosion of Steel by Sprayed Fire-Resistive Materials Applied to Structural Members

1.6 QUALITY ASSURANCE

- A. A. Installer Qualifications: A firm or individual certified, licensed, or otherwise qualified by sprayed fire-resistive material manufacturer as experienced and with sufficient trained staff to install manufacturer's products according to specified requirements. A manufacturer's willingness to sell its sprayed fire-resistive materials to Contractor or to an installer engaged by Contractor does not in itself confer qualification on the buyer.
- B. Testing Agency Qualifications: An independent approved testing agency, acceptable to authorities having jurisdiction, with the experience and capability to conduct the testing indicated, as documented in accordance with local State Building Code.
- C. Source Limitations: Obtain sprayed fire-resistive materials through one source from a single manufacturer for each type of material.
- D. Sprayed Fire-Resistive Materials Testing: By an approved testing and inspecting agency engaged by Contractor or manufacturer to test for compliance with specified requirements for performance and test methods.
 - 1. Sprayed fire-resistive materials are randomly selected for testing from bags bearing the applicable classification marking of UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
 - 2. Testing is performed on specimens of sprayed fire-resistive materials that comply with laboratory testing requirements specified in Part 2 and are otherwise identical to installed fire-resistive materials, including application of accelerant, sealers, topcoats, tamping, troweling, rolling, and water overspray, if any of these are used in final application.
 - 3. Testing is performed on specimens whose application the independent testing and inspecting agency witnessed during preparation and conditioning. Include in test reports a full description of preparation and conditioning of laboratory test specimens.
- E. Compatibility and Adhesion Testing: Engage a qualified testing and inspecting agency to test for compliance with requirements for specified performance and test methods.
 - 1. Test for bond per ASTM E 736 and requirements in UL's "Fire Resistance Directory" for coating materials. Provide bond strength indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
 - 2. Verify that manufacturer, through its own laboratory testing or field experience, has not found primers or coatings to be incompatible with sprayed fire-resistive material.
- F. F. Fire-Test-Response Characteristics: Provide sprayed fire-resistive materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify bags containing sprayed fire-resistive materials with appropriate markings of applicable testing and inspecting agency.
 - 1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another testing and inspecting agency acceptable to authorities having jurisdiction, for sprayed fire-resistive material serving as direct-applied protection tested per ASTM E 119.

- a. Steel members shall be considered restrained unless specifically noted otherwise. Structural design capacity for framing members shall be assumed as "fully-loaded" Non-load restricted fire-resistance designs shall be utilized for steel beams and joists requiring more than a 1 hour rating. Fire-resistance designs that indicate a load restriction factor are not permitted for steel beams and joists requiring more than a 1 hour rating.
 - b. As required by Code, the individual beam and joist must match the assembly rating ratings.
 - 2. Surface-Burning Characteristics: ASTM E 84, limits in accordance with applicable local Building Code.
 - G. Provide products containing no detectable asbestos as determined according to the method specified in 40 CFR 763, Subpart E, Appendix E, Section 1, "Polarized Light Microscopy."
 - H. Code-Required Inspections: Notify Architect and Owner's independent testing agency a minimum of 72 hours prior to commencing work of this Section, for Code-required special inspections.
 - I. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01. Review methods and procedures related to sprayed fire-resistive materials including, but not limited to, the following:
 - 1. Review and finalize construction schedule and verify sequencing and coordination requirements.
 - J. Mock-ups shall be required for all exposed to view systems specified under this section including intumescent coatings and shall be approved by the architect prior to proceed with work.
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Deliver products to Project site in original, unopened packages with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, shelf life if applicable, and fire-resistance ratings applicable to Project.
 - B. Use materials with limited shelf life within period indicated. Remove from Project site and discard materials whose shelf life has expired.
 - C. Store materials inside, under cover, aboveground, and kept dry until ready for use. Remove from Project site and discard wet or deteriorated materials.
- 1.8 PROJECT CONDITIONS
- A. Environmental Limitations: Do not apply sprayed fire-resistive material when ambient or substrate temperature is 40 deg F or lower unless temporary protection and heat is provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.
 - B. Ventilation: Ventilate building spaces during and after application of sprayed fire-resistive material. Use natural means or, if they are inadequate, forced-air circulation until fire-resistive material dries thoroughly. Comply with manufacturer's recommended ventilation procedures.

1.9 COORDINATION

- A. Coordinate with painting subcontractor/manufacturer for compatibility and optimal performance with systems installed under this section.
- B. Coordinate requirements of approved intumescent coating manufacturer for approved primers. Construction manager shall coordinate approval of fireproofing submittal in such time that primer type can be confirmed and installed by STRUCTURAL STEEL prior to delivery.
- C. Sequence and coordinate application of sprayed fire-resistive materials with other related work specified in other Sections to comply with the following requirements:
 - 1. Provide temporary enclosure as required to confine spraying operations and protect the environment.
 - 2. Provide temporary enclosures for applications to prevent deterioration of fire-resistive material due to exposure to weather and to unfavorable ambient conditions for humidity, temperature, and ventilation.
 - 3. Avoid unnecessary exposure of fire-resistive material to abrasion and other damage likely to occur during construction operations subsequent to its application.
 - 4. Do not apply fire-resistive material to metal roof deck substrates until concrete topping, if any, has been completed. For metal roof decks without concrete topping, do not apply fire-resistive material to metal roof deck substrates until roofing has been completed; prohibit roof traffic during application and drying of fire-resistive material.
 - 5. Do not apply fire-resistive material to metal floor deck substrates until concrete topping has been completed.
 - 6. Except for thin-film intumescent fireproofing, do not begin applying fire-resistive material until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.
 - 7. Defer installing ducts, piping, and other items that would interfere with applying fire-resistive material until application of fire protection is completed.
 - 8. Do not install enclosing or concealing construction until after fire-resistive material has been applied, inspected, and tested and corrections have been made to defective applications.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form, signed by Contractor and by Installer, in which manufacturer agrees to repair or replace sprayed fire-resistive materials that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, the following:
 - 1. Cracking, flaking, spalling, or eroding in excess of specified requirements; peeling; or delaminating of sprayed fire-resistive materials from substrates.
 - 2. Not covered under the warranty are failures due to damage by occupants and the Owner's maintenance personnel, exposure to environmental conditions other than those investigated and approved during fire-response testing, and other causes not reasonably foreseeable under conditions of normal use.
- B. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. VOC Content: Products shall comply with VOC content limits of authorities having jurisdiction and the following VOC limits when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
1. Flat Paints and Coatings: 50 g/L.
 2. Nonflat Paints and Coatings: 150 g/L.
 3. Primers, Sealers, and Undercoaters: 200 g/L.
 4. Anticorrosive and Antirust Paints Applied to Ferrous Metals: 250 g/L.
- B. Low-Emitting Materials: Fireproofing used within the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.2 STANDARD DURABILITY SPRAYED FIRE-RESISTIVE MATERIALS

- A. General: For standard density sprayed fire-resistive materials for concealed spaces not exposed to view or weather, non-high-rise construction, provide manufacturer's standard products complying with requirements indicated for material composition and physical properties representative of installed products.
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Carboline Company, subsidiary of RPM International, Fireproofing Products Div.; AD Southwest Fireproofing Type 5GP.
 - b. GCP Applied Technologies (formerly W.R. Grace); Monokote Type MK-6/HY.
 - c. Isolatek International, Cafco Products; Cafco 300.
 - d. Or equal
 2. Basis of Design – Cafco 300, as manufactured by Cafco Products, Isolatek International.
- B. Material Composition: Cementitious sprayed fire-resistive material consisting of factory-mixed, dry formulation of portland cement binders and lightweight mineral or synthetic aggregates mixed with water at Project site to form a slurry or mortar for conveyance and application, per ASTM E 1513.
- C. Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
1. Dry Density: 15 lb/cu. ft. for average and individual densities regardless of density indicated in referenced fire-resistance design, or greater if required to attain fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method."
 2. Thickness: Provide minimum average thickness required for fire-resistance design indicated according to the following criteria, but not less than 0.375 inch, per ASTM E 605:

- a. Where the referenced fire-resistance design lists a thickness of 1 inch or greater, the minimum allowable individual thickness of sprayed fire-resistive material is the design thickness minus 0.25 inch.
 - b. Where the referenced fire-resistance design lists a thickness of less than 1 inch but more than 0.375 inch, the minimum allowable individual thickness of sprayed fire-resistive material is the greater of 0.375 inch or 75 percent of the design thickness.
 - c. No reduction in average thickness is permitted for those fire-resistance designs whose fire-resistance ratings were established at densities of less than 15 lb/cu. ft.
3. Bond Strength: 150 lbf/sq. ft. minimum per ASTM E 736 under the following conditions:
 - a. Field test sprayed fire-resistive material that is applied to flanges of wide-flange, structural-steel members on surfaces matching those that will exist for remainder of steel receiving fire-resistive material.
 - b. If surfaces of structural steel receiving sprayed fire-resistive material are primed or otherwise painted for coating materials, perform series of bond tests in accordance with ASTM E736 while using criteria of acceptance in UL's "Fire Resistance Directory."
 - c. Minimum thickness of sprayed fire-resistive material tested in laboratory shall be 0.75 inch.
4. Compressive Strength: Minimum 1200 psf as determined in the laboratory per ASTM E 761. Minimum thickness of sprayed fire-resistive material tested shall be 0.75 inch and minimum dry density shall be as specified, but not less than 15 lb/cu. ft.
5. Corrosion Resistance: No evidence of corrosion per ASTM E 937.
6. Deflection: No cracking, spalling, or delamination per ASTM E 759.
7. Effect of Impact on Bonding: No cracking, spalling, or delamination per ASTM E 760.
8. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. in 24 hours per ASTM E 859. For laboratory tests, minimum thickness of sprayed fire-resistive material is 0.75 inch maximum dry density is 15 lb/cu. ft. test specimens are not prepured by mechanically induced air velocities, and tests are terminated after 24 hours.
9. Fungal Resistance: No observed growth on specimens per ASTM G 21.

2.3 MEDIUM-DURABILITY CEMENTITIOUS SPRAYED FIRE-RESISTIVE MATERIALS

- A. General: For medium-density sprayed fire-resistive materials for interior spaces exposed to view and abrasion (in final construction) but not to weather provide manufacturer's standard products complying with requirements indicated for material composition and for minimum physical properties of each product listed, measured by standard test methods referenced with each property. All shop ceilings shall be protected with Medium Durability spray.
 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Carboline Company, subsidiary of RPM International, Fireproofing Products Div.; AD Southwest Fireproofing Type 7GP.
 - b. GCP Applied Technologies (formerly W.R. Grace); Monokote Type Z-106/HY.
 - c. Isolatek International Corp., Cafco Products.; Cafco 400.
 - d. Or equal
 2. Basis of Design – Cafco 400, as manufactured by Cafco Products, Isolatek International.

- B. Material Composition: Cementitious sprayed fire-resistive material consisting of factory-mixed, dry formulation of portland cement binders and lightweight mineral or synthetic aggregates mixed with water at Project site to form a slurry or mortar for conveyance and application, per ASTM E 1513.
- C. Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
1. Dry Density: 22 lb/cu. ft. for average and individual densities regardless of density indicated in referenced fire-resistance design, or greater if required to attain fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method."
 2. Thickness: Provide minimum average thickness required for fire-resistance design indicated according to the following criteria, but not less than 0.375 inch, per ASTM E 605:
 - a. Where the referenced fire-resistance design lists a thickness of 1 inch or greater, the minimum allowable individual thickness of sprayed fire-resistive material is the design thickness minus 0.25 inch.
 - b. Where the referenced fire-resistance design lists a thickness of less than 1 inch but more than 0.375 inch, the minimum allowable individual thickness of sprayed fire-resistive material is the greater of 0.375 inch or 75 percent of the design thickness.
 - c. No reduction in average thickness is permitted for those fire-resistance designs whose fire-resistance ratings were established at densities of less than 22 lb/cu. ft.
 3. Bond Strength: 430 lbf/sq. ft. minimum per ASTM E 736 under the following conditions:
 - a. Field test sprayed fire-resistive material that is applied to flanges of wide-flange, structural-steel members on surfaces matching those that will exist for remainder of steel receiving fire-resistive material.
 - b. If surfaces of structural steel receiving sprayed fire-resistive material are primed or otherwise painted for coating materials, perform series of bond tests in accordance with ASTM E736 while using criteria of acceptance in UL's "Fire Resistance Directory."
 - c. Minimum thickness of sprayed fire-resistive material tested in laboratory shall be 0.75 inch.
 4. Compressive Strength: 100 psi as determined in the laboratory per ASTM E 761. Minimum thickness of sprayed fire-resistive material tested shall be 0.75 inch and minimum dry density shall be as specified, but not less than 22 lb/cu. ft.
 5. Corrosion Resistance: No evidence of corrosion per ASTM E 937.
 6. Deflection: No cracking, spalling, or delamination per ASTM E 759.
 7. Effect of Impact on Bonding: No cracking, spalling, or delamination per ASTM E 760.
 8. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. in 24 hours per ASTM E 859. For laboratory tests, minimum thickness of sprayed fire-resistive material is 0.75 inch maximum dry density is 15 lb/cu. ft. test specimens are not prepurged by mechanically induced air velocities, and tests are terminated after 24 hours.
 9. Fungal Resistance: No observed growth on specimens per ASTM G 21.

2.4 HIGH-DURABILITY CEMENTITIOUS SPRAYED FIRE-RESISTIVE MATERIALS

- A. General: For high-density sprayed fire-resistive materials for exposed spaces, including at loading docks, at parking garages, and where exposed to weather, provide manufacturer's standard products complying with requirements indicated for material composition and for minimum physical properties of each product listed, measured by standard test methods referenced with each property.
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Carbolite Company, subsidiary of RPM International, Fireproofing Products Div.; AD Southwest Fireproofing Type 7HD.
 - b. GCP Applied Technologies (formerly W.R. Grace); Monokote Type Z146.
 - c. Isolatek International Corp., Cafco Products.; Fendolite MII.
 - d. Or equal
 2. Basis of Design – Fendolite MII, as manufactured by Cafco Products, Isolatek International.
- B. Material Composition: Cementitious sprayed fire-resistive material consisting of factory-mixed, dry formulation of portland cement binders and lightweight mineral or synthetic aggregates mixed with water at Project site to form a slurry or mortar for conveyance and application, per ASTM E 1513.
- C. Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
1. Dry Density: 40 lb/cu. ft. for average and individual densities regardless of density indicated in referenced fire-resistance design, or greater if required to attain fire-resistance ratings indicated, per ASTM E 605.
 2. Thickness: Provide minimum average thickness required for fire-resistance design indicated according to the following criteria, but not less than 0.375 inch, per ASTM E 605:
 - a. Where the referenced fire-resistance design lists a thickness of 1 inch or greater, the minimum allowable individual thickness of sprayed fire-resistive material is the design thickness minus 0.25 inch.
 - b. Where the referenced fire-resistance design lists a thickness of less than 1 inch but more than 0.375 inch, the minimum allowable individual thickness of sprayed fire-resistive material is the greater of 0.375 inch or 75 percent of the design thickness.
 - c. No reduction in average thickness is permitted for those fire-resistance designs whose fire-resistance ratings were established at densities of less than 40 lb/cu. ft.
 3. Bond Strength: 10,000 lbf/sq. ft. minimum per ASTM E 736 under the following conditions:
 - a. Field test sprayed fire-resistive material that is applied to flanges of wide-flange, structural-steel members on surfaces matching those that will exist for remainder of steel receiving fire-resistive material.

- b. If surfaces of structural steel receiving sprayed fire-resistive material are primed or otherwise painted for coating materials, perform series of bond tests in accordance with ASTM E736 while using criteria of acceptance in UL's "Fire Resistance Directory."
 - c. Minimum thickness of sprayed fire-resistive material tested in laboratory shall be 0.75 inch.
 - 4. Compressive Strength: Minimum 500 psi as determined in the laboratory per ASTM E 761. Minimum thickness of sprayed fire-resistive material tested shall be 0.75 inch and minimum dry density shall be as specified, but not less than 40 lb/cu. ft.
 - 5. Corrosion Resistance: No evidence of corrosion per ASTM E 937.
 - 6. Deflection: No cracking, spalling, or delamination per ASTM E 759.
 - 7. Effect of Impact on Bonding: No cracking, spalling, or delamination per ASTM E 760.
 - 8. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. in 24 hours per ASTM E 859. For laboratory tests, minimum thickness of sprayed fire-resistive material is 0.75 inch maximum dry density is 15 lb/cu. ft. test specimens are not prepurged by mechanically induced air velocities, and tests are terminated after 24 hours.
 - 9. Fungal Resistance: No observed growth on specimens per ASTM G 21.
- 2.5 EXPOSED THIN-FILM MASTIC AND INTUMESCENT FIRE-RESISTIVE COATINGS (MIFRC) Also known as 'Intumescent Mastic Fireproofing, Intumescent Coating, and Intumescent Painted' On Structural and Architectural Drawings
- A. Conditioned Interior Space Conditions: Coatings limited to interior climate controlled spaces having no exposure to condensation, and where the relative humidity and temperature are controlled according to the manufacturers recommendations or to not more than 75 percent, which ever is less, during the application and curing of the coating, the construction and the occupancy of the building.
 - 1. Isolatek International Corp., Cafco Products; Cafco SprayFilm WB 5.
 - 2. Carboline.: Thermo-Sorb VOC without topcoat.
 - 3. Sherwin Williams; Firetex FX5120 without topcoat.
 - 4. Or equal

Basis of Design – SprayFilm WB5, as manufactured by Cafco Products, Isolatek International.
 - B. Interior General Use Conditions: Coatings limited to interior service where protection of the coating during application and curing, the construction and the occupancy of the building are as recommended by the product manufacturer for the specific application.
 - 1. Carboline; Firefilm III.
 - 2. Carboline; Thermo-Sorb VOC.
 - 3. Isolatek Internaional Corp., Cafco Products; Cafco SprayFilm WB-5 Basecoat with finish topcoat.

Basis of Design – SprayFilm WB5, as manufactured by Cafco Products, Isolatek International.
 - C. Exterior Use Conditions: Coatings for exterior use or interior use where exterior environmental conditions exist.
 - 1. Isolatek International Corp., Cafco Products; Cafco SprayFilm-WB 4 with Topseal.
 - 2. International Paint, LLC; Interchar 212 with topcoat.

3. Carboline.; Thermo-Lag E100 with topcoat.

Basis of Design – SprayFilm WB4, as manufactured by Cafco Products, Isolatek International.

- D. Thin-Film Mastic and Intumescent Fire-Resistive Coating: Factory-mixed formulation.

1. Approved by manufacturer and authorities having jurisdiction for interior or exterior use.
2. Multicomponent system consisting of primer, intumescent base coat and topcoat.
3. Systems shall comply with applicable VOC requirements and meet OTC emission regulations.

- E. Color and Gloss: As indicated by manufacturer's designations.

1. If additional painted topcoats are required, comply with manufacturer's requirements and coordinate with Section 099000 - PAINTING AND COATING.

2.6 AUXILIARY FIRE-RESISTIVE MATERIALS

- A. General: Provide auxiliary fire-resistive materials that are compatible with sprayed fire-resistive materials and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.

- B. Substrate Primers: For use on each substrate and with each sprayed fire-resistive product, provide primer that complies with one or more of the following requirements:

1. Primer's bond strength complies with requirements specified in UL's "Fire Resistance Directory," for coating materials based on a series of bond tests per ASTM E 736.
2. Primer is identical to those used in assemblies tested for fire-test-response characteristics of sprayed fire-resistive material per ASTM E 119 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

- C. Adhesive for Bonding Fire-Resistive Material: Product approved by manufacturer of sprayed fire-resistive material.

- D. Metal Lath: Expanded metal lath fabricated from material of weight, configuration, and finish required to comply with fire-resistance designs indicated and fire-resistive material manufacturer's written recommendations. Include clips, lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive sprayed fire-resistive material.

- E. Reinforcing Fabric for Use with Intumescent Coatings: Glass-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated, approved by manufacturer of thin-film mastic and intumescent coating fire-resistive material.

- F. Topcoats: Provide fireproofing manufacturer recommended topcoats for exposed fireproofing.

1. Color and Gloss: Provide custom colors as selected by Architect.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of work. A substrate is in satisfactory condition if it complies with the following:
 - 1. Substrates comply with requirements in the Section where the substrate and related materials and construction are specified.
 - 2. Substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, incompatible paints, incompatible encapsulants, or other foreign substances capable of impairing bond of fire-resistive materials with substrates under conditions of normal use or fire exposure.
 - 3. Objects penetrating fire-resistive material, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
 - 4. Substrates are not obstructed by ducts, piping, equipment, and other suspended construction that will interfere with applying fire-resistive material.
- B. Verify that concrete work on steel deck has been completed.
- C. Verify that roof construction, installation of rooftop HVAC equipment, and other related work are completed.
- D. Conduct tests according to fire-resistive material manufacturer's written recommendations to verify that substrates are free of substances capable of interfering with bond.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Cover other work subject to damage from fallout or overspray of fire-resistive materials during application.
- B. Clean substrates of substances that could impair bond of fire-resistive material, including dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, and incompatible primers, paints, and encapsulants.
- C. For exposed applications, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of sprayed fire-resistive material. Remove minor projections and fill voids that would telegraph through fire-resistive products after application.

3.3 APPLICATION, GENERAL

- A. Comply with fire-resistive material manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and spray on fire-resistive material, as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.
- B. Apply sprayed fire-resistive material that is identical to products tested as specified in Part 1 "Quality Assurance" Article and substantiated by test reports, with respect to rate of application,

accelerator use, sealers, topcoats, tamping, troweling, water overspray, or other materials and procedures affecting test results.

- C. Install metal lath and reinforcing fabric, as required, to comply with fire-resistance ratings and fire-resistive material manufacturer's written recommendations for conditions of exposure and intended use. Securely attach lath and fabric to substrate in position required for support and reinforcement of fire-resistive material. Use anchorage devices of type recommended in writing by sprayed fire-resistive material manufacturer. Attach accessories where indicated or required for secure attachment of lath and fabric to substrate.
- D. Coat substrates with bonding adhesive before applying fire-resistive material where required to achieve fire-resistance rating or as recommended in writing by sprayed fire-resistive material manufacturer for material and application indicated.
- E. Extend fire-resistive material in full thickness over entire area of each substrate to be protected. Unless otherwise recommended in writing by sprayed fire-resistive material manufacturer, install body of fire-resistive covering in a single course.
- F. Spray apply fire-resistive materials to maximum extent possible. Following the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by sprayed fire-resistive material manufacturer.
- G. Where sealers are used, apply products that are tinted to differentiate them from sprayed fire-resistive material over which they are applied.

3.4 APPLICATION, CONCEALED SPRAYED FIRE-RESISTIVE MATERIALS

- A. Apply concealed sprayed fire-resistive material in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition.
- B. Cure concealed sprayed fire-resistive material according to product manufacturer's written recommendations.

3.5 APPLICATION, EXPOSED SPRAYED FIRE-RESISTIVE MATERIALS

- A. Apply exposed sprayed fire-resistive material in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition, but apply in greater thicknesses and densities if indicated.
- B. Provide a uniform finish complying with description indicated for each type of material and matching Architect's sample or, if none, finish approved for field-erected mockup.
- C. Apply exposed cementitious sprayed fire-resistive materials to produce the following finish:
 - 1. Even, spray-textured finish, produced by rolling flat surfaces of fire-protected members with a damp paint roller to remove drippings and excessive roughness.
- D. Cure exposed sprayed fire-resistive material according to product manufacturer's written recommendations.

3.6 APPLICATION, EXPOSED MASTIC AND INTUMESCENT FIRE-RESISTIVE COATINGS

- A. Apply exposed thin-film mastic and intumescent fire-resistive coatings in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition.
- B. Apply mastic and intumescent fire-resistive coating as follows:
 - 1. Install reinforcing fabric as required to obtain designated fire-resistance rating and where indicated.
 - 2. Finish: Even, spray-textured finish produced by lightly rolling flat surfaces of fire-protected members before fire-resistive material dries, to smooth out surface irregularities and to seal in surface fibers.

3.7 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and prepare test reports, as required by 2015 IBC 1705.15.
 - 1. Cooperate with testing agency, provide access.
- B. Remove and replace applications of sprayed fire-resistive material that do not pass tests and inspections for cohesion and adhesion, for density, or for both and retest as specified above.
- C. Apply additional sprayed fire-resistive material, per manufacturer's written instructions, where test results indicate that thickness does not comply with specified requirements, and retest as specified above.
- D. Field inspect intumescent materials in accordance with AWCI Tech Manual 12B.

3.8 CLEANING, PROTECTING, AND REPAIR

- A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.
- B. Protect sprayed fire-resistive material, according to advice of product manufacturer and Installer, from damage resulting from construction operations or other causes so fire protection will be without damage or deterioration at time of Substantial Completion.
- C. Coordinate application of sprayed fire-resistive material with other construction to minimize need to cut or remove fire protection. As installation of other construction proceeds, inspect sprayed fire-resistive material and patch any damaged or removed areas.
- D. Repair or replace work that has not successfully protected steel.

END OF SECTION

SECTION 078410
PENETRATION FIRESTOPPING

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Through-penetration firestop systems for penetrations through fire-resistance-rated constructions, including both empty openings and openings containing penetrating items.
 - 2. Gaps (openings) between exterior curtain walls and the outer perimeter edge of structural floor.
 - 3. Openings at each floor level in shafts or stairwells.
 - 4. Joints in rated walls and floors between similar and dissimilar construction materials.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and will be performed under the designated Sections:
 - 1. Section 078440 - FIRE-RESISTIVE JOINT SYSTEMS for fire-resistive joint sealers.
 - 2. Section 079200 - JOINT SEALANTS for standard joint sealers.
 - 3. Division 08 – OPENINGS for hollow metal doors and frames, and fire-rated glass and framing.
 - 4. Section 142100 - MACHINE-ROOM-LESS TRACTION ELEVATORS for penetrations for traction elevator piping, cabling and conduit penetrations and providing firestopping complying with requirements in this Section.

1.3 COORDINATION

- A. Jobsite conditions of each through-penetration firestop system must meet all details of the UL-Classified System selected. If jobsite conditions do not match any UL-classified systems, contact firestop manufacturer for alternative systems or Engineer Judgment Drawings.
- B. Coordinate work with other trades to assure that penetration-opening sizes are appropriate for penetrant locations.
- C. Verify that the schedule is current at the time of construction, and that each referenced system is suitable for the intended application.

1.4 REFERENCES

- A. Test Requirements: ASTM E 814, "Standard Method of Fire Tests of Through Penetration Fire Stops"
- B. Test Requirements: UL 1479, "Fire Tests of Through-Penetration Firestops"

- L. NFPA 70 - National Electric Code

1.5 PERFORMANCE REQUIREMENTS

- A. General: For penetrations through fire-resistance-rated constructions, including both empty openings and openings containing penetrating items, provide through-penetration firestop systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated.
- B. Penetrations in Fire-Resistance-Rated Walls: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg (2.49 Pa).

1. Fire-resistance-rated walls include fire walls, fire-barrier walls, smoke-barrier walls and fire partitions.
 2. F-Rating: Not less than the fire-resistance rating of constructions penetrated.
- C. Penetrations in Horizontal Assemblies: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg (2.49 Pa).
1. Horizontal assemblies include floors, floor/ceiling assemblies and ceiling membranes of roof/ceiling assemblies.
 2. F-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated.
 3. T-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.
- D. Penetrations in Smoke Barriers: Provide penetration firestopping with ratings determined per UL 1479.
1. L-Rating: Not exceeding 5.0 cfm/sq. ft. (0.025 cu. m/s per sq. m) of penetration opening at 0.30-inch wg (74.7 Pa) at both ambient and elevated temperatures.
- E. Exposed Penetration Firestopping:
1. Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.
 2. For through-penetration firestop systems exposed to view, traffic, moisture, and physical damage, provide products that, after curing, do not deteriorate when exposed to these conditions both during and after construction.
 - a. For piping penetrations for plumbing and wet-pipe sprinkler systems, provide moisture-resistant through-penetration firestop systems demonstrating no evidence of water leakage when tested according to UL 1479.
 - b. For floor penetrations with annular spaces exceeding 4 inches in width and exposed to possible loading and traffic, provide firestop systems capable of supporting floor loads involved, either by installing floor plates or by other means.
- F. For penetrations involving insulated piping, provide through-penetration firestop systems not requiring removal of insulation.

1.6 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
1. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For firestopping products, submit Health Product Declarations (HPD) or Declare product labels.
 2. Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010, using the applicable exposure scenario.

- a. For firestopping, submit test results, including TVOC emissions and VOC content.
 - b. For wet-applied products, submit volume used.
- C. Shop Drawings: For each through-penetration firestop system, show each type of construction condition penetrated, relationships to adjoining construction, and type of penetrating item. Include firestop design designation of qualified testing and inspecting agency that evidences compliance with requirements for each condition indicated.
 - 1. Submit documentation, including illustrations, from a qualified testing and inspecting agency that is applicable to each through-penetration firestop system configuration for construction and penetrating items.
- D. Through-Penetration Firestop System Schedule: Indicate locations of each through-penetration firestop system, along with the following information:
 - 1. Types of penetrating items.
 - 2. Types of constructions penetrated, including fire-resistance ratings and, where applicable, thicknesses of construction penetrated.
 - 3. Through-penetration firestop systems for each location identified by firestop design designation of qualified testing and inspecting agency.
- E. Qualification Data: For Installer.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Either a firm that has been approved by FMG according to FMG 4991, "Approval of Firestop Contractors" or a firm experienced in installing through-penetration firestop systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction of a minimum of five projects with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements.
- B. Installation Responsibility: Assign installation of through-penetration firestop systems and fire-resistive joint systems in Project to a single qualified installer.
- C. Source Limitations: Obtain through-penetration firestop systems, for each kind of penetration and construction condition indicated, through one source from a single manufacturer.
- D. Fire-Test-Response Characteristics: Provide through-penetration firestop systems that comply with the following requirements and those specified in Part 1 "Performance Requirements" Article:
 - 1. Firestopping tests are performed by a qualified testing and inspecting agency. A qualified testing and inspecting agency is UL or another agency performing testing and follow-up inspection services for firestop systems acceptable to authorities having jurisdiction.
 - 2. Through-penetration firestop systems are identical to those tested per testing standard referenced in "Part 1 Performance Requirements" Article. Provide rated systems complying with the following requirements:
 - a. Through-penetration firestop system products bear classification marking of qualified testing and inspecting agency.

- b. Through-penetration firestop systems correspond to those indicated by reference to through-penetration firestop system designations listed in the UL "Fire Resistance Directory."

- E. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.
- F. Manufacturer's Field Services: Contractor to ensure a manufacturer's direct representative is on-site during initial installation of firestop systems to train appropriate contractor personnel in proper selection and installation procedures. Training will be done per manufacturer's written recommendations published in their literature and drawing details.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver through-penetration firestop system products to Project site in original, unopened containers or packages with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, lot number, shelf life if applicable, qualified testing and inspecting agency's classification marking applicable to Project, curing time, and mixing instructions for multicomponent materials.
- B. Store and handle materials for through-penetration firestop systems to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.9 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install through-penetration firestop systems when ambient or substrate temperatures are outside limits permitted by through-penetration firestop system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
- B. Ventilate through-penetration firestop systems per manufacturer's written instructions by natural means or, where this is inadequate, forced-air circulation.

1.10 COORDINATION

- A. Coordinate construction of openings and penetrating items to ensure that through-penetration firestop systems are installed according to specified requirements.
- B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate through-penetration firestop systems.
- C. Do not cover up through-penetration firestop system installations that will become concealed behind other construction until each installation has been examined building inspector, if required by authorities having jurisdiction.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Products: Subject to compliance with requirements, through-penetration firestop systems that may be incorporated into the Work include, but are not limited to the following:
 - 1. Hilti, Inc.(Basis of Design)

2. BioFireShield; RectorSeal Corporation.
 3. Specified Technologies, Inc. (STI).
 4. 3M; Fire Protection Products Division.
 5. Or equal
- B. The following products are listed as the Basis of Design only to establish a level of quality and performance for the materials indicated. Equal products will be acceptable if meeting the characteristics of the materials listed, subject to approval by the Architect.
1. Pre-formed firestop devices for use with noncombustible and combustible pipes (closed and open systems), conduit, and/or cable bundles penetrating concrete floors the following products are acceptable:
 - a. Hilti Cast-In Place Firestop Device (CP 680-P)
 - 1) a. Add Aerator Adaptor when used in conjunction with aerator system.
 - b. Hilti Cast-In Place Firestop Device (CP 680-M) for use with noncombustible penetrants.
 - c. Hilti Tub Box Kit (CP 681) for use with tub installations.
 - d. Hilti Firestop Speed Sleeve (CP 653) for use with cable penetrations.
 - e. Hilti Firestop Drop-In Device (CFS-DID) for use with noncombustible and combustible penetrants.
 - f. Hilti Firestop Block (CFS-BL)
 - g. Hilti Closet Stub (CFS-CID CS)
 2. Sealants, caulking materials, or foams for use with non-combustible items including steel pipe, copper pipe, rigid steel conduit and electrical metallic tubing (EMT), the following products are acceptable:
 - a. Hilti Intumescent Firestop Sealant (FS-ONE MAX)
 - b. Hilti Fire Foam (CP 620)
 - c. Hilti Flexible Firestop Sealant (CP 606)
 - d. Hilti Firestop Silicone Sealant Gun Grade (CFS-S SIL GG)
 - e. Hilti Firestop Silicone Sealant Self Leveling (CFS-S SIL SL)
 3. Intumescent sealants, caulking materials for use with combustible items (penetrants consumed by high heat and flame) including insulated metal pipe, PVC jacketed, flexible cable or cable bundles and plastic pipe, the following products are acceptable:
 - a. Hilti Intumescent Firestop Sealant (FS-ONE MAX)
 4. Non-curing, re-penetrable intumescent putty or foam materials for use with flexible cable or cable bundles, the following products are acceptable:
 - a. Hilti Firestop Putty Stick (CP 618)
 - b. Hilti Firestop Plug (CFS-PL)
 5. Wall opening protective materials for use with U.L. listed metallic and specified nonmetallic outlet boxes, the following products are acceptable:
 - a. Hilti Firestop Putty Pad (CFS-P PA)
 - b. Hilti Firestop Putty Pad (CP 617)

- c. Hilti Firestop Box Insert
- 6. Firestop collar or wrap devices attached to assembly around combustible plastic pipe (closed and open piping systems), the following products are acceptable:
 - a. Hilti Firestop Collar (CP 643N)
 - b. Hilti Firestop Collar (CP 644)
 - c. Hilti Wrap Strips (CP 648-E/648-S)
- 7. Materials used for large openings and complex penetrations made to accommodate cable trays and bundles, multiple steel and copper pipes, electrical busways in raceways, the following products are acceptable:
 - a. Hilti Firestop Block (CFS-BL)
 - b. Hilti Composite Sheet (CFS-COS)
 - c. Hilti Firestop Mortar (CP 637)
 - d. Hilti Fire Foam (CP 620)
 - e. Hilti Firestop Board (CP 675T)
- 8. Non curing, re-penetrable materials used for large size/complex penetrations made to accommodate cable trays and bundles, multiple steel and copper pipes, electrical busways in raceways, the following products are acceptable:
 - a. Hilti Firestop Block (CFS-BL)
 - b. Hilti Firestop Board (CP 675T)
- 9. Re-penetrable, round cable management devices for use with new or existing cable bundles penetrating gypsum or masonry walls, the following products are acceptable:
 - a. Hilti Firestop Speed Sleeve (CP 653) with integrated smoke seal fabric membrane.
 - b. Hilti Firestop Cable Collar (CFS-CC)
 - c. Hilti Firestop Sleeve (CFS-SL SK)
 - d. Hilti Retrofit Sleeve (CFS-SL RK) for use with existing cable bundles.
 - e. Hilti Gangplate (CFS-SL GP) for use with multiple cable management devices.
 - f. Hilti Gangplate Cap (CFS-SL GP CAP) for use at blank openings in gangplate for future penetrations.
- 10. For blank openings made in fire-rated wall or floor assemblies, where future penetration of pipes, conduits, or cables is expected, the following products are acceptable:
 - a. Hilti Firestop Block (CFS-BL)
 - b. Hilti Firestop Plug (CFS-PL)
- 11. For single or cable bundles up to one inch diameter penetrating gypsum, masonry, concrete walls or wood floor assemblies the following product is acceptable:
 - a. Hilti Firestop Cable Disc (CFS-D)

2.2 FIRESTOPPING MATERIALS

- A. Low-Emitting Materials: Penetration firestopping sealants and sealant primers shall comply with the testing and product requirements of the California Department of Health Services' "Standard

Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- B. VOC Content: Penetration firestopping sealants and sealant primers shall comply with the following limits for VOC content:
 - 1. Sealants: 250 g/L.
 - 2. Sealant Primers for Nonporous Substrates: 250 g/L.
 - 3. Sealant Primers for Porous Substrates: 775 g/L.
 - 4. Methylene chloride and perchloroethylene may not be intentionally added to sealants.
- C. Compatibility: Provide through-penetration firestop systems that are compatible with one another; with the substrates forming openings; and with the items, if any, penetrating through-penetration firestop systems, under conditions of service and application, as demonstrated by through-penetration firestop system manufacturer based on testing and field experience.
- D. Materials: Provide through-penetration firestop systems containing primary materials and fill materials which are part of the tested assemblies indicated in the approved Through-Penetration Firestop System Schedule submittal. Fill materials are those referred to in directories of referenced testing and inspecting agencies as "fill," "void," or "cavity" materials.
 - 1. Available Products:
 - a. BioFireShield; RectorSeal Smoke and Acoustic Sealant.
 - b. Hilti; CP 606 Flexible Firestop Sealant.
 - c. Hilti; CP 653 BA Firestop Speed Sleeve.
 - d. Hilti; FS-ONE Intumescent Firestop Sealant.
 - e. Or equal
- E. Accessories: Provide components for each through-penetration firestop system that are needed to install fill materials and to comply with Part 1 "Performance Requirements" Article. Use only components specified by through-penetration firestop system manufacturer and approved by qualified testing and inspecting agency for firestop systems indicated.
- F. Endothermic Mats: 3M Interam Endothermic Mats by 3M Fire Protection Products; located in rated walls behind cabinet unit heaters, fire extinguisher cabinets and electrical panels where there are space limitations to maintain the wall rating.

2.3 MIXING

- A. For those products requiring mixing before application, comply with through-penetration firestop system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting

performance of work. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning: Clean out openings immediately before installing through-penetration firestop systems to comply with firestop system manufacturer's written instructions and with the following requirements:
 - 1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of through-penetration firestop systems.
 - 2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with through-penetration firestop systems. Remove loose particles remaining from cleaning operation.
 - 3. Remove laitance and form-release agents from concrete.
- B. Priming: Prime substrates where recommended in writing by through-penetration firestop system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
- C. Masking Tape: Use masking tape to prevent through-penetration firestop systems from contacting adjoining surfaces that will remain exposed on completion of Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from firestop system materials. Remove tape as soon as possible without disturbing firestop system's seal with substrates.

3.3 THROUGH-PENETRATION FIRESTOP SYSTEM INSTALLATION

- A. General: Install through-penetration firestop systems to comply with Part 1 "Performance Requirements" Article and with firestop system manufacturer's written installation instructions and published drawings for products and applications indicated.
- B. Install forming/damming/backing materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
- C. Install fill materials for firestop systems by proven techniques to produce the following results:
 - 1. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.
 - 2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
 - 3. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 FIELD QUALITY CONTROL

- A. Inspecting Agency: Owner will engage a qualified testing agency to perform tests and inspections and prepare test reports, as required by 2015 IBC 1705.17 and 1705.17.1. Independent inspecting agency shall comply with ASTM E 2174 requirements including those related to qualifications, conducting inspections, and preparing test reports

- B. Where deficiencies are found, repair or replace through-penetration firestop systems so they comply with requirements.
- C. Proceed with enclosing through-penetration firestop systems with other construction only after inspection reports are issued and firestop installations comply with requirements.

3.5 CLEANING AND PROTECTING

- A. Clean off excess fill materials adjacent to openings as Work progresses by methods and with cleaning materials that are approved in writing by through-penetration firestop system manufacturers and that do not damage materials in which openings occur.
- B. Provide final protection and maintain conditions during and after installation that ensure that through-penetration firestop systems are without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated through-penetration firestop systems immediately and install new materials to produce systems complying with specified requirements.

END OF SECTION

SECTION 078440
FIRE-RESISTIVE JOINT SYSTEMS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the Work of this Section, including but not limited to fire-resistive joint systems for the following:
1. Floor-to-floor joints.
 2. Floor-to-wall joints.
 3. Head-of-wall joints.
 4. Wall-to-wall joints.
 5. Perimeter fire-resistive joint systems consisting of floor-to-wall joints between perimeter edge of fire-resistance-rated floor assemblies and exterior curtain walls.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and will be performed under the designated Sections:
1. Section 078410 - PENETRATION FIRESTOPPING for firestopping.
 2. Section 088810 - FIRE RATED GLASS AND FRAMING for fire rated glass assemblies.
 3. Division 21 - FIRE SUPPRESSION for fire-protection piping penetrations.
 4. Division 22 - PLUMBING for piping penetrations.
 5. Division 23 - HEATING, VENTILATING AND AIR CONDITIONING for duct and piping penetrations.
 6. Division 26 - ELECTRICAL for cable and conduit penetrations.

1.3 PERFORMANCE REQUIREMENTS

- A. General: Provide fire-resistive joint systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assembly in which fire-resistive joint systems are installed.
- B. For fire-resistive systems exposed to view, provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

1.4 REFERENCES

- A. Test Requirements: ASTM E 814, "Standard Method of Fire Tests of Through Penetration Fire Stops"

- H. International Firestop Council Guidelines for Evaluating Firestop Systems Engineering Judgments
- I. NFPA 101 - Life Safety Code
- J. NFPA 101 - Life Safety Code
- K. NFPA 70 - National Electric Code

1.5 PERFORMANCE REQUIREMENTS

- A. General: Provide fire-resistive joint systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assembly in which fire-resistive joint systems are installed.
- B. For fire-resistive systems exposed to view, provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

1.6 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
 - 1. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For fire-resistive joint system sealants, submit Health Product Declarations (HPD) or Declare product labels.
 - 2. Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010, using the applicable exposure scenario.
 - a. For fire-resistive joint system sealants, submit test results, including TVOC emissions and VOC content.
 - b. For fire-resistive joint system sealants, submit GreenGuard Gold certifications.
 - c. For wet-applied products, submit volume used.
- C. Shop Drawings: For each fire-resistive joint system, show each kind of construction condition in which joints are installed; also show relationships to adjoining construction. Include fire-resistive joint system design designation of testing and inspecting agency acceptable to authorities having jurisdiction that demonstrates compliance with requirements for each condition indicated.
 - 1. Submit documentation, including illustrations, from a qualified testing and inspecting agency that is applicable to each fire-resistive joint system configuration for construction and penetrating items.
- D. Fire-Resistive Joint Systems Schedule: For each fire-resistive joint system. Include location and design designation of qualified testing agency.
 - 1. Where Project conditions require modification to a qualified testing agency's illustration for a particular fire-resistive joint system condition, submit illustration, with modifications marked, approved by fire-resistive joint system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.
- E. Product Certificates: For each type of fire-resistive joint system, signed by product manufacturer.
- F. Qualification Data: For Installer.
- G. Field quality-control test reports.
- H. Research/Evaluation Reports: For each type of fire-resistive joint system.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: A firm experienced in installing through-penetration fire stop systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction of a minimum of five projects with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install

manufacturer's products per specified requirements. Evidence of FMG 4991 approval is acceptable for installer qualifications, but not mandatory.

- B. Installation Responsibility: Assign installation of through-penetration firestop systems and fire-resistive joint systems in Project to a single qualified installer.
- C. Source Limitations: Obtain fire-resistive joint systems, for each kind of joint and construction condition indicated, through one source from a single manufacturer.
- D. Fire-Test-Response Characteristics: Provide fire-resistive joint systems that comply with the following requirements and those specified in Part 1 "Performance Requirements" Article:
 - 1. Fire-resistance tests are performed by a qualified testing and inspecting agency. A qualified testing and inspecting agency is UL or another agency performing testing and follow-up inspection services for fire-resistive joint systems acceptable to authorities having jurisdiction.
 - 2. Fire-resistive joint systems are identical to those tested per methods indicated in Part 1 "Performance Requirements" Article and comply with the following:
 - a. Fire-resistive joint system products bear classification marking of qualified testing and inspecting agency.
 - b. Fire-resistive joint systems correspond to those indicated by referencing system designations of the qualified testing and inspecting agency.
- E. Manufacturer's Field Services: Contractor to ensure a manufacturer's direct representative is on-site during initial installation of firestop systems to train appropriate contractor personnel in proper selection and installation procedures. Training will be done per manufacturer's written recommendations published in their literature and drawing details.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver fire-resistive joint system products to Project site in original, unopened containers or packages with qualified testing and inspecting agency's classification marking applicable to Project and with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, lot number, shelf life, curing time, and mixing instructions for multicomponent materials.
- B. Store and handle materials for fire-resistive joint systems to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.9 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install fire-resistive joint systems when ambient or substrate temperatures are outside limits permitted by fire-resistive joint system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
- B. Ventilate fire-resistive joint systems per manufacturer's written instructions by natural means or, if this is inadequate, forced-air circulation.

1.10 COORDINATION

- A. Coordinate construction of joints to ensure that fire-resistive joint systems are installed according to specified requirements.

- B. Coordinate sizing of joints to accommodate fire-resistive joint systems.
- C. Do not cover up through-penetration firestop system installations that will become concealed behind other construction until each installation has been examined building inspector, if required by authorities having jurisdiction.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Products: Subject to compliance with requirements, fire-resistive joint systems that may be incorporated into the Work include, but are not limited to the following:
 - 1. Hilti, Inc.(Basis of Design)
 - 2. BioFireshield; RectorSeal Corporation.
 - 3. Specified Technologies, Inc. (STI).
 - 4. 3M; Fire Protection Products Division.
 - 5. Or equal
- B. The following products are listed as the Basis of Design only to establish a level of quality and performance for the materials indicated. Equal products will be acceptable if meeting the characteristics of the materials listed, subject to approval by the Architect.
- C. Sealants, sprays, or pre-formed materials for use with fire-rated construction joints and other gaps, the following products are acceptable:
 - 1. Hilti Firestop Top Track Seal (CFS-TTS)
 - 2. Hilti Firestop Joint Spray (CFS-SP WB)
 - 3. Hilti Firestop Silicone Joint Spray (CFS-SP SIL)
 - 4. Hilti Flexible Firestop Sealant (CP 606)
 - 5. Hilti Firestop Silicone Sealant Gun Grade (CFS-S SIL GG)
 - 6. Hilti Firestop Silicone Sealant Self Leveling (CFS-S SIL SL)
 - 7. Hilti Bottom-of-Wall Sealant (CP 605)
- D. Sealants for use as part of a perimeter fire barrier system between fire-resistance-rated floors and exterior wall assemblies, the following products are acceptable:
 - 1. Hilti Firestop Joint Spray (CFS-SP WB)
 - 2. Hilti Firestop Silicone Joint Spray (CFS-SP SIL)
 - 3. Hilti Firestop Silicone Sealant Gun Grade (CFS-S SIL GG)
 - 4. Hilti Firestop Silicone Sealant Self Leveling (CFS-S SIL SL)
- E. Pre-formed mineral wool designed to fit flutes of metal profile deck and gap between top of wall and metal deck profile; use as a backer for spray material.
 - 1. Hilti Speed Plugs (CP 777)
 - 2. Hilti Speed Strips (CP 767)

2.2 FIRE-RESISTIVE JOINT SYSTEMS

- A. Low-Emitting Materials: Fire-resistive joint system sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for

the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- B. VOC Content: Provide fire-resistive joint system sealants that comply with the following limits for VOC content:
 - 1. Architectural Sealants: 250 g/L.
 - 2. Sealant Primers for Nonporous Substrates: 250 g/L.
 - 3. Sealant Primers for Porous Substrates: 775 g/L.
 - 4. Methylene chloride and perchloroethylene may not be intentionally added to sealants.
- C. General: Where required, provide fire-resistive joint systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which fire-resistive joint systems are installed. Fire-resistive joint systems shall accommodate building movements without impairing their ability to resist the passage of fire and hot gases.
- D. Joints in or between Fire-Resistance-Rated Construction: Provide fire-resistive joint systems with ratings determined per ASTM E 1966 or UL 2079.
- E. Joints at Exterior Curtain-Wall/Floor Intersections: Provide fire-resistive joint systems with rating determined by ASTM E 119 based on testing at a positive pressure differential of 0.01-inch wg (2.49 Pa) or ASTM E 2307.
 - 1. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of the floor assembly.
- F. Joints in Smoke Barriers: Provide fire-resistive joint systems with ratings determined per UL 2079.
 - 1. L-Rating: Not exceeding 5.0 cfm/ft (0.00775 cu. m/s x m) of joint at 0.30 inch wg (74.7 Pa) at both ambient and elevated temperatures.
- G. Compatibility: Provide fire-resistive joint systems that are compatible with joint substrates, under conditions of service and application, as demonstrated by fire-resistive joint system manufacturer based on testing and field experience.
- H. Accessories: Provide components of fire-resistive joint systems, including primers and forming materials, that are needed to install fill materials and to comply with Part 1 "Performance Requirements" Article. Use only components specified by fire-resistive joint system manufacturer and approved by the qualified testing and inspecting agency for systems indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of work.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning: Clean joints immediately before installing fire-resistive joint systems to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:
 - 1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of fill materials.
 - 2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with fill materials. Remove loose particles remaining from cleaning operation.
 - 3. Remove laitance and form-release agents from concrete.
- B. Priming: Prime substrates where recommended in writing by fire-resistive joint system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
- C. Masking Tape: Use masking tape to prevent fill materials of fire-resistive joint system from contacting adjoining surfaces that will remain exposed on completion of Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from fire-resistive joint system materials. Remove tape as soon as possible without disturbing fire-resistive joint system's seal with substrates or damaging adjoining surfaces.

3.3 INSTALLATION

- A. General: Install fire-resistive joint systems to comply with Part 1 "Performance Requirements" Article and fire-resistive joint system manufacturer's written installation instructions for products and applications indicated.
- B. Install forming/packing/backing materials and other accessories of types required to support fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
- C. Install fill materials for fire-resistive joint systems by proven techniques to produce the following results:
 - 1. Fill voids and cavities formed by openings and forming/packing/backing materials as required to achieve fire-resistance ratings indicated.
 - 2. Apply fill materials so they contact and adhere to substrates formed by joints.
 - 3. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 FIELD QUALITY CONTROL

- A. Inspecting Agency: Owner will engage a qualified testing agency to perform tests and inspections and prepare test reports, as required by 2015 IBC 1705.17 and 1705.17.2. Independent inspecting agency shall comply with ASTM E 2393 requirements including those related to qualifications, conducting inspections, and preparing test reports.
- B. Testing Services: Inspecting of completed installations of fire-resistive joint systems shall take place in successive stages as installation of fire-resistive joint systems proceeds. Do not proceed with installation of joint systems for the next area until inspecting agency determines completed work shows compliance with requirements.

1. Inspecting agency shall state in each report whether inspected fire-resistive joint systems comply with or deviate from requirements.
 - C. Remove and replace fire-resistive joint systems where inspections indicate that they do not comply with specified requirements.
 - D. Additional inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
 - E. Proceed with enclosing fire-resistive joint systems with other construction only after inspection reports are issued and fire-resistive joint systems comply with requirements.
- 3.5 CLEANING AND PROTECTING
- A. Clean off excess fill materials adjacent to joints as Work progresses by methods and with cleaning materials that are approved in writing by fire-resistive joint system manufacturers and that do not damage materials in which openings occur.
 - B. Provide final protection and maintain conditions during and after installation that ensure fire-resistive joint systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated fire-resistive joint systems immediately and install new materials to produce fire-resistive joint systems complying with specified requirements.

END OF SECTION

SECTION 079200

JOINT SEALANTS

(Part of Work of Section 070001 - WATERPROOFING, DAMPPROOFING AND CAULKING,
Trade Bid Required)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Joint sealants, caulking, and fillers at all locations shown or otherwise required unless noted as being by other trades.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 070800 – THERMAL AND MOISTURE PROTECTION SYSTEM COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 042000 - UNIT MASONRY for masonry control and expansion joint fillers and gaskets.
 - 2. Section 088000 - GLAZING for glazing sealants.
 - 3. Section 092110 - GYPSUM BOARD ASSEMBLIES for sealing perimeter joints of gypsum board partitions to reduce sound transmission.
 - 4. Section 093013, 16, and 19 for sealing of expansion, contraction, control, and isolation joints in tile surfaces
 - 5. Section 095100 - ACOUSTICAL CEILINGS for sealing edge moldings at perimeters of acoustical ceilings.
 - 6. Section 323000 – SITE IMPROVEMENTS for sealant at site pavement.

1.3 PERFORMANCE REQUIREMENTS

- A. Provide elastomeric joint sealants that establish and maintain watertight and airtight continuous joint seals without staining or deteriorating joint substrates.

- B. Provide joint sealants for interior applications that establish and maintain airtight and water-resistant continuous joint seals without staining or deteriorating joint substrates.

1.4 SUBMITTALS

- A. Product Data: For each product indicated.
- B. LEED Submittals:
 - 1. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For sealants, submit Health Product Declarations (HPD) or Declare product labels.
 - 2. Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010, using the applicable exposure scenario.
 - a. For sealants, submit test results, including TVOC emissions and VOC content.
 - b. For sealants, submit GreenGuard Gold certifications.
 - c. For wet-applied products, submit volume used.
- C. Samples for Verification: For each type and color of joint sealant required, provide Samples with joint sealants in 1/2-inch- wide joints formed between two 6-inch-long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.
- D. Joint-Sealant Schedule: Include the following information:
 - 1. Joint-sealant application, joint location, and designation.
 - 2. Joint-sealant manufacturer and product name.
 - 3. Joint-sealant formulation.
 - 4. Joint-sealant color.
- E. Qualification Data: For Installer and qualified testing agency.
- F. Product Test Reports: Based on comprehensive testing of product formulations performed by a qualified testing agency, indicating that sealants comply with requirements.
- G. Preconstruction Field Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on preconstruction testing specified in "Quality Assurance" Article.
- H. Compatibility and Adhesion Test Reports: From sealant manufacturer, indicating the following:
 - 1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
 - 2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
- I. Field Test Report Log: For each elastomeric sealant application.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized Installer who is approved or licensed for installation of elastomeric sealants required for this Project.
- B. Product Testing: Test joint sealants using a qualified testing agency.
 - 1. Testing Agency Qualifications: Qualified according to ASTM C 1021 to conduct the testing indicated.
- C. Source Limitations: Obtain each type of joint sealant through one source from a single manufacturer.
- D. Preconstruction Compatibility and Adhesion Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.
 - 1. Use manufacturer's standard test method to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
 - a. Adhesion Testing: Use ASTM C 794 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
 - b. Compatibility Testing: Use ASTM C 1087 to determine sealant compatibility when in contact with joint sealant backing and glazing and gasket materials.
 - 2. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 - 3. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures including use of specially formulated primers.
 - 4. Testing will not be required if joint-sealant manufacturers submit joint preparation data that are based on previous testing of current sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those submitted.
- E. Preconstruction Field-Adhesion Testing: Before installing elastomeric sealants, field test their adhesion to Project joint substrates as follows:
 - 1. Locate test joints where indicated on Project or, if not indicated, as directed by Architect.
 - 2. Conduct field tests for each application indicated below:
 - a. Each type of elastomeric sealant and joint substrate indicated.
 - b. Each type of nonelastomeric sealant and joint substrate indicated.
 - 3. Notify Architect seven days in advance of dates and times when test joints will be erected.
 - a. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193.
 - 1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.

4. Report whether sealant in joint connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each type of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
 5. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.
- F. Mockups: Before installing joint sealants, apply elastomeric sealants as follows to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution:
1. Joints in mockups of assemblies specified in other Sections that are indicated to receive elastomeric joint sealants, which are specified by reference to this section.
- G. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.
- 1.6 PROJECT CONDITIONS
- A. Do not proceed with installation of joint sealants under the following conditions:
1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F.
 2. When joint substrates are wet.
 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.
- 1.7 WARRANTY
- A. Special Installer's Warranty: Installer's standard form in which Installer agrees to repair or replace elastomeric joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
1. Warranty Period: Two years from date of Substantial Completion.
- B. Special Manufacturer's Warranty: Manufacturer's standard form in which elastomeric sealant manufacturer agrees to furnish elastomeric joint sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.
1. Warranty Period Elastomeric, Non-silicone Sealants: Minimum warranty five years from date of Substantial Completion.
 2. Warranty Period Silicone Sealants: Minimum warranty twenty years from date of Substantial Completion.
- C. Special warranties specified in this Article exclude deterioration or failure of joint sealants from the following:

1. Movement of the structure caused by stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
2. Disintegration of joint substrates from natural causes exceeding design specifications.
3. Mechanical damage caused by individuals, tools, or other outside agents.
4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by sealant manufacturer, based on testing and field experience.
- B. Low-Emitting Materials: Interior sealants shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. VOC Content: Provide interior sealants and sealant primers that comply with the following limits for VOC content:
 1. Architectural Sealants: 250 g/L.
 2. Sealant Primers for Nonporous Substrates: 250 g/L.
 3. Sealant Primers for Porous Substrates: 775 g/L.
 4. Methylene chloride and perchloroethylene may not be intentionally added to sealants.
- D. Colors of Exposed Joint Sealants: Provide colors as selected by the Architect from manufacturer's full range of standard and custom colors; maximum of five colors, three standard colors and two custom colors.

2.2 JOINT SEALANTS

- A. Elastomeric Sealants: Comply with ASTM C 920 and other requirements indicated for each liquid-applied chemically curing sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.
- B. Stain-Test-Response Characteristics: Elastomeric sealants shall be nonstaining to porous substrates. Provide products that have undergone testing according to ASTM C 1248 and have not stained porous joint substrates indicated for Project.
- C. Suitability for Contact with Food: Where elastomeric sealants are indicated for joints that will come in repeated contact with food, provide products that comply with 21 CFR 177.2600 or ANSI/NSF Standard 51.
- D. Exterior Silicone Sealant, Single-Component Neutral-Curing Type:
 1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Dow Corning Corporation; 790.
 - b. GE Silicones; SilPruf LM SCS2700.

- c. Pecora Corporation; 864.
 - d. Tremco Inc.; Spectrem 1.
 - e. Or equal
- 2. Extent of Use: Exterior joints in vertical and soffit surfaces.
- 3. Provide Custom Color at Exterior Stone Cladding with up to 4 mockups for color confirmation
- E. Traffic Sealant: Exterior Urethane Sealant, Multicomponent Pourable (Self-Leveling) Type for Pedestrian Traffic: ASTM C 920, Type M, Grade P, Class 25, Use T, M, & O.
 - 1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Meadows, W. R., Inc.; POURTHANE.
 - b. Pecora Corporation; Urexpan NR-200.
 - c. Sika; Sikaflex-2c SL.
 - d. Tremco Inc.; THC-901.
 - e. Or equal
 - 2. Extent of Use: Exterior joints in horizontal surfaces.
- F. Interior Sanitary Silicone Sealant, Single-Component Mildew-Resistant, Acid-Curing (Acetoxo) Type: ASTM C 920, Type S, Grade NS, Class 25, Use NT, G, A, and O.
 - 1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Bostik; Pure Silicone.
 - b. Dow Corning Corporation; 786 Mildew Resistant.
 - c. GE Silicones; Sanitary SCS1700.
 - d. Pecora; 898NST.
 - e. Sika; Sikasil GP.
 - f. Tremco; Tremsil 200.
 - g. Or equal
 - 2. Extent of Use: Interior sanitary joints at toilet rooms, kitchens, and other wet areas.
- G. Interior Acrylic Latex Sealant: Acrylic latex or siliconized acrylic latex, ASTM C 834, Type OP, Grade NF.
 - 1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Henkel Corp.; Loctite Polyseamseal Acrylic Caulk with Silicone.
 - b. Pecora Corporation; AC-20+.
 - c. Tremco Inc.; Tremflex 834.
 - d. Or equal
 - 2. Extent of Use: Interior non-moving joints.

2.3 JOINT-SEALANT BACKING

- A. Sealant Backing Material, General: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
- B. Cylindrical Sealant Backings: ASTM C 1330, Type B (bicellular material with a surface skin) or other type, as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.
 - 1. Availavle Products: Armacell Canada Inc.; ITP Standard Backer Rod; or equal.
- C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where applicable.

2.4 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
- C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:
 - 1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.

2. Clean porous joint substrate surfaces by brushing, grinding, blast cleaning, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include concrete, masonry, unglazed surfaces of ceramic tile, and exterior insulation and finish systems.
 3. Remove laitance and form-release agents from concrete.
 4. Clean nonporous surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following metal, glass, porcelain enamel, and glazed surfaces of ceramic tile.
- B. Joint Priming: Prime joint substrates, where recommended in writing by joint-sealant manufacturer, based on preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
- C. Masking Tape: Use masking tape where required to prevent contact of sealant with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF JOINT SEALANTS

- A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.
- B. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.
- C. Install sealant backings of type indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
1. Do not leave gaps between ends of sealant backings.
 2. Do not stretch, twist, puncture, or tear sealant backings.
 3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.
- D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.
- E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
1. Place sealants so they directly contact and fully wet joint substrates.
 2. Completely fill recesses in each joint configuration.
 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- F. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified below to form smooth, uniform beads

of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.

1. Remove excess sealant from surfaces adjacent to joints.
2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
3. Provide concave joint configuration per Figure 5A in ASTM C 1193, unless otherwise indicated.

3.4 FIELD QUALITY CONTROL

- A. Field-Adhesion Testing: Refer to section 070800-THERMAL AND MOISTURE PROTECTION SYSTEMS COMMISSIONING

3.5 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.6 PROTECTION

- A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

END OF SECTION

SECTION 079500
EXPANSION CONTROL

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Architectural expansion joint systems for interior and exterior joints as scheduled on the Drawings and specified in this Section.
- B. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 070800 – THERMAL AND MOISTURE PROTECTION SYSTEM COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 033000 - CAST-IN-PLACE CONCRETE for block-outs for architectural joint systems in concrete floors, decks, and walls.
 2. Section 042000 - UNIT MASONRY for masonry wall expansion joint cover.
 3. Section 075400 - THERMOPLASTIC MEMBRANE ROOFING for roof level expansion joint.
 4. Section 078446 - FIRE-RESISTIVE JOINT SYSTEMS for fire-resistive joints not associated with expansion control assemblies.
 5. Section 079200 - JOINT SEALANTS for elastomeric sealants and preformed compressed-foam sealants without metal frames.
 6. Section 092110 - GYPSUM BOARD ASSEMBLIES for framing joint in gypsum board assemblies.

1.3 DEFINITIONS

- A. Architectural Joint System: Any filler or cover used to span, fill, cover, or seal a joint, except expanding foam seals and poured or foamed in-place sealants.
- B. Cyclic Movement: Periodic change between widest and narrowest joint widths in an automatically mechanically controlled system.
- C. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist passage of flame and hot gases through a movement joint.
- D. Maximum Joint Width: Widest linear gap a joint system tolerates and performs its designed function without damaging its functional capabilities.

- E. Minimum Joint Width: Narrowest linear gap a joint system tolerates and performs its designed function without damaging its functional capabilities.
- F. Movement Capability: Value obtained from the difference between widest and narrowest widths of a joint opening typically expressed in numerical values (mm or inches) or a percentage of nominal value of joint width.
- G. Nominal Joint Width: Width of linear gap indicated as representing the conditions existing when architectural joint systems will be installed or, if no nominal joint width is indicated, a width equal to the sum of maximum and minimum joint widths divided by two.

1.4 PERFORMANCE REQUIREMENTS

- A. General: Provide factory-fabricated architectural joint systems capable of withstanding the types of loads and of accommodating the kinds of movement, and the other functions for which they are designed including those specified below, without failure. Types of failure include those listed in Appendix X3 of ASTM E 1399.
 - 1. Vehicular Traffic Joints: Support vehicular traffic across joint, including construction equipment and full-loaded fire apparatus.
 - 2. Pedestrian Traffic Joints: Support pedestrian traffic across joint.
 - 3. Exterior Joints: Maintain continuity of weather enclosure.
 - 4. Joints in Fire-Resistance-Rated Assemblies: Maintain fire-resistance ratings of assemblies.
 - 5. Joints in Smoke Barriers: Maintain integrity of smoke barrier.
 - 6. Joints in Acoustically Rated Assemblies: Inhibit passage of airborne noise.
 - 7. Other Joints: Where indicated, provide joint systems that prevent penetration of water, moisture, and other substances deleterious to building components or content.
 - 8. Seismic Performance: Expansion control systems shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 - a. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified and the system will be fully operational after the seismic event."
 - b. Component Importance Factor is 1.5.
 - 9. Joints in Surfaces with Architectural Finishes: Serve as finished architectural joint closures.

1.5 SUBMITTALS

- A. Product Data: Include manufacturer's product specifications, construction details, material and finish descriptions, and dimensions of individual components and seals.
- B. Shop Drawings: For each joint system specified, provide the following:
 - 1. Placement Drawings: Include line diagrams showing entire route of each joint system, plans, elevations, sections, details, joints, splices, locations of joints and splices, and attachments to other Work. Where joint systems change planes, provide Isometric Drawings depicting how components interconnect to achieve continuity of joint covers and fillers.

- C. Samples for Verification: Full-size units 6 inches long of each type of joint system indicated; in sets for each finish, color, texture, and pattern specified, showing the full range of variations expected in these characteristics.
- D. Product Test Reports: From a qualified testing agency indicating architectural joint systems comply with requirements, based on comprehensive testing of current products.

1.6 QUALITY ASSURANCE

- A. Source Limitations: Obtain architectural joint systems through one source from a single manufacturer. Coordinate compatibility with adjoining joint systems specified in other Sections.
- B. Fire-Test-Response Characteristics: Where indicated, provide joint systems incorporating fire barriers that are identical to those of assemblies tested for fire resistance per UL 2079 or ASTM E 1966, including hose-stream test of vertical wall assemblies and wall-to-ceiling assemblies, by a testing and inspecting agency acceptable to authorities having jurisdiction.
 - 1. Hose Stream Test: Wall-to-wall and wall-to-ceiling systems shall be subjected to hose stream testing.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Balco, Inc.
 - 2. Construction Specialties, Inc.
 - 3. JointMaster/InPro Corporation.
 - 4. Michael Rizza Company, LLC.
 - 5. MM Systems Corporation.
 - 6. Nystrom, Inc.
 - 7. Sika / Emseal.
 - 8. Watson Bowman Acme Corp.; a BASF Construction Chemicals business.
 - 9. Or equal

2.2 MATERIALS

- A. Aluminum: ASTM B 221, alloy 6063-T5 for extrusions; ASTM B 209, alloy 6061-T6 for sheet and plate.
 - 1. Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.
- B. Stainless Steel: ASTM A 666, Type 304 with No. 2B finish, unless otherwise indicated, for plates, sheet, and strips.
- C. Preformed Seals: Single or multicellular extruded elastomeric seals designed with or without continuous, longitudinal, internal baffles. Formed to be installed in frames or with anchored flanges, in color indicated or, if not indicated, as selected by Architect from manufacturer's standard colors.

- D. Strip Seals: Elastomeric membrane or tubular extrusions with a continuous longitudinal internal baffle system throughout complying with ASTM E 1783; used with compatible frames, flanges, and molded-rubber anchor blocks.
- E. Compression Seals: Preformed, elastomeric extrusions having internal baffle system complying with ASTM E 1612 in sizes and profiles indicated or as recommended by manufacturer.
- F. Preformed Cellular Foams: Nonextruded, low-density, crosslinked, nitrogen-blown ethylene-vinyl-acetate copolymer extruded, compressible foam.
- G. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint.
- H. Accessories: Manufacturer's standard anchors, clips, fasteners, set screws, spacers, flexible moisture barrier and filler materials, drain tubes, lubricants, adhesives, and other accessories compatible with material in contact, as indicated or required for complete installations.

2.3 ARCHITECTURAL JOINT SYSTEMS

- A. General: Provide joint systems of design, basic profile, materials, and operation indicated. Provide units with the capability to accommodate joint widths indicated and variations in adjacent surfaces.
 - 1. Furnish units in longest practicable lengths to minimize number of end joints. Provide hairline mitered corners where joint changes directions or abuts other materials.
 - 2. Include closure materials and transition pieces, tee-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous joint systems.
 - 3. Frames for Strip Seals: Designed with semiclosed cavity that provides a mechanical lock for seals of type indicated.
 - 4. Public Area Seals: Non-slip seals designed for installation on treads and risers and to lie flat with adjacent surfaces, and complying with ADA guidelines for public areas.

2.4 FLOOR EXPANSION JOINT COVERS

- A. Floor Joint Cover Assembly consisting of frames, and cover plate with two elastomeric joint fillers. (for 1" - 4" nominal, horizontal expansion joints)
 - 1. Basis Design: Floor to Floor "FDT" Flush line Dual Seal System as manufactured by MM Systems Corporation.
 - 2. Extrusion: Clear anodic, Class I aluminum alloys and tempers. Frame heights shall be flush with finish flooring.
 - 3. Visual seal: System manufacturers standard elastomeric seal.
 - a. Color: As selected by Architect from manufacturer's full range.

2.5 WALL EXPANSION JOINT COVERS

- A. Aluminum expansion joint system consisting of aluminum covers with factory installed supporting isolation gasket (for 1" - 4" nominal, vertical expansion joints)
 - 1. Basis Design:

- a. At Flat walls: "EX-K" Metal Wall and Ceiling System as manufactured by MM Systems Corporation.
- b. At Corners: "EX-L" Metal Wall and Ceiling System as manufactured by MM Systems Corporation.

2. Extrusion: Clear anodic, aluminum conforming to ASTM B221

2.6 CEILING JOINT COVERS

- A. Elastomeric-Seal Ceiling Joint Cover Assembly consisting of elastomeric seal anchored to frames fixed to sides of joint gap. (for 1" - 4" nominal, horizontal expansion joints)
 1. Basis Design: Ceiling to Ceiling "FCF" and Ceiling to Wall "FCFC" as manufactured by Construction Specialties, Muncy, PA.
 2. Extrusion: Clear anodic, Class I aluminum alloys and tempers. Frame heights shall be flush with finish flooring.
 3. Primary seal: Dual Durometer 65 Shore A, 90 Shore A, ASTM D2000.
 - a. Color: As selected by Architect from manufacturer's full range.
 4. Ceiling applications shall align with and match flush covers used in the wall.

2.7 EXTERIOR EXPANSION JOINTS

- A. Silicone coated, preformed, precompressed self-expanding sealant system for primary seal for wall joints.
 1. Basis Design: Seismic Colorseal as manufactured by Emseal Joint Systems Limited.

2.8 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2.9 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.

2.10 STAINLESS-STEEL FINISHES

- A. Remove tool and die marks and stretch lines or blend into finish.
- B. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece.

- C. Bright, Directional Polish: No. 4 finish.
- D. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Prepare substrates according to architectural joint system manufacturer's written instructions.
- B. Coordinate and furnish anchorages, Placement Drawings, and instructions for installing joint systems to be embedded in or anchored to concrete or to have recesses formed into edges of concrete slab for later placement and grouting-in of frames.
- C. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary to secure joint systems to in-place construction, including threaded fasteners with drilled-in expansion shields for masonry and concrete where anchoring members are not embedded in concrete. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of joint systems.
- D. Provide the services of a surveyor licensed in the state of Massachusetts prior to and after paving substrate to confirm alignment of joint.

3.2 INSTALLATION

- A. Comply with manufacturer's written instructions for handling and installing architectural joint assemblies and materials, unless more stringent requirements are indicated.
- B. Coordinate installation of architectural joint assembly materials and associated work so complete assemblies comply with assembly performance requirements.
- C. Terminate exposed ends of exterior architectural joint assemblies with factory-fabricated termination devices to maintain waterproof system.
- D. Install factory-fabricated transitions between building expansion-joint cover assemblies and roof expansion-joint assemblies to provide continuous, uninterrupted, watertight construction.
- E. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required to install joint systems.
 - 1. Install joint cover assemblies in true alignment and proper relationship to joints and adjoining finished surfaces measured from established lines and levels.
 - 2. Allow adequate free movement for thermal expansion and contraction of metal to avoid buckling.
 - 3. Set covers in horizontal surfaces at elevations that place exposed surfaces flush with adjoining finishes.
 - 4. Locate covers in continuous contact with adjacent surfaces.
 - 5. Securely attach in place with required accessories.
 - 6. Locate anchors at interval recommended by manufacturer, but not less than 3 inches from each end and not more than 24 inches o.c.

- F. Continuity: Maintain continuity of joint systems with a minimum number of end joints and align metal members. Cut and fit ends to produce joints that will accommodate thermal expansion and contraction of metal to avoid buckling of frames. Adhere flexible filler materials, if any, to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.
- G. Extruded Preformed Seals: Install seals to comply with manufacturer's written instructions and with minimum number of end joints.
 - 1. For straight sections, provide preformed seals in continuous lengths.
 - 2. Vulcanize or heat-weld field splice joints in preformed seal material to provide watertight joints using procedures recommended by manufacturer.
 - 3. Apply adhesive, epoxy, or lubricant adhesive approved by manufacturer to both frame interfaces before installing preformed seals.
 - 4. Seal transitions according to manufacturer's written instructions.
 - 5. Install foam seals with adhesive recommended by manufacturer and heat seal all splices.
- H. Joint Systems with Seals: Seal end joints within continuous runs and joints at transitions according to manufacturer's written instructions to provide a watertight installation.
- I. Seismic Seals: Install interior seals in continuous lengths. Install exterior seal in standard lengths and vulcanize or heat-weld field splice joints to provide watertight joints using manufacturer's recommended procedures. Seal transitions and end joints according to manufacturer's written instructions.
- J. Fire Barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and end joints.

3.3 CLEANING AND PROTECTION

- A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.

END OF SECTION

SECTION 080001
METAL WINDOWS
(TRADE BID REQUIRED)

Trade Contractors on this CM-at-Risk project are required by law to provide payment and performance bonds for the full value of their trade contracts, and trade contractors must include the full cost of the required payment and performance bonds in the bid price they submit in response to this RFB.

Bids will only be accepted from trade contractors pre-qualified by the awarding authority.

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.
- B. Time, Manner and Requirements for Submitting Trade Bids:
 - 1. Refer to Division 00 "Invitation to Bid" for Bidding Instructions.
- C. Reference Drawings: The Work of this Trade Bid is shown on the following Contract Drawings: ((always insert accurate list of sheet numbers of applicable Drawings)).
 - 1. Structural S0-0-1 through SS-1-1
 - 2. Code Plans CD1-1 through CD1-6
 - 3. Architectural A1-0-0 through AM-1-7
- D. Trade Contractor shall also examine all other Drawings and all other Sections of the Specifications for coordination and requirements therein affecting the work of this Section, not just those pertaining particularly to this sub-trade.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. All Work of Section 084110 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONT
 - 2. All Work of Section 084410 - GLAZED ALUMINUM CURTAIN WALLS
 - 3. All Work of Section 084523 - FIBERGLASS-SANDWICH-PANEL ASSEMBLIES
 - 4. All Work of Section 085110 - ALUMINUM WINDOWS
 - 5. All Work of Section 086510 - PASS WINDOWS
 - 6. All Work of Section 088050 - FIRE RATED GLAZED ASSEMBLIES

1.3 GENERAL BUILDING COMMISSIONING

- A. The work of this Section is subject to full building commissioning testing performed by the Owner's Commissioning Agent. Trade Contractor shall coordinate, cooperate, and assist the Commissioning Agent in acquiring required test data and/or documentation. Refer to Division 01

Section "General Commissioning Requirements" for specific requirements affecting the work of this Section. Defective or non-complaint work resulted from the commissioning test shall be repaired, or replaced if not repairable, at no cost to the Owner.

1.4 LEED V4 BD+C: SCHOOL REQUIREMENTS

- A. The Project, including the work of this Section, is subject to the provisions of LEED "Silver" Certification Requirements. Trade Contractor, Supplier, Vendor, and Manufacturer of any tier shall be responsible for compliance with any and all applicable LEED administrative, procedural, submittal, and specification requirements. Filed Sub Bid Sub-Contractor, Supplier, Vendor, and Manufacturer of any tier shall endeavor to coordinate and cooperate with the General Contractor's LEED Coordinator in acquiring required product and cost data, and to document and obtain the maximum Claimed Points in any and all applicable categories of the Scorecard. Refer to Division 01 Section "LEED v4 BD+C: School Requirements" and attached LEED Project Scorecard for further requirements affecting the work of this Section.

1.5 SCAFFOLDING AND STAGING

- A. Trade Contractor shall obtain required permits for, and provide scaffolds, staging, and other similar raised platforms required to access and execute the Work of this trade.
1. Scaffolding and staging required for use by Trade Bid Sub-Contractor shall be furnished, erected, maintained in a safe condition, and dismantled when no longer required, by the Trade requiring such scaffolding and staging.
 2. Enclose all exterior scaffolding or staging outside of the construction fence with 8 foot height plywood enclosure at end of each work day to prohibit unauthorized access to the scaffolding or staging.
 3. Portable ladders and mobile platforms of all required heights shall also be provided.

END OF SECTION

SECTION 080002
GLASS AND GLAZING
(TRADE BID REQUIRED)

Trade Contractors on this CM-at-Risk project are required by law to provide payment and performance bonds for the full value of their trade contracts, and trade contractors must include the full cost of the required payment and performance bonds in the bid price they submit in response to this RFB.

Bids will only be accepted from trade contractors pre-qualified by the awarding authority.

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 1 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.
- B. Time, Manner and Requirements for Submitting Trade Bids:
 - 1. Refer to Division 00 "Invitation to Bid" for Bidding Instructions.
- C. Reference Drawings: The Work of this Trade Bid is shown on the following Contract Drawings: ((always insert accurate list of sheet numbers of applicable Drawings)).
 - 1. Code Plans CD1-1 through CD1-6
 - 2. Architectural A1-0-0 through AM-1-7
- D. Trade Contractor shall also examine all other Drawings and all other Sections of the Specifications for coordination and requirements therein affecting the work of this Section, not just those pertaining particularly to this sub-trade.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. All Work of Section 088000 - GLAZING.

1.3 GENERAL BUILDING COMMISSIONING

- A. The work of this Section is subject to full building commissioning testing performed by the Owner's Commissioning Agent. Trade Contractor shall coordinate, cooperate, and assist the Commissioning Agent in acquiring required test data and/or documentation. Refer to Division 01 Section "General Commissioning Requirements" for specific requirements affecting the work of this Section. Defective or non-complaint work resulted from the commissioning test shall be repaired, or replaced if not repairable, at no cost to the Owner.

1.4 LEED V4 BD+C: SCHOOL REQUIREMENTS

- A. The Project, including the work of this Section, is subject to the provisions of LEED "Silver" Certification Requirements. Trade Contractor, Supplier, Vendor, and Manufacturer of any tier shall be responsible for compliance with any and all applicable LEED administrative, procedural, submittal, and specification requirements. Filed Sub Bid Sub-Contractor, Supplier, Vendor, and Manufacturer of any tier shall endeavor to coordinate and cooperate with the General Contractor's LEED Coordinator in acquiring required product and cost data, and to document and obtain the maximum Claimed Points in any and all applicable categories of the Scorecard. Refer to Division 01 Section "LEED v4 BD+C: School Requirements" and attached LEED Project Scorecard for further requirements affecting the work of this Section.

1.5 SCAFFOLDING AND STAGING

- A. Trade Contractor shall obtain required permits for, and provide scaffolds, staging, and other similar raised platforms required to access and execute the Work of this trade.
1. Scaffolding and staging required for use by Trade Bid Sub-Contractor shall be furnished, erected, maintained in a safe condition, and dismantled when no longer required, by the Trade requiring such scaffolding and staging.
 2. Enclose all exterior scaffolding or staging outside of the construction fence with 8 foot height plywood enclosure at end of each work day to prohibit unauthorized access to the scaffolding or staging.
 3. Portable ladders and mobile platforms of all required heights shall also be provided.

END OF SECTION

SECTION 080800

OPENINGS SYSTEMS COMMISSIONING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and General Provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 RELATED SECTIONS

- A. Division 01 – General Requirements
- B. Section 019113 – General Commissioning Requirements
- C. Division 08 – Openings

1.3 REQUIREMENTS

- A. The Commissioning process requires the participation of Division 08, Openings Contractor, to ensure that all systems fulfill the requirements set forth in these construction documents. Refer to Section 019113-GENERAL COMMISSIONING REQUIREMENTS for additional requirements.

PART 2 - PRODUCTS (**NOT USED**)

PART 3 - EXECUTION

3.1 PRE-FUNCTIONAL CHECKLISTS

- A. Inspection reports/checklists assist in the process to document that the equipment and systems are installed properly.
- B. The contractor shall provide any associated checklist and inspection documentation associated with the respective section as indicated by the contract documents.

3.2 BUILDING ENCLOSURE ASSEMBLIES COMMISSIONING

- A. Provide Commissioning Agent time line schedule for construction of various building enclosure elements including preparation of mockups and schedule for coordination meetings.
- B. Provide safe and full access to Commissioning Agent, or his representative to make observations of the work in progress during the course of the project.
- C. Provide labor, equipment, materials and assistance to the Commissioning Agent or his representatives for field testing of building assembly elements as deemed appropriate by the Commissioning Agent
- D. Provide Commissioning Agent full access to inspection and test reports on building enclosure elements by various agencies retained by the Contractor, Installer or Owner.

3.3 FUNCTIONAL PERFORMANCE TESTING

- A. Intent of functional performance testing is to prove thru functional test procedures proper system operation.
- B. Unless specified otherwise, provide a minimum two week notice to the Commissioning Agent for specified functional tests to be witnessed.
- C. Submit Testing Agent's test reports to the Commissioning Agent and Designer/Engineer within one week of the successful completion of each test.
- D. Building enclosure assemblies shall be tested in accordance with the requirements of the Technical Sections for these items of work. Minimum field testing requirements are indicated herein.
- E. All performance criteria to be used for the basis of field testing should be provided by the Designer. All testing should be performed in accordance with the most current AAMA and ASTM Test Methods for the assembly being tested.
- F. Required Minimum functional field testing to be performed by the Owner's Third-Party Testing Agency and witnessed by the Commissioning Agent indicated below:
 - 1. Fenestration Assemblies:
 - 1) Water Penetration and Air Infiltration Tests on representative fenestration assemblies should be performed in accordance with the Project Specifications at a minimum during the following stages of construction:
 - 2. Mock-Up Assemblies:
 - 1) Field testing should be performed as soon as possible after initial installation of the assemblies, at no later than 25% completion. If failure occurs, additional testing to be performed to determine source of failure and no additional installation should occur until mock-up assemblies meet the Project Performance Requirements as demonstrated through successful field testing.
 - 3. Production Assemblies:
 - 1) Field testing should be performed on representative production fenestration assemblies following both 50% and 75% completion. Test specimens shall consist of different fenestration configurations/types during each test, unless indicated as acceptable by CxA in advance.
 - 4. Partial Test Specimens:
 - 1) Many of the curtain wall and storefront assemblies in this project are large in size. Due to the length and width of these types of assemblies, there may be issues in constructing the test chamber as specified by AAMA and ASTM - a test chamber that is able to encapsulate and introduce a test pressure differential on the entire assembly.
 - 2) To accommodate these conditions, some of the field testing performed on this project may be performed on a partial assembly/specimen, with prior approval by CxA. This partial test specimen may consist of a minimum size of 100 sf.
 - 3) Each modified test specimen shall consist of a width of at least 3 vertical mullions and extend at least 3 horizontal mullions in height, including either or both the sill and head of the assembly.
 - 4) No more than 4 total curtain wall and 4 total storefront tests shall be performed with a partial test specimen configuration.
 - 5) Units for testing will be randomly chosen by the CxA and architect.

5. With this partial test specimen configuration, air infiltration readings taken during this test may not be representative of the entire installed assembly and should be taken for reference only and not for measurement of conformance with project performance requirements.
 6. Curtainwall
 1. Air Infiltration and Water penetration; ASTM E783, ASTM E1105, AAMA 503
 - 1) Testing Quantity and Frequency
 - a) One assembly in the Mock-up
 - b) Two assembly at completion of 50% of the units
 - c) Two assembly at completion of 75% of the units
 2. Water Penetration AAMA 501.2
 - a) One assembly in the Mock-up
 - b) Two assemblies at completion of 25% of the units
 - c) Two assembly at completion of 75% of the units
 7. Storefront
 1. Air Infiltration and Water penetration; ASTM E783, ASTM E1105, AAMA 503
 - 1) Testing Quantity and Frequency
 - a) One assembly in the Mock-up
 - b) Two assembly at completion of 50% of the units
 - c) Two assembly at completion of 75% of the units
 2. Water Penetration AAMA 501.2
 - a) One assembly in the Mock-up
 - b) Two assemblies at completion of 25% of the units
 - c) Two assembly at completion of 75% of the units
 8. Insulated Transulent Wall Panel
 1. Air Infiltration and Water penetration; ASTM E783, ASTM E1105, AAMA 503
 - 1) Testing Quantity and Frequency
 - a) One assembly in the Mock-up
 - b) One assembly at completion of 50% of the units
 - c) One assembly at completion of 75% of the units
 2. Water Penetration AAMA 501.2
 - a) One assembly in the Mock-up
 - b) One assemblies at completion of 25% of the units
 - c) One assembly at completion of 75% of the units
 9. Window
 1. Air Infiltration and Water penetration; ASTM E783, ASTM E1105, AAMA 503
 - 1) Testing Quantity and Frequency
 - a) One assembly at completion of 50% of the units
 - b) One assembly at completion of 75% of the units
 2. Water Penetration AAMA 501.2
 - a) One assemblies at completion of 25% of the units
 - b) One assembly at completion of 75% of the units
- G. Additional testing may be performed at the discretion of the OPM and Designer.

3.4 FUNCTIONAL PERFORMANCE TESTS FAILURE

- A. If failure occurs during any field testing performed, the following steps are to be taken:
1. Installer to respond to and perform corrective actions for resolution of deficiencies found during all periods of construction and testing.
 2. Investigatory work shall be performed as necessary by the responsible Installer or Manufacturer to identify source of failure.
 3. The Installer or Manufacturer is to identify a course of remedial work, which is to be approved by the Owner and Designer prior to being performed. Remedial work is to be performed on the assembly that has experienced failure. Upon completion of the remedial work, re-testing is to be performed at the responsible Installer's expense.
 4. Following completion of successful field testing, all similar assemblies are to be reviewed by the Installer and those with similar issues are to be identified. The approved course of remedial work is to be performed on at least one other assembly and this assembly is to be field tested. For every failed assembly, at least one additional assembly is to be tested. Additional testing beyond this requirement may be performed at the request of the Owner/Designer.
 5. Upon completion of successful field testing of additional assemblies, the approved course of remedial work is to be performed on all similar assemblies. The course of inspection and remedial work performed by the Installer is to be documented for Record in writing and photographs as a minimum.

3.5 CORRECTIVE ACTIONS

- A. Corrective work and retesting shall continue until all deficiencies identified have been corrected to the satisfaction of the Owner.
- B. Additional costs associated with the need to retest a system, including cost of Commissioning Agent, is the responsibility of the party or parties responsible for the need for further retesting. There will be no charges to the Owner for retest of systems that do not pass the functional performance requirements during commissioning testing.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: A qualified testing agency shall be engaged to perform tests and inspections.
- B. Acceptance testing of newly installed window and door systems shall include water penetration testing in accordance with ASTM E1105
1. ASTM E1105 - This test method covers the determination of the resistance of installed exterior windows, curtain walls, skylights, and doors to water penetration when water is applied to the outdoor face and exposed edges simultaneously with a static air pressure at the outdoor face higher than the pressure at the indoor face
- C. Testing shall be performed by others (a 3rd party testing agency) but selectively witnessed and evaluated by the commissioning consultant.
- D. Testing Services: Testing and inspecting of representative areas of glazed aluminum curtain walls, storefront systems, windows, and Fiberglass panels, shall take place as installation proceeds to determine compliance of installed assemblies with specified requirements as indicated above.
1. Air Infiltration: As indicated in architectural sections associated with field quality control in testing utilizing standards ASTM E283,

2. Water Infiltration: As indicated in architectural sections associated with field quality control in testing utilizing standards ASTM E1105 and AAMA 501.2 and 084410 for AAMA 501.3 associated with Curtainwalls and 085110 for AAMA 502 and AAMA/NWWDA101/I.S.2 for Aluminum Windows
 - E. Glazed aluminum curtain walls and windows will be considered defective if they do not pass tests and inspections.
 - F. Prepare test and inspection reports. Issue reports to Construction manager and Commissioning Agent for review, record and distribution
- 3.7 INSPECTION CHECKLISTS AND FUNCTIONAL PERFORMANCE TESTING
- A. Inspection Checklists and testing procedures will be performed on the following system types. These inspection and testing requirements are in addition to and do not replace any testing required elsewhere in Division 08 or by applicable codes.)
 1. Walls/Window/Door Systems

2. Prerequisite Checklist

Check	Description
☐	Fenestration installation is complete and ready for inspection and testing
☐	Air and Water Infiltration tests have been performed by 3 rd Party Testing Agency
☐	Schedules and setpoints implemented - This checklist does not take the place of the manufacturer's recommended checkout and startup procedures. - Items that do not apply shall be noted with the reasons on this form (N/A = not applicable, BO = by others). - Contractors assigned responsibility for sections of the checklist shall be responsible to see that checklist items by their subcontractors are completed and checked off.

3. Installation Checks

Check	COMMENT
-------	---------

Check		COMMENT
General Conditions		
No physical damage observed	☐	
No structural issues observed	☐	
Exterior Wall Surfaces		
Deformed finish not observed	☐	
No surface deterioration observed	☐	
No staining observed	☐	
Interior Wall Surfaces		
No cracks observed	☐	
No water staining observed	☐	
No water leaks observed	☐	
No deformed finishes observed	☐	
Window Conditions		
No water leaking observed	☐	
No air leaking observed	☐	
Window units are plumb, level and true to line, without warp or rack of frames or sash	☐	
Masonry surfaces are dry and free of excess mortar, sand or other debris	☐	
Metal surfaces are dry and clean	☐	
Sill members and other members have been set in a bed of sealant or with joint fillers or gaskets to provide weather tight construction	☐	
Weeps are installed per construction documents	☐	
Weep holes are open and free of debris/blockages	☐	
Joint Sealants		
Backing material has been installed in accordance with sealant mfg requirements	☐	
Surfaces are clean and dry prior to sealant application	☐	
Joints are completely filled	☐	
Sealant has cured according to mfg recommendations and is ready for testing	☐	

4. Testing performed by 3rd Party Testing Agency

Window and Curtainwall Testing

Air Infiltration

Water Infiltration

☐Respective Testing Agency has provided passing testing reports for review and record.

END OF SECTION

SECTION 081110
HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Standard hollow-metal steel doors and frames.
- B. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- C. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110 - SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- D. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 080800 – OPENING SYSTEMS COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- E. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 042000 - UNIT MASONRY for building anchors into masonry construction.
 - 2. Section 061000 – ROUGH CARPENTRY.
 - 3. Section 079200 – JOINT SEALANTS.
 - 4. Section 087100 - DOOR HARDWARE for door hardware for steel doors.
 - 5. Section 088000 - GLAZING for glazed lites.
 - 6. Section 092110 - GYPSUM BOARD ASSEMBLIES for insulation.
 - 7. Section 099000 - PAINTING AND COATING for field painting steel doors and frames.

1.3 SUBMITTALS

- A. Product Data: Include construction details, material descriptions, core descriptions, label compliance, fire-resistance rating, temperature-rise ratings, and finishes for each type of steel door and frame specified.
- B. LEED Submittals:
 - 1. Building Product Disclosure and Optimization, Environmental Product Declarations (EPD):

- a. Option 1: For doors and frames, submit product-specific Type III EPDs.
 2. Building Product Disclosure and Optimization, Sourcing of Raw Materials:
 - a. General: For credit achievement calculation, submit location of products sourced (extracted, manufactured, and purchased), indicating number of miles from the project site.
 - b. Option 2, Leadership Extraction Practices:
 - 1) Recycled Content: Submit percentages by weight of postconsumer and preconsumer recycled content for products having recycled content. Include statement indicating costs for each product having recycled content.
 3. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For doors and frames, submit Health Product Declarations (HPD) or Declare product labels.
 4. Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010, using the applicable exposure scenario.
 - a. For doors and insulation, submit GreenGuard Gold certification.
 - C. Shop Drawings:
 1. Elevations of each door design.
 2. Details of doors, including vertical and horizontal edge details and metal thicknesses.
 3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
 4. Locations of reinforcement and preparations for hardware.
 5. Details of each different wall opening condition.
 6. Details of anchorages, joints, field splices, and connections.
 7. Details of accessories.
 8. Details of moldings, removable stops, and glazing.
 9. Details of conduit and preparations for power, signal, and control systems.
 - D. Schedule: Provide a schedule of hollow metal work prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with door hardware schedule.
 - E. Qualification Data: For Installer.
 - F. Product Test Reports: Based on evaluation of comprehensive fire tests performed by a qualified testing agency, for each type of standard steel door and frame.
- 1.4 QUALITY ASSURANCE
- A. Installer Qualifications: An employer of workers trained and approved by manufacturer.
 - B. Source Limitations: Obtain standard steel doors and frames through one source from a single manufacturer.

- C. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings and temperature-rise limits indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
 - 1. Smoke- and Draft-Control Assemblies: Provide an assembly with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing according to UL 1784 and installed in compliance with NFPA 105.
 - 2. Temperature-Rise Limit: Fire door assemblies in interior exit stairways and ramps and exit passageways shall have a maximum transmitted temperature rise of not more than 450 degrees F (250 degrees C) above ambient at the end of 30 minutes of standard fire test exposure. Exception: The maximum transmitted temperature rise is not required in buildings equipped throughout with an automatic sprinkler system installed in accordance with IBC Section 903.3.1.1 or 903.3.1.2.
- D. Fire-Rated, Borrowed-Light Assemblies (Including Sidelights and Transoms): Complying with NFPA 80 and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction for fire-protection ratings indicated, based on testing according to NFPA 257 or UL 9.
- E. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.
- F. Building envelope commissioning – pre-installation conference: Contractor performing the work of this section is required to attend building envelope pre-installation conference to review relevant details and verify compliance of continuity and tie in of air and vapor barrier and requirements for system performance.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver doors and frames palletized, wrapped, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store hollow metal work under cover at Project site. Place in stacks of five units maximum in a vertical position with heads up, spaced by blocking, on minimum 4-inch-high wood blocking. Do not store in a manner that traps excess humidity.
 - 1. Provide minimum 1/4-inch space between each stacked door to permit air circulation.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.7 COORDINATION

- A. Coordinate installation of anchorages for hollow metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

1.8 WARRANTY

- A. Special Assembly Warranty: Manufacturer's standard form in which manufacturer and installer agree to repair or replace components of hollow metal door and frame systems that do not comply with requirements or that deteriorate as defined in this Section within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Noise or vibration caused by thermal movements.
 - c. Deterioration of metals and other materials beyond normal weathering.
 - d. Water leakage.
 - e. Failure of operating components to function normally.
 2. Warranty Period: Three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Ceco Door Products; an ASSA ABLOY Group Company.
 2. CURRIES Company; an ASSA ABLOY Group Company.
 3. de LaFontaine
 4. Mesker Door Inc.
 5. Pioneer Industries, Inc.
 6. Philipp Manufacturing Company.
 7. Republic Builders Products Company.
 8. Steelcraft; an Allegion (formerly Ingersoll-Rand) company.
 9. Or equal

2.2 MATERIALS

- A. Recycled Content of Steel Products: Provide products with average recycled content of steel products so post-consumer recycled content plus one-half of pre-consumer recycled content is not less than 25 percent.
- B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.
- C. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
- D. Metallic-Coated, (Galvanized/Galvannealed) Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60/A60 metallic coating.
- E. Frame Anchors: ASTM A 591/A 591M, Commercial Steel (CS), 40Z coating designation; mill phosphatized.

1. For anchors built into exterior walls, steel sheet complying with ASTM A 1008/A 1008M or ASTM A 1011/A 1011M, hot-dip galvanized according to ASTM A 153/A 153M, Class B.
- F. Inserts, Bolts, and Fasteners: Hot-dip galvanized according to ASTM A 153/A 153M.
- G. Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow metal frames of type indicated.
- H. Grout: ASTM C 476, except with a maximum slump of 4 inches, as measured according to ASTM C 143/C 143M.
- I. Mineral-Fiber Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool with 6- to 12-lb/cu. ft. density; with maximum flame-spread and smoke-development indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics.
- J. Glazing: Comply with requirements in Section 088000 - GLAZING.
- K. Isolation Coating: ASTM D 1187, cold-applied asphalt emulsion, VOC compliant, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.
- L. Environmental Product Declarations (EPD): Product-specific Type III EPDs for hollow metal doors and frames are available from manufacturers listed herein.
- M. Low-Emitting Materials: Provide building products in compliance with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.3 STANDARD STEEL DOORS

- A. General: Provide doors of design indicated, not less than thickness indicated; fabricated with smooth surfaces, without visible joints or seams on exposed faces, unless otherwise indicated. Comply with ANSI A250.8.
1. Design: Full flush commercial type, 1-3/4" thick unless noted otherwise herein or on the drawings, meeting or exceeding the materials, gages, construction, and testing requirements of the referenced ANSI and SDI publications.
 2. Core Construction: Manufacturer's standard kraft-paper honeycomb, polystyrene, polyurethane, mineral-board, or vertical steel-stiffener core that produces doors complying with ANSI A250.8.
 - a. Fire Door Core: As required to provide fire-protection and temperature-rise ratings indicated.
 - b. Thermal-Rated (Insulated) Exterior Doors: Where indicated, provide doors fabricated with thermal-resistance value (R-value) of not less than 4.0 deg F x h x sq. ft./Btu when tested according to ASTM C 1363.
 3. Top and Bottom Edges: Closed with flush or inverted 0.042-inch-thick end closures or channels of same material as face sheets.

4. Tolerances: Comply with SDI 117, "Manufacturing Tolerances for Standard Steel Doors and Frames."
 - B. Exterior Doors: Face sheets fabricated from metallic-coated (galvanized/galvannealed) steel sheet. Provide doors complying with requirements indicated below by referencing ANSI A250.8 for level and model and ANSI A250.4 for physical-endurance level:
 1. Level 3 and Physical Performance Level A (Extra Heavy Duty), Model 2 (Seamless), having 14 gage, 0.053 inch thick (1.3 mm) steel face with a minimum R factor of 14. Cores for exterior doors shall be polyurethane.
 - C. Interior Doors: Face sheets fabricated from cold-rolled steel sheet. Provide doors complying with requirements indicated below by referencing ANSI A250.8 for level and model and ANSI A250.4 for physical-endurance level:
 1. Level 2 and Physical Performance Level B (Heavy Duty), Model 2 (Seamless), 1-3/4 inches thick having 18 gage, 0.053 inch thick (1.3 mm) steel face. Cores for interior doors shall be polystyrene.
 - D. Hardware Reinforcement: Fabricate according to ANSI/SDI A250.6 with reinforcing plates from same material as door face sheets.
 1. Hinges, 8 gage.
 2. Kick Plates: 18 gage.
 3. Closers, locks, and all other hardware: 10 gage.
 - E. Fabricate concealed stiffeners and hardware reinforcement from either cold- or hot-rolled steel sheet.
 - F. Fire Rated Steel Doors: Refer to requirements as specified herein above and provide fire rated doors for rated assemblies as indicated.
- 2.4 STANDARD STEEL FRAMES
- A. General: Comply with ANSI A250.8 and with details indicated for type and profile.
 - B. Exterior Frames: Fabricated from metallic-coated (galvanized/galvannealed) steel sheet.
 1. Fabricate frames with full profile welded joints.
 2. Frames for Level 3 Steel Doors: 0.067-inch-thick steel sheet with a zinc coating supplied by the hot dip process conforming to ASTM A525 or A526, A60 or G60 coating weight standard. Exterior frames shall be thermally broken.
 - C. Interior Frames: Fabricated from cold-rolled steel sheet.
 1. Fabricate frames with full profile welded joints.
 2. Frames for Level 2 Steel Doors: 0.053-inch-thick steel sheet.
 - D. Hardware Reinforcement: Fabricate according to ANSI/SDI A250.6 with reinforcement plates from same material as frames.
 1. Hinge, lock and strike reinforcement: 3/16 inch thick door closer reinforcement; 12 gage floor clip; 3/16 inch thick splice plates or channels; same gage as door frames.

2. Glazing Stops: 16 gage, except as otherwise required for specific U.L. label.
3. Mortar Guards: 26 gage.
4. Hinge Reinforcement: 10 gage.

2.5 FRAME ANCHORS

A. Jamb Anchors:

1. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than 0.042 inch thick, with corrugated or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.177 inch thick.
2. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.042 inch thick.
3. Compression Type for Drywall Slip-on Frames: Adjustable compression anchors.
4. Postinstalled Expansion Type for In-Place Concrete or Masonry: Minimum 3/8-inch-diameter bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.

B. Floor Anchors: Formed from same material as frames, not less than 0.042 inch (1.0 mm) thick, and as follows:

1. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.
2. Separate Topping Concrete Slabs: Adjustable-type anchors with extension clips, allowing not less than 2-inch height adjustment. Terminate bottom of frames at finish floor surface.

2.6 HOLLOW METAL PANELS

A. Provide hollow metal panels of same materials, construction, and finish as specified for adjoining hollow metal work.

2.7 STOPS AND MOLDINGS

- A. Moldings for Glazed Lites in Doors: Minimum 0.032 inch thick, fabricated from same material as door face sheet in which they are installed.
- B. Fixed Frame Moldings: Formed integral with hollow metal frames, a minimum of 5/8 inch high unless otherwise indicated.
- C. Loose Stops for Glazed Lites in Frames: Minimum 0.032 inch thick, fabricated from same material as frames in which they are installed.

2.8 LOUVERS

- A. Provide louvers for interior doors, where indicated, that comply with SDI 111C, with blades or baffles formed of 0.020-inch-thick, cold-rolled steel sheet set into 0.032-inch-thick steel frame.
 1. Sightproof Louver: Stationary louvers constructed with inverted V-shaped or Y-shaped blades.
 2. Fire-Rated Automatic Louvers: Louvers constructed with movable blades closed by actuating fusible link, and listed and labeled for use in fire-rated door assemblies of type and fire-resistance rating indicated by same testing and inspecting agency that established fire-resistance rating of door assembly.

2.9 ACCESSORIES

- A. Mullions and Transom Bars: Join to adjacent members by welding or rigid mechanical anchors.
- B. Ceiling Struts: Minimum 1/4-inch-thick by 1-inch-wide steel.
- C. Grout Guards: Formed from same material as frames, not less than 0.016 inch thick.

2.10 FABRICATION

- A. Fabricate hollow metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
- B. Tolerances: Fabricate hollow metal work to tolerances indicated in SDI 117.
- C. Hollow Metal Doors:
 - 1. Exterior Doors: Provide weep-hole openings in bottom of exterior doors to permit moisture to escape. Seal joints in top edges of doors against water penetration.
 - 2. Glazed Lites: Factory cut openings in doors.
 - 3. Astragals: Provide overlapping astragal on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum 3/4 inch beyond edge of door on which astragal is mounted.
- D. Hollow Metal Frames: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.
 - 1. Full Profile Welded Frames: Weld joints continuously; grind, fill, dress, and make smooth, flush, and not visible.
 - 2. Sidelight and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as doorframe. Fasten members at crossings and to jambs by butt welding.
 - 3. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
 - 4. Grout Guards: Weld guards to frame at back of hardware mortises in frames to be grouted.
 - 5. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
 - 6. Jamb Anchors: Provide number and spacing of anchors as follows:
 - a. Masonry Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:
 - 1) Two anchors per jamb up to 60 inches high.
 - 2) Three anchors per jamb from 60 to 90 inches high.
 - 3) Four anchors per jamb from 90 to 120 inches high.
 - 4) Four anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 120 inches high.

- b. Stud-Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:
 - 1) Three anchors per jamb up to 60 inches high.
 - 2) Four anchors per jamb from 60 to 90 inches high.
 - 3) Five anchors per jamb from 90 to 96 inches high.
 - 4) Five anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 96 inches high.
 - 5) Two anchors per head for frames above 42 inches wide and mounted in metal-stud partitions.
 - c. Compression Type: Not less than two anchors in each jamb.
 - d. Postinstalled Expansion Type: Locate anchors not more than 6 inches from top and bottom of frame. Space anchors not more than 26 inches o.c.
- 7. Door Silencers: Except on weather-stripped doors, drill stops to receive door silencers as follows. Keep holes clear during construction.
 - a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.
 - b. Double-Door Frames: Drill stop in head jamb to receive two door silencers.
- E. Fabricate concealed stiffeners, edge channels, and hardware reinforcement from either cold- or hot-rolled steel sheet.
- F. Hardware Preparation: Factory prepare hollow metal work to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door Hardware Schedule and templates furnished as specified in Section 087100 - DOOR HARDWARE.
 - 1. Locate hardware as indicated, or if not indicated, according to ANSI/SDI A250.8.
 - 2. Reinforce doors and frames to receive nontemplated, mortised and surface-mounted door hardware.
 - 3. Comply with applicable requirements in ANSI/SDI A250.6 and ANSI/DHI A115 Series specifications for preparation of hollow metal work for hardware.
 - 4. Coordinate locations of conduit and wiring boxes for electrical connections with Division 26 - ELECTRICAL.
- G. Stops and Moldings: Provide stops and moldings around glazed lites where indicated. Form corners of stops and moldings with butted or mitered hairline joints.
 - 1. Single Glazed Lites: Provide fixed stops and moldings welded on secure side of hollow metal work.
 - 2. Multiple Glazed Lites: Provide fixed and removable stops and moldings, so that each glazed lite is capable of being removed independently.
 - 3. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.
 - 4. Provide loose stops and moldings on inside of hollow metal work.
 - 5. Coordinate rabbet width between fixed and removable stops with type of glazing and type of installation indicated.

2.11 STEEL FINISHES

- A. Prime Finish: Apply manufacturer's standard epoxy primer immediately after cleaning and pretreating.
 - 1. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with ANSI/SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.
 - 2. Refer to Section 099000 – PAINTING AND COATING for field-applied coating.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations before frame installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.
- B. Prior to installation, adjust and securely brace welded hollow metal frames for squareness, alignment, twist, and plumbness to the following tolerances:
 - 1. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - 2. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
 - 3. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - 4. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.
- C. Drill and tap doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.

3.3 INSTALLATION

- A. General: Install hollow metal work plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.
- B. Hollow Metal Frames: Install hollow metal frames of size and profile indicated. Comply with ANSI/SDI A250.11.

1. Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
 - a. At fire-protection-rated openings, install frames according to NFPA 80.
 - b. Where frames are fabricated in sections because of shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
 - c. Install frames with removable glazing stops located on secure side of opening.
 - d. Remove temporary braces necessary for installation only after frames have been properly set and secured.
 - e. Check plumbness, squareness, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
 - f. Check plumbness, squareness, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
 - g. Field apply isolation coating to backs of frames that are filled with grout.
 2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.
 - a. Floor anchors may be set with powder-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.
 3. Metal-Stud Partitions: Solidly pack insulation behind frames.
 4. Masonry Walls: Coordinate installation of frames to allow for filling space between frames and masonry with insulation.
 5. Concrete Walls: Solidly fill space between frames and concrete with insulation.
 6. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
 7. In-Place Gypsum Board Partitions: Secure frames in place with postinstalled expansion anchors through floor anchors at each jamb. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
 8. Ceiling Struts: Extend struts vertically from top of frame at each jamb to overhead structural supports or substrates above frame unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction. Provide adjustable wedged or bolted anchorage to frame jamb members.
 9. Installation Tolerances: Adjust hollow metal door frames for squareness, alignment, twist, and plumb to the following tolerances:
 - a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus 1/16 inch, measured at jambs at floor.
- C. Hollow Metal Doors: Fit hollow metal doors accurately in frames, within clearances specified below. Shim as necessary.
1. Non-Fire-Rated Standard Steel Doors:

- a. Jams and Head: 1/8 inch plus or minus 1/16 inch.
 - b. Between Edges of Pairs of Doors: 1/8 inch plus or minus 1/16 inch.
 - c. Between Bottom of Door and Top of Threshold: Maximum 3/8 inch.
 - d. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 3/4 inch.
 - 2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.
 - 3. Smoke-Control Doors: Install doors according to NFPA 105.
 - D. Glazing: Comply with hollow metal manufacturer's written instructions.
 - 1. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c. and not more than 2 inches o.c. from each corner.
 - E. Set continuous sill members, thresholds, and flashing in full sealant bed as specified in Section 079200 - JOINT SEALANTS and to produce weathertight installation.
- 3.4 ADJUSTING AND CLEANING
- A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow metal work that is warped, bowed, or otherwise unacceptable.
 - B. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.
 - C. Metallic-Coated (Galvanized/Galvannealed) Surfaces: Clean abraded areas and repair with galvanizing repair paint according to manufacturer's written instructions.

END OF SECTION

SECTION 081119
STAINLESS-STEEL DOORS AND FRAMES

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Stainless-steel, hollow-metal doors.
 - 2. Stainless-steel, hollow-metal frames.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.

1.3 RELATED WORK

- A. Examine Contract Documents for requirements that affect work of this Section. Other Specification Sections that relate directly to work of this Section include, but are not limited to:
 - 1. Section 042000 - UNIT MASONRY for building anchors into and grouting steel frames in masonry construction.
 - 2. Section 081113 - HOLLOW METAL DOORS AND FRAMES.
 - 3. Section 087100 - DOOR HARDWARE for door hardware for steel doors.
 - 4. Section 088000 - GLAZING for glazed lites.

1.4 DEFINITIONS

- A. Stainless-Steel Sheet Thicknesses: Indicated as the specified thicknesses for which over- and under-thickness tolerances apply, according to ASTM A 480/A 480M.

1.5 SUBMITTALS

- A. Product Data: Include construction details, material descriptions, core descriptions, label compliance, fire-resistance rating, temperature-rise ratings, and finishes for each type of steel door and frame specified.
- B. Shop Drawings:
 - 1. Elevations of each door design.
 - 2. Details of doors, including vertical and horizontal edge details and metal thicknesses.
 - 3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.

4. Locations of reinforcement and preparations for hardware.
 5. Details of each different wall opening condition.
 6. Details of anchorages, joints, field splices, and connections.
 7. Details of accessories.
 8. Details of moldings, removable stops, and glazing.
 9. Details of conduit and preparations for power, signal, and control systems.
- C. Schedule: Provide a schedule of stainless steel door and frame work prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with door hardware schedule.
- D. Qualification Data: For Installer.
- E. Product Test Reports: Based on evaluation of comprehensive fire tests performed by a qualified testing agency, for each type of standard steel door and frame.
- 1.6 QUALITY ASSURANCE
- A. Installer Qualifications: An employer of workers trained and approved by manufacturer.
- B. Source Limitations: Obtain stainless steel doors and frames through one source from a single manufacturer.
- C. Fire-Rated Door, Sidelight and Transom Frame Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated.
1. Temperature-Rise Limit: At vertical exit enclosures and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F above ambient after 30 minutes of standard fire-test exposure.
- D. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Deliver doors and frames palletized, wrapped, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store doors and frames under cover at Project site. Place units in a vertical position with heads up, spaced by blocking, on minimum 4-inch-high, wood blocking. Avoid using nonvented plastic or canvas shelters that could create a humidity chamber.
1. If wrappers on doors become wet, remove cartons immediately. Provide minimum 1/4-inch space between each stacked door to permit air circulation.
- 1.8 PROJECT CONDITIONS
- A. Field Measurements: Verify openings by field measurements before fabrication and indicate measurements on Shop Drawings.

1.9 COORDINATION

- A. Coordinate installation of anchorages for stainless-steel frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in [concrete] [or] [masonry]. Deliver such items to Project site in time for installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Ceco Door Products; an ASSA ABLOY Group Company.
 - 2. Security Metal Products.
 - 3. Steelcraft; an Ingersoll-Rand Company.
 - 4. Or equal

2.2 MATERIALS

- A. Stainless-Steel Sheet: ASTM A167, Type 304.
- B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.
- C. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
- D. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum A60 (ZF180) zinc-iron-alloy (galvannealed) coating designation.
- E. Supports and Anchors: After fabricating, galvanize units to be built into exterior walls according to ASTM A 153/A 153M, Class B.
- F. Inserts, Bolts, and Fasteners: Provide items to be built into exterior walls, hot-dip galvanized according to ASTM A 153/A 153M.
- G. Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching stainless-steel door frames of type indicated.
- H. Grout: Comply with ASTM C 476, with a slump of 4 inches for stainless-steel door frames built into concrete or masonry, as measured according to ASTM C 143/C 143M.
- I. Mineral-Fiber Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool with 6- to 12-lb/cu. ft. density; with maximum flame-spread and smoke-developed indexes of 25 and 50 respectively; passing ASTM E 136 for combustion characteristics.
- J. Glazing: Comply with requirements in Section 088000 - GLAZING.

2.3 STAINLESS-STEEL DOORS

- A. General: Provide flush-design doors, not less than 1-3/4 inches thick, of seamless hollow construction, unless otherwise indicated. Construct doors with smooth, flush surfaces without visible joints or seams on exposed faces.
 - 1. Visible joints or seams around glazed lite inserts are permitted.
 - 2. For single-acting swing doors, bevel both vertical edges 1/8 inch in 2 inches.
 - 3. For double-acting swing doors, round vertical edges with 2-1/8-inch radius.
- B. Level/Model: Level 3 and Physical Performance Level A (Extra Heavy Duty). Minimum 16 gage (0.053-inch - 1.3-mm) thick steel, Model 2 (Fully welded, seamless face and edges).
- C. Face Sheets: Fabricated from minimum 0.042-inch-thick, stainless-steel sheet, Type as follows:
 - 1. Doors for Aesthetic Applications: Type 304.
 - 2. Doors for Moderately Corrosive Applications: Type 304.
 - 3. Doors for Highly Corrosive Applications: Type 316.
- D. Core Construction: Fabricate doors with core indicated.
 - 1. Laminated Steel-Stiffened Core: 0.026-inch-thick, steel vertical stiffeners extending full-door height, with vertical webs spaced not more than 6 inches apart, fastened to face sheets with waterproof adhesive. Spaces filled between stiffeners with glass- or mineral-fiber insulation.
 - 2. Fire-Rated Door Core: As required to provide fire-protection and temperature-rise ratings indicated.
- E. Top and Bottom Channels: Minimum 0.053-inch-thick, steel channel spot welded, not more than 6 inches o.c., to face sheets.
 - 1. Tops and bottoms of doors reinforced with inverted horizontal channels, continuous across full width of door, of same material as face sheets so flanges of channels are even with bottom and top edges of face sheets.
 - 2. Top and bottom edges closed with closing channels of same material and thickness as face sheets; welded so webs of channels are flush with door edges.
- F. Hardware Reinforcement: Fabricate reinforcement plates from stainless steel according to ANSI A250.6.

2.4 STAINLESS-STEEL FRAMES

- A. General: Fabricate frames of construction indicated, with faces of corners mitered and contact edges closed tight.
 - 1. Frames: Welded.
 - 2. Door Frames for Openings 48 Inches Wide or Less: Fabricated from 0.053-inch-thick, stainless-steel sheet.
 - 3. Door Frames for Openings More Than 48 Inches Wide: Fabricated from 0.067-inch-thick, stainless-steel sheet.
 - 4. Sidelight Frames: Fabricated from same material as adjacent door frame.
 - 5. Borrowed-Light Frames: Fabricate from 0.053-inch-thick, stainless-steel sheet.

B. Material: Fabricate frames from stainless-steel sheet, Type as follows:

1. Frames for Aesthetic Applications: Type 304.
2. Frames for Moderately Corrosive Applications: Type 304.
3. Frames for Highly Corrosive Applications: Type 316.

C. Jamb Anchors:

1. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than 0.053 inch thick, with corrugated or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.156 inch thick.
2. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.042 inch thick.
3. Compression Type for Slip-on Frames: Adjustable compression anchors.
4. Postinstalled Expansion Type for In-Place Concrete or Masonry: Minimum 3/8-inch-diameter bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.

D. Floor Anchors: Formed from material indicated in Part 2 "Fabrication" Article, not less than 0.067 inch thick, and as follows:

1. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.
2. Separate Topping Concrete Slabs: Adjustable-type anchors with extension clips, allowing not less than 2-inch height adjustment. Terminate bottom of frames at finish floor surface.

2.5 STOPS AND MOLDINGS

- A. Moldings for Glazed Lites in Doors: Minimum 0.032 inch thick, fabricated from same material as door face sheet in which they are installed.
- B. Fixed Frame Moldings: Formed integral with stainless-steel frames, minimum 5/8-inch high, unless otherwise indicated.
- C. Loose Stops for Glazed Lites in Frames: Minimum 0.032 inch thick, fabricated from same material as frames in which they are installed.
- D. Terminated Stops (Hospital Stops): On interior door frames, terminate stops 6 inches above finish floor with a 45-degree angle cut, and close open end of stop with steel sheet closure. Cover opening in extension of frame with welded-steel filler plate, with welds ground smooth and flush with frame.

2.6 ACCESSORIES

- A. Mullions and Transom Bars: Join to adjacent members by welding or rigid mechanical anchors.
- B. Ceiling Struts: Minimum 1/4-inch-thick by 1-inch-wide steel.
- C. Grout Guards: Formed from same material as frames, not less than 0.016 inch thick.

2.7 FABRICATION

- A. General: Fabricate stainless-steel doors and frames to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
- B. Stainless-Steel Doors: Comply with ANSI A250.4, Level A.
 - 1. Exterior Doors: Provide weep-hole openings in bottom of exterior doors to permit moisture to escape. Seal joints in top edges of doors against water penetration.
 - 2. Glazed Lites: Factory cut openings in doors.
 - 3. Edges: Door face sheets joined at vertical edges by continuous weld extending full height of door; with edges ground and polished, providing smooth, flush surfaces with no visible seams.
 - 4. Doors for Aesthetic Applications: Fabricate doors with door faces of Type 304 stainless-steel sheet and internal components, including stiffeners and hardware reinforcements, from cold-rolled, hot-rolled, or metallic-coated steel sheet.
 - 5. Doors for Moderately Corrosive Applications: Fabricate doors with door faces and internal components, including stiffeners and hardware reinforcements, from Type 304 stainless-steel sheet.
 - 6. Doors for Highly Corrosive Applications: Fabricate doors with door faces and internal components, including stiffeners and hardware reinforcements, from Type 316 stainless-steel sheet.
- C. Stainless-Steel Frames: Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible. Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated from same thickness metal as frames.
 - 1. Frames for Aesthetic Applications: Fabricate frames with internal components, including anchors, plaster guards, and hardware reinforcements, from cold-rolled, hot-rolled, or metallic-coated steel sheet.
 - 2. Frames for Moderately Corrosive Applications: Fabricate frames with internal components, including anchors, plaster guards, and hardware reinforcements, from Type 304 stainless-steel sheet.
 - 3. Frames for Highly Corrosive Applications: Fabricate frames with internal components, including anchors, plaster guards, and hardware reinforcements, from Type 316 stainless-steel sheet.
 - 4. Sidelight and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints. Fasten members at crossings and to jambs by butt welding according to joint designs in HMMA 820.
 - 5. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners, unless otherwise indicated.
 - 6. Grout Guards: Weld guards to frame at back of hardware mortises in frames installed in concrete or masonry.
 - 7. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
 - 8. Jamb Anchors: Provide number and spacing of anchors as follows:
 - a. Masonry Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:

- 1) Two anchors per jamb up to 60 inches high.
 - 2) Three anchors per jamb from 60 to 90 inches high.
 - 3) Four anchors per jamb from 90 to 120 inches high.
 - 4) Four anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 120 inches high.
 - b. Stud-Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:
 - 1) Three anchors per jamb up to 60 inches high.
 - 2) Four anchors per jamb from 60 to 90 inches high.
 - 3) Five anchors per jamb from 90 to 96 inches high.
 - 4) Five anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 96 inches high.
 - 5) Two anchors per head for frames above 42 inches wide and mounted in metal-stud partitions.
 - c. Compression Type: Not less than two anchors in each jamb.
 - d. Postinstalled Expansion Type: Locate anchors not more than 6 inches from top and bottom of frame. Space anchors not more than 26 inches o.c.
9. Door Silencers: Except on weather-stripped doors, drill stops to receive door silencers as follows. Provide plastic plugs to keep holes clear during construction.
 - a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.
 - b. Double-Door Frames: Drill stop in head jamb to receive two door silencers.
- D. Hardware Preparation: Factory prepare hollow metal work to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door Hardware Schedule and templates furnished as specified in Section 087100 - DOOR HARDWARE.
 1. Locate hardware as indicated, or if not indicated, according to ANSI A250.8.
 2. Reinforce doors and frames to receive nontemplated, mortised and surface-mounted door hardware.
 3. Comply with applicable requirements in ANSI A250.6 and ANSI/DHI A115 Series specifications for preparation of hollow metal work for hardware.
 4. Coordinate locations of conduit and wiring boxes for electrical connections with Section 260000 - ELECTRICAL WORK.
- E. Stops and Moldings: Provide stops and moldings around glazed lites where indicated. Form corners of stops and moldings with butted or mitered hairline joints.
 1. Single Glazed Lites: Provide fixed stops and moldings welded on secure side of hollow metal work.
 2. Multiple Glazed Lites: Provide fixed and removable stops and moldings so that each glazed lite is capable of being removed independently.
 3. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.
 4. Provide loose stops and moldings on inside of hollow metal work.
 5. Coordinate rabbet width between fixed and removable stops with type of glazing and type of installation indicated.

2.8 STAINLESS-STEEL FINISHES

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Remove tool and die marks and stretch lines or blend into finish.
 - 1. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches.
 - a. Grain for Doors: Vertical (long dimension of door).
 - b. Grain for Frame Jambs: Vertical (long dimension of jamb).
 - c. Grain for Frame Heads: Horizontal (long dimension of head).
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Finish stainless-steel doors and frames after assembly.
- D. Directional Satin Finish: No. 4 finish.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations before frame installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory.
- B. Prior to installation and with installation spreaders in place, adjust and securely brace stainless-steel door frames for squareness, alignment, twist, and plumb to the following tolerances:
 - 1. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - 2. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
 - 3. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - 4. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.
- C. Drill and tap doors and frames to receive nontemplated mortised and surface-mounted door hardware.

3.3 INSTALLATION

- A. General: Install stainless-steel doors and frames plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.
- B. Stainless-Steel Frames: Install stainless-steel frames of size and profile indicated.
 - 1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
 - a. At fire-protection-rated openings, install frames according to NFPA 80.
 - b. Where frames are fabricated in sections due to shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
 - c. Install frames with removable glazing stops located on secure side of opening.
 - d. Install door silencers in frames before grouting.
 - e. Remove temporary braces necessary for installation only after frames have been properly set and secured.
 - f. Check plumb, squareness, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
 - 2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor and secure with postinstalled expansion anchors.
 - a. Floor anchors may be set with powder-actuated fasteners instead of postinstalled expansion anchors, if so indicated and approved on Shop Drawings.
 - 3. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with mortar as specified in Division 04 Section "Unit Masonry."
 - 4. Concrete Walls: Solidly fill space between frames and concrete with grout. Install grout in lifts and take precautions, including bracing frames, to ensure that frames are not deformed or damaged by grout forces.
 - 5. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
 - 6. In-Place Gypsum Board Partitions: Secure frames in place with postinstalled expansion anchors through floor anchors at each jamb. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
 - 7. Ceiling Struts: Extend struts vertically from top of frame at each jamb to supporting construction above, unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction above. Provide adjustable wedged or bolted anchorage to frame jamb members.
 - 8. Installation Tolerances: Adjust stainless-steel door frames for squareness, alignment, twist, and plumb to the following tolerances:
 - a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus 1/16 inch, measured at jambs at floor.

- C. Stainless-Steel Doors: Fit stainless steel doors accurately in frames, within clearances specified below. Shim as necessary

1. Non-Fire-Rated Standard Steel Doors:

- a. Jambs and Head: 1/8 inch plus or minus 1/16 inch.
- b. Between Edges of Pairs of Doors: 1/8 inch plus or minus 1/16 inch .
- c. Between Bottom of Door and Top of Threshold: Maximum 3/8 inch.
- d. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 3/4 inch.

2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.

3. Smoke-Control Doors: Install doors according to NFPA 105.

- D. Glazing: Comply with hollow metal manufacturer's written instructions.

1. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c. and not more than 2 inches o.c. from each corner.

3.4 ADJUSTING AND CLEANING

- A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow metal work that is warped, bowed, or otherwise unacceptable.
- B. Remove grout and other bonding material from hollow metal work immediately after installation.
- C. Stainless-Steel Touchup: Immediately after erection, smooth any abraded areas of stainless steel and polish to match undamaged finish.

END OF SECTION

SECTION 081400
FLUSH WOOD DOORS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Solid-core flush wood doors for transparent.
 2. Factory finishing for wood doors with transparent finish.
 3. Factory fitting flush wood doors to frames and factory machining for hardware.
 4. Louvers and glass lites for flush wood doors.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110 - SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 064020 - INTERIOR ARCHITECTURAL WOODWORK for wood door frames.
 2. Section 081110 - HOLLOW METAL DOORS AND FRAMES.
 3. Section 087100 - DOOR HARDWARE for hardware for wood doors.
 4. Section 088000 - GLAZING for glass and glazing requirements.
 5. Section 099000 - PAINTING AND COATING for field finishing of opaque wood doors.

1.3 REFERENCES

- A. AWI Quality Standards AWS (Architectural Woodwork Standards).

1.4 SUBMITTALS

- A. Product Data: For each type of product, including the following:
1. Door core and edge construction, face type, louvers, and trim for openings.
 2. Factory-finishing specifications.
- B. LEED Submittals:
1. Building Product Disclosure and Optimization, Environmental Product Declarations (EPD):

- a. Option 1: For wood doors, submit product-specific Type III EPDs.
2. Building Product Disclosure and Optimization, Sourcing of Raw Materials:
 - a. General: For credit achievement calculation, submit location of products sourced (extracted, manufactured, and purchased), indicating number of miles from the project site.
 - b. Option 2, Leadership Extraction Practices:
 - 1) Wood Products: Wood products must be certified by the Forest Stewardship Council or USGBC-approved equivalent. Products meeting wood products criteria are valued at 100% of their cost for the purposes of credit achievement calculation.
 - 2) Recycled Content: Submit percentages by weight of postconsumer and preconsumer recycled content for products having recycled content. Include statement indicating costs for each product having recycled content.
3. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For wood doors, submit Health Product Declarations (HPD) or Declare product labels.
4. Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010.
 - a. For wood doors, submit GreenGuard Gold or SCS Indoor Advantage Gold certification.
- C. Shop Drawings: Indicate location, size, and hand of each door; elevation of each type of door; construction details not covered in Product Data; and the following:
 1. Door schedule indicating door and frame location, type, size, fire protection rating, and swing.
 2. Door elevations, dimension and locations of hardware, lite and louver cutouts, and glazing thicknesses.
 3. Details of frame for each frame type, including dimensions and profile.
 4. Details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
 5. Dimensions and locations of blocking for hardware attachment.
 6. Dimensions and locations of mortises and holes for hardware.
 7. Clearances and undercuts.
 8. Requirements for veneer matching.
 9. Doors to be factory primed or finished and application requirements.
- D. Samples for Verification:
 1. Factory finishes applied to actual door face materials, approximately 8 by 10 inches for each material and finish. For each wood species stain and transparent finish, provide set of three samples showing typical range of finish color, sheen, and grain to be expected in the finished work. Finish samples to match reference samples provided by Contractor.
 2. Frames for light openings, 6 inches long, for each material, type, and finish required.

- E. Field quality-control reports.

1.5 QUALITY ASSURANCE

- A. Source Limitations: Obtain flush wood doors through one source from a single manufacturer.
- B. Quality Standard: In addition to requirements specified, comply with WDMA I.S.1-A, "Architectural Wood Flush Doors."
 - 1. WDMA I.S.1-A Performance Grade: Extra Heavy Duty.
- C. Fire-Rated Door Inspector Qualifications: Inspector for field quality-control inspections of fire-rated door assemblies shall comply with qualifications set forth in NFPA 80, Section 5.2.3.1 and the following:
- D. Egress Door Inspector Qualifications: Inspector for field quality-control inspections of egress door assemblies shall comply with qualifications set forth in NFPA 101, Section 7.2.1.15.4 and the following:
- E. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
 - 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 - 2. Temperature-Rise Limit: At vertical exit enclosures and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.
- F. Smoke- and Draft-Control Door Assemblies: Listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing in accordance with UL 1784 and installed in compliance with NFPA 105.
- G. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Comply with requirements of referenced standard and manufacturer's written instructions.
- B. Package doors individually in plastic bags or cardboard cartons.
- C. Mark each door on top rail with opening number used on Shop Drawings.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, and HVAC system is operating and maintaining temperature and relative humidity at levels designed for building occupants for the remainder of construction period.

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form, signed by manufacturer, Installer, and Contractor, in which manufacturer agrees to repair or replace doors that are defective in materials or workmanship, have warped (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section, or show telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch span.
 - 1. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.
 - 2. Warranty shall include hardware installation and replacement of glass and glazing.
 - 3. Warranty shall be in effect during the following period of time from date of Substantial Completion:
 - a. Solid-Core Interior Doors: Life of installation.

PART 2 - PRODUCTS

2.1 SUSTAINABLE DESIGN PERFORMANCE REQUIREMENTS

- A. Certified Wood: Materials shall be produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
 - 1. Salvaged and reclaimed wood is excluded from certified wood requirements.
- B. Low-Emitting Materials: Provide wood doors in compliance with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.2 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Lambton Doors; EnviroDesign Series.
 - 2. Masonite Architectural; Aspiro and Graham Series (formerly Algoma and Marshfield). Cendura Series is not acceptable.
 - 3. Oregon Doors; Architectural Series.
 - 4. VT Industries Inc.; Eggers and Heritage collections.
 - 5. Or equal

2.3 DOOR CONSTRUCTION, GENERAL

- A. Doors for Transparent Finish:
 - 1. Grade: AWI Premium, with AWI Grade AA faces, 4 inch veneer width.
 - 2. Species and Cut: Select White Maple, plain sawn/sliced.
 - 3. Match between Veneer Leaves: Book match.
 - 4. Assembly of Veneer Leaves on Door Faces: Center-balance.
 - 5. Pair and Set Match: Provide for doors hung in same opening or separated only by mullions.

6. Transom Match: Continuous match.
7. Stiles: Same species as face.
8. Cross-Banding: 1/8 in. high density fiberboard, no added formaldehyde (NAF).
9. Adhesives: WDMA T.M.-6, Type I.

2.4 SOLID-CORE DOORS

A. Cores: Comply with the following requirements:

1. Composite Wood, General: CARB II compliant or made with binder containing no added formaldehyde (NAF).
2. Particle Core: ANSI A 208.1, Grade 1-LD-2.
3. Agrifiber Core: ANSI A 208.1, Grade 1-LD-2.
4. Structural Composite Lumber Core: WDMA I.S.10, Timberstrand LSL.
5. Provide doors with structural composite lumber cores instead of particleboard cores at locations where exit devices are indicated or where light or louver cutouts exceed 40% of the door area.

B. Interior Veneer-Faced Doors:

1. Construction: Five plies, hot-pressed, with stiles and rails bonded to core, then entire unit abrasive planed before veneering.

C. Fire-Rated Doors:

1. Construction: Construction and core specified above for type of face indicated or manufacturer's standard mineral-core construction as needed to provide fire rating indicated.
 - a. Fire Retardant Mineral Core, with no added formaldehyde cross-banding.
2. Blocking: For mineral-core doors, provide composite blocking with improved screw-holding capability approved for use in doors of fire ratings indicated as needed to eliminate through-bolting hardware.
3. Edge Construction: At hinge stiles, provide manufacturer's standard laminated-edge construction with improved screw-holding capability and split resistance and with outer stile matching face veneer.
 - a. Screw-Holding Capability: 550 lbf per WDMA T.M.-10.
4. Pairs: Provide fire-rated pairs with fire-retardant stiles matching face veneer that are labeled and listed for kinds of applications indicated without formed-steel edges and astragals. Provide stiles with concealed intumescent seals.

2.5 LOUVERS AND LIGHT FRAMES

A. Wood Louvers: Door manufacturer's standard solid-wood louvers, unless otherwise indicated.

1. Wood Species: Same species as door faces.
2. Profile: Flat.

B. Fire Door Louvers (not required on 20 min. doors): Metal louvers with fusible link and closing device, listed and labeled for use in doors with fire rating of one and one-half hours and less.

1. Metal and Finish: Galvanized steel, 0.0396 inch thick, hot-dip zinc coated and factory primed for paint finish.
 - C. Wood Beads for Light Openings in Wood Doors: Provide manufacturer's standard wood beads unless otherwise indicated.
 1. Wood Species: Same species as door faces.
 2. Profile: Manufacturer's standard shape.
 3. At wood-core doors with 20-minute fire-protection ratings, provide wood beads and metal glazing clips approved for such use.
 - D. Wood-Veneered Beads for Light Openings in Fire Doors: Manufacturer's standard wood-veneered noncombustible beads matching veneer species of door faces and approved for use in doors of fire rating indicated. Include concealed metal glazing clips where required for opening size and fire rating indicated.
- 2.6 GLAZING SYSTEMS
- A. Glazing: Provide factory installed glass products in accordance with requirements in Section 088000 - GLAZING.
- 2.7 FABRICATION
- A. Factory fit doors to suit frame-opening sizes indicated, with the following uniform clearances and bevels, unless otherwise indicated:
 1. Comply with clearance requirements of referenced quality standard for fitting. Comply with requirements in NFPA 80 for fire-rated doors.
 - B. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, ANSI/BHMA/DHI A115-W series standards, and hardware templates.
 1. Coordinate measurements of hardware mortises in metal frames to verify dimensions and alignment before factory machining. Drill pilot holes for screws for butt hinges and lock fronts at the factory.
 2. Metal Astragals: Factory prime and premachine astragals and formed-steel edges for hardware for pairs of fire-rated doors to receive concealed vertical rod exit devices.
 - C. Transom and Side Panels: Fabricate matching panels with same construction, exposed surfaces, and finish as specified for associated doors. Finish bottom edges of transoms and top edges of rabbeted doors same as door stiles.
 1. Fabricate door and transom panels with full-width, solid-lumber meeting rails. Provide factory-installed spring bolts for concealed attachment into jambs of metal doorframes.
 - D. Openings: Cut and trim openings through doors to comply with applicable requirements of referenced standards for kind(s) of door(s) required.
 1. Light Openings: Trim openings with moldings of material and profile indicated.
 2. Louvers: Factory install louvers in prepared openings.
 3. Glazing: Factory install glazing in doors indicated to be factory finished. Comply with applicable requirements in Section 088000 - GLAZING.

2.8 FACTORY FINISHING

- A. General: Comply with AWI's "Architectural Woodwork Quality Standards Illustrated" for factory finishing requirements for doors that are adjacent to wood paneling.
- B. Doors for Transparent Finish: Factory finish doors that are indicated to receive transparent finish. Finish faces and edges of doors, including cutouts.
- C. Transparent Finish:
 - 1. Grade: Premium.
 - 2. Finish (for doors adjacent to wood paneling): Manufacturer's solvent-based catalyzed polyurethane finish with performance comparable to AWS System 11. Water based polyurethane finish may be provided for doors not requiring staining. Provide two finish coats. ADDENDUM NO. 1, ITEM ADD 1-026
 - 3. Finish: WDMA TR-6 catalyzed solvent-based polyurethane.
 - 4. Staining: Provide custom color as selected by Architect.
 - a. Match reference sample provided under Section 064020.
 - 5. Sheen: Satin. Sheen to match sheen of finish specified in Interior Architectural
 - 6. Woodwork and Interior Wall Panels Sections, as demonstrated in color reference
 - 7. sample

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine doors and installed door frames, with Installer present, before hanging doors.
 - 1. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
 - 2. Reject doors with defects.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Hardware: For installation, see Section 087100 - DOOR HARDWARE.
- B. Install doors to comply with manufacturer's written instructions, referenced quality standard, and as indicated.
 - 1. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.
 - 2. Install smoke- and draft-control doors according to NFPA 105.
- C. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
- D. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.3 FIELD QUALITY CONTROL

- A. Inspection Agency: Engage a qualified inspector to perform inspections and to furnish reports to Architect.
- B. Inspections:
 - 1. Fire-Rated Door Inspections: Inspect each fire-rated door in accordance with NFPA 80, Section 5.2.
 - 2. Egress Door Inspections: Inspect each door equipped with panic hardware, each door equipped with fire exit hardware, each door located in an exit enclosure, each electrically controlled egress door, and each door equipped with special locking arrangements in accordance with NFPA 101, Section 7.2.1.15.
- C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.
- D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.
- E. Prepare and submit separate inspection report for each fire-rated door assembly indicating compliance with each item listed in NFPA 80 and NFPA 101.

3.4 ADJUSTING

- A. Operation: Rehang or replace doors that do not swing or operate freely.
- B. Protection: Provide temporary protection to ensure work being without damage or deterioration at time of final acceptance. Remove protections and reclean as necessary immediately before final acceptance.
- C. Finished Doors: Replace doors that are damaged or do not comply with requirements. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION

SECTION 083110
ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Access doors and frames for walls and ceilings.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 033000 - CAST-IN-PLACE CONCRETE for blocking out openings for access doors and frames in concrete.
 2. Section 042000 - UNIT MASONRY for anchoring and grouting access door frames set in masonry construction.
 3. Section 087100 - DOOR HARDWARE for rim cylinder locks and master keying.
 4. Section 092110 - GYPSUM BOARD ASSEMBLIES for metal framing around access panels, and gypsum board.
 5. Section 099000 - PAINTING AND COATING for field painting access doors.
 6. Section 116153 - STAGE LIGHTING POWER AND CONTROL
 7. Division 21 - FIRE SUPPRESSION.
 8. Division 22 - PLUMBING.
 9. Division 23 - HVAC.
 10. Division 26 - ELECTRICAL.

1.3 SUBMITTALS

- A. Product Data: For each type of access door and frame indicated. Include construction details, fire ratings, materials, individual components and profiles, and finishes.
- B. Shop Drawings: Show fabrication and installation details of access doors and frames for each type of substrate. Include plans, elevations, sections, details, and attachments to other work.
- C. Samples: For each door face material, at least 3 by 5 inches in size, in specified finish.

- D. Access Door and Frame Schedule: Provide complete access door and frame schedule, including types, locations, sizes, latching or locking provisions, and other data pertinent to installation. Coordinate locations with MEP/FP prior to submitting schedule.
- E. Ceiling Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted items including access doors and frames, lighting fixtures, diffusers, grilles, speakers, sprinklers, and special trim are shown and coordinated with each other.

1.4 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of access door and frame through one source from a single manufacturer.
- B. Fire-Rated Access Doors and Frames: Units complying with NFPA 80 that are identical to access door and frame assemblies tested for fire-test-response characteristics per the following test method and that are listed and labeled by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - 1. NFPA 252 for vertical access doors and frames.
 - 2. ASTM E 119 for horizontal access doors and frames.
- C. Size Variations: Obtain Architect's acceptance of manufacturer's standard-size units, which may vary slightly from sizes indicated.

1.5 COORDINATION

- A. Verification: Determine specific locations and sizes for access doors needed to gain access to concealed plumbing, mechanical, or other concealed work, and indicate in the schedule specified in "Submittals" Article.

PART 2 - PRODUCTS

2.1 STEEL MATERIALS

- A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
 - 1. ASTM A 123/A 123M, for galvanizing steel and iron products.
 - 2. ASTM A 153/A 153M, for galvanizing steel and iron hardware.
- B. Steel Sheet: Electrolytic zinc-coated, ASTM A 879/A 879M with cold-rolled steel sheet substrate complying with ASTM A 1008/A 1008M, Commercial Steel (CS), exposed.
- C. Steel Finishes: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Surface Preparation for Steel Sheet: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, or other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
 - a. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20.

2. Factory-Primed Finish: Apply shop primer immediately after cleaning and pretreating.

- D. Drywall Beads: Edge trim formed from 0.0299-inch zinc-coated steel sheet formed to receive joint compound and in size to suit thickness of gypsum board.

2.2 STAINLESS-STEEL MATERIALS

- A. Rolled-Stainless-Steel Floor Plate: ASTM A 793, manufacturer's standard finish.
- B. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, Type 316. Remove tool and die marks and stretch lines or blend into finish.

1. Finish: Directional Satin Finish, No. 4.

2.3 ACCESS DOORS AND FRAMES FOR WALLS AND CEILINGS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Acudor Products, Inc.
2. Babcock-Davis.
3. Dur-Red Products.
4. JL Industries (a division of Activar Construction Products Group).
5. Karp Associates, Inc.
6. Larsen's Manufacturing Company.
7. Milcor Inc.
8. Nystrom, Inc.
9. Or equal

- B. Flush Access Doors and Trimless Frames: Fabricated from steel sheet at typical areas and from stainless-steel sheet at toilet and wet areas.

1. Locations: Wall and ceiling surfaces.
2. Door: Minimum 0.060-inch-thick sheet metal, set flush with surrounding finish surfaces.
3. Frame: Minimum 0.060-inch-thick sheet metal with drywall bead flange.
4. Hinges: Continuous piano.
5. Lock: Cylinder.

- a. Lock Preparation: Prepare door panel to accept cylinder specified in Section 087100, DOOR HARDWARE.

- C. Recessed Access Doors and Trimless Frames: Fabricated from steel sheet at typical areas and from stainless-steel sheet at toilet and wet areas.

1. Locations: Wall and ceiling surfaces.
2. Door: Minimum 0.060-inch-thick sheet metal in the form of a pan recessed 5/8 inch for gypsum board infill.
3. Frame: Minimum 0.060-inch-thick sheet metal with drywall bead for gypsum board surfaces.
4. Hinges: Concealed pivoting rod hinge.
5. Lock: Cylinder.

- a. Lock Preparation: Prepare door panel to accept cylinder specified in Section 087100, DOOR HARDWARE.
- D. Fire Rated, insulated, Flush Access Doors and Frames with Exposed Trim: Fabricated from steel at typical areas and from stainless-steel sheet at toilets and wet areas.
 - 1. Locations: Wall surfaces.
 - 2. Fire-Resistance Rating: Not less than that of adjacent construction.
 - 3. Door: Minimum 0.060-inch-thick sheet metal, flush construction.
 - 4. Frame: Minimum 0.060-inch-thick sheet metal with 1-inch-wide, surface-mounted trim.
 - 5. Hinges: Continuous piano.
 - 6. Automatic Closer: Spring type.
 - 7. Lock: Self-latching device with cylinder lock.
- a. Lock Preparation: Prepare door panel to accept cylinder specified in Section 087100, DOOR HARDWARE
- E. Sound Control Access Panels: Provide BAUVCO PLUS II – Karp sound resistant access door – Williams Brothers AT600; or approved equal.

2.4 FABRICATION

- A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.
- B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
- C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of supports indicated.
 - 1. For trimless frames with drywall bead, provide edge trim for gypsum board and gypsum base securely attached to perimeter of frames.
 - 2. Provide mounting holes in frames for attachment of units to metal or wood framing.
 - 3. Provide mounting holes in frame for attachment of masonry anchors.
- D. Recessed Access Doors: Form face of panel to provide recess for application of applied finish. Reinforce panel as required to prevent buckling.
 - 1. For recessed doors with plaster infill, provide self-furring expanded metal lath attached to door panel.
- E. Latching Mechanisms: Furnish number required to hold doors in flush, smooth plane when closed.
 - 1. For cylinder lock, furnish two keys per lock and key all locks alike.
 - 2. For recessed panel doors, provide access sleeves for each locking device. Furnish plastic grommets and install in holes cut through finish.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with manufacturer's written instructions for installing access doors and frames.
- B. Set frames accurately in position and attach securely to supports with plane of face panels aligned with adjacent finish surfaces.
- C. Install doors flush with adjacent finish surfaces or recessed to receive finish material.

3.2 ADJUSTING AND CLEANING

- A. Adjust doors and hardware after installation for proper operation.
- B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

END OF SECTION

SECTION 083310
OVERHEAD COILING DOORS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Manual and Electric-motor-operated overhead coiling doors of the following types:
 - a. Electric-motor-operated Insulated Roll-up service doors – See Door Schedules
 - b. Manual Insulated Roll-up service doors – See Door Schedules
 - c. Manual Insulated Roll-up Counter Doors – See Door Schedules
 - d. Manual Roll-up Counter Doors – See Door Schedules
- B. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- C. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- D. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 080800 – OPENING SYSTEMS COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- E. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 042000 – UNIT MASONRY FOR Adjacent materials
 2. Section 055000 - METAL FABRICATIONS for miscellaneous steel supports.
 3. Section 087100 - DOOR HARDWARE for lock cylinders and keying.
 4. Division 26 - ELECTRICAL for electrical service and connections for powered operators and accessories.

1.3 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide overhead coiling doors capable of withstanding the effects of gravity loads and the following loads and stresses without evidencing permanent deformation of door components:

1. Wind Load: As required by Code or shown on Structural drawings, whichever is more stringent.
 - B. Maximum Air Leakage Rate: Installed products shall comply with the following in accordance with the 2018 International Energy Conservation Code (IECC) Table C402.5.2:
 1. Rolling Doors: 1.00 cfm/sq.ft. per ANSI/DASMA 105, NFRC 400, or ASTM E283 at 1.57 psf.
 - C. Operation-Cycle Requirements: Provide overhead coiling door components and operators capable of operating for not less than 20,000 cycles and for 10 cycles per day.
- 1.4 SUBMITTALS
- A. Product Data: For each type and size of overhead coiling door and accessory. Include the following:
 1. Summary of forces and loads on walls and jambs.
 2. Fire-Rated Doors: Include description of fire-release system including testing and resetting instructions.
 - B. Shop Drawings: Shop drawings to show the air seal at the sill, jambs, and head from the door to the adjacent construction. Also include any special components and installations not dimensioned or detailed in manufacturer's product data.
 - C. Qualification Data: For Installer.
- 1.5 QUALITY ASSURANCE
- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.
 - B. Source Limitations: Obtain overhead coiling doors through one source from a single manufacturer.
 1. Obtain operators and controls from overhead coiling door manufacturer.
 - C. Fire-Test-Response Characteristics: Provide assemblies complying with NFPA 80 that are identical to door and frame assemblies tested for fire-test-response characteristics per UL 10b and NFPA 252, and that are listed and labeled for fire ratings indicated by UL, FMG, ITS, or another testing and inspecting agency acceptable to authorities having jurisdiction.
 - D. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a testing agency acceptable to authorities having jurisdiction that doors comply with all standard construction requirements of tested and labeled fire-rated door assemblies except for size.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. CornellCookson LLC.
 2. McKEON Door Company.
 3. Overhead Door Corp.
 4. Raynor Garage Door Co.
 5. Wayne-Dalton Corp.
 6. Or Equal
- B. Insulated Roll-up Service Door
1. Basis of Design: CornellCookson LLC., Thermiser Max
- C. Insulated Roll-Up Counter Door
1. Basis of Design: CornellCookson LLC., Insulated Rollup Counter Door ESC30
- D. Roll-up Counter Door
1. Basis of Design: CornellCookson LLC., Insulated Rollup Counter Door ESC10

2.2 DOOR CURTAIN MATERIALS AND CONSTRUCTION

- A. Door Curtains: Fabricate overhead coiling door curtain of interlocking stainless steel slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:
1. Stainless Steel Door Curtain Slats: Provide Type 316 Stainless steel door curtain slats.
 - a. Minimum Base-Metal (Uncoated) Thickness: 0.0209 inch.
 - b. Flat profile slats.
 2. Insulation for insulated Units: Fill slat with manufacturer's standard rigid cellular polystyrene or polyurethane-foam-type thermal insulation complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84. Enclose insulation completely within metal slat faces.
 3. Inside Curtain Slat Face: To match material of outside metal curtain slat.
- B. Endlocks and Windlocks for Service Doors: Malleable-iron casings galvanized after fabrication, secured to curtain slats with galvanized rivets or high-strength nylon. Provide locks on not less than alternate curtain slats for curtain alignment and resistance against lateral movement.
- C. Endlocks for Counter Doors: Manufacturer's standard locks on not less than alternate curtain slats for curtain alignment and resistance against lateral movement.

- D. Bottom Bar for Service Doors: Consisting of 2 angles, each not less than 1-1/2 by 1-1/2 by 1/8 inch thick; galvanized, stainless-steel, or aluminum extrusions to suit type of curtain slats.
- E. Bottom Bar for Counter Doors: Manufacturer's standard continuous channel or tubular shape, either stainless steel or aluminum extrusions to suit type of curtain slats.
- F. Curtain Jamb Guides for Service Doors: Fabricate curtain jamb guides of stainless steel angles or channels and angles, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Build up units with not less than 3/16-inch-thick stainless steel sections complying with ASTM A 36/A 36M and ASTM A 123/A 123M. Slot boltholes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain, and a continuous bar for holding windlocks.
- G. Curtain Jamb Guides for Counter Doors: Fabricate curtain jamb guides of material and finish to match curtain slats, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise; with removable stops on guides to prevent overtravel of curtain.

2.3 HOODS AND ACCESSORIES

- A. Hood: Form to act as weatherseal and entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Provide closed ends for surface-mounted hoods and provide fascia for any portion of between-jamb mounting projecting beyond wall face. Provide intermediate support brackets as required to prevent sagging.
 - 1. Fabricate hoods for doors of minimum 0.028-inch -thick, type 316 stainless steel.
 - 2. Include automatic drop baffle to guard against passage of smoke or flame.
- B. Weatherseals: Provide replaceable, adjustable, continuous, compressible weather-stripping gaskets fitted to bottom and top of exterior doors, unless otherwise indicated. At door head, use 1/8-inch-thick, replaceable, continuous sheet secured to inside of hood.
 - 1. Provide motor-operated doors with combination bottom weatherseal and sensor edge.
 - 2. In addition, provide replaceable, adjustable, continuous, flexible, 1/8-inch- thick seals of flexible vinyl, rubber, or neoprene at doorjamb for a weathertight installation.
- C. Fabricate locking device assembly with lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bar to engage through slots in tracks. Lock cylinder is specified in Section 087100 - DOOR HARDWARE.
- D. If door unit is power operated, provide safety interlock switch to disengage power supply when door is locked.
- E. Automatic-Closing Device for Fire-Rated Doors: Provide automatic-closing device that is inoperative during normal door operations, with governor unit complying with requirements of NFPA 80 and with an easily tested and reset release mechanism, and designed to be activated by building fire alarm and detection system and door-holder-release devices.

2.4 COUNTERBALANCING MECHANISM

- A. General: Counterbalance doors by means of adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to door curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
- B. Counterbalance Barrel: Fabricate spring barrel of hot-formed, structural-quality, welded or seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. (2.5 mm/m) of span under full load.
- C. Provide spring balance of one or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Provide cast-steel barrel plugs to secure ends of springs to barrel and shaft.
- D. Fabricate torsion rod for counterbalance shaft of cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
- E. Brackets: Provide mounting brackets of manufacturer's standard design, either cast iron or cold-rolled steel plate.

2.5 ELECTRIC DOOR OPERATORS

- A. General: Provide electric door operator assembly of size and capacity recommended and provided by door manufacturer for door specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
- B. Comply with NFPA 70.
- C. Disconnect Device: Provide hand-operated disconnect or mechanism for automatically engaging chain and sprocket operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount disconnect and operator so they are accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
- D. Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency auxiliary operator.
- E. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V, ac or dc.
- F. Door-Operator Type: Provide wall-, hood-, or bracket-mounted, jackshaft-type door operator unit consisting of electric motor, drive, and chain and sprocket secondary drive.
- G. Electric Motors: Provide high-starting torque, reversible, continuous-duty, Class A insulated, electric motors complying with NEMA MG 1; with overload protection; sized to start, accelerate, and operate door in either direction from any position, at not less than 2/3 fps and not more than 1 fps, without exceeding nameplate ratings or service factor.
 - 1. Type: Polyphase, medium-induction type.
 - 2. Service Factor: According to NEMA MG 1, unless otherwise indicated.

3. Coordinate wiring requirements and electrical characteristics of motors with building electrical system.
- H. Remote-Control Station: Provide momentary-contact, three-button control station with push-button controls labeled "Open," "Close," and "Stop."
 1. Provide interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
- I. Obstruction Detection Device: Provide each motorized door with indicated external automatic safety sensor capable of protecting full width of door opening. Activation of sensor immediately stops and reverses downward door travel.
- J. Limit Switches: Provide adjustable switches, interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
- K. Provide electric operators with ADA-compliant audible alarm and visual indicator lights.
- L. Radio Control: Provide radio control system consisting of the following:
 1. Three-channel universal coaxial receiver to open, close, and stop door, one per operator.
 2. Multifunction remote control.
 3. Remote antenna mounting kit.

2.6 FINISHES

- A. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- B. Stainless Steel Finish: Brushed #4.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General: Install coiling doors and operating equipment complete with necessary hardware, jamb and head molding strips, anchors, inserts, hangers, and equipment supports.
 1. Install fire-rated doors to comply with NFPA 80.

3.2 ADJUSTING

- A. Lubricate bearings and sliding parts; adjust doors to operate easily, free of warp, twist, or distortion and with weathertight fit around entire perimeter.

3.3 STARTUP SERVICES

- A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - a. Test door closing when activated by detector or alarm-connected fire-release system. Reset door-closing mechanism after successful test.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.

END OF SECTION

SECTION 083320

OVERHEAD COILING GRILLES

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Manually operated overhead coiling grilles.
 - 2. Motor operated overhead coiling grilles at A112.1, A112.2,A112.3, and A112.4 .
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 055000 - METAL FABRICATIONS for miscellaneous steel supports.
 - 2. Section 079200 - JOINT SEALANTS for weatherproof joints at hoods.
 - 3. Section 083310 - OVERHEAD COILING DOORS for service and counter doors.
 - 4. Section 087100 - DOOR HARDWARE for lock cylinders and keying.

1.3 PERFORMANCE REQUIREMENTS

- A. Operation-Cycle Requirements: Provide overhead coiling grille components capable of operating for not less than 20,000 cycles and for 10 cycles per day.

1.4 SUBMITTALS

- A. Product Data: For each type and size of overhead coiling grille and accessory.
 - 1. Summary of forces and loads on walls and jambs.
- B. Shop Drawings: Include detailed plans, elevations, details of framing members, required clearances, anchors, and accessories. Include relationship with adjacent materials.
- C. Qualification Data: For Installer.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.

1.6 COORDINATION

- A. Coordinate Work with other operations and installation of adjacent finish materials to avoid damage to installed materials.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Cornell Iron Works.
 - 2. Overhead Door Corp.
 - 3. Raynor Garage Door Co.
 - 4. Wayne-Dalton Corp.
 - 5. Or equal
- B. Basis of Design: "670 Series" Overhead Coiling Grilles as manufactured by Overhead Door Corp.

2.2 GRILLE CURTAIN MATERIALS AND CONSTRUCTION

- A. General: Fabricate overhead coiling grille curtain consisting of a network of 1/4-inch-minimum diameter horizontal rods, or rods covered with tube spacers, spaced as indicated. Interconnect rods by vertical links approximately 5/8 inch wide, spaced as indicated and rotating on rods.
 - 1. Space rods at approximately 1-1/2 inches o.c.
 - 2. Space links approximately 6 inches apart in a straight in-line pattern.
 - 3. Stainless-Steel Grille Curtain: ASTM A 666 or ASTM A 240/A 240M, Type 300 series.
- B. Endlocks: Continuous end links, chains, or other devices at ends of rods; locking and retaining grille curtain in guides against excessive pressures, maintaining grille curtain alignment, and preventing lateral movement.
- C. Bottom Bar: Manufacturer's standard continuous channel, tubular shape, or two angles, finished to match grille.
 - 1. Astragal: Provide a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene; for placement between angles or fitted to shape, as a cushion bumper for grille.
 - 2. Provide motor-operated grilles with combination bottom astragal and sensor edge.
- D. Grille Curtain Jamb Guides: Manufacturer's standard extruded-aluminum shape having curtain groove with return lips or bars to retain curtain. Provide continuous integral wear strips to

prevent metal-to-metal contact and to minimize operational noise; with removable stops on guides to prevent overtravel of curtain.

- E. Wall Mounting Conditions: Between jamb mountings steel tube supports to be provided by overhead coiling grille manufacturer.

2.3 Electric Operation at A112.1, A112.2, A112.3, and A112.4 (all other locations are manual operation)

- A. Electric Motor Operation: Provide UL listed electric operator, size as recommended by manufacturer to move door in either direction at not less than 2/3 foot nor more than 1 foot per second.
- B. Sensing Edge Protection: Electric sensing edge.
- C. Operator Controls: Control stations with open, close, and stop functions.
- D. Key operation.

2.4 HOODS AND ACCESSORIES

- A. Hood: Form to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Provide closed ends for surface-mounted hoods, and provide fascia for any portion of between-jamb mounting projecting beyond wall face. Provide intermediate support brackets as required to prevent sagging.
 - 1. Fabricate hoods for aluminum grilles of minimum 0.032-inch-thick aluminum, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, complying with ASTM B 209.
 - 2. Provide removable metal soffit of same material and finish as curtain if hood is mounted above ceiling, unless otherwise indicated.
- B. Push/Pull Handles: For push-up-operated or emergency-operated grilles, provide manufacturer's standard lifting handles on each side of grille.
- C. Fabricate locking device assembly with lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bar to engage through slots in tracks. Lock cylinder is specified in Section 087100 - DOOR HARDWARE.
- D. If grille curtain is power operated, provide safety interlock switch to disengage power supply when grille is locked.

2.5 COUNTERBALANCING MECHANISM

- A. General: Counterbalance grille curtain by means of adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to grille curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
- B. Counterbalance Barrel: Fabricate spring barrel of hot-formed, structural-quality, welded or seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up grille curtain without distortion of curtain and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.
- C. Provide spring balance of one or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of grille curtain, with uniform adjustment accessible from

outside barrel. Provide cast-steel barrel plugs to secure ends of springs to barrel and shaft.

- D. Fabricate torsion rod for counterbalance shaft of cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
- E. Brackets: Provide mounting brackets of manufacturer's standard design, either cast iron or cold-rolled steel plate.

2.6 FINISHES, GENERAL

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
 - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- C. Directional Satin Finish: No. 4.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General: Install grilles and operating equipment, complete with necessary hardware, according to Shop Drawings, manufacturer's written instructions, and as specified.

3.2 ADJUSTING

- A. Lubricate bearings and sliding parts; adjust grilles to operate easily, free of warp, twist, or distortion and with tight fit around entire perimeter.

3.3 DEMONSTRATION

- A. Engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain overhead coiling grilles.

END OF SECTION

SECTION 083470
INTERIOR SOUND CONTROL DOOR ASSEMBLIES

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Wood and steel sound-control door types.
 2. Steel frames and sound-control seals.
- B. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 081100 - HOLLOW METAL DOORS AND FRAMES for standard steel doors.
 2. Section 081400 - FLUSH WOOD DOORS for standard flush wood doors.
 3. Section 087100 - DOOR HARDWARE for hardware for wood doors.
 4. Section 088000 - GLAZING for glazed lites.
 5. Section 099000 - PAINTING AND COATING for field finishing doors and frames.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
1. Include sound ratings, construction details, material descriptions, core descriptions, fire-resistance rating, temperature-rise ratings, and finishes.
 2. Include factory-finishing specifications.
- B. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; location and extent of hardware blocking; and other pertinent data.
1. Indicate dimensions and locations of mortises and holes for hardware.
 2. Indicate dimensions and locations of cutouts.
 3. Indicate requirements for veneer matching.
 4. Indicate doors to be factory finished and finish requirements.
 5. Indicate fire ratings for fire doors.
 6. Details of sound-control seals, door bottoms, and thresholds.
- C. Samples for Verification:
1. Factory finishes applied to actual door face materials, approximately 8 by 10 inches for each material and finish. For each wood species and transparent finish, provide set of

- three samples showing typical range of color and grain to be expected in the finished work.
- 2. Frames for light openings, 6 inches long, for each material, type, and finish required.

- D. Schedule: Provide a schedule of sound-control door assemblies prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with the Door Hardware Schedule.
- E. Product Certificates: For each type of sound-control door assembly, from manufacturer.
- F. Field Test Report.

1.4 QUALITY ASSURANCE

- A. Source Limitations: Obtain sound-control door assemblies, including doors, frames, sound-control seals, hinges (when integral for sound control), thresholds, and other items essential for sound control, from single source from single manufacturer.
- B. Quality Standard: Comply with AWI's "Architectural Woodwork Quality Standards Illustrated."
 - 1. Provide AWI Quality Certification Labels or an AWI letter of licensing for Project indicating that doors comply with requirements of grades specified.
- C. Forest Certification: Provide doors made from wood products obtained from forests certified by an FSC-accredited certification body to comply with FSC 1.2, "Principles and Criteria."
- D. Fire-Rated Wood Doors and Frames: Doors and frames complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 252.
- E. Acoustical Testing Agency Qualifications: An independent agency accredited as an acoustical laboratory according to the National Voluntary Laboratory Accreditation Program of NIST.
- F. Sound Rating: Provide sound-control door assemblies identical to those of assemblies tested as sound-retardant units by an acoustical testing agency, and have the following minimum rating:
 - 1. STC Rating: As indicated in the Door Schedule, as determined by ASTM E 413 when tested in an operable condition according to ASTM E 90 and ASTM E 1408.
- G. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Comply with requirements of referenced standard and manufacturer's written instructions.
- B. Package doors individually in plastic bags or cardboard cartons.
- C. Mark each door on top and bottom rail with opening number used on Shop Drawings.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install wood sound-control wood doors until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.7 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of sound-control door assemblies that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Failure to meet sound rating requirements.
 - b. Faulty operation of sound seals.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal use or weathering.
 - d. Wood doors that are warped (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section, or show telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch span.
2. Warranty shall be in effect during the following period of time from date of Substantial Completion:
 - a. Interior Solid-Core Wood Doors: Life of installation.
 - b. Steel Doors: Five years.

PART 2 - PRODUCTS

2.1 SOUND-CONTROL DOORS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. AMBICO Limited.
 2. Industrial Acoustics.
 3. Krieger Specialty Products Company.
 4. Overly Door Company.
 5. Or equal
- B. Description: Provide flush-design sound-control doors, 1-3/4 inches thick; with manufacturer's standard sound-retardant core as required to provide STC and fire rating indicated on Door Schedule.
- C. Materials: Comply with for fabrication, and other requirements unless otherwise indicated.
1. Steel Doors: Comply with Section 081100 - HOLLOW METAL DOORS AND FRAMES.
 2. Wood Doors: Comply with Section 081400 - FLUSH WOOD DOORS.
 3. Glazing: As required by sound-control door assembly manufacturer to comply with sound-control and fire-rated-door labeling requirements.

2.2 SOUND-CONTROL FRAMES

- A. Description: Fabricate sound-control door frames with corners mitered, reinforced, and continuously welded full depth and width of frame. Fabricate according to ANSI/NAAMM-HMMA 865.
1. Weld frames according to NAAMM-HMMA 820.
 2. Interior Frames: Fabricate from cold-rolled steel sheet unless otherwise indicated, 0.075-inch nominal thickness, or thicker as required to provide STC rating indicated.
 3. Sound-Control Panel Stops: Formed integral with frames, a minimum of 5/8 inch high, unless otherwise indicated.
 4. Hardware Reinforcement: Fabricate according to ANSI/NAAMM-HMMA 865 of same material as face sheets.
 5. Head Reinforcement: Reinforce frames with metallic-coated steel channel or angle stiffener, 0.108-inch nominal thickness, welded to head.
 6. Jamb Anchors:
 - a. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than 0.064-inch nominal thickness metallic-coated steel with corrugated or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.156 inch thick.
 - b. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.048-inch nominal thickness uncoated steel unless otherwise indicated.
 - c. Postinstalled Expansion Type for In-Place Concrete or Masonry: Minimum 3/8-inch-diameter, metallic-coated steel bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.
 7. Floor Anchors: Not less than 0.079-inch nominal thickness metallic-coated steel, and as follows:
 - a. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.
 - b. Separate Topping Concrete Slabs: Adjustable-type anchors with extension clips, allowing not less than 2-inch height adjustment. Terminate bottom of frames at finish floor surface.
 8. Ceiling Struts: Minimum 3/8-inch-thick by 2-inch- wide uncoated steel unless otherwise indicated.
 9. Plaster Guards: Metallic-coated steel sheet, not less than 0.026 inch thick.
- B. Materials:
1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
 2. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
 3. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B, with G60 zinc (galvanized) or A40 zinc-iron-alloy (galvannealed) coating designation.
 4. Supports and Anchors: After fabricating, galvanize units to be built into exterior walls according to ASTM A 153/A 153M, Class B.
 5. Inserts, Bolts, and Fasteners: Provide items to be built into exterior walls, hot-dip galvanized according to ASTM A 153/A 153M or ASTM F 2329.

6. Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching sound-control door frames of type indicated.
7. Mineral-Fiber Insulation: Insulation composed of rock-wool fibers, slag-wool fibers, or glass fibers.

2.3 SOUND-CONTROL HARDWARE

- A. Description: Provide manufacturer's standard sound-control system, including head and jamb seals, door bottoms, cam-lift hinges, and thresholds, as required by testing to achieve STC and fire rating indicated.
 1. Compression Seals: One-piece units; consisting of closed-cell sponge neoprene seal held in place by metal retainer; with retainer cover of same material as door frame; attached to door frame with concealed screws.
 2. Magnetic Seals: One-piece units; consisting of closed-cell sponge neoprene seal and resiliently mounted magnet held in place by metal retainer; with retainer cover of same material as door frame; attached to door frame with concealed screws.
 3. Automatic Door Bottoms: Neoprene or silicone gasket, held in place by metal housing, that automatically drops to form seal when door is closed; mounted to bottom edge of door with screws.
 4. Door Bottoms: Neoprene or silicone gasket held in place by metal housing; mortised into bottom edge of door.
 5. Cam-Lift Hinges: Full-mortise template type that raises door 1/2 inch when door is fully open; with hardened pin; fabricated from stainless steel.
 6. Thresholds: Flat, smooth, unfluted type as recommended by manufacturer. Material and finish as required by Door Hardware Schedule.
- B. Other Door Hardware: Comply with requirements in Section 087100 - DOOR HARDWARE.

2.4 SOUND-CONTROL ACCESSORIES

- A. Glazing: Comply with requirements in Section 088000 - GLAZING.
- B. Grout: Comply with ASTM C 476, with a slump of not more than 4 inches as measured according to ASTM C 143/C 143M.
- C. Isolation (Corrosion-Resistant) Coating: Cold-applied asphalt mastic, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.5 FABRICATION

- A. Sound-Control Steel Door Fabrication: Sound-control doors to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal.
 1. Seamless Edge Construction: Fabricate doors with faces joined at vertical edges by welding; welds shall be ground, filled, and dressed to make them invisible and to provide a smooth, flush surface.
 2. Glazed Lites: Factory install glazed lites according to requirements of tested assembly to achieve STC rating indicated. Provide fixed stops and moldings welded on secure side of door.

3. Hardware Preparation: Factory prepare sound-control doors to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified.
 - a. Reinforce doors to receive nontemplated mortised and surface-mounted door hardware.
 - b. Locate door hardware as indicated, or if not indicated, according to NAAMM-HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."
 4. Tolerances: Fabricate doors to tolerances indicated in ANSI/NAAMM-HMMA 865.
- B. Sound-Control Wood Door Fabrication: Factory fit doors to suit frame-opening sizes indicated, with uniform clearances and bevels according to referenced quality standard, unless otherwise indicated. Comply with final door hardware schedules and hardware templates.
1. Comply with clearance requirements in NFPA 80 for fire-rated doors.
 2. Locate door hardware as indicated, or if not indicated, according to DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."
 - a. Coordinate measurements of hardware mortises in steel frames to verify dimensions and alignment before factory machining.
- C. Sound-Control Frame Fabrication: Fabricate sound-control frames to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
1. Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible. Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated from same thickness metal as frames.
 2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
 3. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
 4. Jamb Anchors: Provide number and spacing of anchors as follows:
 - a. Masonry Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:
 - 1) Two anchors per jamb up to 60 inches in height.
 - 2) Three anchors per jamb from 60 to 90 inches in height.
 - 3) Four anchors per jamb from 90 to 96 inches in height.
 - 4) Four anchors per jamb plus one additional anchor per jamb for each 24 inches or fraction thereof more than 96 inches in height.
 - b. Stud Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:
 - 1) Three anchors per jamb up to 60 inches in height.
 - 2) Four anchors per jamb from 60 to 90 inches in height.

- 3) Five anchors per jamb from 90 to 96 inches in height.
 - 4) Five anchors per jamb plus one additional anchor per jamb for each 24 inches or fraction thereof more than 96 inches in height.
 - 5) Two anchors per head for frames more than 42 inches wide and mounted in metal stud partitions.
- c. Postinstalled Expansion Type: Locate anchors not more than 6 inches from top and bottom of frame. Space anchors not more than 26 inches o.c.
5. Head Reinforcement: For frames more than 48 inches wide, provide continuous head reinforcement for full width of opening, welded to back of frame at head.
 6. Hardware Preparation: Factory prepare sound-control frames to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified.
 - a. Reinforce frames to receive nontemplated mortised and surface-mounted door hardware.
 - b. Locate hardware as indicated, or if not indicated, according to NAAMM-HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."
 7. Plaster Guards: Weld guards to frame at back of hardware cutouts and glazing-stop screw and sound-control seal preparations to close off interior of openings in frames to be grouted.
 8. Tolerances: Fabricate frames to tolerances indicated in ANSI/NAAMM-HMMA 865.

2.6 FINISHES

- A. Steel Doors and Frames, Painted Finish: Match Section 081100 - HOLLOW METAL DOORS AND FRAMES.
 1. Refer to Section 099000 – PAINTING AND COATING for field-applied coating.
- B. Wood Doors, Transparent Finish: Match Section 081400 - FLUSH WOOD DOORS.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of sound-control door assemblies.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

- B. Prior to installation and with installation spreaders in place, adjust and securely brace sound-control door frames to the following tolerances:
 - 1. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - 2. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
 - 3. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - 4. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.
- C. Drill and tap doors and frames to receive nontemplated mortised and surface-mounted door hardware.

3.3 INSTALLATION

- A. General: Install sound-control door assemblies plumb, rigid, properly aligned, and securely fastened in place; comply with manufacturer's written instructions.
- B. Frames: Install sound-control door frames in sizes and profiles indicated.
 - 1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
 - a. At fire-rated openings, install frames according to NFPA 80.
 - b. At openings requiring smoke and draft control, install frames according to NFPA 105.
 - c. Where frames are fabricated in sections due to shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, and dress; make splice smooth, flush, and invisible on exposed faces.
 - d. Install sound-control frames with removable glazing stops located on secure side of opening.
 - e. Remove temporary braces only after frames or bucks have been properly set and secured.
 - f. Check squareness, twist, and plumbness of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
 - g. Apply corrosion-resistant coatings coating to backs of frames to be filled with mortar, grout, and plaster containing antifreezing agents.
 - 2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor and secure with postinstalled expansion anchors.
 - a. Floor anchors may be set with powder-actuated fasteners instead of postinstalled expansion anchors, if so indicated and approved on Shop Drawings.
 - 3. Metal-Stud Partitions: Solidly pack mineral-fiber insulation behind frames.
 - 4. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout.
 - 5. Concrete Walls: Solidly fill space between frames and concrete with grout. Take precautions, including bracing frames, to ensure that frames are not deformed or damaged by grout forces.

6. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
 7. In-Place Gypsum Board Partitions: Secure frames in place with postinstalled expansion anchors through floor anchors at each jamb. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
 8. Ceiling Struts: Extend struts vertically from top of frame at each jamb to supporting construction above, unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction above. Provide adjustable wedged or bolted anchorage to frame jamb members.
 9. Grouted Frames: Solidly fill space between frames and substrate with grout. Take precautions, including bracing frames, to ensure that frames are not deformed or damaged by grout forces.
 10. Installation Tolerances: Adjust sound-control door frames for squareness, alignment, twist, and plumbness to the following tolerances:
 - a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.
- C. Doors: Fit sound-control doors accurately in frames, within clearances indicated below. Shim as necessary. Install doors to comply with manufacturer's written instructions, referenced quality standard, and as indicated.
1. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.
 2. Install smoke- and draft-control doors according to NFPA 105.
- D. Door Hardware, General: For installation, see Section 087100 - DOOR HARDWARE.
- E. Sound-Control Seals: Where seals have been prefabricated and preinstalled in the factory and subsequently removed for shipping, reinstall seals and adjust according to manufacturer's written instructions.
- F. Cam-Lift Hinges: Install hinges according to manufacturer's written instructions.
- G. Thresholds: Set thresholds in full bed of sealant complying with requirements in Section 079200 - JOINT SEALANTS.
- H. Glazing: Comply with installation requirements in Section 088000 - GLAZING and with sound-control door assembly manufacturer's written instructions.
1. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c., and not more than 2 inches o.c. from each corner.
- 3.4 FIELD QUALITY CONTROL
- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

- B. Testing Services: Acoustical testing and inspecting agency shall select three sound-control door(s) at random from sound-control door assemblies that are completely installed and perform testing for verification that assembly complies with STC rating requirements.
 - 1. Field tests shall be conducted according to ASTM E 336, with results calculated according to ASTM E 413. Acceptable field STC values shall be within 5 dB of laboratory STC values.
 - 2. Inspection Report: Acoustical testing agency shall submit report in writing to Design Professional and Construction Manager within 24 hours after testing.
 - 3. If tested door fails, replace or rework all sound-control door assemblies to bring them into compliance at Contractor's expense.
 - a. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- C. Prepare test and inspection reports.

3.5 ADJUSTING AND CLEANING

- A. Final Adjustments: Check and adjust seals, door bottoms, and other sound-control hardware items right before final inspection. Leave work in complete and proper operating condition.
- B. Remove and replace defective work, including defective or damaged sound seals and doors and frames that are warped, bowed, or otherwise unacceptable.
 - 1. Adjust gaskets, gasket retainers, and retainer covers to provide contact required to achieve STC rating.
- C. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying primer.
- D. Metallic-Coated Surfaces: Clean abraded areas of doors and repair with galvanizing repair paint according to manufacturer's written instructions.
- E. Finished Wood Doors: Replace doors that are damaged or do not comply with requirements. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION

SECTION 083510
HORIZONTAL-SLIDING ACCORDION FIRE DOORS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Horizontal-sliding, accordion-type fire doors.
 2. Horizontal-sliding, accordion-type security doors.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 055000 - METAL FABRICATIONS for miscellaneous steel framing and supports.
 2. Section 092110 - GYPSUM BOARD ASSEMBLIES for adjacent materials
 3. Section 095100 - ACOUSTICAL CEILINGS for adjacent materials
 4. Division 26 - ELECTRICAL for electrical service and connections for powered operators and accessories and tie-in to fire alarm system.

1.3 SUBMITTALS

- A. Product Data: For each type and size of fire door and accessory. Include the following:
1. Summary of forces and loads on walls and jambs.
 2. Include description of fire-release system including testing and resetting instructions.
- B. Shop Drawings: For special components and installations not dimensioned or detailed in manufacturer's product data.
- C. Qualification Data: For Installer.

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Minimum five years experience in producing horizontal-sliding accordion-type fire door systems of the type specified. Manufacturer shall maintain a quality control program in accordance with ICBO-ES Acceptance Criteria AC 77.

- B. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.
- C. Source Limitations: Obtain horizontal-sliding accordion fire doors through one source from a single manufacturer.
 - 1. Obtain operators and controls from door manufacturer.
- D. Fire-Test-Response Characteristics: Provide assemblies complying with NFPA 80 that are identical to door and frame assemblies tested for fire-test-response characteristics per UL 10b and NFPA 252, and that are listed and labeled for fire ratings indicated by UL, FMG, ITS, or another testing and inspecting agency acceptable to authorities having jurisdiction.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100.
- F. Testing Laboratory Label:
 - 1. UL Listing.
 - 2. OSHPD Anchorage Pre-Approval No. R-0318.
- G. Pre-Installation Meeting:
 - 1. Schedule and convene a pre-installation meeting prior to commencement of field operations with representatives of the following in attendance: Owner, Design Professional, Construction Manager, fire door system sub-contractor, and electrical sub-contractor.
 - 2. Review substrate conditions, requirements of related work, installation instructions, storage and handling procedures, and protection measures.
 - 3. Keep minutes of meeting including responsibilities of various parties and deviations from specifications and installation instructions.

1.5 TESTS

- A. Fire-Resistance: Where fire-resistance ratings are indicated or required by authorities having jurisdiction, provide curtains which are identical to curtains whose fire-resistance rating has been tested in compliance with ASTM E152 by independent agencies acceptable to the Design Professional and authorities having jurisdiction.
- B. ASTM A240 - Standard Specification for Heat Resisting Chromium and Chromium-Nickel Stainless Steel Plate, Sheet and Strip for Pressure Vessels.
- C. ICBO Evaluation Services: AC77 - Acceptance Criteria for Smoke-Containment Systems Used With Fire-Resistive Elevator Hoistway Doors and Frames.
- D. NFPA Codes and Standards:
 - 1. 70 - National Electrical Code.
 - 2. 105 - Recommended Practice for the Installation of Smoke-Control Door Assemblies.
 - 3. 72 - National Fire Alarm Code
- E. SBCCI Public Safety and Evaluation Services, Inc., Report No 9710 - Smoke Guard.

F. UL Standards:

1. 268 - Smoke Detectors for Fire Protective Signaling Systems.
2. 508 - Industrial Control Equipment.
3. 864 - Control Units for Fire Protective Signaling Systems.
4. 1784 - Air Leakage Tests for Door Assemblies.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Cornell Iron Works.
2. McKeon SafeScape AC8000 Series.
3. Modernfold, a DORMA company.
4. Won-Door Corp.
5. Or Equal

- B. 2-HR Fire Rated Folding Door/Partition (doors close with activation of the fire alarm)

1. Basis-of-Design: Won-Door - FG90.

- C. Folding Security Door (doors open with activation of the fire alarm)

1. Basis-of-Design: Won-Door – AFG-0

2.2 IDENTIFICATION

- A. Label each smoke containment system with following information:

1. Manufacturer's name.
2. Maximum leakage rating at specified pressure and temperature conditions.
3. Label of quality control agency.

2.3 MATERIALS

- A. Construction: shall consist of two parallel, accordion-type walls of panels independently suspended with no floor tracks, pantographs, or interconnections except at the lead-post.
- B. Panels shall be formed of 24-gauge enamel coated steel V-grooved for strength and resilience. Panels shall be connected by full height 24-gauge enamel coated steel hinges. Panels shall be modular in design and capable of in-place repair-ability.
- C. Suspension System: shall consist of two 14-gauge cold rolled steel (or 0.125 aluminum) tracks on 8 inch centers attached to the overhead structural support. Each lead post shall be suspended by an 8-wheel ball bearing trolley. Each panel shall be suspended by a steel hanger pin and a ball bearing roller.

- D. Lead-Posts: shall be of 24-gauge cold rolled steel and shall be connected by specially formed steel panels. An internally mounted stabilizer bar shall keep lead-posts plumb and in proper alignment during operation and insure a tight fitting closure.
- E. Perimeter Seals: shall consist of continuous extruded vinyl sweeps attached to the top and bottom of the fire door to form a smoke and draft seal.
- F. Hanging Weight: 5.5 pounds per square foot.
- G. Automatic Closing/Opening System shall consist of the following:
 - 1. Microprocessor based Electronic Control box with these features:
 - a. Ability to monitor dual power sources continually for peak performance including:
 - 1) Detect a missing battery, bad battery, or low battery condition.
 - 2) Detect if the charging circuit is bad.
 - 3) Detect fuse failures.
 - 4) Detect high or low AC conditions.
 - b. Ability to monitor the health of the drive train including:
 - 1) Direction errors, obstruction errors, hindrance errors, and position errors.
 - 2) Active daily path checks, by actually closing and opening to assure a clear path and proper operation.
 - 3) Ability to monitor a passive input such as an infrared light beam to assure the closing path is clear.
 - c. Ability to monitor inputs including:
 - 1) Sticky door block, exit hardware, patron hardware, and key switches.
 - 2) Key switch mis-wires where key open and key close are both on simultaneously.
 - d. Ability to self-monitor the health of:
 - 1) Internal volatile and non-volatile memory.
 - 2) Proper operation of firmware.
 - e. Ability to run a "watch dog" monitoring circuit which will force a software restart in the event the software hangs, including the ability to track the number of resets that occur for diagnostic purposes.
 - f. Ability to record the number of times the door has closed, opened, lost communication with external microprocessors, and the number of times the controller has been reset manually.
 - g. Ability to monitor ambient temperature and lockout the operating devices once the environment at the door becomes untenable.
 - h. Ability to enter a security mode to help control access through the door including:
 - 1) The ability to automatically re-close and secure itself after a legitimate patron access has occurred.

- 2) The ability to unlock and revert to a fire door in a fire alarm condition, including the ability to re-lock automatically after the fire alarm condition has cleared.
- i. Ability to withstand voltages up to 120 volts AC on the fire alarm input circuit without damage including the ability to indicate that the alarm circuit has not been wired as a dry contact, "no voltage" circuit when errant voltages are applied to the circuit.
 - j. Ability to communicate with other microprocessors on the system via an internal bus system, including but not limited to microprocessors on the motor drive, in the leading edge of the door, and on a wall mounted display panel adjacent to the door.
 - k. Ability to indicate alarm, trouble and door status both locally and at a remote location.
- 1) Local conditions shall be audibly and or visually indicated at the door where each condition shall have distinct audible pattern as explained in the owners manual.
 - 2) Remote indications shall be via isolated dry contact form C relays. One each to indicate if the door has received the fire alarm signal from the building system/smoke detector; if the door is in a trouble condition; and if the door is closed or not.
2. Motor Operator Assembly including: A DC gear-motor, drive sprocket, clutch, and position sensors. The motor shall drive the fire door by means of a chain attached to a stabilizer bar trolley each time the door operates including the initial closing cycle.
3. A door control momentary rocker switch shall be mounted on one side of the door near the lead post and shall have the following functions: Pressing the upper portion of the switch shall close the door and/or clear fault conditions. Pressing the lower portion of the switch shall open the door and/or temporarily mute the local horn. For doors using wall mounted key switches, option L, a color coordinated cover plate shall be provided to fill the hole left when the rocker switch is removed.
4. The control box shall be equipped with a service switch that performs the following functions:
 - a. When the switch is off with AC power present, the controller shall emit an audible coded sound indicating the system is out of service. In this mode all normal functions shall cease including motor and communications.
 - b. When the switch is off and AC power is not present, the controller shall enter a sleep mode during which the system shall use the battery to monitor the AC line for power but do nothing else.
 - c. When the switch is moved from the off position to the on position, the controller shall enter a calibrate mode where it emits a coded audible alert indicating that the door needs to be closed to complete the calibration sequence. As soon as the door is closed, the controller shall automatically stop the audible alert, and resume all normal functions and monitoring.

H. Leading Edge Obstruction Detector:

1. Shall be pressure sensitive such that each contact with an obstruction shall cause the door to stop, reverse enough to remove pressure on the leading edge, pause, and then re-close when in an alarm condition. The leading edge obstruction detector shall be fully functional at all times, including during the initial closing cycle.

2. Constant pressure to the leading edge in the direction of opening shall, while the door is opening under motor power, continue to open under motor power until the leading edge is released. This is termed motor assisted opening.
 3. Constant pressure to the leading edge while not under motor power shall prevent motor operation and allow the door to be opened manually.
- I. I. Exit Hardware shall be located on both sides of each fire door.
 1. In emergency mode, a slight pressure on the hardware will cause the door to open a minimum of 32 inches, pause for 3 seconds, and then automatically close.
 2. The open distance shall be field programmable, up to the entire opening width, if the local authority requires an opening larger than 32 inches.
 3. The pause before re-close shall be field programmable, up to 30 seconds, if the local authority requires a longer pause time.
 4. The exit hardware shall have the ability when not in the emergency (fire) mode or the security (lock) mode to be used to open the door and move it back into the storage pocket.
 5. The exit hardware shall be field programmable to provide access control. When programmed, the exit hardware shall not respond when pressed until activated by signal from smoke detector or fire alarm.

2.4 ACCESSORIES

- A. Provide automatic-closing device that is inoperative during normal door operations, with governor unit complying with requirements of NFPA 80 and with an easily tested and reset release mechanism, and designed to be activated by building fire alarm and detection system and door-holder-release devices.
- B. Storage pocket with pocket cover door.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General: Install fire doors and operating equipment complete with necessary hardware, jamb and head molding strips, anchors, inserts, hangers, and equipment supports.
 1. Install fire doors to comply with NFPA 80.

3.2 ADJUSTING

- A. Lubricate bearings and sliding parts; adjust doors to operate easily, free of warp, twist, or distortion and with weathertight fit around entire perimeter.

3.3 STARTUP SERVICES

- A. Engage a factory-authorized service representative to perform startup service.
 1. Complete installation and startup checks according to manufacturer's written instructions.
 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

- a. Test door closing when activated by detector or alarm-connected fire-release system. Reset door-closing mechanism after successful test.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.

END OF SECTION

SECTION 083610
SECTIONAL DOORS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Electrically-motor-operated, aluminum and glass sectional overhead doors.
 - 2. Electrically-motor-operated, sectional overhead doors (Alternate No.3, Add Maintenance Building).
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 080800 – OPENING SYSTEMS COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 042000 – UNIT MASONRY for adjacent materials.
 - 2. Section 055000 - METAL FABRICATIONS for miscellaneous steel supports.
 - 3. Section 087100 - DOOR HARDWARE for lock cylinders and keying.
 - 4. Section 133420 – PRE-ENGINEERED BUILDING SYSTEMS
 - 5. Division 26 - ELECTRICAL for electrical service and connections for powered operators and accessories.

1.3 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide sectional overhead doors capable of withstanding the effects of gravity loads and the following loads and stresses without evidencing permanent deformation of door components:
 - 1. Wind Loads: As required by Code or shown on Structural drawings, whichever is more stringent.
- B. Operation-Cycle Requirements: Provide sectional overhead door components and operators capable of operating for not less than 100,000 cycles.

1.4 SUBMITTALS

- A. Product Data: For each type and size of sectional overhead door and accessory. Include the following:
 - 1. Summary of forces and loads on walls and jambs.
 - 2. Motors: Show nameplate data and ratings, characteristics, and mounting arrangements.
- B. Shop Drawings: For special components and installations not dimensioned or detailed in manufacturer's product data.
- C. Qualification Data: For Installer.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.
- B. Source Limitations: Obtain sectional overhead doors through one source from a single manufacturer.
 - 1. Obtain operators and controls from sectional overhead door manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100.

1.6 WARRANTY

- A. Warranty: Manufacturer's limited door and operators System warranty for 10 year against delamination of polyurethane foam from steel face and all other components for 3 years.. 20 year limited on high performance fluoropolymer coating option.

PART 2 - PRODUCTS

2.1 ALUMINUM AND GLASS SECTIONAL OVERHEAD DOORS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Cornell Iron Works.
 - 2. Overhead Door Corp.
 - a. Basis of Design: Model 521 with Glass.
 - 3. Raynor Garage Door Co.
 - 4. Wayne-Dalton Corp.
 - 5. Or equal
- B. Sections: Construct door sections with stiles and rails formed from extruded-aluminum shapes, complying with ASTM B 22, alloy and temper recommended by manufacturer for type of use and finish indicated, with wall thickness not less than 0.065 inch for door section 1-3/4 inches deep. Fabricate sections with stile and rail dimensions and profiles shown on Drawings. Join

stiles and rails by welding or with concealed, 1/4-inch-minimum diameter, aluminum or nonmagnetic stainless-steel through bolts, full height of door section. Form meeting rails to provide a weathertight-seal joint.

1. Reinforce sections with continuous horizontal and diagonal reinforcement, as required to stiffen door and for wind loading. Ensure that reinforcement does not obstruct vision lites.
 2. Provide reinforcement for hardware attachment.
 3. Insulation: Polyurethane insulation for stiles and rails.
- C. Full-Vision Sections: Manufacturer's standard, tubular, aluminum-framed section fully glazed with tempered insulating glass units with R-Value 4.09 and set in vinyl, rubber, or neoprene glazing channel and with removable extruded-vinyl or aluminum stops. The operable unit glass shall match the storefront and curtain wall. Refer to Section 084410-GLAZED ALUMINUM CURTAINWALLS for requirements.

2.2 SECTIONAL OVERHEAD DOORS (ALTERNATE NO.3, ADD MAINTENANCE BUILDING).

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Cornell Iron Works.
 2. Overhead Door Corp.
 - a. Basis of Design: Thermacore Model 529
 3. Raynor Garage Door Co.
 4. Wayne-Dalton Corp.
 5. Cookson
 6. Or equal
- B. Sections: Metal sandwich panel construction with PVC thermal break and weather tight ship-lap design meeting joints.
1. Panel Thickness: 2 inches (51 mm).
 2. Exterior Surface: Ribbed, textured.
 3. Exterior Steel: .015 inch (.38 mm), hot-dipped galvanized.
 4. End Stiles: 16 gauge with thermal break.
 5. Insulation: CFC-free and HCFC-free polyurethane, fully encapsulated.
 6. Air Infiltration: 0.08 cfm at 15 mph; 0.08 cfm at 25 mph.
- C. Partial Glazing: Manufacturers standard Double Thermal Acrylic glazing (25"W x 12"H)

2.3 TRACKS, SUPPORTS, AND ACCESSORIES

- A. Tracks: Manufacturer's standard, galvanized steel track system, sized for door size and weight, designed for lift type indicated and clearances shown, and complying with ASTM A 653/A 653M for minimum G60 zinc coating. Provide complete track assembly including brackets, bracing, and reinforcement for rigid support of ball-bearing roller guides for required door type and size. Slot vertical sections of track spaced at 2 inches apart for door-drop safety device. Slope tracks at proper angle from vertical or design to ensure tight closure at jambs when door unit is closed. Weld or bolt to track supports.

- B. Track Reinforcement and Supports: Galvanized steel track reinforcement and support members, complying with ASTM A 36/A 36M and ASTM A 123/A 123M. Secure, reinforce, and support tracks as required for door size and weight to provide strength and rigidity without sag, sway, and vibration during opening and closing of doors.
 - 1. Support and attach tracks to opening jambs with continuous angle welded to tracks and attached to wall. Support horizontal (ceiling) tracks with continuous angle welded to track and supported by laterally braced attachments to overhead structural members at curve and end of tracks.
 - a. Repair galvanized coating on tracks according to ASTM A 780.
- C. Weatherseals: Replaceable, adjustable, continuous, compressible weather-stripping gaskets of flexible vinyl, rubber, or neoprene fitted to bottom and top of overhead door.
 - 1. Provide motor-operated doors with combination bottom weatherseal and sensor edge.
 - 2. Provide continuous flexible seals at door jambs for a weathertight installation.

2.4 HARDWARE

- A. General: Provide heavy-duty, corrosion-resistant hardware, with hot-dip galvanized, stainless-steel, or other corrosion-resistant fasteners, to suit door type.
- B. Hinges: Heavy-duty galvanized steel hinges of not less than 0.0747-inch-thick, uncoated steel at each end stile and at each intermediate stile, according to manufacturer's written recommendations for door size. Attach hinges to door sections through stiles and rails with bolts and lock nuts or lock washers and nuts. Use rivets or self-tapping fasteners where access to nuts is not possible. Provide double-end hinges where required, for doors exceeding 16 feet in width, unless otherwise recommended by door manufacturer.
- C. Rollers: Heavy-duty rollers with steel ball bearings in case-hardened steel races, mounted with varying projections to suit slope of track. Extend roller shaft through both hinges where double hinges are required. Provide 3-inch-diameter roller tires for 3-inch-wide track and 2-inch-diameter roller tires for 2-inch-wide track.
- D. Push/Pull Handles: For push-up-operated or emergency-operated doors, provide galvanized steel lifting handles on each side of door.
- E. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on single-jamb side, operable from inside only.
- F. Fabricate locking device assembly with lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bar to engage through slots in tracks. Lock cylinder is specified in Section 087100 - DOOR HARDWARE.
- G. If door unit is power operated, provide safety interlock switch to disengage power supply when door is locked.

2.5 COUNTERBALANCE MECHANISM

- A. Extension Spring: Counterbalance mechanism with aircraft-type steel cable over ball-bearing sheaves. Provide oil-tempered wired springs with internal safety rods. Combine operation with a spring bumper in each horizontal track to cushion door at end of opening operation.

- B. Torsion Spring: Counterbalance mechanism consisting of adjustable-tension torsion springs fabricated from oil-tempered-steel wire complying with ASTM A 229/A 229M, Class II, mounted on a cross-header tube or steel shaft. Connect to door with galvanized aircraft-type lift cables with cable safety factor of at least 7 to 1. Provide springs calibrated for a minimum of 100,000 cycles.
- C. Cable Drums: Cast-aluminum or gray-iron casting cable drums grooved to receive cable. Mount counterbalance mechanism with manufacturer's standard ball-bearing brackets at each end of shaft. Provide one additional midpoint bracket for shafts up to 16 feet long and two additional brackets at one-third points to support shafts more than 16 feet long unless closer spacing is recommended by door manufacturer.
- D. Bracket: Provide anchor support bracket as required to connect stationary end of spring to the wall and to level shaft and prevent sag.
- E. Provide a spring bumper at each horizontal track to cushion door at end of opening operation.

2.6 ELECTRIC DOOR OPERATORS

- A. General: Provide electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycle requirements specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
- B. Comply with NFPA 70.
- C. Disconnect Device: Hand-operated disconnect device or mechanism for automatically engaging chain-and-sprocket operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount disconnect device and operator so they are accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
- D. Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency auxiliary operator.
- E. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70, Class 2 control circuit, maximum 24-V, ac or dc.
- F. Electric Motors: High-starting torque, reversible, continuous-duty, Class A insulated, electric motors complying with NEMA MG 1, with overload protection, sized to start, accelerate, and operate door in either direction from any position, at not less than 2/3 fps and not more than 1 fps, without exceeding nameplate ratings or service factor.
 - 1. Type: Polyphase, medium-induction type.
 - 2. Service Factor: Comply with NEMA MG 1, unless otherwise indicated.
 - 3. Coordinate wiring requirements and electrical characteristics of motors with building electrical system.
- G. Remote-Control Station: Momentary-contact, three-button control station with push-button controls labeled "Open," "Close," and "Stop."

- H. Obstruction Detection Device: Provide each motorized door with indicated external automatic safety sensor capable of protecting full width of door opening. Activation of sensor immediately stops and reverses downward door travel.
 - 1. Electric sensing edge monitored to meet UL 325/2010.
 - 2. Photoelectric sensors monitored to meet UL 325/2010.
- I. Limit Switches: Adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.

2.7 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.8 ALUMINUM FINISHES

- A. Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, application, and baking.
 - 1. Color for Aluminum and Glass Sectional door: Custom Color to be selected by Architect
 - 2. Color for Sectional Overhead Door (Alternate No. 3): To be selected from Manufacturers full range.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General: Install door, track, and operating equipment complete with necessary hardware, jamb and head molding strips, anchors, inserts, hangers, and equipment supports according to Shop Drawings, manufacturer's written instructions, and as specified.
- B. Fasten vertical track assembly to framing, spaced not less than 24 inches apart. Hang horizontal track from structural overhead framing with angle or channel hangers fastened to framing by welding or bolting or both. Provide sway bracing, diagonal bracing, and reinforcement as required for rigid installation of track and door-operating equipment.
- C. Protect doors and tracks against damage from construction operations and placement of equipment and fixtures during the remainder of construction period.

3.2 ADJUSTING

- A. Lubricate bearings and sliding parts; adjust doors to operate easily, free from warp, twist, or distortion and with weathertight fit around entire perimeter.
- B. Adjust belt-driven motors as follows:
 - 1. Use adjustable motor-mounting bases for belt-driven motors.

2. Align pulleys and install belts.
3. Tension belt according to manufacturer's written instructions.

- C. Touch-up Painting: Immediately after welding galvanized track to track supports, clean field welds and abraded galvanized surfaces and repair galvanizing to comply with ASTM A 780.

3.3 DEMONSTRATION

- A. Engage a factory-authorized service representative to train the Owner's maintenance personnel to adjust, operate, and maintain sectional overhead doors.

END OF SECTION

SECTION 084110
ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS
(PART OF WORK OF SECTION 080001 – METAL WINDOWS, TRADE BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Interior and exterior aluminum-framed storefronts including glazing.
 2. Interior and exterior manual-swing aluminum doors including glazing.
 3. Installation of hardware as furnished under section 087100.
 4. Exterior perimeter sealant and compressible back-up beads between storefront framing members and abutting dissimilar materials.
 5. Operable vents, screens, and hardware within storefront systems.
 6. Sheet metal back-pans.
 7. Perimeter Sealant at Interior Storefronts where indicated.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 080800 – OPENING SYSTEMS COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 079200 - JOINT SEALANTS for installation of joint sealants installed with aluminum-framed systems and for sealants to the extent not specified in this Section.
 2. Section 084410 - GLAZED ALUMINUM CURTAIN WALLS for curtain-wall systems that mechanically retain glazing on four sides.
 3. Section 087100 - DOOR HARDWARE for lock cylinders and keying.
 4. Section 088000 - GLAZING for glazing requirements to the extent not specified in this Section.
 5. Section 088050 – FIRE-RATED GLAZED ASSEMBLIES for door coordination
 6. Section 089000 - LOUVERS AND VENTS for units installed with aluminum-framed systems.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design entrance and storefront system, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. General: Provide aluminum-framed systems, including anchorage, capable of withstanding, without failure, the effects of the following:
 - 1. Structural loads.
 - 2. Thermal movements.
 - 3. Dimensional tolerances of building frame and other adjacent construction.
 - 4. Failure includes the following:
 - a. Deflection exceeding specified limits.
 - b. Thermal stresses transferred to building structure.
 - c. Framing members transferring stresses, including those caused by thermal and structural movements, to glazing.
 - d. Noise or vibration created by wind and thermal and structural movements.
 - e. Loosening or weakening of fasteners, attachments, and other components.
 - f. Sealant failure.
 - g. Failure of operating units to function properly.
- C. Structural Loads: Wind and seismic loads as indicated on the Structural Drawings, but not less than that required by Code.
- D. Deflection of Framing Members:
 - 1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans up to 13 feet 6 inches (and to 1/240 of clear span plus 1/4 inch for spans greater than 13 feet 6 inches or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.
 - 2. Deflection Parallel to Glazing Plane: Limited to 1/360 of clear span or 1/8 inch, whichever is smaller, amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components directly below to less than 1/8 inch and clearance between members and operable units directly below to less than 1/16 inch.
- E. Thermal Movements: Provide aluminum-framed systems that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
- F. Air Infiltration: Provide doors and storefront which comply with the following. Test unit in accordance with ASTM E 283.
 - 1. Swinging Entrance Doors, ASHRAE Requirement: 1.0 cfm/sf maximum air leakage at a pressure differential of 1.57 psf.
 - 2. Storefront, ASHRAE Requirement: 0.06 cfm/sf maximum air leakage at a pressure differential of 1.57 psf or higher.

- G. Water Leakage Test: Test fixed framing system in accordance with ASTM E 331.
 - 1. Test Pressure: 8 psf.
 - 2. Performance: No leakage as defined in test method at specified test pressure. No uncontrolled water penetrating system or appearing on normally exposed interior surfaces.
- H. Solar Heat-Gain Coefficient: Provide units with a whole-unit SHGC maximum as required by Code, determined according to NFRC 200 procedures. Submit proof of compliance with submittals as specified.
- I. Thermal Transmittance: Provide window units that have a U-value as required by Code rated in BTU/hour/sq. ft./degrees F at 15-mph exterior wind velocity, when tested in accordance with AAMA 1503.1. Test unit to be 4 ft. x 6 ft. Submit proof of compliance with submittals as specified.
- J. Condensation Resistance: Provide aluminum-framed systems with fixed glazing and framing areas having condensation-resistance factor (CRF) of not less than 65 for fixed storefront units and not less than 55 for doors when tested according to AAMA 1503.

1.4 SUBMITTALS

- A. Product Data: Include installation instructions, construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of product indicated. Indicate special procedures and perimeter conditions requiring special attention.
- B. LEED Submittals:
 - 1. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For factory-applied metal finishes, submit Declare product labels.
- C. Shop Drawings: Prepared under the supervision of a qualified professional engineer detailing fabrication and assembly of aluminum-framed systems. For aluminum-framed systems. Include plans, elevations, sections, details, and attachments to other work.
 - 1. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 2. Include structural analysis of story drift and deflection from anticipated live loads, and determination whether head receptors are required.
 - 3. Include details of provisions for system expansion and contraction and for draining moisture occurring within the system to the exterior.
 - 4. For entrances, include hardware schedule and indicate operating hardware types, functions, quantities, and locations.
 - 5. Wiring diagrams for power, signal, and control wiring.
 - 6. Activation and safety devices.
 - 7. Include full-size isometric details of each vertical-to-horizontal intersection of storefronts, showing the following:
 - a. Joinery, including concealed welds.
 - b. Anchorage.

- c. Expansion provisions
 - d. Glazing
 - e. Flashing and drainage.
 - 8. Include details showing interface with perimeter conditions to depict interface with adjacent thermal, weather, air and vapor barriers, and adjacent flashings.
 - 9. Shop drawings must be signed and stamped by a professional engineer.
 - D. Delegated-Design Submittal: For entrance and storefront systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation. Show structural testing for attachment of the storefront to the existing structure. Contractor should survey slab edge locations and conditions of the embeds to develop the attachment details.
 - E. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
 - F. Qualification Data: For Installer.
 - G. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for aluminum-framed systems.
 - H. Performance Reports: Based on systems, components and glazing methods proposed for use on this Project, proof that units as glazed for this Project meet or exceed Code requirements for the following:
 - 1. U-value.
 - 2. Solar heat-gain coefficient.
 - I. Maintenance Data: For aluminum-framed systems to include in maintenance manuals.
 - J. Warranties: Special warranties specified in this Section.
- 1.5 QUALITY ASSURANCE
- A. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer.
 - B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of entrance and storefront systems that are similar to those indicated for this Project in material, design, and extent.
 - C. Installer Qualifications: Capable of assuming engineering responsibility and performing work of this Section and who is acceptable to manufacturer.
 - D. Accessible Entrances: Comply with authorities having jurisdiction, local state building code and the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG)."
 - E. Preinstallation Conference: Conduct conference at Project site. Review methods and procedures related to storefront system, including, but not limited to, the following:

1. Review structural load limitations.
2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
3. Review required testing, inspection, and certifying procedures.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of structural supports for aluminum-framed systems by field measurements before fabrication and indicate measurements on Shop Drawings.
1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating aluminum-framed systems without field measurements. Coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.7 WARRANTY

- A. Special Assembly Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of glazed aluminum-framed storefront systems that do not comply with requirements or that deteriorate as defined in this Section within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Noise or vibration caused by thermal movements.
 - c. Deterioration of metals and other materials beyond normal weathering.
 - d. Water leakage.
 - e. Excessive air leakage
 - f. Failure of operating components to function normally.
 2. Warranty Period: Three years from date of Substantial Completion.
- B. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.
1. Warranty Period: 10 years from date of Substantial Completion.
- C. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of glazed aluminum-framed storefront systems that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Faulty operation of operators, controls, and hardware.
 - c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
 2. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Exterior Storefront, Thermal Break, 2 inch by 4-1/2 inch profile:
 - a. (Basis of Design) EFCO Corporation, 403X.
 - b. Kawneer North America, 451UT.
 - c. Oldcastle BuildingEnvelope, 3000XT.
 - d. Tubelite Inc., TU24000.
 - e. YKK AP America Inc., YES 45 XT.
 - f. Or equal
2. Interior Storefront, 1-3/4 inch by 4-1/2 inch profile:
 - a. (Basis of Design) EFCO Corporation, 403.
 - b. Kawneer North America, Trifab 400.
 - c. Oldcastle BuildingEnvelope, FG-1000.
 - d. Tubelite Inc., INT45.
 - e. YKK AP America Inc., YES 40 FS.
 - f. Or equal
3. Interior Doors, Wide Stile:
 - a. EFCO, a Pella Company, D-500.
 - b. Kawneer North America, 500.
 - c. Oldcastle BuildingEnvelope, WS-500.
 - d. Tubelite Inc., Wide.
 - e. YKK AP America Inc., 50D.
 - f. Or equal
4. Exterior Doors, Wide Stile, Thermally-Broken:
 - a. EFCO, a Pella Company, D-502.
 - b. Kawneer North America, Insulpour 500T.
 - c. Oldcastle BuildingEnvelope, WS-500TC.
 - d. Tubelite Inc., Wide Thermal Block.
 - e. YKK AP America Inc., 50XT.
 - f. Or equal
5. Interior Doors, Fire Rated:
 - a. (Basis of Design) Technical Glass Products (TGP) TGP Fireframes Designer Series

2.2 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

1. Sheet and Plate: ASTM B 209.
2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
3. Extruded Structural Pipe and Tubes: ASTM B 429.
4. Structural Profiles: ASTM B 308/B 308M.
5. Welding Rods and Bare Electrodes: AWS A5.10/A5.10M.

- B. Steel Reinforcement: With manufacturer's standard corrosion-resistant primer complying with SSPC-PS Guide No. 12.00 applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.

1. Structural Shapes, Plates, and Bars: ASTM A 36/A 36M.
2. Cold-Rolled Sheet and Strip: ASTM A 1008/A 1008M.
3. Hot-Rolled Sheet and Strip: ASTM A 1011/A 1011M.

2.3 FRAMING SYSTEMS

- A. Framing Members: Manufacturer's standard extruded-aluminum framing members of thickness required and reinforced as required to support imposed loads.
1. Construction: Dual thermal-break.
- B. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- C. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
1. Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
 2. Reinforce members as required to receive fastener threads.
 3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.
- D. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.
- E. Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials. Form exposed flashing from sheet aluminum finished to match framing and of sufficient thickness to maintain a flat appearance without visible deflection.
- F. Framing System Gaskets and Sealants: Manufacturer's standard recommended by manufacturer for joint type.

2.4 GLAZING SYSTEMS

- A. Insulating-Glass Units for Vertical Glazing: Provide insulating glass units in accordance with Section 084410 - GLAZED ALUMINUM CURTAIN WALLS.
- B. Glazing Gaskets: Manufacturer's standard compression types, replaceable, molded or extruded, that maintain uniform pressure and watertight seal.

- C. Spacers and Setting Blocks: Manufacturer's standard elastomeric types.

2.5 OPERABLE VENT WINDOWS

A. General - Unit Description:

1. Basis of Design: EFCO WV410, or approved equal.
2. Operation: Project out (out-swinging) in configurations as indicated.
3. Performance Requirements:
 - a. The operable vents shall be Architectural Aluminum Windows in accordance with AAMA 501, Methods Of Test For Metal Exterior Walls.
 - b. Air infiltration, water resistance, structural performance, and thermal movement shall be the same as specified herein for curtain wall system.
 - c. Condensation Resistance Factor (CRF) will be determined in accordance with AAMA Specification 1503.1 – 1988 Procedure. Test unit 6'0" x 6'8" using two equal size lites of 1" insulating glass units composed of two nominal "clear lites with a nominal" air space and an aluminum spacer system. The thermal transmittance coefficient (U Value) will be determined in accordance with ASTM C 236-89 and AAMA 1503.1 – 1988.
 - 1) Thermal Performance Ratings:
 - a) Condensation Resistance Factor – Frame 70
 - b) Condensation Resistance Factor – Glass 56
 - c) Thermal Transmittance due to conduction $U = 0.65$
(U values expressed in BTU/hr/ft²/°F).

- B. Fabricate aluminum operable vents that can be re-glazed without dismantling sash.

- C. Weather Stripping: Provide two rows of compression type full-perimeter weather stripping for each operable sash and ventilator; of neoprene / EPDM alloy or santoprene.

- D. Weep Holes: Provide weep holes and internal passages to conduct infiltrating water to exterior.

- E. Structural Silicone Glazing: Provide 4-sided aluminum leg to support glass, tubular, interior plane, flush-with-frame. Glaze units in accordance with requirements specified in Section 084410 - GLAZED ALUMINUM CURTAIN WALLS..

1. Glazing: Same as adjacent structural-sealant-glazed curtain-wall glazing.

- F. Hardware: Provide the following operating hardware:

1. Window-Operating Hardware: Cam-Type Operators. Wickets as required to access hardware.
 - a. As selected by Architect from manufacturer's full range of types and styles.
 - b. Limiter: Include devices to limit opening size to less than 4 inches.
2. Hinges: Concealed four- or six-bar friction hinges located on each jamb near top rail; two per ventilator.
3. Insect Screens: Provide removable insect screen on each operable exterior sash, with screen frame finished to match window unit, complying with SMA 1004 or SMA 1201, and as follows:

- a. Aluminum Wire Fabric: 18-by-18 mesh of 0.013-inch- (0.3-mm-) diameter, coated aluminum wire.
- b. Wickets to access hardware. Wicket frame to match color and finish of storefront frame.

G. Aluminum Finish: Match finish of framing members.

2.6 INSECT SCREENS

- A. General: Design windows and hardware to accommodate screens in a tight-fitting, removable arrangement, with a minimum of exposed fasteners and latches. Provide for each operable exterior sash or ventilator.
- B. Aluminum Insect Screen Frames: Manufacturer's standard aluminum alloy complying with SMA 1004. Fabricate frames with mitered or coped joints, concealed fasteners, and removable PVC spline/anchor concealing edge of frame.
 - 1. Aluminum Tubular Framing Sections and Cross Braces: Roll formed from aluminum sheet with minimum wall thickness as required for class indicated.
 - 2. Finish: Match aluminum window members.
- C. Stainless-Steel Wire Fabric: 18-by-16 mesh of 0.009-inch-diameter, nonmagnetic stainless-steel wire, Type 304 or 316, complying with FS RR-W-365, Type VI.

2.7 DOORS

- A. Doors: Manufacturer's standard glazed doors, for manual swing operation.
 - 1. Door Construction: Mechanical clip fastening, SIGMA deep penetration plus welds and 1-1/8 inch long fillet welds inside and outside of all four corners. Glazing stops shall be hook-in type and EPDM glazing gaskets reinforced with non-stretchable cord.

2.8 DOOR HARDWARE

- A. General: Provide heavy-duty units in sizes and types recommended by entrance system and hardware manufacturers for entrances and uses indicated.
 - 1. Opening-Force Requirements:
 - a. Egress Doors: Not more than 30 lbf required to set door in motion and not more than 15 lbf required to open door to minimum required width.
 - b. Accessible Interior Doors: Not more than 5 lbf.
- B. Doors that are components of Fire-Rated Glazed Assemblies: Doors shall be approved by fire-rated-glazed-assembly manufacturer to maintain fire rating and overall performance of fire rated curtain wall systems
 - 1. Field glaze door frame assemblies
 - 2. Finish to match glazed assembly framing members (custom color as approved by Architect)
- C. Hardware Sets: Provide as specified in Section 087100 - DOOR HARDWARE.
- D. Hardware Sets for Fire Rated Curtainwall Assemblies:

1. Doors and frames have been fire tested as an assembly, therefore hardware substitutions that are not a part of the tested assembly are not allowed.
2. Hardware Set #FR-1

a.

	ITEM	DESCRIPTION	MANUFACTURER	FINISH
6	Hanging Devices	Weld on Pivots	TGP	PTM
2	Exit Device	3547A-F Concealed	Von Druprin	626
2	Lever Trim	360L	Von Druprin	626
1	Cylinder	ANSI Mortise Schlage C Keyway	TGP	626
2	Closers	4040XP Surface Mounted	LCN	689
2	Auto Door Bottoms	420 APKL Smoke Seal	Pemko	MA
1	Auxiliary Fire Latch	Used w/ exit device with no bottom rod	TPG	630
1	Weather Seal	Perimeter Gasket	TGP	
2	Addressable Magnetic Hold Opens	Surface mounted	See 087100	

2.9 ACCESSORY MATERIALS

- A. Insulating Materials: As specified in Section 072100 - THERMAL INSULATION.
- B. Joint Sealants: For installation at perimeter of aluminum-framed systems, as specified in Section 079200 - JOINT SEALANTS.
- C. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.10 SEALANT

- A. Sealant and backing materials.
 1. Sealant used within system: As recommended by manufacturer.
 2. Exterior Perimeter Sealant: Multi-component gun-grade polyurethane sealant Low modulus type, non-sagging, conforming to FS TT-S-000227E, Type II, Class A, and ASTM C 920, Type M, Class 25, Grade NS, use NT, M, A and O with a minimum movement capability of ± 50 percent, equal to the following:
 - a. Mameco International, Inc., product "Vulkem 922".
 - b. Sonneborn Building Products Inc., Minneapolis MN.; product, "Sonolastic NP2".
 - c. Tremco, Beachwood OH.; product, "Dymeric".
 - d. Pecora Corporation, Harleysville PA.; product "Dynatrol II".
 - e. Or equal
 3. Compressible joint bead back-up: Compressible closed cell polyethylene, extruded polyolefin foam or polyurethane foam rod, 1/3 greater in diameter than width of joint. Provide one of the following, or equal:
 - a. Sonneborn Building Products Inc., Minneapolis MN.; product "Sonofoam".
 - b. Applied Extrusion Technologies, Inc., Middletown DE., product "Sof Rod".
 - c. Or equal

4. Primers: Furnish and install joint primers of the types, and to the extent, recommended by the respective sealant manufacturers for the specific joint materials and joint function.
5. Bond-breaker tape, and temporary masking tape: Of types as recommended by the manufacturer of the specific sealant and caulking material used at each application, and completely free from contaminants which would adversely affect the sealant and caulking materials.
6. Concealed Butyl Sealant: At concealed interface locations between storefront system and air & vapor barrier system as indicated on Drawing, butyl rubber sealant equal to "201" as manufactured by Inland Inc. shall be used.
 - a. Multi-purpose, waterproof and weather resistant rubber based sealant that cures using a solvent release system.
 - b. Withstand joint movement of +/-10% without loss of water tightness.
 - c. Remains soft and pliable, "self-healing" when cut.
 - d. Conforms with federal specification TT-S-001657 and ASTM C1085.

2.11 ACCESSORY MATERIALS

A. Insulating Materials:

1. Mineral wool, non-structural insulated sheathing board equal to Rockwool's Comfortboard 80. Total of 4" thick – comprised of two layers of two-inch thick boards.
 - a. Provide at the interior face of spandrel glass Type GX2.
 - b. Provide at the interior face of aluminum infill panels.

B. Joint Sealants: For installation at perimeter of aluminum-framed systems, as specified in Section 079200 - JOINT SEALANTS.

C. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.12 FABRICATION

A. Form aluminum shapes before finishing.

B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

C. Framing Members, General: Fabricate components that, when assembled, have the following characteristics:

1. Profiles that are sharp, straight, and free of defects or deformations.
2. Accurately fitted joints with ends coped or mitered.
3. Means to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to exterior.
4. Physical and thermal isolation of glazing from framing members.
5. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.

D. Mechanically Glazed Framing Members: Fabricate for flush glazing (without projecting stops).

- E. Door Frames: Reinforce as required to support loads imposed by door operation and for installing hardware.
 - 1. At exterior doors, provide compression weather stripping at fixed stops.
 - 2. At interior doors, provide silencers at stops to prevent metal-to-metal contact. Install three silencers on strike jamb of single-door frames and two silencers on head of frames for pairs of doors.
- F. Doors: Reinforce doors as required for installing hardware.
 - 1. At pairs of exterior doors, provide sliding weather stripping retained in adjustable strip mortised into door edge.
 - 2. At exterior doors, provide weather sweeps applied to door bottoms.
- G. Hardware Installation: Factory install hardware to the greatest extent possible. Cut, drill, and tap for factory-installed hardware before applying finishes.
- H. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.13 ALUMINUM FINISHES

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- C. High-Performance Organic Finish (3-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer's standard 3-coat, thermocured system consisting of specially formulated inhibitive primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions.
 - 1. Color and Gloss: Provide custom colors as selected by Architect.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General:
 - 1. Comply with manufacturer's written instructions.

2. Do not install damaged components.
 3. Fit joints to produce hairline joints free of burrs and distortion.
 4. Rigidly secure nonmovement joints.
 5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration.
 6. Seal joints watertight, unless otherwise indicated.
- B. Metal Protection:
1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape or installing nonconductive spacers as recommended by manufacturer for this purpose.
 2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- C. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to exterior.
- D. Set continuous sill members and flashing in full sealant bed as specified in Section 079200 - JOINT SEALANTS and to produce weathertight installation.
- E. Install components plumb and true in alignment with established lines and grades, without warp or rack.
- F. Install glazing as specified in Section 088000 - GLAZING.
1. Structural-Sealant Glazing:
 - a. Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
 - b. Install weatherseal sealant according to Section 079200 - JOINT SEALANTS and according to sealant manufacturer's written instructions to produce weatherproof joints. Install joint filler behind sealant as recommended by sealant manufacturer.
- G. Entrances: Install to produce smooth operation and tight fit at contact points.
1. Exterior Entrances: Install to produce tight fit at weather stripping and weathertight closure.
 2. Field-Installed Hardware: Install surface-mounted hardware according to hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.
- H. Erection Tolerances: Install aluminum-framed systems to comply with the following maximum tolerances:
1. Location and Plane: Limit variation from true location and plane to 1/8 inch in 12 feet; 1/4 inch over total length.
 2. Alignment:
 - a. Where surfaces abut in line, limit offset from true alignment to 1/16 inch.
 - b. Where surfaces meet at corners, limit offset from true alignment to 1/32 inch.
 3. Diagonal Measurements: Limit difference between diagonal measurement to 1/8 inch.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Testing Services: Testing and inspecting of representative areas to determine compliance of installed systems with specified requirements shall take place as follows and in successive stages as indicated on Drawings. Do not proceed with installation of the next area until test results for previously completed areas show compliance with requirements.
 - 1. Air Infiltration: Areas shall be tested for air leakage of 1.5 times the rate specified for laboratory testing under Part 1 "Performance Requirements" Article, but not more than 0.09 cfm/sq. ft. of fixed wall area when tested according to ASTM E 783 at a minimum static-air-pressure difference of 6.24 lbf/sq. ft.
 - 2. Water Penetration: Areas shall be tested according to ASTM E 1105 at a minimum static-air-pressure difference of 0.67 times the static-air-pressure difference specified for laboratory testing under Part 1 "Performance Requirements" Article, but not less than 4.18 lbf/sq. ft., and shall not evidence water penetration.
 - 3. Water Spray Test: Before installation of interior finishes has begun, a minimum area of 75 feet by 1 story of aluminum-framed systems designated by Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
- C. Refer to Section 080800 – OPENING SYSTEMS COMMISSIONING for additional testing requirements and quantities.
- D. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements until satisfactory test results are achieved.

3.4 ADJUSTING

- A. Entrances: Adjust operating hardware for smooth operation according to hardware manufacturers' written instructions.
 - 1. For doors accessible to people with disabilities, adjust closers to provide a 3-second closer sweep period for doors to move from a 70-degree open position to 3 inches from the latch measured to the leading door edge.

END OF SECTION

SECTION 084410

GLAZED ALUMINUM CURTAIN WALLS

(PART OF WORK OF SECTION 080001 - METAL WINDOWS, TRADE BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Glazed aluminum-framed curtain wall systems, including glazing.
 2. Exterior perimeter sealant and compressible back-up beads between framing members and abutting dissimilar materials.
 3. Silicone transition sheet glazed into the curtainwall.
 4. Sheet metal back-pans.
 5. Operable vents, screens, and hardware within curtainwall systems.
 6. Installation of hardware as furnished under section 087100.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 080800 – OPENING SYSTEMS COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 078440 - FIRE-RESISTIVE JOINT SYSTEMS for perimeter fire-containment systems (safing insulation) field installed with glazed aluminum curtain wall systems.
 2. Section 079200 - JOINT SEALANTS for installation of joint sealants installed with glazed aluminum curtain wall systems and for sealants to the extent not specified in this Section.
 3. Section 084110 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS for entrance and storefront systems.
 4. Section 085110 - ALUMINUM WINDOWS for windows installed with glazed aluminum curtain wall systems.
 5. Section 087100 – DOOR HARDWARE for providing hardware templates required for entrance frame fabrication and for furnishing finished door hardware.
 6. Section 088000 - GLAZING for glazing requirements to the extent not specified in this Section.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design glazed curtain wall, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. General: Provide glazed aluminum curtain wall systems, including anchorage, capable of withstanding, without failure, the effects of the following:
 - 1. Structural loads.
 - 2. Thermal movements.
 - 3. Movements of supporting structure indicated on Drawings including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
 - 4. Dimensional tolerances of building frame and other adjacent construction.
 - 5. Failure includes the following:
 - a. Deflection exceeding specified limits.
 - b. Thermal stresses transferred to building structure.
 - c. Framing members transferring stresses, including those caused by thermal and structural movements, to glazing.
 - d. Noise or vibration created by wind and thermal and structural movements.
 - e. Loosening or weakening of fasteners, attachments, and other components.
 - f. Sealant failure.
- C. Structural Loads: Wind and seismic loads as indicated on the Structural Drawings, but not less than that required by Code.
- D. Structural-Test Performance: Provide glazed aluminum curtain wall systems tested according to ASTM E 330 as follows:
 - 1. When tested at positive and negative wind-load design pressures, systems do not evidence deflection exceeding specified limits.
 - 2. When tested at 150 percent of positive and negative wind-load design pressures, systems, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
 - 3. Test Duration: As required by design wind velocity but not less than 10 seconds.
- E. Deflection of Framing Members:
 - 1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans up to 13 feet 6 inches, and to 1/240 of clear span plus 1/4 inch for spans greater than 13 feet 6 inches or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.
 - 2. Deflection Parallel to Glazing Plane: Limited to 1/360 of clear span or 1/8 inch, whichever is smaller, amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch.
- F. Story Drift: Provide glazed aluminum curtain wall systems that accommodate design displacement of adjacent stories indicated.
 - 1. Design Displacement: As indicated on Drawings.
 - 2. Test Performance: No glass breakage, anchor failures, or structural damage when tested according to AAMA 501.4.

- G. Thermal Movements: Provide glazed aluminum curtain wall systems that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
- H. Air Infiltration: Provide glazed aluminum curtain wall systems with maximum air leakage of 0.06 cfm/sq. ft. of fixed wall area when tested according to ASTM E 283 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft.
- I. Water Penetration Under Static Pressure: Provide aluminum glazed curtain wall systems that do not evidence water penetration when tested according to ASTM E 331 at a minimum differential static pressure of 20 percent of positive design wind load, but not less than 12 lbf/sq. ft.
 - 1. Maximum Water Leakage: No uncontrolled water penetrating systems or appearing on systems' normally exposed interior surfaces from sources other than condensation. Water controlled by flashing and gutters that is drained to exterior and cannot damage adjacent materials or finishes is not considered water leakage.
- J. Condensation Resistance: Provide glazed aluminum curtain wall systems with condensation-resistance factor (CRF) of not less than 75 when tested according to AAMA 1503.
- K. Solar Heat-Gain Coefficient: Provide units with a whole-unit SHGC maximum as required by Code, determined according to NFRC 200 procedures. Submit proof of compliance with submittals as specified.
- L. Thermal Transmittance: Provide window units that have a U-value as required by Code rated in BTU/hour/sq. ft./degrees F at 15-mph exterior wind velocity, when tested in accordance with AAMA 1503.1. Test unit to be 4 ft. x 6 ft. Submit proof of compliance with submittals as specified.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. LEED Submittals:
 - 1. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For factory-applied metal finishes, submit Declare product labels.
- C. Shop Drawings: Prepared by or under the supervision of a qualified professional engineer detailing fabrication and assembly of glazed aluminum curtain wall systems.
 - 1. Include structural analysis of story drift and deflection from anticipated live loads, and determination whether head receptors are required.
 - 2. Include weatherproofing, drainage and anchorage provisions.
 - 3. Include details, materials, adjacent and adjacent construction. Include isometric views of complex intersections.

- D. Delegated-Design Submittal: For glazed curtain wall system indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- E. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- F. Fabrication Sample: Of each vertical-to-horizontal intersection of systems, made from 12-inch lengths of full-size components and showing details of the following:
 - 1. Joinery.
 - 2. Anchorage.
 - 3. Expansion provisions.
 - 4. Glazing.
 - 5. Flashing and drainage.
- G. Performance Reports: Based on systems, components and glazing methods proposed for use on this Project, proof that units as glazed for this Project meet or exceed Code requirements for the following:
 - 1. U-value.
 - 2. Solar heat-gain coefficient.
- H. Compatibility Test Reports: Test reports by glazing and/or sealant manufacturers that show chemical compatibility and adhesion (if required) between all non-aluminum components including, but not limited, to:
 - 1. Gaskets
 - 2. Insulated glass edge seals
 - 3. Setting blocks
 - 4. Anti-walk blocks
 - 5. End dams
 - 6. Sealants
 - 7. Silicone sheet membrane flashing
- I. Welding certificates.
- J. Qualification data for Installer.
- K. Field quality-control test reports.
- L. Warranties: Special warranties specified in this Section.

1.5 QUALITY ASSURANCE

- A. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer.
- B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the state the project is located, and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of glazed curtain wall system that are similar to those indicated for this Project in material, design, and extent.

- C. Installer Qualifications: Capable of assuming engineering responsibility and performing Work of this Section and who is acceptable to manufacturer.
- D. Product Options: Information on Drawings and in Specifications establishes requirements for systems' aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field-testing, and in-service performance.
- E. Welding: Qualify procedures and personnel according to AWS D1.2, "Structural Welding Code--Aluminum."
- F. Installation Sequence Conference: Conduct conference at Project site to review sequence of installation of curtain wall systems, including installation of joint sealants, flashing, and glass. Conference shall be attended by all installers of applicable components.
- G. Mockups: Build mockups to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical wall area as indicated on Drawings.
 - 2. Build mockup in sequence recommended by manufacturer including installation of joint sealants, flashing and glass.
 - 3. The construction of the mockup shall be observed by all tradesmen constructing the curtain wall system.
- H. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01. Review methods and procedures related to glazed aluminum curtain wall systems including, but not limited to, the following:
 - 1. Review structural load limitations.
 - 2. Review installation sequence, including installation of sealants, flashing, and glass.
 - 3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 4. Review required testing, inspecting, and certifying procedures.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of structural supports for glazed aluminum curtain wall systems by field measurements before fabrication and indicate measurements on Shop Drawings.
 - 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating glazed aluminum curtain wall systems without field measurements. Coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.7 WARRANTY

- A. Special Assembly Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of glazed aluminum curtain wall systems that do not comply with requirements or that deteriorate as defined in this Section within specified warranty period.
 - 1. Failures include, but are not limited to, the following:

- a. Structural failures including, but not limited to, excessive deflection.
 - b. Noise or vibration caused by thermal movements.
 - c. Deterioration of metals and other materials beyond normal weathering.
 - d. Water leakage.
 - e. Excessive air leakage
 - f. Failure of operating components to function normally.
 2. Warranty Period: Three years from date of Substantial Completion.
- B. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.
1. Warranty Period: Ten years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Curtain Wall - Pressure Plate System:
 - a. (Basis of Design) EFCO Corporation, System 5600X.
 - b. Kawneer North America, 1600UT System 1.
 - c. Oldcastle BuildingEnvelope, Reliance-TC.
 - d. Wausau, Superwall.
 - e. YKK AP America Inc., YCW-750 XTP.
 - f. Or equal.

2.2 FRAMING SYSTEMS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
1. Sheet and Plate: ASTM B 209
 2. Extruded Bars, Rods, Shapes, and Tubes: ASTM B 221
 3. Extruded Structural Pipe and Tubes: ASTM B 429.
- B. Steel Reinforcement: With manufacturer's standard corrosion-resistant primer complying with SSPC-PS Guide No. 12.00 applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.
1. Structural Shapes, Plates, and Bars: ASTM A 36/A 36M.
 2. Cold-Rolled Sheet and Strip: ASTM A 611.
 3. Hot-Rolled Sheet and Strip: ASTM A 570/A 570M.
- C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- D. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

1. Where fasteners are subject to loosening or turn out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
 2. Reinforce members as required to receive fastener threads.
 3. Where acceptable, use exposed fasteners with countersunk Phillips screw heads.
 4. Finish exposed portions to match framing system.
 5. At movement joints, use slip-joint linings, spacers, and sleeves of material and type recommended by manufacturer.
- E. Anchors: Three-way adjustable anchors that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.
- F. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.
- G. Joint Sealants: Provide manufacturer recommended sealants for seams and joints within aluminum framing system.

2.3 GLAZING SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Cardinal Glass Industries.
 2. Guardian Industries.
 3. Viracon.
 4. Vitro Architectural Glass.
 5. Or equal assembly that meets the performance requirements and fits within the specified frame depth.
- B. .Basis of Design and Schedule
1. Type GX1: Viracon VE6-2M. Provide tempered safety glazing at exterior glass plies and laminated safety glass at interior plies, where indicated on drawings and as required by code.
 - a. Composition:
 - 1) Exterior Glass Ply: 1/4" Blue-Green, tempered.
 - 2) Coating: Low-E on #2 Surface.
 - 3) Airspace: 1/2" airspace, mill finish, argon filled.
 - 4) Silicone: black.
 - 5) Interior Glass Ply: Clear laminated glass consisting of two layers of 1/4" heat strengthened glass with 0.030 inch thick PVB interlayer.
 - b. Transmittance:
 - 1) Visible Light Transmittance: 60%
 - 2) Solar energy: 25%
 - 3) U-V: 6%
 - c. Reflectance:
 - 1) Exterior (Vis-Out) Reflectance: 10%
 - 2) Visible light - Interior: 11%
 - 3) Solar energy: 12%

- d. NFRC U-Values:
 - 1) Winter U-Value: .25
 - 2) Summer U-Value: .21
 - e. Shading Coefficient: .35
 - f. Solar Heat Gain Coefficient: .3
 - g. Light to Solar Gain Ratio: 1.94
2. Type GX2 (Spandrel Glass): Viracon VE6-2M. Provide tempered safety glazing, at both exterior and interior glass plies, where indicated on drawings and as required by code.
- a. Composition:
 - 1) Exterior Glass Ply: 1/4" Blue-Green, heat strengthened.
 - 2) Coating: Low-E on #2 Surface.
 - 3) Airspace: 1/2" airspace, mill finish, argon filled.
 - 4) Silicone: black.
 - 5) Interior Glass Ply: 1/4" clear, heat strengthened spandrel glass with Viraspan silk screening. Color to be chosen by architect from manufacturers full line of options.
 - b. Transmittance:
 - 1) Visible Light Transmittance: 39%
 - 2) Solar energy: 18%
 - 3) U-V: 4%
 - c. Reflectance:
 - 1) Exterior (Vis-Out) Reflectance: 24%
 - 2) Visible light - Interior: 30%
 - 3) Solar energy: 26%
 - d. NFRC U-Values:
 - 1) Winter U-Value: .25
 - 2) Summer U-Value: .21
 - e. Shading Coefficient: .26
 - f. Solar Heat Gain Coefficient: .23
 - g. Light to Solar Gain Ratio: 1.7
3. Type GX3 (Translucent Glass): Viracon VE6-2M. Provide tempered safety glazing at exterior glass plies and laminated safety glass at interior plies, where indicated on drawings and as required by code.
- a. Composition:
 - 1) 1" thick, "VE6-2M" Insulating Coated Glass as manufactured by Viracon.
 - 2) Exterior Glass Ply: 1/4" Blue-Green,
 - 3) heat strengthened.
 - 4) Coating: Low-E on #2 Surface.
 - 5) Airspace: 1/2" airspace, mill finish, argon filled.
 - 6) Silicone: black.
 - 7) Interior Glass Ply: 1/4" clear, 0.030 inch Viraspan "Arctic Snow" PVC laminated and heat strengthened.
 - b. Visible Light Transmittance: 60%
 - c. Exterior (Vis-Out) Reflectance: 10%
 - d. NFRC U-Values
 - 1) Winter U-Value: .25
 - 2) Summer U-Value: .21
 - e. Shading Coefficient: .36

- f. Solar Heat Gain Coefficient: .31
 - g. Light to Solar Gain Ratio: 1.93
4. Type GX4: School Guard Glass SG4 IGU (Security Glass Units)
- a. Composition:
 - 1) Nominal thickness: 1" with the following make up:
 - 2) Exterior lite: 1/4" tempered glass with low-E coating on #2 surface.
 - 3) Air space 3/8" argon gas filled with mill finish spacer.
 - 4) SG4 security glass.
 - b. Ratings:
 - 1) 5-aa1 rated for 6 minutes.
 - 2) BR Level 2 low spall.
 - 3) F1233 Class 1
 - 4) UL 972.
 - c. Compliance:
 - 1) ASTM 1048 – Standard Specification - Heat Strengthened & Fully Tempered Flat Glass
 - 2) ASTM C1036 - Standard Specification - Flat Glass
 - 3) ASTM C1172 - Standard Specification for Laminated Architectural Flat Glass
 - 4) ANSI Z97.1 Safety Materials Used in Buildings
 - 5) CPSC 6 CFR 1201
 - d. Performance Criteria: Test failure occurs when a 4" object can pass through the glass materials.
 - 1) Ballistic impact: Pass* (5 shots with a .762 round) (*bullets penetrate but glass stays in place).
 - 2) Concentrated assault:
 - a) Brick: Pass.
 - b) Steel toed boots: Pass.
 - 3) Forced entry:
 - a) Tools 2 min. test: Pass.
 - b) 3 lb. hammer & bat 3-1/2 min. test: Pass.
 - 4) Total time to failure: 6 min. 10 sec.
 - e. Glass Performance Criteria:
 - 1) Summer U-value: .20
 - 2) Winter U-value: .24
 - 3) Solar heat gain coefficient: .28
 - 4) Reflective heat gain: 65
 - 5) Visible light transmission: 59%
 - 6) Shading coefficient: .32
 - 7) Total solar transmittance: .22
5. Type GX5 (Dot-Fritted Glass): Provide tempered safety glazing, at both exterior and interior glass plies, where indicated on drawings and as required by code.
- a. Composition:
 - 1) 1" thick or deeper as determined by the manufacture, "VE6-2M" Insulating Coated Glass as manufactured by Viracon.
 - 2) Exterior Glass Ply: 1/4" Blue-Green, heat strengthened.
 - 3) Coating: Low-E on #2 Surface.
 - 4) Airspace: 1/2" airspace, mill finish, argon filled.
 - 5) Silicone: black.
 - 6) Interior Glass Ply: 1/4" clear, tempered.

- 7) Silk Screen 1/8" dot, 40% coverage on # 3 surface. Final pattern to be selected by Architect from manufacturer's full range of standard patterns.
 - b. Visible Light Transmittance: 42%
 - c. Exterior (Vis-Out) Reflectance: 16%
 - d. NFRC U-Values
 - 1) Winter U-Value: .25
 - 2) Summer U-Value: .21
 - e. Shading Coefficient: .28
 - f. Solar Heat Gain Coefficient: .24
 - g. Light to Solar Gain Ratio: 1.75
- C. Glazing Gaskets: Manufacturer's standard compression types, replaceable, molded or extruded, that maintain uniform pressure and watertight seal.
- D. Spacers and Setting Blocks: Manufacturer's standard elastomeric types.
- 2.4 INTERIOR GLASS TYPES
- A. Manufacturers
- 1. Viracon
 - 2. Oldcastle Building Envelope
 - 3. Vitro Architectural Glass.
 - 4. Guardian Industries.
 - 5. Or equal assembly that meets the performance requirements and fits within the specified frame depth.
- B. Basis of Design and Schedule:
- 1. Type G1: Laminated Clear Safety Glass:
 - a. Two sheets of double-strength clear sheet glass; ASTM C 1036, Type I, Class 1, quality q3; permanently laminated together with a minimum 0.045 inch thick sheet of clear plasticized polyvinyl butyral, which has been produced specifically for laminating glass.
 - b. Thickness: 1/4 inch, or as indicated.
 - 2. Type G1A: 1" Laminated Insulated Safety Glass Unit
 - a. 1" thick Insulated Glass as manufactured by Viracon, complying with ASTM E 2190 Standard Specification for Insulating Glass Unit Performance and Evaluation. Units shall be certified for compliance by the IGCC:
 - b. Composition:
 - 1) Exterior Glass Ply: 1/4" clear, 0.030-inch PVB-laminated and heat strengthened.
 - 2) Coating: None.
 - 3) Airspace: 1/2" airspace, mill finish.
 - 4) Silicone: black.
 - 5) Interior Glass Ply: 1/4" clear, 0.030-inch PVB-laminated and heat strengthened.
 - 3. Type G2: Laminated Spandrel Glass:

- a. Two sheets of double-strength clear sheet glass; ASTM C 1036, Type I, Class 1, quality q3; permanently laminated together with a minimum 0.045 inch thick sheet of "Viraspan V175 - High Opacity White" plasticized polyvinyl butyral, which has been produced specifically for laminating glass.
 - b. Thickness: 1/4 inch, or as indicated.
- 4. Type G2A: 1" thick Insulated Coated Spandrel Glass Insulating Coated Spandrel Glass as manufactured by Viracon, complying with ASTM E 2190 Standard Specification for Insulating Glass Unit Performance and Evaluation. Units shall be certified for compliance by the IGCC.
 - a. Composition:
 - 1) Exterior Glass Ply: 1/4" clear, 0.030-inch PVB-laminated and heat strengthened.
 - 2) Coating: None.
 - 3) Airspace: 1/2" airspace, mill finish.
 - 4) Silicone: black.
 - 5) Interior Glass Ply: 1/4" clear, 0.045-inch pvb-laminated of "Viraspan V175-High Opacity White" and heat strengthened.
- 5. Type G3: Translucent Laminated Glass:
 - a. Two sheets of double-strength clear sheet glass; ASTM C 1036, Type I, Class 1, quality q3; permanently laminated together with a minimum 0.045 inch thick sheet of "Viracon Arctic Snow" plasticized polyvinyl butyral, which has been produced specifically for laminating glass.
 - b. Thickness: 1/4 inch, or as indicated.
- A. Type G4: Type G4: Insulated Security Glass: shall be "School Guard Glass SG4" as manufactured by LTI Smart Glass, Inc., Pittsfield, MA.
 - 1. Nominal thickness: 3/8"
 - a. SG4 security glass.
 - 2. Ratings:
 - a. 5-aa1 rated for 6 minutes.
 - b. BR level 2 low spall.
 - c. F1233 Class 1.
 - d. UL 972.
 - 3. Compliance:
 - a. ASTM 1048 - Standard Specification - Heat Strengthened & Fully Tempered Flat Glass.
 - b. ASTM C1036 - Standard Specification - Flat Glass.
 - c. ASTM C1172 - Standard Specification for Laminated Architectural Flat Glass.
 - d. ANSI Z97.1 Safety Materials Used in Buildings.
 - e. CPSC 6 CFR 1201.
 - 4. Performance Criteria: Test failure occurs when a 4" object can pass through the glass materials.

- a. Ballistic impact: Pass* (5 shots with a .762 round) (*bullets penetrate but glass stays in place).
 - b. Concentrated assault:
 - c. Forced entry:
 - d. Total time to failure: 6 min. 10 sec.
6. One Way Privacy Glass: One-Way viewing glass: shall be equal to Pilkington "Mirrorpane EP" transparent mirror with Pyrolytic surface, formed by chemical deposition on 1/4 "grey tinted glass and having the following features:
 - a. Visible transmittance: 12%.
 - b. Visible Reflectance on the coated side, 60%.
 - c. Recommended light ratio: 10 to 1.

2.5 GLASS PRODUCTS (AS APPLICABLE)

- A. Tempered Float Glass: ASTM C 1048; Type I (transparent flat glass); Quality-Q3; Kind FT; 1/4 inch thick unless indicated otherwise.
- B. Patterned Glass: ASTM C 1036, Type II (patterned and wired flat glass), Class 1 (clear), Form 3 (patterned); and of quality, finish, and pattern specified.
- C. Laminated Glass: ASTM C 1172, and complying with testing requirements in 16 CFR 1201 for Category II materials, and with other requirements specified. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
 1. Construction for Framed Units: Laminate glass with polyvinyl butyral interlayer to comply with interlayer manufacturer's written recommendations.
 2. Construction for Units with Exposed Edges: Laminate glass with cast-in-place and cured-transparent-resin interlayer to comply with interlayer manufacturer's written recommendations.
 3. Interlayer Thickness: 0.030 inch (0.76 mm) thick for vertical glazing, 0.060 inch (1.52 mm) thick for sloped glazing.
 4. Interlayer Color: Clear unless otherwise indicated.
- D. Insulating-Glass Units, General: Factory-assembled units consisting of sealed lites of glass separated by an argon-filled interspace, and complying with ASTM E2190 and with requirements specified in this Section.
 1. Provide Kind HS (heat-strengthened) float glass in place of annealed glass where needed to resist thermal stresses induced by differential shading of individual glass lites and to comply with glass design requirements specified in Part 1 "Performance Requirements" paragraph.
 2. Provide Kind FT (fully tempered) glass lites where safety glass is indicated.
 3. Overall Unit Thickness and Thickness of Each Lite: Dimensions indicated for insulating-glass units are nominal and the overall thicknesses of units are measured perpendicularly from outer surfaces of glass lites at unit's edge.
 4. Sealing System: Dual seal, with primary and secondary sealants as follows:
 5. Manufacturer's Standard Sealants. Butyl primary and silicone secondary sealants. Secondary sealant shall cover entire spacer bar at IGU perimeter.
 6. Spacer Specifications: Manufacturer's standard spacer material. Spacer corners shall be bent, soldered, or welded. Keyed spacer corners will not be accepted. Spacer may have

a mid-span spacer key located at the midpoint of the insulating glass unit head. Where a mid-span spacer key is used, the key must be fully embedded (all sides) in butyl sealant.

2.6 INSULATED SPANDREL PANELS

1. Laminated Insulated Glazing Metal Panels: Provide 1 in. thick insulated panels in conjunction with storefront system equal to "Mapes-R" as manufactured by Mapes Panels, LLC, Lincoln, NE.
2. Panels shall consist of five ply laminated sandwich of extruded polystyrene core. Entire sandwich shall be permanently bonded with heat and pressure using an elastic neoprene contact adhesive.
 - a. Face and back skin shall be 0.032 in. smooth aluminum.
 - b. Substrate shall be 1/8 in. tempered hardboard.
 - c. Core: 2# density extruded polystyrene (closed cell) foam board.
 - d. Tolerances: .8% of panels dimension length and width - (+/-) 1/16" thickness..
 - e. Finish: Prefinished Kynar 500 to match the integrated operable sash color (custom color), as determined by Architect.
3. Performance
 - a. a. R-Value: 4.58.
 - b. b. U-Value: 0.22.
 - c. a. 20-year finish warranty and 25-year lamination warranty.
4. Insulated metal panel shall be glazed at the storefront manufacture's facility in accordance with the panel manufactures standard glazing practice.
 - a. Panel shall be installed in their openings using flexible setting blocks on the bottom edge with expansion space of at least 1/4 in. at panel perimeter.
 - b. Seals against moisture intrusion as recommended by the manufacturer. Polyurethane or silicone based sealant with a 20 year life shall be used.

2.7 OPERABLE VENT WINDOWS

A. General - Unit Description:

1. Basis of Design: EFCO WV410, or equal.Operation: Project out (out-swinging) in configurations as indicated.
2. Performance Requirements:
 - a. The operable vents shall be Architectural Aluminum Windows in accordance with AAMA 501, Methods Of Test For Metal Exterior Walls.
 - b. Air infiltration, water resistance, structural performance, and thermal movement shall be the same as specified herein for curtain wall system.
 - c. Condensation Resistance Factor (CRF) will be determined in accordance with AAMA Specification 1503.1 – 1988 Procedure. Test unit 6'0" x 6'8" using two equal size lites of 1" insulating glass units composed of two nominal "clear lites with a nominal" air space and an aluminum spacer system. The thermal transmittance coefficient (U Value) will be determined in accordance with ASTM C 236-89 and AAMA 1503.1 – 1988.
 - 1) Thermal Performance Ratings:
 - a) Condensation Resistance Factor – Frame 70

- b) Condensation Resistance Factor – Glass 56
- c) Thermal Transmittance due to conduction $U = 0.65$
(U values expressed in BTU/hr/ft²/°F).

- B. Fabricate aluminum operable vents that can be re-glazed without dismantling sash.
- C. Weather Stripping: Provide two rows of compression type full-perimeter weather stripping for each operable sash and ventilator; of neoprene / EPDM alloy or santoprene.
- D. Weep Holes: Provide weep holes and internal passages to conduct infiltrating water to exterior.
- E. Structural Silicone Glazing: Provide 4-sided aluminum leg to support glass, tubular, interior plane, flush-with-frame. Glaze units in accordance with requirements specified in Section 088000 - GLAZING.
 - 1. Glazing: Same as adjacent structural-sealant-glazed curtain-wall glazing.
- F. Hardware: Provide the following operating hardware:
 - 1. Window-Operating Hardware: Cam-Type Operators.
 - a. As selected by Architect from manufacturer's full range of types and styles.
 - b. Limiter: Include devices to limit opening size to less than 4 inches.
 - 2. Hinges: Concealed four- or six-bar friction hinges located on each jamb near top rail; two per ventilator.
 - 3. Insect Screens: Provide removable insect screen on each operable exterior sash, with screen frame finished to match window unit, complying with SMA 1004 or SMA 1201, and as follows:
 - a. Aluminum Wire Fabric: 18-by-18 mesh of 0.013-inch- (0.3-mm-) diameter, coated aluminum wire.
 - 4. Wickets to access hardware. Wicket frame to match color and finish of storefront frame.
- G. Aluminum Finish: Match (Custom color) finish of framing members.

2.8 INSECT SCREENS

- A. General: Design windows and hardware to accommodate screens in a tight-fitting, removable arrangement, with a minimum of exposed fasteners and latches. Provide for each operable exterior sash or ventilator.
- B. Aluminum Insect Screen Frames: Manufacturer's standard aluminum alloy complying with SMA 1004. Fabricate frames with mitered or coped joints, concealed fasteners, and removable PVC spline/anchor concealing edge of frame.
 - 1. Aluminum Tubular Framing Sections and Cross Braces: Roll formed from aluminum sheet with minimum wall thickness as required for class indicated.
 - 2. Finish: Match aluminum window members.
- C. Stainless-Steel Wire Fabric: 18-by-16 mesh of 0.009-inch-diameter, nonmagnetic stainless-steel wire, Type 304 or 316, complying with FS RR-W-365, Type VI.

2.9 GLAZING SEALANTS

- A. General: Provide products of type indicated, complying with the following requirements:
1. Compatibility: Verify glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, interlayer of laminated glass, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
 2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
 3. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range.
 4. Adhesives and sealants that are used inside the weatherproofing system shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - a. Structural Glazing Adhesives: 100 g/L.
 - b. Architectural Sealants: 250 g/L.
- B. Elastomeric Glazing Sealants: Comply with ASTM C 920 and other requirements indicated for each liquid-applied chemically curing sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.
1. 1. Single-Component Neutral- and Basic-Curing Silicone Glazing Sealants:
 - a. Dow Corning Corporation; 790.
 - b. GE Silicones; SilPruf LM SCS2700.
 - c. Tremco Inc.; Spectrem 1.
 - d. Or equal
- C. Glazing Sealants for Fire-Resistive Glazing Products: Identical to products used in test assemblies to obtain fire-protection rating.

2.10 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based elastomeric tape with a solids content of 100 percent; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; packaged on rolls with a release paper backing; and complying with ASTM C 1281 and AAMA 800 for project conditions.
- B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; packaged on rolls with release liner protecting adhesive; and complying with AAMA 800 for the following types:
1. Type 1, for glazing applications in which tape acts as the primary sealant.
 2. Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.11 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
- D. Spacers: Elastomeric blocks or continuous extrusions with a Shore, Type A durometer hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
- E. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).

2.12 FABRICATION OF GLAZING UNITS

- A. Fabricate glazing units in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
- B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites in a manner that produces square edges with slight kerfs at junctions with outdoor and indoor faces.
- C. Grind smooth and polish exposed glass edges and corners.

2.13 INSULATED SPANDREL PANELS

- A. Insulated Spandrel Panels: Laminated, metal-faced flat panels with no deviations in plane exceeding 0.8 percent of panel dimension in width or length.
 - 1. Overall Panel Thickness: 1 inch.
 - 2. Exterior and Interior Skin: Aluminum.
 - a. Thickness: Manufacturer's standard for finish and texture indicated.
 - b. Finish: Matching framing system.
 - c. Texture: Smooth.
 - d. Backing Sheet: Manufacturer's standard.
 - e. Thermal Insulation Core: Manufacturer's standard.

2.14 SEALANT

- A. Sealant and backing materials.
 - 1. Sealant used within system: As recommended by manufacturer.
 - 2. Exterior Perimeter Sealant: Multi-component gun-grade polyurethane sealant Low modulus type, non-sagging, conforming to FS TT-S-000227E, Type II, Class A, and ASTM C 920, Type M, Class 25, Grade NS, use NT, M, A and O with a minimum movement capability of ± 50 percent, equal to the following:

- a. Mameco International, Inc., product "Vulkem 922".
 - b. Sonneborn Building Products Inc., Minneapolis MN.; product, "Sonolastic NP2".
 - c. Tremco, Beachwood OH.; product, "Dymeric".
 - d. Pecora Corporation, Harleysville PA.; product "Dynatrol II".
 - e. Or equal
3. Compressible joint bead back-up: Compressible closed cell polyethylene, extruded polyolefin foam or polyurethane foam rod, 1/3 greater in diameter than width of joint. Provide one of the following, or equal:
 - a. Sonneborn Building Products Inc., Minneapolis MN.; product "Sonofoam".
 - b. Applied Extrusion Technologies, Inc., Middletown DE., product "Sof Rod".
 - c. Or equal
4. Primers: Furnish and install joint primers of the types, and to the extent, recommended by the respective sealant manufacturers for the specific joint materials and joint function.
5. Bond-breaker tape, and temporary masking tape: Of types as recommended by the manufacturer of the specific sealant and caulking material used at each application, and completely free from contaminants which would adversely affect the sealant and caulking materials.
6. Concealed Butyl Sealant: At concealed interface locations between storefront system and air & vapor barrier system as indicated on Drawing, butyl rubber sealant equal to "201" as manufactured by Inland Inc. shall be used.
 - a. Multi-purpose, waterproof and weather resistant rubber based sealant that cures using a solvent release system.
 - b. Withstand joint movement of +/-10% without loss of water tightness.
 - c. Remains soft and pliable, "self-healing" when cut.
 - d. Conforms with federal specification TT-S-001657 and ASTM C1085.

2.15 ACCESSORY MATERIALS

- A. Perimeter Fire-Containment Systems (Safing Insulation): Specified in Section 078440 - FIRE-RESISTANT JOINT SYSTEMS.
- B. Insulating Materials: Specified in Section 072100 - THERMAL INSULATION.
- C. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.
- D. Silicone Membrane: Pre-cured silicone sheet that is physically and chemically compatible with the approved silicone sealant for the curtain wall system.
- E. Foam Tape: Foam glazing tape with adhesive on one side. Select the thickness and width to provide an adequate air and water seal and to provide adequate clamping pressure to silicone flashing.

2.16 FABRICATION

- A. Form aluminum shapes before finishing.
- B. Fabricate components that, when assembled, have the following characteristics:

1. Sharp profiles, straight and free of defects or deformations.
 2. Accurately fitted joints with ends coped or mitered.
 3. Internal guttering systems or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to exterior.
 4. Physical and thermal isolation of glazing from framing members.
 5. Accommodations for thermal and mechanical movements of glazing and framing to prevent glazing-to-glazing contact and to maintain required glazing edge clearances.
- C. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- D. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.17 ALUMINUM FINISHES

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- C. High-Performance Organic Finish (3-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer's standard 3-coat, thermocured system consisting of specially formulated inhibitive primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions.
1. Color and Gloss: Provide custom colors as selected by Architect.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General:
1. Comply with manufacturer's written instructions.
 2. Do not install damaged components.
 3. Fit joints to produce hairline joints free of burrs and distortion.
 4. Rigidly secure nonmovement joints.
 5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.

6. Seal joints watertight, unless otherwise indicated.
- B. Connecting and Sealing to Adjacent Enclosure Systems:
1. At locations where the curtain wall will be installed adjacent to back vented and drained rain screen wall systems, connect the curtain wall to the water-resistive barrier of the adjacent wall system with silicone membrane flashing.
 2. Seal and clamp the silicone membrane into the curtain wall glazing pocket.
 - a. Use a sealant that is compatible with the silicone membrane and the silicone in the joints of the curtain wall system.
 - b. Use an L-shaped pressure bar with applied foam tape to clamp the silicone membrane to the curtain wall mullion.
 3. Notch the stem on vertical mullions as needed to install flashing at the tops and bottoms of the curtain wall. Flashing shall be continuously sealed and clamped into the curtain wall glazing pocket and sealed to adjacent air barrier or enclosure system as indicated on the Drawings. Install similar flashing at the jambs of the curtain wall to provide continuous perimeter flashing.
 4. At locations where the curtain wall will be installed adjacent to roofing systems connect the curtain wall to the roofing vapor barrier and the roof membrane. The roofing vapor barrier may be adhered directly to the inboard side of the curtain wall. Provide a metal backpan if needed to allow for this connection. Connect the roofing membrane to the curtain wall by transitioning the roof membrane to a silicone sheet membrane.
 - a. Provide stainless steel sheet or foil-faced membrane as needed to transition between the roofing membrane and the silicone sheet.
 - b. Seal and clamp the silicone sheet into the curtain wall as described above.
- C. Metal Protection:
1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape or installing nonconductive spacers as recommended by manufacturer for this purpose.
 2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- D. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to exterior.
- E. Install components plumb and true in alignment with established lines and grades.
- F. Coordinate with sealants and installation of perimeter sealants which is specified in Section 079200 - JOINT SEALANTS.
- G. Coordinate with insulation and installation of insulation which is specified in Section 072100 - THERMAL INSULATION.
- H. Coordinate with materials and installation for perimeter fire-containment systems (safing insulation) which is specified in Section 078440 - FIRE-RESISTIVE JOINT SYSTEMS.
- I. Erection Tolerances: Install glazed aluminum curtain wall systems to comply with the following maximum tolerances:

1. Plumb: 1/8 inch in 10 feet ; 1/4 inch in 40 feet.
2. Level: 1/8 inch in 20 feet ; 1/4 inch in 40 feet.
3. Alignment:
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
 - b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
 - c. Where surfaces are separated by reveal or protruding element of 1 inch wide or greater, limit offset from true alignment to 1/4 inch.
4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Testing Services: Testing and inspecting of representative areas to determine compliance of installed systems with specified requirements shall take place as follows and in successive stages as indicated on Drawings. Do not proceed with installation of the next area until test results for previously completed areas show compliance with requirements.
 1. Air Infiltration: Areas shall be tested for air leakage of 1.5 times the rate specified for laboratory testing under Part 1 "Performance Requirements" Article, but not more than 0.09 cfm/sq. ft. of fixed wall area when tested according to ASTM E 783 at a minimum static-air-pressure difference of 6.24 lbf/sq. ft.
 2. Water Penetration: Areas shall be tested according to ASTM E 1105 at a minimum static-air-pressure difference of 0.67 times the static-air-pressure difference specified for laboratory testing under Part 1 "Performance Requirements" Article, but not less than 4.18 lbf/sq. ft., and shall not evidence water penetration.
 3. Water Spray Test: Before installation of interior finishes has begun, a minimum area of 75 feet by 1 story of aluminum-framed systems designated by Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
- C. Refer to Section 080800 – OPENING SYSTEMS COMMISSIONING for additional testing requirements and quantities.
- D. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements until satisfactory test results are achieved.

END OF SECTION

SECTION 084523

FIBERGLASS-SANDWICH-PANEL ASSEMBLIES

(PART OF WORK OF SECTION 080001 – METAL WINDOWS, TRADE BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Aluminum-framed assemblies glazed with fiberglass sandwich panels (translucent) window wall assemblies, with 2-3/4" thick flat factory prefabricated structural insulated translucent double-faced glass fiber sandwich panel system, referred to on the Drawings as INSULATED TRANSLUCENT WALL PANEL SYSTEM.
 - 2. Supplemental secondary framing and supports for window wall assemblies.
 - 3. Factory unitized Operable and fixed vision glazing, including insulating glass, hardware, and screens.
 - 4. Factory unitized Louvers
- B. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 080800 – OPENING SYSTEMS COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- C. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 042000 – UNIT MASONRY for substrate
 - 2. Section 061000 – ROUGH CARPENTRY for blocking
 - 3. Section 079200 - JOINT SEALANTS for sealants installed at perimeters of assemblies.
 - 4. Section 084410 – GLAZED ALUMINUM CURTAINWALLS for glazing types and structural sealant.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design glazed curtain wall, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

1. The design is based on the ninth edition of the Massachusetts State Building code and by reference the ASCE 7-10 to compute the wind loads on components and cladding
 2. Wind Loads: As required by Code or shown on Structural drawings, whichever is more stringent.
- B. General: Provide fiberglass sandwich panel assemblies, including anchorage, capable of withstanding, without failure, the effects of the following:
1. Structural loads.
 2. Thermal movements.
 3. Movements of supporting structure indicated on Drawings including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
 4. Dimensional tolerances of building frame and other adjacent construction.
 5. Failure includes the following:
 - a. Deflection exceeding specified limits.
 - b. Thermal stresses transferred to building structure.
 - c. Framing members transferring stresses, including those caused by thermal and structural movements, to glazing.
 - d. Noise or vibration created by wind and thermal and structural movements.
 - e. Loosening or weakening of fasteners, attachments, and other components.
 - f. Sealant failure.
 - g. Air infiltration exceeding specified limits.
 - h. Water leakage exceeding specified limits.
- C. Structural-Test Performance: Provide glazed aluminum curtain-wall systems tested according to ASTM E 330 as follows:
1. When tested at positive and negative wind-load design pressures, systems do not evidence deflection exceeding specified limits.
 2. When tested at 150 percent of positive and negative wind-load design pressures, systems, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
 3. Test Duration: As required by design wind velocity but not less than 10 seconds.
- D. Deflection of Framing Members:
1. Deflection Normal to Wall Plane: Limited to 1/60 of clear span.
- E. Thermal Movements: Provide glazed aluminum curtain-wall systems that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
- F. Air Infiltration: Provide fiberglass panel assemblies with maximum air leakage of 0.06 cfm/sq. ft. of fixed wall area when tested according to ASTM E 283 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft. and 1.567 psf for doors.

- G. Water Penetration Under Static Pressure: Provide fiberglass panel assemblies that do not evidence water penetration when tested according to ASTM E 331 at a minimum differential static pressure of 20 percent of positive design wind load, but not less than 15 lbf/sq. ft.
 - 1. Maximum Water Leakage: No uncontrolled water penetrating systems or appearing on systems' normally exposed interior surfaces from sources other than condensation. Water controlled by flashing and gutters that is drained to exterior and cannot damage adjacent materials or finishes is not considered water leakage.

1.4 SUBMITTALS

- A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for assemblies.
- B. Shop Drawings: For assemblies. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- C. Delegated-Design Submittal: For fenestration system indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- D. Samples for Initial Selection: For each type of exposed finish required, in manufacturer's standard sizes.
- E. Samples for Verification: Submit 12 by 12 inch sample panel assemblies, for each color selected.
- F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for assemblies.
- G. Maintenance Data: For assemblies to include in maintenance manuals.
- H. Warranties: Special warranties specified in this Section.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Capable of assuming engineering responsibility and performing Work of this Section and who is acceptable to manufacturer.
 - 1. Engineering Responsibility: Preparation of data for structured panel assemblies including shop drawings based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project and submission of reports of tests performed on manufacturer's standard assemblies.
- B. Product Options: Information on Drawings and in Specifications establishes requirements for systems' aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance.

- C. Welding: Qualify procedures and personnel according to AWS D1.2, "Structural Welding Code--Aluminum."
- D. NFRC Certification: Provide fiberglass sandwich panels that are certified for U-factors indicated according to NFRC 100 and listed in its "National Fenestration Council Incorporated - Certified Products Directory."
- E. Mockups: Build mockups to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical wall area as shown on Drawings.
- F. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01. Review methods and procedures related to glazed aluminum curtain-wall systems including, but not limited to, the following:
 - 1. Review structural load limitations.
 - 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 3. Review required testing, inspecting, and certifying procedures.
- G. Building envelope commissioning – pre-installation conference: Contractor performing the work of this section is required to attend building envelope pre-installation conference to review relevant details and verify compliance of continuity and tie in of air and vapor barrier and requirements for system performance.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of structural supports for fiberglass sandwich-panel assemblies by field measurements before fabrication and indicate measurements on Shop Drawings.
 - 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating glazed aluminum curtain-wall systems without field measurements. Coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.7 WARRANTY

- A. Special Assembly Warranty: Manufacturer's standard form in which manufacturer and Installer agree to repair or replace components of assemblies that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Noise or vibration caused by thermal movements.
 - c. Deterioration of metals and other materials beyond normal weathering.
 - d. Water leakage, excessive air infiltration
 - e. Failure of operating components to function normally.
 - 2. Warranty Period: Two years from date of Substantial Completion.

- B. Special Fiberglass-Sandwich-Panel Warranty: Manufacturer's standard form in which manufacturer agrees to replace panels that exhibit defects in materials or workmanship.
 - 1. Defects include, but are not limited to, the following:
 - a. Delamination of coating, if any, from exterior face sheet.
 - b. Discoloration of exterior face sheet of more than 8.0 units Delta E when measured according ASTM D 2244.
 - c. Delamination of panel face sheets from panel cores.
 - 2. Warranty Period: 10 years from date of Substantial Completion.
- C. Special Aluminum-Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.
 - 1. Failures include, but are not limited to, checking, crazing, peeling, chalking, and fading of finishes.
 - 2. Warranty Period: 10 years from date of Substantial Completion.

1.8 EXTRA MATERIALS (ATTIC STOCK)

- A. Furnish extra materials that match products installed and that are packaged and identified with labels describing contents.
 - 1. Window Screens equal to 2 percent of amount of each size of screen indicated.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Kalwall Corporation.
 - 2. Major Industries, Inc.
 - 3. Extech, Pittsburg, PA.
 - 4. GSI, Grayslake, IL.
 - 5. Or equal.

2.2 ALUMINUM FRAME SYSTEMS PANEL COMPONENTS

- A. Aluminum: Alloy and temper recommended in writing by manufacturer for type of use and finish indicated.
 - 1. Sheet and Plate: ASTM B 209.
 - 2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
 - 3. Extruded Structural Pipe and Tubes: ASTM B 429.
- B. Components: Manufacturer's standard extruded-aluminum members of thickness required and reinforced as required to support imposed loads.

- C. Exposed Flashing and Closures: Manufacturer's standard aluminum components not less than 0.040 inch thick.
- D. Frame-System Gaskets: Manufacturer's standard.
- E. Anchors, Fasteners, and Accessories: Manufacturer's standard, corrosion-resistant, nonstaining, and nonbleeding; compatible with adjacent materials.
 - 1. At closures, retaining caps, or battens, use ASTM A 193/A 193M, 300 series stainless-steel screws.
 - 2. Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
 - 3. At movement joints, use slip-joint linings, spacers, and sleeves of material and type recommended in writing by manufacturer.
- F. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.
- G. Anchor Bolts: ASTM A 307, Grade A, hot-dip zinc coating, ASTM A 153/A 153M, Class C or mechanically deposited zinc coating, ASTM B 695, Class 50.
- H. Frame System Fabrication:
 - 1. Fabricate components before finishing.
 - 2. Fabricate components that, when assembled, have the following characteristics:
 - a. Profiles that are sharp, straight, and free of defects or deformations.
 - b. Accurately fitted joints with ends coped or mitered.
 - c. Internal guttering systems or other means to drain water passing joints, condensation occurring within components, and moisture migrating within the assembly to exterior.
 - 3. Fabricate sill closures with weep holes and for installation as continuous component.
 - 4. Reinforce components as required to receive fastener threads.
 - 5. Weld components in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

2.3 FIBERGLASS SANDWICH PANELS

- A. Panel Construction: Assembly of uniformly colored, translucent, thermoset, fiberglass-reinforced-polymer face sheets bonded to both sides of a grid core and complying with requirements applicable to panel materials in ICBO ES AC04, "Sandwich Panels."
 - 1. Face-Sheet, Self-Ignition Temperature: 650 deg F or more per ASTM D 1929.
 - 2. Face-Sheet Burning Extent: 1 inch or less per ASTM D 635.
 - 3. Face-Sheet, Smoke-Developed Index: 450 or less per ASTM E 84.
 - 4. Interior Face-Sheet, Flame-Spread Index: Not more than 25 per ASTM E 84.
 - 5. Light transmission: 12%
 - 6. Solar heat gain coefficient: 0.17
 - 7. Panel U-factor by NFRC certified laboratory: 0.14.
 - 8. Complete insulated panel system shall have NFRC certified U-factor of 0.20.

9. Wind Load: the system shall be engineered and fabricated to withstand the basic wind speed (three second gust speed) stipulated in Table 1604.11 of 780 CMR - Massachusetts State Building Code or as designates in the Structural Drawings, whichever is more stringent.
 10. Light transmitting plastic panel must meet "Class CC1" classification as defined by Section 2606 of the International Building Code.
 11. Thermally broken panels: Minimum Condensation Resistance Factor of 80 by AAMA 1503 measured on the bond line
- B. Panel Thickness: 2-3/4 inches.
- C. Grid Core: Mechanically interlocked and thermally broken extruded-aluminum I-beams, with a minimum flange width of 7/16 inch.
1. Extruded Aluminum: ASTM B 221, in alloy and temper recommended in writing by manufacturer.
 2. Grid Pattern: Shoji grid pattern: 24" x 12"..
- D. Face Sheets:
1. Interior face sheet:
 - a. Color: White S-171 interior face or as selected by the Architect from the manufacturer's standard colors.
 - b. Thickness: 0.045 inch.
 2. Exterior Face Sheet:
 - a. Color: super-weathering Crystal exterior face of color as selected by the Architect from the manufacturer's full range of standard colors.
 - b. Thickness: 0.070 inch.
- E. Fiberglass-Sandwich-Panel Adhesive: ASTM D 2559.
- F. Panel Fabrication: Factory assemble and seal panels.

2.4 OPERABLE AND FIXED WINDOWS

- A. General - Unit Description:
1. Manufacturer's operable vent units with sight line concealed from the exterior, with perimeter members integral to framing.
 2. Operation: Project out (out-swinging) in configurations as indicated.
 3. Performance Requirements:
 - a. The operable vents shall be Architectural Aluminum Windows in accordance with AAMA 501, Methods Of Test For Metal Exterior Walls.
 - b. Air infiltration, water resistance, structural performance, and thermal movement shall be the same as specified for aluminum glazed curtain wall systems.
 - c. Condensation Resistance Factor (CRF) will be determined in accordance with AAMA Specification 1503.1 – 1988 Procedure. Test unit 6'0" x 6'8" using two equal size lites of 1" insulating glass units composed of two nominal "clear lites with a nominal" air space and an aluminum spacer system. The thermal trans

mittance coefficient (U Value) will be determined in accordance with ASTM C 236-89 and AAMA 1503.1 – 1988.

- 1) Thermal Performance Ratings:
 - a) Condensation Resistance Factor – Frame 70
 - b) Condensation Resistance Factor – Glass 56
 - c) Thermal Transmittance due to conduction $U=0.46$
(U values expressed in BTU/hr/ft²/°F).
4. The operable unit glass shall match the storefront and curtain wall. Refer to Section 084410 – GLAZED ALUMINUM CURTAINWALLS for requirements.
5. The operable unit shall be impact tested similar to other fenestration components on the Project.
6. Provide window limit stops at all window openings to prevent the window from being fully opened. Stop dimension to be determined by architect.
- B. Fabricate aluminum operable vents that can be re-glazed without dismantling sash.
- C. Weather Stripping: Provide two rows of compression type full-perimeter weather stripping for each operable sash and ventilator; of neoprene / EPDM alloy or santoprene.
- D. Weep Holes: Provide weep holes and internal passages to conduct infiltrating water to exterior.
- E. Structural Silicone Glazing: Provide 4-sided aluminum leg to support glass, tubular, interior plane, flush-with-frame. Glaze units in accordance with requirements specified in Section 088000 - GLAZING.
 1. Glazing: Same as adjacent structural-sealant-glazed curtain-wall glazing.
- F. Hardware: Provide the following operating hardware:
 1. Window-Operating Hardware: Gear-Type Rotary Operators: Complying with AAMA 901 when tested according to ASTM E 405, Method A. Provide operators that function without requiring the removal of interior screens or using screen wickets.
 - a. As selected by Architect from manufacturer's full range of types and styles.
 - b. Limiter: Include devices to limit opening size to less than 4 inches.
 2. Hinges: Concealed four- or six-bar friction hinges located on each jamb near top rail; two per ventilator.
 3. Insect Screens: Provide removable insect screen on each operable exterior sash, with screen frame finished to match window unit, complying with SMA 1004 or SMA 1201, and as follows:
 - a. Aluminum Wire Fabric: 18-by-18 mesh of 0.013-inch- (0.3-mm-) diameter, coated aluminum wire.
- G. Insect screens:
 1. Mitered with reinforcing corners mechanically joined
 2. Screens for project-out windows shall be equipped with wickets for access to handles
 3. Screen cloth shall be of 18-16 aluminum mesh and held in place by spline

- H. Glazing Colors for Operable Sashes: Provide custom colors as selected by Architect to match curtain wall.
- I. Finish is to be coordinated with closure system.

2.1 LOUVERS

- A. Drainable Fixed Louver, 45°, 2-3/4" deep, shall be designed specifically for inclusion in the translucent panel unit wall system and factory unitized to panels.
- B. Performance:
 - 1. Refer to Elevations and Mechanical drawings for Louver sizes
 - 2. Percent Free Area: 40%
 - 3. Free Area Velocity at beginning point of water penetration 0.01 oz. of water per sq. ft. of louver free area: 1230 fpm
 - 4. Maximum Pressure Drop at 2,000 fpm: 0.612" H₂O in, 0.439" H₂O out
- C. Construction: Frames and blades shall be manufactured of commercial quality extruded aluminum conforming to ASTM B221. Frame and Blade thickness shall be 0.081" thick. Louver shall have 100% welded construction.
- D. Finish is to match system aluminum.
- E. Options:
 - 1. **Bird Screens:** 3/4" flat expanded alum. 0.051" thick set in an extruded tubular aluminum screen frame.
 - 2. **Insect Screens:** 18-16 aluminum mesh set in an extruded tubular aluminum screen frame.
 - 3. **Blank-off plates:** 0.063" thick.

2.2 ACCESSORY MATERIALS

- A. Isolation Coating (Bituminous Paint): ASTM D 1187, VOC compliant, cold-applied asphalt-mastic paint, containing no asbestos, formulated for 30-milthickness per coat.

2.3 ALUMINUM FINISHES

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- C. High-Performance Organic Finish (3-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer's standard 3-coat, thermocured system consisting of specially formulated inhibitive primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight).

Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions.

1. Color and Gloss: Provide custom colors, including metallics, as selected by Architect.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General:
 1. Comply with manufacturer's written instructions.
 2. Do not install damaged components.
 3. Fit joints between aluminum components to produce hairline joints free of burrs and distortion.
 4. Rigidly secure nonmovement joints.
 5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
 6. Weld aluminum components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
 7. Seal joints watertight, unless otherwise indicated.
- B. Metal Protection: Where aluminum components will contact dissimilar materials, protect against galvanic action by painting contact surfaces with bituminous paint or by installing nonconductive spacers as recommended in writing by manufacturer for this purpose.
- C. Install continuous aluminum sill closure with weatherproof expansion joints and locked and sealed or welded corners. Locate weep holes at rafters.
- D. Install components to drain water passing joints, condensation occurring within aluminum members and panels, and moisture migrating within assembly to exterior.
- E. Install components plumb and true in alignment with established lines and elevations.
- F. Coordinate with sealants and installation of perimeter sealants which is specified in Section 079200 - JOINT SEALANTS.
- G. Erection Tolerances: Install assemblies to comply with the following maximum tolerances:
 1. Alignment: Limit offset from true alignment to 1/32 inch where surfaces abut in line, edge to edge, at corners, or where a reveal or protruding element separates aligned surfaces by less than 3 inches; otherwise, limit offset to 1/8 inch.
 2. Location and Plane: Limit variation from true location and plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Testing Services: Testing and inspecting of representative areas to determine compliance of installed systems with specified requirements shall take place as follows and in successive stages as indicated on Drawings. Do not proceed with installation of the next area until test results for previously completed areas show compliance with requirements.
 - 1. Air Infiltration: Areas shall be tested for air leakage of 1.5 times the rate specified for laboratory testing under Part 1 "Performance Requirements" Article, but not more than 0.09 cfm/sq. ft. of fixed wall area when tested according to ASTM E 783 at a minimum static-air-pressure difference of 6.24 lbf/sq. ft.
 - 2. Water Penetration: Areas shall be tested according to ASTM E 1105 at a minimum static-air-pressure difference of 0.67 times the static-air-pressure difference specified for laboratory testing under Part 1 "Performance Requirements" Article, but not less than 4.18 lbf/sq. ft., and shall not evidence water penetration.
 - 3. Water Spray Test: Before installation of interior finishes has begun, a minimum area of 75 feet by 1 story of aluminum-framed systems designated by Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
- C. Refer to Section 080800 – OPENING SYSTEMS COMMISSIONING for additional testing requirements and quantities.
- D. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements until satisfactory test results are achieved.

END OF SECTION

SECTION 085110
ALUMINUM WINDOWS

(PART OF WORK OF SECTION 080001 - METAL WINDOWS, TRADE BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Fixed and operable aluminum-framed windows with factory-installed glass and glazing.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 080800 – OPENING SYSTEMS COMMISSIONING REQUIREMENTS for additional requirements affecting this section.
- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 084110 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS.
 2. Section 084410 - GLAZED ALUMINUM CURTAIN WALLS for curtain wall assemblies and glass and glazing

1.3 PERFORMANCE REQUIREMENTS

- A. General: Provide aluminum windows capable of complying with performance requirements indicated, based on testing manufacturer's windows that are representative of those specified and that are of test size indicated below:
1. Minimum size required by AAMA/NWWDA 101/I.S.2.
- B. AAMA/NWWDA Performance Requirements: Provide aluminum windows of the performance class and grade indicated that comply with AAMA/NWWDA 101/I.S.2.
1. Performance Class: Architectural Grade AW.
 2. Performance Grade: Minimum for performance class indicated.
 3. Exception to AAMA/NWWDA 101/I.S.2: In addition to requirements for performance class and performance grade, design glass framing system to limit lateral deflections of glass

edges to less than 1/175 of glass-edge length or 3/4 inch whichever is less, at design pressure based on the following:

- C. Structural Performance: Provide aluminum windows capable of withstanding the following, including wind loads based on passing AAMA/NWWDA 101/I.S.2, Uniform Load Structural Test, at basic wind speed indicated and as required by Code:
 - 1. Deflection: Design glass framing system to limit lateral deflections of glass edges to less than 1/175 of glass-edge length or 3/4 inch, whichever is less, at design pressure based on structural computations.
 - 2. Wind and Seismic Loads: As indicated on the Structural Drawings, but not less than that required by Code.
 - 3. Movements of supporting structure including, but not limited to, story drift and deflection from uniformly distributed and concentrated live loads as required by Code. Deflection may require special considerations including but not limited to head receptors.
- D. Air Infiltration: Maximum rate not more than indicated when tested according to AAMA/NWWDA 101/I.S.2, Air Infiltration Test.
 - 1. Maximum Rate: As required by Code.
- E. Water Resistance: No water leakage as defined in AAMA/NWWDA referenced test methods at a water test pressure equaling that indicated, when tested according to AAMA/NWWDA 101/I.S.2, Water Resistance Test.
 - 1. Test Pressure: 15 percent of positive design pressure, but not less than 2.86 lbf/sq. ft. or more than 12 lbf/sq. ft.
- F. Condensation-Resistance Factor: Provide aluminum windows tested for thermal performance according to AAMA 1503, showing a CRF of 52 where windows are indicated to be "thermally improved."
- G. Thermal Transmittance: Provide aluminum windows with a whole-window U-value maximum indicated at 15-mph exterior wind velocity and winter condition temperatures when tested according to AAMA 1503.
 - 1. U-Value: As required by Code. Submit proof of compliance with submittals as specified.
- H. Solar Heat-Gain Coefficient: Provide aluminum windows with a whole-window SHGC maximum as required by Code, determined according to NFRC 200 procedures. Submit proof of compliance with submittals as specified.
- I. Thermal Movements: Provide aluminum windows, including anchorage, that accommodate thermal movements of units resulting from the following maximum change (range) in ambient and surface temperatures without buckling, distortion, opening of joints, failure of joint sealants, damaging loads and stresses on glazing and connections, and other detrimental effects. Base engineering calculation on actual surface temperatures of materials due to solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F material surfaces.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include construction details, material descriptions, fabrication methods, dimensions of individual components and profiles, hardware, finishes, and operating instructions.
- B. LEED Submittals:
 - 1. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For factory-applied metal finishes, submit Declare product labels.
- C. Shop Drawings: Include plans, elevations, sections, details, hardware, attachments to other Work, operational clearances, and the following:
 - 1. Mullion details, including reinforcement and stiffeners.
 - 2. Joinery details.
 - 3. Expansion provisions.
 - 4. Flashing and drainage details.
 - 5. Weather-stripping details.
 - 6. Thermal-break details.
 - 7. Glazing details.
 - 8. Window cleaning provisions.
 - 9. Window System Operators: Show locations, mounting, and details for installing operator components and controls.
 - 10. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation and used to determine the following:
 - a. Structural test pressures and design pressures from basic wind speeds indicated.
 - b. Deflection limitations of glass framing systems.
- D. Samples for Verification: Full-size operable window of each type of window.
- E. Qualification Data: For Installer, professional engineer and testing agency.
- F. Field Quality-Control Test Reports: From a qualified testing and inspecting agency engaged by Contractor.
- G. Product Test Reports: Based on evaluation of comprehensive tests performed within the last four years by a qualified testing agency, for each type, grade, and size of aluminum window. Test results based on use of downsized test units will not be accepted.
- H. Performance Reports: Based on systems, components and glazing methods proposed for use on this Project, proof that windows as glazed for this Project meet or exceed Code requirements for the following:
 - 1. U-value.
 - 2. Solar heat-gain coefficient.

- I. Maintenance Data: For operable window sash, operating hardware, weather stripping, and finishes to include in maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An installer acceptable to aluminum window manufacturer for installation of units required for this Project.
- B. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer.
- C. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the state the project is located, and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of windows that are similar to those indicated for this Project in material, design, and extent.
- D. Source Limitations: Obtain aluminum windows through one source from a single manufacturer.
- E. Product Options: Information on Drawings and in Specifications establishes requirements for aluminum windows' aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance.
- F. Fenestration Standard: Comply with AAMA/NWWDA 101/I.S.2, "Voluntary Specifications for Aluminum, Vinyl (PVC) and Wood Windows and Glass Doors," for minimum standards of performance, materials, components, accessories, and fabrication unless more stringent requirements are indicated.
 - 1. Provide AAMA certified aluminum windows with an attached label.
- G. Glazing Publications: Comply with published recommendations of glass manufacturers and GANA's "Glazing Manual" unless more stringent requirements are indicated.
- H. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mockup for types of windows indicated, in locations shown on Drawings.
- I. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01. Review methods and procedures related to aluminum windows including, but not limited to, the following:
 - 1. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
 - 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 3. Review required testing and inspecting procedures.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify aluminum window openings by field measurements before fabrication and indicate measurements on Shop Drawings.
 - 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish opening dimensions and proceed with fabricating aluminum windows without field measurements. Coordinate wall construction to ensure that actual opening dimensions correspond to established dimensions.

1.7 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace aluminum windows that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, the following:
 - 1. Failure to meet performance requirements.
 - 2. Structural failures including excessive deflection.
 - 3. Water leakage, air infiltration, or condensation.
 - 4. Faulty operation of movable sash and hardware.
 - 5. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - 6. Insulating glass failure.
- B. Warranty Period: Ten years from date of Substantial Completion.
- C. Warranty Period for Metal Finishes: Ten years from date of Substantial Completion.
- D. Warranty Period for Glass: Ten years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. EFCO, a Pella Company.
 - 2. Graham Architectural Products Corp.
 - 3. Kawneer North America.
 - 4. Peerless Products, Inc.
 - 5. Wausau Window and Wall Systems.
 - 6. Or equal
- B. Basis of Design: EFCO 405G. Fixed with operable project-out bottom sash and glazing as specified on the drawings

2.2 MATERIALS

- A. Aluminum Extrusions: Alloy and temper recommended by aluminum window manufacturer for strength, corrosion resistance, and application of required finish, but not less than 22,000-psi (150-MPa) ultimate tensile strength, not less than 16,000-psi (110-MPa) minimum yield

strength, and not less than 0.062-inch (1.6-mm) thickness at any location for the main frame and sash members.

- B. Fasteners: Aluminum, nonmagnetic stainless steel, epoxy adhesive, or other materials warranted by manufacturer to be noncorrosive and compatible with aluminum window members, trim, hardware, anchors, and other components.
 - 1. Reinforcement: Where fasteners screw anchor into aluminum less than 0.125 inch (3.2 mm) thick, reinforce interior with aluminum or nonmagnetic stainless steel to receive screw threads, or provide standard, noncorrosive, pressed-in, splined grommet nuts.
 - 2. Exposed Fasteners: Unless unavoidable for applying hardware, do not use exposed fasteners. For application of hardware, use fasteners that match finish of member or hardware being fastened, as appropriate.
- C. Anchors, Clips, and Accessories: Aluminum, nonmagnetic stainless steel, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions; provide sufficient strength to withstand design pressure indicated.
- D. Reinforcing Members: Aluminum, nonmagnetic stainless steel, or nickel/chrome-plated steel complying with ASTM B 456 for Type SC 3 severe service conditions, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions; provide sufficient strength to withstand design pressure indicated.
- E. Compression-Type Weather Stripping, typical: Provide compressible weather stripping designed for permanently resilient sealing under bumper or wiper action and for complete concealment when aluminum window is closed.
- F. Sliding-Type Weather Stripping for Double-Hung and Horizontal-Sliding Windows: Provide woven-pile weather stripping of wool, polypropylene, or nylon pile and resin-impregnated backing fabric. Comply with AAMA 701/702.
 - 1. Weather Seals: Provide weather stripping with integral barrier fin or fins of semirigid, polypropylene sheet or polypropylene-coated material. Comply with AAMA 701/702.
- G. Replaceable Weather Seals: Comply with AAMA 701/702.
- H. Sealant: For sealants required within fabricated windows, provide window manufacturer's standard, permanently elastic, nonshrinking, and nonmigrating type recommended by sealant manufacturer for joint size and movement.

2.3 GLAZING

- A. Insulating-Glass Units for Vertical Glazing: Provide insulating glass units in accordance with requirements of Section 088000.
- B. Glazing System: Manufacturer's standard factory-glazing system that produces weathertight seal.

2.4 HARDWARE

- A. Hardware Requirements: Provide hardware that complies with AAMA/NWWDA 101/I.S.2.
 - 1. Hardware Finishes: To be selected by Architect from manufacturer's full range.

2.5 INSECT SCREENS

- A. General: Design windows and hardware to accommodate screens in a tight-fitting, removable arrangement, with a minimum of exposed fasteners and latches. Provide for each operable exterior sash or ventilator.
- B. Aluminum Insect Screen Frames: Manufacturer's standard aluminum alloy complying with SMA 1004. Fabricate frames with mitered or coped joints, concealed fasteners, and removable PVC spline/anchor concealing edge of frame.
 - 1. Aluminum Tubular Framing Sections and Cross Braces: Roll formed from aluminum sheet with minimum wall thickness as required for class indicated.
 - 2. Finish: Match aluminum window members.
- C. Stainless-Steel Wire Fabric: 18-by-16 mesh of 0.009-inch-diameter, nonmagnetic stainless-steel wire, Type 304 or 316, complying with FS RR-W-365, Type VI.
- D. Wickets to access hardware. Wicket frame to match color and finish of storefront frame.
- E. Provide two additional screens one from window type A and one from CW28 as Owner Attic Stock.

2.6 ACCESSORIES

- A. Window Cleaner Anchor Bolts: Provide window cleaner anchor bolts of standard design, complying with requirements of authorities having jurisdiction. Fabricate bolts of nonmagnetic stainless steel.
 - 1. Reinforce window units or mullions to receive bolts and provide additional anchorage of units at bolt locations.

2.7 FABRICATION

- A. General: Fabricate aluminum windows, in sizes indicated, that comply with AAMA/NWWDA 101/I.S.2 for performance class and performance grade indicated. Include a complete system for assembling components and anchoring windows.
- B. Thermally Improved Construction: Fabricate aluminum windows with an integral, concealed, low-conductance thermal barrier; located between exterior materials and window members exposed on interior side; in a manner that eliminates direct metal-to-metal contact.
- C. Weather Stripping: Provide full-perimeter weather stripping for each operable sash and ventilator.
- D. Weep Holes: Provide concealed weep holes and internal passages to conduct infiltrating water to exterior.
- E. Mullions: Provide mullions and cover plates as shown, matching window units, complete with anchors for support to structure and installation of window units. Allow for erection tolerances and provide for movement of window units due to thermal expansion and building deflections, as indicated. Provide mullions and cover plates capable of withstanding design loads of window units.

- F. Factory-Glazed Fabrication: Glaze aluminum windows in the factory where practical and possible for applications indicated. Comply with AAMA/NWWDA 101/I.S.2.

2.8 FINISHES

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- C. High-Performance Organic Finish (3-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer's standard 3-coat, thermocured system consisting of specially formulated inhibitive primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight). Coatings shall be fluorosurfactant free Kynar 500 by Arkema or fluorosurfactant-compliant Hylar 5000 by Solvay; or equal. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions.

- 1. Color and Gloss: Provide custom colors as selected by Architect.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine openings, substrates, structural support, anchorage, and conditions, with Installer present, for compliance with requirements for installation tolerances; rough opening dimensions; levelness of sill plate; coordination with wall flashings, vapor retarders, and other built-in components; operational clearances; and other conditions affecting performance of work.
 - 1. Masonry Surfaces: Visibly dry and free of excess mortar, sand, and other construction debris.
 - 2. Metal Surfaces: Dry; clean; free of grease, oil, dirt, rust, corrosion, and welding slag; without sharp edges or offsets at joints.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Comply with manufacturer's written instructions for installing windows, hardware, accessories, and other components; Drawings; and Shop Drawings.
- B. Install windows level, plumb, square, true to line, without distortion or impeding thermal movement, anchored securely in place to structural support, and in proper relation to wall flashing and other adjacent construction.
- C. Set sill members in bed of sealant or with gaskets, as indicated, for weathertight construction.
- D. Install windows and components to drain condensation, water penetrating joints, and moisture migrating within windows to the exterior.

- E. Metal Protection: Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials by complying with requirements specified in "Dissimilar Materials" Paragraph in Appendix B in AAMA/NWWDA 101/I.S.2.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and to prepare test reports.
- B. Testing Services: Testing and inspecting of representative areas to determine compliance of installed systems with specified requirements shall take place as follows and in successive stages as indicated on Drawings. Do not proceed with installation of the next area until test results for previously completed areas show compliance with requirements.
 - 1. Air Infiltration: Areas shall be tested for air leakage of 1.5 times the rate specified for laboratory testing under Part 1 "Performance Requirements" Article, but not more than 0.09 cfm/sq. ft. of fixed wall area when tested according to ASTM E 783 at a minimum static-air-pressure difference of 6.24 lbf/sq. ft.
 - 2. Water Penetration: Areas shall be tested according to ASTM E 1105 at a minimum static-air-pressure difference of 0.67 times the static-air-pressure difference specified for laboratory testing under Part 1 "Performance Requirements" Article, but not less than 4.18 lbf/sq. ft., and shall not evidence water penetration.
 - 3. Water Spray Test: Before installation of interior finishes has begun, a minimum area of 75 feet by 1 story of aluminum-framed systems designated by Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
- C. Refer to Section 080800 – OPENING SYSTEMS COMMISSIONING for additional testing requirements and quantities.
- D. Remove and replace windows where test results indicate that they do not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements until satisfactory test results are achieved.

3.4 ADJUSTING

- A. Adjust operating sashes and ventilators, screens, hardware, operators, and accessories for a tight fit at contact points and weather stripping for smooth operation and weathertight closure. Lubricate hardware and moving parts.

3.5 PROTECTION AND CLEANING

- A. Protect window surfaces from contact with contaminating substances resulting from construction operations. In addition, monitor window surfaces adjacent to and below exterior concrete and masonry surfaces during construction for presence of dirt, scum, alkaline deposits, stains, or other contaminants. If contaminating substances do contact window surfaces, remove contaminants immediately according to manufacturer's written recommendations.
- B. Clean aluminum surfaces immediately after installing windows. Avoid damaging protective coatings and finishes. Remove excess sealants, glazing materials, dirt, and other substances.

- C. Clean factory-glazed glass immediately after installing windows. Comply with manufacturer's written recommendations for final cleaning and maintenance. Remove nonpermanent labels and clean surfaces.
- D. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.

END OF SECTION

SECTION 085610

PASS WINDOWS

(PART OF WORK OF SECTION 080001 - METAL WINDOWS, TRADE BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Sliding bullet resistant aluminum pass windows.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 088000 – GLAZING for requirements for glass and glazing, to the extent not specified in this Section.
 - 2. Section 084110 – ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS for mounting

1.3 SUBMITTALS

- A. Product Data: Include construction details, material descriptions, fabrication methods, dimensions of individual components and profiles, hardware, finishes, and operating instructions for each type of window indicated.
- B. Shop Drawings: Include plans, elevations, sections, details, hardware, attachments to other Work, and operational clearances.

1.4 QUALITY ASSURANCE

- A. Source Limitations: Obtain windows through one source from a single manufacturer.
- B. Product Options: Information on Drawings and in Specifications establishes requirements for windows' aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance.

- C. Glazing Publications: Comply with published recommendations of glass manufacturers and GANA's "Glazing Manual" unless more stringent requirements are indicated.

1.5 PROJECT CONDITIONS

- A. Field Measurements: Verify window openings by field measurements before fabrication and indicate measurements on Shop Drawings.
 - 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish opening dimensions and proceed with fabricating windows without field measurements. Coordinate wall construction to ensure that actual opening dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. C.R. Laurence Co
 - 2. Insulgard Security Products
 - 3. Covenant Security Equipment
 - 4. Or equal
- B. Basis of Design: C.R. Laurence Co.; Aluminum Bullet Resistant Level 3 Manual Sliding Service Window #SBRWK3, horizontal sliding pass-through assembly with limited counter and Deal tray.

2.2 TRANSACTION WINDOWS

- 1. Sizes: As indicated on Drawings.
- 2. Locking: Provide manufacturer's standard key lock.
- 3. Glazing: Level 3 Lexguard Glazing

2.3 MATERIALS

- A. Frames: 4" Aluminum bullet resistant frame modules meeting U.L. 752 Protection Level 3. Frames are to be constructed of 6063-T5 extruded aluminum lined with U.L. listed bullet resistant fiberglass for level 3. Shapes and sizes are to be in accordance with the contract drawings.
- B. Glazing: The glazing must be in accordance with U.L. 752 testing standards Level 3. 1-1/4" laminated polycarbonate with abrasion resistant coating.
- C. Accessories
 - 1. Shelf: Provide a high pressure laminate shelf not less than 2" thick. The shelf is to be the full width of the window and a minimum of 12" deep centered under the glazing. Include stainless steel drop-in ricochet resistant deal tray.
 - 2. Manufacturer standard keyed lock.

- D. Fasteners: Aluminum, nonmagnetic stainless steel, epoxy adhesive, or other materials warranted by manufacturer to be noncorrosive and compatible with aluminum window members, trim, hardware, anchors, and other components.
 - 1. Reinforcement: Where fasteners screw anchor into aluminum less than 0.125 inch (3.2 mm) thick, reinforce interior with aluminum or nonmagnetic stainless steel to receive screw threads, or provide standard, noncorrosive, pressed-in, splined grommet nuts.
 - 2. Exposed Fasteners: Unless unavoidable for applying hardware, do not use exposed fasteners. For application of hardware, use fasteners that match finish of member or hardware being fastened, as appropriate.
- E. Anchors, Clips, and Accessories: Aluminum, nonmagnetic stainless steel, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions; provide sufficient strength to withstand design pressure indicated.

2.4 FABRICATION

- A. Fabricate pass windows to be truly straight, plumb, level and square, within tolerances permitted by reference standards.
- B. Fabricate work to sizes, shapes, and profiles indicated on Contract Documents and approved shop drawings.
- C. Fabricate work with uniform, tight hairline joints, free from sharp edges.

2.5 FINISHES

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- C. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
- D. Aluminum to be Kynar (K) painted. Color: Custom color as selected by architect.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine openings, substrates, structural support, anchorage, and conditions, with Installer present, for compliance with requirements for installation tolerances; rough opening dimensions; and other conditions affecting performance of work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Comply with manufacturer's written instructions for installing windows, hardware, accessories, and other components; Drawings; and Shop Drawings.

- B. Install windows level, plumb, square, true to line, without distortion or impeding thermal movement, anchored securely in place to structural support, and in proper relation to wall surface and other adjacent construction.

3.3 PROTECTION AND CLEANING

- A. Clean aluminum surfaces immediately after installing windows. Avoid damaging protective coatings and finishes. Remove excess sealants, glazing materials, dirt, and other substances.
- B. Clean glass immediately after installing windows. Comply with manufacturer's written recommendations for final cleaning and maintenance. Remove nonpermanent labels and clean surfaces.
- C. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.

END OF SECTION

SECTION 087100
DOOR HARDWARE

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:

1. Mechanical and electrified door hardware
2. Electronic access control system components

B. Section excludes:

1. Windows
2. Cabinets (casework), including locks in cabinets
3. Signage
4. Toilet accessories
5. Overhead doors

C. Related Sections:

1. Division 01 Section "Alternates" for alternates affecting this section.
2. Division 06 Section "Rough Carpentry"
3. Division 06 Section "Finish Carpentry"
4. Division 07 Section "Joint Sealants" for sealant requirements applicable to threshold installation specified in this section.
5. Division 08 Sections:
 - a. "Metal Doors and Frames"
 - b. "Flush Wood Doors"
 - c. "Stile and Rail Wood Doors"
 - d. "Interior Aluminum Doors and Frames"
 - e. "Aluminum-Framed Entrances and Storefronts"
 - f. "Stainless Steel Doors and Frames"
 - g. "Fire-Rated Glazed Assemblies"
 - h. "Special Function Doors"
 - i. "Entrances"
6. Division 26 "Electrical" sections for connections to electrical power system and for low-voltage wiring.
7. Division 28 "Electronic Safety and Security" sections for coordination with other components of electronic access control system and fire alarm system.

4. Installation Guide for Doors and Hardware

C. NFPA – National Fire Protection Association

1. NFPA 70 – National Electric Code
2. NFPA 80 – 2016 Edition – Standard for Fire Doors and Other Opening Protectives
3. NFPA 101 – Life Safety Code
4. NFPA 105 – Smoke and Draft Control Door Assemblies
5. NFPA 252 – Fire Tests of Door Assemblies

D. ANSI - American National Standards Institute

1. ANSI A117.1 – 2017 Edition – Accessible and Usable Buildings and Facilities
2. ANSI/BHMA A156.1 - A156.29, and ANSI/BHMA A156.31 - Standards for Hardware and Specialties
3. ANSI/BHMA A156.28 - Recommended Practices for Keying Systems
4. ANSI/WDMA I.S. 1A - Interior Architectural Wood Flush Doors
5. ANSI/SDI A250.8 - Standard Steel Doors and Frames

1.03 SUBMITTALS

A. General:

1. Submit in accordance with Conditions of Contract and Division 01 Submittal Procedures.
2. Prior to forwarding submittal:
 - a. Review drawings and Sections from related trades to verify compatibility with specified hardware.
 - b. Highlight, encircle, or otherwise specifically identify on submittals: deviations from Contract Documents, issues of incompatibility or other issues which may detrimentally affect the Work.

B. Action Submittals:

1. Product Data: Submit technical product data for each item of door hardware, installation instructions, maintenance of operating parts and finish, and other information necessary to show compliance with requirements.

2. Riser and Wiring Diagrams: After final approval of hardware schedule, submit details of electrified door hardware, indicating:
 - a. Wiring Diagrams: For power, signal, and control wiring and including:
 - 1) Details of interface of electrified door hardware and building safety and security systems.
 - 2) Schematic diagram of systems that interface with electrified door hardware.
 - 3) Point-to-point wiring.
 - 4) Risers.
3. Samples for Verification: If requested by Architect, submit production sample of requested door hardware unit in finish indicated and tagged with full description for coordination with schedule.
 - a. Samples will be returned to supplier. Units that are acceptable to Architect may, after final check of operations, be incorporated into Work, within limitations of key coordination requirements.
4. Door Hardware Schedule:
 - a. Submit concurrent with submissions of Product Data, Samples, and Shop Drawings. Coordinate submission of door hardware schedule with scheduling requirements of other work to facilitate fabrication of other work critical in Project construction schedule.
 - b. Submit under direct supervision of a Door Hardware Institute (DHI) certified Architectural Hardware Consultant (AHC) or Door Hardware Consultant (DHC) with hardware sets in vertical format as illustrated by Sequence of Format for the Hardware Schedule published by DHI.
 - c. Indicate complete designations of each item required for each opening, include:
 - 1) Door Index: door number, heading number, and Architect's hardware set number.
 - 2) Quantity, type, style, function, size, and finish of each hardware item.
 - 3) Name and manufacturer of each item.
 - 4) Fastenings and other pertinent information.
 - 5) Location of each hardware set cross-referenced to indications on Drawings.
 - 6) Explanation of all abbreviations, symbols, and codes contained in schedule.
 - 7) Mounting locations for hardware.
 - 8) Door and frame sizes and materials.
 - 9) Degree of door swing and handing.
 - 10) Operational Description of openings with electrified hardware covering egress, ingress (access), and fire/smoke alarm connections.
5. Key Schedule:
 - a. After Keying Conference, provide keying schedule that includes levels of keying, explanations of key system's function, key symbols used, and door numbers controlled.
 - b. Use ANSI/BHMA A156.28 "Recommended Practices for Keying Systems" as guideline for nomenclature, definitions, and approach for selecting optimal keying system.
 - c. Provide 3 copies of keying schedule for review prepared and detailed in accordance with referenced DHI publication. Include schematic keying diagram and index each key to unique door designations.
 - d. Index keying schedule by door number, keyset, hardware heading number, cross keying instructions, and special key stamping instructions.

- e. Provide one complete bitting list of key cuts and one key system schematic illustrating system usage and expansion. Forward bitting list, key cuts and key system schematic directly to Owner, by means as directed by Owner.
- f. Prepare key schedule by or under supervision of supplier, detailing Owner's final keying instructions for locks.

C. Informational Submittals:

- 1. Provide Qualification Data for Supplier, Installer and Architectural Hardware Consultant.
- 2. Provide Product Data:
 - a. Certify that door hardware approved for use on types and sizes of labeled fire-rated doors complies with listed fire-rated door assemblies.
 - b. Include warranties for specified door hardware.

D. Closeout Submittals:

- 1. Operations and Maintenance Data: Provide in accordance with Division 01 and include:
 - a. Complete information on care, maintenance, and adjustment; data on repair and replacement parts, and information on preservation of finishes.
 - b. Catalog pages for each product.
 - c. Final approved hardware schedule edited to reflect conditions as installed.
 - d. Final keying schedule
 - e. Copy of warranties including appropriate reference numbers for manufacturers to identify project.
 - f. As-installed wiring diagrams for each opening connected to power, both low voltage and 110 volts.

E. Inspection and Testing:

- 1. Submit written reports to the Owner and Authority Having Jurisdiction (AHJ) of the results of functional testing and inspection for:
 - a. Fire door assemblies, in compliance with NFPA 80.
 - b. Required egress door assemblies, in compliance with NFPA 101.

1.04 QUALITY ASSURANCE

A. Qualifications and Responsibilities:

- 1. Supplier: Recognized architectural hardware supplier with a minimum of 5 years documented experience supplying both mechanical and electromechanical door hardware similar in quantity, type, and quality to that indicated for this Project. Supplier to be recognized as a factory direct distributor by the manufacturer of the primary materials with a warehousing facility in the Project's vicinity. Supplier to have on staff, a certified Architectural Hardware Consultant (AHC) or Door Hardware Consultant (DHC) available to Owner, Architect, and Contractor, at reasonable times during the Work for consultation.
- 2. Installer: Qualified tradesperson skilled in the application of commercial grade hardware with experience installing door hardware similar in quantity, type, and quality as indicated for this Project.

3. Architectural Hardware Consultant: Person who is experienced in providing consulting services for door hardware installations that are comparable in material, design, and extent to that indicated for this Project and meets these requirements:
 - a. For door hardware: DHI certified AHC or DHC.
 - b. Can provide installation and technical data to Architect and other related subcontractors.
 - c. Can inspect and verify components are in working order upon completion of installation.
 - d. Capable of producing wiring diagram and coordinating installation of electrified hardware with Architect and electrical engineers.
 4. Single Source Responsibility: Obtain each type of door hardware from single manufacturer.
- B. Certifications:
1. Fire-Rated Door Openings:
 - a. Provide door hardware for fire-rated openings that complies with NFPA 80 and requirements of authorities having jurisdiction.
 - b. Provide only items of door hardware that are listed products tested by UL LLC, Intertek Testing Services, or other testing and inspecting organizations acceptable to authorities having jurisdiction for use on types and sizes of doors indicated, based on testing at positive pressure and according to NFPA 252 or UL 10C and in compliance with requirements of fire-rated door and door frame labels.
 2. Smoke and Draft Control Door Assemblies:
 - a. Provide door hardware that meets requirements of assemblies tested according to UL 1784 and installed in compliance with NFPA 105
 - b. Comply with the maximum air leakage of 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) at tested pressure differential of 0.3-inch wg (75 Pa) of water.
 3. Electrified Door Hardware
 - a. Listed and labeled as defined in NFPA 70, Article 100, by testing agency acceptable to authorities having jurisdiction.
 4. Accessibility Requirements:
 - a. Comply with governing accessibility regulations cited in "REFERENCES" article 087100, 1.02.D3 herein for door hardware on doors in an accessible route. This project must comply with all Federal Americans with Disability Act regulations and all Local Accessibility Regulations.
- C. Pre-Installation Meetings
1. Keying Conference
 - a. Incorporate keying conference decisions into final keying schedule after reviewing door hardware keying system including:
 - 1) Function of building, flow of traffic, purpose of each area, degree of security required, and plans for future expansion.
 - 2) Preliminary key system schematic diagram.
 - 3) Requirements for key control system.
 - 4) Requirements for access control.
 - 5) Address for delivery of keys.

2. Pre-installation Conference
 - a. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - b. Inspect and discuss preparatory work performed by other trades.
 - c. Inspect and discuss electrical roughing-in for electrified door hardware.
 - d. Review sequence of operation for each type of electrified door hardware.
 - e. Review required testing, inspecting, and certifying procedures.
 - f. Review questions or concerns related to proper installation and adjustment of door hardware.
3. Electrified Hardware Coordination Conference:
 - a. Prior to ordering electrified hardware, schedule and hold meeting to coordinate door hardware with security, electrical, doors and frames, and other related suppliers.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Inventory door hardware on receipt and provide secure lock-up for hardware delivered to Project site. Promptly replace products damaged during shipping.
- B. Tag each item or package separately with identification coordinated with final door hardware schedule, and include installation instructions, templates, and necessary fasteners with each item or package. Deliver each article of hardware in manufacturer's original packaging.
- C. Maintain manufacturer-recommended environmental conditions throughout storage and installation periods.
- D. Provide secure lock-up for door hardware delivered to Project. Control handling and installation of hardware items so that completion of Work will not be delayed by hardware losses both before and after installation.
- E. Handle hardware in manner to avoid damage, marring, or scratching. Correct, replace or repair products damaged during Work. Protect products against malfunction due to paint, solvent, cleanser, or any chemical agent.
- F. Deliver keys to manufacturer of key control system for subsequent delivery to Owner.

1.06 COORDINATION

- A. Coordinate layout and installation of floor-recessed door hardware with floor construction. Cast anchoring inserts into concrete.
- B. Installation Templates: Distribute for doors, frames, and other work specified to be factory or shop prepared. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.
- C. Security: Coordinate installation of door hardware, keying, and access control with Owner's security consultant.

- D. Electrical System Roughing-In: Coordinate layout and installation of electrified door hardware with connections to power supplies and building safety and security systems.

1.07 WARRANTY

- A. Manufacturer's standard form in which manufacturer agrees to repair or replace components of door hardware that fail in materials or workmanship within published warranty period.
 - 1. Warranty does not cover damage or faulty operation due to improper installation, improper use or abuse.
 - 2. Warranty Period: Beginning from date of Substantial Completion, for durations indicated in manufacturer's published listings.
 - a. Mechanical Warranty
 - 1) Locks
 - a) Schlage L Series: 3 years
 - 2) Exit Devices
 - a) Von Duprin: 3 years
 - 3) Closers
 - a) LCN 4000 Series: 30 years
 - 4) Automatic Operators
 - a) LCN: 2 years
 - b. Electrical Warranty
 - 1) Locks
 - a) Schlage: 1 year
 - 2) Exit Devices
 - a) Von Duprin: 1 year

1.08 MAINTENANCE

- A. Furnish complete set of special tools required for maintenance and adjustment of hardware, including changing of cylinders.
- B. Turn over unused materials to Owner for maintenance purposes.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Approval of alternate manufacturers and/or products other than those listed as "Scheduled Manufacturer" or "Acceptable Manufacturers" in the individual article for the product category are only to be considered by official substitution request in accordance with section 01 25 00.
- B. Approval of products from manufacturers indicated in "Acceptable Manufacturers" is contingent upon those products providing all functions and features and meeting all requirements of scheduled manufacturer's product.

- C. Where specified hardware is not adaptable to finished shape or size of members requiring hardware, furnish suitable types having same operation and quality as type specified, subject to Architect's approval.

2.02 MATERIALS

A. Fabrication

1. Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. provide screws according to manufacturer's recognized installation standards for application intended.
2. Finish exposed screws to match hardware finish, or, if exposed in surfaces of other work, to match finish of this other work including prepared for paint surfaces to receive painted finish.
3. Provide concealed fasteners wherever possible for hardware units exposed when door is closed. Coordinate with "Metal Doors and Frames", "Flush Wood Doors", "Stile and Rail Wood Doors" to ensure proper reinforcements. Advise the Architect where visible fasteners, such as thru bolts, are required.

- B. Provide screws, bolts, expansion shields, drop plates and other devices necessary for hardware installation.

1. Where fasteners are exposed to view: Finish to match adjacent door hardware material.

C. Cable and Connectors:

1. Where scheduled in the hardware sets, provide each item of electrified hardware and wire harnesses with number and gage of wires enough to accommodate electric function of specified hardware.
2. Provide Molex connectors that plug directly into connectors from harnesses, electric locking and power transfer devices.
3. Provide through-door wire harness for each electrified locking device installed in a door and wire harness for each electrified hinge, electrified continuous hinge, electrified pivot, and electric power transfer for connection to power supplies.

2.03 HINGES

A. Manufacturers and Products:

1. Scheduled Manufacturer and Product:
 - a. Ives 5BB series
2. Acceptable Manufacturers and Products:
 - a. Hager BB1191/1279 series
 - b. Best FBB series

B. Requirements:

1. Provide hinges conforming to ANSI/BHMA A156.1.
2. Provide five knuckle, ball bearing hinges.

3. 1-3/4 inch (44 mm) thick doors, up to and including 36 inches (914 mm) wide:
 - a. Exterior: Standard weight, bronze or stainless steel, 4-1/2 inches (114 mm) high
 - b. Interior: Standard weight, steel, 4-1/2 inches (114 mm) high
4. 1-3/4 inch (44 mm) thick doors over 36 inches (914 mm) wide:
 - a. Exterior: Heavy weight, bronze/stainless steel, 5 inches (127 mm) high
 - b. Interior: Heavy weight, steel, 5 inches (127 mm) high
5. 2 inches or thicker doors:
 - a. Exterior: Heavy weight, bronze or stainless steel, 5 inches (127 mm) high
 - b. Interior: Heavy weight, steel, 5 inches (127 mm) high
6. Adjust hinge width for door, frame, and wall conditions to allow proper degree of opening.
7. Provide three hinges per door leaf for doors 90 inches (2286 mm) or less in height, and one additional hinge for each 30 inches (762 mm) of additional door height.
8. Hinge Pins: Except as otherwise indicated, provide hinge pins as follows:
 - a. Steel Hinges: Steel pins
 - b. Non-Ferrous Hinges: Stainless steel pins
 - c. Out-Swinging Exterior Doors: Non-removable pins
 - d. Out-Swinging Interior Lockable Doors: Non-removable pins
 - e. Interior Non-lockable Doors: Non-rising pins
9. Provide hinges with electrified options as scheduled in the hardware sets. Provide with number and gage of wires enough to accommodate electric function of specified hardware. Locate electric hinge at second hinge from bottom or nearest to electrified locking component. Provide mortar guard for each electrified hinge specified.

2.04 ELECTRIC POWER TRANSFER

A. Manufacturers:

1. Scheduled Manufacturer and Product:
 - a. Von Duprin EPT-10
2. Acceptable Manufacturers and Products:
 - a. Security Door Controls PTM
 - b. Precision EPT-12C

B. Requirements:

1. Provide power transfer with electrified options as scheduled in the hardware sets. Provide with number and gage of wires enough to accommodate electric function of specified hardware.
2. Locate electric power transfer per manufacturer's template and UL requirements, unless interference with operation of door or other hardware items.

2.05 PIVOT SETS

A. Manufacturers:

1. Scheduled Manufacturer:
 - a. Ives
2. Acceptable Manufacturers:
 - a. Dormakaba
 - b. ABH

B. Requirements:

1. Provide pivot sets complete with oil-impregnated top pivot, unless indicated otherwise.
2. Where offset pivots are specified, Provide one intermediate pivot for doors less than 91 inches (2311 mm) high and one additional intermediate pivot per leaf for each additional 30 inches (762 mm) in height or fraction thereof. Intermediate pivots spaced equally not less than 25 inches (635 mm) or not more than 35 inches (889 mm) on center, for doors over 121 inches (3073 mm) high.
3. Provide appropriate model where pivot sets are scheduled at fire rated openings.
4. Provide pivots with electrified options as scheduled in the hardware sets. Provide with number and gage of wires enough to accommodate electric function of specified hardware. Locate electrified pivot nearest to electrified locking component. If manufacturer of electrified locking component requires another device for power transfer, then provide recommended power transfer device and appropriate quantity of pivots.
5. Provide mortar guard for each electric pivot specified, unless specified in hollow metal frame specification.

2.06 FLUSH BOLTS

A. Manufacturers:

1. Scheduled Manufacturer:
 - a. Ives
2. Acceptable Manufacturers:
 - a. Burns
 - b. Trimco

B. Requirements:

1. Provide automatic, constant latching, and manual flush bolts with forged bronze or stainless-steel face plates, extruded brass levers, and with wrought brass guides and strikes. Provide 12 inch (305 mm) steel or brass rods at doors up to 90 inches (2286 mm) in height. For doors over 90 inches (2286 mm) in height increase top rods by 6 inches (152 mm) for each additional 6 inches (152 mm) of door height. Provide dust-proof strikes at each bottom flush bolt.

2.07 COORDINATORS

A. Manufacturers:

1. Scheduled Manufacturer:
 - a. Ives

2. Acceptable Manufacturers:
 - a. Burns
 - b. Trimco
- B. Requirements:
 1. Where pairs of doors are equipped with automatic flush bolts, an astragal, or other hardware that requires synchronized closing of the doors, provide bar-type coordinating device, surface applied to underside of stop at frame head.
 2. Provide filler bar of correct length for unit to span entire width of opening, and appropriate brackets for parallel arm door closers, surface vertical rod exit device strikes, or other stop mounted hardware. Factory-prepared coordinators for vertical rod devices as specified.

2.08 MORTISE LOCKS

- A. Manufacturers and Products:
 1. Scheduled Manufacturer and Product:
 - a. Schlage L9000 series
 2. Acceptable Manufacturers and Products:
 - a. Accurate 9000/9100 series
 - b. Best 45H series
- B. Requirements:
 1. Provide mortise locks conforming to ANSI/BHMA A156.13 Series 1000, Grade 1, and UL Listed for 3-hour fire doors.
 2. Indicators: Where specified, provide indicator window measuring a minimum 2-inch x 1/2 inch with 180-degree visibility. Provide messages color-coded with full text and/or symbols, as scheduled, for easy visibility.
 3. Provide locks manufactured from heavy gauge steel, containing components of steel with a zinc dichromate plating for corrosion resistance.
 4. Provide lock case that is multi-function and field reversible for handing without opening case. Cylinders: Refer to "KEYING" article, herein.
 5. Provide locks with standard 2-3/4 inches (70 mm) backset with full 3/4 inch (19 mm) throw stainless steel mechanical anti-friction latchbolt. Provide deadbolt with full 1-inch (25 mm) throw, constructed of stainless steel.
 6. Provide standard ASA strikes unless extended lip strikes are necessary to protect trim. Provide electrified options as scheduled in the hardware sets. Where scheduled, provide switches and sensors integrated into the locks and latches.
 7. Provide motor based electrified locksets that comply with the following requirements:
 - a. Universal input voltage – single chassis accepts 12 or 24VDC to allow for changes in the field without changing lock chassis.
 - b. Fail Safe/Fail Secure – changing mode between electrically locked (fail safe) and electrically unlocked (fail secure) is field selectable without opening the lock case.
 - c. Low maximum current draw – maximum 0.4 amps to allow for multiple locks on a single power supply.

- d. Low holding current – maximum 0.01 amps to produce minimal heat, eliminate “hot levers” in electrically locked applications, and to provide reliable operation in wood doors that provide minimal ventilation and air flow.
 - e. Connections – provide quick-connect Molex system standard.
8. Lever Trim: Solid brass, bronze, or stainless steel, cast or forged in design specified, with wrought roses and external lever spring cages. Provide thru-bolted levers with 2-piece spindles.
- a. Lever Design: 06A.

2.09 DEADBOLTS

A. Manufacturers and Products:

- 1. Scheduled Manufacturer and Product:
 - a. Schlage B600/B700/B800 Series
- 2. Acceptable Manufacturers and Products:
 - a. Best T Series
 - b. Marks 130 Series

B. Requirements:

- 1. Provide grade 1 deadbolt series conforming to ANSI/BHMA A156.
- 2. Cylinders: Refer to "KEYING" article, herein.
- 3. Provide deadbolts with standard 2-3/4 inches (70 mm) backset. Provide 2-3/8 inches (60 mm) where noted or if door or frame detail requires. Provide deadbolt with full 1-inch (25 mm) throw, constructed of steel alloy.
- 4. Provide manufacturer's standard strike.

2.10 EXIT DEVICES

A. Manufacturers and Products:

- 1. Scheduled Manufacturer and Product:
 - a. Von Duprin 99/33A series
- 2. Acceptable Manufacturers and Products:
 - a. Detex Advantex series
 - b. Precision APEX 2000 series

B. Requirements:

- 1. Provide exit devices tested to ANSI/BHMA A156.3 Grade 1 and UL listed for Panic Exit or Fire Exit Hardware.
- 2. Cylinders: Refer to "KEYING" article, herein.
- 3. Provide grooved touchpad type exit devices, fabricated of brass, bronze, stainless steel, or aluminum, plated to standard architectural finishes to match balance of door hardware.
- 4. Touchpad must extend a minimum of one half of door width. No plastic inserts are allowed in touchpads.

DOOR HARDWARE

5. Provide exit devices with deadlatching feature for security and for future addition of alarm kits and/or other electrified requirements.
6. Provide exit devices with weather resistant components that can withstand harsh conditions of various climates and corrosive cleaners used in outdoor pool environments.
7. Provide flush end caps for exit devices.
8. Provide exit devices with manufacturer's approved strikes.
9. Provide exit devices cut to door width and height. Install exit devices at height recommended by exit device manufacturer, allowable by governing building codes, and approved by Architect.
10. Mount mechanism case flush on face of doors or provide spacers to fill gaps behind devices. Where glass trim or molding projects off face of door, provide glass bead kits.
11. Provide cylinder or hex-key dogging as specified at non fire-rated openings.
12. Removable Mullions: 2 inches (51 mm) x 3 inches (76 mm) steel tube. Where scheduled as keyed removable mullion, provide type that can be removed by use of a keyed cylinder, which is self-locking when re-installed.
13. Provide factory drilled weep holes for exit devices used in full exterior application, highly corrosive areas, and where noted in hardware sets.
14. Provide electrified options as scheduled.
15. Top latch mounting: double- or single-tab mount for steel doors, face mount for aluminum doors eliminating requirement of tabs, and double tab mount for wood doors.
16. Provide exit devices with optional trim designs to match other lever and pull designs used on the project.

2.11 MAGNETIC LOCKS (M490)

A. Manufacturers and Products:

1. Scheduled Manufacturer and Product:
 - a. Schlage M490 series
2. Acceptable Manufacturers and Products:
 - a. Securitron M82BD series
 - b. Security Door Controls 1510 series

B. Requirements:

1. Provide magnetic locks certified to meet ANSI/BHMA A156.23 classification criteria including minimum holding force of 1,500lbs. Provide magnetic locks equipped with SPDT Magnetic Bond Sensing device, where specified, to monitor whether enough magnetic holding force exists to ensure adequate locking and SPDT Door Status Monitor device, where specified, to monitor whether door is open or closed. Provide bond sensors fully concealed within electromagnet to resist tampering or damage.
2. Provide magnetic locks certified to meet UL10C, and UL1034 for burglary-resistant electronic locking mechanisms.
3. Provide fasteners, mounting brackets, and spacer bars required for mounting and details.
4. Provide power supply recommended and approved by manufacturer of magnetic locks.
5. Where magnetic locks are scheduled, provide complete assemblies of controls, switches, power supplies, relays, and parts/material recommended and approved by manufacturer of magnetic locks for each individual leaf. Switches control both doors simultaneously at pairs. Locate controls as directed by Architect.

2.12 KEYSWITCHES

A. Manufacturers and Products:

1. Scheduled Manufacturer and Product:
 - a. Schlage 650 series
2. Acceptable Manufacturers and Products:
 - a. Security Door Control 700 series
 - b. Securitron MK series

B. Requirements:

1. Provide key switches capable of being configured to momentary or maintained action.
2. Provide key switches that accept a mortise cylinder. Cylinders: Refer to "KEYING" article, herein.

2.13 POWER SUPPLIES

A. Manufacturers and Products:

1. Scheduled Manufacturer and Product:
 - a. Schlage/Von Duprin PS900 Series
2. Acceptable Manufacturers and Products:
 - a. Securitron BPS series
 - b. Security Door Controls 600 series

B. Requirements:

1. Provide power supplies approved by manufacturer of supplied electrified hardware.
2. Provide appropriate quantity of power supplies necessary for proper operation of electrified locking components as recommended by manufacturer of electrified locking components with consideration for each electrified component using power supply, location of power supply, and approved wiring diagrams. Locate power supplies as directed by Architect.
3. Provide regulated and filtered 24 VDC power supply, and UL class 2 listed.
4. Provide power supplies with the following features:
 - a. 12/24 VDC Output, field selectable.
 - b. Class 2 Rated power limited output.
 - c. Universal 120-240 VAC input.
 - d. Low voltage DC, regulated and filtered.
 - e. Polarized connector for distribution boards.
 - f. Fused primary input.
 - g. AC input and DC output monitoring circuit w/LED indicators.
 - h. Cover mounted AC Input indication.
 - i. Tested and certified to meet UL294.
 - j. NEMA 1 enclosure.
 - k. Hinged cover w/lock down screws.
 - l. High voltage protective cover.

2.14 CYLINDERS

A. Manufacturers and Products:

1. Scheduled Manufacturer and Product:
 - a. Schlage Everest 29 T
2. Acceptable Manufacturers and Products:
 - a. Best CORMAX
 - b. Medeco Keymark

B. Requirements:

1. Provide cylinders/cores compliant with ANSI/BHMA A156.5; latest revision; cylinder face finished to match lockset; manufacturer's series as indicated. Refer to "KEYING" article, herein.
2. Provide cylinders in the below-listed configuration(s), distributed throughout the Project as indicated.
 - a. Patented Restricted: cylinder with interchangeable core with patented, restricted keyway.
3. Patent Protection: Cylinders/cores requiring use of restricted, patented keys, patent protected.
4. Nickel silver bottom pins.

2.15 KEYING

A. Scheduled System:

1. New factory registered system:
 - a. Provide a factory registered keying system, complying with guidelines in ANSI/BHMA A156.28, incorporating decisions made at keying conference.

B. Requirements:

1. Construction Keying:
 - a. Replaceable Construction Cores.
 - 1) Provide temporary construction cores replaceable by permanent cores, furnished in accordance with the following requirements.
 - a) 3 construction control keys
 - b) 12 construction change (day) keys.
 - 2) Owner or Owner's Representative will replace temporary construction cores with permanent cores.
2. Permanent Keying:
 - a. Provide permanent cylinders/cores keyed by the manufacturer according to the following key system.
 - 1) Master Keying system as directed by the Owner.
 - b. Forward biting list and keys separately from cylinders, by means as directed by Owner. Failure to comply with forwarding requirements will be cause for replacement of cylinders/cores involved at no additional cost to Owner.

- c. Provide keys with the following features:
 - 1) Material: Nickel silver; minimum thickness of .107-inch (2.3mm)
 - 2) Patent Protection: Keys and blanks protected by one or more utility patent(s).
- d. Identification:
 - 1) Mark permanent cylinders/cores and keys with applicable blind code for identification. Do not provide blind code marks with actual key cuts.
 - 2) Identification stamping provisions must be approved by the Architect and Owner.
 - 3) Stamp cylinders/cores and keys with Owner's unique key system facility code as established by the manufacturer; key symbol and embossed or stamped with "DO NOT DUPLICATE" along with the "PATENTED" or patent number to enforce the patent protection.
 - 4) Failure to comply with stamping requirements will be cause for replacement of keys involved at no additional cost to Owner.
 - 5) Forward permanent cylinders/cores to Owner, separately from keys, by means as directed by Owner.
- e. Quantity: Furnish in the following quantities.
 - 1) Change (Day) Keys: 3 per cylinder/core.
 - 2) Permanent Control Keys: 3.
 - 3) Master Keys: 6.

2.16 KEY CONTROL SYSTEM

A. Manufacturers:

- 1. Scheduled Manufacturer:
 - a. Telkee
- 2. Acceptable Manufacturers:
 - a. HPC
 - b. Lund

B. Requirements:

- 1. Provide key control system, including envelopes, labels, tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet, all as recommended by system manufacturer, with capacity for 150% of number of locks required for Project.
 - a. Provide complete cross index system set up by hardware supplier, and place keys on markers and hooks in cabinet as determined by final key schedule.
 - b. Provide hinged-panel type cabinet for wall mounting.

2.17 DOOR CLOSERS

A. Manufacturers and Products:

- 1. Scheduled Manufacturer and Product:
 - a. LCN 4010/4110/4020 series
- 2. Acceptable Manufacturers and Products:
 - a. Corbin-Russwin DC8000 series

b. Sargent 281 series

B. Requirements:

1. Provide door closers conforming to ANSI/BHMA A156.4 Grade 1 requirements by BHMA certified independent testing laboratory. Certify surface mounted mechanical closers to meet fifteen million (15,000,000) full load cycles. ISO 9000 certify closers. Stamp units with date of manufacture code.
2. Provide door closers with fully hydraulic, full rack and pinion action with high strength cast iron cylinder, and full complement bearings at shaft.
3. Cylinder Body: 1-1/2-inch (38 mm) diameter with 11/16-inch (17 mm) diameter double heat-treated pinion journal.
4. Hydraulic Fluid: Fireproof, passing requirements of UL10C, and requiring no seasonal closer adjustment for temperatures ranging from 120 degrees F to -30 degrees F.
5. Spring Power: Continuously adjustable over full range of closer sizes, and providing reduced opening force as required by accessibility codes and standards.
6. Hydraulic Regulation: By tamper-proof, non-critical valves, with separate adjustment for latch speed, general speed, and backcheck.
7. Provide closers with solid forged steel main arms and factory assembled heavy-duty forged forearms for parallel arm closers. When closers are parallel arm mounted, provide closers which mount within 6-inch (152 mm) top rail without use of mounting plate so that closer is not visible through vision panel from pull side.
8. Pressure Relief Valve (PRV) Technology: Not permitted.
9. Finish for Closer Cylinders, Arms, Adapter Plates, and Metal Covers: Powder coating finish which has been certified to exceed 100 hours salt spray testing as described in ANSI/BHMA Standard A156.4 and ASTM B117, or has special rust inhibitor (SRI).
10. Provide special templates, drop plates, mounting brackets, or adapters for arms as required for details, overhead stops, and other door hardware items interfering with closer mounting.

2.18 ELECTRO-HYDRAULIC AUTOMATIC OPERATORS

A. Manufacturers and Products:

1. Scheduled Manufacturer and Product:
 - a. LCN 4600 series
2. Acceptable Manufacturers and Products:
 - a. Norton 6000 series
 - b. Precision D4990 series

B. Requirements:

1. Provide low energy automatic operator units with hydraulic closer complying with ANSI/BHMA A156.19.
2. Hydraulic Fluid: Fireproof, passing requirements of UL10C, and requiring no seasonal closer adjustment for temperatures ranging from 120 degrees F to -30 degrees F.
3. Provide units with conventional door closer opening and closing forces unless power operator motor is activated. Provide door closer assembly with adjustable spring size, back-check, and opening and closing speed adjustment valves to control door

4. Provide units with on/off switch for manual operation, motor start up delay, vestibule interface delay, electric lock delay, and door hold open delay.
5. Provide drop plates, brackets, and adapters for arms as required for details.
6. Provide actuator switches and receivers for operation as specified.
7. Provide weather-resistant actuators at exterior applications.
8. Provide key switches with LED's, recommended and approved by manufacturer of automatic operator as required for function described in operation description of hardware group below. Cylinders: Refer to "KEYING" article, herein.
9. Provide complete assemblies of controls, switches, power supplies, relays, and parts/material recommended and approved by manufacturer of automatic operator for each individual leaf. Actuators control both doors simultaneously at pairs. Sequence operation of exterior and vestibule doors with automatic operators to allow ingress or egress through both sets of openings as directed by Architect. Locate actuators, key switches, and other controls as directed by Architect.
10. Provide units with vestibule inputs that allow sequencing operation of two units, and SPDT relay for interfacing with latching or locking devices.

2.19 DOOR TRIM

A. Manufacturers:

1. Scheduled Manufacturer:
 - a. Ives
2. Acceptable Manufacturers:
 - a. Trimco
 - b. Burns

B. Requirements:

1. Provide push plates, push bars, pull plates, pulls, and hands-free reversible door pulls with diameter and length as scheduled.

2.20 PROTECTION PLATES

A. Manufacturers:

1. Scheduled Manufacturer:
 - a. Ives
2. Acceptable Manufacturers:
 - a. Burns
 - b. Trimco

B. Requirements:

1. Provide protection plates with a minimum of 0.050 inch (1 mm) thick, beveled four edges as scheduled. Furnish with sheet metal or wood screws, finished to match plates.

2. Sizes plates 2 inches (51 mm) less width of door on single doors, pairs of doors with a mullion, and doors with edge guards. Size plates 1 inch (25 mm) less width of door on pairs without a mullion or edge guards.
3. At fire rated doors, provide protection plates over 16 inches high with UL label.

2.21 OVERHEAD STOPS AND OVERHEAD STOP/HOLDERS

A. Manufacturers:

1. Scheduled Manufacturers:
 - a. Glynn-Johnson
2. Acceptable Manufacturers:
 - a. Rixson
 - b. ABH

B. Requirements:

1. Provide overhead stop at any door where conditions do not allow for a wall stop or floor stop presents tripping hazard.
2. Provide friction type at doors without closer and positive type at doors with closer.

2.22 DOOR STOPS AND HOLDERS

A. Manufacturers:

1. Scheduled Manufacturer:
 - a. Ives
2. Acceptable Manufacturers:
 - a. Trimco
 - b. Burns

B. Provide door stops at each door leaf:

1. Provide wall stops wherever possible. Provide concave type where lockset has a push button or thumbturn.
2. Where a wall stop cannot be used, provide universal floor stops.
3. Where wall or floor stop cannot be used, provide overhead stop.
4. Provide roller bumper where doors open into each other and overhead stop cannot be used.

2.23 THRESHOLDS, SEALS, DOOR SWEEPS, AUTOMATIC DOOR BOTTOMS, AND GASKETING

A. Manufacturers:

1. Scheduled Manufacturer:
 - a. Zero International

2. Acceptable Manufacturers:
 - a. National Guard
 - b. Reese
- B. Requirements:
 1. Provide thresholds, weather-stripping, and gasketing systems as specified and per architectural details. Match finish of other items.
 2. Smoke- and Draft-Control Door Assemblies: Where smoke- and draft-control door assemblies are required, provide door hardware that meets requirements of assemblies tested according to UL 1784 and installed in compliance with NFPA 105.
 3. Provide door sweeps, seals, astragals, and auto door bottoms only of type where resilient or flexible seal strip is easily replaceable and readily available.
 4. Size thresholds 1/2 inch (13 mm) high by 5 inches (127 mm) wide by door width unless otherwise specified in the hardware sets or detailed in the drawings.

2.24 SILENCERS

- A. Manufacturers:
 1. Scheduled Manufacturer:
 - a. Ives
 2. Acceptable Manufacturers:
 - a. Burns
 - b. Trimco
- B. Requirements:
 1. Provide "push-in" type silencers for hollow metal or wood frames.
 2. Provide one silencer per 30 inches (762 mm) of height on each single frame, and two for each pair frame.
 3. Omit where gasketing is specified.

2.25 ROLLER LATCHES

- A. Manufacturers:
 1. Scheduled Manufacturer:
 - a. Ives
 2. Acceptable Manufacturers:
 - a. Burns
 - b. Trimco
- B. Requirements:
 1. Provide roller latches with 4-7/8 inches (124 mm) strike at single doors to fit ANSI frame prep. If dummy levers are used in conjunction with roller latch mount roller latch at a height as to not interfere with proper mounting and height of dummy lever.

2. Provide roller latches with 2-1/4 inches (57 mm) full lip strike at pair doors. Mount roller in top rail of each leaf per manufacturer's template.

2.26 DOOR POSITION SWITCHES

A. Manufacturers:

1. Scheduled Manufacturer:
 - a. Schlage
2. Acceptable Manufacturers:
 - a. GE-Interlogix
 - b. Sargent

B. Requirements:

1. Provide recessed or surface mounted type door position switches as specified.
2. Coordinate door and frame preparations with door and frame suppliers. If switches are being used with magnetic locking device, provide minimum of 4 inches (102 mm) between switch and magnetic locking device.

2.27 FINISHES

A. FINISH: BHMA 626/652 (US26D); EXCEPT:

1. Hinges at Exterior Doors: BHMA 630 (US32D)
2. Push Plates, Pulls, and Push Bars: BHMA 630 (US32D)
3. Protection Plates: BHMA 630 (US32D)
4. Overhead Stops and Holders: BHMA 630 (US32D)
5. Door Closers: Powder Coat to Match
6. Wall Stops: BHMA 630 (US32D)
7. Weatherstripping: Clear Anodized Aluminum
8. Thresholds: Mill Finish Aluminum

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Prior to installation of hardware, examine doors and frames, with Installer present, for compliance with requirements for installation tolerances, labeled fire-rated door assembly construction, wall and floor construction, and other conditions affecting performance. Verify doors, frames, and walls have been properly reinforced for hardware installation.
- B. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified door hardware installation.
- C. Submit a list of deficiencies in writing and proceed with installation only after unsatisfactory conditions have been corrected.

DOOR HARDWARE

3.02 INSTALLATION

- A. Mount door hardware units at heights to comply with the following, unless otherwise indicated or required to comply with governing regulations.
 - 1. Standard Steel Doors and Frames: ANSI/SDI A250.8.
 - 2. Custom Steel Doors and Frames: HMMA 831.
 - 3. Interior Architectural Wood Flush Doors: ANSI/WDMA I.S. 1A
 - 4. Installation Guide for Doors and Hardware: DHI TDH-007-20
- B. Install door hardware in accordance with NFPA 80, NFPA 101 and provide post-install inspection, testing as specified in section 1.03.E unless otherwise required to comply with governing regulations.
- C. Install each hardware item in compliance with manufacturer's instructions and recommendations, using only fasteners provided by manufacturer.
- D. Do not install surface mounted items until finishes have been completed on substrate. Protect all installed hardware during painting.
- E. Set units level, plumb and true to line and location. Adjust and reinforce attachment substrate as necessary for proper installation and operation.
- F. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.
- G. Install operating parts so they move freely and smoothly without binding, sticking, or excessive clearance.
- H. Hinges: Install types and in quantities indicated in door hardware schedule but not fewer than quantity recommended by manufacturer for application indicated.
- I. Lock Cylinders:
 - 1. Install construction cores to secure building and areas during construction period.
 - 2. Replace construction cores with permanent cores as indicated in keying section.
 - 3. Furnish permanent cores to Owner for installation.
- J. Wiring: Coordinate with Division 26, ELECTRICAL and Division 28 ELECTRONIC SAFETY AND SECURITY sections for:
 - 1. Conduit, junction boxes and wire pulls.
 - 2. Connections to and from power supplies to electrified hardware.
 - 3. Connections to fire/smoke alarm system and smoke evacuation system.
 - 4. Connection of wire to door position switches and wire runs to central room or area, as directed by Architect.
 - 5. Connections to panel interface modules, controllers, and gateways.
 - 6. Testing and labeling wires with Architect's opening number.
- K. Key Control System: Tag keys and place them on markers and hooks in key control system cabinet, as determined by final keying schedule.

- L. Door Closers: Mount closers on room side of corridor doors, inside of exterior doors, and stair side of stairway doors from corridors. Mount closers so they are not visible in corridors, lobbies and other public spaces unless approved by Architect.
- M. Closer/Holders: Mount closer/holders on room side of corridor doors, inside of exterior doors, and stair side of stairway doors.
- N. Power Supplies: Locate power supplies as indicated or, if not indicated, above accessible ceilings or in equipment room, or alternate location as directed by Architect.
- O. Thresholds: Set thresholds in full bed of sealant complying with requirements specified in Division 07 Section "Joint Sealants."
- P. Stops: Provide floor stops for doors unless wall or other type stops are indicated in door hardware schedule. Do not mount floor stops where they may impede traffic or present tripping hazard.
- Q. Perimeter Gasketing: Apply to head and jamb, forming seal between door and frame.
- R. Meeting Stile Gasketing: Fasten to meeting stiles, forming seal when doors are closed.
- S. Door Bottoms and Sweeps: Apply to bottom of door, forming seal with threshold when door is closed.

3.03 ADJUSTING

- A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.
 - 1. Spring Hinges: Adjust to achieve positive latching when door can close freely from an open position of 30 degrees.
 - 2. Electric Strikes: Adjust horizontal and vertical alignment of keeper to properly engage lock bolt.
 - 3. Door Closers: Adjust sweep period to comply with accessibility requirements and requirements of authorities having jurisdiction.
- B. Occupancy Adjustment: Approximately three to six months after date of Substantial Completion, examine and readjust each item of door hardware, including adjusting operating forces, as necessary to ensure function of doors and door hardware.

3.04 CLEANING AND PROTECTION

- A. Clean adjacent surfaces soiled by door hardware installation.
- B. Clean operating items per manufacturer's instructions to restore proper function and finish.

- C. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of Substantial Completion.

3.05 DOOR HARDWARE SCHEDULE

- A. The intent of the hardware specification is to specify the hardware for interior and exterior doors, and to establish a type, continuity, and standard of quality. However, it is the door hardware supplier's responsibility to thoroughly review existing conditions, schedules, specifications, drawings, and other Contract Documents to verify the suitability of the hardware specified.
- B. Discrepancies, conflicting hardware, and missing items are to be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application.
- C. Hardware items are referenced in the following hardware schedule. Refer to the above specifications for special features, options, cylinders/keying, and other requirements.
- D. Hardware Sets:

HARDWARE GROUP NO. 001 - (EXTERIOR ALUMINUM SINGLE WITH PUSH/PULL BAR X NARROW BACKSET MORTISE LOCK)

Provide each SGL door(s) with the following:

QTY		DESCRIPTION	CATALOG NUMBER	MFR
1	EA	PIVOT SET	7226F SET	IVE
1	EA	INTERMEDIATE PIVOT	7226F INT	IVE

SECTION 088000

GLAZING

(PART OF WORK OF SECTION 080002 - GLASS AND GLAZING, TRADE BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:

1. Glass and glazing for the following products and applications:

- a. Steel doors, frames and sidelights specified in Section 081110 - HOLLOW METAL DOORS AND FRAMES.
- b. Glazed entrances and storefronts specified in Section 084110 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS.
- c. Glazed curtain walls specified in Section 084410 - GLAZED ALUMINUM CURTAIN WALLS.
- d. Interior lites.
- e. Unframed mirrors.
- f. Glazing film.

- B. Refer to Section 019113 – GENERAL COMMISSIONING REQUIREMENTS and Section 080800 – OPENING SYSTEMS COMMISSIONING REQUIREMENTS for additional requirements affecting this section.

- C. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.

- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:

1. Section 081400 - FLUSH WOOD DOORS for factory glazing.
2. Section 085110 - ALUMINUM WINDOWS for factory glazing.

1.3 DEFINITIONS

- A. Manufacturers of Glass Products: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
- B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.

- C. Interspace: Space between lites of an insulating-glass unit that contains dehydrated air or a specified gas.
- D. Deterioration of Coated Glass: Defects developed from normal use that are attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in metallic coating.
- E. Deterioration of Insulating Glass: Failure of hermetic seal under normal use that is attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.
- F. Deterioration of Laminated Glass: Defects developed from normal use that are attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1.4 PERFORMANCE REQUIREMENTS

- A. General: Provide glazing systems capable of withstanding normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, and installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Glass Design: Glass thickness designations indicated are minimums and are for detailing only. Confirm glass thicknesses by analyzing Project loads and in-service conditions. Provide glass lites in the thickness designations indicated for various size openings, but not less than thicknesses and in strengths (annealed or heat treated) required to meet or exceed the following criteria:
 - 1. Glass Thicknesses: Select minimum glass thicknesses to comply with ASTM E 1300, according to the following requirements:
 - a. Specified Design Wind Loads: As required by Code.
 - b. Specified Design Snow Loads for Sloped Glazing: As required by Code.
 - c. Probability of Breakage for Vertical Glazing: 8 lites per 1000 for lites set vertically or not more than 15 degrees off vertical and under wind action.
 - 1) Load Duration: 60 seconds or less.
 - d. Probability of Breakage for Sloped Glazing: 1 lite per 1000 for lites set more than 15 degrees off vertical and under wind and snow action.
 - 1) Load Duration: 30 days.
 - e. Maximum Lateral Deflection: For the following types of glass supported on all 4 edges, provide thickness required that limits center deflection at design wind pressure to 1/50 times the short side length or 1 inch, whichever is less.
 - 1) For monolithic-glass lites heat-treated to resist wind loads.
 - 2) For insulating glass.
 - 3) For laminated-glass lites.

- f. Minimum Glass Thickness for Exterior Lites: Not less than 6 mm.
 - C. Thermal Movements: Provide glazing that allows for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures acting on glass framing members and glazing components. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
 - D. Thermal and Optical Performance Properties: Provide glass with performance properties specified based on manufacturer's published test data, as determined according to procedures indicated below:
 - 1. For monolithic-glass lites, properties are based on units with lites 6.0 mm thick.
 - 2. For laminated-glass lites, properties are based on products of construction indicated.
 - 3. For insulating-glass units, properties are based on units with lites 6.0 mm thick and a nominal 1/2-inch-wide interspace.
 - 4. Center-of-Glass Values: Based on using LBL-44789 WINDOW 6.3 computer program for the following methodologies:
 - a. U-Factors: NFRC 100 expressed as Btu/ sq. ft. x h x deg F.
 - b. Solar Heat Gain Coefficient: NFRC 200.
 - c. Solar Optical Properties: NFRC 300.
- 1.5 SUBMITTALS
- A. Product Data: For each glass product and glazing material indicated.
 - B. LEED Submittals:
 - 1. Building Product Disclosure and Optimization, Environmental Product Declarations (EPD):
 - a. Option 1: For flat glass and processed glass, submit product-specific Type III EPDs.
 - 2. Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010.
 - a. For adhesives and sealants, submit test results, including TVOC emissions and VOC content, or GreenGuard Gold certifications.
 - b. For wet-applied products, submit volume used.
 - C. Samples: 12-inch- square Samples for each type of glass and glass assembly, glazing sealants.
 - D. Glazing Schedule: Use same designations indicated on Drawings for glazed openings in preparing a schedule listing glass types and thicknesses for each size opening and location.
 - E. Product Certificates: Signed by manufacturers of glass and glazing products certifying that products furnished comply with requirements.
 - 1. For solar-control low-e-coated glass, provide documentation demonstrating that manufacturer of coated glass is certified by coating manufacturer.
 - F. Qualification Data: For installers.

- G. Preconstruction Adhesion and Compatibility Test Report: From glazing sealant manufacturer indicating glazing sealants were tested for adhesion to glass and glazing channel substrates and for compatibility with glass and other glazing materials.
- H. Product Test Reports: For each type of glazing products:
- I. Warranties: Special warranties specified in this Section.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who has completed glazing similar in material, design, and extent to that indicated for this Project; whose work has resulted in glass installations with a record of successful in-service performance..
- B. Source Limitations for Glass: Obtain the following through one source from a single manufacturer for each glass type: clear float glass, laminated glass and insulating glass.
- C. Source Limitations for Glass Sputter-Coated with Solar-Control Low-E Coatings: Where solar-control low-e coatings of a primary glass manufacturer that has established a certified fabricator program is specified, obtain sputter-coated solar-control low-e-coated glass in fabricated units from a manufacturer that is certified by coated-glass manufacturer.
- D. Source Limitations for Glazing Accessories: Obtain glazing accessories through one source from a single manufacturer for each product and installation method indicated.
- E. Elastomeric Glazing Sealant Product Testing: Obtain sealant test results for product test reports in "Submittals" Article from a qualified testing agency based on testing current sealant formulations within a 36-month period.
 - 1. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.
 - 2. Test elastomeric glazing sealants for compliance with requirements specified by reference to ASTM C 920, and where applicable, to other standard test methods.
- F. Preconstruction Adhesion and Compatibility Testing: Submit to elastomeric glazing sealant manufacturers, for testing indicated below, samples of each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member that will contact or affect elastomeric glazing sealants:
 - 1. Use ASTM C 1087 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
 - 2. Submit not fewer than eight pieces of each type of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
 - 3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 - 4. For materials failing tests, obtain sealant manufacturer's written instructions for corrective measures, including the use of specially formulated primers.
 - 5. Testing will not be required if elastomeric glazing sealant manufacturers submit data based on previous testing of current sealant products for adhesion to, and compatibility with, glazing materials matching those submitted.
- G. Fire-Protection-Rated Glazing: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on positive-pressure testing according to NFPA 257 or UL 9, including the hose-stream test, and shall comply with NFPA 80.

1. Fire-protection-rated glazing required to have a fire-protection rating of 20 minutes shall be exempt from the hose-stream test, unless required by authorities having jurisdiction.
- H. Safety Glazing Products: Comply with testing requirements in 16 CFR 1201.
1. Subject to compliance with requirements, obtain safety glazing products permanently marked with certification label of the Safety Glazing Certification Council or another certification agency] acceptable to authorities having jurisdiction.
 2. Where glazing units, including Kind FT glass and laminated glass, are specified in Part 2 articles for glazing lites more than 9 sq. ft. in exposed surface area of one side, provide glazing products that comply with Category II materials, for lites 9 sq. ft. or less in exposed surface area of one side, provide glazing products that comply with Category I or II materials, except for hazardous locations where Category II materials are required by 16 CFR 1201 and regulations of authorities having jurisdiction.
- I. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.
1. GANA Publications: GANA Laminated Division's "Laminated Glass Design Guide" and GANA's "Glazing Manual."
 2. AAMA Publications: AAMA GDSG-1, "Glass Design for Sloped Glazing," and AAMA TIR-A7, "Sloped Glazing Guidelines."
 3. IGMA Publication for Sloped Glazing: IGMA TB-3001, "Sloped Glazing Guidelines."
 4. IGMA Publication for Insulating Glass: SIGMA TM-3000, "Glazing Guidelines for Sealed Insulating Glass Units."
- J. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of the following testing and inspecting agency:
1. Insulating Glass Certification Council.
- K. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Build mockup for types of windows indicated, in locations shown on Drawings.
- L. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Protect glazing materials according to manufacturer's written instructions and as needed to prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
- B. For insulating-glass units that will be exposed to substantial altitude changes, comply with insulating-glass manufacturer's written recommendations for venting and sealing to avoid hermetic seal ruptures.

1.8 PROJECT CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
 - 1. Do not install liquid glazing sealants when ambient and substrate temperature conditions are outside limits permitted by glazing sealant manufacturer or below 40 deg F.

1.9 WARRANTY

- A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer's standard form, made out to the Owner and signed by coated-glass manufacturer agreeing to replace coated-glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
 - 1. Warranty Period: Ten years from date of Substantial Completion.
- B. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form, made out to the Owner and signed by laminated-glass manufacturer agreeing to replace laminated-glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
 - 1. Warranty Period: Five years from date of Substantial Completion.
- C. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form, made out to the Owner and signed by insulating-glass manufacturer agreeing to replace insulating-glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
 - 1. Warranty Period: Ten years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 INSULATING-GLASS UNITS (BY OTHER SECTIONS, EXCEPT WHERE INSTALLED IN HOLLOW METAL DOORS AND FRAMES)

- A. Refer to Section 084410 - GLAZED ALUMINUM CURTAIN WALLS.
- B. MRc2, Building Product Disclosure and Optimization, Environmental Product Declarations (EPD): Type III EPD.

2.2 INTERIOR GLASS TYPES

- A. Interior glass types listed herein that are within Aluminum-Framed Entrances and Storefronts, and Glazed Aluminum Curtain Walls shall be provided under the Metal Windows trade bid.
- B. Type G1: Laminated Clear Safety Glass:
 - 1. Two sheets of double-strength clear sheet glass; ASTM C 1036, Type I, Class 1, quality q3; permanently laminated together with a minimum 0.045 inch thick sheet of clear plasticized polyvinyl butyral, which has been produced specifically for laminating glass.
 - 2. Thickness: 1/4 inch, or as indicated.

C. Type G1A: 1" Laminated Insulated Safety Glass Unit

1. 1" thick Insulated Glass as manufactured by Viracon, complying with ASTM E 2190 Standard Specification for Insulating Glass Unit Performance and Evaluation. Units shall be certified for compliance by the IGCC:
2. Composition:
 - a. Exterior Glass Ply: 1/4" clear, 0.030-inch PVB-laminated and heatstrengthened.
 - b. Coating: None.
 - c. Airspace: 1/2" airspace, mill finish.
 - d. Silicone: black.
 - e. Interior Glass Ply: 1/4" clear, 0.030-inch PVB-laminated and heatstrengthened.

D. Type G2: Laminated Spandrel Glass:

1. Two sheets of double-strength clear sheet glass; ASTM C 1036, Type I, Class 1, quality q3; permanently laminated together with a minimum 0.045 inch thick sheet of "Viraspan V175 - High Opacity White" plasticized polyvinyl butyral, which has been produced specifically for laminating glass.
2. Thickness: 1/4 inch, or as indicated.

E. Type G2A: 1" thick Insulated Coated Spandrel Glass Insulating Coated Spandrel Glass as manufactured by Viracon, complying with ASTM E 2190 Standard Specification for Insulating Glass Unit Performance and Evaluation. Units shall be certified for compliance by the IGCC.

1. Composition:
 - a. Exterior Glass Ply: 1/4" clear, 0.030-inch PVB-laminated and heatstrengthened.
 - b. Coating: None.
 - c. Airspace: 1/2" airspace, mill finish.
 - d. Silicone: black.
 - e. Interior Glass Ply: 1/4" clear, 0.045-inch pvb-laminated of "Viraspan V175-High Opacity White" and heat strengthened.

F. Type G3: Translucent Laminated Glass:

1. Two sheets of double-strength clear sheet glass; ASTM C 1036, Type I, Class 1, quality q3; permanently laminated together with a minimum 0.045 inch thick sheet of "Viracon Arctic Snow" plasticized polyvinyl butyral, which has been produced specifically for laminating glass.
2. Thickness: 1/4 inch, or as indicated.

G. Type G4: Insulated Security Glass: shall be "School Guard Glass SG4" as manufactured by LTI Smart Glass, Inc., Pittsfield, MA.

1. Nominal thickness: 3/8"
 - a. SG4 security glass.
2. Ratings:

- a. 5-aa1 rated for 6 minutes.
 - b. BR level 2 low spall.
 - c. F1233 Class 1.
 - d. UL 972.
 3. Compliance:
 - a. ASTM 1048 - Standard Specification - Heat Strengthened & Fully Tempered Flat Glass.
 - b. ASTM C1036 - Standard Specification - Flat Glass.
 - c. ASTM C1172 - Standard Specification for Laminated Architectural Flat Glass.
 - d. ANSI Z97.1 Safety Materials Used in Buildings.
 - e. CPSC 6 CFR 1201.
 4. Performance Criteria: Test failure occurs when a 4" object can pass through the glass materials.
 - a. Ballistic impact: Pass* (5 shots with a .762 round) (*bullets penetrate but glass stays in place).
 - b. Concentrated assault:
 - c. Forced entry:
 - d. Total time to failure: 6 min. 10 sec.
- H. Type G5: Fire Protective Door Lites up to 100 Square inches:
 1. Performance Requirements: 45-90 minute clear, non-wired, and tint free glazing that meets the safety requirements for doors up to 100 square inches.
 - a. Thickness: 3/4" (19 mm) thick.
 - b. Weight: 9.0 lbs./sq. ft.
 - c. Appearance: Free of amber tints.
 - d. Fire Rating: Fire rated from 45-90 minutes with hose stream. (Refer to Drawings for various rating required.)
 - e. Impact Safety Rating: CPSC 16 CFR 1201 Category I & II.
 - f. Environmental Impact: Manufacturing process and final product composition shall be free from toxins or hazardous heavy metals.
 2. Manufacturers:
 - a. Technical Glass Products (TGP)
 - b. SCHOTT Technical Glass Products, Snoqualmie, WA.
 - c. SAFTIFIRST, San Francisco, CA.
 - d. Vetrotech Saint-Gobain North America Inc. Auburn, WA.
 - e. Or equal.
 3. Basis of Design: "SuperLite X-45/60/90" by SaftiFirst.
- I. Type G6: One Way Privacy Glass: One-Way viewing glass: shall be equal to Pilkington "Mirrorpane EP" transparent mirror with Pyrolytic surface, formed by chemical deposition on 1/4 "grey tinted glass and having the following features:
 1. Visible transmittance: 12%.
 2. Visible Reflectance on the coated side, 60%.
 3. Recommended light ratio: 10 to 1.

J. Type G7: Clear Fire Rated, Safety Rated Ceramic Glass:

1. Performance Requirements: Provide a fire rating glazing manufactured, fabricated, and installed to maintain performance criteria stated by manufacturer without defects, damage or failure.
 - a. Thickness: 3/16" (5 mm) thick.
 - b. Weight: 2.5 lbs./sq. ft.
 - c. Appearance: Free of amber tints.
 - d. Fire Rating: Fire rated from 20-180 minutes with hose stream. (Refer to Drawings for various rating required.)
 - e. Impact Safety Rating: CPSC 16 CFR 1201 Category I & II.
 - f. Environmental Impact: Manufacturing process and final product composition shall be free from toxins or hazardous heavy metals.
2. Manufacturers:
 - a. Technical Glass Products (TGP)
 - b. SCHOTT Technical Glass Products, Snoqualmie, WA.
 - c. SAFTIFIRST, San Francisco, CA.
 - d. Vetrotech Saint-Gobain North America Inc. Auburn, WA.
 - e. Or equal.
3. Basis of Design: "Pikington Pyrostop" by Technical Glass Products, fire-rating as required for specific assemblies

K. Glass Mirrors, General: ASTM C 1503; manufactured using copper-free, low-lead mirror coating process.

1. Mirror Edge Treatment: Flat polished edge.

2.3 GLASS PRODUCTS (AS APPLICABLE)

- A. Tempered Float Glass: ASTM C 1048; Type I (transparent flat glass); Quality-Q3; Kind FT; 1/4 inch thick unless indicated otherwise.
- B. Patterned Glass: ASTM C 1036, Type II (patterned and wired flat glass), Class 1 (clear), Form 3 (patterned); and of quality, finish, and pattern specified.
- C. Laminated Glass: ASTM C 1172, and complying with testing requirements in 16 CFR 1201 for Category II materials, and with other requirements specified. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
 1. Construction for Framed Units: Laminate glass with polyvinyl butyral interlayer to comply with interlayer manufacturer's written recommendations.
 2. Construction for Units with Exposed Edges: Laminate glass with cast-in-place and cured- transparent-resin interlayer to comply with interlayer manufacturer's written recommendations.
 3. Interlayer Thickness: 0.030 inch (0.76 mm) thick for vertical glazing, 0.060 inch (1.52 mm) thick for sloped glazing.
 4. Interlayer Color: Clear unless otherwise indicated.
- D. Fire-Rated Monolithic Ceramic Glazing Material (Not for Doors or Locations Requiring Safety Glazing): Proprietary product in the form of clear flat sheets of 3/16-inch nominal (5.0 mm) thickness weighing 2.5 lb/sq. ft. and as follows:
 1. Fire-Protection Rating: As indicated for the fire window in which glazing material is in

- stalled, and permanently labeled by a testing and inspecting agency acceptable to authorities having jurisdiction.
2. Products: Subject to compliance with requirements, provide the following:
 - a. Technical Glass Products (TGP); FireLite Premium, polished both sides.
- E. Fire-Rated Laminated Ceramic Glazing Material (for Doors and Locations Requiring Safety Glazing): Category II safety glazing product in the form of 2 lites of clear ceramic glazing material laminated together to produce a laminated lite of 5/16-inch nominal (8.0 mm) thickness; polished on both surfaces; weighing 4 lb/sq. ft. and as follows:
1. Fire-Protection Rating: As indicated for the assembly in which glazing material is installed, and permanently labeled by a testing and inspecting agency acceptable to authorities having jurisdiction.
 2. Polished on both surfaces, transparent.
 3. Products: Subject to compliance with requirements, provide one of the following:
 - a. Technical Glass Products (TGP); FireLite Plus.
 - b. Safti First; Pyran Platinum L, (for maximum 90 minute-rated openings).
 - c. Vetrotech Saint-Gobain; SGG Keralite FR-L.
- F. Insulating-Glass Units, General: Factory-assembled units consisting of sealed lites of glass separated by an argon-filled interspace, and complying with ASTM E2190 and with requirements specified in this Section.
1. Provide Kind HS (heat-strengthened) float glass in place of annealed glass where needed to resist thermal stresses induced by differential shading of individual glass lites and to comply with glass design requirements specified in Part 1 "Performance Requirements" paragraph.
 2. Provide Kind FT (fully tempered) glass lites where safety glass is indicated.
 3. Overall Unit Thickness and Thickness of Each Lite: Dimensions indicated for insulating- glass units are nominal and the overall thicknesses of units are measured perpendicularly from outer surfaces of glass lites at unit's edge.
 4. Sealing System: Dual seal, with primary and secondary sealants as follows:
 5. Manufacturer's Standard Sealants. Butyl primary and silicone secondary sealants. Secondary sealant shall cover entire spacer bar at IGU perimeter.
 - 6.
 7. Spacer Specifications: Manufacturer's standard spacer material. Spacer corners shall be bent, soldered, or welded. Keyed spacer corners will not be accepted. Spacer may have a mid-span spacer key located at the midpoint of the insulating glass unit head. Where a mid-span spacer key is used, the key must be fully embedded (all sides) in butyl sealant.
- G. Glass Mirrors, General: ASTM C 1503; manufactured using copper-free, low-lead mirror coating process.
1. Mirror Edge Treatment: Flat polished edge.

2.4 GLAZING SEALANTS

- A. General: Provide products of type indicated, complying with the following requirements:
1. Compatibility: Verify glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, interlayer of laminated glass, and glazing channel substrates, under conditions of service

- and application, as demonstrated by sealant manufacturer based on testing and field experience.
2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
 3. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range.
 4. VOC Emissions: Provide sealants in compliance with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 5. VOC Content:
 - a. Structural Glazing Adhesives: 100 g/L.
 - b. Architectural Sealants: 250 g/L.
 6. Methylene chloride and perchloroethylene may not be intentionally added to sealants.
- B. Elastomeric Glazing Sealants: Comply with ASTM C 920 and other requirements indicated for each liquid-applied chemically curing sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.
1. Single-Component Neutral- and Basic-Curing Silicone Glazing Sealants:
 - a. Dow Corning Corporation; 790.
 - b. GE Silicones; SilPruf LM SCS2700.
 - c. Tremco Inc.; Spectrem 1.
- C. Glazing Sealants for Fire-Resistive Glazing Products: Identical to products used in test assemblies to obtain fire-protection rating.

2.5 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based elastomeric tape with a solids content of 100 percent; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; packaged on rolls with a release paper backing; and complying with ASTM C 1281 and AAMA 800 for project conditions.
- B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; packaged on rolls with release liner protecting adhesive; and complying with AAMA 800 for the following types:
1. Type 1, for glazing applications in which tape acts as the primary sealant.
 2. Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.6 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
- D. Spacers: Elastomeric blocks or continuous extrusions with a Shore, Type A durometer hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
- E. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).
- F. Perimeter Insulation for Fire-Resistive Glazing: Identical to product used in test assembly to obtain fire-resistance rating.
- G. Mirror Mastic: An adhesive setting compound, asbestos-free, produced specifically for setting mirrors and certified by both mirror manufacturer and mastic manufacturer as compatible with glass coating and substrates on which mirrors will be installed.
 - 1. VOC Emissions: Provide adhesives in compliance with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 2. VOC Content: 250 g/L or less.
 - 3. Methylene chloride and perchloroethylene may not be intentionally added to adhesives.
 - 4. Do not use adhesives that contain urea formaldehyde.
- H. Mirror Hardware, Top and Bottom Aluminum J-Channels: Aluminum extrusions with a return deep enough to produce a glazing channel to accommodate mirrors of thickness indicated and in lengths required to cover bottom and top edges of each mirror in a single piece.

2.7 FABRICATION OF GLAZING UNITS

- A. Fabricate glazing units in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
- B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites in a manner that produces square edges with slight kerfs at junctions with outdoor and indoor faces.
- C. Grind smooth and polish exposed glass edges and corners.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine framing glazing, with Installer present, for compliance with the following:
 - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
 - 2. Presence and functioning of weep system.
 - 3. Minimum required face or edge clearances.
 - 4. Effective sealing between joints of glass-framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

3.3 GLAZING, GENERAL

- A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Glazing channel dimensions, as indicated on Drawings, provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances. Adjust as required by Project conditions during installation.
- C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.
- D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction sealant-substrate testing.
- E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- G. Provide spacers for glass lites where length plus width is larger than 50 inches as follows:
 - 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
 - 2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

- H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.
- I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
- J. Wall-Mounted Mirrors: Install mirrors with mastic and mirror hardware. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrors.
- K. Glazing Film: Apply squarely aligned to glass edges, uniformly smooth, and free from tears, air bubbles, wrinkles, and rough edges, in single sheet completely overlaying the back face of clean glass, according to manufacturer's written instructions, including surface preparation and application temperature limitations.

3.4 TAPE GLAZING

- A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until just before each glazing unit is installed.
- F. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

3.5 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.6 CLEANING AND PROTECTION

- A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels, and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended by glass manufacturer.
- C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.
- D. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

END OF SECTION

SECTION 088050

FIRE-RATED GLAZED ASSEMBLIES

(PART OF WORK OF SECTION 080001 – METAL WINDOWS, TRADE BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Fire-rated curtain wall systems including glazing, doors and door hardware
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 078410 - PENETRATION FIRESTOPPING for firestopping sealants at perimeter of fire rated framing systems.
 - 2. Section 081110 - HOLLOW METAL DOORS AND FRAMES for steel frames at other fire-rated locations.
 - 3. Section 084110 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS for non-rated glazed storefront.
 - 4. Section 084226 - ALL-GLASS ENTRANCES for interior all-glass entrances and storefront systems.
 - 5. Section 088000 - GLAZING for fire-rated glazing at other locations.

1.3 DEFINITIONS

- A. Manufacturers of Glass Products: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
- B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.
- C. Interspace: Space between lites of an insulating-glass unit that contains dehydrated air or a specified gas.
- D. Deterioration of Coated Glass: Defects developed from normal use that are attributed to the manufacturing process and not to causes other than glass breakage and practices for

maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in metallic coating.

- E. Deterioration of Laminated Glass: Defects developed from normal use that are attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1.4 PERFORMANCE REQUIREMENTS

- A. General: Provide glazing systems capable of withstanding normal thermal movement and loads without failure, including glass breakage attributable to the following: defective manufacture, fabrication, and installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Delegated Design: Comply with delegated design requirements and associated submittals indicated in 084410 including but not limited to 1.3 and 1.4D
- C. Fire-Protection-Rated Glazing, General: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 252 for door assemblies and NFPA 257 for window assemblies.
- D. Glass Design: Provide glass lites in the thickness designations indicated for various size openings, but not less than thicknesses and in strengths (annealed or heat treated) required to meet or exceed the following criteria:
 - 1. Glass Thicknesses: Select minimum glass thicknesses to comply with ASTM E 1300, according to the following requirements:
 - a. Probability of Breakage for Vertical Glazing: 8 lites per 1000 for lites set vertically or not more than 15 degrees off vertical and under wind action.
 - 1) Load Duration: 60 seconds or less.
 - b. Maximum Lateral Deflection: For the following types of glass supported on all 4 edges, provide thickness required that limits center deflection at design wind pressure to 1/50 times the short side length or 1 inch, whichever is less.
 - 1) For monolithic-glass lites heat-treated to resist wind loads.
 - 2) For laminated-glass lites.

1.5 SUBMITTALS

- A. Product Data: For each glass product and glazing material indicated.
- B. Samples: For the following products, in the form of 12-inch-square Samples for glass.
 - 1. Frame color samples to verify color selection, substrate to be the same as frame to be provided.
 - 2. Each type of glass.
- C. Shop Drawings:

1. Include plans, elevations, sections, hardware mounting heights, and attachment details, including attachment to structure.
 2. Indicate dimensions, weights, loads, method of field assembly, components, and location and size of each field connection.
- D. Glazing Schedule: Use same designations indicated on Drawings for glazed openings in preparing a schedule listing glass types and thicknesses for each size opening and location.
- E. Product Certificates: Signed by manufacturers of glass and glazing products certifying that products furnished comply with requirements.
- F. Qualification Data: For installers and professional engineer.
- G. Preconstruction Adhesion and Compatibility Test Report: From glazing sealant manufacturer indicating glazing sealants were tested for adhesion to glass and glazing channel substrates and for compatibility with glass and other glazing materials.
1. Include preconstruction field test reports.
- H. Product Test Reports: For each of the following types of glazing products:
1. Fire-resistive glazing products.
- I. Warranties: Special warranties specified in this Section.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who has completed glazing similar in material, design, and extent to that indicated for this Project; whose work has resulted in glass installations with a record of successful in-service performance..
- B. Source Limitations for Glass: Obtain the following through one source from a single manufacturer for each glass type: clear float glass, laminated glass and insulating glass.
- C. Source Limitations for Glazing Accessories: Obtain glazing accessories through one source from a single manufacturer for each product and installation method indicated.
- D. Elastomeric Glazing Sealant Product Testing: Obtain sealant test results for product test reports in "Submittals" Article from a qualified testing agency based on testing current sealant formulations within a 36-month period.
1. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.
 2. Test elastomeric glazing sealants for compliance with requirements specified by reference to ASTM C 920, and where applicable, to other standard test methods.
- E. Glazing for Fire-Rated Assemblies: Glazing for assemblies that comply with NFPA 80 and that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 252 and NFPA 257 for window assemblies.
- F. Safety Glazing Products: Comply with testing requirements in 16 CFR 1201.

1. Subject to compliance with requirements, obtain safety glazing products permanently marked with certification label of the Safety Glazing Certification Council or another certification agency acceptable to authorities having jurisdiction.
 2. Where glazing units, including Kind FT glass and laminated glass, are specified in Part 2 articles for glazing lites more than 9 sq. ft. in exposed surface area of one side, provide glazing products that comply with Category II materials, for lites 9 sq. ft. or less in exposed surface area of one side, provide glazing products that comply with Category I or II materials, except for hazardous locations where Category II materials are required by 16 CFR 1201 and regulations of authorities having jurisdiction.
- G. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.
1. GANA Publications: GANA Laminated Division's "Laminated Glass Design Guide" and GANA's "Glazing Manual."
 2. IGMA Publication for Insulating Glass: SIGMA TM-3000, "Glazing Guidelines for Sealed Insulating Glass Units."
- H. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Build fire-rated curtain wall mockup as located in Drawings.
- I. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.
- J. Testing Agency Qualifications: Qualifications according to
1. International Accreditation Service for a Type A Third-Party Inspection Body (Field Services ICC-ES Third-Party Inspections Standard Operating Procedures, 00-BL-S0400 and S0401)
 2. International Accreditation Service for Testing Body-Building Materials and Systems
 - a. Fire Testing
 - 1) ASTM Standard E119
 - 2) CPSC Standard 16 CFR 1201
 - 3) NFPA Standards 251, 252, 257
 - 4) UL Standards 9, 10B, 10C, 1784, UL Subject 63
 - 5) BS 476; Part 22: 1987
 - 6) EN 1634-1
 - 7) CAN/ULC Standards S101, S104, S106
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Protect glazing materials according to manufacturer's written instructions and as needed to prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
- 1.8 WARRANTY
- A. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form, made out to the Owner and signed by laminated-glass manufacturer agreeing to replace laminated-glass

units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.

1. Provide the Pilkington Pyrostop® and the Fireframes® Curtainwall Series standard five-year manufacturer from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 FIRE RATED GLASS AND FRAMING SYSTEM

A. System Description:

1. Steel fire rated glazed interior curtain wall system, outside glazed pressure plate, cover cap format.

2.2 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. (Basis of Design) Technical Glass Products (TGP); Fireframes Curtainwall Series and Pilkington Pyrostop glazing.
2. AGC Glass Co.; PyroSafe.
3. SaftiFirst, a division of O'Keefe's; SaftiFire Framing GPX.
4. Vetrotech, Saint Gobain.
5. Or equal

2.3 PERFORMANCE REQUIREMENTS:

1. Fire Rating: Two hours.
2. Certification: System tested in accordance with ASTM E-119, NFPA 251, UBC 7-1, UL 263. Temperature on the non-fire side of the system at the conclusion of fire test shall be below 250 degree F (121 degree C) above ambient room temperature.
3. Listing / Label: Fire Testing shall be conducted by an approved independent test laboratory similar to Intertek Testing Services (Warnock-Hersey) or Underwriters Laboratories, Inc. (UL).

2.4 MATERIALS - GLASS:

A. Type G5: Clear, low-iron, laminated with intumescent interlayer fire-rated glass with the following properties:

1. Basis of Design: Pilkington Pyrostop 120-104.
2. Fire Rating: Two hours (120 min.).
3. Glazing Type: Insulated glazing unit.
4. Nominal Thickness: 2-1/8 in.
5. Weight: 21.7 psf.
6. Daylight Transmission: 75%
7. Sound Transmission Coefficient: 46dB

- B. Logo: Each piece of fire-rated glazing shall be labeled with a permanent logo including name of product, manufacturer, testing laboratory (UL), fire rating period, safety glazing standards, and date of manufacture.
- C. Glazing Accessories: Manufacturer's standard compression gaskets, spacers, setting blocks and other accessories necessary for a complete installation.

2.5 MATERIALS – STEEL FRAMING

- A. Steel Curtainwall Framing System
 - 1. Frame: Profiled steel tubing permanently joined with steel bolts.
 - 2. Insulation: Insulate framing system against effects of fire, smoke, and heat transfer from either side. Firmly pack perimeter of framing system to rough opening with mineral wool fire stop insulation or appropriately rated intumescent sealant.
 - 3. Fasteners: Type recommended by manufacturer
 - 4. Glazing Gaskets, Compounds and tapes: Glaze Pilkington Pyrostop glass with approved EPDM glazing gaskets and pure silicone sealant.
 - 5. Steel Pressure Plates: Formed stainless steel pressure plate with dimensions recommended by manufacturer to securely hold glazing material in place.
 - 6. Cover Caps: Formed extruded aluminum, custom color to match adjacent curtain wall.
- B. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish custom color by architect.
 - 1.Extruded Bars, Rods, Shapes, and Tubes: ASTM B 221 (ASTM B 221M).
- C. Steel Reinforcement: With manufacturer's standard corrosion-resistant primer complying with SSPC-PS Guide No. 12.00 applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.
 - 1.Structural Shapes, Plates, and Bars: ASTM A 36/A 36M Standard Specification for Carbon Structural Steel
 - 2.Cold-Rolled Sheet and Strip: ASTM A1008/A1008M Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable
 - 3.Hot-Rolled Sheet and Strip: ASTM A1011/A1011M Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength
- D. Brackets and Reinforcements: Manufacturer's standard high-strength materials with nonstaining, nonferrous shims for aligning system components.
- E. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
 - 1. Where fasteners are subject to loosening or turn out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
 - 2. Reinforce members as required to receive fastener threads.

- F. Anchors: Three-way adjustable anchors that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
 - 1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.

2.6 ACCESSORIES

- A. Exposed Fasteners: Use fasteners fabricated from Type 304 or Type 316 stainless steel.
- B. Glazing Gaskets:
 - 1. Glazing gaskets for interior or exterior applications: ASTM C 864 (extruded EPDM rubber that provides for silicone adhesion) or ASTM C1115 Standard Specification for Dense Elastomeric Silicone Rubber Gaskets and Accessories extruded silicone.
- C. Intumescent Tape: As supplied by frame manufacturer.
- A. Setting Blocks: 1/4" Calcium silicate.
- B. Perimeter Anchors: Steel or 316 Stainless steel when exposed.
- C. Silicone Sealant: One-Part Low Modulus, neutral cure High Movement-Capable Sealant: Type S; Grade NS; Class 25 with additional movement capability of 100 percent in extension and 50 percent in compression (total 150 percent); Use (Exposure) NT; Uses (Substrates) M, G, A, and O as applicable. (Use-O joint substrates include: Metal factory-coated with a high-performance coating; galvanized steel; ceramic tile.)
 - 1. Available Products:
 - a. Dow Corning 790, 795 - Dow Corning Corp.
 - b. Momentive
 - c. Tremco
- D. Intumescent Caulk: Single component, latex-based, intumescent caulk designed to stop passage of fire, smoke, and fumes through fire-rated separations; permanently flexible after cure; will not support mold growth; flame spread/smoke developed 10/10.
 - 2. Available Products:
 - a. 3M CP-25 WP+.

2.7 SLAG-WOOL-FIBER/ROCK-WOOL-FIBER INSULATION

- A. Available Manufacturers:
 - 1. Fibrex Insulations Inc.
 - 2. Owens Corning
 - 3. Thermafiber
 - 4. Rockwool

2.8 FABRICATION

- A. Fabricate glass and other glazing products in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with recommendations of product manufacturer and referenced glazing standard as required to comply with system performance requirements.
- B. Knock-down door perimeter frames are not permitted
- C. Field glaze frame assemblies.
- D. Fabrication Dimensions: Fabricate fire rated assembly to approved dimensions. Guarantee dimensions where practicable within required tolerance.
- E. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.9 STEEL FINISH

- A. High-Performance Organic Finish (3-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer's standard 3-coat, thermocured system consisting of specially formulated inhibitive primer, fluoropolymer color coat, and clear fluoropolymer topcoat, with both color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions.
- B. Custom color by Architect, submit samples as required for Architect's approval

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

3.3 INSTALLATION

- A. General:
 - 1. Comply with manufacturer's written instructions.
 - 2. Do not install damaged components.
 - 3. Fit joints to produce hairline joints free of burrs and distortion.
 - 4. Rigidly secure nonmovement joints.

5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration.
6. Seal joints to prevent the passage of fire.

B. Metal Protection:

1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape or installing nonconductive spacers as recommended by manufacturer for this purpose.
2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with isolation coating.

C. Install components plumb and true in alignment with established lines and grades, without warp or rack.

D. Erection Tolerances: Install aluminum-framed systems to comply with the following maximum tolerances:

1. Location and Plane: Limit variation from true location and plane to 1/8 inch in 12 feet; 1/4 inch over total length.
2. Alignment:
 - a. Where surfaces abut in line, limit offset from true alignment to 1/16 inch.
 - b. Where surfaces meet at corners, limit offset from true alignment to 1/32 inch.
3. Diagonal Measurements: Limit difference between diagonal measurement to 1/8 inch.

3.4 GLAZING INSTALLATION

- A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Glazing channel dimensions, as indicated on Drawings, provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances. Adjust as required by Project conditions during installation.
- C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.
- D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction sealant-substrate testing.
- E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- G. Provide spacers for glass lites where length plus width is larger than 50 inches as follows:

1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
 2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
- H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.
- I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
- 3.5 CLEANING AND PROTECTION
- A. Protect glass from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended by glass manufacturer.
- B. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.
- C. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

SECTION 090002

TILE

(TRADE BID REQUIRED)

Trade Contractors on this CM-at-Risk project are required by law to provide payment and performance bonds for the full value of their trade contracts, and trade contractors must include the full cost of the required payment and performance bonds in the bid price they submit in response to this RFB.

Bids will only be accepted from trade contractors pre-qualified by the awarding authority.

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.
- B. Time, Manner and Requirements for Submitting Trade Bids:
 - 1. Refer to Division 00 "Invitation to Bid" for Bidding Instructions.
- C. Reference Drawings: The Work of this Trade Bid is shown on the following Contract Drawings:
 - 1. Code Plans CD1-1 through CD1-6
 - 2. Architectural A1-0-0 through AM-1-7
 - 3. Architectural Finishes AF1-1-0 through AF1-9-3
 - 4. Equipment EQ0.00 through EQ3.3
 - 5. Food Service FS1-1-1A through FS4-3-1
 - 6. Plumbing P0-0-1 through PM-1-1
 - 7. Electrical E0-0-1 through E4-0-29
 - 8. Technology T0-0-0 through AV-201
- D. Trade Contractor shall also examine all other Drawings and all other Sections of the Specifications for coordination and requirements therein affecting the work of this Section, not just those pertaining particularly to this sub-trade.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. All Work of Section 093013 - CERAMIC TILE
 - 2. All Work of Section 093019 – LARGE FORMAT THIN PORCELAIN TILING

1.3 LEED V4 BD+C: SCHOOL REQUIREMENTS

- A. The Project, including the work of this Section, is subject to the provisions of LEED "Silver" Certification Requirements. Trade Contractor, Supplier, Vendor, and Manufacturer of any tier shall be responsible for compliance with any and all applicable LEED administrative, procedural, submittal, and specification requirements. Filed Sub Bid Sub-Contractor, Supplier, Vendor, and

Manufacturer of any tier shall endeavor to coordinate and cooperate with the General Contractor's LEED Coordinator in acquiring required product and cost data, and to document and obtain the maximum Claimed Points in any and all applicable categories of the Scorecard. Refer to Division 01 Section "LEED v4 BD+C: School Requirements" and attached LEED Project Scorecard for further requirements affecting the work of this Section.

1.4 SCAFFOLDING AND STAGING

- A. Trade Contractor shall obtain required permits for, and provide scaffolds, staging, and other similar raised platforms required to access and execute the Work of this trade.
 - 1. Scaffolding and staging required for use by Trade Bid Sub-Contractor shall be furnished, erected, maintained in a safe condition, and dismantled when no longer required, by the Trade requiring such scaffolding and staging.
 - 2. Enclose all exterior scaffolding or staging outside of the construction fence with 8 foot height plywood enclosure at end of each work day to prohibit unauthorized access to the scaffolding or staging.
 - 3. Portable ladders and mobile platforms of all required heights shall also be provided.

1.4 SCAFFOLDING AND STAGING

- A. Trade Contractor shall obtain required permits for, and provide scaffolds, staging, and other similar raised platforms required to access and execute the Work of this trade.
 - 1. Scaffolding and staging required for use by Trade Bid Sub-Contractor shall be furnished, erected, maintained in a safe condition, and dismantled when no longer required, by the Trade requiring such scaffolding and staging.
 - 2. Enclose all exterior scaffolding or staging outside of the construction fence with 8 foot height plywood enclosure at end of each work day to prohibit unauthorized access to the scaffolding or staging.
 - 3. Portable ladders and mobile platforms of all required heights shall also be provided.
- B. Trade Contractor shall provide heavy duty NFPA 701 compliant fire retardant, 10 oz/sq. yard, 22 mil polyethylene tarpaulins or other appropriate temporary protective measures covering his scaffolds and staging to protect workers, work in progress and installed work against inclement weather, and as additionally required for dust control, and to retain temporary heat provided by General Contractor during cold weather conditions.

1.5 HOISTING MACHINERY, EQUIPMENT, AND SERVICE

- A. Trade Bid Sub-Contractor shall obtain required permits for, and provide all hoisting machinery, rigging devices, crane services, and lift equipment required to access and execute the work of this trade.
 - 1. All hoisting machinery, rigging devices, crane services, and lift equipment shall be furnished, installed, operated, maintained in safe conditions, and dismantled when no longer required, by the trade requiring such equipment or service.

END OF SECTION

SECTION 090005
RESILIENT FLOORS
(TRADE BID REQUIRED)

Trade Contractors on this CM-at-Risk project are required by law to provide payment and performance bonds for the full value of their trade contracts, and trade contractors must include the full cost of the required payment and performance bonds in the bid price they submit in response to this RFB.

Bids will only be accepted from trade contractors pre-qualified by the awarding authority.

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.
- B. Time, Manner and Requirements for Submitting Trade-Bids:
 - 1. Refer to Division 00 "Invitation to Bid" for Bidding Instructions.

Trade Contractor shall provide heavy duty NFPA 701 compliant fire retardant, 10 oz/sq. yard, 22 mil polyethylene tarpaulins or other appropriate temporary protective measures covering his scaffolds and staging to protect workers, work in progress and installed work against inclement weather, and as additionally required for dust control, and to retain temporary heat provided by General Contractor during cold weather conditions.

1.5 HOISTING MACHINERY, EQUIPMENT, AND SERVICE

- A. Trade Bid Sub-Contractor shall obtain required permits for, and provide all hoisting machinery, rigging devices, crane services, and lift equipment required to access and execute the work of this trade.
 - 1. All hoisting machinery, rigging devices, crane services, and lift equipment shall be furnished, installed, operated, maintained in safe conditions, and dismantled when no longer required, by the trade requiring such equipment or service.

END OF SECTION

SECTION 090007
PAINTING
(TRADE BID REQUIRED)

Trade Contractors on this CM-at-Risk project are required by law to provide payment and performance bonds for the full value of their trade contracts, and trade contractors must include the full cost of the required payment and performance bonds in the bid price they submit in response to this RFB.

Bids will only be accepted from trade contractors pre-qualified by the awarding authority.

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.
- B. Time, Manner and Requirements for Submitting Trade Bids:
 - 1. Refer to Division 00 "Invitation to Bid" for Bidding Instructions.
- C. Reference Drawings: The Work of this Trade Bid is shown on the following Contract Drawings:
 - 1. Structural S0-0-1 through SS-1-1
 - 2. Architectural A1-0-0 through AM-1-7
 - 3. Architectural Finishes AF1-1-0 through AF1-9-3
 - 4. Plumbing P0-0-1 through PM-1-1
 - 5. Fire Protection FP0-0-1 through FPM-1-1
 - 6. Mechanical M-0-0-1 through M5-0-4
 - 7. Electrical E0-0-1 through E4-0-29
 - 8. Technology T0-0-0 through AV-201
- D. Trade Contractor shall also examine all other Drawings and all other Sections of the Specifications for coordination and requirements therein affecting the work of this Section, not just those pertaining particularly to this sub-trade.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. All Work of Section 099000 - PAINTING AND COATING
 - 2. All Work of Section 097200 – Wall Coverings

1.3 LEED V4 BD+C: SCHOOL REQUIREMENTS

- A. The Project, including the work of this Section, is subject to the provisions of LEED "Silver" Certification Requirements. Trade Contractor, Supplier, Vendor, and Manufacturer of any tier shall be responsible for compliance with any and all applicable LEED administrative, procedural, submittal, and specification requirements. Filed Sub Bid Sub-Contractor, Supplier, Vendor, and

Manufacturer of any tier shall endeavor to coordinate and cooperate with the General Contractor's LEED Coordinator in acquiring required product and cost data, and to document and obtain the maximum Claimed Points in any and all applicable categories of the Scorecard. Refer to Division 01 Section "LEED v4 BD+C: School Requirements" and attached LEED Project Scorecard for further requirements affecting the work of this Section.

1.4 SCAFFOLDING AND STAGING

- A. Trade Contractor shall obtain required permits for, and provide scaffolds, staging, and other similar raised platforms required to access and execute the Work of this trade.
 - 1. Scaffolding and staging required for use by Trade Bid Sub-Contractor shall be furnished, erected, maintained in a safe condition, and dismantled when no longer required, by the Trade requiring such scaffolding and staging.
 - 2. Enclose all exterior scaffolding or staging outside of the construction fence with 8 foot height plywood enclosure at end of each work day to prohibit unauthorized access to the scaffolding or staging.
 - 3. Portable ladders and mobile platforms of all required heights shall also be provided.
- B. Trade Contractor shall provide heavy duty NFPA 701 compliant fire retardant, 10 oz/sq. yard, 22 mil polyethylene tarpaulins or other appropriate temporary protective measures covering his scaffolds and staging to protect workers, work in progress and installed work against inclement weather, and as additionally required for dust control, and to retain temporary heat provided by General Contractor during cold weather conditions.

1.5 HOISTING MACHINERY, EQUIPMENT, AND SERVICE

- A. Trade Bid Sub-Contractor shall obtain required permits for, and provide all hoisting machinery, rigging devices, crane services, and lift equipment required to access and execute the work of this trade.
 - 1. All hoisting machinery, rigging devices, crane services, and lift equipment shall be furnished, installed, operated, maintained in safe conditions, and dismantled when no longer required, by the trade requiring such equipment or service.

END OF SECTION

SECTION 092110
GYPSUM BOARD ASSEMBLIES

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Interior gypsum wallboard, including moisture resistant wallboard.
 2. Abuse and impact resistant drywall
 3. Tile backing panels.
 4. Acoustic sealant and insulation (sound attenuation batts) in gypsum wallboard assemblies and metal flutes at gypsum wallboard assemblies.
 5. Non-load-bearing steel framing, including angles in partial-height partitions.
 6. Marking and identification for fire- and smoke-partitions.
 7. Grid suspension systems and drywall finishes and edging for ceilings.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110 - SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 054000 - COLD-FORMED METAL FRAMING for load-bearing steel framing.
 2. Section 061000 - ROUGH CARPENTRY for plywood backing panels.
 3. Section 061600 - SHEATHING for gypsum sheathing at exterior assemblies.
 4. Section 083110 - ACCESS DOORS AND FRAMES for furnishing access doors and frames in gypsum board assemblies.
 5. Section 092120 - GYPSUM BOARD SHAFT WALL ASSEMBLIES for framing, gypsum panels, other components of shaft wall assemblies, and finishing gypsum board shaft wall assemblies.
 6. Section 093000 - TILING for joint compound at cementitious tile backing panels.

1.3 PERFORMANCE REQUIREMENTS

- A. Structural Performance:
1. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure.
 2. Provide metal framing engineered to meet code requirements, project requirements, required heights, and the following deflection criteria. For gypsum board assemblies

without applied rigid finishes L/240; for gypsum board assemblies with applied rigid finishes such as tile, stone, wood paneling L/360. Lateral load 5 psf except at shafts. Lateral load at shafts shall be required based on analysis of equipment and systems using shafts.

3. Design acoustic isolation hangers to achieve assemblies with STC as indicated.

- B. Marking and Identification for Fire- and Smoke-Partitions: Fire walls, fire barriers, fire partitions, smoke barriers, smoke partitions and other walls required to have protected openings or penetrations shall be effectively and permanently identified with signs or stenciling. Such identification shall:

1. Be located in accessible concealed floor, floor-ceiling or attic spaces; and
2. Locate within 15 feet of end of each wall and repeat at intervals not exceeding 30 feet measured horizontally along the wall or partition; and
3. Include lettering not less than 3 inches in height with a minimum 3/8 inch stroke in contrasting color, incorporating the suggested wording: "FIRE AND/OR SMOKE BARRIER - PROTECT ALL OPENINGS," or other wording.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.

- B. LEED Submittals:

1. Building Product Disclosure and Optimization, Environmental Product Declarations (EPD).
 - a. Option 1: For gypsum board and metal framing, submit product-specific Type III EPDs.
2. Building Product Disclosure and Optimization, Sourcing of Raw Materials:
 - a. General: For credit achievement calculation, submit location of products sourced (extracted, manufactured, and purchased), indicating number of miles from the project site.
 - b. Option 1: For gypsum board, submit corporate sustainability reports (CSR).
 - c. Option 2, Leadership Extraction Practices:
 - 1) Extended Producer Responsibility: For gypsum board, submit evidence of reclamation and recycling programs.
 - 2) Recycled Content: Submit percentages by weight of postconsumer and preconsumer recycled content for products having recycled content. Include statement indicating costs for each product having recycled content.
3. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For gypsum boards and acoustical insulation, submit Health Product Declarations (HPD) or Declare product labels.
4. Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010.

- a. For adhesives and sealants, submit test results, including TVOC emissions and VOC content.
 - b. For gypsum board, acoustic insulation, and joint compounds, submit GreenGuard Gold certification.
 - c. For wet-applied products, submit volume used.
- C. Shop Drawings: If materials and systems other than those specified and those indicated on the Drawings are proposed for use, submit shop drawings signed and sealed by a structural engineer licensed in the jurisdiction of the project certifying proposed systems meet code and project requirements. and specified deflection criteria.
- D. Samples: Full-size Sample in 12-inch-long length for each trim accessory indicated.

1.5 QUALITY ASSURANCE

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.
- C. Drywall Recycling: All new paper-faced gypsum wallboard scrap (cuts from construction but not demolition waste) shall be recycled by Gypsum Recycling America LLC or approved equal.
- D. Mockups: Before beginning gypsum board installation, install mockups of at least 100 sq. ft. in surface area to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Install mockups for the following:
 - a. Each level of gypsum board finish indicated for use in exposed locations.
 - b. Each texture finish indicated.
 - 2. Apply or install final decoration indicated, including painting and wallcoverings, on exposed surfaces for review of mockups.
 - 3. Simulate finished lighting conditions for review of mockups.
 - 4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 STORAGE AND HANDLING

- A. Store materials inside under cover and keep them dry and protected against damage from weather, condensation, direct sunlight, construction traffic, and other causes. Stack panels flat to prevent sagging.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Comply with ASTM C 840 requirements or gypsum board manufacturer's written recommendations, whichever are more stringent.
- B. Do not install interior products until installation areas are enclosed and conditioned.

- C. Do not install panels that are wet, those that are moisture damaged, and those that are mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

1.8 SYSTEM DESCRIPTION

- A. The Drawings make no distinction between gypsum board products. All board materials supplied under this Section are referred to in the Drawings as gypsum wallboard, "GWB" or such similar terminology. It is required as part of the Work of this Section to have the installer furnish and install the appropriate board materials and provide the correct wallboard finishes for the conditions described herein and shown on the Drawings.
 - 1. Required board thickness are indicated on the Drawings and the locations where fire resistant construction is required.

PART 2 - PRODUCTS

2.1 NON-LOAD-BEARING STEEL FRAMING, GENERAL

- A. Framing Members, General: Comply with ASTM C 754 for conditions indicated.
 - 1. Steel Sheet Components: Comply with ASTM C 645 requirements for metal, unless otherwise indicated.
 - 2. Protective Coating: Manufacturer's standard corrosion-resistant zinc coating, unless otherwise indicated.
 - 3. Recycled Content: Use minimum recycled content of 25%.

2.2 SUSPENSION SYSTEM COMPONENTS

- A. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.0625-inch-diameter wire, or double strand of 0.0475-inch-diameter wire.
- B. Hanger Attachments to Concrete:
 - 1. Anchors: Fabricated from corrosion-resistant materials with holes or loops for attaching wire hangers and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as determined by testing according to ASTM E 488 by an independent testing agency.
 - a. Type: Postinstalled, expansion anchor.
- C. Wire Hangers: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.162-inch diameter.
- D. Carrying Channels: Cold-rolled, commercial-steel sheet with a base-metal thickness of 0.0538 inch and minimum 1/2-inch-wide flanges with depth as required for span and loading and indicated on Drawings.

- E. Furring Channels (Furring Members): 0.0538-inch bare-steel thickness, with minimum 1/2-inch- wide flanges, 3/4 inch deep.
- F. Grid Suspension System for Ceilings: ASTM C 645, direct-hung system composed of main beams and cross-furring members that interlock.
 - 1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Armstrong World Industries, Inc.; Drywall Grid Systems.
 - b. Chicago Metallic Corporation; Drywall Furring System.
 - c. USG Corporation; Drywall Suspension System.
 - 2. Performance Requirements: Ceiling support system shall support a live load of 6 psf minimum at L/240.
- G. Spring Isolation Hangers: Provide spring hanger system, equal to the following:
 - 1. Resilmount; A50R Isolation Ceiling Hanger
 - 2. Kinetics Noise Control Co.; ICW for wood framing, ICC for metal framing.
 - 3. PAC International, Inc.; RSIC--SI-CRC Pro Series.
 - 4. Or equal

2.3 STEEL FRAMING FOR FRAMED ASSEMBLIES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. California Expanded Metals Co. (CEMCO).
 - 2. EB Metal U.S.
 - 3. Marino\WARE.
 - 4. Studco Building Systems.
 - 5. Or equal
- B. Steel Studs and Runners: ASTM C 645.
 - 1. Minimum Base-Steel (Uncoated) Thickness: 0.0296 inches (20 gage).
- C. Slip-Type Head Joints: Where indicated, provide one of the following:
 - 1. Single Long-Leg Runner System: ASTM C 645 top runner with 2-inch- deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top runner and with continuous bridging located within 12 inches of the top of studs to provide lateral bracing.
 - 2. Double-Runner System: ASTM C 645 top runners, inside runner with 2-inch-deep flanges in thickness not less than indicated for studs and fastened to studs, and outer runner sized to friction fit inside runner.
 - 3. Deflection Track / Deflection Clip: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.

- a. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) Brady Innovations; Sliptrack Systems.
 - 2) California Expanded Metals Co. (CEMCO); CST Slotted Tracks.
 - 3) Clark Dietrich Building Systems; MaxTrak Slotted Deflection Track.
 - 4) Steel Network Inc. (The); VertiTrack VT Series.
 - 5) Or equal
- D. Fire Stop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness compatible with studs and in width to accommodate depth of studs.
 1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - a. California Expanded Metals Co. (CEMCO); FAS-TRK 1000 Slotted Tracks.
 - b. Clark Dietrich Building Systems; BlazeFrame Fire Stop Deflection Track.
 - c. Fire Trak Corp.; Fire Trak attached to studs with Fire Trak Slip Clip.
 - d. GCPAT; FlameSafe FlowTrack System.
 - e. Or equal
- E. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.
 1. Minimum Base-Metal Thickness: 0.0312 inch (20 gauge).
- F. Cold-Rolled Channel Bridging: 0.0538-inch bare-steel thickness, with minimum 1/2-inch- wide flanges.
 1. Depth: 1-1/2 inches.
 2. Clip Angle: Not less than 1-1/2 by 1-1/2 inches, 0.068-inch-thick, galvanized steel.
- G. Hat-Shaped, Rigid Furring Channels: ASTM C 645.
 1. Minimum Base-Metal Thickness: 0.0312 inch (20 gauge).
 2. Depth: 1-1/2 inches.
- H. Resilient Furring Channels: 1/2-inch-deep, steel sheet members designed to reduce sound transmission. Strictly comply with manufacturer's installation instruction.
 1. Basis-of-Design: ClarkDietrich RC Deluxe, asymmetrical configuration.
- I. Resilient Sound Isolation Clips: Provide galvanized steel and resilient material sound-isolation clips, equal to the following:
 1. Kinetics Noise Control Co.; IsoMax.
 2. PAC International, Inc.; RSIC-1.
 3. Pliteq, Inc.; GenieClip.
 4. Studco Building Systems; Resilmount A237R.
 5. Or equal

- J. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches wall attachment flange of 7/8 inch, minimum bare-metal thickness of 0.0179 inch, and depth required to fit insulation thickness indicated.
- K. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.
- L. Isolation Strip at Exterior Walls: Adhesive-backed, closed-cell foam strips that allow fastener penetration without foam displacement, 1/8 inch thick, in width to suit steel stud size.
- M. Partial Height Partition Supports: 12ga. Minimum support designed to support out-of-plane loading of cantilevered partial wall systems. Loads are transferred to the floor through the base plate.
 - 1. Basis of Design: ClarkDietrich Pony Wall Heavy
- N. Thermally Broken Subframing (Alternate No. 3: Add Maintenance Building): Provide thermally broken Z-Shapped furring in sizes shown on the Drawings, equal to the following:
 - 1. Advanced Architectural Products GreenGirt CMH Sub-Framing
 - 2. Armatherm: Z-girt
 - 3. Knight Wall Systems: KWS ThermaZee
 - 4. Or equal

2.4 INTERIOR GYPSUM BOARD

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. CertainTeed Gypsum, Inc.
 - 2. Georgia-Pacific (G-P) Gypsum.
 - 3. National Gypsum Company.
 - 4. United States Gypsum Company (USG).
 - 5. Or equal
- B. Gypsum Wallboard: ASTM C 1396.
 - 1. Available Products: USG; SHEETROCK EcoSmart Panels.
 - 2. Thickness: 1/2 inch and 5/8 inch as indicated.
 - 3. Long Edges: Tapered.
 - 4. Building Product Disclosure and Optimization, Environmental Product Declarations (EPD): Type III EPD.
 - 5. Low-Emitting Materials, General Emissions Evaluation: GreenGuard Gold certification.
- C. Gypsum Wallboard, Fire-Resistant Type X: ASTM C 1396.
 - 1. Available Products: USG; SHEETROCK EcoSmart Panels Firecode X.
 - 2. Thickness: 5/8 inch.
 - 3. Long Edges: Tapered.
 - 4. Building Product Disclosure and Optimization, Environmental Product Declarations (EPD): Type III EPD.
 - 5. Building Product Disclosure and Optimization, Material Ingredients: Health Product Declaration (HPD) or Declare product labels.

6. Low-Emitting Materials, General Emissions Evaluation: GreenGuard Gold certification.
- D. Moisture-Resistant and Mold-Resistant Gypsum Board: ASTM C 1396. With moisture- and mold-resistant core and paper surfaces.
1. Core: 5/8 inch, Type X.
 2. Long Edges: Tapered.
 3. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
 4. Building Product Disclosure and Optimization, Environmental Product Declarations (EPD): Type III EPD.
 5. Building Product Disclosure and Optimization, Material Ingredients: Declare product labels.
 6. Low-Emitting Materials, General Emissions Evaluation: GreenGuard Gold certification.
- E. Abuse-Resistant Gypsum Panels: ASTM C 1629. Manufactured to produce greater resistance to surface indentation and through-penetration (impact resistance) than standard, regular-type and Type X gypsum board; 5/8 inch, Type X, long edges tapered.
- F. Impact-Resistant Gypsum Wallboard, Level 2: Sheetrock Brand Mold Tough VHI Firecode X by USG, ToughRock Fireguard X Mold-Guard Abuse-Resistant Gypsum Board by Georgia-Pacific, or Gold Bond Hi-Impact XP Gypsum Board by National Gypsum.
- G. Flexible Type: ASTM C 1396. Manufactured to bend to fit radii and to be more flexible than standard regular-type gypsum board of same thickness.
1. Thickness: 1/4 inch.
 2. Long Edges: Tapered.
- H. Ceiling Type: Manufactured to have more sag resistance than regular-type gypsum board.
1. Thickness: 1/2 inch.
 2. Long Edges: Tapered.
- 2.5 TILE BACKING PANELS
- A. Cementitious Tile Backing Units: ANSI A118.9 and ASTM C 1288 or 1325, with manufacturer's standard edges.
1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Custom Building Products; Wonderboard and Wonderboard Lite.
 - b. FinPan, Inc.; Util-A-Crete Concrete Backer Board.
 - c. National Gypsum Company; Permabase Cement Board.
 - d. USG Corporation; DUROCK Cement Board.
 - e. Or equal
 2. Thickness: 5/8 inch.
 3. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
- 2.6 TRIM ACCESSORIES
- A. Interior Trim: ASTM C 1047.

1. Material: Galvanized or aluminum-coated steel sheet or rolled zinc, with flanges for mechanical fastening, unless otherwise indicated.
2. Shapes:
 - a. Cornerbead.
 - b. Bullnose bead.
 - c. LC-Bead: J-shaped; exposed long flange receives joint compound.
 - d. Expansion (control) joint. For control joints in fire rated walls provide Cemco FAS 093X fire-rated control joint or equal.
 - e. Curved-Edge Cornerbead: With notched or flexible flanges.

B. Aluminum Trim: Extruded accessories of profiles and dimensions indicated.

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Fry Reglet Corp.
 - b. Gordon, Inc.
 - c. Pittcon Industries.
 - d. Or equal
2. Aluminum: Alloy and temper with not less than the strength and durability properties of ASTM B 221, Alloy 6063-T5.
3. Finish: Corrosion-resistant primer compatible with joint compound and finish materials specified.

2.7 JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C 475/C 475M.

B. Joint Tape:

1. Interior Gypsum Wallboard: Paper.
2. Tile Backing Panels: As recommended by panel manufacturer.

C. Joint Compound for Interior Gypsum Wallboard: For each coat use formulation that is compatible with other compounds applied on previous or for successive coats.

1. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping compound.
3. Fill Coat: For second coat, use setting-type, sandable topping compound.
4. Finish Coat: For third coat, use setting-type, sandable topping compound.
5. Skim Coat: For final coat of Level 5 finish, use setting-type, sandable topping compound.

D. Joint Compound for Tile Backing Panels:

1. Cementitious Backing Units: Thinset, nonsag mortar, as recommended by backing unit manufacturer. Refer to Section 093000 - TILING.
2. Water-Resistant Gypsum Backing Board: Use setting-type taping compound and setting-type, sandable topping compound.

2.8 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written recommendations.
- B. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.
 - 1. Low-Emitting Materials: Provide adhesives in compliance with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - 2. VOC Content: 50 g/L or less.
 - 3. Methylene chloride and perchloroethylene may not be intentionally added to adhesives.
 - 4. Do not use adhesives that contain urea formaldehyde.
- C. Steel Drill Screws: ASTM C 1002, unless otherwise indicated.
 - 1. Use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch thick.
 - 2. For fastening cementitious tile backing units, use screws of type and size recommended by panel manufacturer.
 - 3. For fastening abuse-resistant gypsum panels, use Type S 'high-low' screws.
 - 4. For fastening impact-resistant gypsum panels, use Type S 'high-low' screws.
- D. Acoustic Insulation, Sound Attenuation (Batts) Blankets: ASTM C 665, Type I (blankets without membrane facing) consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
 - 1. Available Products: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Owens Corning; Thermafiber UltraBatt FF.
 - b. Isolatek International.
 - c. Rockwool (formerly Roxul).
 - d. Or equal
 - 2. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
 - 3. Building Product Disclosure and Optimization, Environmental Product Declarations (EPD).
 - 4. Recycled Content: Use minimum recycled content of 70%.
 - 5. Building Product Disclosure and Optimization, Material Ingredients: Health Product Declaration (HPD) or Declare product labels.
 - 6. Low-Emitting Materials, General Emissions Evaluation: GreenGuard Gold certification.
- E. Acoustical Sealant: Manufacturer's standard nondrying, nonhardening, nonskinning, nonstaining, gunnable, joint sealant, recommended for sealing interior concealed joints to reduce airborne sound transmission.

1. Available Products, for Concealed and Exposed Joints: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Pecora Corp.; AC-20 FTR Acoustical and Insulation Sealant.
 - b. Specified Technologies, Inc.; Smoke N Sound Acoustical Sealant.
 - c. USG; SHEETROCK Acoustical Sealant.
 - d. Or equal
2. Available Products, for Concealed Joints Only: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. OSI (a division of Henkel); Pro-Series SC-175.
 - b. Pecora Corp.; BA-98.
 - c. Tremco, Inc.; Tremco Acoustical/Curtainwall Sealant.
 - d. Or equal
3. Low-Emitting Materials: Provide sealants in compliance with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
4. VOC Content, Architectural Sealants: 250 g/L or less.
5. Methylene chloride and perchloroethylene may not be intentionally added to sealants.

2.9 IDENTIFICATION LABELS FOR FIRE- AND SMOKE-PARTITIONS

- A. Identification Labels: Self-adhesive signs, to comply with applicable local Code.
 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Fire Wall Signs, Inc.
 - b. Marking & Identification Tape (mnitape.com).
 - c. My Safety Sign.
 - d. Safety Supply Warehouse.
 - e. Or equal
 2. Text: "FIRE AND SMOKE BARRIER - PROTECT ALL OPENINGS".

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames and framing, for compliance with requirements and other conditions affecting performance.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
 - 1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.
- B. Coordination with Sprayed Fire-Resistive Materials:
 - 1. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling runners (tracks) to surfaces indicated to receive sprayed fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches o.c.
 - 2. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of non-load-bearing steel framing. Do not reduce thickness of fire-resistive materials below that required for fire-resistance ratings indicated. Protect adjacent fire-resistive materials from damage.

3.3 INSTALLATION, GENERAL

- A. Installation Standard: ASTM C 754. Also comply with requirements in ASTM C 840 that apply to framing installation.
- B. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.
- C. Install bracing at terminations in assemblies.
- D. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

3.4 INSTALLING SUSPENSION SYSTEMS

- A. Install suspension system components in sizes and spacings indicated on Drawings, but not less than those required by referenced installation standards for assembly types and other assembly components indicated.
- B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.
- C. Suspend hangers from building structure as follows:
 - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
 - a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 - 2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension

system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.

- a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards.
3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
4. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
5. Do not attach hangers to steel roof deck.
6. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.
7. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
8. Do not connect or suspend steel framing from ducts, pipes, or conduit.
- D. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.
- E. Seismic Bracing: Sway-brace suspension systems with hangers used for support.
- F. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.
- G. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

3.5 INSTALLING FRAMED ASSEMBLIES

- A. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
- B. Install studs so flanges within framing system point in same direction.
- C. Install tracks (runners) at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings, except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts penetrating partitions above ceiling.
 1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
 2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on doorframes; install runner track section (for cripple studs) at head and secure to jamb studs.
 - a. Install two studs at each jamb, unless otherwise indicated.
 - b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch clearance from jamb stud to allow for installation of control joint in finished assembly.

- c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
- 3. Other Framed Openings: Frame openings other than door openings the same as required for door openings, unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
- 4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
 - a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
- 5. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
- 6. Curved Partitions:
 - a. Bend track to uniform curve and locate straight lengths so they are tangent to arcs.
 - b. Begin and end each arc with a stud, and space intermediate studs equally along arcs. On straight lengths of not less than 2 studs at ends of arcs, place studs 6 inches o.c.
- D. Direct Furring: Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches o.c.
- E. Z-Furring Members:
 - 1. Erect insulation vertically and hold in place with Z-furring members spaced 24 inches o.c.
 - 2. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches o.c.
 - 3. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space second member no more than 12 inches from corner and cut insulation to fit.

3.6 APPLYING AND FINISHING PANELS, GENERAL

- A. Comply with ASTM C 840.
- B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
- C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch of open space between panels. Do not force into place.
- D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.
- E. Form control and expansion joints with space between edges of adjoining gypsum panels.

- F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
 - 1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. in area.
 - 2. Fit gypsum panels around ducts, pipes, and conduits.
 - 3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch- wide joints to install sealant.
- G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments, except floors. Provide 1/4- to 1/2-inch- wide spaces at these locations, and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.
- H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.

3.7 APPLYING INTERIOR GYPSUM BOARD

- A. Single-Layer Application:
 - 1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing, unless otherwise indicated.
 - 2. On partitions/walls, apply gypsum panels to minimize end joints.
 - 3. On Z-furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
 - 4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.
- B. Multilayer Application:
 - 1. On ceilings, apply gypsum board indicated for base layers before applying face layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints 1 framing member, 16 inches minimum, from parallel base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly.
 - 2. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
 - 3. On Z-furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.
 - 4. Fastening Methods: Fasten base layers and face layers separately to supports with screws.
- C. Laminating to Substrate: Where gypsum panels are indicated as directly adhered to a substrate (other than studs, joists, furring members, or base layer of gypsum board), comply with gypsum board manufacturer's written recommendations and temporarily brace or fasten gypsum panels until fastening adhesive has set.

D. Curved Surfaces:

1. Install panels horizontally (perpendicular to supports) and unbroken, to extent possible, across curved surface plus 12-inch-long straight sections at ends of curves and tangent to them.
2. For double-layer construction, fasten base layer to studs with screws 16 inches o.c. Center gypsum board face layer over joints in base layer, and fasten to studs with screws spaced 12 inches o.c.

3.8 APPLYING TILE BACKING PANELS

- A. Cementitious Tile Backing Units: ANSI A108.1, at locations indicated to receive tile, with joints treated to comply with ANSI A108.11.
- B. Water-Resistant Backing Board: Install at areas not subject to wetting and elsewhere as indicated with 1/4-inch gap where panels abut other construction or penetrations.
- C. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.9 INSTALLING TRIM ACCESSORIES

- A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.
- B. Control Joints: Install control joints according to ASTM C 840 and in specific locations approved by Architect for visual effect.
- C. Interior Trim: Install in the following locations:
 1. Cornerbead: Use at outside corners, unless otherwise indicated.
 2. LC-Bead: Use at exposed panel edges.
 3. Curved-Edge Cornerbead: Use at curved openings.
- D. Aluminum Trim: Install in locations indicated on Drawings.

3.10 FINISHING GYPSUM BOARD

- A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.
- B. Prefill open joints, rounded or beveled edges, and damaged surface areas.
- C. Apply joint tape over gypsum board joints, except those with trim having flanges not intended for tape.
- D. Gypsum Board Finish Levels: Comply with GA-214. Finish panels to levels indicated below:
 1. Level 1: Ceiling plenum areas and concealed areas not exposed to view.
 2. Level 2: Panels that are substrate for tile.
 3. Level 3: Not Used.

4. Level 4: Panel surfaces that will be exposed to view (typical panels).
5. Level 5: Where indicated on Drawings; includes areas to receive dry erase coatings, wall graphics, and wallcoverings.

E. Cementitious Tile Backing Units: Finish according to manufacturer's written instructions.

3.11 INSTALLING IDENTIFICATION FOR FIRE- AND SMOKE-PARTITIONS

A. Marking and Identification for Fire- and Smoke-Partitions: Permanently install as required by Code.

3.12 PROTECTION

A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

B. Remove and replace panels that are wet, moisture damaged, or exhibit mold growth. Repair of damaged panels in place is not acceptable.

1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

SECTION 092120
GYPSUM BOARD SHAFT WALL ASSEMBLIES

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Gypsum board shaft wall assemblies.
 - 2. Marking and identification for fire- and smoke-partitions.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110 - SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 083110 - ACCESS DOORS AND FRAMES for installation in gypsum board assemblies.
 - 2. Section 092110 - GYPSUM BOARD ASSEMBLIES for non-shaft-wall gypsum board assemblies.
 - 3. Section 092110 - GYPSUM BOARD ASSEMBLIES for applying and finishing panels in gypsum board assemblies.

1.3 DEFINITIONS

- A. Gypsum Board Construction Terminology: Refer to ASTM C 11 for definitions of terms for gypsum board construction not defined in this Section or in other referenced standards.

1.4 PERFORMANCE REQUIREMENTS

- A. Structural Performance:
 - 1. Provide gypsum board shaft wall assemblies capable of withstanding the full air-pressure loads indicated for maximum heights of partitions without failing and while maintaining an airtight and smoke-tight seal. Evidence of failure includes deflections exceeding limits indicated, bending stresses causing studs to break or to distort, and end-reaction shear causing track (runners) to bend or to shear and studs to become crippled.
 - 2. Provide gypsum board shaft wall assemblies for horizontal duct enclosures capable of spanning distances indicated within deflection limits indicated.

- B. Marking and Identification for Fire- and Smoke-Partitions: Fire walls, fire barriers, fire partitions, smoke barriers, smoke partitions and other walls required to have protected openings or penetrations shall be effectively and permanently identified with signs or stenciling. Such identification shall:
1. Be located in accessible concealed floor, floor-ceiling or attic spaces; and
 2. Locate within 15 feet of end of each wall and repeat at intervals not exceeding 30 feet measured horizontally along the wall or partition; and
 3. Include lettering not less than 3 inches in height with a minimum 3/8 inch stroke in contrasting color, incorporating the suggested wording: "FIRE AND/OR SMOKE BARRIER - PROTECT ALL OPENINGS," or other wording.

1.5 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
1. Building Product Disclosure and Optimization, Environmental Product Declarations (EPD).
 - a. Option 1: For gypsum board and metal framing, submit product-specific Type III EPDs.
 2. Building Product Disclosure and Optimization, Sourcing of Raw Materials:
 - a. General: For credit achievement calculation, submit location of products sourced (extracted, manufactured, and purchased), indicating number of miles from the project site.
 - b. Option 1: For gypsum board, submit corporate sustainability reports (CSR).
 - c. Option 2, Leadership Extraction Practices:
 - 1) Extended Producer Responsibility: For gypsum board, submit evidence of reclamation and recycling programs.
 - 2) Recycled Content: Submit percentages by weight of postconsumer and preconsumer recycled content for products having recycled content. Include statement indicating costs for each product having recycled content.
 3. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For gypsum boards and acoustical insulation, submit Health Product Declarations (HPD) or Declare product labels.
 4. Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010.
 - a. For adhesives and sealants, submit test results, including TVOC emissions and VOC content.
 - b. For gypsum board, acoustic insulation, and joint compounds, submit GreenGuard Gold certification.
 - c. For wet-applied products, submit volume used.

- C. Fire-Test-Response Reports: From a qualified independent testing and inspecting agency substantiating each gypsum board shaft wall assembly's required fire-resistance rating.
 - 1. Include data substantiating that elevator entrances and other items that penetrate each gypsum board shaft wall assembly do not negate fire-resistance rating.

1.6 QUALITY ASSURANCE

- A. Fire-Resistance-Rated Assemblies: Provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.
 - 1. Fire-Resistance-Rated Assemblies: Indicated by design designations from FM's "Approval Guide, Building Products," UL's "Fire Resistance Directory," or ITS's "Directory of Listed Products."
- B. STC-Rated Assemblies: For gypsum board shaft wall assemblies indicated to have STC ratings, provide assembly materials and construction complying with requirements of assemblies whose STC ratings were determined according to ASTM E 90 and classified according to ASTM E 413 by a qualified independent testing agency.
- C. Preinstallation Conference: Conduct conference at Project site to comply with requirements of Division 01. Review methods and procedures for installing work related to gypsum board shaft wall assemblies including, but not limited to, the following:
 - 1. Fasteners proposed for anchoring steel framing to building structure.
 - 2. Sprayed fire-resistive materials applied to structural framing.
 - 3. Elevator equipment, including hoistway doors, elevator call buttons, and elevator floor indicators.
 - 4. Wiring devices in shaft wall assemblies.
 - 5. Doors and other items penetrating shaft wall assemblies.
 - 6. Items supported by shaft wall-assembly framing.
 - 7. Mechanical work enclosed within shaft wall assemblies.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages, containers, and bundles bearing brand name and identification of manufacturer or supplier.
- B. Store materials inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes. Stack gypsum panels flat on leveled supports off the ground to prevent sagging.

1.8 PROJECT CONDITIONS

- A. Comply with requirements for environmental conditions, room temperatures, and ventilation specified in Section 092110 - GYPSUM BOARD ASSEMBLIES.

1.9 SEQUENCING AND SCHEDULING

- A. Do not install shaft wall liners or plaster base until all pipes, ducts, conduits, and other such items which are to be enclosed thereby, have been permanently installed, inspected and approved.

- B. Coordinate the work of this section with the respective trades responsible for installing interfacing work, and ensure that the work performed hereunder is acceptable to such trades for the installation of their work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. CertainTeed Gypsum, Inc.
 - 2. National Gypsum Company.
 - 3. United States Gypsum Company (USG).
 - 4. Or equal

2.2 ASSEMBLY MATERIALS

- A. General: Provide materials and components complying with requirements of fire-resistance-rated assemblies indicated.
 - 1. Provide panels in maximum lengths available to eliminate or minimize end-to-end butt joints.
 - 2. Provide auxiliary materials complying with gypsum board shaft wall assembly manufacturer's written recommendations.
- B. Steel Framing: ASTM C 645.
 - 1. Protective Coating: ASTM A 653/A 653M, G40, hot-dip galvanized coating.
- C. Gypsum Liner Panels: Manufacturer's proprietary liner panels in 1-inch thickness and with moisture-resistant paper faces.
- D. Gypsum Wallboard: ASTM C 1396, core type as required by fire-resistance-rated assembly indicated.
- E. Accessories: Cornerbead, edge trim, and control joints of material and shapes specified in Section 092110 - GYPSUM BOARD ASSEMBLIES comply with gypsum board shaft wall assembly manufacturer's written recommendations for application indicated.
- F. Gypsum Wallboard Joint-Treatment Materials: ASTM C 475 and as specified in Section 092110 - GYPSUM BOARD ASSEMBLIES.
- G. Steel Drill Screws: ASTM C 1002, unless otherwise indicated.
- H. Track (Runner) Fasteners: Power-driven fasteners of size and material required to withstand loading conditions imposed on shaft wall assemblies without exceeding allowable design stress of track, fasteners, or structural substrates in which anchors are embedded.
 - 1. Powder-Actuated Fasteners: Provide powder-actuated fasteners with capability to sustain, without failure, a load equal to 10 times that imposed by shaft wall assemblies,

- as determined by testing conducted by a qualified independent testing agency according to ASTM E 1190.
2. Postinstalled Expansion Anchors: Where indicated, provide expansion anchors with capability to sustain, without failure, a load equal to 5 times that imposed by shaft wall assemblies, as determined by testing conducted by a qualified independent testing agency according to ASTM E 488.
 - I. Laminating Adhesive: Adhesive or joint compound recommended by manufacturer for directly adhering gypsum face-layer panels and gypsum-base face-layer panels to backing-layer panels in multilayer construction.
 1. Use adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24). Acoustic Insulation, Sound Attenuation (Batts) Blankets: Comply with requirements of Section 092110 - GYPSUM BOARD ASSEMBLIES.
 - J. Acoustical Sealant: As recommended by gypsum board shaft wall assembly manufacturer for application indicated.
 1. Use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - K. Sound Attenuation Blankets: ASTM C 665 for Type I, unfaced mineral-fiber-blanket insulation produced by combining thermosetting resins with mineral fibers manufactured from slag or rock wool.

2.3 GYPSUM BOARD SHAFT WALL

- A. Basis-of-Design Product: As indicated on Drawings by design designation of a qualified testing and inspecting agency.
- B. Sustained Air-Pressure Loads: 5 lbf/sq. ft.
- C. Deflection Limit: L/240.
- D. Studs: Manufacturer's standard profile for repetitive members and corner and end members and for fire-resistance-rated assembly indicated.
 1. Depth: As indicated.
 2. Minimum Base Metal Thickness: Manufacturer's standard thicknesses that comply with structural performance requirements for stud depth indicated.
- E. Track (Runner): Manufacturer's standard J-profile track with long-leg length as standard with manufacturer, but at least 2 inches in depth matching studs.
 1. Minimum Base Metal Thickness: Manufacturer's standard thicknesses that comply with structural performance requirements for stud depth indicated.
- F. Jamb Struts: Manufacturer's standard J-profile strut with long-leg length of 3 inches, in depth matching studs, and not less than 0.0341 inch thick.
- G. Room-Side and Shaft-Side Finish: As indicated.

- H. STC Rating: As indicated.
- I. Cavity Insulation: Sound attenuation blankets.

2.4 IDENTIFICATION LABELS FOR FIRE- AND SMOKE-PARTITIONS

- A. Identification Labels: Self-adhesive signs, to comply with applicable local Code.
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Fire Wall Signs, Inc.
 - b. Marking & Identification Tape (mnitape.com).
 - c. My Safety Sign.
 - d. Safety Supply Warehouse.
 - e. Or equal
 - 2. Text: "FIRE AND SMOKE BARRIER-PROTECT ALL OPENINGS"

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates to which gypsum board shaft wall assemblies attach or abut, with Installer present, including hollow-metal frames, elevator hoistway doorframes, cast-in anchors, and structural framing. Examine for compliance with requirements for installation tolerances and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Sprayed Fire-Resistive Materials: Coordinate with gypsum shaft wall assemblies so both elements of Work remain complete and undamaged. Patch or replace sprayed fire-resistive materials removed or damaged during installation of shaft wall assemblies.
- B. Coordination with Sprayed Fire-Resistive Materials:
 - 1. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling runners (tracks) to surfaces indicated to receive sprayed fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches o.c.
 - 2. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of non-load-bearing steel framing. Do not reduce thickness of fire-resistive materials below that required for fire-resistance ratings indicated. Protect adjacent fire-resistive materials from damage.

3.3 INSTALLATION

- A. General: Install gypsum board shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated, manufacturer's written installation instructions, and the following:

1. ASTM C 754 for installing steel framing and gypsum shaft wallboard.
 - B. Do not bridge building expansion joints with shaft wall assemblies; frame both sides of joints with furring and other support.
 - C. Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, and similar items that cannot be supported directly by shaft wall assembly framing.
 1. At elevator hoistway doorframes, provide jamb struts on each side of doorframe.
 2. Where handrails directly attach to gypsum board shaft wall assemblies, provide galvanized steel reinforcing strip with 0.0312-inch minimum thickness of base (uncoated) metal, accurately positioned and secured behind at least 1 face-layer panel.
 - D. Integrate stair hanger rods with gypsum board shaft wall assemblies by locating cavity of assemblies where required to enclose rods.
 - E. At penetrations in shaft wall, maintain fire-resistance rating of shaft wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons, elevator floor indicators, and similar items.
 - F. Isolate gypsum finish panels from building structure to prevent cracking of finish panels while maintaining continuity of fire-rated construction.
 - G. Install control joints to maintain fire-resistance rating of assemblies.
 - H. Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly. Install acoustical sealant to withstand dislocation by air-pressure differential between shaft and external spaces; maintain an airtight and smoke-tight seal; and comply with manufacturer's written instructions or ASTM C 919, whichever is more stringent.
- 3.4 FINISHING GYPSUM BOARD SHAFT WALL ASSEMBLIES
- A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.
 - B. Prefill open joints, rounded or beveled edges, and damaged surface areas.
 - C. Apply joint tape over gypsum board joints, except those with trim having flanges not intended for tape.
 - D. Gypsum Board Finish Levels: Finish panels to levels indicated below:
 1. Level 1: Ceiling plenum areas and concealed areas not exposed to view.
 2. Level 2: Panels that are substrate for tile.
 3. Level 4: Panel surfaces that will be exposed to view (typical panels).
 4. Level 5: Where indicated on Drawings.

3.5 INSTALLING IDENTIFICATION FOR FIRE- AND SMOKE-PARTITIONS

- A. Marking and Identification for Fire- and Smoke-Partitions: Permanently install as required by Code.

3.6 PROTECTION

- A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- B. Remove and replace panels that are wet, moisture damaged, or exhibit mold growth. Repair of damaged panels in place is not acceptable.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

SECTION 093013

CERAMIC TILE

(PART OF WORK OF SECTION 090002 - TILE, TRADE-BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Floor tile.
 2. Wall tile.
 3. Stone thresholds installed as part of tile installations.
 4. Waterproofing and crack-suppression membrane for thin-set tile installations.
 5. Elastomeric sealants for expansion, contraction, control, and isolation joints in tile surfaces.
 6. Surface preparation for tile and accessories.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 033000 - CAST-IN-PLACE CONCRETE for monolithic slab finishes specified for tile substrates.
 2. Section 079200 - JOINT SEALANTS for sealing of joints between dissimilar materials.
 3. Section 083110 - ACCESS DOORS AND FRAMES for installation in tile.
 4. Section 092110 - GYPSUM BOARD ASSEMBLIES for cementitious backer units.
 5. Division 04 Section "Concrete Masonry Units": for concrete masonry unit substrate receiving wall tile finish.

B. ASTM International (ASTM):

1. ASTM C 150 - Standard Specification for Portland Cement.
2. ASTM C 144 - Standard Specification for Aggregate for Masonry Mortar.
3. ASTM C 207 - Standard Specification for Hydrated Lime for Masonry Purposes.
4. ASTM C 241 - Test Method For Abrasion Resistance of Stone Subjected to Foot Traffic.
5. ASTM C 503 - Specification for Marble Building Stone (Exterior).
6. ASTM C 615 - Specification for Granite Dimension Stone.
7. ASTM C 629 - Specification for Slate Dimension Stone.
8. ASTM C 847 - Standard Specification for Metal Lath.
9. ASTM C 1028 - Test method for Determining the Static Coefficient of Friction or Ceramic Tile and Other Like Surfaces by the Horizontal Dynamometer Pull meter Method.
10. ASTM D 4397 - Specification for Polyethylene Sheeting for Construction, Industrial, and Agricultural Applications.

C. Tile Council of North America (TCNA): TCA Handbook for Ceramic Tile Installation, 2007.

1.4 DEFINITIONS

- A. Module Size: Actual tile size plus joint width indicated.
- B. Face Size: Actual tile size, excluding spacer lugs.

1.5 PERFORMANCE REQUIREMENTS

- A. Static Coefficient of Friction: Tile on walking surfaces shall be provided with the following values as determined by testing in conformance with ASTM C 1028.
1. Level Surfaces: Minimum of 0.6 (Wet).
 2. Step Treads: Minimum of 0.6 (Wet).
 3. Ramp Surfaces: Minimum of 0.8 (Wet).

1.6 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
1. Credit IEQ 4.1: Manufacturers' product data for adhesives and sealants, including printed statement of VOC content.
 2. Credit IEQ 4.3: Manufacturers' product data for tile floors, documentation from an independent testing agency indicating compliance with the FloorScore Standard.
 3. Credit IEQ 4.3: Manufacturers' product data for tile setting adhesives, including printed statement of VOC content.
 4. Laboratory Test Reports for Credit IEQ 4: For adhesives, sealants and tile flooring systems, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop Drawings: Show locations of each type of tile and tile pattern. Show widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.
- D. Samples for Verification:
1. Assembled samples with grouted joints for each type and composition of tile and for each color and finish required, at least 12 inches square and mounted on rigid panel. Use grout of type and in color or colors approved for completed work.
 2. Full-size units of each type of trim and accessory for each color and finish required.
 3. Stone thresholds in 6-inch lengths.
 4. Metal edge strips in 6-inch lengths.
- E. Qualification Data: For Installer.
- F. Material Test Reports: For each tile-setting and -grouting product.

1.7 QUALITY ASSURANCE

- A. Source Limitations for Tile: Obtain all tile of same type and color or finish from one source or producer.
1. Obtain tile from same production run and of consistent quality in appearance and physical properties for each contiguous area.

- B. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from a single manufacturer and each aggregate from one source or producer.
- C. Source Limitations for Other Products: Obtain each of the following products specified in this Section through one source from a single manufacturer for each product:
 - 1. Stone thresholds.
 - 2. Waterproofing.
 - 3. Joint sealants.
 - 4. Metal edge strips.
- D. Installer Qualifications: Installer shall have a minimum of five (5) years experiencing in the installation of similar products.
- E. Single Source Responsibility: Obtain each type and color of tile from a single source. Obtain each type and color of mortar, adhesive and grout from the same source.
- F. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.
- G. Mockups:
 - 1. Provide substrate preparation mockups in 10'x10' size for Architect's review and approval. (See drawings for size and location)
 - 2. The contractor shall not proceed with installation until the required mockup has been approved by Architect.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirement in ANSI A137.1 for labeling sealed tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
- D. Store liquid additives in unopened containers and protected from freezing.

1.9 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to Architect's review for conformance with Contract Documents and the requirements specified herein, provide products from one of the following listed manufacturers:

1. DalTile Corporation, Dallas, TX.
2. American Olean Tile Co., Dallas, TX.
3. Crossville Inc., Crossville, TN.
4. Or equal.

- B. Basis of Design: DalTile, Dallas, TX.

- C. Tile Types:

1. Ceramic Floor Tile, 2" x 2":
 - a. Dal-Tile Corp: "Keystones" series. See Ceramic Tile Detail sheets for patterns.
2. Ceramic Wall Tile, 4 1/4" x 12 3/4":
 - a. Dal-Tile Corp: Linear Color Wheel, Semi-Gloss, Modern Dimensions, Festiva series. See Ceramic Tile Detail sheets for patterns.
3. Ceramic Wall Tile, 4 1/4" x 4 1/4":
 - a. Dal-Tile Corp: : Linear Color Wheel, Semi-Gloss, Modern Dimensions, Festiva series. See Ceramic Tile Detail sheets for patterns.

- D.

- E. Color Schedule: Preliminary color selection upon approval during construction.

1. Daltile Floor Tile: 2" x 2"
 - a. CMT-1 = DESERT GRAY SPECKLE #D200
 - b. CMT-2 = SUEDE GRAY SPECKLE #D208
 - c. CMT-3 = CASTLEROCK#D208
 - d. CMT-4 = BLACK #D311
 - e. CMT-5 = DESERT GRAY #D104
 - f. CMT-6 = NAUTICAL BLUE D621
 - g. CMT-7 CLEMENTINE #D037
 - h. CMT-8 = LIME SHERBET #D619
 - i. CMT-9 = MUSTARD #D181
 - j. CMT-10 = RED #D017

F.

1. Daltile Wall Tile 4 1/4" x 4 1/4" & 4 1/4" X 12 3/4":
 - a. CT-1 = DESERT GRAY # X114
 - b. CT-2 = MATT DESERT GRAY # X714
 - c. CT-3 = SUEDE GRAY #0182
 - d. CT-4 = MATT SUEDE GRAY #0782
 - e. CT-5 = CHALKBOARD #0180
 - f. CT-6 = MATT CHALKBOARD #0780
 - g. CT-7 = MUSTARD #1012
 - h. CT-8 SEA BREEZE #1174
 - i. CT-9 = CURRANT #SH17
 - j. CT-10 = ORANGE BURST #1079
 - k. CT-11 = KEYLIME #1098
 - l. CT-12 = BLACK #0049
 - m. CT-13 = COBALT #DM14

2.2 PORCELAIN STONE MOSAIC WALL TILE

- A. Manufacturers: Subject to compliance with the requirements specified herein, manufacturers offering products which may be incorporated in the work include the following, or equal:
 1. Marazzi
 2. Daltile Corp.
 3. Porcelanosa USA
- B. Basis of Design: Preliminary color selection upon approval during construction.
 1. PSM-1: Marazzi Midpark Mosaics #mp09 Bar
- C. Thickness: 5/16"
- D. Recommended Joint Width: 1/8"
- E. Tile Pattern: As indicated on Drawings
- F. Special Shapes: As indicated on Drawings
- G. Location: As indicated on Drawings

2.2 TRIM AND ACCESSORIES

- A. Pre-fabricated Trim and Profiles. Acceptable products are Schluter, Blanke Corporation, Ceramic Tool Company or equal.
 1. Schluter " Quadec Continuous Trim:

- a. Open edges of wall tile.
- b. Expansion and control joints on wall.
- c. Outside corners
- d. Double-leg outside corners

2. Schluter A. Description: roll-formed stainless steel cove-shaped profile with 3/8" (10 mm) radius that forms the visible surface and an internal integrated trapezoid-perforated anchoring leg.

B. Corners:

1. Provide with matching inside corners
2. Provide with matching outside corners
- 3 Provide with matching end caps
4. Provide with matching connectors

3. Schluter DILEX KSN

- a. Description: profile with integrated trapezoid-perforated anchoring legs, connected by a 7/16" (11 mm) wide replaceable thermoplastic rubber movement zone, which together form the visible surface.

- b. Anchoring Legs Material: a. E - Stainless Steel Type 304 = V2A

- c. Movement Zone Color: DA - Dark Anthracite

- d. Height as required

B. Stone Thresholds: Provide stone thresholds uniform in color and finish and fabricated as follows:

1. Material:

- a. Marble complying with ASTM C 503.

2. Color/Finish: selected by Architect from the manufacturer's standard range.

3. Size:

- a. Unless otherwise indicated on Drawings, fabricate threshold with width matching the door frame depth by full width of frame opening; 5/8 inch thick; with single or double Hollywood Handicap bevel on top side(s) as indicated on Drawings; without holes, cracks, or open seams.

4. Provide to provide transition between tile surface and adjoining finishes and at the following locations:
 - a. At open edges of floor tile where adjacent finish is a different height.

2.3 PRODUCTS, GENERAL

- A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1, "Specifications for Ceramic Tile," for types, compositions, and other characteristics indicated.
 1. Provide tile complying with Standard grade requirements, unless otherwise indicated.
 2. For facial dimensions of tile, comply with requirements relating to tile sizes specified in Part 1 "Definitions" Article.
 3. Large Format Tiles are defined as more than 12 inches in any nominal dimension.
- B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI standards referenced in "Setting and Grouting Materials" Article.
- C. Factory Blending: For tile exhibiting color variations within ranges selected during Sample submittals, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.
- D. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer, unless otherwise indicated.
- E. Tile Trim Units: Matching characteristics of adjoining flat tile and coordinated with sizes and coursing of adjoining flat tile where applicable. Provide shapes selected from manufacturer's standard shapes.
- F.
 1. Description: 1/8" (3 mm) thick, orange, high-density polyethylene membrane with a grid structure of 1/2" x 1/2" (12 mm x 12 mm) square cavities, each cut back in a dovetail configuration, and a polypropylene anchoring fleece laminated to its underside. Conforms to definition for uncoupling membranes in the Tile Council of North America Handbook for Ceramic Tile Installation; and meets or exceeds the requirements of the "American national standard specifications for load bearing, bonded, waterproof membranes for thin-set ceramic tile and dimension stone installation A118.10,"and is listed by cUPC®, and is evaluated by ICC-ES LATICRETE International Inc.; Laticrete Hydroban Waterproof Membrane with fabric reinforcing.
 1. MAPEI Corporation; Aqua Defense with fabric reinforcing.
 2. Summitville Tiles, Inc.; S-9000 with fabric reinforcing.
- G. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.
- H. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- a. Schluter Systems
 - b. Bostik, Inc.
 - c. Custom Building Products.
 - d. Laticrete International, Inc.
 - e. MAPEI Corporation.
 - f. Summitville Tiles, Inc.
 - g. TEC; a subsidiary of H. B. Fuller Company.
2. Cleavage Membrane: Asphalt felt, ASTM D 226, Type I (No. 15); or polyethylene sheeting, ASTM D 4397, 4.0 mils thick.
- I. Latex-Portland Cement Mortar (Thin Set): ANSI A118.4.
 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Schluter Systems
 - b. Bonsal American; an Oldcastle company.
 - c. Bostik, Inc.
 - d. Custom Building Products.
 - e. Laticrete International, Inc.
 - f. MAPEI Corporation.
 - g. Summitville Tiles, Inc.
 - h. TEC; a subsidiary of H. B. Fuller Company.
 2. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
 3. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4.
- J. Polymer-Modified Tile Grout: ANSI A118.7.
 1. Polymer Type: Acrylic resin or styrene-butadiene rubber in liquid-latex form for addition to prepackaged dry-grout mix.
 - a. Unsanded grout mixture for joints 1/8 inch and narrower.
 - b. Sanded grout mixture for joints 1/8 inch and wider.
- K. Joint Grout, Epoxy Type: Provide chemical resistant, water cleanable, tile grouting epoxy, conforming to ANSI A118.3, as follows:
 1. Available Product: Laticrete SpectraLock Pro Grout.
 2. Colors: A selection of at least fourteen standard colors plus black, white, and natural must be available for Architect's selection.
- L. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.
- M. Grout Sealer: Manufacturer's standard silicone product for sealing grout joints that does not change color or appearance of grout.

2.4 ELASTOMERIC SEALANTS

- A. General: Provide manufacturer's standard chemically curing, elastomeric sealants of base polymer and characteristics indicated. Comply with applicable requirements in Section 079200 - JOINT SEALANTS.
1. Use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Colors: Provide colors of exposed sealants to match colors of grout in tile adjoining sealed joints, unless otherwise indicated.
- C. One-Part, Mildew-Resistant Silicone Sealant: ASTM C 920; Type S; Grade NS; Class 25; Uses NT, G, A, and, as applicable to nonporous joint substrates indicated, O; formulated with fungicide, intended for sealing interior ceramic tile joints and other nonporous substrates that are subject to in-service exposures of high humidity and extreme temperatures.
1. Available Products:
- a. Custom Building Products; 100 Silicone Caulk.
 - b. Dow Corning Corporation; Dow Corning 786.
 - c. GE Silicones; Sanitary 1700.
 - d. Pecora Corporation; Pecora 898 Sanitary Silicone Sealant.
 - e. Tremco, Inc.; Tremsil 600 White.
- D. Multipart, Pourable Urethane Sealant for Use T: ASTM C 920; Type M; Grade P; Class 25; Uses T, M, A, and, as applicable to joint substrates indicated, O.
1. Available Products:
- a. Bostik; Chem-Calk 550.
 - b. Tremco, Inc.; Vulkem 245.
 - c. Pecora Corporation; NR-200 Urexpam.
 - d. Tremco, Inc.; THC-900.

2.5 ANTI-FRACTURE MEMBRANE

- A. Fluid applied anti-fracture membrane: Complying with German national standard (DIN18156, part 2), and STM C627 classification "Extra Heavy". Two component liquid rubber membrane used with 20 mil thick flexible polyvinyl chloride sheeting reinforcing material. Acceptable products include:
1. Waterproof membrane shall be resistant to urine, dilute acid, alkali, sugar, brine, and food waste products.
2. All materials shall be non-toxic, non-flammable, and non-hazardous during storage, mixing, application and when cured.
3. Waterproofing, crack suppression & anti-fracture membranes shall meet the following physical requirements:
- a. Water Permeability: (at 30ft.hydro/0.9 atmos/91.2kPa) Nil
 - b. Elongation at break (ASTM D-751): 40%

- c. Service Temperatures: -20°F to +280°F (-28°C to +137°C)
 - d. Tensile breaking strength: 2950psi (20.4MPa; 207kg/cm²)
 - e. Bond strength to concrete: 350psi (2.4MPa; 24kg/c
 - f. Resistance to chemicals (90 day immersion):
 - 1) Brine solution Not Affected
 - 2) Sugar solution Not Affected
 - 3) Milk Not Affected
 - 4) 10% Acid Not Affected
 - 5) 10% Alkali Not Affected
 - 6) Toluol Softens
 - 7) Urine Not Affected
 - g. Rubber solvents or keytones Not Recommended
 - h. Calcium chloride Excellent
 - i. Aromatic solvents Not Recommended
 - j. Floor Tile Installation Evaluation (ASTM C627-81) 900 cycles
 - k. Service Rating (TCA) Extra Heavy Duty
4. Acceptable products include:
- a. Mapei product: "Planicrete W" (urethane based).
5. Laticrete product "Laticrete 9235 Waterproofing" (non-solvent based).) or LATICRETE Hydroban Waterproofing

2.6 MIXING MORTARS AND GROUT

- A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
- B. Add materials, water, and additives in accurate proportions.
- C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.

1. Verify that concrete sub-floor surfaces are ready for tile installation by testing for moisture emission rate and alkalinity; obtain instructions if test results are not within limits recommended by tile manufacturer and setting materials manufacturer.
2. Verify that required floor-mounted utilities are in correct location.
3. Verify that substrates for setting tile are firm; dry; clean; free of oil, waxy films, and curing compounds; and within flatness tolerances required by referenced ANSI A108 Series of tile installation standards for installations indicated.
4. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed before installing tile.
5. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove coatings, including curing compounds and other substances that contain soap, wax, oil, or silicone, that are incompatible with tile-setting materials.
- B. Provide concrete substrates for tile floors that comply with flatness tolerances specified in referenced ANSI A108 Series of tile installation standards.
1. Fill cracks, holes, and depressions with trowelable leveling and patching compound according to tile-setting material manufacturer's written instructions. Use product specifically recommended by tile-setting material manufacturer.
 2. Remove protrusions, bumps, and ridges by sanding or grinding.
- C. Blending: For tile exhibiting color variations within ranges selected during Sample submittals, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

3.3 INSTALLATION, GENERAL

- A. ANSI Tile Installation Standards: Comply with parts of ANSI A108 Series "Specifications for Installation of Ceramic Tile" that apply to types of setting and grouting materials and to methods indicated in ceramic tile installation schedules.
- B. TCA Installation Guidelines: TCA's "Handbook for Ceramic Tile Installation." Comply with TCA installation methods indicated in ceramic tile installation schedules.
- C. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions, unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.
- D. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.
- E. Jointing Pattern: Lay tile in grid pattern, unless otherwise indicated. Align joints when adjoining tiles on floor, base, walls, and trim are same size. Lay out tile work and center tile fields in both

directions in each space or on each wall area. Adjust to minimize tile cutting. Provide uniform joint widths, unless otherwise indicated.

1. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so joints between sheets are not apparent in finished work.
2. Base course at corridors is required to be scribed to provide an even joint pattern on walls.

F. Lay out tile wainscots to next full tile beyond dimensions indicated.

G. Expansion Joints: Locate expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.

1. Locate joints in tile surfaces directly above joints in concrete substrates.
2. Prepare joints and apply sealants to comply with requirements in Section 079200 - JOINT SEALANTS.

H. Grout tile to comply with requirements of the following tile installation standards:

1. For ceramic tile grouts (sand-portland cement; dry-set, commercial portland cement; and latex-portland cement grouts), comply with ANSI A108.10.
2. For chemical-resistant epoxy grouts, comply with ANSI A108.6.

3.4 WATERPROOFING AND CRACK-SUPPRESSION MEMBRANE AND UNCOUPLING MEMBRANE INSTALLATION

- A. Install waterproofing to comply with ANSI A108.13 and waterproofing manufacturer's written instructions to produce waterproof membrane of uniform thickness bonded securely to substrate.
- B. Install crack-suppression membrane to comply with manufacturer's written instructions to produce membrane of uniform thickness bonded securely to substrate.
- C. Install uncoupling membrane....Add D Install uncoupling membrane to comply with manufacturer's written instructions to produce membrane bonded securely to substrate.
- D. Do not install tile over waterproofing until waterproofing has cured and been tested to determine that it is watertight.

3.5 INSTALLATION OF CONTROL JOINTS

- A. General: Provide control joints as recommended by tile manufacturer, where indicated on the Drawings, and as directed by the Architect. Where not indicated, provide joints per the following:
 1. Interior tilework: 20 to 25 feet in each direction, except where exposed to direct sunlight or moisture.
 2. Interior tilework: exposed to direct sunlight or moisture: 12 feet in each direction.
 3. Where tile abuts restraining surfaces such as perimeter walls, dissimilar floors, curbs, columns, pipes, and where changes occur in substrate materials.
 4. At joint between wall and ceilings.
 5. As continuation of expansion joints, control joints, and seismic joints in the building structure which also occur in tile areas.

B. Locations: Verify exact locations of joints with Architect prior to commencing tile installation.

C. Control joints:

1. Form control joints neat, straight, and uniformly wide equal to width of normal tile joint. Cut tile neatly and to accurate radius at exposed junction with pipes, and similar items.
2. Extend control joints full thickness of tile, setting bed and reinforcing.
3. Keep open joints free of grout and debris until filled with sealant and backing.

3.6 FLOOR TILE INSTALLATION

A. General: Install in accordance with ANSI A108.5, and similar to TCA installation method number F122, and as additionally specified herein below. Apply materials in strict accordance with the written instructions and recommendations of setting materials manufacturer.

1. Setting materials:

- 1) Membrane: Anti-fracture membrane (DIN18156, part 2).
- 2) Bonding coat: Latex modified Portland cement (ANSI A118.4).
- 3) Uncoupling membrane - conforms to definition for uncoupling membranes in the Tile Council of North America Handbook for Ceramic Tile Installation; and meets or exceeds the requirements of the "American national standard specifications for load bearing, bonded, waterproof membranes for thin-set ceramic tile and dimension stone installation A118.10

2. Grout materials: Acrylic modified Portland cement sanded grout (ANSI A118.6).

B. Install liquid applied waterproofing membrane with reinforcing as recommended by manufacturer over entire tile substrate area.

C. Install latex/portland cement mortar bed over cured waterproof membrane to a nominal thickness of 3/32 inch.

D. Grouting:

1. Allow tile to fully set prior to grouting; do not grout in less than 48 hours after installation of tile.
2. Grout tile joints in accordance with ANSI A108.10 and as additionally specified.

E. Stone Thresholds: Install stone thresholds at locations indicated; set in same type of setting bed as abutting field tile, unless otherwise indicated.

1. Set thresholds in latex-portland cement mortar for locations where mortar bed would otherwise be exposed above adjacent nontile floor finish.

F. **Metal Edge Strips:** Install at locations indicated or where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with top of tile.

Commented [MW1]: Metal Edge Profiles also add line item for Metal and plastic profiles for movement joints.

3.7 WALL TILE INSTALLATION

A. Install types of tile designated for wall installations to comply with requirements in the Wall Tile Installation Schedule, including those referencing TCA installation methods and ANSI setting-bed standards.

1. Glass Wall Tile Installation: Comply with tile manufacturer's recommendations for setting beds and grouts.
2. Large Format Wall Tile Installation: Comply with tile manufacturer's recommendations for setting beds and grouts.
 - a. Substrate Tolerances: Do not exceed 1/8 in. in 10 ft. and 1/16 in. in 2 ft.

3.8 CLEANING AND PROTECTING

- A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
 1. Remove grout residue from tile as soon as possible.
 2. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions, but no sooner than 10 days after installation. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.
 3. Remove temporary protective coating by method recommended by coating manufacturer that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent it from clogging drains.
- B. When recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear.
- C. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed. After seven days, cover areas subject to construction traffic with heavy cardboard.
- D. Before final inspection, remove protective coverings and rinse neutral cleaner from tile surfaces.

3.9 TILE INSTALLATION SCHEDULE

- A. This schedule refers to Tile Installation Methods specified in the TCNA Manual.
- B. Floor Tile Installation Method FT-1: Interior floor installation on concrete; cement mortar bed (thickset) bonded to concrete; TCA F112 and ANSI A108.1A.
 1. Thick-Set Mortar.
 2. Grout: Polymer-modified unsanded grout.
 3. Joint Width: 1/16 inch.
- C. Floor Tile Installation Method FT-2: Interior floor installation on concrete; thin-set mortar; TCA F113 and ANSI A108.5.
 1. Thin-Set Mortar: Latex-portland cement mortar.
 2. Grout: Polymer-modified unsanded grout.
 3. Joint Width: 1/16 inch.
- D. Floor Tile Installation Method FT-3: Interior floor installation on concrete; thin-set mortar, epoxy grout; TCA F115 and ANSI A108.5.

Commented [MW2]: Eliminate- you should not be installing tile directly to concrete. Need to utilize an Uncoupling membrane (Ditra) however add TCNA F-128 On ground uncoupling membrane recommended by manufacturer for use on young concrete; must achieve 50 psi or greater shear bond strength in 7 days per test method ANSI A118.12 Section 5.1.3

1. Thin-Set Mortar: Latex-portland cement mortar.
 2. Grout: Chemical-resistant, water-cleanable, tile-setting and -grouting epoxy.
 3. Joint Width: 1/8 inch.
- E. Floor Tile Installation Method FT-4: Interior floor installation on waterproof membrane over concrete; thin-set mortar; TCA F122 and ANSI A108.5.
1. Thin-Set Mortar: Latex-portland cement mortar.
 2. Grout: Polymer-modified unsanded grout.
 3. Joint Width: 1/16 inch.
- F. Wall Tile Installation Method WT-1: Interior wall installation over sound, dimensionally stable masonry or concrete; thin-set mortar; TCA W202 and ANSI A108.5.
1. Thin-Set Mortar: Latex-portland cement mortar.
 2. Grout: Polymer-modified unsanded grout.
 3. Joint Width: 1/16 inch.
- G. Wall Tile Installation Method WT-2: Interior wall installation over cementitious backer units; thin-set mortar; TCA W244C and ANSI A108.5.
1. Thin-Set Mortar: Latex-portland cement mortar.
 2. Grout: Polymer-modified unsanded grout.
 3. Joint Width: 1/16 inch.
- H. Wall Tile Installation Method WT-3: Interior wall and shower-receptor installation over cementitious backer units; thin-set mortar; TCA B415, TCA W244, and ANSI A108.5.
1. Thin-Set Mortar: Latex-portland cement mortar.
 2. Grout: Polymer-modified unsanded grout.
 3. Joint Width: 1/16 inch.

END OF SECTION

SECTION 093019

LARGE FORMAT THIN PORCELAIN TILING

(PART OF WORK OF SECTION 090002 - TILE, TRADE-BID REQUIRED)

PART 1 – GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 – GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Furnish and install the following:
1. Large Format Thin Porcelain wall tile.
 2. Installation systems, adhesives, mortars and grouts.
 3. Sealant and backing materials or movement profiles for control joints within tiled areas, around all items which penetrate the tiled wall and floor surfaces, and between tile and intersecting dissimilar surfaces and items.
 4. Preparation of control joints to receive sealant in tiled work.
 5. Anti-fracture membrane or waterproof and vapor Membrane equal to Schluter Kerdi fabric
- B. Perform drilling and cutting in tile surfaces, as required to accommodate penetrating items of other trades, from templates and instructions furnished by the respective trades.

1.3 RELATED WORK

- A. Examine Contract Documents for requirements that affect work of this Section. Other Specification Sections that directly relate to work of this Section include, but are not limited to:
1. Division 3 Section "Cast-In-Place Concrete": for concrete slab and floor substrates.
 2. Division 9 Section "Ceramic Tile": for mosaic floor tile and ceramic wall tile, and related work.
 3. Division 09 Section "Rubber Tile".
 4. Division 09 Section "Resultant Sheet".
 5. Division 09 Section "Carpet".

1.4 REFERENCES

- A. Comply with applicable requirements of the following standards and those others referenced in this Section, under the provisions of Division 1 Section "References"
- B. ANSI:

1. ANSI A108.20 Series/A118 Series - American National Standards for Installation of Ceramic Tile.
2. ANSI A 108.19 Gauged Porcelain Tile and Gauged Porcelain Tile Panels/Slabs.
3. TCNA (HB) - Handbook for Ceramic, Glass and Stone Tile Installation; Tile Council of North America.
4. ISO 13007 - International Standards Organization; classification for Grout and Adhesives.

1.5 SUBMITTALS

- A. Submit the following under provisions of Division 1 Section "Submittal Procedures".
1. Product data: Manufacturer's product data sheets, specifications, performance data, physical properties and installation instructions for each item furnished hereunder.
 - a. Include maintenance data and recommended cleaning materials, and cleaning and stain removal methods.
 - b. Manufacturer's certification for meeting the specification requirements.
 - c. Warranties.
 - d. Certificates of installer qualifications.
 2. Selection samples:
 - a. Manufacturer's sample boards for each type and color group of tile specified, grout colors, and sealant colors, for selections by the Architect.
 3. Verification samples:
 - a. Mount tile and apply grout on one 32 by 32 inch, or 36 by 36 inch sized cement backer board, for each tile type and selected color, to indicate color and texture variations, tile flatness and joint size variations.
 - b. Trim shapes and base, in selected colors in types and shapes indicated for project conditions.
 - c. Granite threshold, 12 inch long samples in shaped profile.
 4. Grade Certificates: Manufacturer's Master Grade Certificates submitted prior to shipment of tile to project.
- B. LEED Submittal – refer to Division 1 Section "LEED Documentation Requirements".
1. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
 2. Project Materials Cost Data: Provide statement indicating total cost for materials used for Project.
 3. LEED Action Plans: Provide preliminary submittals indicating how the following requirements will be met:
 - a. Waste management plan complying with Division 1 Section "Construction Waste Management."
 - b. List of proposed materials with recycled content.

- c. List of proposed regionally manufactured materials and/or regionally extracted, harvested, or recovered materials.

1.6 QUALITY ASSURANCE

- A. Conform to ANSI A 108.19 and TCA Handbook for Ceramic Tile Installation.
- B. Installer Qualifications:
 - 1. The use of trained professional installer for the installation of these thin porcelain tiles is required. In addition, the installer must also have obtained completion of Manufacturer-Sponsored Training provided by Manufacturer, a Manufacturer's distributor.
 - 2. Additionally, installing contractor shall be a five-star member of the National Tile Contractors Association or a Trowel of Excellence member of the Tile Contractors' Association of America.
 - 3. Individual installer(s) working for installing contractor are certified through Advanced Certifications for Tile Installers (ACT) for installation of Large Format Tile and Substrate Preparation.
- C. Tiles delivered to the job or installed in the work which do not fall within the accepted color and texture range demonstrated by the samples shall be removed from the site and replaced with acceptable materials.
- D. Installation materials: Materials must be compatible and from one source, single source responsibility for waterproofing, vapor proofing, installation Mortars and grouts. Job-site mixtures of sand Portland cement and site dilution of additives shall not be permitted.
- E. Mockups: Provide 10'x10' installation mockup showing transition from Thin Porcelain Tiles to Phenolic Resin Panels and Thin Porcelain Tiles to 2' x 2' Porcelain Stone Mosaic Tile. As shown on Drawing.
 - 1. Approved mockups may become part of the completed work if undisturbed at time of Substantial Completion

1.7 DELIVERY, STORAGE AND HANDLING

- A. Follow manufacturer's written guidelines for handling.
- B. Deliver tile in manufacturer's sealed cartons, grade-sealed by the manufacturer in accordance with ANSI A 137.3, with grade-sealed unbroken, and clearly marked as to contents, color, and quantity.
- C. Store and protect containers above floor level, keep dry until ready for use.
- D. Protect adhesives from freezing or overheating in accordance with manufacturer's instructions.

1.8 ENVIRONMENTAL CONDITIONS

- A. Do not install setting or grouting materials in a closed, unventilated environment. Ventilate propane or fossil fuel heaters to prevent damage to tile work from carbon- dioxide build up.
- B. Maintain ambient temperatures between 50 (10° C) and 80 (26° C) degrees Fahrenheit in tiled areas, during installation of mortar materials and for 7 days after completion.
 - 1. When temperature of substrate exceeds 90 (32° C) degrees Fahrenheit, contact manufacturer for instructions.

1.9 SEQUENCING AND SCHEDULING

- A. Coordinate the work of this Section with the respective trades responsible for installing interfacing work, and ensure that the work performed hereunder is acceptable to such trades for the installation of their work.

1.10 WARRANTY

- A. Provide 2 year, non pro-rated warranty under provisions of Section 01780 - CLOSEOUT SUBMITTALS. Extended warranty shall provide for cracking, breakage or failure of tile due to defective workmanship.
 - 1. Materials must be compatible and from one source, single source responsibility for waterproofing, installation, mortars and grouts. Job-site mixtures of sand Portland cement and site dilution of additives shall not be permitted.
- B. Special Warranty: The Contractor warrants the work of this Section to be in accordance with the Contract Documents and free from faults and defects in materials and workmanship for a period of 5 years. This special warranty extends the period of limitations contained in the General Conditions. Have the warranty countersigned by the installer and manufacturer.
- C. The manufacturer of installation systems, adhesives, grouts and mortars shall provide a comprehensive non pro-rated written twenty five(25) year systems warranty against defective products which covers replacement materials and labor costs for demolition, tile accessories, and installation systems.
 - 1. Warranty to provide for tile lifting or separation from substrate, and setting bed/grout deterioration, when products have been installed with referenced TCA setting systems using specified setting and grout materials.
- D. Provide 2 year, non pro-rated warranty under provisions of Division 1 Section "Closeout Submittals". Extended warranty shall provide for cracking, breakage or failure of tile due to defective workmanship.

1.11 PRE-INSTALLATION CONFERENCE

- A. Pre-installation conference: At least five weeks prior to commencing the work attend a meeting at the jobsite to discuss conformance with requirements of specification and job site conditions.

Representatives of owner, architect, general contractor, tile subcontractor, Tile Manufacturer, Installation System Manufacturer and any other parties who are involved in the scope of this installation must attend the meeting.

1.12 EXTRA MATERIALS

- A. Upon completion of the Work of this Section, deliver to the Owner extra materials in, an amount equal to 3 percent of tile and trim of each color, finish and type installed.
- B. Clearly label and package extra materials securely to prevent damage.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with the requirements specified herein, manufacturers offering products which may be incorporated in the work include the following, or equal:
 - 1. Crossville
 - 2. Porcelanosa
 - 3. Daltile Tile and Stone
 - 4. Or equal
- B. Basis of design: Laminam by Crossville
- C. Colors:
 - 1. TPT-1 = OXIDE PERLA MATTE 1M X 3M 3+MM #L2013.1M3M
 - 2. TPT-2= OSSIDO VERDERAME 1M X 3M 3+MM # L9962.1M3M
 - 3. TPT-3= OXIDE NERO MATTE 1M X 3M 3+MM # L1461.1M3M

2.2 LARGE FORMAT THIN PORCELAIN TILE

- A. Size: 1meter x 3meter
- B. Tile Pattern: As indicated on Drawings
- C. Special Shapes: As indicated on Drawings
- D. Location: As indicated on Drawings

2.3 PERFORMANCE

- A. Water Absorption:
ASTM C373 Ave. value $\leq 0.1\%$
- B. MOHS Scale of Hardness:
UNI EN 101 ≥ 6

- C. Flame Spread and Smoke Development:
ASTM E84-12a Flame Spread = 0 Smoke Develop = 15

2.4 INSTALLATION MATERIALS MANUFACTURER

A. Acceptable Manufacturers:

1. Schluter Systems, www.schluter.com 888-472-4588
2. ARDEX Americas, www.ardexamericas.com, 888-512-7339
3. Custom Building Products, www.custombuildingproducts.com, 973-714-6724
4. Bostik Inc., www.bostik-us.com, 800-523-6530
5. Laticrete International, www.laticrete.com, 800-243-4788
6. MAPEI Americas U.S.A., www.mapei.com, 800-992-6273
7. TEC Specialty Products Inc., www.tecspecialty.com, 800-832-9023
8. Or equal

B. Basis of Design: ARDEX Americas.

1. Surface Preparation: Ardex "P51 & P82 primer".
2. Mortar Systems (Walls): Ardex "X77".
3. Grout Systems (Walls): Ardex "WA Epoxy".
4. Caulks / Sealants: Ardex "SX 100% Silicon".
5. Crack Isolation Membranes: Ardex "8+9".

- C. Schluter®-DILEX-HKU 1. Description: roll-formed stainless steel cove-shaped profile with 3/8" (10 mm) radius that forms the visible surface and an internal integrated trapezoid-perforated anchoring leg.

1. 2. Corners: a. Provide with matching inside corners
2. Provide with matching outside corners
3. Provide matching end caps.

2.5 TRIM AND ACCESSORIES

- A. Metal Edge Trim: 10mm Rolled formed Stainless steel cove – shaped profile with 3/8 (10mm) radius that forms the visible surface in Brushed nickel equivalent to Schluter Systems of style and dimensions to suit application, for setting using tile mortar or adhesive; use in the following locations For additional information see drawings:

1. Schluter "Rondec" – Continuous Trim:
 - a. Open edges of wall tile.
 - b. Transition between wall finishes of different materials or heights.
 - c. Expansion and control joints on wall.
 - d. Transition between decorative rubber base to wall panel
 - e. Outside corners
 - f. Inside corners
 - g. Double-leg outside corners

Commented [MW1]: This is option 1 of were we can add the appropriate cove base piece - Dilex HKU

A) Schluter®-DILEX-HKU 1. Description: roll-formed stainless steel cove-shaped profile with 3/8" (10 mm) radius that forms the visible surface and an internal integrated trapezoid-perforated anchoring leg.

- a) 2. Corners: a. Provide with matching inside corners
- b) Provide with matching outside corners
- c) Provide with matching end caps
- d) Provide with matching connectors

- h. Horizontal trim at bottom and top edges
- i. Cove Base

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that surfaces to be covered with large format, thin porcelain tiles are:
 - 1. Sound, rigid and conform to good design/engineering practices; Systems, including the framing system and panels, over which porcelain panels will be installed shall be in conformance with the International Residential Code (IRC) for residential applications, the International Building Code (IBC) for commercial applications, or applicable building codes
 - 2. Clean and free of dust, dirt, oil, grease, sealers, curing compounds, laitance, efflorescence, form oil, loose plaster, paint, and scale.
 - 3. For thin-bed porcelain tile installations when a cementitious bonding material will be used, including large and heavy tile mortar: maximum allowable variation in the tile substrate is 1/8" in 10' (3mm in 3m) from the required plane, with no more than 1/16" variation in 24" (1.5mm variation in 600mm) when measured from the high points in the surface. For modular substrate units, such as adjacent concrete masonry units, adjacent edges cannot exceed 1/32" (0.8mm) difference in height.
 - a. Examine substrates for compliance with requirements for conditions affecting performance of the work. Refer to ANSI A108.01; General requirements for sub-surfaces and preparations by other trades materials.
 - 4. Do not proceed with tile work until surfaces and conditions comply with requirements indicated in referenced tile installation standard and Crossville's Technical Manual / Guidelines.
 - 5. Tile contractor by commencing work assumes overall responsibility to assure that all components and parts shown or required within the installation comply with contract documents and are compatible with each other and with the conditions and expected use. Commencement of work signifies acceptance of substrate and installation conditions.

3.2 INSTALLATION

- A. Install thin porcelain tiles in accordance with manufacturer's printed instructions
- B. Install thin porcelain tiles in accordance with applicable requirements of ANSI A108.19 Series for the materials being used.
- C. Install expansion and control joints in accordance with TCNA method EJ171. Movement joints in the substrate must not be bridged with the thin porcelain tile.
- D. Interior walls:

1. For interior walls an 1/8 inch movement joint installed every 20 feet will accommodate the needed movement of the tile layer on grade, below grade, or above grade* (all other requirements such as perimeter joints etc.. in EJ-171 should followed)
2. *Assuming a class 25 sealant installed at 70°F, using a high temperature of 105°F and a low temperature of 40°F.
3. If specific movement joint requirements need to be calculated, use the anticipated temperature differentials, the appropriate class of sealant (25 or 12.5) and a thermal expansion coefficient of 6.5×10^{-6} in/in/°C.
4. Install stainless steel edge and corner trims using appropriate profiles for intended applications and in accordance with trim manufacturer's instructions.

3.3 GROUTING

- A. Grout joints in accordance with manufacturer's instructions and ANSI A108.10 or ANSI A108.6.
- B. Following the installation of the thin porcelain tiles, grout application times can vary from 24 hours to 72 hours; refer to specific guidelines per the grout manufacturer.
 1. Walls:
 - a. 2mm to 3mm grout joint size is recommended based on wall flatness
 - b. Use of commercially available sanded, unsanded or epoxy grout is acceptable, appropriate caulking material is also acceptable for wall installations.
 - c. Install and clean per manufacturer's instructions

3.4 PROTECTION

- A. Protect installed thin porcelain tile work from damages by other trades and general abuse until substantial work completion and acceptance.
- B. Refer to manufacturer's product data sheet for recommendations regarding protection.

END OF SECTION

SECTION 095100

ACOUSTICAL CEILINGS

(PART OF WORK OF SECTION 090003 - ACOUSTICAL TILE, TRADE BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Acoustical and decorative ceiling tiles and panels.
 2. Metal ceilings.
 3. Custom ceilings.
 4. Suspended acoustical clouds.
 5. Metal edge moldings and trims.
 6. Suspension systems, grid systems and ceiling hangers.
 7. Acoustical sealant at edge moldings at acoustical ceilings.
 8. Coordination with mechanical and electrical trades to ensure that ceilings layouts are symmetrical and have evenly and consistently spaced ceiling mounted equipment, fixtures, and components.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 092110 - GYPSUM BOARD ASSEMBLIES for gypsum board ceilings and soffits.
 2. Division 07 – Spray-Applied Fireproofing.
 3. Division 21 - FIRE SUPPRESSION for fire-suppression components located in ceilings.
 4. Division 23 - HEATING, VENTILATING AND AIR CONDITIONING for air handling and distribution components located in ceilings.
 5. Division 26 - ELECTRICAL for light fixture and alarm system components located in ceilings.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:

1. Building Product Disclosure and Optimization, Environmental Product Declarations (EPD):
 - a. Option 1: For acoustic ceilings, submit product-specific Type III EPDs.
2. Building Product Disclosure and Optimization, Sourcing of Raw Materials:
 - a. General: For credit achievement calculation, submit location of products sourced (extracted, manufactured, and purchased), indicating number of miles from the project site.
 - b. Option 1: For acoustic ceilings, submit corporate sustainability reports (CSR).
 - c. Option 2, Leadership Extraction Practices:
 - 1) Extended Producer Responsibility: For acoustic ceilings, submit evidence of reclamation and recycling programs.
 - 2) Recycled Content: Submit percentages by weight of postconsumer and preconsumer recycled content for products having recycled content. Include statement indicating costs for each product having recycled content.
3. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For acoustic ceilings, submit Health Product Declarations (HPD) or Declare product labels.
4. Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010.
 - a. For sealants, submit test results, including TVOC emissions and VOC content.
 - b. For acoustic ceilings, submit GreenGuard Gold certification.
 - c. For wet-applied products, submit volume used.
- C. Coordination Drawings: Reflected ceiling plans drawn to scale and coordinating penetrations and ceiling-mounted items. Show the following:
 1. Ceiling suspension members.
 2. Method of attaching hangers to building structure. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.
 3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
 4. Minimum Drawing Scale: 1/4 inch = 1 foot.
 5. MEP/FP penetrations through ceiling.
- D. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below.
 1. Acoustical Panel: Set of 6 inch square Samples of each type, color, pattern, and texture.
 2. Exposed Suspension System Members, Moldings, and Trim: Set of 12 inch long Samples of each type, finish, and color.
- E. Asbestos Certification: Manufacturer's written certification that acoustical ceiling products contain no asbestos (0.0000%). Product labels indicating that it is the user's responsibility to

test the products for asbestos are unacceptable and sufficient cause for rejection of the product on site.

- F. Maintenance Data: For finishes to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Source Limitations:

1. Acoustical Ceiling Panels: Obtain each type through one source from a single manufacturer.
2. Suspension Systems: Obtain each type through one source from a single manufacturer.

- B. Seismic Performance: Acoustical ceiling shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

- C. Fire-Test-Response Characteristics: Provide acoustical panel ceilings that comply with the following requirements:

1. Fire-Resistance Characteristics: Where indicated, provide acoustical panel ceilings identical to those of assemblies tested for fire resistance per ASTM E 119 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
 - a. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another testing and inspecting agency.
 - b. Identify materials with appropriate markings of applicable testing and inspecting agency.
2. Surface-Burning Characteristics: Provide acoustical panels complying with ASTM E 1264 for Class A materials as determined by testing identical products per ASTM E 84.

- D. Mockups: Build mockups to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution.

1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

- E. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical panels, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.
- C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.7 COORDINATION

- A. Coordinate layout and installation of acoustical panels and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.1 BASIS-OF-DESIGN

- A. Basis-of-Design Products: Refer to the Acoustic Ceiling Assemblies and Drawings.

2.2 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Armstrong Ceilings.
 - 2. CertainTeed Ceilings.
 - 3. USG.
 - 4. Or equal
- B. Sustainable Design Performance Requirements:
 - 1. Building Product Disclosure and Optimization, Environmental Product Declarations (EPD): Type III EPD.
 - 2. Building Product Disclosure and Optimization, Material Ingredients: Health Product Declaration (HPD) or Declare product labels.
 - 3. Low-Emitting Materials, General Emissions Evaluation: GreenGuard Gold certification.

2.3 ACOUSTICAL CEILING ASSEMBLIES

- A. General Schedule:
 - 1. Acoustical Suspended Ceilings: Acoustical lay-in panels.
 - 2. Suspended Gypsum Board Ceilings
 - 3. Specialty Suspended Ceilings
 - a. Suspended noise transmission reducing ceiling assemblies – see the drawings
 - b. Suspended Micro-Perforated Linear Metal ceiling (LMC) where indicated.
 - c. Suspended Non-Perforated Linear Metal ceiling (LMC) where indicated.
 - d. Suspended extruded aluminum vertical blade system (EAVB), suspended from ACT grid above.
 - 4. Ceiling Suspension Components

- a. Suspension Systems.
- b. Suspended Ceiling Sound Isolation; spring and neoprene-type.
- c. Vertical Edge Trim at "clouds" and edges of ceilings, etc. – extruded aluminum

B. Acoustical Panels Type ACT-1:

- 1. Surface Texture: Fine
- 2. Composition: Mineral Fiber
- 3. Color: White
- 4. Size: 24IN x 24IN
- 5. Edge Profile: Square Lay-in 15/16" for interface with Prelude XL 15/16" Exposed Tee grid.
- 6. Noise Reduction Coefficient (NRC): ASTM C 423; Classified with UL label on product carton 0.75.
- 7. Ceiling Attenuation Class (CAC): ASTM C 1414; Classified with UL label on product carton 35.
- 8. Flame Spread: ASTM E 1264; Class A (UL)
- 9. Light Reflectance White Panel: ASTM E 1477; 0.88
- 10. Recycle Content: Post-Consumer - 0% - 1% Pre-Consumer Waste - 75% - 76%
- 11. Basis of Design: Ultima Square Lay-In, 1910 as manufactured by Armstrong World Industries

C. Acoustical Panels Type ACT-2:

- 1. Surface Texture: Fine
- 2. Composition: Mineral Fiber
- 3. Color: White
- 4. Size: 24IN x 24IN
- 5. Edge Profile: Square Lay-In 15/16" for interface with Prelude Plus XL Fire Guard 15/16" Exposed Tee grid with G60 hot-dip galvanized steel with prefinish.
- 6. Noise Reduction Coefficient (NRC): ASTM C 423; Classified with UL label on product carton 0.80.
- 7. Ceiling Attenuation Class (CAC): ASTM C 1414; Classified with UL label on product carton 35.
- 8. Flame Spread: ASTM E 1264; Class A (UL)
- 9. Light Reflectance White Panel: ASTM E 1477; 0.86
- 10. Dimensional Stability: HumiGuard Plus
- 11. Recycle Content: Post-Consumer - 0% Pre-Consumer Waste - 76%
- 12. Basis of Design: Ultima Health Zone High NRC, 1445 as manufactured Armstrong World Industries

D. Acoustical Panels Type ACT-3:

- 1. Surface Texture: Smooth
- 2. Composition: Mineral Fiber
- 3. Color: White
- 4. Size: 24IN x 24IN
- 5. Edge Profile: FLB 9/16" for interface with Suprafine XL 9/16" Exposed Tee grid.
- 6. Noise Reduction Coefficient (NRC): ASTM C 423; Classified with UL label on product carton 0.85
- 7. Ceiling Attenuation Class (CAC): ASTM C 1414; Classified with UL label on product carton 35.
- 8. Flame Spread: ASTM E 1264; Class A (UL)
- 9. Light Reflectance White Panel: ASTM E 1477; 0.85

10. Recycle Content: Post-Consumer - 12% Pre-Consumer Waste - 59%
11. Basis of Design: Calla, Square Tegular 2824 as manufactured by Armstrong World Industries.

E. Acoustical Panels Type ACT-4:

1. Surface Texture: Smooth
2. Composition: Mineral Fiber
3. Color: White
4. Size: 24IN x 72IN
5. Edge Profile: FLB 9/16" for interface with Suprafine XL 9/16" Exposed Tee grid.
6. Noise Reduction Coefficient (NRC): ASTM C 423; Classified with UL label on product carton 0.85
7. Ceiling Attenuation Class (CAC): ASTM C 1414; Classified with UL label on product carton 35.
8. Flame Spread: ASTM E 1264; Class A (UL)
9. Light Reflectance White Panel: ASTM E 1477; 0.85
10. Recycle Content: Post-Consumer - 12% Pre-Consumer Waste - 59%
11. Basis of Design: Calla, Square Tegular 2866 as manufactured by Armstrong World Industries.

F. Acoustical Panels Type ACT-5:

1. Surface Texture: Smooth
2. Composition: Mineral Fiber
3. Color: Black
4. Size: 24IN x 24IN
5. Edge Profile: Square Lay-in 15/16" for interface with Prelude XL 15/16" Exposed Tee grid.
6. Noise Reduction Coefficient (NRC): ASTM C 423; Classified with UL label on product carton 0.85.
7. Ceiling Attenuation Class (CAC): ASTM C 1414; Classified with UL label on product carton 35.
8. Flame Spread: ASTM E 1264; Class A (UL)
9. Recycle Content: Post-Consumer - 0% Pre-Consumer Waste - 76%
10. Basis of Design: Calla, Square Lay-in, 2820BK as manufactured by Armstrong World Industries

2.4 METAL CEILINGS

A. Ceiling Panel Type LMC-1: Ceiling and Wall mounted.

1. Surface Texture: Smooth
2. Composition: Metal
3. Color: Architect to select from manufacturers full range of "wood grain" metal options
 - a. Color and size of LMC-1 and LMC-2 to match
4. Size: 8IN or 9IN x 96IN
5. Edge Profile: Square with extended flange
6. Perforation Option: Microperforated, Round-Diagonal
7. Include matching access panels
8. Sabin: N/A
9. % Open Area: 18.4%

10. NRC: 0.70
11. Flame Spread: ASTM E 1264; Class A (FM)
12. Recycle Content: 59%
13. Acoustical Infill
14. Manufacturer: Subject to compliance with the requirements specified herein, manufacturers offering products which may be incorporated in the work include the following:
 - a. Armstrong World Industries
 - b. USG
 - c. Atas International, Inc.
15. Basis of Design: METALWORKS Linear, Synchro Ceiling Planks as manufactured by Armstrong World Industries.

B. Ceiling Panel Type LMC-2 (Exterior Grade):

1. Surface Texture: Smooth
2. Composition: Metal
3. Color: Architect to select from manufacturers full range of "wood grain" metal options
 - a. Color and size of LMC-1 and LMC-2 to match
4. Size: 8IN or 9IN x 96IN
5. Edge Profile: Square with extended flange
6. Perforation Option: Unperforated
7. Sabin: N/A
8. Flame Spread: ASTM E 1264; Class A (FM)
9. Recycle Content: 59%
10. Exterior application
11. Manufacturer: Subject to compliance with the requirements specified herein, manufacturers offering products which may be incorporated in the work include the following:
 - a. Armstrong World Industries
 - b. USG
 - c. Atas International, Inc.
12. Basis of Design: METALWORKS Linear, Synchro Ceiling Planks as manufactured by Armstrong World Industries.

C. Extruded Aluminum Vertical Blade (EAVB) Ceiling System: Blade Components (applied in ceiling areas designated as EAVB).

1. Basis of design: "Fin Mate III" by Gordon Inc.
2. Blades Sizes and Spacing
 - a. EAVB-8: Shall be 8" deep and spaced every 6" O.C.
 - b. EAVB-10: Shall be 10" deep and spaced every 8" O.C.
3. Blades are attached to EAVB Grid and must be compatible with the EAVB Grid.
4. Finish: Power Coat. Color to be selected by Architect from full range of standard colors.

2.5 CUSTOM CEILINGS

A. Ceiling Panel Type CP-1:

1. Manufacturer: Subject to compliance with the requirements specified herein, manufacturers offering products which may be incorporated in the work include the following:
 - a. Sky Acoustics Inc.
 - b. Clipso Americas.
 - c. Decoustic
2. Basis of Design: Sky Acoustics Inc. Custom Supercluster Acoustical Ceiling Panel.
 - a. Suspended pre-fabricated Acoustical Panels Panel Type: 1-1/8" thick Curved/Shaped Acoustical Ceiling Panel with "6 high curved and straight perimeter design return.
3. Panel Sizes: As indicated on drawings
4. Panel Composition: 1" (25mm Medium Density 6-7 PCF (96 – 112 KCM) Fiberglass Core + 1/16" (2mm) High Density 16 – 20 PCF (256 – 320 KCM) fiberglass layer laminated to the face + back + coated veil finish laminated to face and back of panel.
5. Approximate Panel Weight: 0.87 PSF (4.25 KSM) - based on 4'x8'x1 1/8" (1.22m x 2.44m x 28mm) panel size – coated finish.
6. Nominal Thickness: 1 1/8 (28mm) – coated finish
Other thicknesses available: 2 1/4" (57mm) – coated finish.
7. Surface Color/Finish: To be determine by Architect from the manufacturer's full range of colors and finish options.
8. Edges: Coated to match panel face.
9. Mounting System: Ceiling Mounting System: Sky Acoustics Direct suspended - 'Z'clip Mounted at back of the panels with 18 gauge curved carrying channels to connect the furring channels and to receive the suspension. Curved C-channel supplied by Sky Acoustics
10. Lighting Reflectance White Panel: ASTM E 1477-98a, 90% for Pure White
11. Noise Reduction Coefficient (NRC): ASTM C423; Classified with UL label on product carton 0.90.
12. Frame Spread: ASTM E 84; Class A.

2.6 SUSPENDED ACOUSTICAL CLOUDS

- A. Provide acoustical cloud assemblies as indicated on drawings.
- B. Suspensions Wire: ceiling blades shall be independently suspended using aircraft cables and quick release adjusters.
 1. #12 Aircraft Cable: "Armstrong Item AC1210", Color: Black
 2. Height Adjustable hardware with attachment clips: "Armstrong ACHC", color black
 - a. Provide one at 11: from edge
 - b. Provide one at 24" OC.
- C. Anchorage

1. Manufacturer's recommended deck hole anchors, fasteners, and other attachment accessories suitable for various mounting substrates.
2. Metal finish trim cap; color: black.

2.7 METAL SUSPENSION SYSTEMS

- A. Metal Suspension System Standard: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635.
1. Structural Classification: Intermediate-duty system.
 2. End Condition of Cross Runners: Override (stepped) or butt-edge type.
 3. Face Design: Flat, flush.
 4. Cap Material: Steel or aluminum cold-rolled sheet.
 5. Color: White, prefinished.
 6. Grid Face Width: As specified with ACT type.
 7. Recycled Content: Use minimum recycled content of 25%.
- B. Attachment Devices: Size for five times the design load indicated in ASTM C 635, Table 1, "Direct Hung," unless otherwise indicated.
1. Anchors in Concrete: Anchors with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing per ASTM E 488 or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency; zinc-plated for Class SC1 service.
 - a. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing per ASTM E 1190, conducted by a qualified testing and inspecting agency.
- C. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:
1. Zinc-Coated Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
 - a. Size: Select wire diameter so its stress at three times hanger design load (ASTM C 635, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than 0.106 diameter wire.
- D. Hold-Down Clips: At vestibules and areas subject to wind uplift, provide manufacturer's standard hold-down clips spaced 24 inches on all cross tees.

2.8 METAL EDGE MOLDINGS AND TRIM

- A. Roll-Formed Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that fit acoustical panel edge details and suspension systems indicated; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension system runners.

1. For lay-in panels with reveal edge details, provide stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member.
2. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.
3. For narrow-face suspension systems, provide suspension system and manufacturer's standard edge moldings that match width and configuration of exposed runners.

B. Suspension Trim: Subject to compliance with requirements, provide one of the following:

1. Armstrong World Industries, Inc.; Axiom.
2. CertainTeed Ceilings; Approved equal.
3. USG Interiors, Inc.; Compasso.

2.9 ACOUSTICAL SEALANT

A. Acoustical Sealant, for Concealed Joints: Manufacturer's standard nondrying, nonhardening, nonskinning, nonstaining, gunnable, joint sealant, recommended for sealing interior concealed joints to reduce airborne sound transmission.

1. Available Products: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. OSI (a division of Henkel); Pro-Series SC-175.
 - b. Pecora Corp.; AC-20 FTR Acoustical and Insulation Sealant.
 - c. Pecora Corp.; BA-98.
 - d. Specified Technologies, Inc. (STI); Smoke N Sound Acoustical Sealant.
 - e. USG; SHEETROCK Acoustical Sealant.
2. Low-Emitting Materials: Provide adhesives and sealants in compliance with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
3. VOC Content, Architectural Sealants: 250 g/L or less.
4. Methylene chloride and perchloroethylene may not be intentionally added to sealants.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

3.3 INSTALLATION

- A. General: Install acoustical panel ceilings to comply with ASTM C 636 per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
- B. Suspend ceiling hangers from building's structural members and as follows:
 - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 - 2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 - 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
 - 4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
 - 5. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 - 6. Do not attach hangers to steel deck tabs.
 - 7. Space hangers not more than 48 o.c. along each member supported directly from hangers, unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
- C. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
 - 1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
 - 2. Screw attach moldings to substrate at intervals not more than 16 inches o.c. and not more than 3 inches from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet. Miter corners accurately and connect securely.
 - 3. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- D. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- E. Install acoustical panels with undamaged edges and fit accurately into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.

1. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
2. Install hold-down clips in areas indicated, in areas required by authorities having jurisdiction, and for fire-resistance ratings; space as recommended by panel manufacturer's written instructions, unless otherwise indicated.

3.4 CLEANING

- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION

SECTION 096460
WOOD ATHLETIC FLOORING

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Wood athletic flooring assemblies.
 2. Field finishing of work of this Section, including striping and line work as indicated.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 033000 - CAST-IN-PLACE CONCRETE for substrate.
 2. Section 116620 - ATHLETIC EQUIPMENT for floor plate and sleeve assemblies, and installation of volleyball floor inserts.
 3. Division 12 Section "Telescoping Bleachers": for bleacher rolling path and imposed loads requiring additional reinforcing and support under the wood athletic floor.

1.3 SUBMITTALS

- A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for wood sports-floor assemblies.
- B. Shop Drawings: Show installation details including location and layout of each type of floor assembly and accessory. Include the following:
1. Expansion provisions and trim details.
 2. Layout, colors, widths, and dimensions of game lines and markers.
 3. Locations of floor inserts for athletic equipment installed through flooring assembly.
- C. Samples for Verification: For each type of wood flooring and accessory, with stain color and finish required, approximately 12 inches long and of same thickness and material indicated for the Work.
1. Include sample sets showing the full range of normal color and texture variations expected in wood flooring.

2. Include sample sets showing finishes and game-line paint and marker paint colors applied to wood flooring.

D. LEED Submittal:

1. Product Data for Credit EQ 4.1: For interior adhesives and sealants applied inside the weatherproofing system and applied on-site, including printed statement of VOC content.
2. Laboratory Test Reports for Credit IEQ 4.1: For interior adhesives, sealants and sealant primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' (now the Department of Public Health) "*Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers*", including 2004 Addenda.
3. Product Data for Credit EQ 4.2: For interior paints and coatings applied inside the weatherproofing system and applied on-site, including printed statement of VOC content.
4. Laboratory Test Reports for Credit IEQ 4.2: For interior paint and coating products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' (now the Department of Public Health) "*Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers*", including 2004 Addenda.
5. Credit EQ 4.4: Manufacturer's product data for each composite wood product and adhesive used indicating that the product contains no added urea formaldehyde.
6. Laboratory Test Reports for Credit IEQ 4.4: For composite-wood products, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' (now the Department of Public Health) "*Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers*", including 2004 Addenda.
7. Credit MR 7: Chain-of-custody certificates signed by manufacturers certifying that products specified to be made from certified wood comply with forest certification requirements. Include evidence that mill is certified for chain-of-custody by an FSC-accredited certification body.
 - a. Include statement indicating costs for each certified wood product.

E. Qualification Data: For Installer.

F. Maintenance Data: For wood sports-floor assemblies and finish systems to include in maintenance manuals.

1.4 QUALITY ASSURANCE

A. Source Limitations: For field-finished wood flooring, obtain each species, grade, and cut of wood from one source with resources to provide materials and products of consistent quality in appearance and physical properties.

B. Floor System Manufacturer Qualifications

1. Manufacturer shall be an established firm experienced in field and have been in wood athletic flooring business or a minimum of ten (10) years.
2. Manufacturer shall be a member in good standing of the Maple Flooring Manufacturers Association (MFMA).

C. Floor Contractor/Installer Qualifications and Certifications

1. Flooring contractor shall be a firm experienced in flooring field and authorized by manufacturer.
 2. Floor Installer shall be an MFMA Accredited Installer for the manufacturer they represent
 3. Submit a list of at least three completed projects of similar magnitude and complexity.
 4. Floor Contracting Company and field personnel shall be trained by Flooring Manufacturer and Finish Manufacturer on proper installation and finishing processes
 - B. Maple Flooring: Comply with applicable MFMA grading rules for species, grade, and cut.
 - C. Mockups: Install mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 1. To set quality standards for installation, install mockup of floor area as shown on Drawings.
 2. To set quality standards for sanding and application of field finishes, prepare finish mockup of floor area as shown on Drawings.
 3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- 1.5 DELIVERY, STORAGE, AND HANDLING
- A. Deliver wood flooring materials in unopened cartons or bundles.
 - B. Protect wood flooring from exposure to moisture. Do not deliver wood flooring until after concrete, masonry, plaster, ceramic tile, and similar wet work is complete and dry.
 - C. Store wood flooring materials in a dry, warm, ventilated, weathertight location.
- 1.6 PROJECT CONDITIONS
- A. Conditioning period begins not less than seven days before wood flooring installation, is continuous through installation, and continues not less than seven days after wood flooring installation.
 1. Environmental Conditioning: Maintain an ambient temperature between 65 and 75 deg F and relative humidity planned for building occupants in spaces to receive wood flooring during the conditioning period.
 2. Wood Flooring Conditioning: Move wood flooring into spaces where it will be installed, no later than the beginning of the conditioning period.
 - a. Do not install flooring until it adjusts to relative humidity of, and is at same temperature as, space where it is to be installed.
 - b. Open sealed packages to allow wood flooring to acclimatize immediately on moving flooring into spaces in which it will be installed.
 - B. After conditioning period, maintain relative humidity and ambient temperature planned for building occupants.
 - C. Install factory-finished wood flooring after other finishing operations, including painting, have been completed.

1.7 WARRANTY

- A. Warranty shall be prepared and submitted in accordance with Division 01 Section "Warranties".
 - 1. Manufacturer shall warrant the flooring system material to be free from manufacturing material and workmanship defects for a period no less than one (1) year.
 - 2. Guarantee shall include Total System Performance Guarantee, annually renewable one (1) year extensions, up to 40 years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Conner Sports Flooring
 - 2. Robbins Eclipse Floating Floor
 - 3. Action Excel NR.
 - 4. Or Equal
- B. Basis of Design: Rezillbase SP-11 as manufactured by Conner Sports Flooring,

2.2 SUBFLOOR SYSTEM

- A. Plywood Underlayment: APA rated, C-D Plugged, exterior glue, tongue and groove, two layers, 11/32 inch thick.
- B. Resilient Pads: With air voids for resiliency and installed at manufacturer's standard spacing for product designation indicated above.
 - 1. Type: Recycled rubber or thermoplastic rubber.

2.3 WOOD FLOORING

- A. Strip Flooring: Northern hard maple (*Acer saccharum*), kiln dried, random length, tongue and groove, and end matched.
 - 1. Grade: MFMA-RL Second and Better.
 - 2. Cut: Flat.
 - 3. Thickness: 25/32 inch.
 - 4. Face Width: 2-1/4 inches.
 - 5. Backs: Channeled (kerfed) for stress relief.
 - 6. Preservative Treatment: Clear, penetrating, water-repellent wood preservative that protects against mold, mildew, staining, and decay fungi; complying with MFMA's written recommendations and applied by immersion.

2.4 ACCESSORY MATERIALS

- A. Vapor Retarder: ASTM D 4397, polyethylene sheet not less than 6 mils thick.

- B. Resilient Wall Base: Molded, vented, rubber or vinyl cove base; 4 by 3 by 48 inches; with premolded outside corners.
- C. Trowelable Leveling and Patching Compound: Latex-modified, hydraulic-cement-based formulation approved by sports-floor manufacturer.
- D. Adhesives: Manufacturer's standard for application indicated.
 - 1. Concrete Primers: Manufacturer's standard for application indicated.
 - 2. Use adhesive and primer, if any, that have a VOC content of 100 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- E. Floor-Finish System: System of compatible components recommended in writing by flooring manufacturer and MFMA approved.
 - 1. Type: MFMA Group 5, Water Based Finishes; polyurethane.
 - 2. Floor-Sealer Formulation: Pliable, penetrating type.
 - 3. Finish-Coat Formulation: Formulated for gloss finish and multicoat application.
 - 4. Game-Line and Marker Paint: Industrial enamel compatible with finish coats and recommended in writing by manufacturers of finish coats, and paint for this use.
 - a. Provide 4 color center court logo, and game lines in 4 colors to define the following:
 - 1) 1 full basketball court with school logo and school team name
 - 2) 2 cross-court basketball courts
 - 3) 1 full court volleyball courts
 - 4) 2 cross-court volleyball courts
 - 5) Both out-of-bounds end lines (4'-0") with text to read "Northeast Metro Tech"
 - 5. VOC content: Provide products that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - a. Floor Sealers and Finish Coats: VOC content of not more than 350 g/L.
 - b. Game-Line and Marker Paint: VOC content of not more than 150 g/L.
- F. Metal Saddle: Extruded aluminum saddle threshold, ¼ inch (6 mm) high, width as shown on Drawings, length equal to width of door opening and full width at transitions between floor materials.
 - 1. Acceptable Manufacturers:
 - a. Pemko
 - b. National Guard Products
 - c. Zero International
 - d. Or Equal
 - 2. Finish: Aluminum; color as selected by Architect from manufacturer's full range.
 - 3. Provide solid threshold without factory-drilled holes.
 - 4. Product: Pemko, Saddle Threshold 270 Series, or equal by approved manufacturer.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Inspect concrete slab for proper tolerance and dryness, and report any discrepancies to the general contractor and architect in writing. Slab will be level to within 1/8" (3mm) in a 10' (3m). Moisture content of the concrete slab shall not exceed 4% or vapor transmission exceeds 4.5 pounds per 1,000 square feet (2.20 kg per 100 square meters).
- B. All work required to put the concrete subfloors in acceptable condition shall be the responsibility of the general contractor.
- C. Subfloor shall be broom cleaned by general contractor.
- D. Installer shall document all working conditions provided in General Specifications prior to commencement of installation.

3.2 HUMIDITY CONTROL

- A. Prior to acclimating the wood, the Flooring Contractor shall confirm the space temperature is between 70-80 degrees, and the humidity is at 35% (confirm final humidity with flooring manufacturer). These conditions must be consistent through the duration of acclimation and installation. The Flooring Contractor shall provide the necessary humidification or dehumidification to maintain these conditions.

3.3 INSTALLATION

- A. Vapor Barrier:
 - 1. Install polyethylene with joints lapped a minimum of 6" (150mm) and turned up 4" (100mm) at the walls.
- B. Subfloor:
 - 1. Install Robbins Zero G shock absorbing pad per manufacturer's recommendations over 6 mil poly.
 - 2. Following manufacturer's guidelines, place Bio-Channel Star subfloor assembly in end-to-end manner, staggering end joints in adjacent rows. Allow for a 1/4" (6mm) gap between panels. Panels shall be placed on a diagonal to the direction of the maple floor. Provide 1-1/2" to 2" (40 to 50mm) expansion void at the perimeter and all vertical obstructions.
 - 3. Install solid blocking at doorways, under bleachers in the stacked position, and below portable goals.
 - 4. Install Bleacher Blocking per manufacturer's recommendations.
 - 5. Place Star anchor channel in each factory-prepared location in the panel.
 - 6. Anchor each Star Channel in the center pre-drilled hole only, unless trimming at wall or vertical obstruction requires relocation in adjacent location to anchor.
- C. Maple Flooring:
 - 1. Machine nail maple finish flooring 10" to 12" (150mm to 200mm) O.C. with end joints properly driven up and proper spacing provided for humidity conditions in specific regions. Consult your local Robbins "Certified" contractor. Provide 1 1/2" to 2" (50mm) expansion voids at the perimeter and at all vertical obstructions.

Expansion rows shall be evenly distributed with each row of flooring, with each space not exceeding 1/64" (0.4mm).

3.4 FINISHING

A. Sanding:

1. Sand per manufacturer's recommendations.
2. After sanding, buff entire floor using 100 grit screen or equal grit sandpaper, with a heavy-duty buffing machine.
3. Inspect entire area of floor to insure the floor presents a smooth surface without drum stop marks, gouges, streaks or shiners.
4. Vacuum and/or tack floor before first coat of seal.
5. Floor should be clean and completely free of dirt and sanding dust.

B. Finishing:

1. Gymnasiums
 - a. Apply specified combination of seal, gameline paint, and finish in accordance with manufacturer's instructions and these specifications.
 - b. Buff and vacuum and/or tack between each coat after it dries.
 - c. Apply game lines accurately after the buffing and vacuuming the coated surfaces. Layout in accordance with drawings. For game lines, use current rules of association having jurisdiction. Lines shall be straight with sharp edges in colors selected by architect.

3.5 WALL BASE INSTALLATION

- A. Install Robbins vent cove base anchored to walls with base cement or screws and anchors. Use pre-molded outside corners and neatly mitered inside corner.

3.6 PROTECTION

- A. Protect sports floors during remainder of construction period to allow finish to cure and to ensure that flooring and finish are without damage or deterioration at time of Substantial Completion.
 1. Do not cover sports floors after finishing until finish reaches full cure, and not before seven days after applying last finish coat.
 2. Do not move heavy and sharp objects directly over sports floors. Protect fully cured floor finishes and surfaces with plywood or hardboard panels to prevent damage from storing or moving objects over sports floors.
 - 3.

3.7 Final Clean up

- A. Clean up all unused materials and debris and remove it from the premises.

END OF SECTION

SECTION 096510
RESILIENT FLOORING AND ACCESSORIES
(PART OF WORK OF SECTION 090005 - RESILIENT FLOORS, TRADE-BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Resilient floor covering luxury vinyl tile.
 2. Resilient tile "flocked" floor covering.
 3. Substrate preparation for resilient flooring and accessories.
 4. High-performance adhesive suitable for RH and pH measured in substrate.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 033000 - CAST-IN-PLACE CONCRETE for substrate.
 2. Division 09 - FINISHES for other flooring types.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED v4 Submittals:
1. Product data for MR Credit 4 Option 1 for products having regional manufacturing and extraction locations.
 2. Product data for MR Credit 4 Option 2 for products having recycled content, including documentation indicating percentages by weight of post-consumer and pre-consumer recycled content and sustainable attributes. a. Include statement indicating costs for each product having recycled content. b. Include product data for bio-based content and certification of SMART sustainable product certification.
 3. Product data for MR Policy 2 for construction and demolition waste management.
 4. Product data for EQ Credit 2 for low emitting adhesives and sealants, including printed statement of VOC content as required by Division 01. 5. Confirm that each product complies with the testing and product requirements of the California Department of Health Services Standard Practice for the Testing of Volatile Organic Emissions from

Various Sources Using Small Scale Environmental Chambers, including 2004 Addenda. If a product specified has not been tested as noted, provide a substitution to the Architect for review and approval of an equal product meeting noted California Department of Health standard.]

- C. Shop Drawings: For each type of floor covering. Include floor covering layouts, locations of seams, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
 - 1. Show details of special patterns.
- D. Samples for Verification: Full-size units of each color and pattern of resilient flooring required.
 - 1. Resilient Wall Base and Accessories: Manufacturer's standard-size Samples, but not less than 12 inches long, of each resilient product color and pattern required.
- E. Maintenance Data: For resilient products to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Installer experienced in performing work of this section who has specialized in installation of work similar to that required for this project.
 - 1. Must be a Manufacturers Certified Installer.
 - 2. Proof of valid certification must be submitted to the Construction Manager at Risk (CM-R) and verified by Manufacturer prior to the start of the project.
 - 3. The Certified Installer must manage and be on site during installation at all times.
- B. Fire-Test-Response Characteristics: Provide products identical to those tested for fire-exposure behavior per test method indicated by a testing and inspecting agency acceptable to authorities having jurisdiction.
- C. Mock-Ups: Install at project site a mock-up using acceptable products and manufacturer approved installation methods. Obtain Owner's and Architect's acceptance of finish color, texture and pattern, and workmanship standard. Comply with Division 1 Quality Control (Mock-Up Requirements) Section.
 - 1. Provide substrate preparation mockups in an area no less than 15' x 15' for Architect's review and approval.
 - 2. After substrate preparation approval by Architect, provide resilient sheet "flocked" floor covering installation mockups over prepared substrate in an area no less than 10' x 10' for Architect's review and approval.
 - 3. The contractor shall not proceed with installation until the required mock-up has been approved by Architect.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store tiles on flat surfaces.

1.6 PROJECT CONDITIONS

- A. Maintain temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 95 deg F in spaces to receive floor tile during the following time periods:
 - 1. 48 hours before installation.

2. During installation.
 3. 48 hours after installation.
- B. After post-installation period, maintain temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.
- C. Close spaces to traffic during floor covering installation.
- D. Close spaces to traffic for 48 hours after floor covering installation.
- E. Install resilient products after other finishing operations, including painting, have been completed.

1.7 WARRANTY

- A. Provide warranties, commencing from the date of Substantial Completion, in accordance with Conditions of Contract and Division 01 Section "Warranties".
- B. Manufacturer Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty agreeing to repair or replace sheet "flocked" floor covering that fails within the warranty period.
1. Failures include, but are not limited to, the following:
 - a. Material manufacturing defects.
 - b. Surface wear and deterioration to the point of wear-through where normal foot and wheeled traffic is occurring or where the material is being properly maintained.
 - c. Failure due to substrate moisture exposure not exceeding 98% relative humidity when tested according to ASTM F2170.
 2. Warranty Period: Twenty (20) years commencing on Date of Substantial Completion.
 3. Manufacturer's warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.
- C. Installation Warranty: Submit the contractor's installation warranty signed by the Construction Manager at Risk (CM-R) and Installer for Owner's Acceptance, agreeing to repair or replace work which has failed as a result of defects in workmanship. Upon notification of such installation deficiencies, within the warranty period, make necessary repairs or replacement at the convenience of the Owner.
1. Warranty Period: Two (2) year limited warranty commencing on Date of Substantial Completion from contractor.
 2. Installation warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.

1.8 EXTRA MATERIALS

- A. Upon completion of the Work of this Section, deliver to the Owner extra materials from same production run as products installed.

1. Quantity of extra material is equal to 3% of amount for each color, finish and type installed.
2. Clearly label and package extra materials securely to prevent damage.

PART 2 - PRODUCTS

2.1 LUXURY VINYL TILE FLOOR COVERING (DESIGNATED AS LVT ON DRAWINGS)

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Tarkett, Inc
 2. Armstrong World Industries, Inc.
 3. Mannington Mills, Inc.
 4. Or equal
- B. Luxury Vinyl Plank Tile Floor Covering Contour Wood: ASTM F 1700.
1. Thickness: 0.080 inch.
 2. Size: 4.5" x 36", 6" x 36" plank
 3. inches.
 4. Style and Colors: to be determined.

2.2 RESILIENT SHEET "FLOCKED" FLOOR COVERING (DESIGNATED AS RC ON DRAWINGS)

- A. Description: Flocked high performance carpet tile with a 100% nylon type 6.6 wear layer with an intermediate fiberglass layer and a recycled closed cell vinyl cushioned backing.
- B. Warranty: Provide flocked tile flooring with a 15-year, non-prorated lifetime warranty.
- C. Manufacturers:
1. Forbo Flooring, Inc.
 2. Lianjing Nre Decorative Material Co., LTD
 3. LS Greenflor
 4. Or equal
- D. Basis of Design: Converge Planks by Forbo Flooring, Inc.
- E. Thickness: 0.19 in.
- F. Size: 39.37" x 9.84".
- G. Style and Colors: As selected by Architect from manufacturer's full range.

2.3 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, Portland cement based or blended hydraulic-cement-based formulation.
1. Ardex, Inc., products "Feather Finish" and "Ardex SD-P".
 2. Quikrete Companies, product "Fast-Set Underlayment 1248".

3. Silpro Masonry Systems Inc., product "Ultra Skim and Speedtop"
 4. Or equal.
- B. Adhesive: Provide adhesive that is recommended by the flooring manufacturer for 99% internal relative humidity.
1. Basis of Design: Forbo FST 1299, or approved equal.
 2. Use adhesives certified as low-emitting materials in accordance with either the Scientific Certification System's Indoor Advantage Gold program, Scientific Certification System's FloorScore program, or GreenGuard's Children and Schools program.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances, moisture content, and other conditions affecting performance.
1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
 2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to manufacturer's written recommendations to ensure adhesion of resilient products.
- B. Concrete Substrates: Prepare according to ASTM F 710.
1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 2. Alkalinity and Adhesion Testing: Perform tests recommended by flooring manufacturer. Proceed with installation only after substrate alkalinity falls within a range on pH scale not less than 5 or more than 9 pH, or as otherwise required in writing by manufacturer of flooring.
 3. Moisture Vapor Emission Testing:
 - a. Perform subfloor moisture testing in accordance with ASTM F 2170, "Standard Test Method for Determining Relative Humidity in Concrete Slabs Using in-situ Probes" as recommended by flooring manufacturer. Proceed with installation only after substrates pass testing.
 - 1) Perform three tests for first 1,000 ft² and at least one additional test for each 1,000 ft².
 - 2) Select test locations to provide information about moisture distribution across the entire concrete floor slab, especially areas of potential high moisture. Include a test location within 3 ft of each exterior wall.
 - b. Do not proceed with flooring installation until results of moisture tests are accepted by flooring and adhesive manufacturer. All test results shall be documented and submitted to the architect for record.

4. Alkalinity and Adhesion Testing: Perform tests recommended by flooring manufacturer. Proceed with installation only after substrate alkalinity falls within a range on pH scale not less than 5 or more than 9 pH, or as otherwise required in writing by manufacturer of flooring.
 3. Moisture Vapor Emission Testing: a. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours, or as otherwise required in writing by manufacturer of flooring.
 5. Relative Humidity Testing: Perform relative humidity testing in accordance with manufacturer's requirements and requirements as specified hereinabove under Part 2.
 6. Perform tests indicated above and as recommended by flooring manufacturer. Proceed with installation only after substrates pass testing.
- C. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
- D. Use trowelable leveling and patching compound to fill cracks, holes, and depressions in substrates.
- E. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.
1. Do not install resilient products until they are same temperature as space where they are to be installed.
- F. Sweep and vacuum clean substrates to be covered by resilient products immediately before installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, and dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 TILE INSTALLATION

- A. Comply with manufacturer's written instructions for installing floor coverings.
- B. Lay out tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
1. Lay tiles in pattern indicated. Lay out floor coverings as follows:
- C. Match tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.
- D. Scribe, cut, and fit tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, edgings, doorframes, thresholds, and nosing.
- E. Extend floor coverings into toe spaces, door reveals, closets, and similar openings.
- F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent, nonstaining marking device.

- G. Install tiles on covers for telephone and electrical ducts and similar items in finished floor areas. Maintain overall continuity of color and pattern with pieces of tile installed on covers. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.
- H. Adhere tiles to flooring substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.4 RESILIENT ACCESSORY INSTALLATION

- A. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of floor coverings that would otherwise be exposed.

3.5 CLEANING AND PROTECTION

- A. Perform the following operations immediately after completing resilient product installation:
 - 1. Remove adhesive and other blemishes from exposed surfaces.
 - 2. Sweep and vacuum surfaces thoroughly.
 - 3. Damp-mop surfaces to remove marks and soil.
 - a. Do not wash surfaces until after time period recommended by manufacturer.
- B. Protect resilient products from marks, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period. Use protection methods recommended in writing by manufacturer.
 - 1. Apply protective floor polish to horizontal surfaces that are free from soil, visible adhesive, and surface blemishes if recommended in writing by manufacturer.
 - a. Coordinate selection of floor polish with the Owner's maintenance service.
 - 2. Cover products installed on horizontal surfaces with undyed, untreated building paper until Substantial Completion.
 - 3. Do not move heavy and sharp objects directly over surfaces. Place hardboard or plywood panels over flooring and under objects while they are being moved. Slide or roll objects over panels without moving panels.

END OF SECTION

SECTION 096516

VINYL SHEET FLOORING

(PART OF WORK OF SECTION 090005 - RESILIENT FLOORS, TRADE-BID REQUIRED)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- B. Carefully review and examine all other Contract Documents for requirements therein affecting the work of this Section. Furthermore, coordinate and sequence the work of this Section with all other trades affected.

1.2 SUMMARY

- A. Furnish and install vinyl sheet flooring with all pertinent accessories as required, indicated on Drawings, and/or as specified in this Section.
 - 1. Provide substrate preparation where required including but not limited to grinding down high spots, filling in low spots, skim-coating, smoothing, patching and leveling to specified conditions acceptable by flooring manufacturer.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.

1.3 RELATED WORK

- A. Examine Contract Documents for requirements that affect work of this Section. Other Specification Sections that directly relate to work of this Section include, but are not limited to:
 - 1. Division 03 Section "Cast-In-Place Concrete": for concrete substrate designated to receive vinyl sheet flooring finish.
 - 2. Refer to the High Performance Adhesive specified within this section.
 - 3. Division 09 Section "Rubber Wall Base": for finish wall base abutting the rubber flooring.
 - 4. Other Division 09 sections for floor finishes abutting the work of this Section.

1.4 SUBMITTALS

- A. Prepare and submit under the provisions of Division 01 Section "Submittal Procedures".
 - 1. Product data: Submit manufacturer's technical data, installation and maintenance instructions for flooring and accessories.

- a. Certifications: submit the manufacturer's certification that the flooring has been tested by an independent laboratory and complies with the required fire tests.
 - b. Operation and Maintenance Data: Operation and maintenance data for installed products in accordance with Division 1 Closeout Submittals (Maintenance Data and Operation Data) Section. Include methods for maintaining installed products, and precautions against cleaning materials and methods detrimental to finishes and performance.
 - c. Warranty: Warranty documents specified herein.
 2. Shop drawings: scaled drawings showing seaming plan, coving details.
 3. Samples: Submit the manufacturer's standard samples showing full range of colors for flooring, welding rods, and applicable accessories.
- B. LEED Submittals: prepare and submit required documentation for the work of this Section in accordance with USGBC LEED Reference Guide for Building Design and Construction (v4) and Division 01 Section "LEED v4 BD+C: School Requirements".
1. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
 2. Building product disclosure and optimization: Provide required documentation to secure the maximum MR credits, including but not limited to:
 - a. Environmental product declarations.
 - b. Sourcing of raw materials.
 - c. Material ingredients.
 3. Project material cost data: Provide invoices, receipts, statements, and other evidence required to document total cost for materials used for Project.
 4. Waste management and disposal records complying with Division 01 Section "Construction Waste Management and Disposal".
 - a. For products diverted from disposal in landfills and incinerators, and where recycled resources are directed back to the manufacturing process. Include a statement indicating percentage of materials diverted and recycled and the costs associated with each.

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Provide resilient flooring manufactured by a firm with a minimum of 10 years' experience with resilient flooring of type equivalent to those specified.
- B. Installer Qualifications: Installer shall be experienced in the vinyl sheet flooring industry and shall have a minimum of five (5) years experiencing in the installation of similar products.
- C. Mock-Ups: Install at project site a mock-up using acceptable products and manufacturer approved installation methods. Obtain Owner's and Architect's acceptance of finish color, texture and pattern, and workmanship standard. Comply with Division 1 Quality Control (Mock-Up Requirements) Section.
1. Provide substrate preparation mock-ups in an area no less than 15' x 15' for Architect's review and approval.
 2. After substrate preparation approval by Architect, provide vinyl sheet flooring installation mock-ups over prepared substrate in an area no less than 10' x 10' for Architect's review and approval.

3. The contractor shall not proceed with installation until the required mock-up has been approved by Architect.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by Johnsonite, but not less than 55 deg F (13 deg C) or more than 85 deg F (29 deg C).

1.6 PROJECT CONDITIONS

- A. Install resilient products after other finishing operations, including painting, have been completed.
- B. Maintain ambient temperatures within range recommended by Johnsonite, but not less than 65 deg F (18 deg C) or more than 85 deg F (29 deg C) in spaces to receive resilient products during the following time periods:
 1. 48 hours before installation.
 2. During installation.
 3. 48 hours after installation.
- C. Maintain the ambient relative humidity between 40% and 60% during installation.
- D. Until Substantial Completion, maintain ambient temperatures within range recommended by Johnsonite, but not less than 55 deg F (13 deg C) or more than 85 deg F (29 deg C).

1.7 WARRANTY

- A. Provide warranties, commencing from the date of Substantial Completion, in accordance with Conditions of Contract and Division 01 Section "Warranties".
- B. Manufacturer Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty agreeing to repair or replace sheet vinyl floor covering that fails within the warranty period.
 1. Failures include, but are not limited to, the following:
 - Material manufacturing defects.
 - Surface wear and deterioration to the point of wear-through where normal foot and wheeled traffic is occurring or where the material is being properly maintained.
 - Failure due to substrate moisture exposure not exceeding 98% relative humidity when tested according to ASTM F2170.
 2. Warranty Period: Twenty (20) years commencing on Date of Substantial Completion.
 3. Manufacturer's warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.
- C. Installation Warranty: Submit the contractor's installation warranty signed by the Construction Manager at Risk (CM-R) and Installer for Owner's Acceptance, agreeing to repair or replace work which has failed as a result of defects in workmanship. Upon notification of such installation deficiencies, within the warranty period, make necessary repairs or replacement at the convenience of the Owner.
 1. Warranty Period: Two (2) year limited warranty commencing on Date of Substantial Completion from contractor.

2. Installation warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.

1.8 EXTRA MATERIALS

- A. Upon completion of the Work of this Section, deliver to the Owner extra materials from same production run as products installed.
 1. Quantity of extra material is equal to 3% of amount for each color, finish and type installed.
 2. Clearly label and package extra materials securely to prevent damage.

PART 2 - PRODUCTS

2.1 HOMOGENOUS SHEET VINYL FLOORING (SV)

- A. Manufacturers: Subject to Architect's review for conformance with Contract Documents and the requirements specified herein, provide products from one of the following listed manufacturers:
 1. Tarkett, Inc
 2. Armstrong World Industries, Inc.
 3. Gerflor USA
 4. Or equal
- B. Basis of Design: iQ Optima as manufactured by Tarkett, Inc.. Designated on the Floor Finish Plans as "SV".
 1. Product Description: Unbacked homogeneous vinyl sheet floor covering complying with ASTM F1913.
 2. Wear-Layer/Overall Thickness: Not less than 0.08 inch (2.0 mm)
 3. Roll Size:
 - a. Roll Width: Rolls to be a minimum width of 6'-6" wide.
 - b. Roll Length: rolls to be a minimum length of 66 feet.
 4. Applied Finish: Manufacturer's, factory-applied, permanent, laser and UV-cured.
 5. Max static load limit must exceed 1800 PSI
 6. Residual Indentation: ASTM F1914; Lower than -0.005"
 7. Impact Resistance: ASTM F925; Excellent, results on request
 8. Impact Insulation Class: ASTM E989 (E492); 42
 9. Fire Performance: ASTM E 648; Class 1
 10. Seaming Method: Heat welded.
 11. Sustainable Properties: SCS Floor Score Certified, meets CAL Section 01350, and 100% REACH compliant. Contributes to LEED credits for recycled content, adhesives, low VOC emitting material. EPD Environmental Product Declaration and HPD Health Product Declaration Available.
- C. Colors: (Based on iQ Optima) Up to 15 colors to be used as indicated on drawings.

2.2 SLIP RESISTANT SHEET VINYL FLOORING (SV-SR)

- A. Manufacturer: Subject to Architect's review for conformance with Contract Documents and the requirements specified herein, provide products from one of the following listed manufacturers:
 1. Altro USA, Inc.
 2. Gerflor USA

3. Polyflor America, Inc.
 4. Or equal.
- B. Basis of Design for Slip Resistant Sheet Vinyl Flooring: Stronghold 30 as manufactured by Altro USA, Inc. designated on the Floor Finish Plans as "SV-SR".
1. Complies with requirements for ASTM F1303 Standard Specification for Sheet Vinyl Floor Covering with Backing.
 2. Roll/Sheet Width & Length: 6' feet 7 inches (2 m) x 66 feet.
 3. Wear Layer/Overall Thickness: 3.0 mm (0.12 inches), with non-directional pattern and slip retardant particulate suspended evenly throughout the product thickness.
 4. Backing: non-woven polyester/cellulose, glass fiber reinforcement.
 5. Slip Resistance: ADA compliant, ASTM D 2047 James Machine, SCoF Dry .92 / Wet 0.88 DIN 51130 Ramp Test - R 12
 6. Static Load Limit: ASTM F 970, Standard Test Method for Static Load Limit, Modified – 2000 psi.
 7. Fire Performance: ASTM E 648, Standard Test method for Critical Radiant Flux of 0.45 watts/cm² or greater, Class I, ASTM E662 Smoke Development.
 8. Sustainable Properties: Phthalate-free, contains rapidly renewable bio-based content, 100 percent recyclable, SCS FloorScore Certified, meets CAL Section 01350, contributes to LEED credits for recycled content, adhesives, low VOC emitting material. EPD Environmental Product Declaration and HPD Health Product Declaration Available.
- C. Colors: (Based on Stronghold 30) up to 2 colors to be used as indicated on drawings.
- 2.3 SHEET VINYL – MULTIPURPOSE FLOORING (MULT-1)
- A. Manufacturer: Subject to Architect's review for conformance with Contract Documents and the requirements specified herein, provide products from one of the following listed manufacturers:
1. Altro USA, Inc.,
 2. Mannington Mills, Inc.
 3. Upofloor Americas Inc.
 4. Or equal.
- B. Basis of Design for Multipurpose Sheet Vinyl Flooring: Reliance 25 as manufactured by Altro USA, Inc. designated on the Floor Finish Plans as "MULT-1".
1. Complies with requirements for ASTM F1303 Standard Specification for Sheet Vinyl Floor Covering with Backing.
 2. Roll/Sheet Width & Length: 6' feet 7 inches (2 m) x 66 feet.
 3. Wear Layer/Overall Thickness: 2.5 mm (0.10 inches), with non-directional pattern and slip retardant particulate suspended evenly throughout the product thickness.
 4. Backing: non-woven polyester/cellulose, glass fiber reinforcement.
 5. Slip Resistance: ADA compliant, ASTM D 2047 James Machine, SCoF Dry .92 / Wet 0.88 DIN 51130 Ramp Test - R 12

6. Static Load Limit: ASTM F 970, Standard Test Method for Static Load Limit, Modified – 2000 psi.
7. Fire Performance: ASTM E 648, Standard Test method for Critical Radiant Flux of 0.45 watts/cm² or greater, Class I, ASTM E662 Smoke Development.
8. Sustainable Properties: Phthalate-free, contains rapidly renewable bio-based content, 100 percent recyclable, SCS FloorScore Certified, meets CAL Section 01350, contributes to LEED credits for recycled content, adhesives, low VOC emitting material. EPD Environmental Product Declaration and HPD Health Product Declaration Available.
9. Colors: (Based on Stronghold 30) up to 4 colors to be used as indicated on drawings.

2.3 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, Portland cement based or blended hydraulic-cement-based formulation.
 1. Ardex, Inc., products "Feather Finish" and "Ardex SD-P".
 2. Quikrete Companies, product "Fast-Set Underlayment 1248".
 3. Silpro Masonry Systems Inc., product "Ultra Skim and Speedtop"
 4. Or equal.
- B. Adhesive: Provide adhesive that is recommended by the flooring manufacturer for 98% internal relative humidity. The adhesive shall be included as part of the manufacturer's warranty.
 1. Basis of Design for SV: Gerflor Spray Adhesive, or equal.
 2. Basis of Design for SV-SR: Altro Ecofix65, , or equal.
 3. Use adhesives certified as low-emitting materials in accordance with either the Scientific Certification System's Indoor Advantage Gold program, Scientific Certification System's FloorScore program, or GreenGuard's Children and Schools program.
- C. System Accessories:
 1. Vinyl welding rod: Provide vinyl weld rod as supplied by flooring manufacturer and intended for heat welding of seams. Color as selected by Architect.
 2. Cover Former: Provide cover former sized to suit application as supplied by flooring manufacturer.
 3. Cap Strip: Acceptable material, sized to suit application: L-shaped profile with 1/8" (3.2mm) wide top section and vertical wall section that together form the visible surface, integrated trapezoid-perforated anchoring leg, and integrated grout joint spacer.
 - a. Manufacturers:
 - 1) Schluter Systems L.P.
 - 2) Blanke Corp.
 - 3) Ceramic Tool Company Inc.
 - 4) Or equal
 - b. Basis of design: "JOLLY" as manufactured by Schluter Systems L.P.

- c. Anchoring Leg: Provide with straight anchoring leg, outside corners, and internal connectors.
- d. Material and Finish: Brushed Chrome Anodized Aluminum.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the work.
- B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to Johnsonite written instructions to ensure adhesion of Resilient Sheet Flooring.
 - 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 - 2. Remove substrate paint, coatings and other substances that are incompatible with adhesives or contain soap, wax, oil, solvents, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
 - 3. Mechanically remove contamination on the substrate that may cause damage to the resilient flooring material. Permanent and non-permanent markers, pens, crayons, paint, and similar items, must not be used to write on the back of the flooring material or used to mark the substrate as they could bleed through and stain the flooring material.
 - 4. Prepare Substrates according to ASTM F 710 including the following:
 - a. Moisture Vapor Emission Testing:
 - 1) Perform subfloor moisture testing in accordance with ASTM F 2170, "Standard Test Method for Determining Relative Humidity in Concrete Slabs Using in-situ Probes" as recommended by flooring manufacturer. Proceed with installation only after substrates pass testing.
 - a) Perform three tests for first 1,000 ft² and at least one additional test for each 1,000 ft².
 - b) Select test locations to provide information about moisture distribution across the entire concrete floor slab, especially areas of potential high moisture. Include a test location within 3 ft of each exterior wall.
 - 2) Do not proceed with flooring installation until results of moisture tests are accepted by flooring and adhesive manufacturer. All test results shall be documented and submitted to the architect for record.b. A pH test for alkalinity must be conducted. Results should range between 7 and 9. If the test results are not within the acceptable range of 7 to 9, the installation must not proceed until the problem has been corrected.

- b. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer.
- 5. Wood subfloors must have a minimum 18" (45.7 cm) of cross-ventilated space beneath the bottom of the joist.
 - a. The floor must be rigid, free of movement.
 - b. Single wood and tongue and groove subfloors should be covered with ¼" (6.4 mm) or ½" (12.7 mm) APA approved underlayment plywood.
 - 1). Use ¼" (6.4 mm) thick underlayment panels for boards with a face width of 3" (76 mm) or less.
 - 2). Use ½" (12.7 mm) thick underlayment panels for boards with a face width wider than 3" (76 mm).
 - c. Do not install over OSB (Oriented Strand Board), particle board, chipboard, lauan or composite type underlayments.
- B. Fill cracks, holes, depressions and irregularities in the substrate with good quality Portland cement based underlayment leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
- C. Floor covering shall not be installed over expansion joints.
- D. Do not install resilient products until they are same temperature as the space where they are to be installed.
 - 1. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.
- E. Sweep and vacuum clean substrates to be covered by resilient products immediately before installation.

3.3 RESILIENT SHEET FLOORING INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient sheet flooring.
- B. Resilient Sheet Flooring:
 - 1. Install with manufacturer's recommended adhesive specified for the site conditions and follow adhesive label for proper use.
 - 2. Install rolls in sequential order following roll numbers on the labels.
 - 3. Reverse sheets unless instructed otherwise in manufacturer's Installation Instructions.
 - 4. Roll the flooring in both directions using a 100-150 pound three-section roller.
 - 5. Heat-weld all seams, vertical and horizontal.

3.4 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protection of resilient products.
- B. Perform the following operations immediately after completing resilient product installation:
 - 1. Remove adhesive and other blemishes from exposed surfaces.
 - 2. Sweep and vacuum surfaces thoroughly.
 - 3. Damp-mop surfaces to remove marks and soil.

- C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
 - 1. No traffic for 24 hours after installation.
 - 2. No heavy traffic, rolling loads, or furniture placement for 72 hours after installation.
- D. Wait 72 hours after installation before performing initial cleaning.
- E. A regular maintenance program must be started after the initial cleaning.

END OF SECTION

SECTION 096521
RUBBER TILE
FLOORING

(Part of Work of Section 090005 - RESILIENT FLOORS, Filed Sub-Bid Required)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- B. Carefully review and examine all other Contract Documents for requirements therein affecting the work of this Section. Furthermore, coordinate and sequence the work of this Section with all other trades affected.

1.2 SUMMARY

- A. Furnish and install rubber tile flooring with all pertinent accessories as indicated on Drawings and/or as specified in this Section.
 - 1. Provide substrate preparation where required including but not limited to grinding down high spots, filling in low spots, skim-coating, smoothing, patching and leveling to specified conditions acceptable by flooring manufacturer.

1.3 RELATED WORK

- A. Examine Contract Documents for requirements that affect work of this Section. Other Specification Sections that directly relate to work of this Section include, but are not limited to:
 - 1. Division 03 Section "Cast-In-Place Concrete": for slag-on-grade or concrete floor substrates receiving rubber tile flooring finish.
 - 2. Division 09 Section "Rubber Wall Base": for finish wall base abutting the rubber flooring.
 - 3. Division 09 - Finishes: for various abutting flooring finishes.
 - 4. Division 014 - Section "Machine Roomless Elevators" for elevator cab floor designated to receive rubber tile finish provided by Rubber Tile Floor Section.
 - 5. Divisions 26 and 27: for electrical and/or telecommunication devices, fixtures, or access panels occurring in floor.

1.4 SUBMITTALS

- A. Prepare and submit under the provisions of Division 01 Section "Submittal Procedures".
 - 1. Product data: manufacturer's technical specifications for each type of product indicated; test reports; installation instructions; warranty

- information.
- 2. Shop drawings: submit product Schedule for rubber tile products. Use same designations indicated on Drawings showing tile patterns and colors.
- 3. Samples:
 - a. Samples for Initial Selection: For each type of product indicated.
 - b. Samples for Verification: For each type of product indicated, in manufacturer's standard-size samples of each resilient product color, texture, and pattern required.
- B. LEED Submittals: prepare and submit required documentation for the work of this Section in accordance with USGBC LEED Reference Guide for Building Design and Construction (v4) and Division 01 Section "LEED v4 BD+C: School Requirements".
 - 1. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
 - 2. Building product disclosure and optimization: Provide required documentation to secure the maximum MR credits, including but not limited to:
 - a. Environmental product declarations.
 - b. Sourcing of raw materials.
 - c. Material ingredients.
 - 3. Project material cost data: Provide invoices, receipts, statements, and other evidence required to document total cost for materials used for Project.
 - 4. Waste management and disposal records complying with Division 01 Section "Construction Waste Management and Disposal".
 - a. For products diverted from disposal in landfills and incinerators, and where recycled resources are directed back to the manufacturing process. Include a statement indicating percentage of materials diverted and recycled and the costs associated with each.
 - 5. Product Data for Credit EQ 4.1: For adhesives, include printed statement of VOC content and chemical components.
 - 6. Possible LEED contributions for Rubber Flooring include MR2; MR5; and EQ4.3.
 - a. Manufacturer offers a reclamation program for returning jobsite scrap.
 - b. SCS FloorScore® Certified and meets California Specifications Section 01250.
 - c. C2C Certified Basic

5. ASTM F1514 - Standard Test Method for Measuring Heat Stability of Resilient Flooring by Color
6. ASTM D2240 - Standard Test Method for Rubber Property – Durometer Hardness
7. ASTM F2199 - Standard Test Method for Determining Dimensional Stability of Resilient Floor Tile after Exposure to Heat
8. ASTM D3389 - Standard Test Method for Coated Fabrics Abrasion Resistance (Rotary Platform, Double Head Abrader)
9. ASTM D2047 - Standard Test Method for Static Coefficient of Friction of Polish- Coated Floor Surfaces as Measured by the James Machine
10. ASTM E648 - Standard Test Method for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source
11. ASTM E662 - Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials
12. ASTM F925 - Standard Test Method for Resistance to Chemicals of Resilient Flooring
13. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using *in situ* Probes
14. ASTM F2420 - Standard Test Method for Determining Relative Humidity on the Surface of Concrete Floor Slabs Using Relative Humidity Probe Measurement and Insulated Hood
15. ASTM F2055 - Standard Test Method for Size and Squareness of Resilient Floor Tile by Dial Gage Method
16. ASTM F3010 - Standard Practice for Two-Component Resin Based Membrane- Forming Moisture Mitigation Systems for Use Under Resilient Floor Coverings
17. ASTM D412: Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers—Tension
18. ASTM E2179: Standard Test Method for Laboratory Measurement of the Effectiveness of Floor Coverings in Reducing Impact Sound Transmission Through Concrete Floors
19. ASTM F1869: Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride

D. International Organization for Standardization

1. ISO 140 - Measurement of sound insulation in buildings and of building elements

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualification: Provide rubber tile flooring manufactured by a firm with a minimum of 10 years' experience with rubber tile flooring of type's equivalent to those specified.
 1. Manufacturing facilities are ISO 9001 and ISO 14001 Certified.
- B. Installer Qualifications: Installer shall be manufacturer approved for the requirements of the project or INSTALL (International Standards & Training Alliance) resilient certified for the requirements of the Project.
- C. Mockups:

1. Provide substrate preparation mockups in 15' x 15' size for Architect's review and approval. (As shown on the drawing)
2. After substrate preparation approval by Architect, provide rubber tile flooring installation mockups over prepared substrate in 10' x 10' size for Architect's review and approval. (As shown on the drawing)
3. Provide transitions from rubber tile to Forbo Flotex Tile.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by flooring manufacturer, but not less than 55 deg F (13 deg C) or more than 85 deg F (29 deg C).

1.8 PROJECT CONDITIONS

- A. Install resilient products after other finishing operations, including painting, have been completed.
- B. Maintain ambient temperatures within range recommended by Johnsonite, but not less than 65 deg F (18 deg C) or more than 85 deg F (29 deg C) in spaces to receive resilient products during the following time periods:
 1. 48 hours before installation.
 2. During installation.
 3. 48 hours after installation.
- C. Maintain the ambient relative humidity between 40% and 60% during installation.
- D. Until Substantial Completion, maintain ambient temperatures within range recommended by flooring manufacturer, but not less than 55 deg F (13 deg C) or more than 85 deg F (29 deg C).
- E. Follow Manufacture site conditions requirements.

1.9 WARRANTIES

- A. Provide warranties, commencing from the date of Substantial Completion, in accordance with Conditions of Contract and Division 01 Section "Warranties".
 1. Provide manufacturer's commercial warranty against manufacturing defects for a period no less than five (5) years.
 2. Manufacturer shall warrant that the product will no wear through for a period no less than five (5) years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to Architect's review for conformance with Contract Documents and the requirements specified herein, provide products from one of the following listed manufacturers:
 1. Mondo America, Inc.
 2. Johnsonite by Tarkett Inc.

3. Nora Systems, Inc.,
4. Or equal.

- B. Basis of Design: " Zeus Speckled Rubber Tile" as manufactured by Mondo America, Inc

2.2 RUBBER TILE FLOORING

- A. Rubber Tile Flooring shall be manufactured from a homogeneous composition of 100% synthetic rubber and having the following physical characteristics:
- B. Rubber Tile Flooring shall comply with the requirements of ASTM F1344 Standard Specification for Rubber Floor Tile, Type I (Homogeneous), Grade 1, fully vulcanized synthetic rubber, having the following physical characteristics:
- Overall thickness: 0.137" (3.5 mm).
 - Hammered surface texture.
 - Tile size: 39 3/8" x 39 3/8" (100 cm x 100 cm).
 - Color: As indicated on drawings.
 - ASTM D412. Tension-Modulus at 10% Elongation: ≥ 300 psi.
 - ASTM D2047. Static Coefficient of Friction: ≥ 85 (dry, Neolite).
 - ASTM D2240. Durometer Hardness: ≥ 85 Shore A.
 - ASTM D3389. Abrasion Resistance: < 1.00 gram weight loss.
 - ASTM E648. Critical Radiant Flux: Class 1, equal to or greater than 0.45 watts/cm².
 - ASTM E2179. Reduction of Impact Sound: $\Delta IIC \geq 10$ dB.
 - ASTM F925. Chemical Resistance: Compliant (No more than slight change).
 - ASTM F970. Static Load Limit: ≤ 0.005 in (250 psi).
 - ASTM F970 (Modified). Static Load Limit: ≤ 0.005 in (800 psi).
 - ASTM G21: Resistance to Fungi: No growth.
 - Meets CA Section 01350 and is GREENGUARD Gold Certified.
 - No formaldehyde, halogens, heavy metals, isocyanates, phthalates, polyvinyl chloride (PVC), PFAs and PFCs.
 - Certified Cradle to Cradle SILVER, GOLD or PLATINUM.

2.3 INSTALLATION MATERIALS

- A. Primer:
1. Use Base King ES-MBP™ substrate primer, applied in dual coats for 100 % RH, prior to adhesive use, as approved by Manufacturer and as indicated:
 - a. For use and safety, refer to Base King's current published technical data and safety data sheets.
 - b. Must be used with Base King EnviroSTIX™ ES-100.
 - c. Primer shall comply with the following limit for VOC content when calculated according to SCAQMD Rule 1168
 - d. Adhesive Primers: 250 g/L.
 2. Use moisture resistant Base King EnviroSTIX™ ES-100 pre-applied poly-acrylic, peel and bond adhesive, as approved by Manufacturer and as indicated:
 - a. Immediately report to Manufacturer any visual defects, prior to Rubber Tile Flooring installation.
 - b. For use and safety, refer to Base King's current published technical data and safety data sheets.
 - c. Must be used with Base King ES-MBP™ primer.
 3. Rubber Tile Flooring adhesive shall comply with the following limit for VOC content

RUBBER TILE FLOORING

when calculated according to SCAQMD Rule 1168:

- a. Indoor Floor Covering Adhesives: 50 g/L.

B. COLORS AND PATTERNS

1. Rubber tile flooring colors, layouts, and patterns shall be as indicated on Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the work.
- B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to flooring manufacturer's written instructions to ensure adhesion of Resilient Tile Flooring.
 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 2. Remove substrate paint, coatings and other substances that are incompatible with adhesives or contain soap, wax, oil, solvents, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
 3. Mechanically remove contamination on the substrate that may cause damage to the resilient flooring material. Permanent and non-permanent markers, pens, crayons, paint, etc., must not be used to write on the back of the flooring material or used to mark the substrate as they could bleed through and stain the flooring material.
 4. Prepare Substrates according to ASTM F 710 including the following:
 - a. Moisture Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.
 - 1). Perform anhydrous calcium chloride test, ASTM F 1869. Results must not exceed 5 lbs. Moisture Vapor Emission Rate per 1,000 sq. ft. in 24 hours.
 - b. A pH test for alkalinity must be conducted. Results should range between 7 and 9. If the test results are not within the acceptable range of 7 to 9, the installation must not proceed until the problem has been corrected.
 - c. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer.
- B. Fill cracks, holes, depressions and irregularities in the substrate with good quality Portland cement based underlayment leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.

1. Ardex, Inc., products "Feather Finish" and "Ardex SD-P".
 2. Quikrete Companies, product "Fast-Set Underlayment 1248".
 3. Silpro Masonry Systems Inc., product "Ultra Skim and Speedtop"
 4. Or equal.
- C. Floor covering shall not be installed over expansion joints.
- D. Do not install resilient products until they are same temperature as the space where they are to be installed.
1. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.
- E. Sweep and vacuum clean substrates to be covered by resilient products immediately before installation.

3.3 RESILIENT TILE FLOORING INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient tile flooring.
- B. Comply with manufacturer's written instruction for installing Rubber Tile Flooring.
- C. The substrate will require two (2) coats of primer, prior to Rubber Tile Flooring application using peel and bond adhesive system.
1. Use a new roller at each coat application.
 2. Apply a smooth, thin, even coat of primer using slight pressure working the primer into the substrate. Avoid leaving puddles or heavy roller bead/ lines.
 3. Cover all areas leaving no bare or dry spots rolling in both directions.
 4. Allow the primer to completely dry to touch (40-60 minutes) before proceeding with tile installation.
- D. Lay out tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
1. Lay tiles in pattern indicated.
- E. Match tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Immediately notify Manufacturer of any product defect. Do not installed defective or damaged tiles.
- F. Cut and fit tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, edgings, doorframes, thresholds, and nosings. Always leave the peel and bond adhesive's protective release paper on the product during the cutting stage.
- G. Extend tiles into toe spaces, door reveals, closets, and similar openings. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent, nonstaining marking device
- H. Install tiles on covers for telephone and electrical ducts and similar items in finished floor areas. Maintain overall continuity of color and pattern with pieces of tile installed on covers. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.
- I. Adhere tiles to flooring substrates using full adhesive coverage to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- J. The floor must be rolled in both directions using a 100 -150 lb. 3-section roller. Roll the floor as soon as conditions permit. Roll floor again 90 degrees to the first row to assure good transfer of peel and bond adhesive to the substrate.
- K. Immediate foot traffic and point and rolling loads can be utilized after installation.

3.4 REPAIRS

- A. Repair material must come from the same original dye lot as initially installed Rubber Tile Flooring.
- B. Repairs are to be performed by Flooring Contractor's qualified installers/technicians only.

3.5 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protection of resilient products.
- B. Resilient edge and transition strips:
 - 1. Install edge strips at all edges of flooring, which would otherwise be exposed.
 - 2. Place resilient edge strips tightly butted to flooring and secure with adhesive recommended by the edge strip manufacturer.
- C. Perform the following operations immediately after completing resilient product installation:
 - 1. Remove adhesive and other blemishes from exposed surfaces.
 - 2. Sweep and vacuum surfaces thoroughly.
 - 3. Damp-mop surfaces to remove marks and soil. Use high quality neutral floor cleaner for resilient flooring.
- D. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- E. No traffic for 24 hours after installation.
- F. No heavy traffic, rolling loads, or furniture placement for 72 hours after installation.
- G. Wait 72 hours after installation before performing initial cleaning.
- H. A regular maintenance program must be started after the initial cleaning.

END OF SECTION

SECTION 096523

RUBBER STAIR TREAD, RISER, TILE AND BASE

(PART OF WORK OF SECTION 090005 - RESILIENT FLOORS, FILED SUB-BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Rubber stair tread, riser, tile and base.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.

1.3 RELATED WORK

- A. Examine Contract Documents for requirements that affect work of this Section. Other Specification Sections that directly relate to work of this Section include, but are not limited to:
 - 1. Division 03 Section "Concrete Floor Resurfacing and Patching": for concrete patching of existing stair treads substrate receiving rubber tread finish.
 - 2. Division 05 Section
 - 3. Other Division 09 sections: for floor finishes abutting and/or related to this Section.

1.4 SUBMITTALS

- A. Prepare and submit under the provisions of Division 01 Section "Submittal Procedures".
 - 1. Product data:
 - a. Manufacturer's technical specifications, installation instructions, and warranties for each type of product indicated.
 - b. Product Data for Credit EQ 4.1: For adhesives, including printed statement of VOC content and chemical components.
 - 2. Product schedule: Use same designations indicated on Drawings.
 - 3. Samples:
 - a. Samples for Initial Selection: For each type of product indicated.

- b. Samples for Verification: For each type of product indicated, in manufacturer's standard-size samples of each resilient product color, texture, and pattern required.
 - B. LEED Submittals: prepare and submit required documentation for the work of this Section in accordance with USGBC LEED Reference Guide for Building Design and Construction (v4) and Division 01 Section "LEED v4 BD+C: School Requirements".
 - 1. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
 - 2. Building product disclosure and optimization: Provide required documentation to secure the maximum MR credits, including but not limited to:
 - a. Environmental product declarations.
 - b. Sourcing of raw materials.
 - c. Material ingredients.
 - 3. Project material cost data: Provide invoices, receipts, statements, and other evidence required to document total cost for materials used for Project.
 - 4. Waste management and disposal records complying with Division 01 Section "Construction Waste Management and Disposal".
 - a. For products diverted from disposal in landfills and incinerators, and where recycled resources are directed back to the manufacturing process. Include a statement indicating percentage of materials diverted and recycled and the costs associated with each.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Provide resilient flooring manufactured by a firm with a minimum of 10 years' experience with resilient flooring of type equivalent to those specified.
- B. Installer Qualifications: Installer shall be experienced in the rubber flooring industry and shall have a minimum of five (5) years experiencing in the installation of similar products.
- C. Mock-ups: Install at project site a job mock-up using acceptable products and manufacturer approved installation methods. Obtain Owner's and Architect's acceptance of finish color, texture and pattern, and workmanship standard. Comply with Division 1 Quality Control (Mock-Up Requirements) Section.
 - 1. Provide substrate preparation mockups in an area no less than 15' x 15' for Architect's review and approval.
 - 2. After substrate preparation approval by Architect, provide rubber stair system installation mockups over prepared substrate in an area no less than 10' x 10' for Architect's review and approval.
 - 3. The contractor shall not proceed with installation until the required mock-up has been approved by Architect.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by Johnsonite, but not less than 55 deg F (13 deg C) or more than 85 deg F (29 deg C).

1.7 PROJECT CONDITIONS

- A. Install resilient products after other finishing operations, including painting, have been completed.
- B. Maintain ambient temperatures within range recommended by Johnsonite, but not less than 65 deg F (18 deg C) or more than 85 deg F (29 deg C) in spaces to receive resilient products during the following time periods:
 - 1. 48 hours before installation.
 - 2. During installation.
 - 3. 48 hours after installation.
- C. Maintain the ambient relative humidity between 40% and 60% during installation.
- D. Until Substantial Completion, maintain ambient temperatures within range recommended by Johnsonite, but not less than 55 deg F (13 deg C) or more than 85 deg F (29 deg C).

1.8 WARRANTY

- A. Provide warranties, commencing from the date of Substantial Completion, in accordance with Conditions of Contract and Division 01 Section "Warranties".
- B. Manufacturer Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty agreeing to repair or replace rubber stair tread, riser, tile and base products that fails within the warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Material manufacturing defects.
 - b. Surface wear and deterioration to the point of wear-through where normal foot and wheeled traffic is occurring or where the material is being properly maintained.
 - c. Failure due to substrate moisture exposure not exceeding 98% relative humidity when tested according to ASTM F2170.
 - 2. Warranty Period: Twenty (20) years commencing on Date of Substantial Completion.
 - 3. Manufacturer's warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.
- C. Installation Warranty: Submit the contractor's installation warranty signed by the Construction Manager at Risk (CM-R) and Installer for Owner's Acceptance, agreeing to repair or replace work which has failed as a result of defects in workmanship. Upon notification of such installation deficiencies, within the warranty period, make necessary repairs or replacement at the convenience of the Owner.
 - 1. Warranty Period: Two (2) year limited warranty commencing on Date of Substantial Completion from contractor.
 - 2. Installation warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.

1.9 EXTRA MATERIALS

- A. Upon completion of the Work of this Section, deliver to the Owner extra materials from same production run as products installed.

1. Quantity of extra material is equal to 3% of amount for each color, finish and type installed.
2. Clearly label and package extra materials securely to prevent damage.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Trades and Risers: ASTM F 2169.
 1. Nora System, Inc.
 2. Johnsonite, a division of Tarkett.
 3. Roppe Corporation.
 4. Mannington Burke.
 5. Or equal
- B. Basis Design: Norament 825C by Nora Systems, Inc.
- C. Style and Colors: As indicated on the Floor Finish Legend.
- D. Colors: Up to 9 colors will be selected.
- E. Materials: Rubber, Composition A.
- F. Size: Lengths and depths to fit each stair tread in one piece.
- G. Stringers: Of same thickness as risers, height and length after cutting to fit risers and treads and to cover stair stringers; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.

2.2 RUBBER STAIR TREAD WITH RISER, TILE AND BASE (designated as RR on drawings)

- A. Integrated Stair Tread with Riser and Base shall have the following physical characteristics:
 1. Manufactured from a homogeneous composition of 100% synthetic rubber.
 2. Complies with requirements for ASTM F 2169 Standard Specification for Resilient Stair Treads, Type TS, Class 1 and 2, Group 1 and 2.
 3. Hardness: ASTM D 2240 – Not less than 85 Shore A.
 4. Abrasion Resistance: ASTM D 3389 – less than 1 gram weight loss.
 5. ASTM D 2047, Standard Test Method for Static Coefficient of Friction of Polish-Coated Flooring of 0.6 or greater.
 6. ASTM E 648, Standard Test Method for Critical Radiant Flux of 0.45 watts/cm² or greater, Class I.
 7. Integrated tread and riser.
 8. Certified Cradle to Cradle, NSF – 332 certified gold, Floor Score certified
- B. Solid Color Rubber Integrated Stair Tread with Riser and Base
 1. Raised Round Pattern.
 2. 2" height hinged Square Nose, tapering .210" to .153".
 3. 20" overall width including 13" tread depth with 7" integrated riser.

4. 2" wide contrasting solid color rubber insert.
5. Tread length(s) shall be as indicated on Drawings and field verified.

2.3 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, Portland cement based formulation manufactured and warranted by a reputable manufacturer.
 1. Ardex, Inc., products "Feather Finish" and "Ardex SD-P".
 2. Quikrete Companies, product "Fast-Set Underlayment 1248".
 3. Silpro Masonry Systems Inc., product "Ultra Skim and Speedtop"
 4. Or equal.
- B. Adhesives: Provide adhesive that is recommended by the flooring manufacturer for slab conditions 98% and over internal relative humidity. The adhesive shall be included as part of the manufacturer's warranty.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the work.
- B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.
 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
 3. Mechanically remove contamination on the substrate that may cause damage to the resilient flooring material. Permanent and non-permanent markers, pens, crayons, paint, or other similar writing instruments, must not be used to write on the back of the flooring material or used to mark the substrate as they could bleed through and stain the flooring material.
 4. Prepare Substrates according to ASTM F710 including the following:
 - a. Moisture Testing: Perform subfloor moisture testing in accordance with ASTM F 2170, "Standard Test Method for Determining Relative Humidity in Concrete Slabs Using in-situ Probes" as recommended by flooring

manufacturer. Proceed with installation only after substrates pass testing.

- 1) Perform three tests for first 1,000 ft² and at least one additional test for each 1,000 ft².
 - 2) Select test locations to provide information about moisture distribution across the entire concrete floor slab, especially areas of potential high moisture. Include a test location within 3 ft of each exterior wall.
 - 3) Do not proceed with flooring installation until results of moisture tests are accepted by flooring and adhesive manufacturer. All test results shall be documented and submitted to the architect for record.
- b. Perform tests recommended by flooring manufacturer. Proceed with installation only after substrate alkalinity falls within a range on pH scale not less than 5 or more than 9 pH, or as otherwise required in writing by manufacturer of flooring.

5. Wood steps/substrates:

- a. The substrate must be rigid, free of movement.
 - b. Single wood and tongue and groove substrate should be covered with 1/4" (6.4 mm) or 1/2" (12.7 mm) APA approved underlayment plywood.
 - 1). Use 1/4" (6.4 mm) thick underlayment panels for boards with a face width of 3" (76 mm) or less.
 - 2). Use 1/2" (12.7 mm) thick underlayment panels for boards with a face width wider than 3" (76 mm).
 - c. Do not install over OSB (Oriented Strand Board), particle board, chipboard, lauan or composite type underlayments.
- B. Fill cracks, holes, depressions and irregularities in the substrate with good quality Portland cement based underlayment leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
- C. Floor covering shall not be installed over expansion joints.
- D. Do not install resilient products until they are same temperature as the space where they are to be installed.
1. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.
- E. Sweep and vacuum clean substrates to be covered by resilient products immediately before installation.

3.3 RUBBER STAIR TREAD WITH RISER, TILE AND BASE INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient accessories.
- B. Rubber Stair Tread, Tile and Nosing:
1. Use Johnsonite #930 Epoxy Caulking Compound to strengthen nosing and fill irregularities in substrates to conform to tread nosing.
 2. Tightly adhere to substrates throughout length of each piece.
 3. For treads installed as separate, equal-length units, install to produce a flush joint between units.

3.4 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protection of resilient products.
- B. Resilient edge and transition strips:
 - 1. Install edge strips at all edges of flooring, which would otherwise be exposed.
 - 2. Place resilient edge strips tightly butted to flooring and secure with adhesive recommended by the edge strip manufacturer.
- C. Resilient edge and transition strips:
 - 1. Install edge strips at all edges of flooring, which would otherwise be exposed.
 - 2. Place resilient edge strips tightly butted to flooring and secure with adhesive recommended by the edge strip manufacturer.
- D. Perform the following operations immediately after completing resilient product installation:
 - 1. Remove adhesive and other blemishes from exposed surfaces.
 - 2. Sweep and vacuum surfaces thoroughly.
 - 3. Damp-mop surfaces to remove marks and soil.
- E. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

END OF SECTION

SECTION 096530

RUBBER WALL BASE

(PART OF WORK OF SECTION 090005 - RESILIENT FLOORS, FILED SUB-BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Rubber wall base.
 2. Millwork rubber base
 3. Rubber transition accessories.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.

1.3 RELATED WORK

- A. Examine Contract Documents for requirements that affect work of this Section. Other Specification Sections that directly relate to work of this Section include, but are not limited to:
1. Division 04 Section "Concrete Masonry Units": for concrete masonry unit substrate receiving rubber wall base finish.
 2. Division 09 Section "Gypsum Boards": for gypsum board wall construction receiving resilient wall base finish.
 3. Division 09 - Finishes: for various finish flooring abutting wall base.

1.4 REFERENCES

- A. ASTM International:
1. F 1861 Standard Specification for Resilient Wall base
 2. E 84 Standard Test Method for Surface Burning Characteristics of Building Materials
 3. E 662 Test Method for Specific Density of Smoke Generated by Solid Materials.
 4. F 925 Standard Test Method for Resistance to Chemicals of Resilient Flooring.
 5. F 137 Standard Test Method for Flexibility of Resilient Flooring Materials with Cylindrical Mandrel Apparatus

B. Other Referenced Documents

1. National Fire Protection Association (NFPA): NFPA 255, Test Method for Critical Radiant Flux of Floor Covering Systems Using a Radiant Energy Source
2. National Fire Protection Association (NFPA) 258 Test Method for Specific Density of Smoke Generated by Solid Materials.

1.5 SUBMITTALS

A. Prepare and submit under the provisions of Division 01 Section "Submittal Procedures".

1. Product Data: manufacturer's technical product specifications for each type of product indicated; installation instructions; warranties.
2. Shop drawings: Product Schedule: Use same designations indicated on Drawings.
3. Samples:
 - a. for Initial Selection: For each type of product indicated.
 - b. for Verification: For each type of product indicated, in manufacturer's standard-size samples of each resilient product color, texture, and pattern required.

B. LEED Submittals: prepare and submit required documentation for the work of this Section in accordance with USGBC LEED Reference Guide for Building Design and Construction (v4) and Division 01 Section "LEED v4 BD+C: School Requirements".

1. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
2. Building product disclosure and optimization: Provide required documentation to secure the maximum MR credits, including but not limited to:
 - a. Environmental product declarations.
 - b. Sourcing of raw materials.
 - c. Material ingredients.
3. Project material cost data: Provide invoices, receipts, statements, and other evidence required to document total cost for materials used for Project.
4. Waste management and disposal records complying with Division 01 Section "Construction Waste Management and Disposal".
 - a. For products diverted from disposal in landfills and incinerators, and where recycled resources are directed back to the manufacturing process. Include a statement indicating percentage of materials diverted and recycled and the costs associated with each.

1.6 QUALITY ASSURANCE

A. Mock-ups:

1. Provide substrate preparation mockups in 10' x 4" size for Architect's review and approval. Mockup shall include both inside and outside corners.
2. The contractor shall not proceed with installation until the required mockup has been approved by Architect.

B. Installer Qualifications: Installer shall have a minimum of five (5) years experiencing in the installation of similar products.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by Roppe, but not less than 55 deg F (13 deg C) or more than 85 deg F (29 deg C).

1.8 PROJECT CONDITIONS

- A. Install resilient products after other finishing operations, including painting, have been completed.
- B. Maintain ambient temperatures within range recommended by Roppe, but not less than 65 deg F (18 deg C) or more than 85 deg F (29 deg C) in spaces to receive resilient products during the following time periods:
 - 1. 48 hours before installation.
 - 2. During installation.
 - 3. 48 hours after installation.
- C. Maintain the ambient relative humidity between 40% and 60% during installation.
- D. Until Substantial Completion, maintain ambient temperatures within range recommended by Roppe, but not less than 55 deg F (13 deg C) or more than 85 deg F (29 deg C).

1.9 WARRANTIES

- A. Provide warranties, commencing from date of Substantial Completion, in accordance with Conditions of Contract and Division 01 Section "Warranties".
 - 1. Provide Manufacturer Warranty against any defect in manufacturing materials or workmanship for periods no less than:
 - a. Product Warranty: 1 year.
 - b. Wear Warranty: 3 years.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Subject to Architect's review for conformance with Contract Documents and the requirements specified herein, provide products from one of the following listed manufacturers:
 - 1. Roppe Corporation, Fostoria, OH.
 - 2. Johnsonite, Inc. Chagrin Falls, OH.
 - 3. Mannington Burke.
 - 4. Or equal.

2.2 RUBBER WALL BASE

- A. Basis of Design - Type T. S. Roppe Pinnacle Rubber Base: (designated as RB on drawings)
 - 1. Wall Base: ASTM F 1861.
 - 2. Style and Colors: As indicated on the Finish Legend.
 - 3. Type (Material Requirement): TS (rubber, vulcanized thermoset) or TP (rubber, thermoplastic.)

4. Shape: Coved.
 5. Minimum Thickness: 0.125 inch.
 6. Height: 4 inches.
 7. Lengths: 100' rolled coil.
 8. Outside Corners: Premolded.
 9. Inside Corners: Premolded.
 10. Surface: Smooth.
- D. Accessories: Premolded end stops of same material, size and color as base. Job-form all external and internal corners from base material; pre-molded corner pieces will not be acceptable.
- E. Colors: Up to 8 colors will be selected.
- F. Provide Rubber Wall Base with the following physical characteristics:
1. Manufactured from a thermoplastic rubber formulation.
 2. Meets performance requirements for ASTM F 1861 Standard Specification for Resilient Wall Base, Type TP, Group 1 (solid).
 3. ASTM E 648, Standard Test Method for Critical Radiant Flux of 0.45 watts/cm² or greater, Class I.
 4. ASTM E 84, Standard Test Method for Surface Burning Characteristics of Building Materials, Class A, Smoke <450.
 5. Flexibility: Does not crack, break, or show any signs of fatigue when bent around a 1 1/4" diameter cylinder when tested according to ASTM F 137 Standard Test Method for Flexibility of Resilient Flooring Materials protocols.
 6. Color Stability: Meets or exceeds ASTM F 1861 requirements for color stability when tested to ASTM F 1515 Standard Test Method for Measuring Light Stability of Resilient Flooring protocols.
 7. Phthalate-free.
- 2.3 MILLWORK RUBBER WALL BASE (Designated as MRB on drawings)
- A. Basis of Design - Type TP Roppe Contours Rubber Base
1. Wall Base: ASTM F 1861.
 2. Style: Vertical #65, PV6065.
 3. Colors: to be determined .
 4. Type (Material Requirement): TP (rubber, thermoplastic.)
 5. Shape: Sculptured
 6. Pattern Serenity PV4010
 7. Minimum Thickness: 0.375 inch.
 8. Height: 4 inches.
 9. Lengths: 8 feet sections, 40 feet per carton.
 10. Surface: Smooth.
- B. Surface Burning: ASTM E84/NFPA 255, Class AC. Flammability/Critical Radiant Flux: ASTM E648 / NFPA 253, Class 1 (>0.45 Watts per sq. cm.), .082 W/cm²D. Smoke Density: ASTM E662/NFPA 258, Passes (<450), 157 (flaming) - 197 (non-flaming)
- 2.4 RUBBER TRANSITION ACCESSORIES
- A. Basis of Design: Roppe Rubber Accessories

- B. Description: Accessories includes wide variety of trims, moldings, transitions, reducers, edge guards, thresholds and adapters, and cove caps.
- C. Material: Rubber
 - 1. ASTM E84 - Surface Burning: Class B
 - 2. ASTM E648 (NFPA 253) - Critical Radiant Flux: Class I, > 0.45 W/cm²
 - 3. ASTM E662 (NFPA 258) - Smoke Density: Passes, <450
- D. Profile and dimensions: As indicated on drawings.

2.5 INSTALLATION MATERIALS

- A. Filler for patching, smoothing and leveling substrates: Low VOC Portland cement-based latex underlayment acceptable to wall base manufacturer, equal to the following:
 - 1. Ardex, Inc., products "Feather Flash" and "Ardex SD-P".
 - 2. Quikrete Companies, product "Fast-Set Underlayment 1248".
 - 3. Silpro Masonry Systems Inc., product "Masco Latex Cement".
 - 4. Or equal.
- B. Adhesives: as recommended by Roppe to meet site conditions.
 - 1. Roppe #1100 Wall Base Adhesive
- C. Caulking: colored caulking acceptable to wall base manufacturer.
- D. Transition and edge strips:
 - 1. General: Homogeneous rubber, of profiles required for thickness of abutting materials.
 - 2. Edge strips: Tapered or bull nose edge.
 - 3. Colors: Match or contrast with the flooring, as selected by the Architect from standard colors available, of width shown on the drawings.
- E. Cleaning material: Domestic neutral floor detergent having a pH 7 or pH 8, as recommended by the flooring manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the work.
- B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Adjacent Surfaces Protection: Protect adjacent work areas and finish surfaces from damage during product installation.

- B. Prepare substrates according to manufacturer's written instructions to ensure adhesion of rubber wall base.
 - 1. Prepare substrates to be smooth, rigid, flat, level, permanently dry, clean and free of foreign materials such as paint, dust, grease, oils, solvent, and all other contaminants that may interfere with adhesive bond.
 - 2. Remove, by light sanding and grinding, all protruding edges, high spots, bumps and ridges. Ensure that substrate is free from paint, varnish, wax, oil, or other foreign matter.
 - 3. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound. Skim-coat substrate where necessary.
 - 4. Vacuum clean substrates to be covered by resilient products immediately before installation.
- C. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.

3.3 RESILIENT BASE INSTALLATION

- A. Comply with Manufacturer's written instructions for installing resilient wall base.
- B. Install base on solid backing, bond to vertical substrate with continuous contact at horizontal and vertical surfaces.
 - 1. Install resilient base in lengths as long as practicable without gaps at seams and with tops of adjacent pieces aligned.
 - 2. Scribe to fit to doorframes and other interruptions.
 - 3. Apply primers as recommended by adhesive manufacturer's written instructions.
 - 4. Spread only enough adhesive to permit installation of materials before initial set. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates. Do not stretch resilient base during installation.
 - 5. Install external and internal corners in accordance with manufacturers specific instructions. Install preformed corners if available before installing straight pieces. Cope corners and fit neatly.
 - 6. Fill voids with plastic filler along the top edge of the resilient wall base on masonry or other similar irregular substrate surfaces.
- C. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

3.4 CLEANING AND PROTECTION

- A. Resilient base: Install base on solid backing, bond to vertical substrate with continuous contact at horizontal and vertical surfaces. Apply wall base to walls, columns, casework , supports and other permanent fixtures in areas where base is required.
 - 1. Install in lengths as long as practical(not less than 8'-0").
 - 2. Scribe to fit to doorframes and other interruptions.
 - 3. Form all external and internal corners in accordance with manufacturers written instructions. Cope inside corners and fit neatly.
 - 4. Fill voids with plastic filler along the top edge of the resilient wall base on masonry surfaces or other similar irregular substrates.

- B. Resilient edge and transition strips:
 - 1. Install edge strips at all edges of flooring, which would otherwise be exposed.
 - 2. Place resilient edge strips tightly butted to flooring and secure with adhesive recommended by the edge strip manufacturer.
- C. Comply with Manufacturer's written instructions for cleaning and protection of resilient products.
- D. Perform the following operations immediately after completing resilient base installation:
 - 1. Remove adhesive and other blemishes from exposed surfaces.
 - 2. Damp-mop surfaces to remove marks and soil.
 - 3. Repair or replace defective or damaged installed products.
- E. Protect resilient base from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- F. Cover resilient wall base until Substantial Completion.

END OF SECTION

SECTION 096543

LINOLEUM SHEET FLOORING

(PART OF WORK OF SECTION 090005 - RESILIENT FLOORS, TRADE-BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Linoleum Sheet Flooring (LIN)
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.

1.3. RELATED WORK

- A. Examine Contract Documents for requirements that affect work of this Section. Other Specifications Sections that directly relate to work of this Section include, but are not limited to:
 - 1. Division 03 Section "Cast-In-Place Concrete": for cast-in-place concrete, concrete toppings, and moisture mitigation admixture.
 - 2. Division 09 Section "Rubber Wall Base": for abutting rubber wall base.
 - 3. Division 09 - Finishes: for various abutting flooring finishes.

1.4 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM F 2195 Standard Specification for Linoleum Sheet Floor Covering.
 - 2. ASTM F 1869 Standard Test Method for Measuring Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride
 - 3. ASTM F 2170 Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes
 - 4. ASTM F 1861 Standard Specification for Resilient Wall Base.
 - 5. ASTM F 710 Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.
 - 6. ASTM F 1482 Standard Practice for Installation and Preparation of Panel Type Underlayments to Receive Resilient Flooring.

7. ASTM E 648 Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.
 8. ASTM E 662 Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials.
 9. ASTM E 84 Standard Test Method for Surface Burning Characteristics of Building Materials.
 10. ASTM E 492 Standard Test Method for Laboratory Measurement of Impact Sound Transmission through Floor-Ceiling Assemblies Using the Tapping Machine.
 11. ASTM E 989 Standard Classification for Determination of Impact Insulation Class (IIC).
- B. National Fire Protection Association (NFPA):
1. NFPA 253 Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.
 2. NFPA 258 Test Method for Specific Optical Density of Smoke Generated by Solid Materials.
- C. International Standards and Training Alliance (INSTALL):
1. INSTALL Resilient Certification.
Follow Manufacture recommendations

1.5 SYSTEM DESCRIPTION

- A. Performance Requirements: Provide flooring which has been manufactured, fabricated and installed to performance criteria certified by manufacturer without defects, damage, or failure.

1.6 SUBMITTALS

- A. Make submittals in accordance with Conditions of the Contract and Division 01 "Submittal Procedures" Section.
1. Product data: Submit product data, including manufacturer's SPEC-DATA product sheet, for specified products.
 2. Shop Drawings: Submit shop drawings showing layout, profiles, and product components, including anchorage, accessories, finish colors, patterns and textures.
 3. Samples: Submit selection and verification samples for finishes, colors, and textures.
- B. Quality Assurance Submittals: Submit the following:
1. Certification of compliance: Letter of compliance signed by manufacturer certifying materials comply with specified performance characteristics and criteria, and physical requirements.
 2. Manufacturer's Instructions: Manufacturer's installation instructions.
 3. Manufacturer's Field Reports: Manufacturer's field reports specified herein.
- C. Sustainable Submittals
1. Product data for Credit MR 4.1 and Credit MR 4.2 for products having recycled content, including documentation indicating percentages by weight of post-consumer and pre-consumer recycled content.

- a. Include statement indicating costs for each product having recycled content.
 2. Product data for Credit MR6 for products having rapidly renewable content, including documentation indicating percentages by weight of rapidly renewable content as required by Division 01.
 - a. Include statement indicating costs for each product having Rapidly Renewable content.
 3. Product data for Credit EQ 4.1 for adhesives and sealants, including printed statement of VOC content as required by Division 01.
 4. Confirm that each product complies with the testing and product requirements of the California Department of Health Services Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small Scale Environmental Chambers, including 2004 Addenda. If a product specified has not been tested as noted, provide a substitution to the Architect for review and approval of an equal product meeting noted California Department of Health standard.
 5. Product data and certification of SMART sustainable product certification pursuant to LEED innovation credit.
- D. Closeout Submittals: Submit the following:
 1. Operation and Maintenance Data: Operation and maintenance data for installed products in accordance with Division 1 Closeout Submittals (Maintenance Data and Operation Data) Section. Include methods for maintaining installed products, and precautions against cleaning materials and methods detrimental to finishes and performance.
 2. Warranty: Warranty documents specified herein. Limited 20 year warranty - see manufactures information and coordinate with Division 1 Quality Assurance Section.
- E. LEED Submittals: prepare and submit required documentation for the work of this Section in accordance with USGBC LEED Reference Guide for Building Design and Construction (v4) and Division 01 Section "LEED v4 BD+C: School Requirements".
 1. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
 2. Building product disclosure and optimization: Provide required documentation to secure the maximum MR credits, including but not limited to:
 - a. Environmental product declarations and Health Product Declarations.
 - b. Sourcing of raw materials.
 - c. Material ingredients.
 3. Project material cost data: Provide invoices, receipts, statements, and other evidence required to document total cost for materials used for Project.
 4. Waste management and disposal records complying with Division 01 Section "Construction Waste Management and Disposal".
 - a. For products diverted from disposal in landfills and incinerators, and where recycled resources are directed back to the manufacturing process. Include a statement indicating percentage of materials diverted and recycled and the costs associated with each.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Installer experienced in performing work of this section who has specialized in installation of work similar to that required for this project.
 - 1. Engage installer certified as a [Forbo "Associate Mechanic" or INSTALL certified Resilient Installer (standard installations)] [Forbo "Master Mechanic" (complex installations)].
 - 2. Certificate: Submit certificate indicating installer qualification.
- B. Regulatory Requirements:
 - 1. Fire Performance Characteristics: Provide resilient linoleum sheet flooring with the following fire performance characteristics as determined by testing products in accordance with ASTM method indicated below by a certified testing laboratory or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - a. Critical Radiant Flux: Class 1 Rating per NFPA 253 (ASTM E 648) (0.45 watts/cm² or greater).
 - b. Smoke Density: Less than 450 per NFPA 258 (ASTM E 662).
- C. Mock-Ups:
 - 1. Provide substrate preparation mockups in 15' x 15' size for Architect's review and approval. (As shown on the drawing)
 - 2. After substrate preparation approval by Architect, provide rubber tile flooring installation mockups over prepared substrate in 10' x 10' size for Architect's review and approval. (As shown on the drawing)
 - 3. Dry lay mockup is required for two classrooms - consisting of design, pattern of all colors used in pattern, cut and place to show entire pattern design, showing a net fit seam. Location of mockup to be determined in field. After mockup is approved, Linoleum Flooring Patterns will be released for ordering material for entire project.
 - 4. The contractor shall not proceed with installation until the required mockup has been approved by Architect.
- D. Pre-Installation Meetings: Conduct pre-installation meeting to verify project requirements, substrate conditions, manufacturer's installation instructions, and manufacturer's warranty requirements. Comply with Division 1 Project Management and Coordination (Project Meetings) Section.
- E. Pre-Installation Testing: Conduct pre-installation testing as follows: [Specify testing (i.e., bond test, pH test, etc).]

1.8 DELIVERY, STORAGE, AND HANDLING

- A. General: Comply with Division 1 Product Requirements Sections.
- B. Ordering: Comply with manufacturer's ordering instructions and lead time requirements to avoid construction delays.
- C. Delivery: Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.

- D. Storage and Protection: Store materials protected from exposure to harmful weather conditions and at temperature and humidity conditions recommended by manufacturer.
 - 1. Material should be stored in areas that are fully enclosed and weathertight. The permanent HVAC should be fully operational, controlled and set at a minimum of 68° F (20° C) for at least 48 hours prior to the installation.

1.9 PROJECT CONDITIONS

- A. Environmental Requirements/Conditions: In accordance with manufacturer's recommendations, areas to receive flooring should be clean, fully enclosed and weathertight. The permanent HVAC must be fully operational, controlled and set at a minimum of 68° F (20° C) for a minimum of seven days prior to, during, and seven days after the installation. The flooring material should be conditioned in the same manner for at least 48 hours prior to the installation. Areas to receive flooring shall be adequately lighted to allow for proper inspection of the substrate, installation and seaming of the flooring, and for final inspection.
- B. Temperature Requirements: Maintain air temperature in spaces where products will be installed for time period before, during, and after installation as recommended by manufacturer.
 - 1. Temperature Conditions: 68° F (20° C) for a minimum of seven days prior to, during, and seven days after the installation.
- C. Existing Conditions: [Specify existing conditions affecting product use and installation.]
- D. Field Measurements: Verify actual measurements/openings by field measurements before fabrication; show recorded measurements on shop drawings. Coordinate field measurements and fabrication schedule with construction progress to avoid construction delays.

1.10 SEQUENCING AND SCHEDULING

- A. Finishing Operations: Install tile flooring after finishing operations, including painting and ceiling operations, have been completed.
- B. Concrete Curing: Do not install tile flooring over concrete substrates until substrates have cured and are dry to bond with adhesive as determined by resilient flooring manufacturer's recommended bond, and pH test.
 - 1. Flooring installer shall have the responsibility for carrying out the manufacturer's recommended bond, moisture test, and pH test prior to commencing installation.
 - 2. Submit test results and report any unsatisfactory conditions to Construction Manager and Architect.

1.11 WARRANTY

- A. Provide warranties, commencing from the date of Substantial Completion, in accordance with Conditions of Contract and Division 01 Section "Warranties".
- B. Manufacturer Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty agreeing to repair or replace sheet linoleum floor covering that fails within the warranty period.

1. Failures include, but are not limited to, the following:
 - a. Material manufacturing defects.
 - b. Surface wear and deterioration to the point of wear-through where normal foot and wheeled traffic is occurring or where the material is being properly maintained.
 - c. Failure due to substrate moisture exposure not exceeding 98% relative humidity when tested according to ASTM F2170.
 2. Warranty Period: Twenty (20) years commencing on Date of Substantial Completion.
 3. Manufacturer's warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.
- C. Installation Warranty: Submit the contractor's installation warranty signed by the Construction Manager at Risk (CM-R) and Installer for Owner's Acceptance, agreeing to repair or replace work which has failed as a result of defects in workmanship. Upon notification of such installation deficiencies, within the warranty period, make necessary repairs or replacement at the convenience of the Owner.
1. Warranty Period: Two (2) year limited warranty commencing on Date of Substantial Completion from contractor.
 2. Installation warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.

1.12 MAINTENANCE

- A. Extra Materials: Deliver to Owner extra materials from same production run as products installed. Package products with protective covering and identify with descriptive labels. Comply with Division 01 Closeout Submittals (Maintenance Materials) Section.
1. Quantity: Furnish quantity of flooring units equal to 3% of amount installed.
 2. Delivery, Storage and Protection: Comply with Owner's requirements for delivery, storage and protection of extra materials.

PART 2 - PRODUCTS

2.1 MANUFACTURES

- A. Subject to Architect's review for conformance with Contract Documents and the requirements specified herein, provide products from one of the following listed manufacturers:
1. Forbo Flooring, Inc. Hazleton, PA
 2. Gerflor USA
 3. Tarkett, Ohio
- Or equal

2.2 LINOLEUM SHEET RESILIENT FLOOR COVERING

- A. Linoleum Sheet Flooring and Adhesive:

1. Description: Homogeneous linoleum sheet made primarily of natural materials consisting of linseed oil, wood flour, and rosin binders, mixed and calendared onto natural jute backing. Pattern and color shall extend throughout total thickness of material.
2. Basis of Design: "Marmoleum Marbled Linoleum Sheet and Linoleum Adhesive" as manufactured by Forbo Flooring, Inc., Hazleton, PA.
3. Width: 2 Meters (79")
4. Length: 32 Meters (105 Linear Feet)
5. Gauge: 2.5mm (1/10")
6. Backing: Jute
7. Patterns and Colors: Provide up to 19 colors in custom patterns as selected by Architect.
8. Adhesive: Forbo Sustain 100 Adhesive, or approved equal.
9. Net Fit Seams: All Marmoleum sheet products shall be installed utilizing net fit seams.
10. Topshield 2 Finish: Applied during the manufacturing process.

2.3 ACCESSORIES

- A. Trowelable Leveling and Patching Compounds: Latex-modified, Portland cement based or blended hydraulic-cement-based formulation.
1. Ardex, Inc., products "Feather Finish" and "Ardex SD-P".
 2. Quikrete Companies, product "Fast-Set Underlayment 1248".
 3. Silpro Masonry Systems Inc., product "Ultra Skim and Speedtop"
 4. Or equal.
- B. Adhesive: "Sustain 100M Adhesive" as manufactured by Forbo Flooring, Inc.
1. Non-flammable; 100% Solvent free
 2. Contains MicroSept™ anti-microbial protection
 3. Not flammable; 100% Solvent free
 4. Storage: Freeze-thaw stable: 1 cycle at 20o F. If the pail is opened and found to be frozen, let it set closed and undisturbed at room temperature until thawed. DO NOT try to mix frozen adhesive.
 5. Shelf life: 2year in unopened container
 6. Appearance and Odor: Blue paste with little or no odor
 7. VOC Emissions: 0 grams per liter (calculated per CA South Coast Rule 1168)
 8. Spread Rate: Approximately 125 square feet per gallon
 9. No moisture testing required as per the latest version of ASTM 1869 or ASTM 2170 is required when using Forbo Sustain 100 Adhesive.
 10. Tolerant up to 100% RH

2.4 RELATED MATERIALS

- A. Related Materials: Refer to other sections for related materials as follows:
1. Resilient Flooring Accessories: Refer to Division 9 Finishes Sections for resilient flooring accessories.
 2. Expansion Joint Covers: Refer to other specification section for expansion joint covers to be used with resilient flooring.

2.5 SOURCE QUALITY

- A. Source Quality: Obtain flooring product materials from a single manufacturer.

PART 3 - EXECUTION

3.1 MANUFACTURER'S INSTRUCTIONS

- A. Compliance: Comply with manufacturer's product data, including product technical bulletins, product catalog installation instructions, and product carton instructions for installation.

3.2 EXAMINATION

- A. Site Verification of Conditions: Verify substrate conditions (which have been previously installed under other sections) are acceptable for product installation in accordance with manufacturer's instructions.
 - 1. Perform manufacturer's recommended bond test, bond test, and pH test, prior to commencing the installation.
- B. Material Inspection: In accordance with manufacturer's installation requirements, visually inspect materials prior to installation. Material with visual defects shall not be installed and shall not be considered as a legitimate claim.
- C. Moisture Testing: As specified in Division 03 Section "Cast-In-Place Concrete". No further moisture testing shall be required prior to installation of the resilient floor coverings.

3.3 PREPARATION

- A. Adjacent Surfaces Protection: Protect adjacent work areas and finish surfaces from damage during work of this Section.
- B. Surface Preparation:
 - 1. General: Prepare floor substrate in accordance with manufacturer's instructions.
 - 2. Floor Substrate: Floors shall be sound, smooth, flat, permanently dry, clean, and free of all foreign materials including, but not limited to, dust, paint, grease, oils, solvents, curing and hardening compounds, sealers, asphalt and old adhesive residue.
 - 3. Concrete Floor Substrate: Concrete floor substrate shall have a minimum compressive strength of 3,000 psi. Refer to Division 03 Section "Cast-In-Place Concrete" for patching and repairing crack materials, and leveling compounds with portland cement based compounds.
 - 4. Moisture Vapor Emission Testing:
 - a. Perform subfloor moisture testing in accordance with ASTM F 2170, "Standard Test Method for Determining Relative Humidity in Concrete Slabs Using in-situ Probes" as recommended by flooring manufacturer. Proceed with installation only after substrates pass testing.
 - 1) Perform three tests for first 1,000 ft² and at least one additional test for each 1,000 ft².
 - 2) Select test locations to provide information about moisture distribution across the entire concrete floor slab, especially

areas of potential high moisture. Include a test location within 3 ft of each exterior wall.

- b. Do not proceed with flooring installation until results of moisture tests are accepted by flooring and adhesive manufacturer. All test results shall be documented and submitted to the architect for record.

3.4 INSTALLATION

- A. Adhesive Flooring Installation: Begin laying sheet at the starting point, ensuring that the sheet is laid exactly along the layout lines. The sheet must be installed into wet adhesive, do not spread the adhesive in an area larger than the sheet can be installed while the adhesive is still wet. The successful installation of sheet border is best accomplished by following one of two strategies. (1) When laying out sheet, determine the edge of a field sheet a comfortable distance from each wall and then snap chalk lines around the perimeter of the room. When spreading adhesive, use these lines as a guide to stop spreading adhesive and install the field tile up to the adhesive spread lines. Once the field tiles have been installed, the border tiles and be "dry" fitted (before spreading the adhesive). After the border sheet have been cut, adhesive can be applied in the area of the border tiles and the tiles can be placed immediately into the wet adhesive. (2) Plan the sequence of spreading adhesive so that the border sheet can be cut and placed into the adhesive before the adhesive working time has been exceeded. Immediately after installation, roll the tile with a 100 pound roller in both directions and repeat as necessary to ensure adequate transfer of adhesive to the backing.

1. Adhesive Material Installation: Use trowel as recommended by flooring manufacturer for specific adhesive. Spread at a rate of approximately 150 ft²/gallon, as recommended by flooring manufacturer.

- B. Installation Techniques:

1. Where demountable partitions and other items are indicated for installation on top of finished flooring, install flooring before these items are installed.
2. Scribe, cut, fit flooring to butt tightly to vertical surfaces, permanent fixtures and built-in furniture, including pipes, outlets, edgings, thresholds, nosings, and cabinets.
3. Extend flooring into toe spaces, door reveals, closets, and similar openings.
4. Install flooring on covers for telephone and electrical ducts, and similar items occurring within finish floor areas. Maintain overall continuity of color and pattern with pieces of flooring installed on these covers.
5. Do not install resilient flooring over expansion joints. Use expansion joint covers manufactured for use with resilient flooring. Refer to other specification sections for expansion joint covers.
6. Adhere resilient flooring to substrate without producing open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, or other surface imperfections in completed installation.
 - a. Use adhesive applied to substrate in compliance with flooring manufacturer's recommendations, including those for trowel notching, adhesive mixing, and adhesive open and working times.
7. Roll resilient flooring as required by resilient flooring manufacturer.
8. Heat-weld all seams, vertical and horizontal.

- C. Finish Flooring Patterns: As indicated or as selected by Architect.

3.5 FIELD QUALITY REQUIREMENTS

- A. Manufacturer's Field Services: Upon Owner's request and with at least 72 hours notice, provide manufacturer's field service consisting of product use recommendations and periodic site visit for inspection of product installation in accordance with manufacturer's instructions.
 - 1. Site Visits: schedule the following min. site visits.
 - a. Monitor manufacturer's recommended bond, moisture test, and pH test.
 - 1). Additional site visits resulted from failed substrate moisture and/or pH tests shall be borne by Construction Manager.
 - b. Substrate preparation.
 - c. Mock up installation.
 - d. Interim installation.
 - e. Warranty inspection prior to Substantial Completion.

3.6 CLEANING

- A. Cleaning: Remove temporary coverings and protection of adjacent work areas. Repair or replace damaged installed products. Clean installed products in accordance with manufacturer's instructions prior to owner's acceptance. Remove construction debris from project site and legally dispose of debris.
 - 1. Remove visible adhesive and other surface blemishes using cleaning methods recommended by floor manufacturer.
 - 2. Sweep and vacuum floor after installation.
 - 3. Do not wash floor until after time period recommended by flooring manufacturer.
 - 4. Damp mop flooring to remove black marks and soil.
- B. Resilient edge and transition strips:
 - 1. Install edge strips at all edges of flooring, which would otherwise be exposed.
 - 2. Place resilient edge strips tightly butted to flooring and secure with adhesive recommended by the edge strip manufacturer.

3.7 PROTECTION

- A. Protection: Protect installed product and finish surfaces with heavy duty kraft paper from damage during construction. Remove and legally dispose of protective covering at time of Substantial Completion.

3.8 INITIAL MAINTENANCE PROCEDURES

- A. General: Include in Contract Sum Amount cost for initial maintenance procedures, and execute procedures after flooring installation as recommended by flooring manufacturer.
- B. Initial maintenance "Starter Kit" supplied by manufacturer. Initial maintenance to be conducted by flooring contractor.
- C. Drying Room Yellowing: Expose installed linoleum to either natural or artificial light to allow "drying room yellowing" (the film is a natural occurrence of the oxidation of the linseed oil in linoleum products) on installed linoleum flooring to disappear prior to initiating temporary protection procedures.

END OF SECTION

SECTION 096560

RESILIENT ATHLETIC RUBBER FLOORING

(PART OF WORK OF SECTION 090005 - RESILIENT FLOORS, TRADE-BID REQUIRED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Rubber Athletic Floor – Cleat Resistant Tile
 - 2. Rubber Athletic Floor - Tile
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 033000 - CAST-IN-PLACE CONCRETE for substrate.
 - 2. Section 096460 - WOOD ATHLETIC FLOORING.
 - 3. Division 09 – FINISHES for various a butting floor finishes.
 - 4. Section 116620 - ATHLETIC EQUIPMENT for floor plate and sleeve assemblies.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
 - 1. Product Data for Credit IEQ 4.1: For adhesives and glues used at Project site, documentation including printed statement of VOC content.
 - 2. Product Data for Credit IEQ 4.2: For interior paints used at Project site, documentation including printed statement of VOC content.
 - 3. Product Data for Credit IEQ 4.3: For interior flooring used at Project site, documentation including printed statement of VOC content and compliance with FloorScore Standard.
- C. Shop Drawings: Show installation details and locations of the following:
 - 1. Border tiles.
 - 2. Floor patterns.
 - 3. Locations of floor inserts for athletic equipment.

- D. Samples for Verification: For each type, color, and pattern of floor covering indicated, 12-inch-square Samples of same thickness and material indicated for the Work.
- E. Qualification Data: For resilient athletic flooring installer.
- F. Maintenance Data: For floor coverings to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Installer shall be manufacturer's approved for the requirements of the project, experienced in the resilient athletic flooring industry and shall have a minimum of five (5) years experiencing in the installation of similar products.
- B. Mockups:
 - 1. Provide substrate preparation mockups in 15'x15' size for Architect's review and approval. (As shown on the drawing)
 - 2. After substrate preparation approval by Architect, provide rubber tile flooring installation mockups over prepared substrate in 10'x10' size for Architect's review and approval. (as shown on the drawing)

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storing.
- B. Store materials to prevent deterioration. Store tiles on flat surfaces and rolls upright.

1.6 PROJECT CONDITIONS

- A. Adhesively Applied Products:
 - 1. Adhesive Mondo worldwide PU-400 100% RH or approve equal
 - 2. Maintain temperatures within range recommended in writing by manufacturer, but not less than 70 deg F or more than 95 deg F, in spaces to receive floor coverings during the following time periods:
 - a. 48 hours before installation unless longer period is recommended in writing by manufacturer.
 - b. During installation.
 - c. 48 hours after installation, unless longer period is recommended in writing by manufacturer.
 - 3. After post installation period, maintain temperatures within range recommended in writing by manufacturer, but not less than 55 deg F or more than 95 deg F.
 - 4. Close spaces to traffic during floor covering installation.
 - 5. Close spaces to traffic for 48 hours after floor covering installation, unless manufacturer recommends longer period in writing.
- B. Install floor coverings after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 ATHLETIC FLOORING

A. Provide the following types:

1. Rubber Athletic Floor - Mondo Sport Impact Tile

- a. Subject to Architect's review for conformance with Contract Documents and the requirements specified herein, provide products from one of the following listed manufacturers:

- i. Mondo America Inc
- ii. Johnsonite, Inc.
- iii. Nora System, Inc.
- iv. Or equal

b. Designated on drawings as ASF-1 – ASF-5

c. Basis of Design Mondo Worldwide America - Mondo Sport Impact

- i. Tile Size: 36" x 36".
- ii. Edges: glued
- iii. Thickness 10mm" thick.
- iv. Standard Colors: Speckled Colors with Hammered Texture

2.2 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, Portland cement based or blended hydraulic-cement-based formulation.

1. Ardex, Inc., products "Feather Finish" and "Ardex SD-P".
2. Quikrete Companies, product "Fast-Set Underlayment 1248".
3. Silpro Masonry Systems Inc., product "Ultra Skim and Speedtop"
4. Or equal.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances, moisture content, and other conditions affecting performance.

1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to manufacturer's written recommendations to ensure adhesion of floor coverings.

B. Concrete Substrates: Prepare according to ASTM F 710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Alkalinity and Adhesion Testing: Perform tests recommended by flooring manufacturer. Proceed with installation only after substrate alkalinity falls within a range on pH scale not less than 5 or more than 9 pH, or as otherwise required in writing by manufacturer of flooring.
3. Moisture Vapor Emission Testing:
 - a. Perform subfloor moisture testing in accordance with ASTM F 2170, "Standard Test Method for Determining Relative Humidity in Concrete Slabs Using in-situ Probes"; as recommended by flooring manufacturer. Proceed with installation only after substrates pass testing.
 - 1) Perform three tests for first 1,000 ft² and at least one additional test for each 1,000 ft².
 - 2) Select test locations to provide information about moisture distribution across the entire concrete floor slab, especially areas of potential high moisture. Include a test location within 3 ft of each exterior wall.
 - b. Do not proceed with flooring installation until results of moisture tests are accepted by flooring and adhesive manufacturer. All test results shall be documented and submitted to the architect for record.

C. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended in writing by manufacturer. Do not use solvents.

D. Use trowelable leveling and patching compound to fill cracks, holes, and depressions in substrates.

E. Move floor coverings and installation materials into spaces where they will be installed at least 48 hours in advance of installation, unless manufacturer recommends a longer period in writing.

1. Do not install floor coverings until they are same temperature as space where they are to be installed.

F. Sweep and vacuum clean substrates to be covered by floor coverings immediately before installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, and dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 FLOOR COVERING INSTALLATION, GENERAL

A. Comply with manufacturer's written installation instructions.

B. Scribe, cut, and fit floor coverings to butt neatly and tightly to vertical surfaces, equipment anchors, floor outlets, and other interruptions of floor surface.

C. Extend floor coverings into toe spaces, door reveals, closets, and similar openings, unless otherwise indicated.

- D. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating subfloor markings on floor coverings. Use nonpermanent, nonstaining marking device.
- E. Adhere products to substrates using a full spread of adhesive applied to substrate to comply with adhesive and floor covering manufacturers' written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.
 - 1. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.4 FLOOR TILE INSTALLATION

- A. Lay out tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
 - 1. Lay tiles in pattern indicated.
- B. Discard broken, cracked, chipped, or deformed tiles.
- C. Match tiles for color and pattern by selecting tiles from cartons in same sequence as manufactured and packaged, if so numbered.
 - 1. Lay tiles in pattern of colors and sizes indicated.

3.5 CLEANING AND PROTECTING

- A. Perform the following operations immediately after completing floor covering installation:
 - 1. Remove adhesive and other blemishes from floor covering surfaces.
 - 2. Sweep and vacuum floor coverings thoroughly.
 - 3. Damp-mop floor coverings to remove marks and soil.
 - a. Do not wash floor coverings until after time period recommended in writing by manufacturer.
- B. Protect floor coverings from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period. Use protection methods recommended in writing by manufacturer.
 - 1. Do not move heavy and sharp objects directly over floor coverings. Protect floor coverings with plywood or hardboard panels to prevent damage from storing or moving objects over floor coverings.

END OF SECTION

SECTION 096620

TERRAZZO FLOORING

(Part of Work of Section 070001 - TERRAZZO, Filed Sub-Bid Required)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Thin-set epoxy terrazzo.
 2. Precast epoxy terrazzo units.
 3. Vapor mitigation at epoxy terrazzo flooring systems.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 079200 - JOINT SEALANTS for sealants installed with terrazzo.

1.1 SUBMITTALS

- A. Product data: Submit manufacturer's technical product specifications for each type of product required for installation; installation instructions, warranty information.
- a. Material Certificates:
- 1) Epoxy Resin: For each type of resin required indicating that materials meet specification requirements, by manufacturer.
 - 2) Aggregate: For each type of aggregate required indicating compatibility with terrazzo mix, signed by aggregate supplier.
- B. LEED Submittals: prepare and submit required documentation for the work of this Section in accordance with USGBC LEED Reference Guide for Building Design and Construction (v4) and Division 01 Section "LEED v4 BD+C: School Requirements".

1. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
 2. Building product disclosure and optimization: Provide required documentation to secure the maximum MR credits, including but not limited to:
 - a. Environmental product declarations.
 - b. Sourcing of raw materials.
 - c. Material ingredients.
 3. Project material cost data: Provide invoices, receipts, statements, and other evidence required to document total cost for materials used for Project.
 4. Waste management and disposal records complying with Division 01 Section "Construction Waste Management and Disposal".
 - a. For products diverted from disposal in landfills and incinerators, and where recycled resources are directed back to the manufacturing process. Include a statement indicating percentage of materials diverted and recycled and the costs associated with each.
 5. For flooring system including adhesives and sealers, submit documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- C. Shop drawings: Prepare and submit Shop Drawings that include plans, elevations, sections, component details and attachments to other work. Include terrazzo installation requirements. Show layout of the following:
1. Divider strips.
 2. Expansion joint strips.
 3. Accessory strips.
 4. Abrasive strips.
 5. Stair treads, risers and landings.
 6. Terrazzo patterns.
- D. Samples:
1. Samples for Verification: Prepare and submit cured system of samples for each type, material, color and pattern of terrazzo and accessory required showing the full range of color, texture and pattern variations expected. Label each terrazzo sample to identify manufacturer's matrix color and aggregate types, size and proportions. Prepare samples of the same thickness and from same material to be used for the Work in the size indicated below:
 - 1) Epoxy Terrazzo: samples as selected by Architect from 6" x 6" samples. (No limit is set on number of samples).
 - 2) Accessories: 6 inch long Samples of each type and kind of exposed strip item required.
- E. Informational Submittals
1. Qualification Data: Submit two copies of qualification data.

- a. Include list of projects indicating name and location of project, name of Owner, name and contact information for General Contractor or Construction Manager, and name and contact information for Architect.
- b. Include letter from NTMA with the name of the Project and name of member, stating current member status.

F. Material Certificates:

- 1. Epoxy Resin: For each type of resin required indicating that materials meet specification requirements, by manufacturer.
- 2. Aggregate: For each type of aggregate required indicating compatibility with terrazzo mix, signed by aggregate supplier.

G. Closeout Submittals

- 1. Maintenance Literature: Terrazzo Contractor shall submit two copies of maintenance recommendations from NTMA.

1.4 QUALITY ASSURANCE

- A. Acceptable Epoxy Resin Manufacturer: An Associate Member of the NTMA, experienced in manufacturing epoxy resin in accordance with NTMA standards and with a record of successful in-service performance, as well as sufficient production capacity to produce required materials.
- B. Acceptable Terrazzo Trade Contractor: A Contractor Member of NTMA whose work has resulted in construction with a record of successful in-service performance.
 - 1. Installer shall have completed terrazzo installations within the past 5 years of scale and complexity similar to the proposed installation.
 - 2. Engage an installer who has won an Honor Award from the National Terrazzo and Mosaic Association (NTMA) in the last three (3) years
 - 3. If installer is not a contractor member of the NTMA, he shall submit a list of 5 completed projects of similar magnitude and complexity.
 - 4. Installer must be acceptable to terrazzo flooring manufacturer.
 - 5. Installation shall be performed by an applicator with minimum 3 years' experience in work of similar nature and scope. Installer must be approved by the manufacturer of the floor surfacing materials. The contractor shall furnish a written statement from the manufacturer that the installer is acceptable.
 - 6. Installer to verify locations of all flexible joints required by the provisions of this Section and by the recommendations of the related material manufacturers.
 - a. Joint locations may or may not be shown in drawings.
 - b. Refer to drawings required under submittals above.
- C. Source Limitations: Obtain primary terrazzo materials through one source from a single manufacturer. Provide secondary materials including patching and fill material, joint sealant, and repair materials of type and from source recommended by manufacturer of primary materials.
- D. Source Limitations for Aggregates: Obtain each color, grade, type, and variety of aggregate from one source with resources to provide materials of consistent quality in appearance and physical properties.
- E. NTMA Standard: Comply with NTMA Guide Specification and written recommendations for terrazzo type indicated unless more stringent requirements are specified.

- F. Preinstallation Conference: The general contractor shall conduct a conference at Project site to comply with requirements in Division 01. Review methods and procedures related to terrazzo including, but not limited to, the following:

1. Inspect concrete substrate, location of joints and/or saw cuts to minimize subfloor cracking and locations of control joints and strips in terrazzo surface.
2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
3. Review terrazzo mixes and patterns.
4. Review special terrazzo designs and patterns.
5. Review dust-control procedures.
6. Coordination with the work of other trades affecting or affected by the work of this Section.

- G. Mockups: Prior to starting application of flooring, provide full scale portable mock-up to establish acceptable quality, durability, and appearance. Mock-up size must not be less than 4 square feet to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Acceptable mock-up to be standard of quality for installed work.
2. 4' x 4' mockup panel including all the colors and divider strips used on project.
3. Unacceptable installed work to be removed and replaced or refinished until acceptable.

1.5 PROJECT CONDITIONS

- A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting terrazzo installation.
- B. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.
- C. Close spaces to traffic during epoxy terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.
- D. Control and collect dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.

1. Provide dustproof partitions and temporary enclosures to limit dust migration and to isolate areas from noise.

- E. Acceptable Substrates

1. Level tolerance: Concrete subfloor shall be level with a maximum variation from level of 1/4" in 10 feet. Any irregularity of the surface requiring patching and/or leveling shall be done using material approved by the manufacturer.
2. Concrete floor shall receive a light steel trowel finish.
3. Concrete shall be cured a minimum of 28 days. No curing agents are to be used in areas to receive terrazzo.
4. Concrete slab shall have an efficient puncture-resistant, reinforced moisture vapor barrier 15 mils thick minimum placed directly under the concrete slab (for slab on grade). Do not use vapor barrier manufactured with recycled materials. Testing must be done to verify the moisture vapor emission rate of the slab. Moisture vapor emission and moisture content t

Commented [LC1]: Key Resin recommends 15 mils- coordinate with concrete spec

esting must conform with the requirements of ASTM F-1869 (Calcium Chloride Test) and ASTM F-1270 (Relative Humidity Probe Test). Apply manufacturer's recommended moisture vapor emission control material based upon the highest test reading to mitigate vapor emissions at all concrete floor areas, scheduled to receive terrazzo.

5. Saw cutting of control joints must be done between 12 and 24 hours after placement of the structural concrete.

1.6 WARRANTIES

- A. A. Provide warranties, commencing from the date of Substantial Completion, in accordance with Contractor Conditions and Division 01 Section "Warranties".
 1. Manufacturer's Warranty: against any and all defects in manufacturing materials and workmanship for a period no less than two (2) years.
 2. Installer's Warranty: against any and all defects in material installation and workmanship for a period no less than two (2) years.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. NTMA Standards: Comply with NTMA's "Terrazzo Specifications and Design Guide" and with written recommendations for terrazzo type indicated unless more stringent requirements are specified.

2.2 EPOXY TERRAZZO FLOORING

- A. Manufacturers: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 1. Terroxy Resin Systems
 2. Crossfield Products Corp., Dex-O-Tex Division; Equal
 3. General Polymers Corporation.
 4. Key Resin Company
 5. Master Terrazzo Technologies, LLC
 6. TEC, Inc., an H. B. Fuller Company
 7. Or equal
- B. Basis of Design: 3/8" thick "Key Epoxy Green Terrazzo" thin-set epoxy terrazzo system as manufactured by Key Resin Company, Batavia, OH. C. Thickness: 3/8 inch.
- C. Materials:
 1. Flexible Reinforcing Membrane: Manufacturer's resinous membrane for substrate crack preparation and reflective crack reduction.
 2. Primer: Product of manufacturer recommended for substrate and use indicated.
 3. Epoxy resin binder mixed according to manufacturer's recommendation and tested without aggregate added. All specimens cured for 7 days at 75 degrees plus or minus 2 degrees Fahrenheit and 50% plus or minus 2% R.H. The product shall meet the following requirements:

Property	Test Method	Requirement
Hardness	ASTM D-2240 using Shore D Durometer	60-85
Tensile Strength	ASTM D-412 Specimen made using "C" die	3,000 psi Minimum
Compressive Strength	ASTM D-695 Specimen "B" cylinder	10,000 psi Minimum
Chemical Resistance	ASTM D-1308 seven days at room temperature by immersion method	No deleterious effects: Distilled Water Mineral Oil Isopropanol Ethanol 0.025 Detergent Solution 1% Soap Solution 10% Sodium Hydroxide 10% Hydrochloric Acid 30% Sulfuric Acid

4. Epoxy Resin: Manufacturer's standard recommended for use indicated and in color required for mix indicated. The finished epoxy terrazzo shall meet the following requirements:

Property	Test Method	Requirement
Flammability	ASTM D-635	Self-extinguishing, extent of burning .025 inches maximum.
Thermal Coefficient of Linear Expansion	ASTM-D-696	25 x 10 ⁻⁶ inches per inch per degree to 140 degrees Fahrenheit
Bond Strength	ACI Committee No. 403/503 Bulletin Title No.59-43 (Pages 1139-1141)	100% concrete failure minimum, with 300 PSI minimum tensile strength.

5. Marble Chips or Glass Aggregate:
- Size: To conform with NTMA gradation standards.
 - Hardness according to ASTM C-241 Ha-10 minimum.
 - 24 hours absorption rate not to exceed 0.75 percent.
 - Chips shall contain no deleterious or foreign matter.
 - Dust content less than 1% by weight.
6. Finishing Grout: Resin based.
7. Divider and Accessory Strips:

- a. Thin-Set Divider Strips: Angle or Type, 1/4, 3/8" inch deep (note: match floor depth)
 - 1) Material: Alloy of Zinc
 - 2) Type: "L" strip: 3/8 inch by 1/2 inch.
 - 3) Heavy Top Thickness: Shall be 1/8", 1/4", 1/2" at locations indicated, plus other additional thickness(s) as required to achieve intended result.
 - a) All insert accent circles at Lobby to have 1/4 inches di-viders strips.
 - b) All waves and curves and outer rim of the custom school logo to have 1/2-inch dividers strips.
 - c) Custom school logo to have 1/8-inch dividers strips.
 - b. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material, thickness, and color of divider strips and in depth required for topping thickness indicated.
 - c. Accessory Strips: Match divider-strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:
 - 1) Base bead and base dividers.
 - 2) Nosings for stair treads and landings.
 - 3) Edge beads for exposed edges of terrazzo.
 - 4) Solid zinc Insert Letters: to match terrazzo flooring depth.
- E. Bond Strength of Epoxy Terrazzo: 300 lb. failure according to field test method for surface soundness and adhesion as described in ACI Committee No. 403 Bulletin.
- F. Mix: Comply with NTMA's "Guide Specification for Epoxy Terrazzo" and manufacturer's written instructions for component proportions and mixing. *All custom mixtures to use 50% of size one chips and 50% size two chips. Mother of Pearl to be "Classic Mother of Pearl".*
1. Custom Mix Color and Pattern:
- Custom Mix Color and Pattern:
- a. T-1 White Epoxy Terrazzo
 - 1) Epoxy Resin Color: White.
 - 2) Silver coated clear Lass aggregate 15%
 - 3) Mother of pearl aggregate 10%
 - 4) Light grey marble chips aggregate 10%
 - 5) Blue glass aggregate 10%
 - 6) Silver aggregate 20%
 - 7) Copper aggregate 15%
 - 8) Silver coated amber aggregate 20%
 - b. T-2 Light Grey Epoxy Terrazzo
 - 1) Epoxy Resin Color: Light grey.
 - 2) Silver coated clear Lass aggregate 15%
 - 3) Mother of pearl aggregate 10%
 - 4) Light grey marble chips aggregate 10%

- 5) Blue glass aggregate 10%
- 6) Silver aggregate 20%
- 7) Copper aggregate 15%
- 8) Silver coated amber aggregate. 20%
- c. T-3 Green Epoxy Terrazzo
 - 1) Epoxy Resin Color: Dark green.
 - 2) Silver coated gold chips 35%
 - 3) Silver coated green glass chips 35%
 - 4) Green glass chips 15%
 - 5) Mirror glass aggregate 15%
- d. T4 Gold Epoxy Terrazzo
 - 1) Epoxy Resin Color: gold
 - 2) All sided mirror chips 25%
 - 3) Silver coated yellow glass aggregate 25%
 - 4) Silver coated amber glass aggregate 25%
 - 5) Mother of pearl aggregate 25%
- e. T5 Black Epoxy Terrazzo
 - 1) Epoxy Resin Color: black
 - 2) Mother of pearl classic chips 15%
 - 3) Spark copper chips 25%
 - 4) Mabele chips 60%
- f. T6 Grey Epoxy Terrazzo
 - 1) Epoxy Resin Color: grey
 - 2) Clear glass aggregate 15%
 - 3) Mother of pearl chips 20%
 - 4) Black marble chips 25%
 - 5) Copper aggregate 15%
 - 6) Silver coated amber aggregate 25%
- g. T7 White/cream Epoxy Terrazzo
 - 1) Epoxy Resin Color: white
 - 2) Imported white marble chips 15%
 - 3) Mother of pearl chips 20%
 - 4) White marble chips 25%
 - 5) Burgandy marble chips pper aggregate 15%
- h. T8 Medium grey Epoxy Terrazzo
 - 1) Epoxy Resin Color: grey
 - 2) Clear glass aggregate 40%
 - 3) White marble chips 60%
- i. T9 Black/Grey Epoxy Terrazzo
 - 1) Epoxy Resin Color: black
 - 2) Black marble chips 50%
 - 3) Blue marbel chips 50%

- j. T-10 Green Epoxy Terrazzo
 - 1) Epoxy Resin Color: Dark green.
 - 2) Clear glass chips 60%
 - 3) Green glass chips 40%

Custom school logos consisting of five colors of terrazzo (T-)

2.3 PRECAST EPOXY TERRAZZO

- A. Manufacturers
 - 1. Subject to compliance with requirements, provide products by one of the following specified manufacturers:
 - a. Wausau Tile, Inc.
 - b. Concord Terrazzo Company, Inc.
 - c. Or approved equal.
- B. Basis of Design: "Tectura Designs" precast epoxy terrazzo system as manufactured by Wausau Tile, Inc.
- C. Materials
 - 1. Epoxy Resin.
 - 2. Aggregates: All aggregates to meet ASTM C-33 specifications, cleaned and properly graded to size. Aggregate shall be blended to meet individual project requirements.
 - 3. Marble chips, size to conform with NTMA gradation standards.
 - 4. Abrasive Inserts: Shall consist of silicon carbide and black epoxy.
 - 5. Caulks & Sealants:
 - a. Urethane or Polyurethane Sealant as approved by terrazzo manufacturer.
 - b. Color to be selected by Architect from manufacturer's standard color pallet.
 - 6. Cleaner: Liquid neutral chemical cleaner, with pH factor between 7 and 8, of formulation recommended by sealer manufacture for type of precast terrazzo used and complying with NTMA requirements.
 - 7. Sealer: Colorless, slip and stain-resistant penetrating sealer with pH factor between 7 and 8, that does not affect color or physical properties of precast terrazzo surface. Flash point (ASTM D56): 80 degrees F, Minimum.
- D. Fabrication
 - 1. Sizing Tolerances:
 - a. All units to conform to shop drawings with a 1/16" tolerance in dimension.
 - 2. Precast Surfaces and Edges:
 - a. All exposed edges to be ground and polished with a minimum of 1/16" bevel.
 - b. All finished surfaces to be ground and polished, free of holes and to have overall uniformity in matrix and aggregate.
 - c. All precast epoxy terrazzo finished surfaces to be sealed with a sealer approved by manufacturer.
- E. Precast Straight Terrazzo Base Units:
 - 1. Size: 3/8-inch thick at curved columns and 3/4 inches thick at all other locations; cast in maximum lengths possible, but not less than 36 inches.
 - 2. Type: As indicated on drawings.
 - 3. Height: As indicated on drawings.
 - 4. Top Edge: As indicated on drawings.

Commented [LC2]: You took out the base type-cove or straight base?

5. Outside Corner Units: With finished returned edges at outside corner.
6. Surface to be ground & polished, free of holes or rough areas.
7. Surfaces to be uniform in appearance.
8. Color and Pattern: Terrazzo base to match adjacent terrazzo flooring. Multiple base colors shall be required.

F. Precast Terrazzo Stair Units:

1. Basis of Design: "E-31" as manufactured by Wausau Tile, Inc.
2. Comply with precast manufacturer's written recommendations for fabricating precast terrazzo units in sizes and profiles indicated.
3. Reinforce units as required by unit sizes, profiles, and thicknesses and as recommended by manufacturer.
4. Surface to be ground & polished, free of holes or rough areas.
5. Surfaces to be uniform in appearance.
6. Finish exposed-to-view edges and reveals to match face finish.
7. Size: 1" thick x length of stair.
8. 3/8" chamfered face edges.
9. Abrasive Inserts (for stair treads): Shall consist of three 1/2" lines of silica sand and black epoxy. Stop 3" from both ends.
10. Colors: As indicated on drawings.

Commented [LC3]: Are colors for precast stairs, benches, etc. on drawings? There will be pricing differences between the colors, for example, T-8 will be less expensive than T-1

G. Precast Terrazzo Benches Vertical and Horizontal units:

1. Comply with precast manufacturer's written recommendations for fabricating precast terrazzo units in sizes and profiles indicated.
2. Reinforce units as required by unit sizes, profiles, and thicknesses and as recommended by manufacturer.
3. Surface to be ground & polished, free of holes or rough areas.
4. Surfaces to be uniform in appearance.
5. Finish exposed-to-view edges and reveals to match face finish.
6. Size: As indicated on drawings.
7. 3/8" chamfered face edges.
8. Colors: As indicated on drawings.

H. Setting Materials:

1. Epoxy setting Materials:
 - a. 100% solid epoxy 1, gray or white.
 1. All thinset materials, epoxy based, will require a full setting bed be applied to all appropriate surfaces of the precast terrazzo, vertical and horizontal, where contact is made with the substrate or structural base.
 2. Alignment of precast should be straight and true to all dimensions. It may not vary more than 1/8" in length, height or width.
 3. Install anchors as shown on details, if required.
 4. Fill joints between with manufacturer – approved caulk or as specified..

Commented [LC4]:

2.4 MISCELLANEOUS ACCESSORIES

- A. Moisture Mitigation: Terrazzo contractor shall provide moisture vapor tolerant and alkaline resistant, two-component, low odor, water-based epoxy resin surfacing system broadcast with silica aggregate provided by the same epoxy resin manufacturer to reduce alkalinity levels and moisture emission to not more than 3 lbs./per 1000 sq. ft per 24 hours.
 1. Prime Coat: primer/scratch coat.

2. Matrix: bodycoat/aggregate composition.

B. Strip Adhesive: Epoxy-resin adhesive recommended by adhesive manufacturer for this use and acceptable to terrazzo manufacturer.

1. Use adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24). C. Anchoring Devices:

1. Strips: Provide mechanical anchoring devices for strip materials as required for secure attachment to substrate.
2. Precast Terrazzo: Provide mechanical anchoring devices as recommended by fabricator for proper anchorage and support of units for conditions of installation and support.

D. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.

E. Joint Compound: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.

F. Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.

G. Sealer: Slip- and stain-resistant penetrating-type sealer that is chemically neutral with pH factor between 7 and 10; does not affect color or physical properties of terrazzo; is recommended by sealer manufacturer; and complies with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated.

1. Surface Friction: Not less than [0.5 (OSHA)] [0.6 (ADA)] according to ASTM D 2047.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

3.2 PREPARATION

A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application. B. Concrete Slabs:

1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.
 - a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 - b. Repair damaged and deteriorated concrete according to terrazzo manufacturer's written recommendations.
 - c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.

2. Verify that concrete substrates are visibly dry and free of moisture.
3. Alkalinity and Adhesion Testing: Perform tests recommended by flooring manufacturer. Proceed with installation only after substrate alkalinity falls within a range on pH scale not less than 5 or more than 9 pH, or as otherwise required in writing by manufacturer of flooring.
4. Moisture Vapor Mitigation System and Testing
 - a. Comply with Manufacture's written instruction for moisture mitigation system application.
 - b. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with installation only after substrate have maximum moisture-vapor-emission rate of 3lb of water/1000 sq. ft. in 24 hours, or as otherwise required in writing by manufacturer of flooring.
5. Relative Humidity Testing:
 - a. Perform relative humidity test, ASTM F 2170
 - b. Protect other work from dust generated by grinding operations. Control dust to prevent air pollution and comply with environmental protection regulations.
1. Erect and maintain temporary enclosures and other suitable methods to limit dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.
- C. Proceed with installation only after unsatisfactory conditions, including levelness tolerances, cracking, and excessive moisture vapor transmission have been corrected.

3.3 EPOXY TERRAZZO FLOORING INSTALLATION A.

General:

1. Comply with NTMA's written recommendations for terrazzo and accessory installation.
 2. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions and NTMA's "Terrazzo Specifications and Design Guide."
 3. Installation Tolerance: Limit variation in terrazzo surface from level to 1/4 inch in 10 feet noncumulative.
 4. Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.
 5. Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted.
- B. Thickness: 3/8 inch nominal.
- C. Flexible Reinforcing Membrane:
1. Prepare and prefill substrate cracks with membrane material.
 2. Install membrane to produce full substrate coverage in areas to receive terrazzo.
 3. Reinforce membrane with fiberglass scrim, include at 100% of terrazzo floor area.
 4. Prepare membrane according to manufacturer's written instructions before applying substrate primer.
- D. Primer: Apply to terrazzo substrates according to manufacturer's written instructions.
- E. Strip Materials:

1. Divider and Control-Joint Strips:
 - a. Locate divider strips in locations indicated.
 - b. Install control-joint strips in locations indicated.
 - c. Install control-joint strips with 1/4-inch gap between strips, and install sealant in gap.
 - d. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.
2. Accessory Strips: Install accessory strips as required to provide a complete installation.
3. Abrasive Strips: Install with surface of abrasive strip positioned 1/16 inch higher than terrazzo surface.

F. Finishing:

1. Rough Grinding:
 - a. Grind with 24 or finer grit stones or with comparable diamond abrasives.
 - b. Follow initial grind with 60/80 grit stones or with comparable diamond abrasives.
 2. Grouting:
 - a. Clean terrazzo with clean water and rinse. Allow to dry.
 - b. Apply epoxy grout per manufacturer's instructions.
 - c. Allow grout to cure.
 3. Fine Grinding/Polishing: Grind with 120 grit or with comparable diamond abrasives until all grout is removed from surface. Produce surface with a minimum of 70 percent aggregate exposure.
- G. Repair: Remove and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.

3.4 PRECAST TERRAZZO INSTALLATION

- A. Install precast terrazzo units using method recommended NTMA and manufacturer unless otherwise indicated.
- B. Installation Tolerance: Set units with alignment level and true to dimensions, varying 1/8-inch maximum in length, height, or width; noncumulative.
- C. Do not install units that are chipped, cracked, discolored, or not properly finished.
- D. A minimum of 95 percent thin-set coverage on the back of the terrazzo tread and riser. All Terrazzo tread and riser must have back-buttering. The corners of the terrazzo tread and riser must have good mortar support to prevent cracking.
- E. Epoxy Bed Thickness: 1/4 inch unless otherwise indicated.
- F. Repair terrazzo areas that evidence lack of bond between topping and underbed according to NTMA's written recommendations.
- G. Seal joints between units with joint compound matching precast terrazzo matrix.

3.5 CLEANING AND PROTECTION

A. Cleaning:

1. Remove grinding dust from installation and adjacent areas.
2. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow to dry thoroughly.

B. Sealing:

1. Seal surfaces according to NTMA's written recommendations.
2. Apply 3 coats sealer according to sealer manufacturer's written instructions.

C. Protection: Protect installed product and finish surfaces with Ram Board Heavy-Duty Temporary Floor Protection from damage during construction. Remove and legally dispose of protective covering at the time of Substantial Completion. Ram Board to be 46 mil thick. Tape Seams between boards with Ram Board's Vapor-Cure Tape. Perimeter Edges to use Ram Board's Edge Tape.

D. Final Cleaning and Sealing

1. Clean the surface from dust and debris.
2. Apply 2 final coats of sealer.

END OF SECTION

SECTION 096710
RESINOUS FLOORING

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Epoxy flooring systems.
 2. Vapor mitigation at epoxy flooring system
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 079200 - JOINT SEALANTS for sealants installed at joints in resinous flooring systems.
 2. Division 04 Section "Concrete Masonry Units": for masonry wall receiving integrated epoxy cove base finish.
 3. Division 0 Section "Joint Sealants": for sealing the joint between epoxy flooring integral cove base and abutting dissimilar materials.
 4. Division 09 Section "Ceramic Tiling": for abutting stone thresholds at door openings.
 5. Section 09 – Finishes: for various abutting flooring and wall finishes.
 6. Division 22 Section "Plumbing": for floor drains and plumbing fixtures penetrating the finish flooring; trench drains requiring continuous resinous flooring finish.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's technical data, application instructions, and recommendations for each resinous flooring component required.
- B. LEED Submittals:
1. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
 2. Building product disclosure and optimization: Provide required documentation to secure the maximum MR credits, including but not limited to:

- a. Environmental product declarations.
 - b. Sourcing of raw materials.
 - c. Material ingredients.
 3. Project material cost data: Provide invoices, receipts, statements, and other evidence required to document total cost for materials used for Project.
 - C. Shop Drawings: Provide floor plans, to scale matching Architectural Plans, which indicate extent of each different resinous flooring system including system type, color and pattern, degree of slip resistance, and dimensioned locations of control joints and seams where systems meet.
 1. Provide enlarged details, at minimum 3 inch = 1 foot scale, indicating conditions at walls, door frames, pits, curbs, equipment pedestals, and the like.
 - D. Samples for Verification: For each resinous flooring system required, 6 inches square, applied to a rigid backing by Installer for this Project.
 - E. Material Certificates: For each resinous flooring component, signed by manufacturer.
 - F. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.
 - G. Maintenance Data: For resinous flooring to include in maintenance manuals.
 - H. Test Results: For field testing of substrate, signed by installer.
- 1.4 QUALITY ASSURANCE
- A. Installer Qualifications: Engage an experienced installer (applicator) who is experienced in applying resinous flooring systems similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance, and who is acceptable to resinous flooring manufacturer.
 1. Engage an installer who employs only persons trained and approved by resinous flooring manufacturer for applying resinous flooring systems indicated.
 2. Engage an installer who is certified in writing by resinous flooring manufacturer as qualified to apply resinous flooring systems indicated.
 - B. Source Limitations: Obtain primary resinous flooring materials, including primers, resins, hardening agents, grouting coats, and topcoats, through one source from a single manufacturer. Provide secondary materials, including patching and fill material, joint sealant, and repair materials, of type and from source recommended by manufacturer of primary materials.
 - C. Mockups: Apply mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 1. Apply full-thickness mockups on 48-inch- square floor area selected by Design Professional.
 - a. Include 48-inch length of integral cove base.
 2. Simulate finished lighting conditions for Design Professional's review of mockups.

3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
 - D. Pre-installation Conference: Prior to installation of flooring, meet at the Project site with the Manufacturer's Representative, the Installer, the Architect, the Owner's Representative and the Owner's Testing Agency. Record discussions and furnish copy to each participant. Topics to be discussed shall include, but not be limited to:
 1. Existing and new slab conditions
 2. Owner's Testing Agency results of mandatory testing
 3. Surface preparation
 4. Required room temperatures
 5. Ventilation
 6. Step-by-step application procedures
 7. Curing time and methods
 8. Protection of completed Work
 - E. Testing:
 1. ASTM E 1907 Standard Guide to Methods of Evaluating Moisture Conditions of Concrete Floors to Receive Resilient Floor Coverings
 - a. ASTM F 1869 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Sub-floor Using Anhydrous Calcium Chloride
 - b. ASTM D 4263 Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method
 - c. ASTM F 2170 Standard Test Method for Determining Relative Humidity in Concrete Slabs Using in situ Probes
 2. ASTM F 710 Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring
 3. ASTM D 4501 Standard Test Method for Shear Strength of Adhesive Bonds Between Rigid Substrates by the Block-Shear Method
- 1.5 DELIVERY, STORAGE, AND HANDLING
- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.
 - B. Store materials to prevent deterioration from moisture, heat, cold, direct sunlight, or other detrimental effects.
- 1.6 PROJECT CONDITIONS
- A. Environmental Limitations: Comply with resinous flooring manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting resinous flooring application.
 1. Maintain ambient air temperature between 65oF and 85oF.
 2. Type I Concrete substrate shall be properly cured for a minimum of 30 days. Type III Concrete shall be properly cured for a minimum of 7 days.
 - B. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous flooring application.

- C. Close spaces to traffic during resinous flooring application and for not less than 24 hours after application, unless manufacturer recommends a longer period.

1.7 WARRANTY

- A. Manufacturer shall furnish a single, written warranty covering 100% of the material and labor costs protecting the client from delamination, disbondment, and osmotic/hydrostatic failure for a period of three (3) years from date of installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Dur-A-Flex, Inc.
 - 2. Sherwin Williams.
 - 3. Stonhard, Inc
 - 4. Or equal
- B. VOC Content of Liquid-Applied Flooring Components: Not more than 100 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

2.2 RESINOUS FLOORING SYSTEM

- A. Basis of Design: 1/4" Hybri-Flex AQ as manufactured by Dur-A-Flex.
 - 1. Color: Up to 6 colors as selected by Architect.
 - 2. Wearing Surface: Textured for slip resistance.
 - 3. Integral Cove Base: 4 inches high with 1 inch radius
 - 4. Overall System Thickness: 1/4 inch.
 - 5. VOC: Less than 100 g/l.
 - 6. Moisture Vapor Limit: 20lbs./1,000 sq.ft./24 hour per ASTM F-1869 or 99%RH per ASTM F-2170.
- B. System Components: Manufacturer's standard components which are compatible with each other and as follows:
 - 1. Topping: Dur-A-Flex, Inc. Poly-Crete SL resin, hardener and SL aggregate.
 - 2. The quartz aggregate shall be Dur-A-Flex, Inc. Q28 colored quartz.
 - 3. Broadcast coat: Dur-A-Glaze #4 resin and hardener.
 - 4. Grout and topcoat: Dur-A-Flex, Inc. Accelera resin and hardener.

2.3 ACCESSORY MATERIALS

- A. Patching and Fill Material: Resinous product of or approved by resinous flooring manufacturer and recommended by manufacturer for application indicated.
- B. Moisture Mitigation: Terrazzo contractor shall provide moisture vapor tolerant and alkaline re-sistant, two-component, low odor, water-based epoxy resin surfacing system broadcast with silica aggregate provided by the same epoxy resin manufacturer to reduce alkalinity levels and moisture emission to not more than 3 lbs./per 1000 sq. ft per 24 hours.
 - 1. Prime Coat: primer/scratch coat.

2. Matrix: bodycoat/aggregate composition.

PART 3 - EXECUTION

3.1 PREPARATION

- A. General: Prepare and clean substrates according to resinous flooring manufacturer's written instructions for substrate indicated. Provide clean, dry, and neutral Ph substrate for resinous flooring application.
- B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.
 1. Roughen concrete substrates as follows:
 - a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 - b. Comply with ASTM C 811 requirements, unless manufacturer's written instructions are more stringent.
 2. Repair damaged and deteriorated concrete according to resinous flooring manufacturer's written recommendations.
 3. Verify that concrete substrates are dry:
 - a. Moisture Vapor Emission Testing:
 - 1) Perform subfloor moisture testing in accordance with ASTM F 2170, "Standard Test Method for Determining Relative Humidity in Concrete Slabs Using in-situ Probes" as recommended by flooring manufacturer. Proceed with installation only after substrates pass testing.
 - a) Perform three tests for first 1,000 ft² and at least one additional test for each 1,000 ft².
 - b) Select test locations to provide information about moisture distribution across the entire concrete floor slab, especially areas of potential high moisture. Include a test location within 3 ft of each exterior wall.
 - 2) Do not proceed with flooring installation until results of moisture tests are accepted by flooring and adhesive manufacturer. All test results shall be documented and submitted to the architect for record.
 4. Verify that concrete substrates have neutral pH and that resinous flooring will adhere to them. Perform tests recommended by manufacturer. Proceed with application only after substrates pass testing.
- C. Resinous Materials: Mix components and prepare materials according to resinous flooring manufacturer's written instructions.
- D. Use patching and fill material to fill holes and depressions in substrates according to manufacturer's written instructions.
- E. Treat control joints and other nonmoving substrate cracks to prevent cracks from reflecting through resinous flooring according to manufacturer's written recommendations.

3.2 APPLICATION

- A. General: Apply components of resinous flooring system according to manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness indicated.

1. Coordinate application of components to provide optimum adhesion of resinous flooring system to substrate, and optimum intercoat adhesion.
 2. Cure resinous flooring components according to manufacturer's written instructions. Prevent contamination during application and curing processes.
 3. At substrate expansion and isolation joints, provide joint in resinous flooring to comply with resinous flooring manufacturer's written recommendations.
 - a. Apply joint sealant to comply with manufacturer's written recommendations.
- B. Apply primer over prepared substrate at manufacturer's recommended spreading rate.
- C. Apply reinforcing membrane to substrate cracks.
- D. Integral Cove Base: Apply cove base mix to wall surfaces before applying flooring. Apply according to manufacturer's written instructions and details including those for taping, mixing, priming, troweling, sanding, and topcoating of cove base. Round internal and external corners.
 1. At top of base provide stainless steel "J" bead.
- E. Apply self-leveling slurry body coat(s) in thickness indicated for flooring system.
 1. Broadcast aggregates and, after resin is cured, remove excess aggregates to provide surface texture indicated.
- F. Apply troweled or screeded body coat(s) in thickness indicated for flooring system. Hand or power trowel and grout to fill voids. When cured, sand to remove trowel marks and roughness.
- G. Apply topcoat(s) in number of coats indicated for flooring system and at spreading rates recommended in writing by manufacturer.
- H. Accessories:
 1. Provide flooring system with fiberglass scrim for maximum tensile strength and crack isolation.
 2. Provide flooring system with antimicrobial agent.
 3. Fiberglass reinforcing tape and bond breaker to bridge over wall/floor joint.
 4. Provide termination satin anodized aluminum L-strip at all open edges and top of integral wall base.
 5. Sanitary sealant at top of integral cove base and fill 1/8" to 1/4" gap around floor drains.
 6. Stainless steel "J"bead at top of cove base: equal to schluter.

3.3 CLEANING AND PROTECTING

- A. Protect resinous flooring from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by resinous flooring manufacturer.
- B. Cure the resinous flooring system materials in compliance with manufacturer's directions, taking care to prevent contamination during stages of the installation and prior to completion of the curing process.
- C. Protect the resinous flooring system from damage and wear during other phases of the construction operation, using temporary coverings as recommended by the manufacturer, if required. Remove temporary covering just prior to final inspection.
- D. Clean the resinous flooring system just prior to final inspection, using materials and procedures suitable to the system manufacturer.
- E. Some cleaners will affect the color, gloss or texture of your polymer floor surfaces. To determine how your cleaner will perform, first test each cleaner, in a small area, utilizing your cleaning technique. This precaution will demonstrate the effect of your cleaner and technique. If no deleterious effects are observed, continue with the procedure. If deleterious effects do occur, modify the cleaning material and/or procedure. For recommendations regarding types of cleaners, contact the 1/8" Decorative Broadcast Epoxy Flooring System manufacturer.

END OF SECTION

SECTION 096813

TILE CARPETING

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Carpet tile.
 2. Carpet accessories.
 3. Substrate preparation for carpet and accessories.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110 - SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 096510 - RESILIENT FLOORING AND ACCESSORIES for resilient wall base and accessories installed with carpet.
 2. Division 03 Section "Cast-In-Place Concrete": Concrete substrate to receive carpet, and concrete sealer admixtures.
 3. Division 09 "Resilient Flooring and Accessories" sections: for resilient wall base where indicated in conjunction with carpeting, and for floor finishes abutting and/or related to carpeting.
 4. Other Division 09 sections: for floor finishes abutting and/or related to this tile carpeting.
 5. Divisions 26 and 27: for electrical and telecommunications receptacles, voice/data/video outlets, devices occurring in floor.

1.3 REFERENCES

- A. Except as modified by governing codes and by the Contract Documents, comply with the applicable provisions and recommendations of the following:
1. American Society for Testing and Materials (ASTM):
 - a. E84 – Test Method for Surface Burning Characteristics of Building Materials.
 - b. E648 – Test Method for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source.
 2. The Carpet and Rug Institute:

- a. CRI Carpet Installation Standard - 2011.
- b. NFPA 253 - Test for Critical Radiant Flux of Floor Covering Systems.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated. Include manufacturer's written data on physical characteristics, durability, and fade resistance. Include installation recommendations for each type of substrate required.

- B. LEED Submittals:

- 1. MRc2, Building Product Disclosure and Optimization, Environmental Product Declarations (EPD):

If project needs the product specific EPD for LEED point totals, then delete options for the industry-wide EPDs.

- a. Option 1: For carpets, submit industry-wide (generic) EPDs or product specific Type III EPDs.

- 2. MRc3, Building Product Disclosure and Optimization, Sourcing of Raw Materials:

- a. General: For credit achievement calculation, submit location of products sourced (extracted, manufactured, and purchased), indicating number of miles from the project site.
 - b. Option 1: For carpets, submit corporate sustainability reports (CSR).
 - c. Option 2, Leadership Extraction Practices:

- 1) Extended Producer Responsibility: For carpets, submit evidence of reclamation and recycling programs.
 - 2) Recycled Content: For carpet, submit percentages by weight of postconsumer and preconsumer recycled content for products having recycled content. Include statement indicating costs for each product having recycled content.

- 3. MRc4, Building Product Disclosure and Optimization, Material Ingredients:

- a. Option 1, Material Ingredient Reporting: For carpets, submit Cradle to Cradle (C2C) certifications (v2 Basic or v3 Bronze level) or Health Product Declarations (HPD) or Declare product labels.
 - b. Option 2, Material Ingredient Optimization: For carpets, submit Cradle to Cradle (C2C) certifications (v2 Gold Platinum or v3 Silver Gold Platinum).

- 4. EQc2, Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010.

- a. For carpets, submit test results, including TVOC emissions and VOC content, or Carpet and Rug Institute (CRI), Green Label Plus certifications.
 - b. For adhesives, submit test results, including TVOC emissions and VOC content, or GreenGuard Gold certifications.
 - c. For wet-applied products, submit volume used.

C. Shop Drawings: Show the following:

1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet.
2. Carpet type, color, and dye lot.
3. Seam locations, types, and methods.
4. Type of subfloor.
5. Type of installation.
6. Pattern type, repeat size, location, direction, and starting point.
7. Pile direction.
8. Type, color, and location of insets and borders.
9. Type, color, and location of edge, transition, and other accessory strips.
10. Transition details to other flooring materials.

D. Samples: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.

1. Carpet Tile: Full-size Sample.
2. Exposed Edge, Transition, and other Accessory Stripping: 12-inch-long Samples.

E. Product Schedule: Use same room and product designations indicated on Drawings and in schedules.

F. Sample Warranties: For special warranties.

G. Maintenance Data: For carpet to include in maintenance manuals specified in Division 01. Include the following:

1. Methods for maintaining carpet, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
2. Precautions for cleaning materials and methods that could be detrimental to carpet.

1.5 QUALITY ASSURANCE

A. Installer Qualification: Firm with not less than 5 consecutive years of experience in installation of commercial carpeting of type, quantity and installation methods similar to work of this section. Flooring contractor possessing Contract for the product installation shall not sub-contract the labor without written approval of the Project Manager. Flooring contractor will be responsible for proper product installation, including floor testing and preparation as specified by the manufacturer and JOB CONDITIONS herein. Flooring contractor to provide Owner a written installation warranty that guarantees the completed installation to be free from defects in materials and workmanship for a period of one year after job completion.

B. Manufacturer's Qualifications: Firm (carpet mill) with not less than 5 consecutive years of production experience with carpet similar to type specified in this section; whose published product literature clearly indicates general compliance of products with requirements of this section. Obtain each type of product from one source and by a single manufacturer.

C. Carpeting Standard: Comply with the Carpet and Rug Institute's "CRI Carpet Installation Standard," 2011 edition, formerly CRI 104 "Standard For Installation Specification Of Commercial Carpet."

D. Dye Lots: All carpet of the same type in continuous areas shall be from the same dye lots.

- E. Fire-Test-Response Characteristics: Provide products with the critical radiant flux classification indicated in Part 2, as determined by testing identical products per ASTM E 648 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.
- F. Mockups: Before installing carpet, build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. General: Comply with CRI Carpet Installation Standard, Section 5, "Storage and Handling."
- B. Deliver carpet in original mill protective covering with mill register numbers and tags attached.
- C. Before beginning installation, inspect all goods to verify all goods uniformity, quality, color and texture against the approved samples. It shall also be inspected for defects, color variations, or shipping damage. Defective and danged materials shall be immediately replaced at no additional cost to the Owner.
 - 1. Carpet tiles shall be inspected to insure that carpet tiles are from the same dye lot.
- D. The contractor shall not proceed with installation until the required mock up has been approved by Architect.

1.7 PROJECT CONDITIONS

- A. General: Comply with CRI Carpet Installation Standard, Section 7, "Site Conditions."
- B. Environmental Limitations: Do not install carpet until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- C. Do not install carpet over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet manufacturer.
- D. Where demountable partitions, equipment, or other items are indicated for installation on top of carpet, install carpet before installing these items.

1.8 WARRANTY

- A. Provide certified copies of the following manufacturer's product warranties:
 - 1. Lifetime Face Fiber Wear
 - 2. Lifetime Staining/Soiling Resistance
 - 3. Lifetime Color Pattern Permanency
 - 4. Lifetime Delamination of Backing
 - 5. Lifetime Edge Ravel
 - 6. Lifetime Tuft Bind
 - 7. Lifetime Floor Compatibility
 - 8. Lifetime Antistatic

9. Lifetime Antimicrobial Protection
 10. Lifetime Flammability
 11. Lifetime Cushion Resiliency
 12. Lifetime Dimensional Stability
 13. Lifetime Floor Release
 14. Lifetime Moisture Resistance
- B. Warranty shall be sole source responsibility of the manufacture. Second source warranties or warranties that involve parties' other than the manufacturer is unacceptable.
- C. General Warranty: Special warranty specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.
- D. Special Carpet Warranty: Written warranty, signed by carpet manufacturer agreeing to replace carpet that does not comply with requirements or that fails within specified warranty period. Warranty does not include deterioration or failure of carpet due to unusual traffic, failure of substrate, vandalism, or abuse. Failures include, but are not limited to, more than 10 percent loss of face fiber, edge raveling, snags, runs, and delamination.
1. Warranty Period: Ten years from date of Substantial Completion.
- E. Installers Warranty: The Contractor (Installer) shall fully guarantee the installation against defects in workmanship, seaming and loss of adhesion to floor for a period of one (1) year from the date of Substantial Completion. Upon written notice, the Installer shall repair or replace the affected area at no cost to MDC.
- 1.9 EXTRA MATERIALS (ATTIC STOCK)
- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Carpet: Tiles equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to Architect's review for conformance with Contract Documents and the requirements specified herein, provide products from one of the following listed manufacturers:
1. Milliken Carpet
 2. Mannington Commercial
 3. Tandus Centiva.
 4. Or equal.

- B. Basis of Design Tile : Milliken Laylines - Americas 50cm X 50cm tile.

Basis of Design Tile : Milliken Consequence 2.0 Sequel - 50cm X 50cm

Basis of Design Tile for Media Center : Milliken Edge - Lit 1 meter X 1 meter.

Preliminary color selection upon approval during construction.

1. CPT-1: Consequence 2.0 Sequel as manufactured by Milliken Carpet

Color: to be determined

CONSEQUENCE 2.0 CARPET TILE CHARACTERISTICS

- a. Construction: Tufted, Textured Loop
- b. Face Fiber: Milliken-Certified WearOn® Nylon Type 6,6 Nylon.
- c. Tile Size: 19.7" x 19.7"
- d. Dye Method: PrintWorks™ Precision Dyeing
- e. Pile Density: 8024
- f. Gauge: 1/12"
- g. Surface Pile Weight: 28 oz/yd² (949.4 g/m²)
- h. Stitches per Inch: 9.6"
- i. Backing System: PVC-Free WellBAC® Comfort Plus Cushion
Available with TractionBack®
- j. Antimicrobial Treatment: Lifetime Warranted built in protection
- k. Critical Radiant Flux Classification: Not less than 0.45 W/sq.cm.
- l. Colorfastness to Crocking: ≥ 4.0 Wet or Dry
- m. Colorfastness to Light: ≥ 4.0 at 80 Hours
- n. Stain Resistance: StainSmart® AATCC-175, must pass Acid Red 40 spot test with an 8 or better.
- o. Dimensional Stability: Aachen Method Din 54318, 0.2% or less per ISO 2551.
- p. Smoke Density: < or = 450 flaming.
- q. Static Generation: (AATCC-134) 20% R.H., 70° F. ≤ 3.5 KV, Permanent Conductive
- r. FiberFlame-Spread and Flammability:
 - i. (Radiant Panel ASTM-E-648) ≥ 0.45 (Class I)
 - ii. Carpet flammability shall meet federal Flammability Standards CPSC FF 1- 70, when tested in accordance with ASTM D2959-70T (Methenamine Pill Test).
- s. Milliken Contract products have standard WellBAC cushion. Texture Appearance Retention Rating (TARR) is Severe Traffic End-Use Applications .
- t. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement based formulation provided by carpet tile manufacturer.
- u. Adhesives: Water-resistant, mildew-resistant, non-staining, pressure-sensitive type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet tile and recommended by carpet tile manufacturer for releasable installations.
- v. Indoor Air Quality Control: CRI Green Label Plus™ GLP0793, Carpet Category 5Y
- w. Water intake for Manufacturing and Finishing purposes must not exceed 1 gallon per square meter.
- x. Additional Manufacturer Warranties: Lifetime Face Fiber Wear, Lifetime Color Pattern Permanency, and Lifetime Moisture Resistance

- y. Pattern and Color: Understanding the importance of pattern and color for aesthetics, as well as appearance retention and maintainability, the Architect reserves the right to reject any product or manufacturer based solely on pattern and color considerations.

2. CPT-2, CPT-2a, CPT-2b: Laylines as manufactured by Milliken Carpet

Color: Colors to be determined

LAYLINES CARPET TILE CHARACTERISTICS

- a. Construction: Tufted, Textured Loop
- b. Face Fiber: Milliken-Certified WearOn® Nylon Type 6,6
- c. Tile Size: 19.7" x 19.7"
- d. Dye Method: PrintWorks™ Precision Dyeing
- e. Pile Density: 5400 minimums
- f. Gauge: 1/10"
- g. Surface Pile Weight: 20 oz./sq. yd. minimum.
- h. Stitches per Inch: 14.4
- i. Backing System: PVC-Free WellBAC® Comfort
Cushion Available with TractionBack®
- j. Antimicrobial Treatment: Lifetime Warranted built in protection
- k. Critical Radiant Flux Classification: Not less than 0.45 W/sq.cm.
- l. Colorfastness to Crocking: (AATCC 165) ≥ 4.0 Wet or Dry
- m. Colorfastness to Light: (AATCC 16E) ≥ 4.0 at 80 Hours
- n. Stain Resistance: StainSmart® AATCC-175, must pass Acid Red 40 spot test with an 8 or better.
- o. Dimensional Stability: Aachen Method Din 54318, 0.2% or less per ISO 2551.
- p. Smoke Density: < or = 450 flaming.
- q. Static Generation: (AATCC-134) 20% R.H., 70° F. ≤ 3.5 KV, Permanent Conductive Fiber.
- r. Flame-Spread and Flammability:
 - i. (Radiant Panel ASTM-E-648) ≥ 0.45 (Class I)
 - ii. Carpet flammability shall meet federal Flammability Standards CPSC FF 1- 70, when tested in accordance with ASTM D2959-70T (Methenamine Pill Test).
- s. Milliken Contract products have standard WellBAC cushion. Texture Appearance Retention Rating (TARR) is Severe Traffic End-Use Applications .
- t. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement based formulation provided by carpet tile manufacturer.
- u. Adhesives: Water-resistant, mildew-resistant, non-staining, pressure-sensitive type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet tile and recommended by carpet tile manufacturer for releasable installations.
- v. Indoor Air Quality Control: CRI Green Label Plus™ GLP0793, Carpet Category 5Y.
- w. Water intake for Manufacturing and Finishing purposes must not exceed 1 gallon per square meter.
- x. Additional Manufacturer Warranties: Lifetime Face Fiber Wear, Lifetime Color Pattern Permanency, and Lifetime Moisture Resistance
- y. Pattern and Color: Understanding the importance of pattern and color for aesthetics, as well as appearance retention and maintainability, the Architect

reserves the right to reject any product or manufacturer based solely on pattern and color considerations.

3. CPT-3: Edge Lit as manufactured by Milliken Carpet

Color: Color: EDG141-201-65 Atmosphere

EDGE-LIT CARPET TILE CHARACTERISTICS

- a. Construction: Tufted, Textured Loop
- b. Face Fiber: Milliken-Certified WearOn® Nylon Type 6,6.
- c. Tile Size: 39.4" x 39.4"
- d. Dye Method: PrintWorks™ Precision Dyeing.
- e. Pile Density: 6541
- f. Gauge: 1/12.
- g. Surface Pile Weight: 15 oz/yd² (508.6 g/m²)
- h. Stitches per Inch: 9.8" minimum
- i. Backing System: PVC-Free WellBAC® Comfort Cushion
Available with TractionBack®
- j. Antimicrobial Treatment: Lifetime Warranted built in protection
- k. Critical Radiant Flux Classification: Not less than 0.45 W/sq.cm.
- l. Colorfastness to Crocking: (AATCC 165) ≥ 4.0 Wet or Dry
- m. Colorfastness to Light: (AATCC 16E) ≥ 4.0 at 80 Hours
- n. Stain Resistance: StainSmart® AATCC-175, must pass Acid Red 40 spot test with an 8 or better.
- o. Dimensional Stability: Aachen Method Din 54318, 0.2% or less per ISO 2551.
- p. Smoke Density: < or = 450 flaming.
- q. Static Generation: (AATCC-134) 20% R.H., 70° F. ≤ 3.5 KV, Permanent Conductive Fiber.
- r. Flame-Spread and Flammability:
 - i. (Radiant Panel ASTM-E-648) ≥ 0.45 (Class I)
 - ii. Carpet flammability shall meet federal Flammability Standards CPSC FF 1- 70, when tested in accordance with ASTM D2959-70T (Methenamine Pill Test).
- s. Milliken Contract products have standard WellBAC cushion. Texture Appearance Retention Rating (TARR) is Severe Traffic End-Use Applications .
- t. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement based formulation provided by carpet tile manufacturer.
- u. Adhesives: Water-resistant, mildew-resistant, non-staining, pressure-sensitive type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet tile and recommended by carpet tile manufacturer for releasable installations.
- v. Indoor Air Quality Control: CRI Green Label Plus™ GLP0793, Carpet Category 5Y.
- w. Water intake for Manufacturing and Finishing purposes must not exceed 1 gallon per square meter.
- x. Additional Manufacturer Warranties: Lifetime Face Fiber Wear, Lifetime Color Pattern Permanency, and Lifetime Moisture Resistance
- y. Pattern and Color: Understanding the importance of pattern and color for aesthetics, as well as appearance retention and maintainability, the Architect

reserves the right to reject any product or manufacturer based solely on pattern and color considerations.

2.3 PERFORMANCE REQUIREMENTS

C. LEED Requirements:

1. MRc2, Building Product Disclosure and Optimization, Environmental Product Declarations (EPD):

If project needs the product specific EPD for LEED point totals, then delete options for the industry-wide EPDs.

- a. Option 1: Provide carpet with industry-wide (generic) EPDs or product specific Type III EPDs.

2. MRc3, Building Product Disclosure and Optimization, Sourcing of Raw Materials:

- a. Option 1: Provide carpets from manufacturers with corporate sustainability reports (CSR).

- b. Option 2, Leadership Extraction Practices:

- 1) Extended Producer Responsibility: Provide carpets from manufacturers with reclamation and recycling programs.
- 2) Recycled Content: Provide carpets manufactured with recycled content.

3. MRc4, Building Product Disclosure and Optimization, Material Ingredients:

- a. Option 1, Material Ingredient Reporting: Provide carpets with Cradle to Cradle (C2C) certifications (v2 Basic or v3 Bronze level) or Health Product Declarations (HPD) or Declare product labels.

- b. Option 2, Material Ingredient Optimization: Provide carpets with Cradle to Cradle (C2C) certifications (v2 Gold Platinum or v3 Silver Gold Platinum).

4. EQc2, Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010.

D. Other Sustainable Design Performance Requirements:

The following is optional. Owner may prefer to be PVC-free. PVC and SBR content may necessitate IAQ testing per Eqc4.

1. Do not permit polyvinyl chloride (PVC) or styrene butadiene rubber (SBR) carpet backing materials.

2.4 INSTALLATION ACCESSORIES

- A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided by or recommended by the carpet manufacturer.

- B. Adhesives: Water-resistant, mildew-resistant, nonstaining type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet and that is recommended by carpet manufacturer.
1. The following items are required for LEED v4:
 - a. Provide adhesives in compliance with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - b. Provide adhesives with VOC content not more than 50g/L when calculated according to 40 CFR 59, Subpart D (EPA method 24).
 - c. Methylene chloride and perchloroethylene may not be intentionally added to adhesives.
 - d. Adhesives films and tapes may be used in lieu of adhesive spread:
 - e. Adhesive Film, for Carpet Tiles: Pressure sensitive adhesive, applied on one side of a polyester film, recommended by carpet tile manufacturer for releasable installation.

PART 3 - EXECUTION

A. EXAMINATION

1. General: Do not start work until work of other trades are substantially completed. Inspect surfaces to receive carpet and verify that all such work is complete to the point where this installation may properly commence. In the event of discrepancy, notify General Contractor. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved. Start of carpet installation indicates acceptance of subfloor conditions and full responsibility for completed work.
2. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet performance. Verify that substrates and conditions are satisfactory for carpet installation and comply with requirements specified.
3. Examine carpet for type, color, pattern, and potential defects.
4. Concrete Subfloors: Comply with CRI Carpet Installation Standard, Section 9, "Testing Concrete Substrates." Verify that concrete slabs comply with ASTM F 710 and the following:
5. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by the carpet manufacturer.
6. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.
7. Proceed with installation only after unsatisfactory conditions have been corrected.

B. PREPARATION

1. General: Comply with CRI Carpet Installation Standard, Section 7.3, "Site Conditions; Floor Preparation," and carpet manufacturer's written installation instructions for preparing substrates indicated to receive carpet installation.
2. Concrete Substrates: Prepare according to ASTM F 710.
3. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
4. Alkalinity and Adhesion Testing: Perform tests recommended by flooring manufacturer. Proceed with installation only after substrate alkalinity falls within a range on pH scale

- not less than 5 or more than 9 pH, or as otherwise required in writing by manufacturer of flooring.
5. Moisture Vapor Emission Testing:
 6. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours, or as otherwise required in writing by manufacturer of flooring.
 7. Relative Humidity Testing:
 8. Perform relative humidity test, ASTM F 2170. Proceed with installation only after substrates have a maximum relative humidity level of 75 percent, or as otherwise required in writing by manufacturer of flooring.
 9. Perform tests indicated above and as recommended by flooring manufacturer. Proceed with installation only after substrates pass testing.
 10. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.
 11. Broom and vacuum clean substrates to be covered immediately before installing carpet. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

C. INSTALLATION

1. Comply with CRI Carpet Installation Standard, Section 18, "Modular Carpet," and with carpet tile manufacturer's written installation instructions.
2. Installation Method, for Adhesive: Partial glue down; install periodic tiles with releasable, pressure-sensitive adhesive.
3. Installation Method, for Adhesive Film: Free lay; apply adhesive film squares at corners of tiles.
4. Do not install tiles with adhesive film at stair and ramp locations.
5. Do not install tiles with adhesive film over existing carpets.
6. Installation Method, for No Adhesives: Free lay; press tiles firmly.
7. Do not install tiles without adhesive at stair and ramp locations.
8. Do not install tiles without adhesive over existing carpets.
9. Carpet Tile Pattern: As directed by Architect.
10. Maintain dye lot integrity. Do not mix dye lots in same area.
11. Install pattern parallel to walls and borders.
12. Do not bridge building expansion joints with carpet.
13. Cut and fit carpet to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet manufacturer.
14. Extend carpet into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
15. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.

D. CLEANING AND PROTECTION

1. Perform the following operations immediately after installing carpet:
2. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet manufacturer.
3. Remove yarns that protrude from carpet surface.
4. Vacuum carpet using commercial machine with face-beater element and HEPA filter.
5. Protect installed carpet to comply with CRI Carpet Installation Standard, Section 20, "Protecting Indoor Installations."

6. Protect carpet against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet manufacturer.

END OF SECTION

SECTION 096910

ACCESS FLOORING

PART 1- GENERAL

1.1 RELATED DOCUMENTS

- A. Plans and general provisions of the Contract, including but not limited to the Agreement and General Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Access flooring panels and understructure designed for use as an HVAC system return plenum
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 064020 - Interior Architectural Millwork for return plenum air intake coordination
 - 2. Section 096510 - RESILIENT FLOORING AND ACCESSORIES for resilient wall base and accessories.
 - 3. Section 096813 - TILE CARPETING for carpeting
 - 4. Section 230000 - Heating Ventilation and Air Conditioning for return plenum coordination

1.3 SYSTEM DESCRIPTION

- A. Access Flooring System: Assemblies composed of modular floor panels on pedestals with stringers and support as required at radiused perimeters

1.4 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide access flooring systems capable of withstanding the following loads and stresses within limits and under conditions indicated, as determined by testing manufacturer's current standard products according to referenced procedures in CISCA A/F, "Recommended Test Procedures for Access Floors":
 - 1. Concentrated Loads: Provide floor panels, including those with cutouts, capable of withstanding a concentrated design load of 2500 lbf with a top-surface deflection under load and a permanent set not to exceed, respectively, 0.10 and 0.010 inch (2.54 and 0.25 mm) according to CISCA A/F, Section I, "Concentrated Loads."

2. Ultimate Loads: Provide access flooring systems capable of withstanding a minimum ultimate load of 6000 lbf without failing, according to CISC A/F, Section II, "Ultimate Loading."
 3. Rolling Loads: Provide access flooring systems capable of withstanding rolling loads of the following magnitude, with a combination of local and overall deformation not to exceed 0.040 inch (1.02 mm) after exposure to rolling load over CISC A/F Path A or B, whichever path produces the greatest top-surface deformation, according to CISC A/F, Section III, "Rolling Loads."
 - a. CISC A/F Wheel 1 Rolling Load: 2000 lbf.
 - b. CISC A/F Wheel 2 Rolling Load: 1500 lbf.
 4. Stringer Load Testing: Provide stringers, without panels in place, capable of withstanding a concentrated load of 450 lbf at center of span with a permanent set not to exceed 0.010 inch (0.25 mm), as determined per CISC A/F, Section IV, "Stringer Load Testing."
 5. Pedestal Axial Load Test: Provide pedestal assemblies, without panels or other supports in place, capable of withstanding a 5000 lbf (22 240 N) axial load per pedestal, according to CISC A/F, Section V, "Pedestal Axial Load Test."
 6. Pedestal Overturning Moment Test: Provide pedestal assemblies, without panels or other supports in place, capable of withstanding an overturning moment per pedestal of 1000 lbf x inches (113 N x meters), according to CISC A/F, Section VI, "Pedestal Overturning Moment Test."
- B. Floor Panel Impact-Load Performance: Provide access flooring system capable of withstanding an impact load of 150 lb when dropped from 36 inches (914 mm) onto a 1-sq. in. (6.5-sq. cm) area located anywhere on panel, without failing. Failure is defined as collapse of access flooring system.
- 1.5 SUBMITTALS
- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
1. For adhesives and glues used at Project site, documentation including printed statement of VOC content.
 2. For interior sealants and sealant primers used at Project site, documentation including printed statement of VOC content.
- C. Shop Drawings: Include layout of access flooring system and relationship to adjoining Work based on field-verified dimensions.
1. Plans indicating specific configuration of floor and indicating locations of voids and millwork benches
 2. Details and sections with descriptive notes indicating materials, finishes, fasteners, typical and special edge conditions, accessories, and understructure.
 3. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- D. Samples for Verification: For each type of flooring material and exposed finish indicated.

1. Resilient Accessories: Manufacturer's standard accessories including samples of each type of gasketing material
 2. Exposed Metal Accessories: 12 inches in length.
 3. One complete full-size floor panel, pedestal, and understructure unit for each type of access flooring system required.
- E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, or performed by access flooring manufacturer and witnessed by a qualified testing agency, for each type of flooring material.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers trained and approved by manufacturer.
- B. Source Limitations: Obtain access flooring system through one source from a single manufacturer.
- C. Regulatory Requirements: Fabricate and install access flooring to comply with NFPA 75 requirements for raised flooring.
- D. Provide floor panels that are clearly and permanently marked on their underside with panel type and concentrated-load rating.
- E. Mockups: Build mockups to verify selections made under sample submittals and to set quality standards for materials and execution.
1. Build mockup of typical access flooring assembly from representative portion of floor including field, perimeter and edge of air intake conditions. Coordinate inclusion of carpet in mockup. Size to be an area no less than five floor panels in length by five floor panels in width.
 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- F. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination."
1. Review connection with mechanical and electrical systems.
 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install access flooring until spaces are enclosed, subfloor has been sealed, ambient temperature is between 40 and 90 deg F, and relative humidity is not more than 70 percent.

1.8 COORDINATION

- A. Coordinate location of mechanical and electrical work, including electrical floor boxes, in underfloor cavity to prevent interference with access flooring pedestals.

- B. Mark pedestal locations on subfloor by use of a grid, with a module equal to width of five floor panels in both directions, to enable mechanical and electrical work to proceed without interfering with access flooring pedestals.
- C. Proceed with installation only after completion of other construction within affected spaces.

PART 2 - PRODUCTS

2.1 FLOOR PANELS AND UNDERSTRUCTURE

- A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:
 - 1. Tate Access Floors, Inc - Basis of Design
 - Concore 1500 by Tate Access Floors, Inc
 - Cementitious-Filled, Formed-Steel Panel Systems:
 - 2. ASM Modular
 - 3. Global IFF
 - 4. Or equal
- B. Floor Panels, General: Provide modular panels complying with the following requirements that one person, using a portable lifting device, can interchange with other field panels without disturbing adjacent panels or understructure:
 - 1. Nominal Panel Size: 24 by 24 inches.
 - 2. Panel Attachment to Understructure: No attachment, set in place.
- C. Cementitious-Filled, Formed-Steel Panels: Fabricated with die-cut flat top sheet and die-formed and stiffened bottom pan formed from cold-rolled steel sheet joined together by resistance welding to form an enclosed assembly, with metal surfaces protected against corrosion by manufacturer's standard factory-applied finish. Fully grout internal spaces of completed units with manufacturer's standard cementitious fill.
- D. Pedestals: Assembly consisting of base, column with provisions for height adjustment, and head (cap); made of steel. Fillet weld head to pedestals, provide support as required for radius perimeter. See Drawings for pedestal height requirements
- E. Stringer Systems: Modular steel stringer systems made to interlock with pedestal heads and form a grid pattern placing stringers under each edge of each floor panel and a pedestal under each corner of each floor panel. Protect steel components with hot-dip galvanized or corrosion-resistant paint finish.
 - 1. Bolted Stringers: System of main and cross stringers connected to pedestals with threaded fasteners accessible from above.
 - 2. Provide continuous gasket at contact surfaces between panel and stringers to deaden sound, to seal off underfloor cavity from above, and to maintain panel alignment and position.

2.2 ACCESSORIES

- A. Adhesives: Manufacturer's standard adhesive for bonding pedestal bases to subfloor.
 - 1. VOC Limits: Use adhesives and sealants with VOC content limits lower than referenced in Section 018113 - SUSTAINABLE DESIGN AND LEED REQUIREMENTS.
- B. Cutouts: Provide cutouts in floor panels for cable penetrations and service outlets. Provide reinforcement or additional support, if needed, to make panels with cutouts comply with standard performance requirements.
 - 1. Number, Size, Shape, and Location: As indicated.
 - 2. Trim edge of cutouts with manufacturer's standard plastic molding.
 - 3. Provide foam-rubber pads for sealing annular space formed in cutouts by cables.
- C. Ramps: Ramp construction, similar to access floor construction, of width and slope indicated but not steeper than 1:12, with raised-disc rubber floor coverings, and of same materials, performance, and construction requirements as access flooring.
- D. Panel Lifting Device: Manufacturer's standard portable lifting device of type required for specified panels. Provide one lifting devices per room of each type required.
- E. Perimeter Support: Where indicated, provide manufacturer's standard method for supporting panel edge and forming transition between access flooring and adjoining floor coverings at same level as access flooring.
- F. Perimeter Gasketing: provide manufacturer's resilient gasketing material at perimeter and as required at other locations.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer and manufacturer's representative present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
 - 1. Verify that substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, foreign deposits, and debris that might interfere with adhesive attachment of pedestals.
 - 2. Proceed with installation only after unsatisfactory conditions have been corrected.
- B. Preinstallation Adhesive Field Test: Before installing pedestals, field test their adhesion to subfloor surfaces as follows:
 - 1. In areas representative of each subfloor surface, set typical pedestal assemblies in same adhesive and methods required for completed work.
 - 2. Allow test installation to cure for 30 days, with a pressure of 25 lbf applied vertically to pedestals during this period.
 - 3. After curing, apply lateral load against a straight steel bar inserted 2 inches into pedestal stems. Measure the force needed to cause adhesive failure of pedestal base.

4. Proceed with installation only after tests show compliance with performance requirement specified for pedestals' capability to resist overturning moment.

3.2 PREPARATION

- A. Lay out floor panel installation to keep the number of cut panels at floor perimeter to a minimum. Avoid using panels cut to less than 6 inches.
- B. Locate each pedestal, complete any necessary subfloor preparation, and vacuum clean subfloor to remove dust, dirt, and construction debris before beginning installation.

3.3 INSTALLATION

- A. Install access flooring system and accessories under supervision of access flooring manufacturer's authorized representative to produce a rigid, firm installation that complies with performance requirements and is free of instability, rocking, rattles, and squeaks.
- B. Set pedestals in adhesive as recommended in writing by access flooring manufacturer to provide full bearing of pedestal base on subfloor.
- C. Adjust pedestals to permit top of installed panels to be set flat, level, and to proper height.
- D. Secure stringers to pedestal heads according to access flooring manufacturer's written instructions.
- E. Install flooring panels securely in place, properly seated with panel edges flush. Do not force panels into place.
- F. Scribe perimeter panels to provide a close fit with adjoining construction with no voids greater than 1/8 inch where panels abut vertical surfaces.
- G. Cut and trim access flooring and perform other dirt-or-debris-producing activities at a remote location or as required to prevent contamination of subfloor under access flooring already installed.
- H. Scribe and install underfloor-cavity dividers to closely fit against subfloor surfaces, and seal with mastic.
- I. Scribe vertical closures to closely fit against subfloor and adjacent finished-floor surfaces. Set in mastic and seal to maintain plenum effect within underfloor cavity.
- J. Clean dust, dirt, and construction debris caused by floor installation, and vacuum subfloor area, as installation of floor panels proceeds.
- K. Seal underfloor air cavities at construction seams, penetrations, and perimeter to control air leakage as recommended in writing by manufacturer.
- L. Install access flooring without change in elevation between adjacent panels and within the following tolerances:
 1. Plus or minus 1/16 inch in any 10-foot distance.

3.4 ADJUSTING, CLEANING, AND PROTECTION

- A. Prohibit traffic on access flooring for 24 hours and removal of floor panels for 72 hours after installation to allow pedestal adhesive to set.
- B. After completing installation, vacuum clean access flooring and cover with continuous sheets of reinforced plastic. Maintain protective covering until time of Substantial Completion.
- C. Replace access flooring panels that are stained, scratched, or otherwise damaged or that do not comply with specified requirements.

END OF SECTION

SECTION 09 72 00

WALL COVERINGS

(PART OF THE WORK OF SECTION 090007-PAINTING, FILED SUB-BID REQUIRED)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- B. Carefully review and examine all other Contract Documents for requirements therein affecting the work of this Section. Furthermore, coordinate and sequence the work of this Section with all other trades affected.

1.2 SUMMARY

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Rigid Wall Covering.
 - 2. Digital Vinyl Wall Covering.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.

1.3 RELATED SECTIONS

- A. Section 09 29 00 – GYPSUM BOARD: for gypsum board substrate.
- B. Section 09 30 13 – CERAMIC TILE for floor material.
- C. Section 09 90 00 – PAINTING for primers.

1.4 REFERENCES

- A. Comply with applicable requirements of the following standards and those others referenced in this Section, under the provisions of Section 01 42 20 – Reference standards and definitions.
 - 1. Performance characteristics:
 - a. NFPA Class A fire rating.
 - b. Surface burning characteristics as determined by ASTM E-84
 - c. Impact strength in accordance with the applicable provisions of ASTM D5420.
 - d. Chemical and stain resistance in accordance with applicable provisions of ASTM D-543.
- B. Fungal and Bacterial Resistance in accordance with ASTM G-21 and ASTM G-22.
- C. 2015 International Building Code with amendments as indicated in the 2018 Connecticut State Building Code.

Connecticut Building Standard Guidelines: High Performance Buildings Compliance Requirements –September 2011.

1.5 SUBMITTALS

A. Submit the following under provisions of Section 01 33 00 - Submittal Procedures:

1. Literature: Manufacturer's product data and detailed specifications for each system component and installation accessory required, including installation methods for each type of substrate.
 - a. Include maintenance data and recommended cleaning materials, and cleaning and stain removal methods.
 - b. Include certified test reports together with complete description of each material.
 - c. Provide confirmation and data that shows all adhesives and setting materials meet the testing and product requirements of The California Department of Health Services Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-scale Environmental Chambers, including the 2004 Addenda.
2. Shop drawings showing locations, extent and installation details of wall covering products.
3. Samples for verification purposes: Submit the following samples, as proposed for this work, for verification of color, texture, pattern, and thickness:
 - a. Sample of each product specified available in 8" x 8" size.
 - b. Available colors: solid, woodgrain & patterns, and textures."

B. High Performance Buildings Compliance Submittal: Submit the required documents in accordance with the Checklist as a separate submittal package to Construction Manager's High Performance Buildings Compliance Coordinator, including information on each product specified:

1. Local/Regional Materials:
 - a. Sourcing location(s): Indicate location of extraction, harvesting, and recovery of raw materials used in the products manufacturing; indicate distance between extraction, harvesting, and recovery and the project site.
 - b. Manufacturing location(s): Indicate location of manufacturing facility; include distance between manufacturing facility and the project site.
2. Recycled content: Manufacturers certification of recycled content indicating percentage by weight of both pre-consumer and post-consumer recycled content.
3. VOC Content: Submit documentation showing VOC content for all materials submitted.
4. Construction Waste Management.

1.6 QUALITY ASSURANCE

- A. Imperfections such as engraving roller die marks, roller repeat marks or other features deemed not in conformance with the specified materials, will be cause for rejection by the Architect, if evidenced in either the submitted samples, or the manufactured material delivered to the job site.
- B. Manufacturer's qualifications: Not less than 5 years' experience in the production of specified products and a record of successful in-service performance.

- C. Applicators Qualifications: Work of this section shall be performed by a firm regularly engaged in the installation of wallcoverings of the types and qualities specified, and acceptable to the Architect.
- D. Code compliance: Assemblies should conform to all applicable codes including IBC, UBC, SBCCI, BOCA, and Life Safety.
- E. Single source responsibility: Provide all components of the wall protection system manufactured by the same company to ensure compatibility of color, texture and physical properties.
- F. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockups for each type of wall covering on each substrate required. Comply with requirements in ASTM F 1141.

1.7 PROJECT SITE CONDITIONS

- A. Temperatures:
 - 1. Materials must be acclimated in an environment of 65-75°F (18-24°C) for at least 24 hours prior to beginning the installation.
 - 2. Installation areas must be enclosed and weatherproofed before installation commences.
 - 3. Maintain substrate surface and ambient temperatures above 65 degrees F, unless required otherwise by manufacturer's instructions.
 - 4. Do not apply adhesive when the substrate surface temperature or ambient temperature is below 65 degrees F.
 - 5. Maintain these conditions 72 hours before, during and after installation of wallcovering.
- B. Lighting: Provide not less than 80 foot-candles per square foot minimum, on the surfaces to receive wallcoverings.
- C. Wall Condition:
 - 1. The wall surface should be clean, dry, structurally sound and free of mildew, grease, dust, or other stains.
 - 2. Plaster and masonry wall surfaces should not exceed 5.5% moisture when measured by a moisture meter. Gypsum board wall surfaces should not exceed 16% moisture.
 - 3. Room humidity should not exceed 90%.

1.8 WARRANTY

- A. Submit manufacturer's written five-year warranty against manufacturing defects.
 - 1. All wallcovering materials when adhered to a sound surface with the manufacturer's recommended procedures and adhesive, shall be warranted free of manufacturing defects for a period of 5 years from the date of substantial completion.

PART 2 - PRODUCTS

2.1 DIGITAL VINYL WALL COVERING (VWC)

- A. Manufacturers: Subject to compliance with the requirements specified herein, manufacturers offering products which may be incorporated in the work include the following, or approved equal:
 - 1. Rampart by Wolf Gordon, Inc.
 - 2. Duratec by MDC Interior Solutions, LLC.
 - 3. Flex Decorative Wall Protection by Koroseal Interior Products LLC.
 - 4. Or equal
- B. Basis of Design (VWC): Digital Rampart Wall Covering as manufactured by Wolf Gordon, Inc.
- C. Physical Properties:
 - 1. Content: 100% Vinyl.
 - 2. Backing: Dense Polyester/ Cotton.
 - 3. Finish: Stain Resistant Treatment.
 - 4. Width: 52" – 54"
 - 5. Weight: 35 oz per linear yard
 - 6. Texture: TBD by Architect.
 - 7. Color:
 - a. VWC-1: Located in 2nd floor Media Center
Custom digital image will be provided by architect.
 - b. VWC-2 VWC-2a & VWC-2b: Located in 2nd floor common spaces.
Custom digital image will be provided by architect.
 - c. VWC-3, VWC-3a & VWC-3b: Located in 3rd floor common spaces.
Custom digital image will be provided by architect.
 - d. VWC-4, VWC-4a & VWC-4b: Located in 4th floor common spaces.
Custom digital image will be provided by architect.
 - e. VWC-5: Location to be determined. Size 10'-0" long 10'-0" tall on GWB.
Custom digital image will be provided by architect.
 - f. VWC-6: Location to be determined. Size 10'-0" long 10'-0" tall on GWB. Custom digital image will be provided by architect.
 - 8. Trim: Provide color matching or clear outside corner protection.
 - 9. Adhesive: As recommended by manufacturer.
- D. Performance characteristics:
 - 1. Fire rating: Class A, as per ASTM E84.
 - 2. ASTM F793 Type III Wallcovering.
 - 3. Surface Abrasion – ASTM D4977: Meets Level 3
 - 4. Surface Indentation – ASTM D5420: Meets Level 2
 - 5. Hard Body Impact – ASTM C1629: Level 1
 - 6. Stain Resistance – ASTM D1308: Meets
 - 7. Scuff Resistance – ASTM D1308: Meets

- 8. Effect of Chemical Cleaning Agents – ASTM D543: No damaging effect
- 9. Low VOC Emitting:
 - a. Meets California 01350 standard for low VOC emission.
 - b. Use of Harmful Chemicals: Complies with MRc4 LEED v4
 - c. GREENGUARD GOLD Indoor Air Quality Certified for low VOC emissions.

2.2 FABRICATION

- A. Comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thicknesses of components.
- B. Shop-assemble components to the greatest extent possible. Disassemble only as necessary for shipping and handling.
- C. Fabricate components with tight seams and joints with exposed edges rolled. Provide surfaces free of evidence of wrinkling, chipping, uneven coloration, dents, and other imperfections. Fabricate members and fittings to produce flush, smooth, and rigid hairline joints
- D. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors for interconnection of members to other construction.

2.3 ACCESSORIES

- A. Provide all accessories, including but not limited to color matched caulk, setting materials, adhesives and primers as recommended by the wallcovering/display board manufacturer.
- B. Note all setting materials and adhesive materials are intended to be “Low VOC” products complying with LEED Requirements and procedures.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Inspect all surfaces and verify that they are in proper condition to receive the work of this Section.
- B. Beginning of installation means acceptance of substrate and site conditions.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances that could impair bond of wall covering, including dirt, oil, grease, mold, mildew, and incompatible primers.
- C. Prepare substrates to achieve a smooth, dry, clean, structurally sound surface free of flaking, unsound coatings, cracks, and defects.
 - 1. Moisture Content: Maximum of 5 percent on new plaster, concrete, and concrete masonry units when tested with an electronic moisture meter.

2. Gypsum Board: Prior to priming and skim coating, seal damaged drywall facing paper. Prime with primer as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
 3. Remove hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.
- D. Protection: Take all necessary steps to prevent damage to material during installation as required in manufacturer's installation instructions.
- E. Coordinate the work of this Section with the operable partitions manufacturer / contractor to ensure that adhesives, surface preparation and mounting techniques are all optimal and as recommended by manufacturer for surfaces to receive wall covering.

3.3 INSTALLATION

- A. Temperature at the time of installation must be between 65-75°F (18-24°C) and be maintained for at least 48 hours after the installation to allow for proper adhesive set-up.
- B. Relative humidity shall not exceed 80%.
- C. Do not expose wall covering to direct sunlight during or after installation. This will cause the surface temperature to rise, which in turn will cause bubbles and delamination.
- D. Install the work of this section in strict accordance with the manufacturer's recommendations using approved adhesive.
1. Locate the wall covering as indicated on the approved detail drawing for the appropriate substrate and in compliance with the manufacturer's installation instructions. Install level and plumb at the height indicated on the drawings.
 2. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished work.
 3. Install all trims pieces, and other accessories in strict accordance with the manufacturer's instructions.

3.4 CLEANING AND MAINTENANCE

- A. Immediately upon completion of installation, clean material in accordance with manufacturer's recommended cleaning method.
- B. Upon completion of the work, remove surplus materials, rubbish and debris resulting from the wallcovering installation. Leave areas in orderly condition.
- C. Remove stains promptly to prevent any possible reaction between the staining agent and the wallcovering that could cause permanent discoloration.
- D. Protect installed materials to prevent damage by other trades. Use materials that may be easily removed without leaving residue or permanent stains.

END OF SECTION

SECTION 09 77 03
FIBERGLASS REINFORCED PLASTIC WALL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- B. Carefully review and examine all other Contract Documents for requirements therein affecting the work of this Section. Furthermore, coordinate and sequence the work of this Section with all other trades affected.

1.2 SUMMARY

- A. Furnish and install fiberglass reinforced plastic wall panels where shown on the Drawings.
- B. Related Sections: Section(s) related to this section include:
 - 1. Section 04 20 00 – Unit Masonry Assemblies: for masonry substrate.
 - 2. Section 09 29 00 – Gypsum Board: for gypsum substrates.
 - 3. Section 09 51 00 – Acoustical Ceiling: for adjacent ceiling construction.

1.3 REFERENCES

- A. General: Standards listed by reference, including revisions by issuing authority, form a part of this specification section to extent indicated. Standards listed are identified by issuing authority, authority abbreviation, designation number, title or other designation established by issuing authority. Standards subsequently referenced herein are referred to by issuing authority abbreviation and standard designation
- B. ASTM International:
 - 1. ASTM D2583 Standard Test Method for Indentation Hardness of Rigid Plastics by Means of a Barcol Impressor.
 - 2. ASTM D5420 Standard Test Method for Impact Resistance of Flat, Rigid Plastic Specimen by Means of a Striker Impacted by a Falling Weight (Gardner Impact).
 - 3. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials.
 - 4. The California Department of health Services Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-scale Environmental Chambers, including the 2004 Addenda.
- C. 2015 International Building Code with amendments as indicated in the 2018 Connecticut State Building Code.
- D. Connecticut Building Standard Guidelines: High Performance Buildings Compliance Requirements –September 2011.

1.4 SYSTEM DESCRIPTION

- A. Performance Requirements: Provide fiberglass reinforced plastic (FRP) panels which have been manufactured and installed to maintain performance criteria stated by manufacturer without defects, damage or failure.

1.5 SUBMITTALS

- A. General: Submit listed submittals in accordance with Conditions of the Contract and Division 01 Submittal Procedures Section.
- B. Product Data: Submit product data, including manufacturer's product sheet, for specified products.
 - 1. Provide confirmation and data that shows all adhesives meet the testing and product requirements of The California Department of Health Services Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-scale Environmental Chambers, including the 2004 Addenda.
- C. Shop Drawings: Submit shop drawings showing layout, profiles and product components, including anchorage, accessories, finish colors, patterns and textures. Indicate location and dimension of joints and fastener attachment.
- D. Samples: Submit selection and verification samples for finishes, colors and textures. Submit 2 samples of each type of panel, trim and fastener.
- E. Quality Assurance Submittals: Submit the following:
 - 1. Test Reports: Certified test reports showing compliance with specified performance characteristics and physical properties.
 - 2. Certificates: Product certificates signed by manufacturer certifying materials comply with specified performance characteristics, criteria and physical requirements.
 - 3. Manufacturer's Instructions: Manufacturer's installation instructions.
 - 4. Manufacturer's Field Reports: Manufacturer's field reports specified herein.
- F. Closeout Submittals: Submit the following:
 - 1. Operation and Maintenance Data: Operation and maintenance data for installed products in accordance with Division 01 Closeout Submittals (Maintenance Data and Operation Data) Section. Include methods for maintaining installed products and precautions against cleaning materials and methods detrimental to finishes and performance.
 - 2. Warranty: Warranty documents specified herein.
- G. High Performance Buildings Compliance Submittal: Submit the required documents in accordance with the Checklist as a separate submittal package to Construction Manager's High Performance Buildings Compliance Coordinator, including information on each product specified:
 - 1. Local/Regional Materials:
 - a. Sourcing location(s): Indicate location of extraction, harvesting, and recovery of raw materials used in the products manufacturing; indicate distance between extraction, harvesting, and recovery and the project site.
 - b. Manufacturing location(s): Indicate location of manufacturing facility; include distance between manufacturing facility and the project site.
 - 2. Recycled content: Manufacturers certification of recycled content indicating percentage by weight of both pre-consumer and post-consumer recycled content.
 - 3. VOC Content: Submit documentation showing VOC content for all materials submitted.
 - 4. Construction Waste Management.

1.6 QUALITY ASSURANCE

- A. Qualifications:

1. Installer Qualifications: Installer should be experienced in performing work of this section and should have specialized in installation of work similar to that required for this project.
 - a. Certificate: submit certificate indicating qualifications.
 2. Manufacturer Qualifications: Manufacturer should be capable of providing field service representation during construction and should be capable of approving application method.
 - B. Regulatory Requirements:
 1. Comply with applicable local, state and federal codes.
- 1.7 DELIVERY, STORAGE & HANDLING
 - A. General: Comply with Division 01 Product Requirements Sections.
 - B. Ordering: Comply with manufacturer's ordering instructions and lead time requirements to avoid construction delays.
 - C. Delivery: Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact. Package sheets on skids or pallets for shipment to project site.
 - D. Storage and Protection: Store materials protected from exposure to harmful weather conditions and at temperature and humidity conditions recommended by manufacturer. Store panels indoors in a dry place at the project site.
 - E. Handling: Remove foreign matter from face of panel by using a soft bristle brush, avoiding abrasive action.
- 1.8 PROJECT CONDITIONS
 - A. Environmental Requirements:
 1. Installation shall not begin until building is enclosed, permanent heating and cooling equipment is in operation, and residual moisture from plaster, concrete, ceramic tile or resinous flooring work has dissipated.
 2. During installation, and for not less than 48 hours before, maintain an ambient temperature and relative humidity within limits required by type of adhesive used and recommendation of adhesive manufacturer.
 3. Provide ventilation to disperse fumes during application of adhesive as recommended by adhesive manufacturer.
 - B. Field Measurements: Verify actual measurements/openings by field measurements before fabrication; show recorded measurements on shop drawings. Coordinate field measurements and fabrication schedule with construction progress to avoid construction delays.
- 1.9 WARRANTY
 - A. Project Warranty: Refer to Conditions of the Contract for project warranty provisions.
 - B. Manufacturer's Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty document executed by authorized company official. Manufacturer's warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.
 1. Warranty Period: 10 years commencing on Date of Substantial Completion.

PART 2 - PRODUCTS

2.1 FIBERGLASS REINFORCED PLASTIC (FRP) PANELS

- A. Manufacturer: Subject to compliance with requirements, manufacturers that may be

incorporated into the Work include, but are not limited to, the following offering products which may be incorporated in the work include the following:

1. Crane Composites, Inc.
 2. Marlite Inc.
 3. Panlolan Inc.
 4. Or equal
- B. Basis of design: Glassboard FX as manufactured by Crane Composites.
1. Fire rating: Class A.
 2. Surface Finish: Pebbled embossed texture.
 3. Scratch Resistance, ASTM D 2583, Barcol Hardness: 40
 4. Abrasion Resistance: Taber Abrasion Test, CS-17 abrasive wheels with 1,000 g weight: Weight loss after 25 cycles of no more than 0.038 percent.
 5. Impact Strength, ASTM D 5420: 45 in-lbs (5.1 J), showing no visible damage on finish side.
 6. Panel Compliance: ASTM D 5319.
 7. Color: to be selected by the Architect from the manufacturer's standard range of colors.
 8. Moldings: Provide harmonizing PVC (polyvinyl chloride) moldings (color to be selected by the Architect from the manufacturer's standard range of colors).
 - a. Rivets: Provide rivets at locations as required by panel manufacturer.
 9. Panel Low-Emitting Materials: Comply with testing and product requirements of California Department of Health Services standards for Volatile Organic Emissions.
 10. Panel Surface Protection: "Surfaseal" molecularly bonded surface protection film for impact, abrasion, and scratch resistance.

2.2 ACCESSORIES

- A. Note all adhesives are intended to be "Low VOC" products complying with LEED Requirements and procedures.
- B. Adhesive: Provide Low VOC panel adhesive as recommended by panel manufacturer.
- C. Panel Seam Sealant: Bright white, 2-part urethane sealant, as recommended by FRP panel manufacturer.
 1. VOC Content: 0.0 g/L.
- D. Provide all other accessories as required by panel manufacturer, including but not limited to color matching moldings, J-trim, heavy-duty corners batten strips and fasteners.

2.3 RELATED MATERIALS

- A. Related Materials: Refer to other sections listed in Related Sections paragraph herein for related materials.

2.4 SOURCE QUALITY

- A. Source Quality: Obtain fiberglass reinforced plastic (FRP) panels from a single manufacturer. Provide panels and molding only from manufacturer specified to ensure warranty and color harmonization of accessories.

PART 3 - EXECUTION

3.1 MANUFACTURER'S INSTRUCTIONS

- A. Compliance: Comply with manufacturer's product data, including product technical bulletins, product catalog installation instructions and product carton instructions for installation.

3.2 EXAMINATION

- A. Site Verification of Conditions: Verify that substrate conditions, which have been previously installed under other sections, are acceptable for product installation in accordance with manufacturer's instructions.
 - 1. Examine backup surfaces to determine that corners are plumb and straight, surfaces are smooth, uniform, clean and free from foreign matter, nails are countersunk and joints and cracks are filled flush and smooth with the adjoining surface.
 - 2. Do not begin installation until backup surfaces are in satisfactory condition.

3.3 PREPARATION

- A. Clean substrates to remove substances that could impair bond of adhesive, including oil, grease, dirt, dust, or other contaminants.
- B. Acclimate FRP panels by unpacking and placing in installation space a minimum of 24 hours before installation.
- C. Lay out FRP panels before beginning installation.
 - 1. Locate panel joints to provide equal panel widths at ends of walls.
 - 2. Locate panel joints to provide trimmed panels at corners a minimum of 12 inches (300 mm) wide.

3.4 INSTALLATION

- A. Fiberglass Reinforced Panel (FRP) Installation:
 - 1. Install FRP panels in accordance with manufacturer's instructions at locations indicated on the Drawings.
 - 2. Install FRP panels plumb, level, square, flat, and in proper alignment.
 - 3. Install FRP panels to be water resistant and washable.
 - 4. Install panels with manufacturer's recommended gap for panel field and corner joints.
 - 5. Pre-drill fastener holes in panels with 1/8 inch (3.2 mm) oversize.
 - 6. For trowel type and application of adhesive, follow adhesive manufacturer's recommendations.
- B. Adhesive:
 - 1. Install FRP panels in full spread of adhesive.
 - 2. Follow adhesive manufacturer's instructions for application of adhesive.
- C. Install trim accessories with adhesive and nails or staples:
 - 1. Do not fasten through FRP panels.
- D. Sealant:
 - 1. Fill grooves in trim accessories with sealant before installing FRP panels.
 - 2. Bed inside corner trim in bead of sealant.
 - 3. Remove excess sealant and smears as FRP panels are installed.
 - 4. Clean in accordance with sealant manufacturer's instructions
- E. Tolerances: Install FRP panels within manufacturer's installation tolerances.
- F. Related Products Installation: Refer to other sections listed in Related Sections paragraph herein for related materials installation.

3.5 FIELD QUALITY REQUIREMENTS

- A. Manufacturer's Field Services: Upon Owner's request, provide manufacturer's field service consisting of product use recommendations and periodic site visits for inspection

of product installation in accordance with manufacturer's instructions.

3.6 CLEANING

A. Cleaning: Remove temporary coverings and protection of adjacent work areas. Repair or replace products that have been installed and are damaged. Clean installed products in accordance with manufacturer's instructions prior to Owner's acceptance. Remove construction debris from project site and legally dispose of debris.

1. Remove any adhesive or excessive sealant from panel face using solvent or cleaner recommended by panel manufacturer.

3.7 PROTECTION

A. Protection: Protect installed product and finish surfaces from damage during construction.

END OF SECTION

SECTION 09 77 30
INTERIOR WALL PANELS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the GENERAL REQUIREMENTS AND COVENANTS - DIVISION I, and the SPECIAL PROVISIONS - DIVISIONS IIA and IIB, which are hereby made a part of this Specification Section.
- B. Examine all Drawings and all Sections of the Specifications for requirements and provisions affecting the Work of this Section.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Phenolic Resin Panel System with Aluminum Trim, and attachment systems.
- B. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 092110 - GYPSUM BOARD ASSEMBLIES for secondary support framing supporting wall panels.
- C. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the Connecticut Building Standard Guidelines Compliance Manual for High Performance Buildings. Refer to Section 018113, SUSTAINABLE DESIGN REQUIREMENTS for these conditions.

1.3 REFERENCES

- A. ASTM D638 - 10 Standard Test Method for Tensile Properties of Plastics.
- B. ASTM D790 - 10 Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.
- C. ASTM E84 - 12 Standard Test Method for Surface Burning Characteristics of Building Materials
- D. NEMA Standards Publication LD3-2005. High pressure decorative laminates.

1.4 SUBMITTALS

- A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of wall panel and accessory.
- B. Sustainability Design Requirements: Provide product data required as in Section 018113 Sustainable Design Requirements.

- C. Shop Drawings: Show fabrication and installation layouts of wall panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, and accessories.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
 - 1. Panels: 12 inches square.
 - 2. Panels with Graphics: Submit three 11 by 17 inch panel showing all graphics in color, and three 24 by 24 inch HPS panels printed in color at actual scale for submittals. Intent is to verify resolution and print quality. Resubmit if submittals are not accepted.

1.5 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of wall panel through one source from a single manufacturer.
- B. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.
- C. Mockups: Provide 10'x10' installation mockups erected at site, to verify color, workmanship and installation details.
 - 1. Approved mockups may become part of the completed work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, sheets, wall panels, and other manufactured items so as not to be damaged or deformed. Package wall panels for protection during transportation and handling.
- B. Unload, store, and erect wall panels in a manner to prevent bending, warping, twisting, and surface damage.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to Architect's review for conformance with Contract Documents and the requirements specified herein, provide products from one of the following listed manufacturers:
 - 1. Stonewood Architectural Panels
 - 2. Trespa
 - 3. American Architectural Millwork
 - 4. Fry Reglet
 - 5. Or equal

2.2 INTERIOR PHENOLIC WALL PANELS

- A. Basis of design: Stonewood Architectural Panels: Fiberesin Industries, Inc. N48W37031 E. Wisconsin Avenue, Oconomowoc, WI Toll Free: (262) 567- 4427

- B. Panel Thickness: 1/2inch
- C. Face dimensions: As indicated on drawings.
- D. Ultra-Durable Solid Phenolic: Solid phenolic with decorative pattern or color on exposed face.
 - 1. Edges – Square cut and kerfed on all edges, to accept hardware.
 - 2. Color and Pattern: As selected by Architect from Wilsonart international, final selection will be made in field. Selection based on Wilsonart color: Amber cherry #791K-78 or approved equal from Nevamar and Panolam full range of phenolic panel selections.

2.3 HARDWARE

- A. Style: millwork insert with return keys
- B. Horizontal Main Rail support rail and vertical Cross Spline alignment framing:
- C. Narrow Main Rail, to create detailed 1/4" horizontal reveals. Furnished in full 8' (2.44m) lengths.
- D. Panel Trim: Aluminum Profiles furnished in full 10' (3 meters) lengths
 - 1. Outside Corner – Narrow profile
 - 2. Edge/Inside Corner – Narrow profile;
- E. Hardware and Trim Material:
 - 1. Aluminum - Heavy weight extruded aluminum 6063-T5 alloy and prefinished at the factory.
 - a. Concealed Aluminum - Mill finish
 - b. Exposed Aluminum - Clear satin anodized.
 - c. Fry Reglet or approve equal.

2.4 PERFORMANCE REQUIREMENTS

- A. Fire Performance: Flame spread (ASTM E-84 UL registered and labeled for quality consistency. Class 1 or Class A.
- B. Meets or exceeds NEMA requirements.
- C. Low VOC Emitting: GREENGUARD Indoor Air Quality Certified for low VOC emissions.

2.5 FABRICATION

- A. All framing, panels, hardware and accessories shall be factory finished and ready to install except for field fabrication as required by jobsite and perimeter conditions.
- B. Factory-fabricated intersections and corner pieces of the same or different profiles are used to connect horizontal and vertical joints as well as transitions from plane to plane. The intersections are welded and sealed
- C. Field fabrication shall be allowed where necessary but shall be kept to an absolute minimum. Refinish field cut panel edges in accordance with manufacturer's instruction before installation.

- D. For all cut-outs, drill corners for a minimum 1/8" radius.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 WALL PANEL INSTALLATION

- A. General: Install wall panels in accordance with manufacturer's recommendations and approved submittals. Install with orientation, sizes, and locations indicated on Drawings. Install panels and fixing system as per shop drawings and specification.
 - 1. Assure installed hardware to be straight, plumb and level.
 - 2. Anchor units rigidly and securely in place.
 - 3. Cut sheets to meet existing supports.
- B. Fasten supports and trim using recommended drill-tipped screws anchored into studs or other solid substrate at 32" (80 cm) c/c max. Where hardware cannot be installed with screws, fasten with adhesive in accordance with the manufacturer's recommendations. Pre-drilling should not be necessary. Use die line on extrusions for screw placement guide and fasten securely.
- C. Avoid contamination of the panel faces with adhesives, solvents or cleaners during installation.

3.3 CLEANING AND PROTECTION

- A. On completion of wall panel installation, clean finished surfaces as recommended by wall panel manufacturer. Maintain in a clean condition during construction.
- B. Replace wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 098120
SPRAYED ACOUSTIC INSULATION

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Spray-applied acoustic insulation, cellulose.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design. Refer to Section 018110 - SUSTAINABLE DESIGN REQUIREMENTS (LEED) and Section 018115 - SUSTAINABLE DESIGN REQUIREMENTS (PASSIVE HOUSE) for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 052100 – STRUCT STEEL FRAMING
 - 2. Section 052001 - STEEL JOIST FRAMING
 - 3. Section 078100 – APPLIED FIREPROOFING for material compatibility

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Show locations including plans, elevations and relationship to adjacent construction.
- C. Samples: Minimum 6 by 6 inch sample for appearance.

1.4 QUALITY ASSURANCE

- A. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- B. Finish Mockups: Apply mockups of at least 100 sq. ft. in surface area to demonstrate aesthetic effects and qualities of materials and execution.
 - 1. Simulate finished lighting conditions for review of mockups.
 - 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store materials inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes.

1.6 PROJECT CONDITIONS

- A. Comply with manufacturer's recommendations for application temperature.

PART 2 - PRODUCTS

2.1 SPRAY-APPLIED ACOUSTIC INSULATION, CELLULOSE

- A. Self-Supported, Spray-Applied Cellulosic Insulation: ASTM C1149, Type I (materials applied with liquid adhesive; suitable for either exposed or enclosed applications), chemically treated for flame-resistance, processing, and handling characteristics.
 - 1. Basis of Design: International Cellulose Corporation; K-13.
 - 2. Color: Light grey.
 - 3. Thickness: As indicated on the Drawings.
 - 4. NRC Rating: ASTM C423, NRC 0.80, at 1 inch thick.
 - 5. Surface Burning Characteristics: ASTM E84/UL 723, Class 1/A, flame spread 25 or less, smoke developed 50 or less.
 - 6. Building Product Disclosure and Optimization, Material Ingredients: Health Product Declaration (HPD).
 - 7. Low-Emitting Materials, General Emissions Evaluation: GreenGuard Gold certification.
 - 8. Primer (Required): Manufacturer's recommended primer for substrate indicated.
 - a. VOC Content: 200 g/L or less.
 - b. Methylene chloride and perchloroethylene may not be intentionally added to paints.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and substrates, with Installer present, for conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Apply spray-applied insulation according to manufacturer's written instructions and approved submittals.
- B. Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked. After insulation is applied for vertical applications, make flush with face of studs by using method recommended by insulation manufacturer.

3.3 CLEANING AND PROTECTION

- A. Remove temporary protection and enclosure of other work. Promptly remove overspray from door frames, windows, and other surfaces.

END OF SECTION

SECTION 098430
SOUND-ABSORBING PANELS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Fabric wrapped acoustical wall panels.
 2. Wood fiber acoustical panels.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 061000 - ROUGH CARPENTRY for wood blocking.
 2. Section 095100 - ACOUSTICAL CEILINGS for acoustical ceiling panels supported by exposed suspension system and tested for noise reduction.
 3. Division 03 Section "Precast Architectural Concrete": for precast concrete substrate.
 4. Division 04 Section "Concrete Masonry Units": for cmu substrate.
 5. Division 06 Section "Misc. Rough Carpentry": for blocking, nailers, and grounds where required to support the cementitious wood fiber panels.
 6. Division 09 Section "Gypsum Boards": for abutting drywall substrate.
 7. Division 10 Section "Vegetated Green Wall"
 8. Division 23 Section "Heating Ventilation and Air Conditioning."

1.3 REFERENCES

- A. ASTM International:
1. ASTM C635 Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.
 2. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials.
 3. ASTM E1264 Standard Classification for Acoustical Ceiling Products.
- B. Ceilings and Interior Systems Construction Association (CISCA):
1. CISCA Code of Practices.

- C. LEED v4 BD+C: School.

1.4 DEFINITIONS

- A. NRC: Noise reduction coefficient.

1.5 SUBMITTALS

- A. Product Data: For each type of panel edge, core material, and mounting indicated.
- B. LEED Submittals: prepare and submit required documentation for the work of this Section in accordance with USGBC LEED Reference Guide for Building Design and Construction (v4) and Division 01 Section "LEED v4 BD+C: School Requirements".
 - 1. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
 - 2. Building product disclosure and optimization: Provide required documentation to secure the maximum MR credits, including but not limited to:
 - a. Environmental product declarations.
 - b. Sourcing of raw materials.
 - c. Material ingredients.
 - 3. Project material cost data: Provide invoices, receipts, statements, and other evidence required to document total cost for materials used for Project.
 - 4. Waste management and disposal records complying with Division 01 Section "Construction Waste Management and Disposal".
 - a. For products diverted from disposal in landfills and incinerators, and where recycled resources are directed back to the manufacturing process. Include a statement indicating percentage of materials diverted and recycled and the costs associated with each.
- C. Shop Drawings: For acoustical wall panels. Include mounting devices and details; details at panel head, base, joints, and corners; and details at ceiling, floor base, and wall intersections. Include elevations showing panel sizes and direction of fabric weave and pattern matching. Indicate panel edge and core materials.
- D. Coordination Drawings: Show intersections with wall base, electrical receptacles and switches, and other adjacent work.
- E. Samples for Initial Selection: For each type of fabric facing material from acoustical wall panel manufacturer's full range.
- F. Samples for Verification: For the following products. Prepare Samples from same material to be used for the Work.
 - 1. Fabric: Full-width by 36-inch-long Sample from dye lot to be used for the Work, and as follows:
 - a. With specified treatments applied.
 - b. Show complete pattern repeat.

- c. Mark top and face of fabric.
 - 2. Panel Edge: 12-inch-long Sample showing edge profile, corner, and finish.
 - 3. Core Material: 12-inch-square Sample showing corner.
 - 4. Mounting Device: Full-size Sample.
 - 5. Sample Panels: No larger than 36 by 36 inches. Show joints and mounting methods.
- G. Product Certificates: For each type of acoustical wall panel, signed by product manufacturer.
- H. Qualification Data: For fabricator and testing agency.
- I. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each type of acoustical wall panel.
- J. Maintenance Data: For acoustical wall panels to include in maintenance manuals. Include fabric manufacturers' written cleaning and stain-removal recommendations.
- K. Warranty: Special warranty specified in this Section.
- 1.6 QUALITY ASSURANCE
- A. Regulatory Requirements and Approvals: [Comply with requirements below.] [Specify applicable requirements of regulatory agencies.].
- 1. International Code Council (ICC):
 - a. ICC-ES Evaluation Report ESR-1112.
 - 2. State of California:
 - a. DSA Number PA-008.
 - 3. Underwriters' Laboratories of Canada (ULC) label.
 - a. Structural Cement-Fiber Unit-535X
- B. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
- C. Source Limitations: Obtain each type of acoustical wall panels through one source from a single manufacturer.
- D. Fire-Test-Response Characteristics: Provide acoustical wall panels with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
- 1. Flame-Spread Index: 25 or less.
 - 2. Smoke-Developed Index: 450 or less.
- E. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Storage and Protection: Store materials protected from exposure to harmful environmental conditions and at temperature and humidity conditions recommended by the manufacturer.
 - 1. Prevent soiling, physical damage or wetting.
 - 2. Store cartons open at each end to stabilize moisture content and temperature.
- B. Comply with fabric and acoustical wall panel manufacturers' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.
- C. Deliver materials and panels in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.
- D. Protect panel edges from crushing and impact.

1.8 PROJECT CONDITIONS

- A. Locate materials onsite at least 24 hours before beginning installation to allow materials to reach temperature and moisture content equilibrium.
- B. Maintain the following conditions in areas where acoustical materials are to be installed 24 hours before, during and after installation:
 - 1. Relative Humidity: 65 - 75%.
 - 2. Uniform Temperature: 55 - 70 degrees F (13 - 21 degrees C).
- C. Environmental Limitations: Do not install acoustical wall panels until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- D. Lighting: Do not install acoustical wall panels until a permanent level of lighting is provided on surfaces to receive acoustical wall panels.
- E. Air-Quality Limitations: Protect acoustical wall panels from exposure to airborne odors, such as tobacco smoke, and install panels under conditions free from odor contamination of ambient air.
- F. Field Measurements: Verify locations of acoustical wall panels by field measurements before fabrication and indicate measurements on Shop Drawings.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of acoustical wall panels that fail in performance, materials, or workmanship within specified warranty period.
 - 1. Failure in performance includes, but is not limited to, acoustical performance.
 - 2. Failures in materials include, but are not limited to, fabric sagging, distorting, or releasing from panel edge; or warping of core.
 - 3. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 BACK-MOUNTED, EDGE-REINFORCED ACOUSTICAL WALL PANELS WITH GLASS-FIBER BOARD CORE AND FABRIC FACING

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers that may be incorporated into the Work include, but are not limited to, the following:

1. Sky Acoustic, Inc.
2. Decoustics Ltd.
3. MBI Products Company.
4. Quiet Concepts, a division of PCI Industries.
5. Kinetics Noise Control.
6. Sound Concepts.
7. Wall Technology, an Owens Corning Company.

- B. Basis of Design: Sky Acoustic, Inc.

- C. Panel Construction: Manufacturer's standard panel construction consisting of facing material laminated to front face, edges, and back border of dimensionally stable, rigid glass-fiber board core; with edges chemically hardened and clean tailored corners.

1. Nominal Core Thickness: 1" and 2".
2. Overall System NRC: Not less than 0,90, for Type A mounting per ASTM E 795.
3. Panel Width: As indicated on Drawings.
4. Panel Height: Fabricated height as indicated on Drawings
5. Panel Edge Detail: Clean Tailored Edges
6. Corner Edge: Square to form continuous profile to match edge detail.

- D. Facing Material: Fabric from same dye lot; color and pattern as selected by Architect from manufacturer's full range.

1. Available Manufacturer: Subject to compliance with requirements, manufacturers that may be incorporated into the Work include, but are not limited to, the following:

- a. Pallas
- b. Carnegie
- c. Maharam

2. FWAP-1 Located in Cafeteria: Preliminary color selection upon approval during construction.

- a. Manufacturer: Pallas Textile
- b. Style: Camaieu
- c. Color: Chi #29.096.011
- d. Two inch deep panel

3. FWAP-2 Located in Cafeteria: Preliminary color selection upon approval during construction.

- a. Manufacturer: Maharam
- b. Style: Birch#511508

- c. Color: Howlite #004
 - d. One inch deep panel
- 4. FWAP-3: Located in Multipurpose Room Preliminary color selection upon approval during construction.
 - a. Manufacturer: Maharam
 - b. Style: Sway #511496
 - c. Color: Delicate #001
 - d. Two inch deep panel
- 5. FWAP-4 Located in Multipurpose Room: Preliminary color selection upon approval during construction.
 - a. Manufacturer: Maharam
 - b. Style: Enlace #511513
 - c. Color: Moraine #001
 - d. One inch deep panel
- 6. FWAP-5 Located in Multipurpose Room: Preliminary color selection upon approval during construction.
 - a. Manufacturer: Maharam
 - b. Style: Carry – 2 #511518
 - c. Color: Vista #002
 - d. Two inch deep panel
- 7. FWAP-6 Located in Multipurpose Room: Preliminary color selection upon approval during construction.
 - a. Manufacturer: Maharam
 - b. Style: Enlace#511513
 - c. Color: Dulcet #004
 - d. One inch deep panel
- E. Glass-Fiber Board Core: ASTM C 612, Type IA or Types IA and IB; density as specified, unfaced, dimensionally stable, molded rigid board, with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
 - 1. Nominal Core Density: 6 to 7 lb/cu. ft.
- F. Back-Mounting Devices: Concealed on backside of panel, recommended to support weight of panel, and as follows:
 - 1. As recommended by manufacturer.
- G. Fabrication:

1. Sound-Absorption Performance: Provide acoustical wall panels with minimum NRCs indicated, as determined by testing per ASTM C 423 for mounting type specified.
2. Acoustical Wall Panels: Panel construction consisting of facing material adhered to[face,] edges and back border of dimensionally stable core; with rigid edges to reinforce panel perimeter against warpage and damage.
 - a. Glass-Fiber Board: Resin harden areas of core for attachment of mounting devices.
3. Fabric Facing: Stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other foreign matter. Applied with visible surfaces fully covered.
 - a. Where square corners are indicated, tailor corners.
 - b. Where radius or other nonsquare corners are indicated, attach facing material so there are no seams or gathering of material.
 - c. Where fabrics with directional or repeating patterns or directional weave are indicated, mark fabric top and attach fabric in same direction so pattern or weave matches in adjacent panels.
4. Dimensional Tolerances of Finished Units: Plus or minus 1/16 inch for the following:
 - a. Thickness.
 - b. Edge straightness.
 - c. Overall length and width.
 - d. Squareness from corner to corner.
 - e. Chords, radii, and diameters.

2.2 RECYCLED WOOD FIBER AND CEMENTITIOUS PANELS

- A. Basis of Design: Tectum Inc.; Finale Panel, or approved equal.
 1. Recycled Content: 70% minimum.
- B. Nominal Core Thickness: 2 inches.
- C. Overall System NRC: Not less than 0.70, for Type A mounting per ASTM E 795.
- D. Panel Size: As indicated on Drawings.
- E. Corner Detail: As indicated on Drawings.
- F. Factory Finish: Manufacturer's factory painted finish; custom color to be selected by Architect. Field painting is not excepted.
- G. Fasteners: Except as otherwise indicated, provide exposed steel drywall screws, to extend at least 1 inch into gypsum board substrate, painted to match panel.

2.3 POLYESTER FIBER ACOUSTIC PANELS (PFAP):

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers that may be incorporated into the Work include, but are not limited to, the following:

1. MDC; Zintra on Zintra Acoustic Panels
2. 3 Form; Hush Clad Sound Absorbing Wall Panel
3. CSI Wall Panels; Soundcore Sheer Acoustic Control with Depth

B. Basis of Design: MDC; Zintra on Zintra Acoustic Panels

1. Constructed: Perforated Polyester fiber panel bonded to another sheet of polyester fiber
2. Thickness: 1/2", 1" and 2" thick as indicated on drawings.
3. Size: As indicated on the drawings up to a maximum 48 inch x 108 inch panel.
4. Edge Detail: Square
5. Sound Absorption (ASTM C423): Noise Reduction Coefficient as follows:
 - a. 1 inch Panel: 0.75 minimum
6. Mounting Accessories: Z-clips
7. Colors: (Based on MDC Zintra) Up to 3 colors to be used as indicated on drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces, fabric, substrates, blocking, and conditions, with Installer present, for compliance with requirements, installation tolerances, and other conditions affecting performance of acoustical wall panels.
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install acoustical wall panels in locations indicated with vertical surfaces and edges plumb, top edges level and in alignment with other panels, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.
- B. Comply with acoustical wall panel manufacturer's written instructions for installation of panels using type of concealed mounting accessories indicated or, if not indicated, as recommended by manufacturer. Anchor panels securely to supporting substrate.
- C. Match and level fabric pattern and grain among adjacent panels.
- D. Installation Tolerances: As follows:
 1. Variation from Level and Plumb: Plus or minus 1/16 inch.
 2. Variation of Panel Joints from Hairline: Not more than 1/16 inch wide.

3.3 CLEANING

- A. Clip loose threads; remove pills and extraneous materials.
- B. Clean panels with fabric facing, on completion of installation, to remove dust and other foreign materials according to manufacturer's written instructions.
- C. Follow manufacturer's instruction for cleaning panels.

3.4 PROTECTION

- A. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, to ensure that acoustical wall panels are without damage or deterioration at time of Substantial Completion.
- B. Replace acoustical wall panels that cannot be cleaned and repaired, in a manner approved by Architect, before time of Substantial Completion.

END OF SECTION

SECTION 099000

PAINTING AND COATING

(Part of Work of Section 090007 - PAINTING, Trade Bid Required)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:

1. Field painting of exposed interior items and surfaces.
2. Field painting of exposed exterior items and surfaces.
3. Surface preparation for painting.
4. Green Screen Paint and Base

- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.

- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:

1. Section 051200 - STRUCTURAL STEEL FRAMING for shop priming structural steel.
2. Section 055000 - METAL FABRICATIONS for shop priming ferrous metal.
3. Section 055100 - METAL STAIRS AND RAILINGS for shop priming ferrous metal.
4. Section 064020 - INTERIOR ARCHITECTURAL WOODWORK for shop priming interior architectural woodwork.
5. Section 078100 - APPLIED FIREPROOFING for intumescent fire-resistive coatings.
6. Section 081110 - HOLLOW METAL DOORS AND FRAMES for factory priming steel doors and frames.
7. Section 081400 - FLUSH WOOD DOORS for factory finishing.
8. Section 092110 - GYPSUM BOARD ASSEMBLIES for surface preparation of gypsum board.

1.3 DEFINITIONS AND EXTENT

- A. General: Standard coating terms defined in ASTM D 16 apply to this Section.

1. Flat refers to a lusterless or matte finish with a gloss range below 15 when measured at an 85-degree meter.

2. Eggshell refers to low-sheen finish with a gloss range between 20 and 35 when measured at a 60-degree meter.
 3. Semigloss refers to medium-sheen finish with a gloss range between 35 and 70 when measured at a 60-degree meter.
 4. Full gloss refers to high-sheen finish with a gloss range more than 70 when measured at a 60-degree meter.
- B. This Section includes surface preparation and field painting of exposed exterior and interior items and surfaces.
1. Surface preparation, priming, and finish coats specified in this Section are in addition to shop priming and surface treatment specified in other Sections.
- C. Paint exposed surfaces, except where these Specifications indicate that the surface or material is not to be painted or is to remain natural. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces. If a color of finish is not indicated, Architect will select from standard colors and finishes available.
1. Painting includes field painting of exposed bare and covered pipes and ducts (including color coding), hangers, exposed steel and iron supports, and surfaces of mechanical and electrical equipment that do not have a factory-applied final finish.
- D. Do NOT paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels.
1. Prefinished items include the following factory-finished components:
 - a. Architectural woodwork.
 - b. Acoustical wall panels.
 - c. Toilet enclosures.
 - d. Metal lockers.
 - e. Kitchen appliances.
 - f. Elevator entrance doors and frames.
 - g. Elevator equipment.
 - h. Finished mechanical and electrical equipment.
 - i. Light fixtures.
 2. Concealed surfaces include walls or ceilings in the following generally inaccessible spaces:
 - a. Foundation spaces.
 - b. Furred areas.
 - c. Ceiling plenums.
 - d. Utility tunnels.
 - e. Pipe spaces.
 - f. Duct shafts.
 - g. Elevator shafts.
 3. Finished metal surfaces include the following:
 - a. Anodized aluminum.
 - b. Stainless steel.
 - c. Chromium plate.

- d. Copper and copper alloys.
 - e. Bronze and brass.
- 4. Operating parts include moving parts of operating equipment and the following:
 - a. Valve and damper operators.
 - b. Linkages.
 - c. Sensing devices.
 - d. Motor and fan shafts.
- 5. Labels: Do not paint over UL, FMG, or other code-required labels or equipment name, identification, performance rating, or nomenclature plates.

1.4 SUBMITTALS

- A. Product Data: For each paint system indicated. Include block fillers and primers.
 - 1. Material List: An inclusive list of required coating materials. Indicate each material and cross-reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.
 - a. Disclose material ingredients by name and Chemical Abstract Service (CAS) Registry Number.
 - 2. Manufacturer's Information: Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material.
- B. LEED Submittals:
 - 1. Building Product Disclosure and Optimization, Environmental Product Declarations (EPD):
 - a. Option 1: For paints, submit industry-wide EPDs and product-specific Type III EPDs.
 - 2. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For paints, submit Cradle to Cradle (C2C) certifications, Health Product Declarations (HPD), or Declare product labels.
 - 3. Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010, using the applicable exposure scenario.
 - a. For field-applied paints and coatings, submit test results, including TVOC emissions and VOC content.
 - b. For paints, submit GreenGuard Gold or SCS Indoor Advantage Gold certifications.
 - c. For wet-applied products, submit volume used.
- C. Samples for Verification: For each color and material to be applied, with texture to simulate actual conditions, on representative Samples of the actual substrate.

1. Provide stepped Samples, defining each separate coat, including block fillers and primers. Use representative colors when preparing Samples for review. Resubmit until required sheen, color, and texture are achieved.
2. Provide a list of materials and applications for each coat of each Sample. Label each Sample for location and application.
3. Submit two 8 inch by 12 inch Samples for each type of finish coating for Architect's review of color and texture only.

D. Qualification Data: For Applicator.

1.5 QUALITY ASSURANCE

- A. Applicator Qualifications: A firm or individual experienced in applying paints and coatings similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
- B. Source Limitations: Obtain block fillers and primers for each coating system from the same manufacturer as the finish coats.
- C. Mockups: Provide a full-coat benchmark finish sample for each type of coating and substrate required. Comply with procedures specified in PDCA P5. Duplicate finish of approved sample Submittals.
 1. Architect will select one room or surface to represent surfaces and conditions for application of each type of coating and substrate.
 - a. Wall Surfaces: Provide samples on at least 100 sq. ft.
 - b. Small Areas and Items: Architect will designate items or areas required.
 2. Apply benchmark samples, according to requirements for the completed Work, after permanent lighting and other environmental services have been activated. Provide required sheen, color, and texture on each surface.
 - a. After finishes are accepted, Architect will use the room or surface to evaluate coating systems of a similar nature.
 3. Final approval of colors will be from benchmark samples.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label and the following information:
 1. Product name or title of material.
 2. Product description (generic classification or binder type).
 3. Manufacturer's stock number and date of manufacture.
 4. Contents by volume, for pigment and vehicle constituents.
 5. Thinning instructions.
 6. Application instructions.
 7. Color name and number.
 8. VOC content.

- B. Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45 deg F. Maintain storage containers in a clean condition, free of foreign materials and residue.
 - 1. Protect from freezing. Keep storage area neat and orderly. Remove oily rags and waste daily.

1.7 PROJECT CONDITIONS

- A. Apply waterborne paints only when temperatures of surfaces to be painted and surrounding air are between 50 and 90 deg F.
- B. Apply solvent-thinned paints only when temperatures of surfaces to be painted and surrounding air are between 45 and 95 deg F.
- C. Do not apply paint in snow, rain, fog, or mist; or when relative humidity exceeds 85 percent; or at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.
 - 1. Painting may continue during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by manufacturer during application and drying periods.

1.8 EXTRA MATERIALS

- A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Paint: Furnish four unopened gallons of each type of paint and coating work, in color and gloss as used for the Project.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work are listed in the Finish Schedule at the end of this Section.

2.2 INTERIOR PAINT MANUFACTURERS

- A. A. Subject to Architect's review for conformance with Contract Documents and the requirements specified herein, provide products from one of the following listed manufacturers:
 - 1. The Sherwin-Williams Co., Cleveland, OH.
 - 2. PPG Architectural Finishes, Inc., Pittsburgh PA.
 - 3. Benjamin Moore & Co., Montvale, NJ.
 - 4. Or equal.
- B. Basis of Design: The Sherwin-Williams Co., Cleveland, OH.

2.3 PAINT MATERIALS, GENERAL

- A. Material Compatibility: Provide block fillers, primers, and finish-coat materials that are compatible with one another and with the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
- B. Material Quality: Provide manufacturer's best-quality paint material of the various coating types specified that are factory formulated and recommended by manufacturer for application indicated. Paint-material containers not displaying manufacturer's product identification will not be acceptable.
 - 1. Proprietary Names: Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers. Furnish manufacturer's material data and certificates of performance for proposed substitutions.
- C. Paint Colors (PT-#): Refer to the Finish Schedule on the Drawings.
- D. VOC Content for Interior Paints and Coatings: Products shall comply with VOC limits of authorities having jurisdiction and, for interior paints and coatings applied at Project site, the following VOC limits, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 1. Flat Paints and Coatings: 50 g/L (SCAQMD and CARB).
 - 2. Nonflat Paints and Coatings: 50 g/L (SCAQMD) or 100 g/L (CARB).
 - 3. Nonflat, High Gloss Paints and Coatings: 50 g/L (SCAQMD) or 150 g/L (CARB).
 - 4. Dry-Fog Coatings: 50 g/L (SCAQMD) or 150 g/L (CARB).
 - 5. Primers, Sealers, and Undercoaters: 100 g/L.
 - 6. Anticorrosive and Antirust Paints Applied to Ferrous Metals (Industrial Maintenance and Rust Preventative Coatings): 100 g/L (SCAQMD) or 250 g/L (CARB).
 - 7. Zinc-Rich Industrial Maintenance Primers: 100 g/L (SCAQMD) or 340 g/L (CARB).
 - 8. Pretreatment Wash Primers: 420 g/L.
 - 9. Floor Coatings: 50 g/L (SCAQMD) or 100 g/L (CARB).
 - 10. Shellacs, Clear: 730 g/L.
 - 11. Shellacs, Pigmented: 550 g/L.
 - 12. Clear Wood Finishes: 275 g/L.
 - 13. Stains, Exterior: 100 g/L (SCAQMD) or 250 g/L (CARB).
 - 14. Stains, Interior: 250 g/L.
- E. Low-Emitting Materials: Interior paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- F. Green Studio and Photo Studio Green Walls
 - 1. Paint
 - a. Provide Virtual Green Chroma Key Paint by ProCyc, Inc., or equal
 - 2. Radius Base
 - a. Provide green screen radius base, 2.5EZ, 30" radius cyclorama cove base by ProCyc, Inc, or equal.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements for paint application.
 - 1. Proceed with paint application only after unsatisfactory conditions have been corrected and surfaces receiving paint are thoroughly dry.
 - 2. Start of painting will be construed as Applicator's acceptance of surfaces and conditions within a particular area.
- B. Coordination of Work: Review other Sections in which primers are provided to ensure compatibility of the total system for various substrates. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.
 - 1. Notify Architect about anticipated problems when using the materials specified over substrates primed by others.

3.2 PREPARATION

- A. General: Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be painted. If removal is impractical or impossible because of size or weight of the item, provide surface-applied protection before surface preparation and painting.
 - 1. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.
- B. Cleaning: Before applying paint or other surface treatments, clean substrates of substances that could impair bond of the various coatings. Remove oil and grease before cleaning.
 - 1. Schedule cleaning and painting so dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.
- C. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions and technical bulletins for each particular substrate condition and as specified.
 - 1. Provide barrier coats over incompatible primers or remove and reprime.
 - 2. Cementitious Materials: Prepare concrete, concrete unit masonry, cement plaster, and mineral-fiber-reinforced cement panel surfaces to be painted. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.
 - a. Use abrasive blast-cleaning methods if recommended by paint manufacturer.
 - b. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not paint surfaces if moisture content exceeds that permitted in manufacturer's written instructions.

- c. Clean concrete floors to be painted with a 5 percent solution of muriatic acid or other etching cleaner. Flush the floor with clean water to remove acid, neutralize with ammonia, rinse, allow to dry, and vacuum before painting.
 - 3. Wood: Clean surfaces of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Sand surfaces exposed to view smooth and dust off.
 - a. Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or other recommended knot sealer before applying primer. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dried.
 - b. Prime, stain, or seal wood to be painted immediately on delivery. Prime edges, ends, faces, undersides, and back sides of wood, including cabinets, counters, cases, and paneling.
 - c. If transparent finish is required, backprime with spar varnish.
 - d. Backprime paneling on interior partitions where masonry, plaster, or other wet wall construction occurs on back side.
 - e. Seal tops, bottoms, and cutouts of unprimed wood doors with a heavy coat of varnish or sealer immediately on delivery.
 - 4. Ferrous Metals: Clean ungalvanized ferrous-metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with SSPC's recommendations.
 - a. Exterior Exposed Steel: Clean steel surfaces in accordance with SSPC-SP 6/NACE No. 3 Commercial Blast Cleaning. Abrasive blast cleaned surfaces shall exhibit a uniform, angular profile of 1.5-3.0 mils. Prime cleaned surfaces within 8 hours and prior to surface rusting.
 - b. Interior Exposed Steel, in Humid Environments: Clean steel surfaces in accordance with SSPC-SP 6/NACE No. 3 Commercial Blast Cleaning. Abrasive blast cleaned surfaces shall exhibit a uniform, angular profile of 1.5-3.0 mils. Prime cleaned surfaces within 8 hours and prior to surface rusting.
 - c. Interior Exposed Steel, in Dry Environments: Clean steel surfaces in accordance with SSPC-SP2 or SP3 Hand or Power Tool Cleaning.
 - 5. Galvanized Surfaces: Clean galvanized surfaces in accordance with SSPC-SP16 Brush off Blast Cleaning of Galvanized Steel and NonFerrous Metals, to achieve a minimum 1 mil anchor profile.
- D. Material Preparation: Mix and prepare paint materials according to manufacturer's written instructions.
 - 1. Maintain containers used in mixing and applying paint in a clean condition, free of foreign materials and residue.
 - 2. Stir material before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into material. If necessary, remove surface film and strain material before using.
 - 3. Use only thinners approved by paint manufacturer and only within recommended limits.
- E. Tinting: Tint each undercoat a lighter shade to simplify identification of each coat when multiple coats of same material are applied. Tint undercoats to match the color of the finish coat, but provide sufficient differences in shade of undercoats to distinguish each separate coat.

3.3 APPLICATION

- A. General: Apply paint according to manufacturer's written instructions. Use applicators and techniques best suited for substrate and type of material being applied.
1. Paint colors, surface treatments, and finishes are indicated in the paint schedules.
 2. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to formation of a durable paint film.
 3. Provide finish coats that are compatible with primers used.
 4. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, grilles, convector covers, covers for finned-tube radiation, and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.
 5. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before final installation of equipment, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
 6. Paint interior surfaces of ducts with a flat, nonspecular black paint where visible through registers or grilles.
 7. Paint backsides of access panels and removable or hinged covers to match exposed surfaces.
 8. Finish exterior doors and doors in wet areas on tops, bottoms, and side edges the same as exterior faces.
 9. Sand lightly between each succeeding enamel or varnish coat.
- B. Scheduling Painting: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.
1. The number of coats and film thickness required are the same regardless of application method. Do not apply succeeding coats until previous coat has cured as recommended by manufacturer. If sanding is required to produce a smooth, even surface according to manufacturer's written instructions, sand between applications.
 2. Omit primer over metal surfaces that have been shop primed and touchup painted.
 3. If undercoats, stains, or other conditions show through final coat of paint, apply additional coats until paint film is of uniform finish, color, and appearance. Give special attention to ensure that edges, corners, crevices, welds, and exposed fasteners receive a dry film thickness equivalent to that of flat surfaces.
 4. Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until paint has dried to where it feels firm, and does not deform or feel sticky under moderate thumb pressure, and until application of another coat of paint does not cause undercoat to lift or lose adhesion.
- C. Application Procedures: Apply paints and coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.
1. Brushes: Use brushes best suited for type of material applied. Use brush of appropriate size for surface or item being painted.
 2. Rollers: Use rollers of carpet, velvet-back, or high-pile sheep's wool as recommended by manufacturer for material and texture required.
 3. Spray Equipment: Use airless spray equipment with orifice size as recommended by manufacturer for material and texture required.

- D. Minimum Coating Thickness: Apply paint materials no thinner than manufacturer's recommended spreading rate to achieve dry film thickness indicated. Provide total dry film thickness of the entire system as recommended by manufacturer.
 - E. Mechanical and Electrical Work: Painting of mechanical and electrical work is limited to items exposed in equipment rooms and occupied spaces.
 - F. Mechanical items to be painted include, but are not limited to, the following:
 - 1. Uninsulated metal piping.
 - 2. Uninsulated plastic piping.
 - 3. Pipe hangers and supports.
 - 4. Tanks that do not have factory-applied final finishes.
 - 5. Visible portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets.
 - 6. Duct, equipment, and pipe insulation having "all-service jacket" or other paintable jacket material.
 - 7. Mechanical equipment that is indicated to have a factory-primed finish for field painting.
 - G. Electrical items to be painted include, but are not limited to, the following:
 - 1. Switchgear.
 - 2. Panelboards.
 - 3. Electrical equipment that is indicated to have a factory-primed finish for field painting.
 - H. Block Fillers: Apply block fillers to concrete masonry block at a rate to ensure complete coverage with pores filled.
 - I. Prime Coats: Before applying finish coats, apply a prime coat, as recommended by manufacturer, to material that is required to be painted or finished and that has not been prime coated by others. Recoat primed and sealed surfaces where evidence of suction spots or unsealed areas in first coat appears, to ensure a finish coat with no burn-through or other defects due to insufficient sealing.
 - J. Pigmented (Opaque) Finishes: Completely cover surfaces as necessary to provide a smooth, opaque surface of uniform finish, color, appearance, and coverage. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections will not be acceptable.
 - K. Transparent (Clear) Finishes: Use multiple coats to produce a glass-smooth surface film of even luster. Provide a finish free of laps, runs, cloudiness, color irregularity, brush marks, orange peel, nail holes, or other surface imperfections.
 - 1. Provide satin finish for final coats.
 - L. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or repaint work not complying with requirements.
- 3.4 FIELD QUALITY CONTROL
- A. The Owner reserves the right to invoke the following test procedure at any time and as often as the Owner deems necessary during the period when paint is being applied:

1. The Owner will engage a qualified independent testing agency to sample paint material being used. Samples of material delivered to Project will be taken, identified, sealed, and certified in the presence of Contractor.
2. Testing agency will perform appropriate tests for the following characteristics as required by the Architect.
3. The Architect may direct Contractor to stop painting if test results show material being used does not comply with specified requirements. Contractor shall remove noncomplying paint from Project site, pay for testing, and repaint surfaces previously coated with the noncomplying paint. If necessary, Contractor may be required to remove noncomplying paint from previously painted surfaces if, on repainting with specified paint, the two coatings are incompatible.

3.5 CLEANING

- A. Cleanup: At the end of each workday, remove empty cans, rags, rubbish, and other discarded paint materials from Project site.
 1. After completing painting, clean glass and paint-spattered surfaces. Remove spattered paint by washing and scraping without scratching or damaging adjacent finished surfaces.

3.6 PROTECTION

- A. Protect work of other trades, whether being painted or not, against damage from painting. Correct damage by cleaning, repairing or replacing, and repainting, as approved by Architect.
- B. Provide "Wet Paint" signs to protect newly painted finishes. After completing painting operations, remove temporary protective wrappings provided by others to protect their work.
 1. After work of other trades is complete, touch up and restore damaged or defaced painted surfaces. Comply with procedures specified in PDCA P1.

3.7 PAINT SCHEDULE

- A. Schedule: Provide products and number of coats specified. Use of manufacturer's proprietary product names to designate colors, materials, generic class, standard of quality and performance criteria and is not intended to imply that products named are required to be used to the exclusion of equivalent performing products of other manufacturers.
- B. Exterior Paint Schedule:
 1. Exterior Galvanized Metal (not shop-finished under Section 051200 - STRUCTURAL STEEL FRAMING, Section 055000 - METAL FABRICATIONS, or Section 055100 - METAL STAIRS AND RAILINGS), Aliphatic Acrylic Polyurethane System:
 - a. Surface Preparation: SSPC-SP16 Brush-off Blast of Galvanized Steel.
 - b. One Coat:
 - 1) Tnemec 66HS Hi-Build Epoxoline at 3.0 mils DFT.
 - 2) PPG PMC Amerlock 400 Hi-Build Epoxy at 4.0-5.0 mils DFT.
 - 3) Dupont 25P High Solids at 4.0 mils DFT.
 - 4) International Intergard 475 HS at 5.0 to 10.0 mils DFT.

- c. And One Coat:
 - 1) Tnemec 73 Endura-Shield at 3.0 mils DFT.
 - 2) PPG PMC Amercoat 450H Polyurethane at 3.0 mils DFT.
 - 3) Dupont Imron 2.8 Urethane at 3.0 to 4.0 mils DFT.
 - 4) International Interthane 990 HS at 3.0 to 4.0 mils DFT.
- 2. Exterior Ferrous Metal, Urethane System:
 - a. Surface Preparation: SSPC-SP6.
 - b. One Coat:
 - 1) Tnemec 90G-1K97 at 3 mils DFT; shop applied under other Sections; use for touch up.
 - 2) PPG PMC Amercoat 68 MCZ at 3 mils DFT; shop applied under other Sections; use for touch up.
 - 3) Dupont Urethane Ganicin Zinc Rich Primer 80% zinc load at 3.0 mils DFT.
 - 4) International Interzinc 315 at 2.0 to 3.0 mils DFT.
 - c. And One Coat:
 - 1) Tnemec 66HS Hi-Build Epoxoline at 3.0 mils DFT.
 - 2) PPG PMC Amerlock 400 Hi-Build Epoxy at 3.0 to 5.0 mils DFT.
 - 3) Dupont 25P High Solids Epoxy at 4.0 to 6.0 mils DFT.
 - 4) International Intergard 475 HS at 4.0 to 8.0 mils DFT.
 - d. And One Coat:
 - 1) Tnemec 73 Endura-Shield at 3.0 mils DFT.
 - 2) PPG PMC Amerlock 450H Polyurethane Topcoat at 3.0 mils DFT.
 - 3) Dupont High Solids Imron Urethane at 4.0 mils DFT.
 - 4) International Interthane 990 HS at 2.0 to 3.0 mils DFT.
- 3. Exterior Aluminum (where required), Painted Finish:
 - a. Surface Preparation: Pressure wash with Oakite and sand with 3M Scotch-Brite nylon pads.
 - b. One Coat:
 - 1) Tnemec 66HS Hi-Build Epoxoline at 2.0 mils DFT.
 - 2) PPG PMC Amerlock 400 Hi-Build Epoxy at 2.0 to 3.0 mils DFT.
 - 3) Dupont 25P High Solids at 4.0 mils DFT.
 - 4) International Intergard 475 HS at 5.0 to 10.0 mils DFT.
 - c. And One Coat:
 - 1) Tnemec 73 Endura-Shield at 2.0 mils DFT.
 - 2) PPG PMC Amercoat 450H Polyurethane at 3.0 mils DFT.
 - 3) Dupont High Solids Imron 2.8 at 4.0 mils DFT.
 - 4) International Interthane 990 HS at 3.0 to 4.0 mils DFT.
- C. Interior Paint Schedule, Typical:

1. Interior Gypsum Wallboard and Plaster, Latex Paint Finish:
 - a. One Coat, Primer:
 - 1) Imperial Paints ECOS Interior Wall Primer.
 - 2) Moore Ultra Spec 500 Interior Latex Primer 534.
 - 3) PPG Speedhide Zero VOC Interior Primer 6-4900XI.
 - 4) S-W Harmony Interior Primer B11 series.
 - 5) S-W ProMar 200 HP Zero VOC Interior Primer.
 - b. And Two Coats, Flat Finish: At ceilings and elsewhere as indicated.
 - 1) Imperial Paints ECOS Interior Flat.
 - 2) Moore Ultra Spec 500 Interior Latex Flat 536.
 - 3) PPG Speedhide Zero VOC Interior Latex Flat 6-4110XI.
 - 4) S-W ProMar 400 Zero VOC Interior Flat.
 - c. And Two Coats, Eggshell Finish: At walls and elsewhere as indicated.
 - 1) Imperial Paints ECOS Interior Eggshell.
 - 2) Moore Ultra Spec 500 Interior Latex Low Sheen 537.
 - 3) PPG Speedhide Zero VOC Interior Latex Eggshell 6-4310XI.
 - 4) S-W ProMar 200 HP Zero VOC Interior Eg-Shel.
2. Interior Architectural Woodwork, Finish Carpentry, and Wood Doors (softwoods, paint grade hardwoods, MDF, MDO, and hardwood veneers), Latex Paint Finish:
 - a. One Coat, Primer:
 - 1) Imperial Paints ECOS Interior Wood Primer.
 - 2) Moore Ultra Spec 500 Interior Latex Primer 534.
 - 3) PPG Speedhide Zero VOC Interior Primer 6-4900XI.
 - 4) S-W ProMar 200 HP Zero VOC Interior Primer.
 - b. And Two Coats, Semi-Gloss:
 - 1) Imperial Paints ECOS Interior Satin.
 - 2) Moore Ultra Spec 500 Interior Latex Semi-Gloss 539.
 - 3) PPG Speedhide Zero VOC Interior Latex Semi-Gloss 6-4510XI.
 - 4) S-W ProMar 200 HP Zero VOC Interior Semi-Gloss.
3. Interior Architectural Woodwork, Finish Carpentry and Millwork (hardwoods and hardwood veneers, except paint grade and factory-finished items), Transparent Polyurethane Finish:
 - a. Sand: 120 grit sandpaper.
 - b. Sand: 220 grit sandpaper.
 - c. One Coat, Stain: Not Used.
 - d. And Three Coats, Satin Finish:
 - 1) American Formulating & Manufacturing, Safecoat Polyureseal BP.
 - 2) Imperial Paints ECOS Woodshield Varnish. Moore Benwood Stays Clear Acrylic Polyurethane Low Lustre W423.

- 4) Vermont Natural Coatings; PolyWhey Natural Furniture Finish.
 - e. Sand Between Urethane Coats: 220 grit sandpaper.
 - 4. Interior Concrete Masonry Unit (CMU), Latex Paint Finish:
 - a. Two Coats, Block Filler:
 - 1) Moore Ultra Spec Hi-Build Masonry Block Filler 571.
 - 2) PPG Speedhide Interior Masonry Hi Fill Latex Block Filler 6-15XI.
 - 3) S-W PrepRite Block Filler B25W25.
 - b. And Two Coats, Eggshell Finish: At walls and elsewhere as indicated.
 - 1) Moore Ultra Spec 500 Interior Latex Low Sheen 537.
 - 2) PPG Speedhide Zero VOC Interior Latex Semi-Gloss 6-4510XI.
 - 3) S-W ProMar 200 HP Zero VOC Interior Eg-Shel.
 - 5. Interior Exposed Steel, Joists, Ductwork, Conduit and Similar Items (where indicated), Dry-Fall or Dry-Fog Painted System:
 - a. One Coat:
 - 1) Moore Latex Dry Fall Flat 395 at 2.5 to 3.0 mils DFT.
 - 2) PPG Speedhide Super Tech WB Interior Dry-Fog Latex 6-725XI Flat at 2.0 to 2.5 mils DFT.
 - 3) S-W WB Pro Industrial Waterborne Acrylic Dryfall Flat B42 series at 2.5 to 3.0 mils DFT.
 - 4) Tnemec 115 WB Unibond at 2.5 to 3.0 mils DFT.
 - 6. Interior Concrete Floor, Water based epoxy system:
 - a. Two Coats, Tinted Semi-gloss Finish:
 - 1) PPG Aquapon WB EP
 - b. Two coats, Clear Semi-gloss finish
 - 1) PPG Aquapon WB EP
- D. Interior Paint Schedule, High Performance and Specialty Systems:
- 1. Interior Gypsum Wallboard and Plaster at Toilet Rooms, and Other Wet Areas, Urethane Coating:
 - a. Surface Preparation: Cured, clean and dry, free of surface contaminants.
 - b. One Coat:
 - 1) Tnemec 201 Epoxoprime at 3.0- 4.0 mils DFT.
 - 2) PPG PMC Amerlock Sealer at 3.0 to 4.5 mils DFT.
 - 3) Dupont Hi-Solids Colar primer at 3.0 to 4.0 mils DFT.

- 4) International Interseal 670 HS at 3.0 to 4.0 mils DFT.
 - c. And One Coat:
 - 1) Tnemec 280 Tneme-glaze at 6.0 to 8.0 mils DFT.
 - 2) PPG PMC Amercoat 351 Epoxy at 6.0 to 8.0 mils DFT.
 - 3) Dupont 100 % Solids Epoxy at 8.0-10.0 mils.
 - 4) International Interseal 670 HS at 3.0 to 4.0 mils DFT.
 - d. And One Coat:
 - 1) Tnemec 1080 or 1081 Endurashield WB at 3.0 to 3.5 mils DFT.
 - 2) PPG PMC AmerShield VOC at 2.0 to 3.0 mils DFT.
 - 3) Dupont WB Urethane at 3.5 to 4.0 mils DFT.
 - 4) International Water Borne Urethane at 3.0 to 4.0 mils DFT.
- 2. Interior Metals (Not specified to receive other coating systems/not shop finished), Epoxy Painted Finish:
 - a. One Coat: Approved primer, in shop under other Sections (where specified). If not shop primed, provide primer recommended by finish coating manufacturer.
 - b. And One Coat:
 - 1) Tnemec 1029 Enduratone at 2.0 mils DFT.
 - 2) PPG PMC Amerlock 400 at 2.0 to 4.0 mils DFT.
 - 3) Dupont 25P at 3.0 to 4.0 mils DFT.
 - 4) International Interseal 670 HS at 3.0 mils DFT.
 - c. And One Coat:
 - 1) Tnemec 1029 Enduratone at 2.0 to 3.0 mils DFT.
 - 2) PPG PMC Amerlock 400 at 2.0 to 4.0 mils DFT.
 - 3) Dupont High Solids Acrylic Coating 3.0 mils DFT.
 - 4) International Intercryl 530 at 3.0 to 4.0 mils DFT.
- 3. Interior TV Studio and Photo Studio Green Walls:
 - a. One Coat: Grey Bonding Primer as recommended by the Chroma Paint coating manufacturer.
 - b. And One Coat:
 - 1) Pro Cyc Grey Bonding Primer
 - 2) Or equal
 - c. And Three Coats:
 - 1) Virtual Green Chroma Key
 - 2) Or equal
- E. Mechanical and Electrical Work: Paint all exposed items throughout the project except factory finished items with factory-applied baked enamel finishes which occur in mechanical rooms or areas, and excepting chrome or nickel plating, stainless steel, and aluminum other than mill

finished. Paint all exposed ductwork and inner portion of all ductwork. Same as specified for other interior metals, hereinabove

3.8 INTERIOR PAINTING SCHEDULE - GENERAL FINISHES AND COLORS

- A. General: Number of coats scheduled herein below is minimum required, refer to Article entitled "APPLICATION" regarding coverage.
- B. The Architect will furnish a schedule of colors for each area and surface. Tinting and matching shall be to the satisfaction of the Architect. No limit is placed on the number of colors that may be required, or the colors selected in any one room, area, or surface.
Premium paints of deep-hued, bright, pigment intensive, accent and primary colors may be scheduled for up to 25 percent of all interior and exterior surfaces without additional cost to the Owner. The Architect shall select the following number of colors for interior spaces:

PAINT COLOR SCHEDULE FOR PUBLIC SPACES, INCLUDING LOBBIES AND STUDENT COMMONS PINT COLOR SCHEDULE

C. Paint schedule for Public spaces, including Lobbies and Corridors

- a. 2 colors on soffit
 - b. 1 color on wall.
 - c. 1 color on door frames.
- 2. Paint color schedule (for each wing, per floor) for classroom corridors
 - a. 1 color above lockers.
 - b. 1 color above ceramic tile wainscot
 - c. 1 color on classroom entry wall.
 - d. 5 colors on soffit at classroom & corridors.
 - e. 1 color on door frames.
- 3. Paint color schedule Multipurpose Room
 - a. 2 colors on walls
 - b. 2 colors on soffit.
 - c. 1 color on door frames.
 - d. 1 color on all exposed structure and supports , metal fabrications, roof deck, ,HVACs located above ACT clouds
 - e. 1 color metal rail
- 4. Paint color schedule for gang toilets per floor.
 - a. 1 color on soffit color
- 5. Paint color schedule for single toilets per scheme.
 - a. 2 colors on wall colors.
 - b. 1 color on soffit color

- c. 1 color on door frame.
- 6. Paint color schedule for Office / Administration Areas.
 - a. 4 colors on walls.
 - b. 2 colors on soffit
 - c. 1 color on door frame.
- 7. Paint color schedule for Gymnasium.
 - a. 4 colors on walls
 - b. 1 color on ceiling / underside of deck.
 - c. 1 color on structure steel members.
 - d. 1 color on duct.
 - e. 1 color on horizontal structural steel member
 - f. 1 color on door frame.
- 8. Paint color schedule for service rooms / janitors, boiler, electrical rooms .
 - a. 1 color on walls
 - b. 1 color on door frame
- 9. Paint color schedule for Stairs.
 - a. 2 colors on walls.
 - b. 1 color on stringer.
 - c. 1 color on rail & wire mesh
 - d. 1 color on handrail.
- 10. Paint color schedule for Media Center and Group Study
 - a. 4 colors on walls.
 - b. 3 colors on soffit
 - c. 1 color on door frame.
- 11. Paint color schedule for Cafeteria .
 - a. 2 wall colors.
 - b. 4 soffit colors.
 - c. 1 door frame
- 12. Team Locker Room and sport area
 - a. 3 colors on walls
 - b. 1 color on soffits
 - c. 1 color on door frame
- 13. Fitness and Weight room
 - a. 3 colors on walls
 - b. 1 color on ceiling / underside of deck.
 - c. 1 color on structure steel members.
 - d. 1 color on duct.
 - e. 1 color on door frame.
- 14. TV studio classroom
 - a. 2 colors on walls

- b. 1 color on ceiling / underside of deck.
- c. 1 color on structure steel members.
- d. 1 color on duct
- e. 1 color on door frame

- F. All prime and intermediate coats shall be tinted on interior colors
- G. Colorants shall be pure, non-fading pigments, mildew-proof, ultra-violet resistant, finely ground in approved medium; and be lime proof, when used in coatings to be applied on masonry, concrete, plaster, and gypsum board surfaces.
- H. Mechanical and Electrical Work: Paint all exposed items throughout the project except factory finished items with factory-applied baked enamel finishes which occur in mechanical rooms or areas, and excepting chrome or nickel plating, stainless steel, and aluminum other than mill finished. Paint all exposed ductwork and inner portion of all ductwork. Same as specified for other interior metals, hereinabove
- I.

END OF SECTION

SECTION 101100
VISUAL DISPLAY SURFACES

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Markerboards, including custom sized/shaped.
 2. Tackboards and Tackstrips.
 3. Marker wall coverings.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 042000 - UNIT MASONRY for substrate.
 2. Section 064020 - INTERIOR ARCHITECTURAL WOODWORK for custom wood trim for visual display surfaces.
 3. Section 092110 - GYPSUM BOARD ASSEMBLIES for substrate.
 4. Section 099000 - PAINTING AND COATING for primers under marker wall covering.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. LEED Submittals:
1. Credit IEQ 4.1: Manufacturers' product data for interior adhesives and sealants used at Project site, including printed statement of VOC content.
 2. Credit IEQ 4.4: Composite wood manufacturer's product data for each composite wood product used indicating that the bonding agent contains no added urea formaldehyde. Adhesive manufacturer's product data for each adhesive used indicating that the adhesive contains no added urea formaldehyde.
- C. Samples: For each type of visual display surface indicated, for units with factory-applied color finishes, and as follows:
1. Actual sections of visual display surfaces.

2. Fabric swatches fabric-faced tack assemblies.

D. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Show location of panel joints.
2. Show location of special-purpose graphics for visual display surfaces.
3. Include sections of typical trim members.

E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for surface-burning characteristics of fabrics.

F. Maintenance Data: For visual display surfaces to include in maintenance manuals.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of visual display surface through one source from a single manufacturer.

B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

C. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver factory-built visual display boards, including factory-applied trim where indicated, completely assembled in one piece without joints, where possible. If dimensions exceed maximum manufactured panel size, provide two or more pieces of equal length as acceptable to Architect. When overall dimensions require delivery in separate units, prefit components at the factory, disassemble for delivery, and make final joints at the site.

B. Store visual display units vertically with packing materials between each unit.

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify dimensions by field measurements before fabrication and indicate measurements on Shop Drawings.

1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating visual display surfaces without field measurements. Coordinate wall construction to ensure that actual dimensions correspond to established dimensions.
2. Allow for trimming and fitting where taking field measurements before fabrication might delay the Work.

PART 2 - PRODUCTS

2.1 BASIS-OF-DESIGN

A. Basis-of-Design Products: Refer to the Finish Schedule on the Drawings.

2.2 MARKERBOARD ASSEMBLIES

- A. Porcelain-Enamel Markerboard Assembly: Balanced, high-pressure, factory-laminated markerboard assembly of 3-ply construction consisting of backing sheet, core material, and 0.021-inch-thick, porcelain-enamel magnetic steel face sheet.
1. Available Manufacturers:
 - a. AACRO Products, Inc.
 - b. Claridge Products & Equipment, Inc.
 - c. Peter Pepper Products.
 - d. MooreCo; Best-Rite Manufacturing.
 - e. Steelcase Company; PolyVision products.
 - f. Or equal
 2. Manufacturer's Standard Core: Minimum 1/4 inch thick, with manufacturer's standard moisture-barrier backing with binder containing no added urea formaldehyde.
 3. Fire Rating: ASTM E 84, Class A.
 4. Color: White, low gloss finish. Writing surface will also serve as a projection surface for short throw projector.
 5. Laminating Adhesive: Manufacturer's standard moisture-resistant thermoplastic type.
 6. The tolerance for board flatness shall be compatible with short throw projector touch screen module.

2.3 TACKBOARD ASSEMBLIES

- A. Linoleum Resilient Tackboard: Uni-color linoleum resilient homogeneous tackable surface consisting of linseed oil, granulated cork, rosin binders and dry pigments calendared onto a natural burlap backing with integral color throughout with surface-burning characteristics indicated.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Forbo Industries; Bulletin Board.
 - b. WallTalkers; Tac-wall.
 - c. Or Equal
 2. Thickness: 1/4 inch.
 3. Manufacturer's Standard Core: Minimum 1/4 inch thick, with manufacturer's standard backing with binder containing no added urea formaldehyde.
 4. Fire Rating: ASTM E 84, Class A.
 5. Colors: Refer to Finish Schedule.
- B. Fabric-Wrapped Tackboard:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Claridge Products & Equipment, Inc.
 - b. Egan Visual Inc.

- c. MooreCo; Best-Rite Manufacturing.
 - d. Peter Pepper Products.
 - e. Steelcase Company.
 - f. Or equal
2. Manufacturer's Standard Core: Total laminated nominal thickness of core and covering ½ inch, with manufacturer's standard backing with binder containing no added urea formaldehyde.
3. Fire Rating: ASTM E 84, Class A.
4. Fabric Facing Material, Colors and Patterns: Refer to Finish Schedule.
 - a. Weight: 16 oz per linear yard, non-directional weave.
 - b. Fiber Content: 100% recycled polyester.
 - c. Breaking Strength: 150 lbs. minimum warp and fill, ASTM D 5034.
 - d. Tear strength: 30 lbs. minimum warp and fill, ASTM D 2661.
 - e. Flame Test: ASTM E 84, Class A or 1.
 - f. Colors: Selected by the Architect from manufacturer's of full range of standard colors.
5. Trim to match adjacent markerboard trim:
6. Capability of being mulled together with H-channel trim

2.4 VISUAL DISPLAY WALL COVERINGS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Best-Rite Manufacturing.
 2. Egan Visual Inc.
 3. Marsh Industries, Inc.; Visual Products Group.
 4. Omnova Solutions Inc.; Decorative Products; Commercial Wallcovering.
 5. WallTalkers; a division of RJF International Corporation.
 6. Or equal
- B. Visual Display Wall Covering: Intended for use with dry-erase markers and as a projection surface and consisting of moderate-gloss, plastic film bonded to fabric backing; not less than 0.020-mil total thickness.
 1. Surface Graphics: 2-inch-square grid.
 2. Color: As selected by Architect from manufacturer's full range.
- C. Magnetic Visual Display Wall Covering: Intended for use with dry-erase markers and magnetic aids and consisting of moderate-gloss plastic film bonded to ferrous-powdered fabric backing; not less than 0.025-mil total thickness.
 1. Color: As selected by Architect from manufacturer's full range.
- D. Primer/Sealer: Mildew-resistant primer/sealer complying with requirements in Section 099000 - PAINTING AND COATING and recommended in writing by wall covering manufacturer for intended substrate.

2.5 ACCESSORIES

- A. Aluminum Frames and Trim: Factory-applied, fabricated from not less than 0.062-inch-thick, extruded aluminum; of size and shape indicated.
 - 1. Chalk/Marker Tray: Manufacturer's standard, continuous tray.
 - 2. Flag Holder: Provide one flag holder per room, equal to Claridge No. 76H. The flag holder shall be compatible with accepted short throw projector touch screen module.
- B. Adhesive: Mildew-resistant, nonstaining adhesive, for use with specific visual display surfaces and substrate application, as recommended in writing by visual display surface manufacturer.
 - 1. Adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.6 FABRICATION

- A. Porcelain-Enamel Visual Display Assemblies: Laminate porcelain-enamel face sheet and backing sheet to core material under heat and pressure with manufacturer's standard flexible, waterproof adhesive.
- B. Factory-Assembled Visual Display Units: Coordinate factory-assembled units with trim and accessories indicated. Join parts with a neat, precision fit.
- C. Aluminum Frames and Trim: Fabricate units straight and of single lengths, keeping joints to a minimum. Miter corners to neat, hairline closure.

2.7 ALUMINUM FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- D. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Remove dirt, scaling paint, projections, and depressions that will affect smooth, finished surfaces of visual display boards.
- B. Prepare surfaces to achieve a smooth, dry, clean surface free of flaking, unsound coatings, cracks, defects, and substances that will impair bond between visual display boards and surfaces.

3.3 INSTALLATION

- A. General: Install visual display surfaces in locations and at mounting heights indicated on Drawings. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.
 - 1. Join adjacent wall panels with concealed steel splines for smooth alignment.
 - 2. Where markerboards abut, install with clean, trimless butt joints.
 - 3. Tolerance: Maximum 5mm over any dimension for surfaces at projection locations.

3.4 CLEANING AND PROTECTION

- A. Clean visual display surfaces according to manufacturer's written instructions. Attach one cleaning label to visual display surface in each room.
- B. Touch up factory-applied finishes to restore damaged or soiled areas.
- C. Cover and protect visual display surfaces after installation and cleaning.

END OF SECTION

SECTION 101400

SIGNAGE

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 – GENERAL REQUIREMENTS, which are hereby made a part of this Section of the Specifications.

1.2 SECTION INCLUDES

- A. The work of this Section consists of the following sign categories:

1. Exterior

- a. Building Identification
- b. Directional
- c. Regulatory
- d. Identification
- e. Miscellaneous specialty signs

2. Interior

- a. Room, Office and Area Identification
- b. Informational
- c. Directional
- d. Regulatory
- e. Dedication
- f. Miscellaneous specialty signs

- B. The items below are included as part of this specification.

- 1. General sign type drawings, including overall sign shape, size and graphic layout
- 2. Mounting drawings, showing mounting heights and relationships to site and/or building elements
- 3. Detailed sign type drawings, indicating type styles, symbols, dimensioned graphic layouts, methods of graphic application, colors, and primary materials
- 4. Construction drawings, showing fabrication and mounting details
- 5. Preliminary sign schedule, listing sign location number, sign type, sign message, quantity and notes of clarification, if any
- 6. Sign location plans, indicating the location of each sign with its number

1.3 RELATED SECTIONS

1.4 ACTION SUBMITTALS

- A. The sign contractor shall submit the following to the general contractor prior to fabrication, under the provisions of Section 01330 SUBMITTAL PROCEDURES

1. Construction shop drawings for all sign types showing shape, size, type styles, symbols, dimensioned graphic layouts, methods of graphic application, colors, materials, and fabrication and mounting details
2. Sign mounting drawings showing mounting heights and relationship to site and/or building elements
3. Final sign message schedule
 - a. The sign contractor will meet with the architect, owner and general contractor, as directed and as necessary, to confirm all text and graphic content for each sign element; the sign contractor will amend the preliminary sign message schedule included in these construction documents, as necessary
 - b. As part of this sign message schedule review process, particular attention should be directed to the room numbering system, with all room numbers and names being reviewed and verified with architect and owner
 - c. The resulting sign message schedule will be submitted by the sign contractor for approval, and will list each individual sign, together with a unique sign location number, sign type designation, sign message and graphic content, quantity, and notes of clarification, if any.
4. Sign location plans indicating the location of each sign with its number
5. Two full size printed layouts of artwork proofs for each sign type and each unique layout
6. Two samples of the following Sign Types: 11, 12, 18, 24A, and 30A. Sample letter of Sign Type 35. Partial corner samples for the following Sign Types: 31, 45, 46, and 52.
7. Two printed sample of full-scale graphics image (corner only on the specified material) for the following Sign Types 29, and 44.
8. Two color chip samples of each color and finish of exposed materials, minimum 4" x 4", applied to actual sign material substrates

- B. All signage samples are to be delivered for review and approval in a single submission package.

1.5 INFORMATION SUBMITTALS

- A. The sign subcontractor shall submit the names of five projects, completed in the last three years, which are similar in scope to this project. The sign subcontractor shall provide information for each project including contact name, telephone number, and email address.

1.6 SIGN CONTRACTOR QUALIFICATION

- A. Subject to compliance with requirements, pre-qualified acceptable signage subcontractors include, but are not limited to, the following:

1. Poblocki Sign Company Northeast
4 Industrial Park Road
Medway, MA 02053
508-533-9000
www.poblocki.com
2. Poyant Signs Incorporated
125 Samuel Barnet Boulevard
New Bedford, MA 02745
800-544-0961
www.poyantsigns.com

3. Sign Works Group, Inc.
60 Arsenal Street
Watertown, MA 02472
617-924-0292
4. Welch Architectural
7 Lincoln Avenue
Scarborough, ME 04074
207.883.6200
www.welchsign.com

1.7 REGULATORY REQUIREMENTS

- A. Provide all signs in accordance with, and as required by Federal, state, or local building code or ordinances including ADAAG – Americans with Disabilities Act Accessibility Guidelines, 2010 Standards, as issued by the US Department of Justice. Code compliant signage shall include, but not be limited to, building egress, elevator operation, fire safety regulations, and health and safety requirements.

1.8 COORDINATION

- A. The sign contractor will notify the general contractor of any special anchoring provisions, such as blocking, to be made in walls and ceilings prior to sign installation. The notifications will be timely, before walls and ceilings are closed.

1.9 PERMITS

- A. The sign contractor will obtain any permits required for signs, if these permits are separate from the basic building permit obtained by the general contractor.

PART 2 - PRODUCTS

2.1 SIGNAGE GENERAL

- A. The room numbers and text shown on the sign schedule are preliminary and are subject to revision.
- B. The products, fabricators, manufacturers, and materials shown for each sign type is intended to be the basis for design. Equal sign products from other manufacturers may be submitted to the architect for approval prior to bidding. All work will be as shown on the construction drawings.

2.2 EXTERIOR SIGNS

- A. Flush Wall Mount Plaque. Flush wall mount plaques will be fabricated and installed by sign contractor. Flush wall mount plaques will consist of acrylic plaques with digitally printed graphics, Thermoformed plaques with raised graphics and Braille, and mounting adhesives. All components to be cut on CNC equipment and all dimensional and alignment tolerances shall not exceed +/- .005". Sign mounts to exterior wall with recessed shim plate. Product will be used for Sign Types 50, 53-56 and 60.
- B. Fabricated Aluminum Panel. Fabricated aluminum panels will be fabricated and installed by sign contractor. Fabricated aluminum panel sign will consist of aluminum face and fabricated aluminum frame. Sign mounts to exterior wall. Product will be used for Sign Type 52.

- C. Vinyl Graphics. Vinyl graphics will be fabricated and installed by sign contractor. Surface applied vinyl graphics will be applied to designated building surfaces. Product will be used for Sign Types 51, 57-59, 60A, 60B, and 61.
- D. Metal Letters. Metal letters will be manufactured by Steel Art Company of Norwood MA, www.steelartco.com. Metal letters will be cut with a CNC controlled abrasive waterjet cutting system. All letter and graphic forms shall have sharp inside and outside corners. Product will be used for Sign Types 62 and 71.
- E. Post and Panel. Post and panel signs will be fabricated and installed by sign contractor utilizing extrusions and components manufactured by Sign Comp of Grand Rapids MI, www.signcomp.com. Sign extrusions and components will include Sign Comp Series 3 round post, post cap, sign panel frame, and post filler strip. Text and symbols will be applied to sign panel faces with surface applied vinyl graphics. Products will be used for Sign Types 63, 63A, 64-68.
- F. Site ID. Site ID will be fabricated and installed by sign subcontractor. Site ID sign will consist of fabricated aluminum panels and surface mounted dimensional letters. Fabricated panels will consist of welded structural frame and faces, and shall be free of surface deflections and distortions. Product will be used for Sign Type 69.
- G. Fabricated Metal Letters and Logo, Option B, on Smooth Surface. Metal letters and logo will be manufactured by Steel Art Company of Norwood MA, www.steelartco.com. Metal letters will be cut with a CNC controlled abrasive waterjet cutting system. All letter and graphic forms shall have sharp inside and outside corners. Letters are mounted on granite veneer surface with studs. Product will be used for Sign Types 70.
- H. School Logo. School Logo will be back-lit; fabricated and installed by sign contractor. Logo will consist of fabricated aluminum graphics and letterforms with reverse channel LED letterforms for halo-lit effect. Logo will be cut with a CNC controlled abrasive waterjet cutting system. All graphic forms shall have sharp inside and outside corners. Sign mounts on wall with spacer. Product will used for Sign Type 72.

2.3 INTERIOR SIGNS

- A. Flush Wall Mount Plaque. Flush wall mount plaques will be fabricated and installed by sign contractor. Flush wall mount plaques will consist of acrylic plaques with digitally printed graphics, insert plaques with removable paper inserts, Thermoformed plaques with raised graphics and Braille, and mounting adhesives. All components to be cut on CNC equipment and all dimensional and alignment tolerances shall not exceed +/- .005". Product will be used for Sign Types 11-19, 20-20A, 23, 24H-24N, 25A, 25B, and 27-28.
- B. Projected Wall Mount Plaque. Projected wall mount plaque will be fabricated and installed by sign contractor. Sign will consist of aluminum plaques with digitally printed graphics and aluminum mounting brackets. Product will be used for Sign Type 22.
- C. V-Shape Projected Wall Mount Sign. V-Shape projection sign will be fabricated and installed by sign contractor. Sign will consist of acrylic panels with digitally printed graphics, mounted on wall with screws and VHB tape. Product will be used for Sign Types 24A-24G, and 48-49.
- D. Metal Letters and Graphics. Metal letters and graphics will be manufactured by Steel Art Company of Norwood MA, www.steelartco.com. Metal letters and graphics will be cut with a

CNC controlled abrasive waterjet cutting system. All letter and graphic forms shall have sharp inside and outside corners. Product will be used for Sign Types 35, 36, and 45.

- E. Gym ID, Canopy Mounted Metal Letters. Metal letters will be fabricated and installed by sign contractor. Metal letters will be cut with a CNC controlled abrasive waterjet cutting system. All letter and graphic forms shall have sharp inside and outside corners. Product will be used for Sign Type 35.
- F. Dedication Plaque. Dedication plaque will be fabricated and installed by sign contractor. Dedication plaque will consist of aluminum plate with fine horizontal satin grain finish and protective clear coat finish. Graphics to be direct UV cured digital print. Plaque mounts to designated surface with full-size acrylic backer. Product will be used for Sign Type 46.
- G. Graphics Panel. Graphics panel will be fabricated and installed by sign contractor. Graphics panel will consist of high-pressure laminate panel with digitally printed graphics. Panel mounts to designated architectural surface with Gyford mounting hardware. Product will be used for Sign Types 29.
- H. Specialty Acrylic Panel. Specialty acrylic panel will be fabricated and installed by sign contractor. Panel will consist of frosted acrylic panel with digitally printed graphics, and mount to designated architectural surface with Gyford mounting hardware. Or panel will consist of frosted acrylic panel with dimensional letters, and mount to designated architectural surface with custom aluminum clips. Product will be used for Sign Types 30, 30A, 30B, 32-34.
- I. Specialty Projection Wall Mount Panel. Specialty projection panel will be fabricated and installed by sign contractor. Project wall mount panel will consist of Dibond panels with digitally printed graphics. Panel mounts to designated architectural surface with mounting brackets, or mounts to column with mounting brackets and stainless-steel straps. Product will be used for Sign Type 31 and 31A.
- J. Vinyl Graphics. Vinyl graphics will be fabricated and installed by sign contractor. Surface applied vinyl graphics will be applied to designated building surfaces with spacers. Product will be used for Sign Types 19A and 26.
- K. Decorative Wall Covering. Wall covering will be fabricated and installed by sign contractor. Wall covering will consist of 3M Controltac or equivalent material with digitally printed image and over laminate for UV protection. Require for new wall surface to be smooth, properly primed. Use a primer that dries to a solid color to conceal drywall joints. Install per manufactures recommendation. Product will be used for Sign Type 44.
- L. Restaurant ID. Restaurant ID will be fabricated and installed by sign contractor. ID will consist of fabricated and painted expanded PVC panel mounted to architectural surface. Product will be used for Sign Type 45.

2.4 BASIS FOR DESIGN

- A. The product(s) shown for each sign type is intended to be the basis for design. Equal sign products from other manufacturers may be submitted to the architect for approval prior to bidding. All work will be as shown on the construction drawings.

2.5 QUANTITIES

- A. Exterior sign types:

Type 50	Exterior Door ID Small	35
51	Exterior Entry ID Vinyl	3 sets
52	Exterior Door ID Large	8
53	Exterior Restroom ID	2
55	Exterior Fire Dept Regulatory	2
56	Exterior Elevator Machine Room Regulatory	1
57	Exterior Door Number Vinyl	26
58	Exterior Window Number Vinyl	92
59	Exterior Info Vinyl Letters	5 sets

34	Major Destination ID, Mullion Mtd	1
35	Major Destination ID	3 sets
36	Major Destination ID, Small	2 sets
37	Gym ID	1 set
44	Wall Mural Graphics	1
45	Restaurant ID	2
46	Dedication Plaque	1
48	Fire Extinguisher, V-Flag	100
49	Defibrillator ID, V-Flag	7

2.6 MATERIALS

A. The following is a list of primary materials to be used on this project:

1. Acrylic shall clear Acrylite cast acrylic sheet, smooth both faces, as manufactured by Evonik Industries, Parsippany, NJ, www.acrylite.net.
2. Polycarbonate shall be clear, matte finish one face, as manufactured by Sheffield Plastics, Sheffield, MA., www.sheffieldplastics.com.
3. Paint shall be acrylic polyurethane MAP, as manufactured by Matthews Paint, Delaware, OH, www.matthewspaint.com.
4. Foam tape shall be 4416, as manufactured by 3M Company, St. Paul, MN, www.3M.com.
5. VHB foam tape shall be 4950, as manufactured by 3M Company, St. Paul, MN, www.3M.com.
6. Silicone adhesive shall be 732 Multipurpose RTV Sealant, as manufactured by Dow Corning, Midland, MI, www.dowcorning.com.
7. Pressure sensitive vinyl graphic film shall be Scotchcal 77125 Electrocut Graphic Film, as manufactured by 3M Company, St. Paul, MN, www.3M.com.
8. Expanded PVC shall be manufactured by Komatex, Huntsville, AL, www.kommerlingusa.com.
9. Graphic panel shall be manufactured by iZone Imaging, Temple, TX, www.izoneimaging.com
10. Dibond panel shall be manufactured by 3A Composites, Horgen, Switzerland www.display.3acomposites.com/dibond
11. Metal standoffs and other specialty mounting hardware shall be manufactured by Gyford Standoff Systems, Reno, NV, www.standoffsystems.com

B. All other secondary materials shall be as shown on the construction drawings.

2.7 FABRICATION STANDARDS

- A. All graphic elements, including text and symbols, will be reproduced from computer generated digital artwork. All vector artwork created for graphic reproduction will be output at a minimum resolution of 1200 dpi. All computer-generated non-vector artwork will be saved at 300 dpi, at full size, and will be output at a minimum resolution of 300 dpi.
- B. All graphic elements, including text and symbols, will be reproduced with sharp inside and outside corners and edges. No rounded corners or edges shall be permitted.
- C. All graphic elements will be produced in such a manner that all edges and corners of letterforms, symbols, color bands, rules, and borders, are true and clean. All printed inks shall be applied evenly without pinholes, scratches, or orange-peel texture.
- D. All painted components will be spray finished in such a manner that exposed surfaces are free of dust under the paint surface, orange-peel texture, runs, color streaks, or build-up at edges. Sharp edges and corners will be broken prior to painting. All surfaces shall be prepared, primed, and finished in accordance with the published application instructions of the paint manufacturer.
- E. Colors and metal finishes will be selected by the architect from the standard offering of each manufacturer. Custom colors, if desired, will be shown on sign construction drawings.
- F. Type styles and symbols will be as shown on the general and detailed sign type drawings.
- G. All Braille on tactile signs shall be accurate Grade 2 translations, and shall conform to the provisions of ADAAG and ICC/ANSI A117.1 with regard to size, position, spacing, and profile (domed top) characteristics.
- H. All fabrication workmanship shall be of best quality in every particular, complete in every detail, and strictly in accordance with best practices. All exposed and fabricated joints shall be tight and completely smooth. All sign faces shall be free of cupping, oil-canning, or other deflections.

2.8 PACKAGING

- A. Every effort should be made to use biodegradable and recyclable packaging materials.
- B. Pack each sign so as to prevent scratches and surface damage.
- C. See 3.7 for disposal of waste.

2.9 WARRANTY

- A. All products will be guaranteed against defects in materials and workmanship for a period of three years from the date of installation. Warranty is void if product is not maintained according to the manufacturer's recommendations.

PART 3 - EXECUTION

3.1 DELIVERY, STORAGE, HANDLING

- A. If stored at the site, all materials will be in an elevated, dry location, protected by a waterproof covering. The location will be coordinated with the general contractor.

3.2 ENVIRONMENTAL CONDITIONS

- A. Store all adhesives at room temperatures of no less than 55 degrees.

3.3 SITE INSPECTION

- A. Examine mounting surfaces, areas, and conditions with the general contractor present. Check for compliance with requirements for installation, and other factors affecting the performance of the work.

3.4 INSTALLATION

- A. Install all signs, according to the manufacturer's recommendations, and as shown on the construction drawings.
- B. Install all signs plumb and level at specific locations shown on the sign location plans and construction drawings.
- C. Exposed fasteners will not be permitted, unless specifically shown and required on the construction drawings, or approved by the architect.
- D. All signs will be shop-fabricated, and where practical, delivered to the site completely assembled. All signs that cannot be delivered fully assembled shall be erected and assembled so that all parts fit accurately with hairline joints.

3.5 PROJECT SCHEDULE

- A. All work will be performed in accordance with a schedule approved by the general contractor. The sign contractor shall assume that all signs will be installed in two separate phases occurring within a period of 36 months.
- B. All sign installation work will be completed prior to occupancy permit inspections. Temporary signs are not included

3.6 CLEANING

- A. Clean all signs following installation with a mild, non-streaking, wall cleaning solution for normal dirt and finger prints. Care should be taken not to scratch the sign surface.

3.7 WASTE MANAGEMENT

- A. Separate and recycle materials and packaging in accordance with the project Waste Management Plan.
- B. Remove from the site any materials and packaging not included in the Waste Management Plan.

3.8 RE-ORDER PROCESS

- A. Upon completion of the installation, the sign contractor will submit as-built drawings, and maintenance instructions to the facility representative.

- B. The sign contractor will supply to the facility representative re-order instructions for replacement of sign parts such as name strips, and for the ordering of new signs.

SECTION 102110
TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Phenolic-core toilet compartments and screens, floor-mounted and overhead braced.
 2. Locker room changing compartments, floor-mounted and overhead braced.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 042000 – UNIT MASONRY for masonry wall construction supporting the toilet compartment
 2. Section 061000 – ROUGH CARPENTRY for in-wall blocking and nailers in drywall supporting the toilet compartments
 3. Section 092110 – GYPSUM BOARD ASSEMBLIES adjacent materials and panel support
 4. Section 090002 – TILE for adjacent materials
 5. Section 102800 - TOILET ACCESSORIES for partition mounted accessories.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. LEED Submittals: Prepare and submit required documentation for the work of this Section in accordance with USGBC LEED Reference Guide for Building Design and Construction (v4) and Division 01 Section "LEED v4 BD+C: School Requirements".
1. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
 2. Building product disclosure and optimization: Provide required documentation to secure the maximum MR credits, including but not limited to: Shop Drawings: Include plans, elevations, sections, details, and attachments to other work. Show locations of cutouts for compartment-mounted toilet accessories.

- a. Environmental product declarations.
 - b. Sourcing of raw materials.
 - c. Material ingredients.
 - 3. Project material cost data: Provide invoices, receipts, statements, and other evidence required to document total cost for materials used for Project.
 - 4. Waste management and disposal records complying with Division 01 Section 017400 "Construction Waste Management".
 - a. For products diverted from disposal in landfills and incinerators, and where recycled resources are directed back to the manufacturing process. Include a statement indicating percentage of materials diverted and recycled and the costs associated with each.
 - C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Show locations of cutouts for compartment-mounted toilet accessories.
 - D. Samples for Verification: Of each type of color and finish required for units, prepared on 6-inch-square Samples of same thickness and material indicated for Work.
- 1.4 QUALITY ASSURANCE
- A. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: 25 or less.
 - 2. Smoke-Developed Index: 450 or less.
 - B. Regulatory Requirements: Comply with applicable provisions of Massachusetts Architectural Access Board and the Americans with Disabilities Act (ADA), "Accessibility Guidelines for Buildings and Facilities (ADAAG) for compartment door operating hardware and compartments designated as accessible."
 - C. Regulatory Requirements: Comply with applicable provisions of ICC A117.1 and the Americans with Disabilities Act (ADA), "Accessibility Guidelines for Buildings and Facilities (ADAAG) for compartment door operating hardware and compartments designated as accessible."
- 1.5 PROJECT CONDITIONS
- A. Field Measurements: Verify actual locations of walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements before fabrication and indicate measurements on Shop Drawings.
 - 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating toilet compartments without field measurements. Coordinate wall, floor, ceilings, and other contiguous construction to ensure that actual dimensions correspond to established dimensions.
- 1.6 COORDINATION
- A. Coordinate with the work of Section 061000 - ROUGH CARPENTRY for locations requiring wood blocking or flat plate reinforcing within partitions for compartment mounting.

1.7 WARRANTY

- A. Manufacturer shall guarantee its plastic against breakage, corrosion, and delamination under normal conditions for 25 years from the date of Substantial Completion. If materials are found to be defective during the warranty period for reasons listed above, the materials shall be replaced free of charge.

PART 2 - PRODUCTS

2.1 RECYCLED PLASTIC UNITS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Scranton Products

- a. Basis of Design: "Hiny Hiders" as manufactured by Scranton Products (Santana/Comtec/Capitol), Scranton, PA.

2. Accurate Partitions Corporation.
3. General Partitions Mfg. Corp.
4. Global Partitions.
5. Or equal

- B. Stainless-Steel Sheet: ASTM A 666, Type 304, stretcher-leveled standard of flatness.

- C. Stainless-Steel Castings: ASTM A 743/A 743M.

- D. Door, Panel, and Pilaster Construction: Solid, recycled high-density polyethylene (HDPE) material, not less than 1 inch thick, seamless, with eased edges, and with homogenous color and pattern throughout thickness of material.

1. Color and Pattern: One color and pattern in each room as selected by Architect from manufacturer's full range of colors and patterns.
2. Heat-Sink Strip: Manufacturer's standard continuous, extruded-aluminum or stainless-steel strip fastened to exposed bottom edges of solid-plastic components to hinder malicious combustion.

- E. Brackets and Fittings: Manufacturer's standard design.

1. Full-Height (Continuous) Type Brackets: Stainless steel.
2. Pilaster Shoes and Sleeves (Caps): Stainless-steel sheet, not less than 0.031-inch nominal thickness and 3 inches high, finished to match hardware.
3. Stainless-Steel Finish: No. 4 bright, directional polish on exposed faces. Protect exposed surfaces from damage by application of strippable, temporary protective covering before shipment.

2.2 ACCESSORIES

- A. Hardware and Accessories: Manufacturer's standard design, heavy-duty operating hardware and accessories.

1. Material: Stainless steel.
 2. Coat Hook: Manufacturer's standard combination hook and rubber-tipped bumper, sized to prevent in-swinging door from hitting compartment-mounted accessories.
- B. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.
- C. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel or chrome-plated steel or brass, finished to match hardware, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use hot-dip galvanized or other rust-resistant, protective-coated steel.

2.3 FABRICATION

- A. Floor-Mounted, Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.
- B. Door Size and Swings: Unless otherwise indicated, provide 24-inch-wide, in-swinging doors for standard toilet compartments and 36-inch-wide, out-swinging doors with a minimum 32-inch-wide, clear opening for compartments designated as accessible.
- C. Doors, panels, and pilasters shall be 1 inch (25 mm) thick with all edges rounded to a radius. Doors and dividing panels shall be 55 inches (1397 mm) high and mounted at 14 inches (356 mm) above the finished floor. Pilasters shall be 82" high and fastened into pilaster shoes.
- D. Color shall be as selected by Architect from Scranton Products' "Classic Collection", including Orange Peel and EX textures. Up to two-color combinations for doors and panels may be selected in each area.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.
1. Maximum Clearances:
 - a. Pilasters and Panels: 1/2 inch.
 - b. Panels and Walls: 1 inch.
 2. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.
 - a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
 - b. Align brackets at pilasters with brackets at walls.
- B. Floor-Mounted, Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Set pilasters with anchors penetrating not less than 1-3/4 inches into structural floor unless otherwise indicated in manufacturer's written instructions. Secure continuous head rail to each

pilaster with no fewer than two fasteners. Hang doors to align tops of doors with tops of panels, and adjust so tops of doors are parallel with overhead brace when doors are in closed position.

- C. Wall-Hung Urinal Screens: Attach with anchoring devices to suit supporting structure. Set units level and plumb and to resist lateral impact.

3.2 ADJUSTING

- A. Hardware Adjustment: Adjust and lubricate hardware according to manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors and doors in entrance screens to return doors to fully closed position.

END OF SECTION

SECTION 102120
CUBICLE CURTAINS AND TRACKS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Curtain tracks and curtain carriers, manual operation.
 - 2. Cubicle curtains.
- B. Sustainable Design Intent: Refer to Section 018110 - SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 061000 - ROUGH CARPENTRY for wood blocking for mounting items requiring anchorage.
 - 2. Section 095100 - ACOUSTICAL CEILINGS for metal ceiling grid supporting the curtain

1.3 PERFORMANCE REQUIREMENTS

- A. Curtains: Provide curtain fabrics with the following characteristics:
 - 1. Fabrics are launderable to a temperature of not less than 160 deg F.
 - 2. Fabrics are flame resistant and are identical to those that have passed NFPA 701, with no chemical flame retardants, when tested by a testing and inspecting agency acceptable to authorities having jurisdiction.
 - a. Identify fabrics with appropriate markings of applicable testing and inspecting agency.

1.4 SUBMITTALS

- A. Product Data: For each product indicated.

- B. Include durability, laundry temperature limits, fade resistance, and fire-test-response characteristics for each type of curtain fabric indicated.
- C. LEED Submittals:
 - 1. Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010, using the applicable exposure scenario.
 - a. For fabric curtain materials, submit GreenGuard Gold certification.
 - 2. Building product disclosure and optimization: Provide required documentation to secure the maximum MR credits, including but not limited to:
 - a. Environmental product declarations.
 - b. Sourcing of raw materials.
 - c. Material ingredients.
- D. Shop Drawings: Show layout and types of cubicles, sizes of curtains, number of carriers, anchorage details, and conditions requiring accessories. Indicate dimensions taken from field measurements.
 - 1. Include details on blocking.
- E. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - 1. Suspended ceiling components.
 - 2. Structural members to which suspension systems will be attached.
 - 3. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - 4. Coordinate with other Division 09 Sections for ceilings.
- F. Samples for Initial Selection: For each type of curtain material indicated.
 - 1. Samples for Verification: For each type of product required, prepared on Samples of size indicated below.

- G. Curtain Fabric: 12-inch-square swatch or larger as required to show complete pattern repeat, from dye lot used for the Work, with specified treatments applied. Mark top and face of material.
 - 1. Mesh Top: Not less than 4 inches square.
 - 2. Curtain Track: Not less than 4 inches long.
 - 3. Curtain Carrier: Full-size unit.
- H. Curtain and Track Schedule: Use same designations indicated on Drawings.
- I. Manufacturer Certificates: Signed by manufacturers certifying that products comply with requirements.
- J. Operation and Maintenance Data: For curtains, track, and hardware to include in operation and maintenance manuals.

1.5 REFERENCES

- A. Comply with applicable requirements of the following standards and those others referenced in this section, under the provisions of division 01 section "references".
 - 1. NFPA 701 - fire tests for flame resistant textiles and films.
 - 2. UL flammability test N° 214.
 - 3. Conform to applicable codes for flame/spread rating for curtains when tested in Accordance with ASTM E 84.
 - 4. 780 CMR - Massachusetts State BuildingC.
 - 5. LEED v4 BD+C

1.6 PERFORMANCEREQUIREMENTS

- A. Track: To support vertical test load of 50 pounds without visible deflection of track or damage to supports. Size track to support moving loads.
- B. Size track to support moving loads, sufficiently rigid to resist visible deflection and without permanent set.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install cubicles until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.8 EXTRA MATERIALS

- A. Upon completion of the Work of this Section, deliver to the Owner extra materials for future repairs and maintenance, provide:
 - 1. Two of each curtain size.

2. Ten extra carriers.

B. Clearly label and package extra materials securely to prevent damage.

1.9 WARRANTY

A. A. Provide manufacturer's standard limited lifetime warranty commencing from date of substantial Completion.

PART 2 - PRODUCTS

2.1 CURTAIN TRACKS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. AR Nelson.
2. Crowder, K. N. Manufacturing, Inc.
3. Cubicle Curtain Factory.
4. General Cubicle Company, Inc.
5. InPro Corporation.
6. Silent Gliss USA Inc.

B. Basis of Design: AR Nelson; Model No. 1100CT, suspended mount cubicle track.

C. Extruded-Aluminum Track: Not less than 1-1/4 inches wide by 3/4 inch high; with minimum wall thickness of 0.062 inch.

D. Finish: Clear anodized.

E. Track Accessories: Fabricate splices, end caps, connectors, end stops, coupling and joining sleeves, wall flanges, brackets, ceiling clips, and other accessories from same material and with same finish as track.

F. Curtain Carriers: Two nylon rollers and nylon axle with chrome-plated steel hook.

1. Exposed Fasteners: Stainless steel.
2. Concealed Fasteners: Stainless steel.

2.2 CURTAINS

A. Healthier Hospitals Initiative (HHI): Products shall comply with requirements of Safer Chemicals Challenge: Healthy Interiors.

- B. Furniture and furnishings shall eliminate the use of formaldehyde, perfluorinated compounds, polyvinyl chloride (PVC), antimicrobials, and all flame retardants.
- C. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Maharam
 - 2. Carnegie.
 - 3. Architex..
- D. Curtain: Maharam Pattern, Carry - 2 #511518–72% Trevira FR Polyester, 28% Post – Consumer Recycled Polyester, 72" Wide, or approved pattern and color equal.
- E. Colors: As selected by the Architect from manufacturer's full range.
- F. Curtain Grommets: Two-piece, rolled-edge, rustproof, nickel-plated brass; spaced not more than 6 inches o.c.; machined into top hem.
- G. Mesh Top: No. 40 nylon mesh, minimum. White color.
- H. Curtain Tieback: Nickel-plated brass chain; one at each curtain termination.

2.3 CURTAIN FABRICATION

- A. Fabricate curtains to comply with the following requirements:
- B. Width: Equal to track length from which curtain is hung plus 10 percent added fullness, but not less than 12 inches added fullness.
- C. Length: Equal to floor-to-ceiling height, with 20-inch mesh top, and minus distance above the finished floor at bottom as follows:
 - 1. Cubicle Curtains: 12 inches.
- D. Top Hem: Not less than 1 inch and not more than 15 1/2 inches wide, triple thickness, reinforced with integral web, and double lock stitched.
- E. Mesh Top: Top hem not less than 1 inch and not more than 15 1/2 inches wide, triple thickness, reinforced with integral web, and double lock stitched. Double lock stitch bottom of mesh directly to 1/25 inch triple thickness, top hem of curtain fabric.
- F. Bottom Hem: 1 inch double thickness and single lock stitched.
- G. Side Hems: Not less than 1/2 inch and not more than 15 1/4 inches wide, with double turned edges, and single lock stitched.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, and other conditions affecting performance of work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install tracks level and plumb, according to manufacturer's written instructions. Provide track fabricated from one continuous length.
- B. Curtain Track Mounting: As indicated on Drawings.
- C. Suspended Track Mounting: Install track with suspended supports at intervals of not more than 84 inches. Fasten support at each splice and tangent point of each corner. Secure ends of track to wall with flanged fittings or brackets.
- D. Track Accessories: Install splices, end caps, connectors, end stops, coupling and joining sleeves, and other accessories as required for a secure and operational installation.
 - 1. Provide one locking switch unit for each pair of beds.
 - 2. Provide one hinged loading unit for each bed.
- E. Curtain Carriers: Provide curtain carriers adequate for 6-inch spacing along full length of curtain plus an additional carrier.
- F. Curtains: Hang curtains on each curtain track. Secure with curtain tieback.

3.3 PROTECTION

- A. Protect installed recessed track openings with nonresidue adhesive tape to prevent construction debris from impeding carrier operation. Remove tape prior to Substantial Completion.

END OF SECTION

SECTION 102210
WIRE MESH PARTITIONS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Wire mesh fabrications for the following applications:
 - a. Heavy-duty interior partitions.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 087100 - DOOR HARDWARE for lock cylinders and keying.

1.3 SUBMITTALS

- A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for wire mesh items.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
- C. Samples for Verification: 12-by-12-inch panel constructed of specified frame members and wire mesh. Show method of finishing members at intersections.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver wire mesh items crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.

1.5 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of construction contiguous with wire mesh items by field measurements before fabrication and indicate measurements on Shop Drawings.

1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish location dimensions and proceed with fabricating wire mesh items without field measurements. Coordinate with adjacent construction to ensure that actual location dimensions correspond to established dimensions.

1.6 COORDINATION

- A. Coordinate installation of anchorages for wire mesh items supported or anchored to permanent construction. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Acorn Wire & Iron Works, Inc.
 2. Jesco Industries, Inc.
 3. King Wire Partitions, Inc.
 4. Miller Wire Works, Inc.
 5. Standard Wire & Steel Works.
 6. Wire Crafters, Inc.
 7. Or equal
- B. Basis-of-Design: To establish basis of design and quality standards, wire mesh partitions shall be equivalent to 'No.135' as manufactured by Acorn Wire & Iron Works, Inc; as approved by Architect.

2.2 MATERIALS

- A. Steel Wire: ASTM A 510.
- B. Steel Plates, Channels, Angles, and Bars: ASTM A 36/A 36M.
- C. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.
- D. Steel Pipe: ASTM A 53/A 53M, Schedule 40, unless another weight is indicated or required by structural loads.
- E. Square Steel Tubing: Cold-formed structural-steel tubing, ASTM A 500.
- F. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with G60 (Z180) zinc (galvanized) or A60 (ZF180) zinc-iron-alloy (galvannealed) coating designation.
- G. Panel-to-Panel Fasteners: Manufacturer's standard steel bolts.
- H. Post installed Expansion Anchors in Concrete: With capability to sustain, without failure, load imposed within factors of safety indicated, as determined by testing per ASTM E 488, conducted by a qualified independent testing agency.

- I. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated and fabricated from corrosion-resistant materials; with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 10 times that imposed by wire mesh construction, as determined by testing per ASTM E 1190, conducted by a qualified testing and inspecting agency.

2.3 HEAVY-DUTY WIRE MESH PARTITIONS

A. Wire Mesh Partition Panels: Panels to be 8'-0" tall.

1. 5' wide maximum, all wire heavy duty type constructed of 6 gauge steel wire woven into 2" diamond mesh securely clinched into 1-1/2" x 3/4" channel frames.
2. Vertical frames to have 3/8" bolt holes 18" o.c.
3. All joints mortised and tenoned.
4. Center reinforcing bar 1-1/2" x 3/4" channel tenoned to side frames.
5. All wires passed through center bar.
6. Flat bar posts to be 5/16" x 3-1/2" with 3/8" bolt holes to match partition.
7. Top capping bar 3" x 4.1 lb. channel with 5/16" 'U' bolts 2'4" o.c. May be anchored to walls and or structural steels above.
8. Corner posts 1-3/4" x 1-3/4" angles with 3/8" bolt holes to match partition.
9. Floor sockets 2-1/2" high with set screw adjustment.
10. Provide filler panels where required.

B. Swinging Doors:

1. 1. Size: 3'-0"w x 7'-0"h, single or pair as indicated.
2. 2. Hinged door frames 1-1/2" x 3/4" channel with 1-1/2" x 1/8" flat bar cover three sides, 1-5/8" x 7/8" x 1/8" angle riveted to lock side. Each door to have 1-1/2 pairs butt hinges riveted to both door and hinge bar.
3. Doors shall have substantial mortise type cylinder locks operated by key outside, recessed knob inside. Lock cylinder to be furnished, installed and master keyed by Division 01 Section "Door Hardware".
 - a. Provide for each pair double swinging doors lockable top and bottom sliding bolts and sleeves for fixing/securing one leaf of the double doors.

C. Accessories:

1. All bolts, hardware, and accessories for complete installation to be included.
2. Field bracing: furnished as required.
3. Wall Clips: Manufacture's standard, cold-rolled steel sheet.

2.4 FABRICATION

A. General: Fabricate wire mesh items from components of sizes not less than those indicated. Use larger-size components as recommended by wire mesh item manufacturer. Provide bolts, hardware, and accessories as required for complete installation.

1. Fabricate wire mesh items to be readily disassembled.
2. Welding: Weld corner joints of framing and grind smooth.

B. Heavy Duty Wire Mesh Partitions: Fabricate wire mesh partitions with cutouts for pipes, ducts, beams, and other items indicated. Finish edges of cutouts to provide a neat, protective edge.

1. Mesh: Securely clinch mesh to framing.
2. Framing: Fabricate framing with mortise and tenon corner construction.
 - a. Provide horizontal stiffeners as indicated or, if not indicated, as required by panel height and as recommended by wire mesh partition manufacturer. Weld horizontal stiffeners to vertical framing.
 - b. Fabricate partition and door framing with slotted holes for connecting adjacent panels.
3. Fabricate wire mesh partitions with 3 inches of clear space between finished floor and bottom horizontal framing.
4. Doors: Align bottom of door with bottom of adjacent panels.
 - a. For doors that do not extend full height of partition, provide transom over door, fabricated from same mesh and framing as partition panels.
5. Hardware Preparation: Mortise, reinforce, drill, and tap doors and framing as required to install hardware.

2.5 FINISHES

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 1. Finish wire mesh items after assembly.
 2. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- B. Powder-Coated Finish: Apply manufacturer's standard baked finish, complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.
 1. Color to be selected by Architect from full range of standard colors.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Examine floors for suitable conditions where wire mesh items will be installed.
- C. Examine walls to which wire mesh items will be attached for properly located blocking, grounds, and other solid backing for attachment of support fasteners.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 ERECTION

A. Wire Mesh Partitions:

1. Anchor wire mesh partitions to floor with 3/8-inch-diameter, postinstalled expansion anchors at 12 inches o.c. through anchor clips located at each post and corner. Shim anchor clips as required to achieve level and plumb installation.
2. Anchor wire mesh partitions to walls at 12 inches o.c. through back corner panel framing.
3. Secure top capping bars to top framing channels with 1/4-inch- diameter "U" bolts spaced not more than 28 inches o.c.
4. Provide line posts at locations indicated.
5. Where standard-width wire mesh partition panels do not fill entire length of run, provide adjustable filler panels to fill openings.
6. Install doors complete with door hardware.
7. Install security windows complete with window hardware.
8. Weld or bolt sheet metal bases.
9. Bolt accessories to wire mesh partition framing.

3.3 ADJUSTING AND CLEANING

- A. Adjust doors to operate easily without binding.
- B. Check and readjust operating hardware items just before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work including doors and framing that are warped, bowed, or otherwise unacceptable.
- C. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint; paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

END OF SECTION

SECTION 102610
CORNER GUARDS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Corner guards.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 055000 - METAL FABRICATIONS for steel angle type guards, custom fabricated.
 - 2. Section 087100 - DOOR HARDWARE for metal armor, kick, mop, and push plates.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop drawings: Mounting details with the appropriate fasteners for specific project substrates.
- C. LEED Submittals: prepare and submit required documentation for the work of this Section in accordance with USGBC LEED Reference Guide for Building Design and Construction (v4) and Division 01 Section "LEED v4 BD+C: School Requirements".
 - 1. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
 - 2. Building product disclosure and optimization: Provide required documentation to secure the maximum MR credits, including but not limited to:
 - a. Environmental product declarations.
 - b. Sourcing of raw materials.
 - c. Material ingredients.

3. Project material cost data: Provide invoices, receipts, statements, and other evidence required to document total cost for materials used for Project.
4. Waste management and disposal records complying with Division 01 Section "Construction Waste Management and Disposal".
 - a. For products diverted from disposal in landfills and incinerators, and where recycled resources are directed back to the manufacturing process. Include a statement indicating percentage of materials diverted and recycled and the costs associated with each.
- D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
 1. Corner Guards: 12 inches long.
- E. Maintenance Data: For each impact-resistant wall protection unit to include in maintenance manuals.
 1. Include recommended methods and frequency of maintenance for maintaining optimum condition of plastic covers under anticipated traffic and use conditions. Include precautions against using cleaning materials and methods that may be detrimental to plastic finishes and performance.

1.4 QUALITY ASSURANCE

- A. Source Limitations: Obtain corner guards from single source from single manufacturer.
- B. Product Options: Drawings indicate size, profiles, and dimensional requirements of impact-resistant wall protection units and are based on the specific system indicated. Refer to Division 01 Sections.
 1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.
- C. Surface-Burning Characteristics: Provide impact-resistant, plastic wall protection units with surface-burning characteristics as determined by testing identical products per ASTM E 84, NFPA 255, or UL 723 by UL or another qualified testing agency.
- D. Performance Requirements: Provide corner guard system that conform to the following requirements of regulatory agencies and the quality control of IPC Door and Wall Protection Systems, InPro Corporation.
 1. Fire Performance Characteristics: Provide UL Classified corner guards conforming with NFPA Class A fire rating. Surface burning characteristics, as determined by UL-723 (ASTM E-84), shall be flame spread of 10 and smoke development of 350 - 450. Provide ULC (Canada) listed corner guards conforming to the requirements of the National Building Code of Canada 1990, Subsection 3.1.13. Surface burning characteristics, as determined by CAN/ULCS102.2, shall be flame spread of 15 and smoke developed of 35.
 2. Self Extinguishing: Provide corner guards with a CC1 classification, as tested in accordance with the procedures specified in ASTM D-635-74, Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Self-Supporting Plastics in a Horizontal Position, as referenced in UBC 52-4-1988.

3. Impact Strength: Provide rigid vinyl profile materials that have an Impact Strength of 30.2 ft-lbs/inch of thickness as tested in accordance with the procedures specified in ASTM D-256-90b, Impact Resistance of Plastics.
4. System Impact Resistance: Provide a corner guard system that resists an impact of 153.9 ft-lbs while producing no visual blemishes upon the vinyl cover surface and no deformations in the vinyl retainers, as tested in accordance with the applicable provisions of ASTM F 476-84, paragraph 18, Impact Test.
5. GREENGUARD Certified: Provide GREENGUARD Certified material. Profiles shall meet the requirements of GREENGUARD Certification Standards for Low-Emitting Products and GREENGUARD Product Emission Standard for Children & Schools.
6. Chemical and Stain Resistance: Provide corner guards that show resistance to stain when tested in accordance with applicable provisions of ASTM D-543.
7. Fungal and Bacterial Resistance: Provide rigid vinyl that does not support fungal or bacterial growth as tested in accordance with ASTM G-21 and ASTM G-22.
8. Color Consistency: Provide components matched in accordance with SAE J-1545 - (Delta E) with a color difference no greater than 1.0 units using CIE Lab, CIE CMC, CIE LCh, Hunter Lab or similar color space scale systems.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store units in original undamaged packages and containers inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.
 1. Maintain room temperature within storage area at not less than 70 deg F during the period plastic materials are stored.
 2. Keep plastic sheet material out of direct sunlight.
 3. Store plastic wall protection components for a minimum of 72 hours, or until plastic material attains a minimum room temperature of 70 deg F.

1.6 1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install impact-resistant wall protection units until building is enclosed and weatherproof, wet work is complete and dry, and HVAC system is operating and maintaining temperature at 70 deg F for not less than 72 hours before beginning installation and for the remainder of the construction period.

1.7 1.7 WARRANTY

- A. Standard Manufacturer's Limited Lifetime Warranty against material and manufacturing defects commencing from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. IPC Door and Wall Protection Systems, InPro Corporation.
 2. Construction Specialties, Inc.
 3. Arden Architectural Specialties, Inc. Korogard Wall Protection Systems; Division of RJF International Corporation.

4. Oe equal

- B. Basis of Design: "150BN BluNose High Impact Corner Guard Profile" as manufactured by IPC Door and Wall Protection Systems, InPro Corporation.

2.2 CORNER GUARDS

A. Surface-Mounted, Vinyl Corner Guards: 2 piece system

1. Corner Guard System

- a. BluNose High Impact Corner Guard Profile
- b. 3" (76mm) x 3" (76mm), 90 degree.
- c. Heights: 9' standard heights, plus applicable custom heights as indicated on Drawings. Where indicated and/or required, provide vinyl covers and retainers with custom angles. Custom angles shall be between 112.5° and 157.5°. Provide flexible top caps to bend to retainer angle.

2. Materials

- a. Vinyl Covers: Snap on cover of .080" (2mm) thickness shall be extruded from chemical and stain resistant polyvinyl chloride with the addition of impact modifiers. No plasticizers shall be added (plasticizers may aid in bacterial growth).
- b. Vinyl Retainers: Continuous vinyl retainers of .070" (1.8mm) thickness with a co-extruded flexible vinyl apex shall be fabricated from polyvinyl chloride with the addition of impact modifiers.

3. Components

- a. Top caps and bottom caps shall be made of injection molded thermoplastics.
- b. Fasteners: All mounting system accessories appropriate for substrates indicated on the drawings shall be provided.
- c. Flexible top caps shall be made of injection molded flexible PVC.

4. Finishes

- a. Vinyl Covers: Colors of the corner guard to be selected by the Architect from the Manufacturer's full range of standard finish selection. Surface shall have a pebble texture.
- b. Molded Components: Top caps and bottom caps shall be of a color matching the corner guards. Surface shall have a pebble texture.

2.3 FABRICATION

- A. Fabricate units to comply with requirements indicated for design, dimensions, and member sizes, including thicknesses of components.
- B. Fabricate components with exposed edges rolled. Provide surfaces free of wrinkles, chips, dents, uneven coloration, and other imperfections. Fabricate members and fittings to produce flush, smooth, and rigid hairline joints.
- C. Assemble components in factory to greatest extent possible to minimize field assembly. Disassemble only as necessary for shipping and handling.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and wall areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Examine walls to which units will be attached for blocking, grounds, and other solid backing that have been installed in the locations required for secure attachment of support fasteners.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Complete finishing operations, including painting, before installing wall protection system components.
- B. Before installation, clean substrate to remove dust, debris, and loose particles.

3.3 INSTALLATION

- A. General: Install units level, plumb, and true to line without distortions. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished Work.
 - 1. Provide mounting hardware, anchors, and other accessories required for a complete installation.
- B. Retainer Installation:
 - 1. Position the vinyl retainer against the wall, allowing 5/16" (8mm) from the bottom of the retainer to the top of the cove base or baseboard for the bottom cap.
 - 2. Drywall: Secure the retainer to the wall using #8 x 1-1/4" Phillips round head, self-tapping screws. Stagger the fasteners on each wing of the retainer. Use 4 screws per 3' (.91m) length, 6 screws per 4' (1.22m) length, 10 screws per 8' (2.44m) length, or 12 screws per 9' (2.74m) length.
 - 3. Concrete/Masonry: Drill 1/4" (6.5mm) holes into the ends of the retainer for the top and bottom caps. Stagger the holes on each wing of the retainer. Use the slotted tabs on the top and bottom cap to transfer hole location to the retainer. Drill 1/4" (6.5mm) holes on the two wings of the retainer. Stagger the fasteners on each wing of the retainer. Drill 4 holes per 3' (.91m) length, 6 holes per 4' (1.22m) length, 10 holes per 8' (2.44m) length, or 12 holes per 9' (2.74m) length. Transfer the location of all mounting holes to the wall. Drill 1/4" (6.5mm) holes and position ALLIGATOR anchors into the holes on the wall. Mount the retainer with #10 x 1-3/4" Phillips pan head screws and tighten to secure the retainer to the wall.
- C. Top and Bottom Cap Installation:
 - 1. Drywall: Overlap the retainer with the mounting tabs of the top and bottom caps and attach them to the retainer using two, #8 x 1-1/4" Phillips flat head, self tapping screws per cap. Stagger the fasteners on each wing of the cap.
 - 2. Concrete/Masonry: Overlap the retainer with the mounting tabs of the top and bottom caps and attach them to the retainer and into the ALLIGATOR anchors using two, #8 x 1-1/2" Phillips flat head screws per cap. When installing flexible top caps on custom angle

corner guards, use cup washers and flat head screws to fasten the top caps to the retainer.

- D. Position the vinyl cover on the retainer to check the fit. Adjust the top cap on the retainer to obtain a tight fit with the vinyl cover. Starting at the top, push the vinyl cover over the retainer pressing over the entire length until the cover snaps securely into place.
- E. Vinyl retainers shall be flexible for field bent to angles 10° wider or 10° tighter than 90°. When doing so use flexible top and bottom caps or the installation should be full height from floor to ceiling.

3.4 CLEANING

- A. Immediately after completion of installation, clean corner guards and accessories using a low VOC, non-ammonia-, non-chlorine, and non-solvent-based, household cleaning agent.

END OF SECTION

SECTION 102800
TOILET ACCESSORIES

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Toilet accessories as scheduled on the Drawings and described in this Section. Coordinate with Owner for accessories provided by Owner.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 061000 - ROUGH CARPENTRY for blocking.
 2. Section 088000 - GLAZING for frameless mirrors.
 3. Section 042000 - UNIT MASONRY.
 4. Section 092110 - GYPSUM BOARD ASSEMBLIES.
 5. Section 093013 - CERAMIC TILE.
 6. Section 102110 - TOILET COMPARTMENTS.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated. Include the following:
1. Construction details and dimensions.
 2. Anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
 3. Material and finish descriptions.
 4. Features that will be included for Project.
 5. Manufacturer's warranty.
- B. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.
1. Identify locations using room designations indicated on Drawings.
 2. Identify products using designations indicated on Drawings.

- C. Maintenance Data: For toilet accessories to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Source Limitations: For products listed together in the same articles in Part 2, provide products of same manufacturer unless otherwise approved by Architect.

1.5 COORDINATION

- A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
- B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. A & J Washroom Accessories, Inc.
 - 2. American Specialties, Inc.
 - 3. Bobrick Washroom Equipment, Inc.
 - 4. Bradley Corporation.
 - 5. Or equal

2.2 MATERIALS

- A. Stainless Steel: ASTM A 666, Type 304, 0.0312-inch minimum nominal thickness, unless otherwise indicated.
- B. Steel Sheet: ASTM A 1008/A 1008M, Designation CS (cold rolled, commercial steel), 0.0359-inch (0.9-mm) minimum nominal thickness.
- C. Galvanized Steel Mounting Devices: ASTM A 153/A 153M, hot-dip galvanized after fabrication.
- D. Fasteners: Screws, bolts, and other devices of same material as accessory unit and tamper-and-theft resistant where exposed, and of galvanized steel where concealed.

2.3 TOILET ACCESSORIES

- A. Coat Hook (CH): Surface mounted satin finish stainless steel single robe hook, fabricated from 22 gage type 304 stainless steel with concealed mounting bracket. Provide on hook in each toilet stall, each privacy toilet room, and each changing compartment.
 - 1. Acceptable Models
 - a. ASI model 7340
 - b. Bobrick model B-76717.

- c. Gamco model 5153
 - d. Or equal
 - 2. Locations:
 - a. Provide one hook at each toilet stall, each privacy toilet room, each Locker room toilet stall, and on the door of each office.
- B. Grab Bar (GB1 through GB3): of lengths and configurations as indicated on Drawings
 - 1. Wall mounted, straight vertical or horizontal and swing-up grab bars shall be stainless steel tubing, 1-1/2 inches o.d., minimum 18 gage, Type 304L. Each flange shall be of sufficient strength and design to sustain a concentrated load of 250 pounds. Standard wall clearance shall be 1-1/2 inches, unless indicated otherwise. Heliarc weld flanges to tubing to form single structural unit. Secure flanges to concealed mounting plate with vandal resistant set screws. Grip surface texture of grab bars shall be peened, satin finish flange and bar end.
 - a. GB1 through GB3: Bobrick series: B-6806, or equal by ASI or Gamco.
 - 2. Locations:
 - a. As shown on the drawings and as required by MAAB requirements.
- C. Framed Mirror (M1, M2): of sizes and mounting height as scheduled on Drawings, having the following:
 - 1. Frame: one piece 1/2 by 1/2 by 1/2 inch stainless steel channel frame, with continuous integral stiffener on all sides. Corners mitered and polished smooth.
 - 2. Mirror glass: Nominal 1/4 inch thick laminated safety glass, conforming to ANSI Z97.1, with Class 1, standard commercial quality, electro-copper back-plating protected by a corrosion-resistant zinc-coating.
 - 3. Acceptable models:
 - a. ASI. series 0625L
 - b. Bobrick model B-1659
 - c. Gamco "C" series
 - d. Or equal
 - 4. Locations:
 - a. As shown on Drawings.
- D. Soap Dispenser (SD): Furnished by Owner (to be installed by Contractor)
- E. Sanitary Napkin Disposal (SND): Surface-mounted sanitary napkin disposal shall be type-304 stainless steel with all-welded construction; exposed surfaces shall have satin finish. Front of sanitary napkin disposal shall have same degree of arc. Radius on corners and edges of sanitary napkin disposal. Cover shall be drawn, one-piece, seamless construction and secured to container with a full-length stainless steel piano-hinge. Container shall have integral finger depression for opening cover. Basis of design is Bobrick model B-270 or approved equal by:
 - 1. Acceptable models:

- a. Equal by ASI
 - b. Equal by Bradley
 - c. Equal by Gamco
 - d. Or equal
- 2. Locations:
 - a. Provide one at each Women's or Gender Neutral individual toilet room, and each stall in all women's toilet rooms and locker rooms.
- F. Toilet Tissue Dispenser (TT): Furnished by Owner (to be installed by Contractor)
- G. Paper towel Dispenser (TW): Furnished by Owner (to be installed by Contractor)
- H. Mop and Broom Holder (MH): Surface mounted, 22 gage, 36 inch long stainless steel channel bracket, having 4 spring loaded, rubber cam mop holders which are capable of holding 7/8 to 1-1/4 inch diameter handles.
 - 1. Acceptable models:
 - a. ASI. model 8215B.
 - b. Bobrick model B-223-36.
 - c. Or equal
 - 2. Locations:
 - a. Provide one at each Custodiam Closet, Custodial Workroom, and receiving area.
- I. Folding Shower Seat (SS1): Provide ADA compliant wall mounted folding shower seat.
 - 1. Description: Reversible solid phenolic folding shower seat.
 - a. Seat material: minimum 1/2" thickness solid phenolic seat with integral slots for drainage.
 - b. Frame: 18-8 type 304 stainless steel with satin finish.
 - 2. Locations:
 - a. At each Accessible shower and as shown on Drawings. Right-Hand or Left-Hand configuration as shown on Drawings.
 - 3. Acceptable models:
 - a. Bobrick Washroom Equipment, Inc., B-5181.
 - b. American Specialties, Inc., Model 8206.
 - c. A&J Washroom Accessories, Model U929.
 - d. Bradley Corp., Model 9569.
 - e. Or equal.
- J. Tampon and Sanitary Napkin Vending Machine (SNM):
 - 1. Surface Mounted Sanitary Napkin Vendor [SNM-S]:

- a. Description: Coin-operated surface mounted feminine napkin and tampon vendor.
 - 1) Body: Type 304 welded stainless steel with #4 satin finish.
 - 2) Provide individual locks for door and coin box with separate keys.
 - b. Product:
 - 1) Bobrick Washroom Equipment, Inc., B-2706
 - 2) American Specialties, Inc., Model No. 0864
 - 3) A&J Washroom Accessories, Model U526-SM
 - 4) Bradley Corp., Model 407-11
 - 5) Or approved equal.
2. Recessed Sanitary Napkin Vendor [SNM-R]:
- a. Description: Coin-operated recessed feminine napkin and tampon vendor.
 - 1) Body: Type 304 welded stainless steel with #4 satin finish. Construction shall be as specified for Long Type towel dispenser/disposal above.
 - 2) Provide individual locks for door and coin box with separate keys.
 - b. Product:
 - 1) Bobrick Washroom Equipment, Inc., B-3706.
 - 2) American Specialties, Inc., Model No. 04684.
 - 3) A&J Washroom Accessories, Model U526.
 - 4) Bradley Corp., Model 407.
 - 5) Or approved equal.
3. Locations:
- a. Provide one vending machine at each Women's multi-stall toilet rooms and at each Women's locker room.
- K. Shower Soap Tray (ST): Basis of Design: Bobrick Model B-6807, Stain-less Steel with Satin Finish.
- 1. Locations:
 - a. Provide one at each shower shown on the drawings.
- L. Shower Curtain Rods, Curtains and Hooks (SC)
- 1. Basis of Design:
 - a. Shower Curtain Hooks: Bobrick Part No.204-1, Type 304 Stainless Steel. Quantity to match hooks required for shower curtain.
 - b. Shower Curtain: Bobrick Part No.204-2 (42" wide) and No.204-3 (72" wide); Opaque, matte white, 0.008-inch-thick vinyl containing antibacterial and flame-retardant agents; hemmed bottom and sides; Nickel-plated brass grommets.

- c. Shower Curtain Rod: Bobrick Model B-207x36 (36" long) and B-207x72(72" long). Verify dimensions in field. Rod and flanges to be 18-8, Type 304, 20-gauge stainless steel tubing with satin finish.

2. Locations:

- a. As shown on the drawings.

2.4 FABRICATION

- A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.
- B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to the Owner.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install accessories according to manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.
- B. Grab Bars: Install to withstand a downward load of at least 250 lbf, when tested according to method in ASTM F 446.

3.2 ADJUSTING AND CLEANING

- A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
- B. Remove temporary labels and protective coatings.
- C. Clean and polish exposed surfaces according to manufacturer's written recommendations.

END OF SECTION

SECTION 104110

EMERGENCY ACCESS AND INFORMATION CABINETS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Fire department key vault box.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 042000 - UNIT MASONRY for substrate.
 - 2. Section 061000 - ROUGH CARPENTRY for wood blocking.

1.3 SUBMITTALS

- A. Product Data: Submit manufacturer's product data, installation instructions, use limitations and recommendations for each product and system used. Provide manufacturer's certifications stating that products and systems comply with requirements.
- B. Shop Drawings: Provide large scale shop drawings for fabrication, installation and erection of all parts of the work. Provide plans, elevations, and details of anchorage, connections and accessory items. Provide installation templates for work installed by others.
- C. Contractor's Review: Before commencing work, submit signed statement that Contract Documents have been reviewed with a qualified representative of supplier/manufacturer, and that selected materials and construction are proper, compatible, and adequate for application shown.

PART 2 - PRODUCTS

2.1 FIRE DEPARTMENT KEY VAULT BOX

- A. Fire Department Key Vault Box: Provide at building entrance; location shall be acceptable to local Fire Department.
 - 1. Basis of Design: Knox Company; Model 3200 Knox-Box, Recessed Mounted Type.
 - 2. Finish: Weather resistant TGIC polyester powder coat, color as selected by Architect from manufacturer's standard colors.
 - 3. Locking: Provide lock and keys acceptable to local Fire Department.
 - 4. Building Alarm Interface: Provide tamper switch interface with building alarm system.
 - 5. Accessories:
 - a. Provide manufacturer's standard recessed mounting kit, for installation in specified construction.
 - b. Provide alarm tamper switches, UL listed.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Rough-In Work: Examine installation of walls and other conditions under which work is to be installed; verify dimensions of services and substrates before fabricating work.
- B. Notify Contractor of unsatisfactory locations and dimensions of other work and of unsatisfactory conditions for proper installation of equipment. Do not proceed with fabrication and installation until unsatisfactory dimensions and conditions have been corrected in manner satisfactory to Installer.

3.2 FIRE DEPARTMENT KNOX BOX INSTALLATION

- A. General: Set each item of equipment securely in place, level, and adjust to correct height, 4 ft. - 0 in. AFF, unless otherwise required by local Fire Department.
- B. Anchor to supporting substrate where indicated and where required for sustained operation and use without shifting or dislocation. Conceal anchorage where possible. Seal perimeter joints in accordance with Section 079200 - JOINT SEALANTS.

3.3 CLEANING

- A. After completion of installation and other major work remove protective coverings, if any, and clean equipment, internally and externally. Restore exposed and semi-exposed finishes to remove abrasions and other damages; polish exposed-metal surfaces and touch-up painted surfaces. Replace work that cannot be successfully restored.

END OF SECTION

SECTION 104313
AUTOMATIC EXTERNAL DEFIBRILLATORS (AED)

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Automatic external defibrillator (AED) cabinets and AEDs.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 042000 - UNIT MASONRY for substrate.
 - 2. Section 061000 - ROUGH CARPENTRY for wood blocking.
 - 3. Section 092110 - GYPSUM BOARD ASSEMBLIES for substrate.
 - 4. Division 26 - ELECTRICAL for electrical service and connections for motor operators, controls, limit switches, and other powered devices and for system disconnect switches for motorized shade operation.
 - 5. Division 28 - ELECTRONIC SAFETY AND SECURITY for door alarm connection and opening monitoring connection.

1.3 COORDINATION

- A. Coordinate size of AED cabinets to ensure compatibility with Owner-furnished AED devices.
- B. Coordinate fire-rating of AED cabinets with fire-rated partitions to ensure partition fire-rating is maintained.

1.4 SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Submit shop drawings indicating material characteristics, details of construction, connections, and relationship with adjacent construction.
 - 1. Show locations and details for installing electrical wiring, alarm and monitoring components and switches.

2. Wiring Diagrams: Power, alarm and monitoring wiring.

1.5 QUALITY ASSURANCE

- A. Comply with governing codes and regulations. Provide products of acceptable manufacturers which have been in satisfactory use in similar service for three years. Use experienced installers. Deliver, handle, and store materials in accordance with manufacturer's instructions.
- B. Source Limitations: Obtain AED cabinets through one source from a single manufacturer.
- C. Fire-Rated AED Cabinets: Listed and labeled to comply with requirements of ASTM E 814 for fire-resistance rating of walls where they are installed.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store, and protect defibrillator cabinets and related materials using means and methods that will prevent damage, deterioration, or loss.
- B. Deliver components in manufacturer's original packaging, properly labeled for identification.

PART 2 - PRODUCTS

2.1 AUTOMATED EXTERNAL DEFIBRILLATOR CABINET

- A. Provide one cabinet in the following rooms (final locations to be determined by architect:
 1. Corridor D002
 2. Cafeteria A114
 3. Corridor C105
 4. Corridor D114
 5. Multipurpose C117
 6. Corridor A212
 7. Gymnasium D202
 8. Corridor A309
 9. Corridor A416
- B. Available Cabinet Manufacturers: Subject to compliance with requirements, products which may be incorporated into the Work include, but are not limited to, the following:
 1. JL Industries, Inc.
 2. Larsen's Manufacturing Company.
 3. Potter Roemer; Div. of Smith Industries, Inc.
 4. Zoll Medical Corporation.
 5. Or equal
- C. Basis-of-Design: Subject to compliance with requirements, provide JL Industries 1400 Series Lifestart Series recessed AED cabinets, or comparable products from available manufacturers, as approved by Architect.

1. Cabinet Style: Recessed & Semi-Recessed.
2. Size: 14 inches high by 14 inches wide by 6-3/4 inches deep, unless otherwise indicated.
3. Components:
 - a. Tub Material: Stainless steel.
 - b. Door and Trim Construction: Flush doors with 5/8 inch door stop attached by continuous hinge and equipped with zinc-plated with roller catch.
 - 1) Finish: #4 brushed Stainless Steel
 - 2) Door Style: Fully-tempered glazing; pull and AED Graphics.
 - c. Trim Style and Depth: 3/8-inch flat trim.
 - d. Trim Dimensions: 1-3/4 inch face trim on door and frame.
4. Fire Rating: As indicated for partition type on Drawings.
5. Alarms: 85 db alarm (audible) alarm, battery operated. Alarm stays on 2-minutes after door is closed.
6. Alarm Contacts: Contact devices, coordinate with Owner's existing alarm systems.
7. Cabinet Lettering: AED identifying decal, as selected by Architect from manufacturer's full line.

2.2 AUTOMATED EXTERNAL DIFIBRILLATOR (AED)

- A. Provide one (1) defibrillator per cabinet.
- B. Manufacture:
 1. Subject to Architect's review for conformance with Contract Documents and the requirements specified herein, provide products from one of the following listed manufacturers:
 - a. Philips Medical Systems, Andover, MA.
 - b. Medtronic, Minneapolis, MN.
 - c. Cardiac Science, Bothell, WA.
 - d. Or equal.
- C. Basis of Design: Automated External Defibrillator shall be model "HeartStart FRx Ready Pack" as manufactured by Philips Medical Systems, Andover, MA.
- D. Components:
 1. Ready Pack shall have automated external defibrillator, battery, carry ase, SMART Pads II (1 pre-connected set, 1 spare set), Training Pads II, Setup and Maintenance Guides, Owner's Manual, Quick Reference Guide, Date Sticker.
 2. Waveform: Truncated Exponential Biphasic. Waveform parameters adjusted as a function of each patient's impedance.
 3. Therapy: Adult defibrillation: Peak current 32A (150 J nominal into a 50-ohm load). Pediatric defibrillation with optional FRx Infant/Child key installed: Peak current 19A (50 J nominal into 50-ohm load).
 4. Protocol: Device follows preconfigured settings. Defibrillation and CPR protocol can be customized using HeartStart Event Review software.
 5. Capacity: Minimum 200 shocks or 4 hours of operating time (EN 60601-2-4:2003)."
 6. CPR/AED Responder Kit: Kit shall contain CPR mask, eye shield, 2 pr nitrile gloves, antiseptic wipes, towel, razor, shears, and a bio-hazardbag in a nylon carry case.

7. AED inspection tag.
8. Two-way AED wall sign.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls and partitions for suitable framing depth and blocking where recessed and semi-recessed cabinets will be installed, and blocking where surface mounted cabinets will be installed.
 1. Notify the Architect, in writing of conditions detrimental to proper and timely completion of the installation.
 2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install materials and systems in accordance with manufacturer's instructions and approved submittals. Install materials and systems in proper relation with adjacent construction and with uniform appearance. Coordinate with work of other sections.
- B. Install cabinets in locations and at mounting heights indicated, or if not indicated, at heights to comply with applicable regulations of governing authorities.
 1. Prepare recesses in walls for defibrillator cabinets as required by type and size of cabinet and style of trim and to comply with manufacturer's instructions.
 2. Securely fasten cabinets to structure, square and plumb, to comply with manufacturer's instructions.
 3. Maintain fire ratings where cabinets are recessed into fire-rated wall systems.
 4. Verify alarm is in proper working order and coordinate any additional security connections required with Owner's security personnel.
- C. Cabinet Lettering: Install on face of glass surface.

3.3 ADJUSTING AND CLEANING

- A. Remove temporary protective coverings and strippable films, if any, as defibrillator cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. Adjust cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
- C. On completion of cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
- D. Touch up marred finishes, or replace cabinets that cannot be restored to factory finished appearance. Use only materials and procedures recommended or furnished by cabinet manufacturer.

- E. Replace cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 104400
FIRE-PROTECTION SPECIALTIES

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Portable fire extinguishers.
 2. Fire-protection cabinets for portable fire extinguishers.
 3. Mounting brackets for fire extinguishers.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Division 04 - MASONRY for installation in masonry walls.
 2. Division 06 – ROUGH CARPENTRY
 3. Division 07 – JOINT SEALANTS
 4. Division 09 - PAINTING AND COATING for field painting fire-protection cabinets.
 5. Division 21 - FIRE PROTECTION for fire hose valves and standpipes. SUBMITTALS

1.3 SUBMITTALS

- A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each item.
1. Fire Extinguishers: Include rating and classification.
 2. Fire-Protection Cabinets: Include roughing-in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type, trim style, and panel style.
- B. Maintenance Data: For fire extinguishers and fire-protection cabinets to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Source Limitations: Obtain fire extinguishers and fire-protection cabinets through one source from a single manufacturer.

- B. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."
- C. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.
- D. Fire-Rated Fire-Protection Cabinets: Listed and labeled to comply with requirements of ASTM E 814 for fire-resistance rating of walls where they are installed.

1.5 COORDINATION

- A. Coordinate size of fire-protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.
- B. Comply with ADA and MAAB requirements.

1.6 COORDINATION

- A. Coordinate size of fire-protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.
- B. Comply with ADA and MAAB requirements.

PART 2 - PRODUCTS

2.1 PORTABLE FIRE EXTINGUISHERS

- A. General: Provide fire extinguishers of type, size, and capacity for each fire-protection cabinet and mounting bracket indicated.
- B. Multipurpose Dry-Chemical Type in Steel Container: UL-rated 2-A:10-B:C, 5-lb nominal capacity, with monoammonium phosphate-based dry chemical in enameled-steel container.

2.2 FIRE-PROTECTION CABINET

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. JL Industries, Inc.
 - 2. Larsen's Manufacturing Company.
 - 3. Nystrom Building Products.
 - 4. Potter Roemer; Div. of Smith Industries, Inc.
 - 5. Or equal
- B. Basis of design:
 - 1. FEC-R Fiire Extinguisher Cabinet – Recessed (JL Industries #2035)
 - 2. FEC-R-B&E Fire Extinguisher Cabinet – Recessed with Blanket & Extinguisher (JL Industries #3635)
 - 3. FEC-SR Fiire Extinguisher Cabinet – Semi-recessed (JL Industries #2037)
 - 4. FEC-SR-B&E Fire Extinguisher Cabinet – Semi-recessed with Blanket & Extinguisher (JL Industries #3636)

5. FEC-SM Fire Extinguisher Cabinet – Surface mounted (JL Industries #2033)
6. FEC-SM-B&E Fire Extinguisher Cabinet – Surface mounted with Blanket & Extinguisher (JL Industries #3633)
7. FEC-LOCKER Fire Extinguisher Cabinet / Locker Combo.

Provide one fire extinguisher at each cabinet, equal to JR Industries' Cosmic 10E. Dimensions of extinguisher to be coordinated with cabinet.

- C. Cabinet Type: Suitable for fire extinguisher. Refer to Part 2 descriptions for specific requirements as applicable.
 - D. Cabinet Material: Stainless Steel
- 2.3 Recessed cabinet, Type R: one-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend).
- A. Cabinet trim style: 3/8" Flat trim
 - B. Door and trim: 18 Gauge, 304 stainless steel, #4 finish.
 1. Vertical duo design with safety glazing.
 2. Vigilante alarm: Provide 9 volt, battery operated (battery included), plunger activated. vigilante alarm.
 3. Handles: Standard Handle to be mounted at 48" above finished floor at locations allowing front approach and 54" above finished floor at locations limited to side approach.
 4. Lettering: Factory furnished decals for filed application, as directed by Architect.
 - a. Pattern: Vertical reading.
 - b. Color: Red.
 5. Cabinet construction: 18 gage cold-rolled steel with #4 stainless steel finish..
 6. Without exception, Fire-Rated cabinet shall be used at all applicable fire-rated walls and partitions.
 - C. Door Glazing: Tempered break glass.
 - D. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
 - E. Accessories:
 1. Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire-protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
 2. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.
 - a. Pattern: Vertical reading.
 - b. Color: Red.

- 2.4 Semi-recessed cabinet, Type SR: one-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend).
- A. Cabinet trim style: Rolled edge, semi-recessed cabinet.
1. Protruding from wall: 2-1/2".
- B. Door and trim: 18 Gauge, 304 stainless steel, #4 finish, Rolled edge trim style.
1. Vertical duo design with safety glazing.
2. Vigilante alarm: Provide 9 volt, battery operated (battery included), plunger activated. vigilante alarm.
3. Handles: Standard Handle to be mounted at 48" above finished floor at locations allowing front approach and 54" above finished floor at locations limited to side approach.
4. Lettering: Factory furnished decals for filed application, as directed by Architect.
- a. Pattern: Vertical reading.
- b. Color: Red.
5. Cabinet construction: 18 gage cold-rolled steel with #4 stainless steel finish..
6. Without exception, Fire-Rated cabinet shall be used at all applicable fire-rated walls and partitions.
- C. Door Glazing: Tempered break glass.
- D. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
- E. Accessories:
1. Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire-protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
2. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.
- a. Pattern: Vertical reading.
- b. Color: Red.
- 2.5 Surface Mounted cabinet, Type SM: one-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend).
- A. Cabinet trim style: Rolled edge, surface mounted cabinet.
1. Protruding from wall: 8-1/4".
- B. Door and trim: 18 Gauge, 304 stainless steel, #4 finish, Rolled edge trim style.
1. Vertical duo design with safety glazing.
2. Vigilante alarm: Provide 9 volt, battery operated (battery included), plunger activated. vigilante alarm.

3. Handles: Standard Handle to be mounted at 48" above finished floor at locations allowing front approach and 54" above finished floor at locations limited to side approach.
 4. Lettering: Factory furnished decals for field application, as directed by Architect.
 - a. Pattern: Vertical reading.
 - b. Color: Red.
 5. Cabinet construction: 18 gage cold-rolled steel with #4 stainless steel finish..
 6. Without exception, Fire-Rated cabinet shall be used at all applicable fire-rated walls and partitions.
- C. Door Glazing: Tempered break glass.
- D. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
- E. Accessories:
1. Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire-protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
 2. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.
 - a. Pattern: Vertical reading.
 - b. Color: Red.

2.6 MOUNTING BRACKETS

- A. Mounting Brackets: Manufacturer's standard steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
- B. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.

2.7 FABRICATION

- A. Fire-Protection Cabinets: Provide manufacturer's standard box (tub), with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.
 1. Weld joints and grind smooth.
 2. Construct fire-rated cabinets with double walls fabricated from 0.0428-inch-thick, cold-rolled steel sheet lined with minimum 5/8-inch-thick, fire-barrier material.
 - a. Provide factory-drilled mounting holes.
- B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles selected.
 1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2 inch thick.
 2. Miter and weld perimeter door frames.

- C. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

2.8 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Finish fire-protection cabinets after assembly.
- D. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls and partitions for suitable framing depth and blocking where recessed cabinets will be installed.
- B. Examine fire extinguishers for proper charging and tagging. Contractor shall be responsible for fire extinguisher tagging by a certified service technician located within 75 miles of the project.
 - 1. Remove and replace damaged, defective, or undercharged units.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Prepare recesses for recessed fire-protection cabinets as required by type and size of cabinet and trim style.

3.3 INSTALLATION

- A. General: Install fire-protection specialties in locations and at mounting heights indicated on the Drawings and acceptable to authorities having jurisdiction.
- B. Fire-Protection Cabinets: Fasten fire-protection cabinets to structure, square and plumb.
 - 1. Unless otherwise indicated, provide recessed fire-protection cabinets. If wall thickness is not adequate for recessed cabinets, provide semirecessed fire-protection cabinets.
 - 2. Fasten mounting brackets to inside surface of fire-protection cabinets, square and plumb.
- C. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.

- D. Identification: Apply vinyl lettering at locations indicated.

3.4 INSTALLATION OF FIRE-RATED CABINETS

- A. Install cabinet with not more than 1/16-inch tolerance between pipe OD and knockout OD. Center pipe within knockout.
- B. Seal through penetrations with firestopping sealant as specified in Section 078410 - PENETRATION FIRESTOPPING.

3.5 ADJUSTING AND CLEANING

- A. Remove temporary protective coverings and strippable films, if any, as fire-protection specialties are installed, unless otherwise indicated in manufacturer's written installation instructions.
- B. Adjust fire-protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
- C. On completion of fire-protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
- D. Touch up marred finishes, or replace fire-protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire-protection cabinet manufacturer.
- E. Replace fire-protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 105110
METAL LOCKERS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Metal wardrobe lockers.
 - 2. Metal athletic lockers.
 - 3. Locker benches.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 061000 - ROUGH CARPENTRY for furring, blocking, and shims required for installing metal lockers and concealed within other construction before metal locker installation.

1.3 SUBMITTALS

- A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal locker and bench.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Show base, top, trim and other accessories.
 - 2. Include locker identification system.
- C. Maintenance Data: For adjusting, repairing, and replacing locker doors and latching mechanisms to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative of metal locker manufacturer for installation and maintenance of units required for this Project.

- B. Source Limitations: Obtain metal lockers and accessories through one source from a single manufacturer.
- C. Regulatory Requirements: Where metal lockers are indicated to comply with accessibility requirements, comply with Massachusetts Architectural Access Board requirements and the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG)."
- D. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver metal lockers until spaces to receive them are clean, dry, and ready for metal locker installation.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify the following by field measurements before fabrication and indicate measurements on Shop Drawings:
 - 1. Concealed framing, blocking, and reinforcements that support metal lockers before they are enclosed.
 - 2. Recessed openings.
 - 3. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish recessed opening dimensions and proceed with fabricating metal lockers without field measurements. Coordinate wall and floor construction to ensure that actual recessed opening dimensions correspond to established dimensions.

1.7 COORDINATION

- A. Coordinate size and location of bases for metal lockers.
- B. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that metal lockers can be supported and installed as indicated.

PART 2 - PRODUCTS

2.1 ALL-WELDED, CORRIDOR METAL LOCKERS (TYPE A)

- A. Available Manufacturers:
 - 1. Penco Products, Inc., Subsidiary of Vesper Corporation; Welded Gen2 Lockers.
 - 2. List Industries Inc.; Marquis Protector Lockers.
 - 3. Republic Storage Systems Company; Quiet Corridor Lockers.
 - 4. Or equal
- B. Locker Style: Welded Corridor Lockers
- C. Sizes and Tiers:
 - a. Type A1 – 15"D x 15"W x 72"H Single Tier

- b. Type A2 - 15"D x 15"W x 72"H Two Tier
 - c. Type A3 - 15"D x 15"W x 72"H Three Tier
- D. Body: Assembled by welding body components together. Fabricate from unperforated, cold-rolled steel sheet with thicknesses as follows:
- 1. Tops, Bottoms, and Sides: 18 gauge thick minimum.
 - 2. Backs: 18 gauge thick.
 - 3. Shelves: 6 gauge thick, with double bend at front and single bend at sides and back.
- E. Frames: Channel formed; fabricated from 16 gauge thick, cold-rolled steel sheet; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral door strike full height on vertical main frames.
- F. Locker Base: Structural channels, formed from 0.0528-inch-thick, cold-rolled steel sheet; welded to front and rear of side-panel frames.
- G. Doors: One-piece; fabricated from 16 gauge thick, cold-rolled steel sheet; formed into channel shape with double bend at vertical edges, and with right-angle single bend at horizontal edges.
- 1. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than 15 inches (381 mm) wide; welded to inner face of doors.
 - 2. Door Style: Louvered vents.
- H. Hinges: Self-closing; welded to door and attached to door frame with not less than 2 factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees.
- I. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond face of door; pry resistant.
- J. Equipment: Equip each metal locker with identification plate and the following, unless otherwise indicated:
- 1. Single-Tier Units: One double-prong ceiling or back wall hook and two single-prong wall hooks. One hat/book shelf. Integral combination lock and master key. Provide combination listing for all lockers
 - 2. Double-Tier Units: One double-prong ceiling or back wall hook and two single-prong wall hooks. Integral combination lock and master key. Provide combination listing for all lockers
 - 3. Triple-Tier Units: One double-prong ceiling or back wall hook and two single-prong wall hooks. Integral combination lock and master key. Provide combination listing for all lockers
- K. Accessories:
- 1. Continuous Sloping Tops: Fabricated from minimum 0.0428-inch-thick, cold-rolled steel sheet; approximately 20-degree pitch.
 - 2. Recess Trim: Fabricated from 0.0428-inch- thick, cold-rolled steel sheet.
 - 3. Filler Panels: Fabricated from 0.0428-inch- (1.1-mm-) thick, cold-rolled steel sheet.
 - 4. Boxed End Panels: Fabricated from 0.0528-inch-thick, cold-rolled steel sheet.

- L. Finish: Baked enamel or powder coat, color as selected from manufacturers full range. Up to three colors may be selected.

2.2 ALL-WELDED VENTILATED METAL LOCKERS (TYPES B)

A. Available Equal Manufacturers:

1. All-Welded, Athletic Metal Lockers:

- a. List Industries Inc.; Athletic Team Fully Frames All-Welded Lockers.
- b. Penco Products, Inc., Subsidiary of Vesper Corporation; All-Welded Lockers.
- c. Republic Storage Systems Company; All-Welded Ventilated Lockers.
- d. Or equal

B. Locker Style: Ventilated / Expanded metal.

C. Sizes and Tiers:

- a. Type B1 – 15"D x 15"W x 72"H Single Tier
- b. Type B2 - 15"D x 15"W x 72"H Two Tier
- c. Type B3 - 15"D x 15"W x 72"H Three Tier

D. Body: Pre-assembled of welded construction. No nuts , bolts or rivets shall be allowed in the assembly of the main locker groups. Fabricate from unperforated, cold-rolled steel sheet with thicknesses as follows:

- 1. Tops and Bottoms: 16 gauge thick, with single bend at edges.
- 2. Backs: 18 gauge inch thick minimum.
- 3. Shelves: 16 gauge thick, with double bend at front and right-angle single bend at sides and back.

E. Frames: Channel formed; fabricated from 16 gauge thick, cold-rolled steel sheet or 0.0966-inch-thick steel angles; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous integral door strike full height on vertical main frames.

F. Locker Base: See drawings

G. Perforated Doors: One-piece, fabricated from 14 gauge thick, cold-rolled steel sheet with manufacturer's standard diamond perforations; formed into channel shape with double bends.

- 1. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than 15 inches wide; welded to inner face of doors.

H. Hinges: Self-closing; welded to door and attached to door frame with not less than 2 factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees.

I. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond face of door; pry resistant.

- 1. Single-Point Latching: Nonmoving latch hook. Equip each door with 1 latch hook, fabricated from minimum 0.1116-inch-thick steel; welded midway up full-height door strike; with resilient silencer.

- J. Projecting Turn-Handle and Latch: Steel handle welded to manufacturer's standard, three-point, cremone-type latch mechanism that consists of steel rods or bars that engage main locker frame at top and bottom of door, and center latch that engages strike jamb; with steel padlock loop.
- K. Equipment: Equip each metal locker with identification plate and the following, unless otherwise indicated:
 - 1. Single-Tier Units: One double-prong ceiling or back wall hook and two single-prong wall hooks. One hat/book shelf. Integral combination lock and master key. Provide combination listing for all lockers
 - 2. Double-Tier Units: One double-prong ceiling or back wall hook and two single-prong wall hooks. Integral combination lock and master key. Provide combination listing for all lockers Integral combination lock and master key. Provide combination listing for all lockers
 - 3. Triple-Tier Units: One double-prong ceiling or back wall hook and two single-prong wall hooks. Integral combination lock and master key. Provide combination listing for all lockers.
- L. Accessories:
 - 1. Legs: Fabricated from 0.0677-inch-thick, cold-rolled steel sheet; welded to bottom of locker.
 - 2. Continuous Base: Fabricated from 0.0677-inch-thick, cold-rolled steel sheet.
 - 3. Recess Trim: Fabricated from 0.0428-inch-thick, cold-rolled steel sheet.
 - 4. Filler Panels: Fabricated from 0.0428-inch-thick, cold-rolled steel sheet.
- M. Finish: Baked enamel or powder coat, color as selected from Manufacturers full range. Up to two colors may be selected.

2.3 ALL-WELDED ATHLETIC METAL LOCKERS - FOOTBALL (TYPE C)

- A. Available Equal Manufacturers:
 - 1. All-Welded, Athletic Metal Lockers:
 - a. Republic Storage Systems Company; MVP with Lockable Compartment
 - b. Penco Products, Inc., Subsidiary of Vesper Corporation; All-Welded Stadium Fully Framed Lockers.
 - c. List Industries Inc.; All-Star All-Welded Sports Lockers.
 - d. Or equal
- B. Locker Style: Sports / Stadium Type.
- C. Sizes and Tiers:
 - a. Type C1 – 18"D x 24"W x 72"H Single Tier
- D. Body: Assembled by welding components together. Fabricate from cold-rolled steel sheet with thicknesses as follows:
 - 1. Tops and Bottoms: 16 gauge thick, with single bend at edges.
 - 2. Backs: 18 gauge

3. Shelves: 0.0528 inch thick, with double bend at front and right-angle single bend at sides and back.
 - E. Frames: Channel formed; fabricated from 16 gauge thick, cold-rolled steel sheet or 0.0966-inch-thick steel angles; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames.
 - F. Locker Base: See drawings.
 - G. Equipment: Equip each metal locker with identification plate and the following, unless otherwise indicated:
 1. One full width hat shelf.
 2. Four single-prong wall hooks.
 3. Upper 12" Locking Security Box with integral Combination lock and master key
 4. Lower seat shelf
 - H. Accessories:
 1. Legs: Fabricated from 0.0677-inch-thick, cold-rolled steel sheet; welded to bottom of locker.
 2. Continuous Base: Fabricated from 0.0677-inch-thick, cold-rolled steel sheet.
 3. Continuous Sloping Tops: Fabricated from minimum 0.0428-inch-thick, cold-rolled steel sheet; approximately 20-degree pitch.
 4. Recess Trim: Fabricated from 0.0428-inch-thick, cold-rolled steel sheet.
 5. Filler Panels: Fabricated from 0.0428-inch-thick, cold-rolled steel sheet.
 - I. Finish: Baked enamel or powder coat, color as selected from Manufacturers full range. Up to two colors may be selected.
- 2.4 LOCKER BENCHES
- A. General: Provide locker benches fabricated by same manufacturer as metal lockers.
 - B. Bench Tops: Manufacturer's standard 1-piece units, of the following material, minimum 9-1/2 inches wide by 1-1/4 inches thick, with rounded corners and edges:
 1. Laminated maple with one coat of clear sealer on all surfaces, and one coat of clear lacquer on top and sides.
 - C. Fixed Pedestals: Manufacturer's standard supports, with predrilled fastener holes for attaching bench top and anchoring to floor, complete with fasteners and anchors.
 - D. Handicap ADA Benches:
 1. Bench Tops: Manufacturer's standard 1-piece units, of the following material, minimum 24" deep by 48" wide by 1-1/4 inches thick, with rounded corners and edges:

Laminated maple with one coat of clear sealer on all surfaces, and one coat of clear lacquer on top and sides.
 2. Fixed Pedestals: Manufacturer's standard supports, with predrilled fastener holes for attaching bench top and anchoring to floor, complete with fasteners and anchors. 4 Pedestals per bench.

2.5 FABRICATION

- A. General: Fabricate metal lockers square, rigid, and without warp; with metal faces flat and free of dents or distortion. Make exposed metal edges free of sharp edges and burrs, and safe to touch.
 - 1. Form body panels, doors, shelves, and accessories from one-piece steel sheet, unless otherwise indicated.
 - 2. Provide fasteners, filler plates, supports, clips, and closures as required for a complete installation.
- B. Unit Principle: Fabricate each metal locker with an individual door and frame; individual top, bottom, and back; and common intermediate uprights separating compartments.
- C. All-Welded Construction: Factory preassemble metal lockers by welding all joints, seams, and connections, with no bolts, nuts, screws, or rivets used in assembly of main locker groups. Factory weld main locker groups into one-piece structures. Grind exposed welds flush.
- D. Hooks: Manufacturer's standard ball-pointed type, aluminum or steel; zinc plated.
- E. Coat Rods: Fabricated from steel; nickel plated.
- F. Identification Plates: Manufacturer's standard etched, embossed, or stamped aluminum plates; with numbers and letters at least 3/8 inch (9 mm) high.
- G. Continuous Base: Formed into channel or Z profile for stiffness, and fabricated in lengths as long as practicable to enclose base and base ends of metal lockers; finished to match lockers.
- H. Continuous Sloping Tops: Fabricated in lengths as long as practicable, without visible fasteners at splice locations; finished to match lockers.
 - 1. Sloped top corner fillers, mitered.
 - 2. Sloped top end caps.
- I. Recess Trim: Fabricated with minimum 2-1/2-inch (64-mm) face width and in lengths as long as practicable; finished to match lockers.
- J. Filler Panels: Fabricated in an unequal leg angle shape; finished to match lockers. Provide slip joint filler angle formed to receive filler panel.
- K. Boxed End Panels: Fabricated with 1-inch- (25-mm-) wide edge dimension, and designed for concealing fasteners and holes at exposed ends of nonrecessed metal lockers; finished to match lockers.
 - 1. Provide one-piece panels for double-row (back-to-back) locker ends.
- L. Finished End Panels: Designed for concealing unused penetrations and fasteners, except for perimeter fasteners, at exposed ends of nonrecessed metal lockers; finished to match lockers.
 - 1. Provide one-piece panels for double-row (back-to-back) locker ends.
- M. Center Dividers: Full-depth, vertical partitions between bottom and shelf; finished to match lockers.

2.6 STEEL SHEET FINISHES

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Factory finish steel surfaces and accessories except stainless-steel and chrome-plated surfaces.
- C. Surface Preparation: Clean surfaces of dirt, oil, grease, mill scale, rust, and other contaminants that could impair paint bond. Use manufacturer's standard methods.
- D. Powder-Coat Finish: Immediately after cleaning and pretreating, electrostatically apply manufacturer's standard baked-polymer thermosetting powder finish. Comply with resin manufacturer's written instructions for application, baking, and minimum dry film thickness.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls, floors, and support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install level, plumb, and true; shim as required, using concealed shims.
 - 1. Anchor locker runs at ends and at intervals recommended by manufacturer, but not more than 36 inches o.c. Install anchors through backup reinforcing plates, channels, or blocking as required to prevent metal distortion, using concealed fasteners.
 - 2. Anchor single rows of metal lockers to walls near top of lockers and to floor.
 - 3. Anchor back-to-back metal lockers to floor.
- B. All-Welded Metal Lockers: Connect groups of all-welded metal lockers together with standard fasteners, with no exposed fasteners on face frames.
- C. Equipment and Accessories: Fit exposed connections of trim, fillers, and closures accurately together to form tight, hairline joints, with concealed fasteners and splice plates.
- D. Fixed Locker Benches: Provide not less than 2 pedestals for each bench, uniformly spaced not more than 72 inches apart. Securely fasten tops of pedestals to undersides of bench tops, and anchor bases to floor.

3.3 ADJUSTING, CLEANING, AND PROTECTION

- A. Clean, lubricate, and adjust hardware. Adjust doors and latches to operate easily without binding. Verify that integral locking devices operate properly.
- B. Protect metal lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit metal locker use during construction.

- C. Touch up marred finishes, or replace metal lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by metal locker manufacturer.

END OF SECTION

SECTION 11 12 00
PARKING CONTROL EQUIPMENT

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

- A. All of the Contract Documents, including General and Supplementary Conditions, Division 0 and Division 1, General Requirements, apply to the work of this Section.

1.02 DESCRIPTION OF WORK

- A. Section Includes:
1. Complete automatic barrier arm gate access systems
 2. Vehicle loop detectors, photoelectric sensors and strobe switch

1.03 RELATED WORK

- A. Carefully examine all the Contract Documents for requirements that affect the work of this Section. Other specification sections that directly relate to the work of this Section include, but are not limited to the following:
1. Section 05 50 00 – Metal Fabrications for pipe bollards to protect parking control equipment
 2. Division 26 – Electrical
 3. Division 27 – Communication
 4. Division 28 – Electronic Safety and Security
 5. Section 32 12 16 – Asphalt Paving
 6. Section 32 13 13 – Exterior Concrete
 7. Section 32 16 00 - Curbing
 6. Section 32 30 00 – Site Improvements
 9. Section 32 31 00- Fencing

1.04 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site. Inspect and discuss electrical roughing-in, technology and controls, equipment bases, and other preparatory work specified elsewhere.
1. Verify that equipment operation is consistent with system description.
 2. Review sequence of operation for each type of parking control equipment.
 3. Review coordination of interlocked equipment specified in this Section and elsewhere.
 4. Review required testing, inspecting, and certifying procedures.

1.05 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for parking control equipment.
 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties.

- B. Shop Drawings: For parking control equipment.
 - 1. Include plans, elevations, sections, details, and attachments to other work.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include diagrams for power, signal, and control wiring.
 - 4. Vehicle Detectors: Layout, product information and method of placement of vehicle loop detector system.
 - 5. Photoelectric sensors: Layout, product information and method of placement of photoelectric sensors.
 - 6. Strobe switch location, attachment detail and associated hardware and conduit.
- C. Warranty: Manufacturer warranties against material and manufacturing defects.
 - 1. Cabinet: 10 years
 - 2. Electrical and mechanical components: 2 years.

1.06 INFORMATIONAL SUBMITTALS

- A. Qualification Data described under Item 1.09 herein.
- B. Field quality-control reports.

1.07 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For parking control equipment to include in emergency, operation, and maintenance manuals.

1.08 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Gate Arms: One extra breakaway gate arm for each gate installed, complete with accessory components.

1.09 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer with a minimum of five (5) years of experience installing, programming and servicing barrier arm gate systems.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Source Limitations: Obtain parking control equipment from single source from single manufacturer. Gate operator specified under Section 323100 Fencing for Cantilever Slide Gate shall be from the same single source manufacturer as the gate operator furnished and installed under this Section 11 12 00.

2.02 ACCESS CONTROL

- A. Parking and Access Controls: Refer to Division 27 Communication and Division 28 Electronic
PARKING CONTROL EQUIPMENT

Safety and Security and the Technology and Security Site Plan and Details for card readers and remote access control devices furnished and installed by the security and technology subcontractor.

1. Validated Parking: Card reader
 2. Delivery/Drop-Off: Remote Access Control
- B. Strobe Switch and Power Module: Furnish one model #1790-1014-S&M2 strobeswitch and power module for the automatic gate at the back of the school building, and two model #2795-2 Dual Strobeswitch and power module for the automatic gates along the driveway. Products shall be as distributed by Fortran Traffic Systems Limited, 470 Midwest Road, Toronto, Ontario, Canada M1P4Y5 800-387-4555. www.fortrantraffic.com, or Architect approved equal. Furnish black galvanized steel conduit for strobe switch mounting.
1. Other acceptable distributors are:
 - a. Whelen Engineering Company, Inc. 860-526-9504 www.whelen.com
 - b. Federal Signal 800-446-6809, www.fedsig.com
 2. Strobeswitch and power modules shall have a 2-year manufacturer's warranty against defect in material and operation.
- C. Electrical Components and Devices: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.03 AUTOMATIC BARRIER GATES

- A. General: Provide three (3) complete automatic barrier gates, consisting of operator and controller housed in a weathertight, tamper-resistant cabinet enclosure with gate arm and fully integrated with complete access pedestal and post supports for reflective photoelectric sensors. Device shall be activated by a signal from access control device. Fabricate unit with gate arm height in down position of not more than 35 inches above base of tower.
1. Basis of Design Product: Subject to compliance with the requirements, provide LiftMaster, MA Barrier Gate Operator model MATDCBB Mega Arm Tower with battery backup, distributed by: MasterHalco/LiftMaster 63 Manley St, West Bridgewater, MA 02379 represented by Steven Steinmetz 508-583-7474 Ext 53259, mobile 508-313-6992. National tech rep Kevin Wyrembelski 214-234 8162 Ext: 58752, mobile 469-323-8198, or a comparable product by one of the following:
 - a. American Door.
 - b. American Access Company.
 - c. Powermaster
- B. Standards: ASTM F 2200 for barrier gates and gate operators that are listed and labeled according to UL 325 and UL 991 by a qualified testing agency.
- C. Cabinets: Fabricated from sheet metal aluminum with seams welded and ground smooth; approximately 14 inches square by 42 inches tall. Provide single, gasketed access door for each cabinet with flush-mounted locks. Furnish two keys for each lock, all locks keyed to Owner's master key system. Fabricate cabinet with internal reinforcing and four mounting holes accessible only from inside cabinet.
1. Aluminum Sheet: Not less than 0.097-inch- (2.5-mm-) thick, galvanized- steel sheet.
 - a. Finish cabinet, interior and exterior, with manufacturer's standard baked-enamel or powder-coat finish.
 - b. Color: As selected by the Architect.

- D. Straight Gate Arm: Aluminum, red and white stripes on traffic-side face. Provide mounting flange with breakaway feature to ensure a clean break if arm is struck by vehicle.
 - 1. Length: One 12-foot long and Two 15-foot long.
- E. Operator: UL labeled and listed, instant-reversing, continuous-duty motor for operating gate arm. Transmit power to gate-arm drive shaft through the speed reducer to harmonic-acting crank and connecting rod. Fabricate crank, rod, and drive shaft of galvanized solid bar steel. Provide an operable cam for adjusting arm travel.
 - 1. Battery Backup: Yes
 - 2. Remote Control Access: Security+ 2.0® 3-channel receiver will handle unlimited remotes with 811LMX/813LMX
 - 3. Fire Department Compliant: Allows gate to auto open upon loss of AC power or battery depletion
 - 4. Limit Setting: Magnetic
 - 5. Specifications:
 - a. Operator Speed: Opening time: 2.5 seconds
 - b. Power: 120V/230VAC single phase
 - c. Accessory Power: 24VDC, 500mA
 - d. Warranty: 2 years; 10 years frame and cover
 - e. Temperature Specifications: With optional heater: -40°F (-40°C) to 140°F (60°C)
 - f. UL Usage Classification: UL 325 & UL 991 listed 3 class I, II, III and IV.
 - 6. Construction:
 - a. Motor: 24VDC - 1/2 HP equivalent
 - b. Operator Duty Rating: Continuous duty
 - c. Chassis/Frame: Powder coated 1/4 in. aluminum alloy
 - d. Gear Reduction: 60:1 worm gear reducer in synthetic oil bath
 - e. Arms: Red/white stripe aluminum 15 foot arm..
 - f. Cover: UV-resistant polyethylene
 - g. Controls: Sequenced access management system.
 - h. Clutch.
 - i. Retro reflective photo eye.
 - j. Security+2.0 radio receiver: Accept Security+ 2.0 rolling code technology remote controls and binary DIP switch.
 - k. Red/green traffic light.
 - l. Low power loop detector.
 - m. High-capacity connected access portal.
 - n. Two door connected access portal.

2.04VEHICLE DETECTORS

- A. General: Provide detection devices for exiting, that sense presence or transit of vehicles and emit signals activating gate-arm operators.
- B. Vehicle Loop Detector System: Self-tuning electronic presence detector with adjustable detection patterns, adjustable sensitivity and frequency settings, and panel indicator light. Include automatic closing timer with adjustable time delay before closing, timer cut-off switch, designed to hold gate arm open until traffic clears. Provide number of loops consisting of multiple strands of wire, number of turns, loop size, and method of placement at locations required for safety close and free exit and as recommended in writing by detection system manufacturer for pave-over installation.
 - 1. Factory-Formed Loop: Wire, preformed in size indicated.
 - a. 1/2 inch schedule 40 PVC conduit.
 - b. 4 or 5 turns of 18 gauge stranded wire (depending on size) and include a 25= lead-

- in wire.
2. Operation:
 - a. Recognize vehicles within 6 inches (152 mm) of each other on standard- sized loop.
 - b. Recognize vehicle direction by detecting vehicle moving from one loop to another.
 - c. Generate reverse count if vehicle backs up after generating directional count in forward direction.
 - d. Continuous diagnostic monitoring for intermittently operating and failed loops.
 - e. Crosstalk test between adjacent loops.

2.05 ACCESS CONTROL UNIT PEDESTALS

- A. Provide a single pedestal with hood at each entrance automatic barrier gate (2 total). Prior to submitting product information for approval, confirm hood size is compatible with the intercom and access card readers provided by the Security and Technology contractor.
 1. Basis of Design: Pedestal Pro, Lindon, UT 800-660-3072 www.pedestalpro.com. Other acceptable manufacturers are LiftMaster 833-707-1984, Elite Gates 800-555-6017, or Architect approved equal.
 - a. Pedestal Pro Model No. 42-9C-ALUM-BLK ,42" hight, 12" reach, aluminum, surface mount, black wrinkle powdercoat finish.
 - b. Housing shall be Model No. 610HOU aluminum, black wrinkle powdercoat finish. Confirm specific housing plate configuration with the Security and Technology subcontractor for their intercom and access card reader mounting requirements.

2.06 ANCHORAGES

- A. Anchor bolts; hot-dip galvanized according to ASTM A 153/A 153M and ASTM F 2329.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, including equipment bases; accurate placement, pattern, and orientation of anchor bolts; critical dimensions; and other conditions affecting performance of the Work.
- B. Examine roughing-in for electrical and communication systems to verify actual locations of connections before parking control equipment installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Excavation for Traffic Controllers: Saw cut existing pavement for recessed traffic controllers and hand-excavate recesses to dimensions and depths and at locations as required by traffic controller manufacturer's written instructions and as indicated on Drawings.

3.03 INSTALLATION

- A. General: Install parking control equipment as required for complete and integrated installation.
 - 1. Rough-in electrical connections.
- B. Automatic Barrier Gates: Anchor cabinets to concrete bases with anchor bolts or expansion anchors, and mount barrier gate arms.
 - 1. Install barrier gates according to UL 325.
- C. Vehicle Loop Detectors: Bury and seal wire loop at locations indicated on Drawings according to manufacturer's written instructions. Connect to parking control equipment operated by detector.
- D. Strobeswitches and power modules: Install in accordance with the approved manufacturer's instructions on conduit to approximately 6-feet in height.
- E. Surface mounted pedestal and hood installation shall be coordinated with the Site and Security and Technology subcontractors, and installed in accordance with the manufacturer's instructions.
- F. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
- G. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

3.04 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections:
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Parking control equipment will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.05 ADJUSTING

- A. Adjust parking control equipment to function smoothly, and lubricate as recommended by manufacturer.
- B. Confirm that locks engage accurately and securely without forcing or binding.
- C. After completing installation of exposed, factory-finished parking control equipment, inspect exposed finishes and repair damaged finishes.

3.06 PROTECTION

- A. Remove barrier gate arms during the construction period to prevent damage, and install them immediately before Substantial Completion.

3.07 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain parking control equipment.

END OF SECTION

SECTION 111300
LOADING DOCK EQUIPMENT

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.
- B. Examine all other Sections of the Specifications for requirements that affect work of this Section whether or not such work is specifically mentioned in this Section.
- C. Coordinate work with that of all other trades affecting, or affected by work of this Section. Cooperate with such trades to assure the steady progress of all work under the Contract.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Dock bumpers.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 033000 - CAST-IN-PLACE CONCRETE for concrete work for recessed loading dock equipment.
 - 2. Section 055000 - METAL FABRICATIONS for framing and supports for strip door curtains.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include construction details, material descriptions, rated capacities, operating characteristics, furnished specialties, accessories, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: Show fabrication and installation details. Include plans, elevations, sections, details, and attachments to other work.
 - 1. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

- C. Qualification Data: For Installer

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- B. Source Limitations: Obtain each type of loading dock equipment through one source from a single manufacturer.
- C. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store and handle dock equipment in a manner to avoid significant or permanent damage to fabric or frame.
 - 1. Comply with manufacturer's written instructions for minimum and maximum temperature requirements for storage.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Indicate measurements on Shop Drawings.
 - 1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish heights of loading docks and proceed with fabricating loading dock equipment without field measurements. Coordinate loading dock construction to ensure that actual dimensions correspond to established dimensions.

1.7 COORDINATION

- A. Coordinate installation of anchorages for loading dock equipment. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Steel Plates, Shapes, and Bars: ASTM 36/A 36M.
- B. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from steel plate complying with ASTM A 572/A 572M, Grade 55 (380).
- C. Steel Tubing: ASTM A 500, cold formed.
- D. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- E. Wood: DOC PS 20 dimension lumber, select structural grade, kiln dried.

- F. Pressure-Treated Wood: DOC PS 20 dimension lumber, select structural grade, kiln dried, and pressure treated with waterborne preservatives to comply with AWPAC2.

2.2 DOCK BUMPERS

- A. Manufacturers: Available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. American Floor Products (AFCO).
 - 2. Chalfant Dock Equipment.
 - 3. Durable Corporation.
 - 4. 4Front Engineered Solutions.
 - 5. Or equal
- B. Laminated-Tread Bumpers: Fabricated from multiple, uniformly thick plies cut from fabric-reinforced rubber tires. Laminate plies under pressure on not less than two 3/4-inch-diameter, steel supporting rods that are welded at one end to 1/4-inch-thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than 1 inch of tread plies extending beyond the face of closure angles.
- C. Anchorage Devices: Hot-dip galvanized steel anchor bolts, nuts, washers, bolts, sleeves, cast-in-place plates, and other anchorage devices as required to fasten bumpers securely in place and to suit installation type indicated.

2.3 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish loading dock equipment after assembly and testing.
- C. Galvanizing: Hot-dip galvanize items as indicated to comply with applicable standard listed below:
 - 1. ASTM A 123/A 123M for iron and steel loading dock equipment.
 - 2. ASTM A 153/A 153M for iron and steel hardware for loading dock equipment.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of loading dock equipment.
- B. Examine roughing-in for electrical systems for loading dock equipment to verify actual locations of connections before equipment installation.
- C. Examine walls and floors of pits for suitable conditions where recessed loading dock equipment is to be installed. Pits shall be plumb and square and properly sloped for drainage from back to front of loading dock.

- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Coordinate size and location of loading dock equipment indicated to be attached to or recessed into concrete or masonry, and furnish anchoring devices with templates, diagrams, and instructions for their installation.

3.3 INSTALLATION

- A. General: Install loading dock equipment, including accessories as required for a complete installation.
- B. Dock Bumpers: Attach dock bumpers to face of loading dock in a manner that complies with requirements indicated for spacing, arrangement, and position relative to top of platform and anchorage.
 - 1. Bolted Attachment: Attach dock bumpers to preset anchor bolts embedded in concrete or to cast-in-place inserts or threaded studs welded to embedded-steel plates or angles. If preset anchor bolts, cast-in-place inserts, or threaded studs welded to embedded-steel plates or angles are not provided, attach dock bumpers by drilling and anchoring with expansion anchors and bolts.
- C. Dock Lifts: Attach dock lifts securely to loading platform.
- D. Transparent-Strip Door Curtains: Attach door-curtain mounting system to lintel with screw anchors or toggle bolts. Mount curtain strips to achieve overlap indicated.

3.4 ADJUSTING AND CLEANING

- A. Adjust loading dock equipment for proper, safe, efficient operation.
- B. Test dock lifts for vertical travel within operating range indicated.
- C. Restore marred, abraded surfaces to their original condition.

END OF SECTION

SECTION 113300
RETRACTABLE STAIRS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Retractable/disappearing stairs for ceilings.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and will be performed under the designated Sections:
 - 1. Section 051200 – STRUCTURAL STEEL FRAMING for adjacent materials
 - 2. Section 061000 - ROUGH CARPENTRY for wood blocking and framing.
 - 3. Section 087100 - DOOR HARDWARE for rim cylinder locks and master keying.
 - 4. Section 092110 - GYPSUM BOARD ASSEMBLIES for gypsum board ceilings.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Show fabrication and installation details. Include plans, elevations, sections, details, and attachments to other work.

1.4 QUALITY ASSURANCE

- A. Safety Performance: Provide products which comply with ANSI A14.9, Ceiling Mounted Disappearing Climbing Systems - Safety Requirements.
- B. Fire-Rated Access Doors and Frames: Units complying with NFPA 80 that are identical to access door and frame assemblies tested for fire-test-response characteristics per the following test method and that are listed and labeled by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - 1. ASTM E 119 for horizontal access doors and frames.

1.5 PROJECT CONDITIONS

- A. Field Measurements: Verify dimensions by field measurements before fabrication and indicate measurements on Shop Drawings. Notify Architect of discrepancies. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

PART 2 - PRODUCTS

2.1 PRODUCTS, FIRE-RATED

- A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work are the following or approved equal:
 - 1. Fire-Rated Ceiling Access Door with Integral Folding Stairway Model SS/AL, by Precision Ladders, LLC.
- B. Retractable/Disappearing Stair Unit:
 - 1. Provide unit with 61 to 63 degree angle frame.
 - 2. Door Panel: 20 ga steel door panel, with insulation, full width, continuous piano hinge, and set flush with stairway frame.
 - 3. Frame: 1/8 in formed steel channel.
 - 4. Capacity: 500 lbs. min., for not greater than 12 ft high; 300 lbs. min., for 12 ft. - 1 inch and higher.
 - 5. Stringers and Treads: Extruded aluminum side rails with serrated treads and handrail.
 - 6. Hardware: Manufacturer's standard, with continuous weatherstripping.
 - 7. Ceiling Height and Rough Opening: As indicated on Drawings. Treads are full width of opening.
 - 8. Accessories: Provide manufacturer's standard steel pole for operation and keyed cylinder lock.
 - 9. Finish: Manufacturer's standard mill finish on aluminum components. Shop primed finish on steel door panel and frame for finish painting per Section 099000 - PAINTING AND COATING.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine rough opening in ceiling for correct opening dimensions and squareness.

3.2 INSTALLATION

- A. Comply with manufacturer's written instructions for installing retractable stairs.
- B. Install plumb and true, and rigidly anchored to supporting construction with appropriate fasteners and anchor devices.

3.3 ADJUSTING AND CLEANING

- A. Adjust doors and hardware after installation for proper operation.

- B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

END OF SECTION

SECTION 114000

FOODSERVICE EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of contract, including General and Supplementary Conditions and Division 01 Sections, apply to this Section.

1.2 SCOPE

- A. Attention is directed to the detailed Item Specifications, which provide for minimum acceptable products. Item Specifications paragraphs may indicate materials or components that exceed the manufacturer's standards and are required for this project.
- B. Cooperate and coordinate with others engaged on the project in order that work will progress on schedule.
- C. Work to be performed under this Section is shown on Foodservice Equipment Drawings.
- D. Install materials furnished under this Section, other than materials that are expressly noted for installation under other Sections. Installation work shall be performed by workmen compatible with those existent on the project site. Equipment shall be of the latest design; new and unused, unless indicated otherwise in the Item Specifications, complete with all standard parts for normal operations and including such accessories or materials as may be required to comply with these Specifications.
- E. This Specification is to further describe and supplement the applicable Drawings. What is called for by either the Drawings and/or these Specifications shall be furnished and installed as part of this work. Any questions relative to discrepancies or omissions shall be submitted to the Architect.
- F. Provide neatly punched openings or cutouts required to permit passage of plumbing and electrical services by related trades and to accommodate mounted switches and receptacles in the equipment.
 - 1. Work in this Section shall include but shall not be limited to the following:
 - 2. Catalog items of equipment.
 - 3. Fabricated equipment other than catalog items.
 - 4. Plumbing trim consisting of mechanical system components required for standard operation of equipment items such as faucets and waste outlets. Vacuum breakers shall be furnished for equipment where water is introduced less than 2 in. above flood level.
 - 5. Electrical equipment forming an integral part of equipment items such as electric motors, heating elements, controls, switches, starters, temperature regulators and internal wiring to a control panel or switch, if mounted on the equipment.
- G. Sustainable Design Intent: Comply with project requirements intended to achieve a rating, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council.

FOODSERVICE EQUIPMENT

1.3 RELATED WORK SPECIFIED ELSEWHERE

- A. Finished floor and walls, structural supports for all ceiling supported equipment, acoustical ceilings and related building.
- B. Connecting piping, waste lines, traps and vent piping, complete with shut-off valves to all the equipment, and the rough-in for sanitary waste, domestic water, floor drains and plumbing fixtures except those provided under this Section, and related mechanical work.
- C. Exhaust ventilating systems complete with blowers, ductwork, hangers, access panels, and insulation between the exhaust collars and the exhaust blowers.
- D. External wiring; the mounting and wiring of motor starters, solenoid valves, switches and receptacles not integral with the equipment; mounting and wiring of walk-in refrigerated room ceiling mount light fixtures; wiring of walk-in refrigerated room interior evaporator coils; connecting conduit, and external connections to equipment to the building electrical distribution system.

1.4 SUBMITTALS

- A. Submit Shop Drawings for approval in accordance with the General Conditions.
- B. Stub-in drawings shall indicate the layout of equipment and dimensioned locations of all services to the equipment.
 - 1. Hand drawn scale: 1/2 inch = 1 ft., 0".
 - 2. CAD drawn scale: 1/4 inch = 1 ft., 0".
 - 3. Stubbed services shall include electrical, hot and cold water, floor drains or floor sinks, solid wastes and exhaust collar connections. Point of connection services shall include steam supply, condensate return, gas connection and indirect waste connections. Service dimensions shall include height measured from finish floor.
 - 4. Electrical and plumbing services shall be indicated and coordinated on the same drawing.
 - 5. Call-outs for each stub point indicated at the point, or clearly keyed to a schedule on the same drawing.
 - 6. Special conditions plan shall include all floor recesses, curbs and special wall construction indicated and dimensioned
- C. Fabrication drawings shall be furnished for non-catalog items, showing plans, elevations and full construction details with gauges, components, fasteners, erection and connections. Drawings shall be to the minimum scale of 3/4 in. = 1 ft., 0 in.
- D. Standard items of equipment, not built-in or part of other assemblies shall be submitted for approval in the form of bound catalog cuts. Each cut shall include a clearly marked item number, a listing of all optional accessories and finishes, and connection data.
- E. Catalog Cuts shall include letters of approval, under a separate binder, indicating compliance with M.G.L. c. 142 and 248 CMR. Only products and materials that have been listed by the Board as Product-approved shall be used for plumbing and gas fitting work performed in the Commonwealth of Massachusetts.

1. Catalog Cuts shall include operation manuals for all existing foodservice equipment that is scheduled for reuse and that requires gas fitting work performed in the Commonwealth of Massachusetts.
- F. Mechanical refrigeration system submittal shall include the firm name and address of the installation contractor and name of the qualified installer.
- G. Energy Star - Specified Energy Star rated equipment and appliances shall serve as the standard for all types of equipment and appliances whenever possible. Kitchen Equipment Contractor shall clearly indicate that items are Energy Star rated both on the submittal cover sheet and manufacturer cut sheets.
- H. Failure to comply with approved shop drawings shall be cause for rejection of an improperly built assembly.

1.5 SAMPLES

- A. If the bidder's proposed equipment fabricator is unknown to the Consultant's office, immediately after award of contract, submit the following samples for selection and approval:
 1. Section of table showing edge, bullnose, framing, fasteners, gusset, leg, and foot, all assembled.
 2. Drawer assembly (will be returned for use on this project).
- B. Work delivered to the job shall match approved samples.

1.6 GUARANTEES AND WARRANTIES

- A. New equipment furnished for this facility shall be guaranteed for a period of not less than one calendar year beginning on the date of final acceptance of the work of this Section. In the case of a manufacturer whose standard warranty exceeds this period the longer period shall apply. Self-contained refrigeration units for reach-in refrigerators, freezers, ice cream chests and ice machines shall carry a five-year replacement warranty for the sealed unit. The guarantee shall protect against defective material, design and workmanship.
- B. In addition to the guarantee called for under the General Conditions, this Contractor shall further agree that in the event of failure of any system or item of equipment or improper functioning of specified work during the guarantee period, he shall have "on call" competent service personnel available to make the necessary repairs or replacements of specified work promptly at no cost to the Owner. In the event that replacement of an entire item is required, the Owner will have the option of full use of the defective equipment until a replacement has been delivered and completely installed.
- C. Furnish manufacturer's warranty for each item of standard equipment and a warranty on fabricated equipment. Submit guarantees and warranties to the Architect in accordance with conditions found in "Demonstration and Operating Instructions" paragraphs, contained in Part 3, this Section.

1.7 REGULATORY AGENCIES

- A. Work shall be in accordance with the governing health, building and safety, and fire protection codes and regulations.
- B. Standards of the National Sanitation Foundation (NSF) shall serve as guidelines for the work of this Section.
- C. Electric equipment and accessories shall conform to the standards of the National Electric Manufacturers Association (NEMA), Underwriters Laboratories, Inc. (UL) or Electrical Testing Station (ETS).
- D. Steam generating equipment and accessories shall conform to the standards of the American Society of Mechanical Engineers (ASME).
- E. Gas fired equipment and accessories shall conform to the standards of the American Gas Association (AGA) and the American National Standards Institute (ANSI) Z83.11.
- F. Energy Star - Specified Energy Star rated equipment and appliances shall serve as the standard for all types of equipment and appliances whenever possible.
- G. BOARD OF STATE EXAMINERS OF PLUMBERS AND GAS FITTERS: Board Required Product-approval. Only products and materials that have been listed by the Board as Product-approved shall be used for plumbing and gas-fitting work performed in the Commonwealth and governed by M.G.L. c. 142 and 248 CMR.

1.8 EQUALITY OF MATERIALS AND EQUIPMENT

- A. The base bid shall contain no substitutions to these drawings or specifications. Bidders may offer substitute equipment in a separate proposal, indicating the proposed model and sum to be added or deducted if the alternate item is accepted by the Owner. Each line item shall include delivery, installation and taxes. Decisions to accept or reject a piece of equipment shall be made by the Owner, and all decisions shall be final.

PART 2 - PRODUCTS

2.1 MATERIALS AND FINISHES

- A. General
 - 1. Metals shall be free from defects impairing strength, durability or appearance, made of new materials with structural properties to withstand strains and stresses to which normally subject.
 - 2. Stock materials, patterns, products and methods of fabrication shall be approved provided that they conform to the requirements specified under Item Specifications.
- B. Stainless Steel
 - 1. Stainless steel shall be non-magnetic corrosion resistant chromium-nickel steel, Type 302 or 304 (18-8 Alloy), polished to a Number 4 finish where exposed, unless otherwise noted. Minimum gauges shall be as specified under Item Specifications.

C. Galvanized (Galvannealed) Steel

1. Galvannealed steel shall be commercial quality with tight coat of zinc galvanizing metal applied to a soft steel sheet, subsequently passed through a 1200 degree F. oven, resulting in a spangle free paintable surface. Minimum gauges shall be as specified under Item Specifications.

D. Plastic Laminate Materials

1. The laminate facing shall be GP-50, .050 in. thick, general purpose, high pressure, decorative plastic laminate that meets or exceeds the requirements of NEMA Publication LD3-1985, and NSF Standard 35. The plastic laminate exposed surfaces shall be provided in accordance with the specified manufacturer, finish and color. Balancing sheet shall be backing grade GP-28 in matching color at semi-exposed and BK-20 unfinished where hidden.
2. Plastic laminate covered surfaces shall be factory fabricated with 3/4 in. thick core having plastic laminate facing on both faces and all edges, laminated with waterproof glue under pressure in accordance with the plastic laminate manufacturer's specifications.
3. The core shall be medium density phenolic resin particleboard conforming to ANSI A208.1, Type 2-M-2, 45 pound per cubic foot density minimum.
4. Provide veneer core plywood or solid hardwood edge banding for doors and vertical dividers or panels where hardware is attached to casework.
5. Hinges shall be articulated, spring loaded type equal to Grass CST65-170-F or Stanley, with quantity adequate to support the door without deformation. Do not provide handles on plastic laminate clad doors.

2.2 CONSTRUCTION

A. General

1. Flat metal work items of equipment, such as tables, sinks, or counter tops, and other non-catalog items described under Item Specifications, shall be manufactured by a food service equipment fabricator who has the plant, personnel and engineering facilities to properly design, detail and manufacture high quality food service equipment.
2. The equipment fabricator shall be subject to the approval of the Architect, Owner and Consultant. Refer to Paragraph 1.05, Samples.
3. Fabricated foodservice equipment shall be manufactured by one manufacturer, of uniform design, material and finish.
4. Equipment shall conform to the applicable requirements of current Federal, State, and Local Codes and Regulations.

B. Welding

1. The words "weld", "welded" or "welding" as used in this Section of the Specification shall mean that metal joints shall be continuously welded and the exposed parts ground smooth and polished to match adjoining surfaces. Welding electrodes shall match the material being welded.
2. Where spot welding is specified, the welds shall be a maximum spacing of 3 in. on center.
3. Where tack welding is specified, the pieces welded shall have 1/2 in. minimum lengths of welding material at 4 in. on center maximum spacing.

C. Grinding, Polishing and Finishing

1. Exposed welding joints shall be ground flush with the adjoining material and neatly finished to harmonize therewith. Wherever material has been depressed or sunken by a welding operation, such depressions shall be suitably hammered and peened flush with the adjoining surfaces and, if necessary, again welded and ground to eliminate low spots. Ground surfaces shall be polished or buffed to a degree consistent with good workmanship. Coves shall be ground and polished to match adjoining material.
2. Care shall be exercised in grinding operations to avoid excessive heating of metal and discoloration. Abrasives, wheels, and belts used in grinding stainless steel shall be iron free and shall have not been used on carbon steel. The texture of the final polishing operation shall be uniform and smooth. Grain direction shall be uniform, uni-directional for a total length of material. Cross grains and random polishing are not acceptable.
3. The general finish of equipment shall be consistent throughout the job. Brake ends shall be free of open texture or orange peel appearance, and where brake work mars the uniform finish of the material, the marks shall be removed by grinding and polishing, and finishing. Sheared edges shall be free of burrs, projections or fins to eliminate all danger of laceration. Mitered or bullnosed corners shall be neatly finished with the underedge of the material neatly ground to a uniform condition and in no case will overlapping material be acceptable. The equipment surfaces, where exposed, shall be finished to a grained Number 4 (satin) finish unless otherwise specified. An exposed surface shall include an inside surface, which is exposed to view when a swinging or sliding door is opened. Underside of shelves need not be satin finish unless otherwise specified.
4. Excessive distortion caused by welding shall be cause for rejection for that item of equipment.

2.3 BUY-OUT COMPONENTS

- A. CASTERS: 5 in. diameter polyurethane tired, swivel, plate or stem mount to suit application, 300 pound capacity, brakes only if specified, NSF approved; Component Hardware C-21-3050 (plate/no brake), C21-3051 (plate/brake) C23-3350 (stem/no brake) or C23-3351 (stem/brake), or equal by Kason, or PDI Atlanta.
- B. COUNTER LEGS: Stainless steel, 6 in. to 7-3/4 in. height adjustment; Component Hardware A72-0811, or A77-5048, or equal by Kason, or PDI Atlanta.
- C. DOOR AND DRAWER PULLS: Stainless steel, full grip type with beveled edge, NSF approved for stud mounting in device, in horizontal attitude to meet NSF requirements; Component Hardware P63-1012, or equal by Kason, or PDI Atlanta.
- D. DOOR HINGES: Stainless steel, lift off type, swedged knuckle for minimum clearance, nylon bearings; Component Hardware M75-1002 or equal by Kason, or PDI Atlanta.
- E. DRAWER PANS: Molded plastic or fiberglass, 20 in. by 20 in. by 5 in. deep, NSF approved; Component Hardware S80-2020, or equal by Kason, or PDI Atlanta.
- F. DRAWER SLIDES: Stainless steel, NSF approved, full extension, 200 pound capacity with stainless steel ball bearing wheels; Component Hardware S-52 series, or equal by Kason, or PDI Atlanta.
- G. FAUCET SETS, DECK MOUNTED: Chrome plated cast bronze with 1/2 in. IPS eccentric flanged female inlets on 8 in. centers, removable cartridges, lever handles, and aerator tip on

swivel nozzle or swivel gooseneck to suit the application; T&S Brass B-0221 or B-0321, or equal by Component Hardware, Chicago, or Fisher.

- H. FAUCET SETS, POTWASHING SINK: Chrome plated cast bronze with removable cartridges, 3/4 in. passages, eccentric flanged female inlets on 8 in. centers with LL street EL inlets with locknuts, four prong handles, 12 in. swing spout; T&S Brass B-0290 or equal by Component Hardware, Chicago, or Fisher.
- I. FAUCET SETS, SPLASH MOUNTED: Chrome plated cast bronze with 1/2 in. IPS eccentric flanged female inlets on 8 in. centers, removable cartridges, lever handles, and aerator tip on 12 in. swing spout; T&S Brass, B-0231-CC or equal by Component Hardware, Chicago, or Fisher. Provide each with a mounting kit.
- J. GUSSETS: Stainless steel, stepped side, fully closed, NSF approved, mild steel interior reinforcement, wide flange for welding to framing, set screw anchor for leg; Component Hardware A20-0206C, or equal by Kason, or PDI Atlanta.
- K. LEG AND BULLET FOOT ASSEMBLIES: Stainless steel tubing, 16 gauge, number 4 finish, adjustable bullet foot with minimum of 3 in. vertical travel, 2,000 pound capacity, top designed for mounting in gusset, length to suit application; Component Hardware A46-6272-C, or equal by Kason, or PDI Atlanta.
- L. LEG AND FLANGED FOOT ASSEMBLIES: Stainless steel tubing, 16 gauge, number 4 finish, adjustable bullet foot with 3-1/2 in. diameter flange and two holes for securing to floor, minimum of 3 in. vertical travel, 2,000 pound capacity, top designed for mounting in gusset, length to suit application; Component Hardware A46-4272-C, or equal by Kason, or PDI Atlanta.
- M. NUTS: Zinc plated "Pal Nuts" with integral cap and lockwasher; Component Hardware Q-34-1024 or equal by Kason, or PDI Atlanta.
- N. SEALANT: Sealant for sealing equipment to walls or filling crevices between components. All materials listed below that are used in the building interior must not exceed the following requirements:
 - 1. South Coast Air Quality Management District (SCAQMD) Rule #1168
 - 2. For interior adhesives and sealants applied within the weatherproof barrier, submit a printed statement of VOC content.
- O. SOUND DEADENING BASINS: Component Hardware Q75-1366 or equal by Kason, or PDI Atlanta.
- P. SOUND DEADENING TOPS AND SHELVES: Component Hardware Q85-5225, or equal by Kason, or PDI Atlanta, "Tacky Tape" installed between all channel or angle reinforced tops, drainboards or undershelves.
- Q. WASTE OUTLETS, CRUMB CUP: Stainless steel body, removable crumb cup stopper, gasket, coupling nut and sealing washer, 1-1/2 in. IPS, and optional 4 in. long nickel plated brass tailpiece with gasket; Component Hardware E38-1010, or equal by Kason, or PDI Atlanta.
- R. WASTE OUTLETS, LEVER OPERATED: Cast stainless steel rotary type with 1-1/2 in. NPS and 2 in. NPS threads, and removable beehive crumb-cup; Component Hardware DSS-8000 or equal by Component Hardware, Chicago, or Fisher.

- S. WELD STUDS: Copper flashed steel with 10-24 threads, length to suit; Component Hardware Q-36, or equal by Kason, or PDI Atlanta.
- T. GFCI RECEPTACLES: Pass & Seymour 2095-W, 115 volt, 20 amp GFCI Duplex Receptacle or equal.

2.4 FABRICATED COMPONENTS

A. Box Type Cabinet Construction

- 1. Sheet metal cabinet bases of box type construction shall be fabricated without general interior framing. Structural strength shall be achieved by the gauge of the metal and the formed angle and channel edges and corners. Vertical sections shall be closed. Cabinet base shall be fabricated of 18 gauge minimum of material specified at Item Specifications. Mount on counter legs or base as specified.
- 2. Intermediate shelf shall be fabricated of 16 gauge stainless steel with rear and sides turned up 1-1/2 in. tight to the cabinet sides. The front edge of shelf shall be turned down 1-1/2 in. and in 1/2 in. at 45 degrees and shelf spot welded in place. Reinforce underside with longitudinal 14 gauge channel on the centerline.
- 3. Bottom shelf shall be fabricated of 16 gauge stainless steel similar to the intermediate shelf except that the front edge shall be formed into a full width 1-1/2 in. by 4 in. welded in boxed channel. Rear edge shall be fitted with a full width channel. Underside shall be reinforced.

B. Counters and Drainboards

- 1. Counters, table tops and drainboards shall be 14 gauge stainless steel, of NSF construction, with edges per Item Specifications. Metal tops shall be made of the largest pieces available and shall appear as one piece with all field and shop joints reinforced and welded, ground and polished. Short pieces of metal will not be acceptable. Counter bends shall be not less than 1/8 in. radius. Wherever a fixture has a waste or drain outlet, the surface shall pitch toward the outlet.
- 2. Counters, table tops and drainboards shall be reinforced with channel or angle frame as specified in the Item Specifications. Framing shall be secured to the underside with sound deadening material sandwiched between the surfaces, weld studs, and nuts.
- 3. Wherever bolts or screws are welded to the underside of trim or tops, neatly finish the reverse side of the weld uniform with the adjoining surface of the trim or top. Depressions at these points will not be acceptable. Raise dimples and depressions by peening, or heating and shrinking, and grind and polish to present a flat surface.

C. Crossrails

- 1. Crossrails shall be not less than 1-1/4 in. outside diameter 16 gauge stainless steel tubing welded, ground and polished to a Number 4 finish. Crossrails shall be welded to legs at a height of 10 in. above finished floor, and shall extend from left to right between front legs, unless otherwise specified, and from front to back between all legs.

D. Drawer Assembly

- 1. Drawer assemblies shall consist of a removable drawer pan set in a removable 16 gauge stainless steel channel shaped drawer support frame with gusset plate reinforced corners.

2. Support frame shall have double pan front cover consisting of boxed 18 gauge stainless steel outer shell with welded corners, flush mounted recessed stainless steel pull, 20 gauge stainless steel back shell tack welded to outer shell with fiberglass sound deadening between. Drawer shall be provided with rubber bumpers to quiet closing. Support drawer frame on full extension drawer slides.
3. Drawer shall be suspended from table in a three-sided, 16 gauge stainless steel enclosure with flanged-in bottom edges, banded lower front, flanged-out front side and top edges. All sharp corners shall be broken and any exposed exterior threads of slide mounting bolts shall be provided with solid metal acorn nuts.
4. Component Hardware S91-0020 with thermoplastic pan is considered as equivalent to the above specified construction.

E. Edges

1. Marine: Bumped up 1/2 in. at 45 degrees and turned down 1-1/2 in. and in 1/2 in. at 45 degrees; corners welded and square.
2. Raised roll: Coved up and rolled 180 degrees on a 1-1/2 in. diameter with 3 in. height; corners welded and rounded or coved.
3. Rolled: Rolled 180 degrees on a 1-1/2 in. diameter; corners welded and bullnosed.
4. Short (6 inch) splash on counters and tables: Coved up 6 in., turned back to wall or equipment 1 in. and down 1/2 in.; ends welded closed. Secure tight to face of wall with clips unless specified otherwise and seal joint.
5. Tall (10 inch) splash on preparation sinks, dishtables, counter, and tables: Coved up 8-1/2 in., turned back to wall or equipment 1-1/2 in. at 45 degrees and down 1/2 in.; ends welded closed. Secure 3 in. off face of wall with brackets unless specified otherwise.
6. Turn down: Turn down 2 in. and in 1/2 in. at 45 degrees; corners welded and square.

F. Framing of Tops, Drainboards, Undershelves

1. Channel: Reinforce with 1 in. by 4 in. by 1 in. 14 gauge galvannnealed steel channels; stainless steel if exposed to view. Channels shall run front-to-back at all legs and longitudinally on the centerline. Cross and longitudinal members shall be welded into a single assembly at intersections and sharp corners shall be broken. Framing shall be secured to underside of tops with pairs of weld studs. Framing shall be installed maintaining NSF required clearance to adjacent vertical surfaces and edges of top. The following specified angle framing is considered superior to channel framing and may be used in its place.
2. Angle: 1-1/2 in. by 1-1/2 in. by 1/8 in. perimeter angle frame with crossmembers not over 30 in. on center. Framing shall be secured to top with weld studs, 18 in. on center maximum with three minimum studs on any single face of a table. Perimeter angle frame that is exposed to normal view, shall be stainless steel. Crossmembers and framing not unexposed to normal view shall be iron. Corners of angle frame shall be mitered, or notched and brake formed to form a closed corner. Corner gusset plates used for mounting of leg gussets shall be 1/8 in. thick and sealed to underside of the top. Iron framework joints shall be ground smooth, and shall be painted with a minimum of two coats of aluminum lacquer after degreasing. Framing shall be installed maintaining NSF required clearance to adjacent vertical surfaces and edges of top. Channel framing shall not be considered equal to specified angle framing.
3. Sound deaden all horizontal framed surfaces with material sandwiched between the framing and the bottom of the surface.

G. Hinged Doors

1. Hinged doors shall be double pan type stainless steel construction with 18 gauge exterior and 20 gauge interior, welded corners, and 1/2 in. fiberglass insulation for sound deadening. Each door shall be provided with a stainless steel recessed handle, and an adjustable tension door catch equal to Component Hardware M22-2430. Doors shall close against the bottom shelf and flush with body of equipment.
2. Louvered hinged doors for ventilation shall be fabricated of the same components and provided with a full perimeter 3 in. wide channel reinforcing frame on the interior face. Remaining face shall be die punched with drip-proof louvers fully utilizing the remaining flat metal or a stainless steel flattened expanded metal grille per Item Specifications.

H. Sinks and Sink Inserts

1. Unless otherwise specified, sinks including sink inserts built into tops of fixtures, shall be made of 14 gauge stainless steel with all vertical and horizontal corners rounded to a radius of approximately 3/4 in. with the intersections meeting in a spherical section. Sinks shall be integrally welded to fixture tops.
2. Sinks with two or more compartments shall have full height, 1 in. thick double wall partitions consisting of two pieces of stainless steel back-to-back so fabricated that each compartment will be a deep bowl with coved corners. Partitions shall be welded in place to the bottom, front and back of the sink with smooth rounded coved corners. Top edges of the partitions shall be continuously welded. The front of the sinks shall consist of a stainless steel smooth, flush apron, same gauge as the sinks. Bottom and rear of partitions shall be closed. Sink dimensions contained in Item Specifications are inside dimensions.
3. Sinks shall be provided with integral 14 gauge stainless steel drainboards when specified. Drainboards and sink basins shall be pitched toward waste outlets and shall be self draining. The underside of all sink basins shall sound deadened. Sink units shall be provided with an integral splash at walls. Provide the necessary holes for the mounting of faucet sets.

I. Sliding Doors

1. Sliding doors shall be double pan type stainless steel construction with 18 gauge exterior and 20 gauge interior, welded corners, and 1/2 in. fiberglass insulation for sound deadening. Each door shall be provided with a stainless steel recessed handle. Provide sliding doors with nylon roller bearing sheaves and overhead track components equal to Component Hardware B58-5523 and 5513 sheaves, B57 track, B62-1093 nylon door guides and B60-1086 door stops.

J. Undershelves

1. Undershelf in an open type table shall be 16 gauge stainless steel unless otherwise noted. Edges shall be turned down 1-1/2 in. and in 1/2 in. at 45 degrees with corners notched out to fit legs to which shelf shall be welded from underside. Line up all edges of shelf with centerline of legs. Reinforce underside with longitudinal 14 gauge channel on the centerline.

K. Wall Brackets

1. Dish tables, sinks and counters with sinks shall be securely anchored 3 in. off the face of the wall unless specified otherwise. Brackets shall be "Z" shaped and fabricated of 3 in.

wide, 14 gauge stainless steel. Brackets shall be secured in a vertical attitude to the rear of equipment backsplash with weld studs, and to the wall with appropriate fasteners.

2. Counters that are specified tight-to-wall shall be secured in a hidden manner with steel clips, and the wall/fixture joint shall be sealed.

L. Wall Shelves

1. Wall shelves shall be fabricated of 16 gauge stainless steel, size per Item Specifications, with back and ends raised 1-1/2 in., front edges of ends angled back, all corners broken, and front turned down 1-1/2 in., and in 1/2 in. at 45 degrees. Shelf corners shall be welded, ground and polished. Mount shelf 1 in. off face of wall with suitable fasteners on 14 gauge stainless steel flag brackets, 48 in. on center maximum. Flag brackets shall have a web angle of 30 degrees, measured from horizontal.

2.5 ELECTRICAL EQUIPMENT AND WIRING

- A. Under this Section, items of equipment having mounted electrical motors, electrical heating units, lighting fixtures, controllers, control stations, switches, receptacles and the like shall be internally wired as specified herein, terminating at a junction box mounted on the equipment and left ready for connection to the building electrical distribution system by the Electrical Contractor. Extra ceiling mount light fixtures for refrigerated rooms shall be delivered to Electrical Contractor for field installation and wiring. Connections to evaporator coils mounted inside refrigerated rooms shall be wired by the Electrical Contractor.
- B. Provide openings or cutouts required to accommodate the switches and receptacles in the specified work, and the wiring in conduit from terminal blocks in junction boxes.
- C. Electrically operated equipment and fabricator wiring shall conform to the requirements of Underwriter's Laboratories, Inc. Motors over one horsepower shall be equipped with overload protection.
- D. Furnish wiring diagrams for equipment as requested by the Architect or Contractor.

2.6 ITEM SPECIFICATIONS

Item A01

STORAGE SHELVING, FIVE-TIER

Quantity - 13

Make - Metro Super Adjustable Super Erecta or equal by ISS or Cambro

Size - (6) 60 in. by 21 in., (6) 48 in. by 21 in., (1) 36 in. by 21 in., all 74-5/8 in. high; five tier with bottom shelf up 14 in. clear above floor

Description - Unit shall be all standard construction with Super Adjustable Metroseal coated wire shelves and tubular steel uprights with capped tops, adjustable feet, and 1 in. shelf height adjustment capability with Corner Release System. Each unit shall include four legs.

Item A02

DUNNAGE RACK

Quantity - Seven

Make - New Age 2000 Series or equal by Channel or Kelmax

Size - (2) 54 in. by 20 in., (2) 48 in. by 20 in., (1) 42 in. by 20 in., and (1) 36 in. by 20 in., all 12 in. high

Description - Dunnage platforms shall be all standard construction with 1-1/2 in. by 1-3/4 in. by .070 in. thick wall extruded Type 6063-T5 aluminum tubing with four horizontal tubes and four legs welded together, and each unit capable of supporting a minimum of 2,500 pounds.

Item A03

MOBILE SHELVING UNIT, FOUR-TIER

Quantity - 23

Make - MetroMax Q*C166 or equal by Cambro or Fermob

Size - (3) 60 in. by 21 in., (19) 48 in. by 21 in., and (1) 42 in. by 21 in., all 69 in. high on casters; four tier

Description - Shelving unit shall be all standard construction and shall consist of four shelves with removable injection molded polypropylene mats with antimicrobial product protection, supported on epoxy coated steel shelf frames and similar uprights with capped tops, and mounted on 5 in. diameter polyurethane tired swivel casters with donut bumpers.

Accessories - Provide with polymer posts in lieu of standard.

Item A04

DUNNAGE RACK, MOBILE

Quantity - Six

Make - New Age 1200 Series or equal by Channel or Kelmax

Size - (5) 48 in. by 20 in., and (1) 36 in. by 20 in.

Description - Dunnage platforms shall be all standard construction with 1-1/2 in. by 1-3/4 in. by .070 in. thick wall extruded Type 6063-T5 aluminum tubing with four horizontal tubes and plate mounted casters with unit capable of supporting 1,000 pounds.

Accessories - Provide two total 1208 handles. All casters to swivel.

Item A05

PAN RACK, MOBILE

Quantity - Eight

Make - New Age 1332*C166 or equal by Channel

Size - 20-1/2 in. by 26 in. by 69 in. high

Capacity - Fifteen 18 in. by 26 in. pans on 4 in. centers

Description - Rack shall be fabricated of welded extruded aluminum 1 in. by 1 in. by .070 in. tubular uprights and framing, and 1-1/4 in. by 1-5/8 in. by .100 in. angle pan slides with corners chamfered and deburred. Gussets of 1-1/2 in. by 1-1/2 in. by 5/8 in. angle aluminum shall be welded to the

bottom inside angles where horizontal bracing meets vertical uprights. Mount on platform type, 5 in. polyurethane tired swivel casters.

Item A06

UTILITY CART

Quantity - Five

Make - Lakeside 521 or equal by Channel or Kelmax

Size - 32-5/8 in. by 19-3/8 in. by 34-1/2 in.

Description - Cart shall be all standard NSF construction, stainless steel throughout, with top and bottom shelves supported by an angle frame, and mounted on two 8 in. fixed and two 5 in. swivel casters.

Capacity of cart to be 650 pounds.

Item A07

WALK-IN COOLER

Make - American Panel or equal by Bally or Thermo-Kool

Size - 19 ft., 1-1/2 in. by 9 ft., 5-1/2 in. by 7 ft., 10 in. high minimum inside dimensions; 7 ft., 8 in. high after finished floor is installed by the General Contractor

Power - 1.1 KW - 120/60/1 to light fixtures, temperature monitor/alarm, and door defrost heater strip

Installation, Construction, Materials and Accessories - See Item A08

Guarantee - See Item A08

Item A08

WALK-IN FREEZER

Make - American Panel or equal by Bally or Thermo-Kool

Size - 20 ft., 0 in. by 11 ft., 9 in. by 7 ft., 10 in. high minimum inside dimensions; 7 ft., 8 in. high after finished floor is installed by the General Contractor.

Power - 1.3 KW - 120/60/1 to light fixtures, temperature monitor/alarm, door defrost heater strip, and pressure relief port

Installation - The walk-in refrigerated room shall be installed in a 7 in. deep ID recess (below finished floor). Recess depth allows 1 in. for use of leveling sand; 4 in. for the insulated floor panels; 2 in. for finished floor and setting bed that shall be carried in from the adjacent room and level to same. The finished floor and setting bed shall be furnished and installed by the General Contractor, and shall have coved joints at all walls, turned up a minimum of 4 in. inside and out. The unit shall be set level on a bed of clean, dry mason's sand. Shims are not acceptable for leveling material.

Construction - All standard construction per the manufacturer, modified to meet the specific following points:

- Walls to be 4 in. thick with CFC free urethane foam insulation, UL Class 1 rated
- Cam type locking devices
- 36 in. by 80 in. minimum door clearance
- Polished hardware (hinges and latch to match)
- Three hinges on doors (to include one Kason 1248 spring assist hinge per door)
- Leveraged pull handle (mechanical advantage type, Kason 1236 or equal)
- Quarter turn inside safety release lever handle mechanism (not screw type)
- Prewired door sections with heater wires and light fixtures and switches
- Kason 1806 LED light fixtures or Kason 1808 LED light fixtures
- Dial type thermometers at doors
- Model IC+ (with dry contacts) temperature and HACCP monitoring system at doors. Cooler and freezer alarms to interconnect with access control system for alert monitoring. Provide each system with a pair of 22 gauge low voltage wires. Wires shall be installed by the Controls Contractor. Wires shall run from the dry contacts to the access control panel. Kitchen Equipment Contractor to verify

length prior to purchasing. To avoid false triggering, provide a shielded two-conductor cable with the shield connected to the receiving equipment.

- NSF construction throughout with exception of buried floor panels
- Interior and exterior faces of doors and exposed exterior walls shall be provided with aluminum diamond tread plate protective material to a height of 48 in. above finished floor. Hold diamond plating up 6 in. from the finish floor to accommodate the coved base.

Minimum materials - Interior and exterior wall surfaces shall be clad with .038 in. pebble finished aluminum. The ceiling shall be finished in white polyester over 24 gauge galvanized steel. Interior floor shall be 14 gauge galvanized steel.

Accessories - Freezer shall be provided with an electrically heated pressure relief port. Each door shall be provided with a heated vision panel, 14-1/2 in. by 23 in. constructed of three panels of tempered unbreakable glass, electrically heated, with sealed air spaces between. Provide matching trim strips and closure panels to adjoining surfaces, fabricated per details, made of largest pieces available to minimize number of joints, and installed in accordance with NSF Brochure 770202, Installation Manual for Walk-in Refrigerators and Freezers. Provide sixteen total extra Kason 1806 LED OR Kason 1808 LED light fixtures for mounting in the rooms and deliver to Electrical Contractor for field installation.

Guarantee - The walk-in refrigerated room panels shall be guaranteed for a period of ten (10) years from the date of approved installation for defects in materials and workmanship when subjected to normal use and service; remainder of rooms for one year.

Item A09

MECHANICAL REFRIGERATION SYSTEM

Quantity - Three

Make - Heatcraft, Bohn, Larkin, Climate Control, Chandler

Scope - Furnish and install complete refrigeration systems for the walk-in refrigerated rooms in accordance with the plans. The systems shall include condensing units, evaporator coils, piping, all specified accessories, and those components required to provide complete and satisfactory systems in accordance with accepted refrigeration practice.

Important: The installation work shall be performed by a fully qualified refrigeration contractor employing a certified mechanic fully trained in the installation of commercial refrigeration systems. Submittal shall list the installing company and the qualified system installer.

Piping - Furnish and install the interconnecting piping between the condensing units and their respective unit coolers. Piping shall be installed in a neat and workmanlike manner with adjustable hangers spaced at no more than ten foot intervals on horizontal runs; six foot intervals, vertical runs.

Line sizes shall be in accordance with ASHRAE standards and best refrigeration practice to assure proper feed to evaporator, avoid excessive pressure drop, and prevent excessive amounts of lubricating oil from being trapped in any part of the system. Line sizing shall be such that it will protect the compressor from loss of lubrication at all times, prevent liquid refrigerant from entering the compressor during operating or idle time, and maintain a clean and dry system.

Refrigeration piping shall be Type L, ACR grade, hard drawn seamless copper tubing, wrought type copper fittings, and silver soldered joints. Precharged lines are not acceptable.

Furnish and install sleeves for refrigerant and evaporator drain piping wherever piping passes through a wall or ceiling. Sleeves shall be non-conductive gray plastic tubing, with interior dimension sized at least 1/4 in. larger than piping, and shall be neatly packed with brine putty after installation.

Furnish and install condensate drain piping from the unit cooler to an open drain. Piping shall consist of not less than 7/8 in. Type L copper tubing, supported 36 in. on center maximum, in such a way that there will be 1 in. clearance between the wall and the tubing. Provide a union or slip fitting at the

connection to the evaporator drain pan to allow easy disassembly for service and cleaning. Drain piping shall be pitched 4 in. to the foot and carried through the wall of the refrigerated area. It shall be trapped to prevent entry of warm air and insects to the refrigerated rooms and discharged to a floor drain with the code required air gap. The exposed drain piping shall be spray painted.

Provide an electric drainline heater tape in the freezer, with a length equal to five wraps per foot of length of the drainline located within the freezer compartment. Wrap and secure in accordance with manufacturer's recommendations.

Provide chrome plated escutcheon plates at all exposed points where piping penetrates the wall or ceilings.

Insulation - Suction lines for refrigerated rooms having a temperature above freezing shall be covered with 3/4 in. wall thickness closed cell HT Armaflex insulation with ultra violet radiation protection.

Suction lines for refrigerated rooms having a temperature below freezing shall be covered with 1 in. wall thickness closed cell HT Armaflex insulation with ultra violet radiation protection.

The insulation shall be applied to these lines in accordance with manufacturer's recommendations, and as they are being installed so that insulation will not be split. All joints shall be completely sealed with overlapping, cemented material to prevent the formation of frost on the lines.

Controls - Each evaporator shall be provided with an iNtelliGen electronic control as manufactured by Heatcraft Refrigeration. Provide each system with a pair of twisted 24 gauge low voltage wires, Belden 9841 or equal. Wires shall be installed by the Controls Contractor. Wires shall run from the dry contacts at the evaporators to the access control panel. Kitchen Equipment Contractor to verify length prior to purchasing. To avoid false triggering, provide a shielded two-conductor cable with the shield connected to the receiving equipment. The time clock and heater contactor shall be removed from the condensing unit. No control wiring will be required from evaporator to the condensing unit.

Refrigerant Testing - The entire system shall be pressure and leak tested at no less than 100 PSIG, cleaned and dehydrated by maintaining a vacuum of 500 microns or lower for a period of twelve hours. The required operating charge of refrigerant and oil, if necessary, shall be added and the entire system tested for performance. Each system shall be clearly marked as to the type refrigerant required.

Guarantee - The equipment shall be guaranteed to maintain the specified temperatures. All mechanical refrigeration equipment shall be mechanically guaranteed for a period of one year after date of acceptance by the Owner. The emergency service shall be provided free of charge, whenever necessary on a 24 hour, seven day-per-week basis during the guarantee period.

Any leaks that occur during the first year of operation after acceptance by the Owner, shall be repaired and the necessary refrigerant added at no expense to the Owner.

The year's service shall be provided by the installing company, and under no circumstances will the service policy be sublet to another refrigeration contractor. The name of the installer/service agency for the guarantee period shall be located at a prominent place on the condensing units.

The condensing units shall be provided with an additional four year parts warranty to commence upon the completion of the aforementioned guarantee, bringing the total parts warranty to five years.

Condensing Units - The condensing units shall consist of an EC energy saving motor with variable speed controller, compressor, refrigerant condenser, liquid receiver, compressor service valves, and a dual high-low pressure control. The units shall be as manufactured by Heatcraft Refrigeration.

The condensing units shall be outdoor type, wall mountable, and quiet type with an approximate 51 to 63 decibel rating at 100 percent fan speed. The compressor shall be Microchannel Coil Technology scroll type per schedule, and fitted with coated aluminum fin condenser, suction service valve, discharge service valve, compressor contactor, high and low pressure controls, receiver with fusible plug, liquid shut-off valve and charging port, mounted non-fused disconnect switch, waterproof electrical control box, discharge line vibration eliminator, weather resistant UL painted steel cabinet, access guard, liquid line assembly, suction line filter and vibration eliminator, crankcase heater, and 1-1/2 in. high raised steel base.

Mount on roof per drawings with structural supports, roof penetrations and weatherproofing provided by the General Contractor. Mount with clearance above roof deck per Manufacturers recommendation.

Evaporator Coils - Each evaporator shall be provided with iNtelliGen electronic control as manufactured by Heatcraft Refrigeration, thermostatic expansion valve, and solenoid valve. The time clock and heater contactor shall be removed from the condensing unit. No control wiring will be required from evaporator to the condensing unit. iNtelliGen Controls to include iIC integration card for BMS connection direct to evaporator controls.

The freezer shall be provided with an automatic electric defrost system consisting of two evaporator coils as indicated in the schedule. Evaporators shall be low profile type six fins per inch complete with variable speed EC energy saving fan motors with controller. Coils shall be NSF and UL Listed.

The cooler shall be provided with two evaporator coils as indicated in the schedule. Evaporators shall be low profile type six fins per inch complete with EC energy saving fan motors. Coils shall be NSF and UL Listed.

Furnish and install 1/4 in. minimum diameter stainless steel threaded mounting rods for the hanging of the evaporator coils, with stainless steel washers and nuts on the interior ends, and reinforcing angle at the exterior top of the room. Plated steel running thread is not acceptable.

Refrigeration Equipment Schedule

Cooler (A07)	Room Temp: +35 degrees F			TD: 10 degrees F

Item A12
THREE-COMPARTMENT SINK
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.
Size - 11 ft., 3 in. by 30 in. by 34 in. high plus 10 in. high splash at walls; 3 in. high raised open roll on front; three 21 in. by 27 in. by 12 in. deep integral sink basins
Construction - 14 gauge stainless steel top, basins and splash, stainless steel channel reinforced, six legs with gussets, adjustable feet, and five lengths of crossrail. Secure 3 in. off face of wall. Turn end down into dishwasher and secure with stainless steel machine screws and nuts. Provide each basin with a lift out, 16 gauge stainless steel cover with all edges flanged down 1 in., corners rounded and

welded, provided with two neatly punched thumb holes, and designed to rest on 1/4 in. rod stock supports welded across the basin corners at proper height to provide a flush surface. Provide a hook under the drainboard for hanging the lids when not in use.

Accessories - Two splash mounted faucet sets, three 2 in. lever waste outlets.

Item A13

WALL SHELF

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 60 in. by 12 in. mounted 54 in. above floor

Construction - Wall shelf shall be fabricated of 16 gauge stainless steel with back and ends raised 1-1/2 in., front edges of ends angled back, all corners broken, and front turned down 1-1/2 in., and in 1/2 in. at 45 degrees. Shelf corners shall be welded, ground and polished. Mount shelf 1 in. off face of wall with suitable fasteners on 14 gauge stainless steel flag brackets, 48 in. on center maximum. Flag brackets shall have a web angle of 30 degrees measured from horizontal.

Item A14

DISPOSER CONTROL PANEL

Specified as part of Item A14

Item A15

DISPOSER

Make - In-Sink-Erator SS-200-7*C166 or equal by Salvajor or Red Goat

Power - 3.3 amps - 2 HP - 208/60/3

Description - Disposer shall be all standard construction with stainless steel grinding chamber, Hycar resilient mounting with chrome plated exterior, and grinding chamber water inlet. Motor shall be clad with a stainless steel cover and shall be totally enclosed, fan cooled, induction type with built-in manual reset inherent thermal overload protection, double tapered Timkin roller bearings, centrifugal moisture shield, pressure relief vent, timed or continuous run operation options, and provided with two 24 volt solenoid valves and two flow control valves (1 GPM & 7 GPM). Weld cone integral with the drainboard.

Accessories - Provide unit with a No. 18A cone assembly integral with the drainboard, complete with safety baffle and stopper, bowl cover, water inlet for mounting in sink basin, a solenoid valve, vacuum breaker, and an AS-101 AquaSaver control center for mounting on fabricator provided bracket below the dish table

Item A16

HOSE REEL ASSEMBLY

Make - T&S Brass B-1457-7102-01C or equal by Fisher or Reel Craft

Size - 12 foot hose, 3/8 in. ID

Maximum Water Use - 1.07 Gallons per minute

Description - Unit shall be all standard construction with stainless steel open type reel, adjustable bumper, blue hose, B-107-J low flow spray valve, heat resistant spray valve handle, chrome risers, two wall brackets, continuous pressure vacuum breaker, 36 in. flexible water hose, control valve, and deck type base faucet, designed for wall mounting per plan up 7 ft., 6 in. measured at the inlet.

Accessories - Provide with G019430-45 stainless steel wall mount swing bracket.

Installation - The hose reel bracket for wall mounted units shall be rotated 90 degrees downward and installed such that it allows the hose to hang straight down and parallel to the wall. Refer to T&S Brass instructions manual page four figure one for further details.

Item A17

WAREWASHER, DOOR-TYPE, VENTLESS

Make - Hobart AM16VLT-BAS (Hot Water Sanitizing) or equal by Champion or Stero

Power - 24 amps - 480/60/3

Maximum Water Use - 0.64 Gallons per Rack

Certification - Unit shall be Energy Star compliant

Description - Dishwasher shall be door type with extended hood of all standard construction with 40 rack per hour capacity, 16 gauge stainless steel drawn tank, 18 gauge stainless steel chamber, and 12 gauge stainless steel frame and stainless steel feet, ventless energy recovery, touchscreen controls, WiFi connectivity, two stage filtration, pillarless opening, three-sided hood, pumped drain, door lock, timed wash cycles for 1, 2, 4 or 6 minutes, NSF pot and pan rating for 2, 4, and 6 minute cycles, 70 degrees Fahrenheit rise integral electric booster heater, 27 in. door opening for 18 in. by 26 in. sheet pans or 60-quart, spring counterbalanced chamber, X-shaped revolving, interchangeable upper and lower anti-clogging wash arms, revolving, interchangeable upper and lower rinse arms, slanted, self-locating, one-piece scrap screen and, basket system, automatic fill, door actuated start. Pump shall be stainless steel with stainless steel impeller and shaft, fitted with a stainless steel and carbon ceramic seal, capable of 160 gallon per minute flow and self draining. Motor shall be 2 HP, three phase, squirrel cage, induction-run type with inherent thermal protection, grease packed ball bearings, splashproof design, and ventilated.

Accessories - Single point electrical connection, and four plastic racks; two peg, two flat, sheet pan rack. Provide drain water tempering kit and splash shield for corner installation.

Item A17a

WATER FILTER ASSEMBLY

Make - WaterSpec WS-SSEXT or equal by 3M or Everpure

Description - Unit shall be all standard construction designed for vertical wall mounting per plan and consisting of a mounting bracket, manifold, and filter cartridge with housing. Assembly shall have an operating inlet water temperature range of 35 to 160 degrees Fahrenheit.

Accessories - Provide four spare SS-EXT filter cartridges.

Item A18

CLEAN WARE TABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 48 in. by 30 in. by 34 in. high plus 10 in. splash at wall; 3 in. high raised roll at front and end

Construction - 14 gauge stainless steel top and splash over channel frame with raised roll front and end, tall splash at rear, turned down into dishwasher and secured with stainless steel machine screws, and mounted on two legs with gussets, and adjustable feet. Provide a 36 in. long undershelf welded to table legs at one end and mounted at opposing end on two 10 in. high legs with gussets, and adjustable feet. Secure table 3 in. off face of wall.

Item A19

HAND SINK

Quantity - Three

Make - Advance 7-PS-70-CM*C166 or equal by IMC Teddy or Krowne

Description - Units shall be all standard stainless steel construction with mounting bracket. Mount on wall with rim at 36 in. above floor

Accessories - Provide with a splash mounted faucet set with wrist handles (Item A19a), 3 in. flat strainer type (non-basket, non-lever) open type waste, chrome plated tailpiece, "P" trap and clean-out cap. Provide one unit (adjacent to Item A53) with a welded stainless steel splash on left end.

Item A19a

FAUCET

Quantity - Three

Make - T&S Brass B-0330-04 modified or Fisher 1953 modified, or Encore

Description - Units shall be all standard construction with mixing body, 8 in. center inlets, and wrist blade handles. Modified unit shall be provided with 119X gooseneck with B-0199-02-F10 aerator tip in lieu of the standard.

Item A20

WASTE BIN

Quantity - Three

No work in this Section. Item to be provided by Owner.

Item A21

No item

Item A22

No item

Item A23

MOBILE WORK TABLE

Quantity - Five

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 60 in. by 30 in. by 36 in. high

Construction - 14 gauge stainless steel top over angle frame with edges formed in turndown and mounted on four legs with gussets, 5 in. diameter swivel casters, two with brakes, and full undershelf.

Accessories - Drawer assembly.

Item A24

WASTE BARREL

Quantity - Five

No work in this Section. Item to be provided by Owner.

Item A25

WORK TABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 9 ft., 0 in. by 30 in. by 36 in. high plus 6 in. high end splash at wall

Construction - 14 gauge stainless steel top and splash over angle frame, front, back and end formed in turndown, right end formed in short splash with finished exterior end, six legs with gussets, adjustable feet, two crossrails and partial undershelf.

Accessories - Drawer assembly. Provide a rigid stainless steel bracket for mounting of an electric outlet in a setback position complete with work box, GFI receptacle and stainless steel cover plate.

Item A26

COOK'S WORK TABLE WITH SINK AND OVERSHELF

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 9 ft., 0 in. by 30 in. by 36 in. high plus 6 in. high end splash at wall; overshelf 9 ft., 0 in. long with shelf at 54 in. above floor; 20 in. deep shelf; 18 in. by 20 in. by 10 in. deep integral sink basin

Construction - 14 gauge stainless steel top, splash, and sink basin over angle frame, front, back, and end formed in turndown, left end formed in short splash with finished exterior end, six legs with gussets, adjustable feet, flanged feet at corners for securing to floor, two crossrails and partial undershelf.

Secure 3 in. from face or wall. Overshelf shall be 16 gauge stainless steel, edges formed in turndown, channel reinforced, and welded to three extended rear table legs with support webs, and supported in integrally welded inverted gussets with sleeved joints for rigidity.

Accessories - Drawer assembly, deck mounted faucet set and a 2 in. lever waste outlet. Provide three rigid stainless steel brackets for mounting of electric outlets in setback positions complete with work boxes, GFI receptacles and stainless steel cover plates.

Item A27

VENTILATOR DEMAND CONTROL SYSTEM

Make - CaptiveAire DCV-1011 (Job #5465035) or equal by Gaylord or Halton

Scope - Furnish and install complete exhaust control system for the exhaust canopy in accordance with the plans and Manufacturers shop drawings. The system shall include programmable logic controller (PLC), variable frequency drive (VFD), stainless steel control enclosure, exhaust duct temperature sensors, room temperature sensor, LCD screen interface with cable, all specified accessories, and those components required to provide complete and satisfactory systems in accordance with accepted HVAC practice. System shall control Items A37 and A38. Mount LCD screen control in UDS riser. Mount system processor in the cabinet mounted on the left end of exhaust ventilator A37. Mount the room air temperature sensor on the wall 60 in. above the finished floor.

Important: The installation work shall be performed by a fully qualified contractor employing a certified mechanic fully trained in the installation of the DCV hood system. Submittal shall list the installing company and the qualified system installer. Provide wiring diagrams and guidance to related trades to achieve correct operation of the system.

Accessories - Service Design Verification: Factory Services and on site coordination to be performed by the Manufacturers service technician (not a sales representative). On site supervision shall include two site visits: One visit to coordinate preparations for installation, and a second visit at startup and calibration. Provide BacNet monitoring system.

Item A27a

VENTILATOR CONTROL INTERFACE SCREEN

Specified as part of Item A27

Item A27b

ROOM TEMPERATURE SENSOR

Specified as part of Item A27

Item A28

FIRE SUPPRESSION SYSTEM

Make - Ansul R-102 or equal by Kidde or Pyro-Chem

Power - 20 amps circuit - 120/60/1

Protection for hoods: A37 and A38

Design - Provide an automatic liquid fire suppressant system sized to meet all local codes, UL 300 and NFPA Codes. System shall provide surface protection for cooking equipment, hood and the exhaust

duct work, if required. Tanks shall be mounted in the hood manufacturer provided utility cabinet and piping shall run hidden wherever possible. All pipes and fittings used to convey the chemical shall be scale free steel, 40 weight. Exposed piping located within the ventilator shall be stainless steel and limited to vertical drops only. Horizontal piping shall be run over the ventilator's top. Nozzles shall be swivel type with metal caps. Detection shall be fusible links rated per codes, and system shall rely on no outside source of power. The system shall be provided with a control box with indicator to indicate system status. Control head shall also include integral micro switch offering "normally open" and "normally closed" terminals for use by the Electrical Contractor for the shut-down of equipment and the sounding of alarms. Suppressant tanks shall be stainless steel. Provide and install a remote pull station per codes, complete with cables, conduit and pulleys. Coordinate installation of remote pull station with General Contractor to provide a flush mounted pull box with cable conduit concealed within walls. Provide system with class-K extinguisher as required. Delete standard gas valve and reset relay switch. Gas valve and reset switch shall be provided as part of Items A39.

Workmanship - Exposed stainless steel fittings and piping shall be assembled with special care to avoid marring or damaging the surfaces. Any pieces showing marks shall be removed and replaced with new materials. Chrome sleeves are not acceptable.

Test - Perform a puff test on the completed system and obtain the written approval of the local Fire Inspector.

Accessories - Provide metal blow-off caps on all nozzles.

Item A29

MOBILE OVEN RACK

Specified as part of Item A30

Item A30

COMBINATION OVEN/STEAMER, ROLL-IN

Make - Rational iCombi Pro 20-Half Size G or equal by Alto-Shaam or ConvoTherm

Size - 42-5/8 in. by 44 in. by 73-3/4 in. high

Power - 15 amps - 208/60/1 - cord and plug

Rating - 3/4 in. gas inlet at 160,000 BTU per hour

Capacity - Twenty full-size sheet pans

Certification - Unit shall be Energy Star compliant

Description - Roll-in combination oven/steamer shall be all standard construction with stainless steel cabinet interior and exterior, rear-ventilated triple glass panel door with swiveling panes, thermal reflective coating and integrated sealing mechanism, three five-speed reversing convection fans with automated or manual programming, steam generator, cooking using steam and convection, individually, one after the other, or combined, cabinet climate management system, intelligent cooking path regulation system with automatic adjustment of cooking steps in order to achieve the target results, intelligent proofing system, individual, programming of up to 1,200 cooking programs with up to twelve steps, transfer of cooking programs to other cooking systems through secure cloud connection with or via USB stick, automated intelligent planning and controlling system for organizing multiple cooking processes and mixed loads, automatic optimization of cooking schedules and energy consumption in planning and target time preparation to start or end, automatically resuming and completion of cooking processes following power outages lasting less than 15 minutes, intelligent automatic pressure independent cleaning system with display of the current cleaning and descaling status, power-steam function, integrated maintenance-free grease separation system, cool-down function with fast cooling internal water nozzle, core temperature probe with six measuring points and automatic error correction, precise burst-steam injection, water quantities can be set to four different levels within a temperature range of 85 degrees F to 500 degrees F for convection or steam/convection combination modes, digital temperature display, cooking cabinet humidity and time display, 12- or 24-hour time format, 24-hour real-time clock with automatic adjustment for daylight

savings time when connected to cloud cooking system, automatic pre-selected starting time with variable date and time, integrated hand shower with automatic retraction and switchable spray/jet function, LED cooking cabinet lighting, electronic safety temperature limiter for steam generator and convection heating, integrated fan wheel brake, HACCP data storage and output via USB, integrated IP-protected Ethernet interface, integrated Wi-Fi interface, high-resolution touchscreen display, central dial with push function with selection and confirmation of entries, 4-hour factory certified chef assistance program, 2-year factory warranty, and 5-year steam generator warranty.

Accessories - Provide with roll-in rack cart, installation and connection kit, Active Green cleaner tablet 150 pieces/bucket, and Care Tablets bucket of 150 packets

Item A31

DOUBLE CONVECTION OVEN

Make - Blodgett ZEPHAIRE-200-G-ES Double*C166 or equal by Montague or Southbend

Size - 38-1/4 in. by 46 in. to include fan motor by 70-5/8 in. high

Power - (2) 8 amps - 3/4 HP - 120/60/1 - cords and plugs

Rating - 3/4 in. gas inlet at 100,000 BTU/Hour

Description - Units shall be all standard construction with stainless steel front, sides and top, porcelain enameled steel interior with 29 in. by 28-1/4 in. by 20 in. high inside dimensions, 1 in. solid block insulation and 1 in. thick mineral fibre sheet insulation for 2 in. on insulation on top, back and sides, stainless steel doors with simultaneous operation, removable rack supports capable of holding eleven racks and five chrome plated steel wire racks, electronic ignition with fail-safe controls, solid state manual controls with separate dials for temperature and time settings, timer with buzzer, removable dual tube burners, pressure regulators, two-speed blowers with thermal overload protection and door interlock, and interior lighting with two halogen bake oven lamps. Provide standard one year parts and labor warranty on the total oven and additional three year warranty on the door assembly, parts only.

Accessories - Provide a stainless steel finished back panel. Mount on heavy duty swivel casters.

Manifold the two ovens for a single gas connection.

Item A32

CONVEYOR OVEN ON STAND

Make - Lincoln 1116-000-U or equal by Middleby Marshall or TurboChef

Size - 56 in. by 38-7/8 in. by 42 in. high on stand with conveyor at 32 in. above floor

Power - 7 amps - 120/60/1 - cord and plug

Rating - 3/4 in. gas inlet at 40,000 BTU/hour

Description - Oven shall be all standard stainless steel construction with reversible conveyor, 18 in. wide by 56 in. long conveyor belt with product stop, 28 in. baking chamber, adjustable cooking temperature from 250 to 575 degrees F, adjustable conveyor speed, digital controls, front-loading glass access door, and front removable conveyor. Mount on stainless steel stand with casters. Provide factory start-up and check-out.

Accessories - Provide six pizza cooking screens

Item A33

TEN-PAN STEAMER

Make - Market Forge ETP-10G or equal by Groen or Accutemp

Power - 2 amps - 120/60/1 - cord and plug

Rating - 3/4 in. gas inlet at 84,000 BTU/Hour

Description - Steam cooker shall be all standard construction with two five-pan capacity compartments mounted on a stainless steel cabinet base with close coupled individual atmospheric steam generators mounted at the rear of the compartments with pilotless ignition system, automatic water level control, low water cut-off, built-in water filtration system, safety relief valve, pre-heat and high limit thermostats,

condensate and water tempering tank, and delimer/descaler port. Compartments shall be fitted with stainless steel liners and removable pan supports, and shall be independently and automatically controlled with 60 minute electromechanical timer with continuous end of cooking signal, and holding mode. Doors to be field reversible, positive closing, insulated, slam action type with one-piece silicone rubber gasket and door interlock to cut power to the heater when the doors are opened. Mount cabinet base on 6 in. high stainless steel adjustable legs.

Accessories - Provide unit with ten 12 in. by 20 in. by 2-1/2 in. deep stainless steel pans; six perforated and four solid, and replacement filter kit.

Item A34

FORTY-GALLON TILTING BRAISING PAN

Make - Groen BPP-40GA*C166 or equal by Market Forge or Cleveland

Size - 35-3/4 in. by 28-1/4 in. by 10 in. deep inside pan dimensions

Power - 5 amps - 120/60/1

Rating - 1/2 in. gas inlet at 144,000 BTU/Hour

Description - Unit shall be all standard stainless steel construction, with tubular support frame, adjustable feet, flanged feet at rear, electric motorized crank tilt mechanism with manual override and three position control switch, torsion bar counterbalanced hinged cover with vent, and a 40 gallon pan. The cooking surface shall be constructed with 5/8 in. thick stainless steel and bonded clad plate with integral heat transfer fins, and a multi-tube gas burner. Pan shall be polished to a 100 emery grit finish and provided with electronic ignition, 7 degrees off level cooking capable, power on switch and indicator light, heat on indicating light, thermostatically controlled and provided with a high limit cut-off, temperature and time set knob, LED display of set temperature or cook time, buttons for reset of Low Temp and High Temp pre-sets, "Manual" mode button for knob-setting of pan temperature, and timer-set button with indicator light.

Accessories - Provide unit with a faucet mounting bracket with a double pantry water fill faucet and aerator tip, and BPC pan carrier.

Item A35

SIX-BURNER RANGE WITH OVEN

Make - Vulcan 36S-6BN*C166 or equal by Garland or Southbend

Size - 36 in. by 34 in. by 37 in. high to work surface; 45 in. high overall; 58 in. high overall with overself

Rating - 3/4 in. gas inlet at 215,000 BTU/hour

Description - Range shall be all standard construction with stainless steel front, sides, backriser, and lift-off high shelf, with six 30,000 BTU/hour open burners with lift-off heads, shrouded flash tube pilot system per section, level cast iron removable grates, pull-out crumb tray, 27 in. deep by 26-3/8 in. by 14 in. high 35,000 BTU/hour thermostatically controlled oven with two adjustable racks, porcelain bottom and door panel, and provided with pressure regulator.

Accessories - Provide a 10 in. high stainless steel stub back. Provide with Flame Safety device with manual spark ignition. Mount unit on heavy duty swivel casters, two with brakes.

Item A36

FORTY-GALLON TILTING KETTLE

Make - Groen DH-40A or equal by Market Forge or Cleveland

Power - 5 amps - 120/60/1

Rating - 1/2 in. gas inlet at 100,000 BTU/hour

Description - Unit shall be all standard construction self-contained, gas heated, stainless steel steam jacketed kettle with integral bar type reinforcing ring and butterfly shaped pouring lip, supported on a stainless steel console containing a worm gear tilt mechanism for the kettle trunnion with front-mounted controls, trunnion mounted thermostat, gas heated steam source charged with chemically pure water, low-water cut-off and indicator, safety valve, pressure gauge, water sight glass, gas

regulator, electronic ignition, heating light, temperature and time set knob, LED display of set heat level or cook time, buttons for reset of Low Temp and High Temp presets, "Manual" mode button for knob-setting of heat level, and Timer-set button with indicator light. Kettle shall be UL listed, AGA Design Certified, NSF listed and ASME code constructed and National Board registered for operating up to 50 PSI maximum working pressure. Unit to be mounted on 6 in. high adjustable stainless steel legs.

Accessories - Provide unit with swing spout mixing faucet with aerator tip and bracket, 2 in. tangent drawoff with 1/4 in. perforated strainer, Model 51 counterbalanced hinged cover, basket inserts, pan carrier, and a kettle brush kit.

Item A37

EXHAUST VENTILATOR

Make - CaptiveAire 6024 ND-2 (Job #5465035) or equal by Gaylord or Halton

Size - 14 ft., 0 in. plus a 12 in. utility cabinet on the left end by 60 in. plus a 12 in. extended rear stand-off by 24 in. high plus 4 in. high collars, mounted up 6 ft., 8 in. above finished floor; flat bottom

Power - 120/60/1 power to lights from Item A27

Exhaust - 2,800 total CFM through two 12 in. diameter collars at -0.620 in. static pressure. Blower and ductwork provided and installed by Ventilation Contractor.

Description - Ventilator shall be of all standard construction, built of not less than 18 gauge 304 stainless steel throughout with welded joints and seams in accordance with NFPA-96, with reinforced front bottom edge with integral front baffle, double wall insulated front, and NSF Listed. Unit shall have grease collection trough, storage container, and hanger brackets. Provide with 430 stainless steel Captrate Grease-Stop Solo Filter UL classified S-baffle extractors that shall remove at least 75percent of grease particles five microns in size, and 90percent of grease particles seven microns in size and larger, with a corresponding pressure drop not to exceed 1.0 inches of water gauge. Provide all materials necessary for the hanging of the ventilator.

Accessories - Provide unit with six recessed UL Listed light LED fixtures factory prewired and left ready for final connection by the Electrical Contractor. Provide closure trim per detail to a point 3 in. above finished ceiling to close to adjacent surfaces on three sides. Provide one filter removal tool, quarter end panels and a full System Design Verification to be performed by a Factory Certified Technician once system start-up and inspections are completed.

Item A38

EXHAUST VENTILATOR

Make - CaptiveAire 6024 ND-2 (Job #5465035) or equal by Gaylord or Halton

Size - 15 ft., 0 in. by 60 in. by 24 in. high plus 4 in. high collars, mounted up 6 ft., 8 in. above finished floor; flat bottom

Power - 120/60/1 power to lights from Item A27

Exhaust - 3,300 total CFM through two 14 in. diameter collars at -0.651 in. static pressure. Blower and ductwork provided and installed by Ventilation Contractor.

Description - Ventilator shall be of all standard construction, built of not less than 18 gauge 304 stainless steel throughout with welded joints and seams in accordance with NFPA-96, with reinforced front bottom edge with integral front baffle, double wall insulated front, and NSF Listed. Unit shall have grease collection trough, storage container, and hanger brackets. Provide with 430 stainless steel Captrate Grease-Stop Solo Filter UL classified S-baffle extractors that shall remove at least 75percent of grease particles five microns in size, and 90percent of grease particles seven microns in size and larger, with a corresponding pressure drop not to exceed 1.0 inches of water gauge. Provide all materials necessary for the hanging of the ventilator.

Accessories - Provide unit with six recessed UL Listed light LED fixtures factory prewired and left ready for final connection by the Electrical Contractor. Provide closure trim per detail to a point 3 in. above finished ceiling to close to adjacent surfaces on three sides. Provide one filter removal tool, quarter

end panels, and a full System Design Verification to be performed by a Factory Certified Technician once system start-up and inspections are completed.

Item A39

UTILITY DISTRIBUTION SYSTEM (UDS)

Make - CaptiveAire UDI (Job #5465035) or equal by Gaylord or Halton

Size - 15 ft., 0 in. by 12 in. by 6 ft., 8 in. high

Power - 50 amps circuit - 120/208/60/3

Rating - 2 in. gas manifold at 843 MBTU/Hour (1,700 MBTU/Hour capacity)

Description - Utility distribution system shall be all standard construction of 300 series stainless steel with primary service riser, secondary riser and a horizontal raceway with separate compartments for plumbing and electrical services. Raceway plumbing compartment shall include gas and water piping, service drops with shut-off valves, Dormont quick disconnect gas hoses and flexible water connectors. Raceway electrical compartment shall include wiring to appliance connectors along and individual appliance electrical connectors with weatherproof covers. Primary service riser shall include load center with individual service breakers, main shunt trip breaker with reset handle, emergency kill switch, status indicators lights, DCV control interface, gas delay reset, and GFI convenience outlet. Secondary riser shall include a pre-plumbed 2 in. electric gas valve, manual shut-off valves for gas and water supply, and GFI convenience outlet. Mount DCV interface screen in main service riser.

Item A40

FLOOR PAN AND GRATE

Quantity - Two

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 20 in. by 36 in. by 4 in. deep inside dimensions; 23 in. by 39 in. overall

Construction - Pan shall be fabricated of 14 gauge stainless steel, all welded construction, pitched to a 4 in. ID drain fitting with stainless steel removable, perforated basket and perforated dome strainer.

Long sides shall be fitted with integral grate support ledges. Provide a model CGF molded fiberglass grate (Chemgrate) with 1 in. by 4 in. pattern, 3/4 in. clear slots and ends finished in accordance with manufacturer's instructions. Grate shall be cut in a manner that closed pockets will not be formed where they rest on the pan ledges.

Item A41

No item

Item A42

No item

Item A43

DROP CORD WITH INLINE GFCI

Quantity - Two

Make -World Cords (860/763-2100) Model 88-DC-2003-A4-GM

Power - 20 amps - 120/60/1

Description - Cord shall be all standard construction with female connector body, cord, strain relief, stainless steel ceiling plate, inline GFCI protection with integrated test and reset buttons, and manual reset. Cords shall be adjusted to hang to 78 in. above floor. Plastic wire ties are not acceptable for this work.

Item A44

MOBILE EQUIPMENT STAND

Quantity - Two

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 30 in. by 30 in. by 32 in. high

Construction - 14 gauge stainless steel top over channel frame, edges formed in turn down, mounted on four legs with gussets, undershelf, and 5 in. diameter casters, two with brakes.

Item A45

AUTOMATIC SLICER

Make - Hobart HS9, or equal by Bizerba or Globe

Power - 5.6 amps - 1/2 HP - 120/60/1 - cord and plug

Description - Slicer shall be all standard construction, automatic type with anodized cast aluminum housing and base, removable 13 in. diameter 304L stainless steel knife with removable ring guard cover, totally enclosed, permanently lubricated PSC knife motor, with poly-v belt drive, zero knife exposure, linear automatic carriage drive system with speeds of 28, 38, 48 and 58 strokes per minute, manual assist mode, and provided with thermoplastic coated steel feed grip, glass bead finished gauge plate and knife cover, tilting carriage, water protected push-button switches, top mounted and removable knife sharpener with two borazon stones, adjustable gauge plate from "0" to 1 in., lift lever system and rubber feet. Unit to be provided with mechanical and electrical interlocks to include home position start, close gauge plate to stop, carriage will not tilt away or remove if gauge plate is not closed, locked gauge plate when carriage is removed, no-volt release, and 30 second automatic shut-off without carriage motion. Slicer shall be NSF 8 compliant.

Accessories - Provide unit with knife removal tool

Item A46

TWENTY-QUART MIXER

Make - Hobart HL-200 or equal by Globe or Univex

Power - 8 amps - 1/2HP - 120/60/1 - cord and plug

Description - Mixer frame and body shall be fabricated of welded heavy gauge steel finished in Hybrid Powder coat finish, and provided with a stainless steel splash guard at the column, stainless steel bowl guard with electrical interlock, single point bowl installation with swing-out bowl support, manual bowl lift and an attachment hub with No. 12 taper. Transmission shall be gear driven constant mesh heat treated and hardened gears on similar shafts be mounted in ball bearings with recirculating oil and grease to all gears and shafts. Mixing action shall be planetary and shall have speeds of 59 (stir), 107, 198, 365, agitator RPM speeds as selected by an external dial. Speeds to be selectable on-the-fly and include a soft start and stir speed while lifting the bowl into place and controlled with a 15 minute timer with automatic time recall

Accessories - Provide mixer with a 20 quart stainless steel bowl, one flat "B" beater and one "D" wire loop whip with stainless steel wires.

Item A47

COOK'S WORK TABLE WITH SINK AND OVERSHELF

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 10 ft., 0 in. by 30 in. by 36 in. high plus 6 in. high end splash at wall; overshelf 10 ft., 0 in. long with shelf at 54 in. above floor; 20 in. deep shelf; 18 in. by 20 in. by 10 in. deep integral sink basin

Construction - 14 gauge stainless steel top, splash, and sink basin over angle frame, front, back, and end formed in turndown, right end formed in short splash with finished exterior end, six legs with gussets, adjustable feet, flanged feet at corners for securing to floor, two crossrails and partial undershelf.

Secure 3 in. from face or wall. Overshelf shall be 16 gauge stainless steel, edges formed in turndown, channel reinforced, and welded to three extended rear table legs with support webs, and supported in integrally welded inverted gussets with sleeved joints for rigidity.
Accessories - Drawer assembly, deck mounted faucet set and a 2 in. lever waste outlet.

Item A48

WORK TABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 10 ft., 0 in. by 30 in. by 36 in. high plus 6 in. high end splash at wall

Construction - 14 gauge stainless steel top and splash over angle frame, front, back and end formed in turndown, left end formed in short splash with finished exterior end, six legs with gussets, adjustable feet, two crossrails and partial undershelf.

Accessories - Drawer assembly. Provide a rigid stainless steel bracket for mounting of an electric outlet in a setback position complete with work box, GFI receptacle and stainless steel cover plate.

Item A49

WATER FILTER ASSEMBLY

Make - 3M ScaleGard HT SF165 Modified or equal by Everpure or Selecto

Description - Unit shall be all standard construction designed for wall mounting and consisting of a mounting bracket, quarter-turn cartridge release mechanism, manifold with integral pressure gauge, integral quarter turn shut-off valve, outlet check valve, filter cartridge with internal prefilter membrane and external scale feeder cartridge. Provide with HF95-CL chloramine reduction filter cartridge in lieu of standard HF65 cartridge.

Accessories - Provide four spare HF95-CL filter cartridges and four spare HF8-S cartridges.

Item A50

FLOOR PAN AND GRATE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 30 in. by 12 in. by 4 in. deep inside dimensions; 33 in. by 15 in. overall

Construction - Pan shall be fabricated of 14 gauge stainless steel, all welded construction, pitched to a 4 in. ID drain fitting with stainless steel removable, perforated basket and perforated dome strainer.

Long sides shall be fitted with integral grate support ledges. Provide a model CGF molded fiberglass grate (Chemgrate) with 1 in. by 4 in. pattern, 3/4 in. clear slots and ends finished in accordance with manufacturer's instructions. Grate shall be cut in a manner that closed pockets will not be formed where they rest on the pan ledges.

Item A51

ICE MAKER WITH BIN

Make - Manitowoc IDT0620A/D420 or equal by Scotsman or Hoshizaki

Size - 22 in. by 34 in. by 71-1/2 in. high

Power - 12.2 amps - 120/60/1

Capacity - 560 pounds of cubes per day at 70/50 degrees

Maximum Water Use - 19.9 gallons/100 Lbs of ice

Certification - Unit shall be Energy Star compliant

Description - Ice cuber shall be all standard construction with an air cooled condenser, automatic controls, R410A refrigerant, self cleaning and sanitizing system, digital display diagnostic, system information and programmable ice production, vertical freezing plate with half dice sized cubes, bin level thermostat, and housed in a stainless steel cabinet with gray ABS accents. Bin shall have 383 pound capacity with compression molded composite resin base, hinged lift-up door, internal scoop

holder, polyethylene liner and stainless steel exterior wrap. Mount on stainless steel adjustable legs. Provide unit with standard 3 year parts and labor warranty on total machine, 5 year parts and labor warranty on the evaporator and 5 year parts warranty on the compressor.

Item A51a

WATER FILTER ASSEMBLY

Make - 3M ICE160-S*C166 or equal by Everpure or Selecto

Size - 6-1/2 in. by 5 in. by 17-3/4 in. verify clearance below to remove cartridge

Description - Unit shall be all standard construction and consist of a head assembly with integral mounting bracket, quarter-turn cartridge release mechanism, "valve-in-head" automatic shut-off upon removal of cartridge, pressure gauge, and filter cartridge with internal pre-filter membrane designed for ice makers. Cartridge shall be capable of removal to .2 micron or larger particles, remove chlorine and off tastes and odors, inhibit scale build-up, service flow rate of up to 3.34 gallons per minute, and meet requirements of NSF Standards 42 and 53 and be so listed.

Accessories - Provide three spare filter cartridges

Item A52

FOOD PROCESSOR

Make - Robot Coupe R301 Ultra Dice*C166 or equal by Berkel or Hobart

Power - 12 amps - 120/60/1 - cord and plug

Description - Combination food cutter shall be all standard construction with 1-1/2 HP direct drive fan cooled capacitor start motor with brake, magnetic interlocks, stainless steel cutter bowl with handle and see-thru lid, continuous feed top unit with attached large feed pusher, two standard discs and dicing kit.

Item A53

PREP TABLE WITH SINKS

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 9 ft., 0 in. by 30 in. by 36 in. high to work surface plus 10 in. high splash at rear; two 18 in. by 20 in. by 10 in. deep integral sink basins

Construction - 14 gauge stainless steel top, basins and splash, channel reinforced, six legs with gussets and adjustable feet, partial undershelf, two crossrails, tall splash rear, and marine front and ends, secured 3 in. off face of wall.

Accessories - Drawer assembly, splash mounted faucet set and two 2 in. lever waste outlets.

Item A54

WALL SHELF

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 9 ft., 0 in. by 12 in. mounted 54 in. above floor

Construction - Wall shelf shall be fabricated of 16 gauge stainless steel with back and ends raised 1-1/2 in., front edges of ends angled back, all corners broken, and front turned down 1-1/2 in., and in 1/2 in. at 45 degrees. Shelf corners shall be welded, ground and polished. Mount shelf 1 in. off face of wall with suitable fasteners on 14 gauge stainless steel flag brackets, 48 in. on center maximum. Flag brackets shall have a web angle of 30 degrees measured from horizontal.

Item A55

WATER FILTER ASSEMBLY

Make - 3M BREW110-MS Modified or equal by Everpure or Selecto

Size - 4 in. diameter by 11 in. verify clearance below to remove cartridge

Description - Unit shall be all standard construction and consist of a head assembly with integral mounting bracket, quarter-turn cartridge release mechanism, "valve-in-head" automatic shut-off upon removal of cartridge, and filter cartridge with internal pre-filter membrane designed for coffee and tea brewers. Cartridge shall be capable of removal to .5 micron or larger particles, remove chlorine and off tastes and odors, inhibit scale build-up, service flow rate of up to 1.5 gallons per minute, and meet requirements of NSF Standards 42 and 53 and be so listed.

Accessories - Provide three spare filter cartridges

Item A56

COFFEE BREWER

Make - Bunn CWTF-DV-3*C166 or equal by Curtis or Bloomfield

Power - 13.9 amps - 120/60/1 - cord and plug

Description - Unit shall be all standard construction with stainless steel body, automatic controls, non-pressure tank, pour-over capable, stainless steel funnel, rubber feet, three warmers with individual controls, and front mounted hot water faucet.

Accessories - Provide unit with three 12 cup glass decanters. Provide with cord and plug set.

Item A57

MICROWAVE OVEN

Make - Amana RMS10TS or equal by Panasonic or Sharp

Size - 20 in. by 16-1/2 in. by 12-1/4 in. high

Power - 13 amp - 120/60/1 - cord and plug (NEMA 5-15P)

Description - Microwave oven shall be all standard construction with 1000 watt nominal cooking power, 0.8 cubic foot cavity, five power levels, programmable touch-pad control, digital display and timer, rotating antenna, stainless steel interior and exterior, see through door window with interior light, recessed and sealed ceramic cooking shelf, permanent air filter, and three year warranty.

Item A58

WORK TABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - Approximately 63 in. by 23 in. by 36 in. high plus 6 in. high splash at walls

Construction - 14 gauge stainless steel top and splash over angle frame, front formed in turndown, rear and ends formed in short splash, six legs with gussets and adjustable feet, one crossrail, and partial undershelf. Secure to wall and seal.

Item A59

STAFF LOCKER, TWO-TIER

Quantity - Five

No work in this Section. Item to be provided and installed by General Contractor.

Item A60

WASTE BIN

No work in this Section. Item to be provided by Owner.

Item B01

HOT HOLDING CABINET, PASS-THRU

Quantity - Two

Make - Victory HS-1D-1-PT-HD or equal by Continental or Turbo Air

Size - 26-1/2 in. by 35-1/4 in. by 84-1/4 in. high overall

Power - 6.3 amps - 208/60/1 - cord and plug (NEMA 6-20P)

Doors - Half height, kitchen side hinged on right, servery side hinged on right

Description - Heated cabinet shall be all standard construction with stainless steel exterior, stainless steel coved interior floor and ceiling, stainless steel interior walls and door liner, foamed-in-place polyurethane insulation, self-closing door hardware with a hold-open at 120 degrees, automatic interior lighting, exterior digital thermometer, heavy duty epoxy plated wire shelves adjustable in one inch increments, built-in adjustable humidity control vent, externally mounted blower, safety shielded strip type heating elements, adjustable electronic temperature control from 80 degrees to 180 degrees Fahrenheit with Secure-Temp 1.0 temperature monitoring technology.

Accessories - Provide adjustable Type A/C tray slide kit spaced 3 in. on center in the top and bottom sections. Provide unit mounted on 6 in. high casters.

Item B02

MOBILE WORK TABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 60 in. by 27 in. by 36 in. high

Construction - 14 gauge stainless steel top over angle frame with edges formed in turn-down and mounted on four legs with gussets, 5 in. diameter swivel casters, two with brakes, and full undershelf.

Accessories - Drawer assembly.

Item B03

REFRIGERATOR, PASS-THRU

Make - Victory RSA-2D-S1-PT-HD-HC or equal by Continental or Turbo Air

Size - 52-1/8 in. by 38-5/8 in. by 84-1/4 in. high overall

Capacity - 48.33 cubic feet

Power - 6.5 amps - 120/60/1 - cord and plug

Doors - Half height, standard hinging both sides

Certification - Unit shall be Energy Star compliant

Description - Refrigerator shall be all standard construction with stainless steel exterior, aluminum interior, self-closing door hardware with a hold-open at 120 degrees, Humidity control wires around the door jamb, automatic LED interior lighting, exterior digital thermometer, heavy duty epoxy plated wire shelves adjustable in one inch increments, self-contained top mounted refrigeration system capable of maintaining a 33 degree to 38 degree temperature range with Secure-Temp 1.0 temperature monitoring technology, R-290 refrigerant, and condensate evaporator.

Accessories - Provide adjustable Type A/C tray slide kit spaced 3 in. on center in the top half, and two shelves in the bottom half. Provide unit mounted on casters.

Item B04

WORK TABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 54 in. by 27 in. by 36 in. high plus 6 in. high splash at wall

Construction - 14 gauge stainless steel top and splash over angle frame, front and ends formed in turndown, rear formed in short splash, four legs with gussets and adjustable feet, and full undershelf.

Secure to wall and seal.

Accessories - Drawer assembly

Item B05

HOT HOLDING CABINET, PASS-THRU

Make - Victory HS-2D-1-PT-HD or equal by Continental or Turbo Air

Size - 52-1/8 in. by 35-1/4 in. by 84-1/4 in. high overall

Power - 13 amps - 208/60/1 - cord and plug (NEMA 6-20P)

Doors - Half height, standard hinging both sides

Description - Heated cabinet shall be all standard construction with stainless steel exterior, stainless steel coved interior floor and ceiling, stainless steel interior walls and door liner, foamed-in-place polyurethane insulation, self-closing door hardware with a hold-open at 120 degrees, automatic interior lighting, exterior digital thermometer, heavy duty epoxy plated wire shelves adjustable in one inch increments, built-in adjustable humidity control vent, externally mounted blower, safety shielded strip type heating elements, adjustable electronic temperature control from 80 degrees to 180 degrees Fahrenheit with Secure-Temp 1.0 temperature monitoring technology.

Accessories - Provide adjustable Type A/C tray slide kit spaced 3 in. on center in the top and bottom sections. Mount 6 in. high casters.

Item B06

HOT HOLDING CABINET, PASS-THRU

Make - Victory HS-1D-1-PT-HD or equal by Continental or Turbo Air

Size - 26-1/2 in. by 35-1/4 in. by 84-1/4 in. high overall

Power - 6.3 amps - 208/60/1 - cord and plug (NEMA 6-20P)

Doors - Half height, kitchen side hinged on left, servery side hinged on left

Description - Heated cabinet shall be all standard construction with stainless steel exterior, stainless steel coved interior floor and ceiling, stainless steel interior walls and door liner, foamed-in-place polyurethane insulation, self-closing door hardware with a hold-open at 120 degrees, automatic interior lighting, exterior digital thermometer, heavy duty epoxy plated wire shelves adjustable in one inch increments, built-in adjustable humidity control vent, externally mounted blower, safety shielded strip type heating elements, adjustable electronic temperature control from 80 degrees to 180 degrees Fahrenheit with Secure-Temp 1.0 temperature monitoring technology.

Accessories - Provide adjustable Type A/C tray slide kit spaced 3 in. on center in the top and bottom sections. Provide unit mounted on 6 in. high casters.

Item B07

REFRIGERATOR, PASS-THRU

Quantity - Two

Make - Victory RSA-1D-S1-PT-HD-HC

Size - 26-1/2 in. by 35 in. by 84-1/4 in. high overall

Capacity - 22.9 cubic feet

Power - 6.5 amps - 120/60/1 - cord and plug

Doors - Half height, one unit kitchen side hinged on left, one unit kitchen side hinged on right, one unit servery side hinged on left, one unit servery side hinged on right

Certification - Unit shall be Energy Star compliant

Description - Refrigerator shall be all standard construction with stainless steel exterior, aluminum interior, self-closing door hardware with a hold-open at 120 degrees, Humidity control wires around the door jamb, automatic LED interior lighting, exterior digital thermometer, heavy duty epoxy plated wire shelves adjustable in one inch increments, self-contained top mounted refrigeration system capable of maintaining a 33 degree to 38 degree temperature range with Secure-Temp 1.0 temperature monitoring technology, R-290 refrigerant, and condensate evaporator.

Accessories - Provide adjustable Type A/C tray slide kit spaced 3 in. on center in the top half, and two shelves in the bottom half. Provide unit mounted on casters.

Item B08

WORK TABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 96 in. by 30 in. by 36 in. high plus 6 in. high splash at walls

Construction - 14 gauge stainless steel top and splash over angle frame, front, right and partial left formed in turndown, rear and partial left formed in short splash, six legs with gussets and adjustable feet, two crossrails, and partial undershelf. Secure to wall and seal.

Accessories - Drawer assembly

Item B09

No item

Item B10

PANINI GRILL, ALUMINUM PLATE

Make - Star PGT14T

Power - 6.5 amps - 208/60/1 - cord and plug (NEMA 6-15P)

Description - Double sided grill shall be all standard construction with stainless steel body, heavy-duty torsion spring hinge, 14 in. wide grooved top and bottom cooking surface, aluminum cooking plates, and operating temperature between 175 degrees F (79 degrees C) and 550 degrees F (288 degrees C).

Item B11

HAND SINK

Make - Advance 7-PS-70-CM*C166 or equal by IMC Teddy or Krowne

Description - Units shall be all standard stainless steel construction with mounting bracket. Mount on wall with rim at 36 in. above floor

Accessories - Provide with a splash mounted faucet set with wrist handles (Item B11a), 3 in. flat strainer type (non-basket, non-lever) open type waste, chrome plated tailpiece, "P" trap and clean-out cap.

Item B11a

FAUCET

Make - T&S Brass B-0330-04 modified or Fisher 1953 modified, or Encore

Description - Units shall be all standard construction with mixing body, 8 in. center inlets, and wrist blade handles. Modified unit shall be provided with 119X gooseneck with B-0199-02-F10 aerator tip in lieu of the standard.

Item B12

WASTE BIN

No work in this Section. Item to be provided by Owner.

Item B13

ENTREE SERVING COUNTER

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML

Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 12 in. by 40 in. by 34 in. high

Power - 20 amps circuit - 120/60/1 to each of two apron mounted GFI receptacles;

20 amps circuit - 120/60/1 to body mounted GFI receptacle;

American Disabilities Act Requirements - Self-service food pans and food protectors shall be mounted in accordance with ADA code requirements for side reach per code section 4.2.6.

Construction - Top shall be 1-1/4 in. Quartz over a 3/4 in. marine grade plywood substrate. Mount on angle frame, and provide openings for the drop-in equipment with thermal protection at all edges per detail. Provide stainless steel cladding on exposed underside of substrate.

Counter tops: Superior Marble and Granite LLC (Middleton, Ma) or equal (submit warranty letter for stone top and installation with counter submittal)

Description - Stone counter top to be provided per details with color selected by the Architect. The edge details/treatments shall be supplied in accordance with the counter details. Supply tops with Superior Marble and Granite model number SMGW2 (two-year warranty on all seams). Supply with model SMGEZCUT where all cut outs to be insulated and prepared to receive equipment drop-ins. Cut out where appropriate shall receive model (ProtectX232) flanges.

Mount on eight 2 in. square 16 gauge stainless steel tubular legs with Component Hardware A15-0851 adjustable feet. Reinforce between all front and end legs with 2 in. square stainless steel tubing welded in place 6-1/4 in. clear above floor. Provide similar reinforcement between rear legs where an undershelf does not exist.

Undershelves shall be fabricated of 16 gauge stainless steel with reinforcing and sound deadening as specified for open base table undershelves. Front face shall be turned down 1-1/2 in. and in 1/2 in. at 45 degrees. Rear and ends shall be turned up 1-1/2 in. and corners welded. Weld to legs at a point 10 in. above floor. Shelf shall be mounted on the inside face of legs, not cut-out at each leg. Leave 2 in. clearance between the shelf edge and the counter front and end panels for passing of services by Related Trades.

Front and ends of counter shall be provided with plastic laminate clad panels. Plastic laminate manufacturer shall be as selected by the Architect. Plastic laminate color shall be as selected by the Architect from Wilsonart's full range of colors. Panels shall be mounted with a minimum of joints. All joints to be hairline type. Joint between a front and end panel shall appear on the end panel face. Panels shall be secured to counter legs and crossrails with welded stainless steel clips and stainless steel wood screws. Do NOT secure THROUGH the legs or crossrails. Provide a continuous 14 gauge support-protector strip at the lower edge of all finish panels, extending 1/16 in. past front face.

Apron shall be provided per elevations, fabricated of 18 gauge stainless steel, and shall be used for the mounting of switches, outlets, and controls. Apron shall include a formed reinforced bottom edge and shall be set in 1 in. from leg face.

Accessories - Provide with a 51 in. long (between end posts on centers) Versa-Gard VG9 two-tier display (Item B13a) with brushed stainless steel uprights, end panels, concealed mount flanges, and mounted per plan. Provide with a 66 in. long (between end posts on centers) Versa-Gard VG6S full-service food protector (Item B13b) with brushed stainless steel uprights, end panels, concealed mount flanges, and mounted per plan.

Item B13a
TWO-TIER GLASS FOOD DISPLAY CASE
Specified as part of Item B13

Item B13b
FULL-SERVICE GLASS FOOD PROTECTOR CASE
Specified as part of Item B13

Item B14
HOT FOOD WELL ASSEMBLY, DROP-IN
Make - MOD400-DM*C166 or equal by Hatco or Alto-Shaam
Size - 57-1/2 in. by 23-5/8 in. by 9-3/4 in. high
Power - 17.3 amps - 3.6 KW - 208/60/1
Description - Modular food warmer shall be all standard construction and shall consist of a stainless steel mounting frame, gasket and locking system, four individually controlled stainless steel 6 in. deep "wet or dry" hot food wells with 1 in. thick fiberglass insulation on five sides enclosed in an aluminized steel enclosure, and a mounting panel for installation in the counter apron complete with gasket, infinite heat controls with positive off position, high temperature limit thermostats, and pilot lights. Wells shall be provided with drain outlets factory manifolded with 1 in. diameter line and a gate valve.
Accessories - Provide with drain valve extension kit and Wellslok extension kit.

Item B15
PREP TOP REFRIGERATOR
Make - Beverage-Air SPE72HC-18 or equal by Continental or True
Size - 72 in. by 32 in. by 34 in. high to work surface
Capacity - 14.6 cubic feet
Power - 3 amps - 1/4 HP - 120/60/1 - cord and plug
Description - Refrigerator shall be all standard construction with stainless steel top, front and ends, 2 in. thick polyurethane insulation, hinged doors with heavy duty self-closing hinges, anodized aluminum interior, air cooled refrigeration system with thermostatic controls and condensate evaporator, four wire shelves, and top fitted with a white plastic cutting board, and a eighteen pan opening complete with adapter bars, polycarbonate pan. Top shall have a stainless steel removable hood and insulated lid assembly. Mount on 5 in. diameter swivel casters; two with brakes.
Accessories - Provide unit with five year compressor warranty. Provide with stainless steel back, and mount on 4 in. high casters for a 34 in. working height. Delete standard hood assembly and provide with removable pan covers.

Item B16
TRASH BIN
Quantity - Four
No work in this Section. Item to be provided by Owner.

Item B17
FILL FAUCET
Quantity - Three
Make - T&S Brass B-0208 or equal by Fisher or Encore
Description - Unit shall be all standard construction with a B-199-02F-12 aerator tip.

Item B18

HOT FOOD WELL ASSEMBLY, DROP-IN

Make - Wells MOD200-DM*C166 or equal by Hatco or Alto-Shaam

Size - 29-1/2 in. by 23-5/8 in. by 9-3/4 in. high

Power - 8.7 amps - 1.8 KW - 208/60/1 - cord and plug (NEMA 6-15P)

Description - Modular food warmer shall be all standard construction and shall consist of a stainless steel mounting frame, gasket and locking system, two individually controlled stainless steel 6 in. deep in. wet or dry in. hot food wells with 1 in. thick fiberglass insulation on five sides enclosed in an aluminized steel enclosure, and a mounting panel for installation in the counter apron complete with gasket, infinite heat controls with positive off position, high temperature limit thermostats, and pilot lights.

Wells shall be provided with drain outlets factory manifolded with 1 in. diameter line and a gate valve.

Accessories - Provide with drain valve extension kit and Wellslok extension kit.

Item B19

DELI SERVING COUNTER

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML

Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 12 ft., 0 in. by 40 in. by 34 in. high; 78 in. by 30 in. notch for prep top refrigerator per plan

Power - 20 amps circuit - 120/60/1 to body mounted GFI receptacle;

15 amps circuit - 120/60/1 to body mounted NEMA 6-15R receptacle

American Disabilities Act Requirements - Self-service food pans and food protectors shall be mounted in accordance with ADA code requirements for side reach per code section 4.2.6.

Construction - Top shall be 1-1/4 in. Quartz over a 3/4 in. marine grade plywood substrate. Mount on angle frame, and provide openings for the drop-in equipment with thermal protection at all edges per detail. Provide stainless steel cladding on exposed underside of substrate.

Counter tops: Superior Marble and Granite LLC (Middleton, Ma) or equal (submit warranty letter for stone top and installation with counter submittal)

Description - Stone counter top to be provided per details with color selected by the Architect. The edge details/treatments shall be supplied in accordance with the counter details. Supply tops with Superior Marble and Granite model number SMGW2 (two-year warranty on all seams). Supply with model SMGEZCUT where all cut outs to be insulated and prepared to receive equipment drop-ins. Cut out where appropriate shall receive model (ProtectX232) flanges.

Mount on eight 2 in. square 16 gauge stainless steel tubular legs with Component Hardware A15-0851 adjustable feet. Reinforce between all front and end legs with 2 in. square stainless steel tubing welded in place 6-1/4 in. clear above floor. Provide similar reinforcement between rear legs where an undershelf does not exist.

Undershelves shall be fabricated of 16 gauge stainless steel with reinforcing and sound deadening as specified for open base table undershelves. Front face shall be turned down 1-1/2 in. and in 1/2 in. at 45 degrees. Rear and ends shall be turned up 1-1/2 in. and corners welded. Weld to legs at a point 10 in. above floor. Shelf shall be mounted on the inside face of legs, not cut-out at each leg. Leave 2 in. clearance between the shelf edge and the counter front and end panels for passing of services by Related Trades.

Front and ends of counter shall be provided with plastic laminate clad panels. Plastic laminate manufacturer shall be as selected by the Architect. Plastic laminate color shall be as selected by the Architect from Wilsonart's full range of colors. Panels shall be mounted with a minimum of joints. All joints to be hairline type. Joint between a front and end panel shall appear on the end panel face. Panels shall be secured to counter legs and crossrails with welded stainless steel clips and stainless

steel wood screws. Do NOT secure THROUGH the legs or crossrails. Provide a continuous 14 gauge support-protector strip at the lower edge of all finish panels, extending 1/16 in. past front face.

Apron shall be provided per elevations, fabricated of 18 gauge stainless steel, and shall be used for the mounting of switches, outlets, and controls. Apron shall include a formed reinforced bottom edge and shall be set in 1 in. from leg face.

Accessories - Provide with an 80 in. long (between end posts on centers) Versa-Gard VG6S full-service food protector (Item B19a) with brushed stainless steel uprights, end panels, concealed mount flanges, and mounted per plan. Provide with a 36 in. long (between end posts on centers) Versa-Gard VG6S full-service food protector (Item B19b) with brushed stainless steel uprights, end panels, concealed mount flanges, and mounted per plan.

Item B19a
FULL-SERVICE GLASS FOOD PROTECTOR CASE
Specified as part of Item B19

Item B19b
FULL-SERVICE GLASS FOOD PROTECTOR CASE
Specified as part of Item B19

Item B20
AIR SCREEN GRAB AND GO DISPLAY REFRIGERATOR
Make - Federal LPRSS4-SC or equal by Structural Concepts or RPI
Size - 48 in. by 34 in. by 46 in. high
Power - 15 amps - 120/60/1 - cord and plug
Description - Display case shall be all standard construction with stainless steel display deck and black enamelled interior ends and back panel, two tiers of solid black enamel shelves, top and shelf mounted LED lights, plastic laminate clad exterior in color as selected by Architect from standard offerings, self-contained refrigeration system with adjustable thermostat and solid state controlled defrost, condensate evaporator, glass end panels, and night curtain.
Accessories - Provide unit recessed casters, special base laminate option.

Item B21
COLD PAN, DROP-IN
Make - Hatco CWB-3*C166 or equal by Atlas or Wells
Size - 45 in. by 27 in. by 25-1/2 in. high
Power - 6.7 amps - 1/4 HP - 120/60/1 phase - cord and plug
Description - The NSF 7 approved refrigerated drop-in well shall be standard construction per the manufacturer's standard details with an angled interior wall design. Unit shall utilize R-404A refrigerant and consist of aluminized steel housing with a stain-less bezel, mounted electronic temperature control, pan support bars for full-size pans, condenser unit (can be rotated), compressor with flexible refrigerant lines, sight glass, service valves, receiver, and dryer/filter.
Accessories - Provide optional five year warranty on the compressor. Provide with 20 in. pan support bars and perforated false bottom.

Item B22
No item

Item B23

TWO-TIER HEATED SHELF

Quantity - Two

Make - Hatco GRSDS/H-36D*C166 or equal

Size - 36 in. by 24 in. by 32-1/2 in. high

Power - 15.1 amps - 1.81 KW - 120/60/1 - cord and plug (NEMA 5-20P)

Description - Unit shall be all standard construction with two heated shelves, one slanted and one flat, with Hardkote finish, constructed of stainless steel and extruded aluminum with tempered glass end panels, incandescent lights, dividers, and thermostatic controls.

Item B24

HEATED SURFACE, DROP-IN

Make - Hatco HBGB-4818*C166 or equal by BSI

Size - 48 in. by 18 in. plus perimeter flange

Power - 7.1 amps - 850 watts - 120/60/1 - cord and plug

Description - Black ceramic glass aluminum surface with thermostatic controlled heated base with 100 degrees to 200 degrees Fahrenheit. range, stainless steel flanged edge for drop-in installation, and remote control box.

Accessories - Provide with flush mount control box with lighted power switch for mounting in counter apron.

Item B25

HOT GRAB AND GO SERVING COUNTER

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 11 ft., 6 in. by 40 in. by 34 in. high

Power - 20 amps circuit - 120/60/1 to each of two apron mounted GFI receptacles;

20 amps circuit - 120/60/1 to body mounted GFI receptacle;

5.3 amps - 208/60/1 to apron mounted heat lamp control

American Disabilities Act Requirements - Self-service food pans and food protectors shall be mounted in accordance with ADA code requirements for side reach per code section 4.2.6.

Construction - Top shall be 1-1/4 in. Quartz over a 3/4 in. marine grade plywood substrate. Mount on angle frame, and provide openings for the drop-in equipment with thermal protection at all edges per detail. Provide stainless steel cladding on exposed underside of substrate.

Counter tops: Superior Marble and Granite LLC (Middleton, Ma) or equal (submit warranty letter for stone top and installation with counter submittal)

Description - Stone counter top to be provided per details with color selected by the Architect. The edge details/treatments shall be supplied in accordance with the counter details. Supply tops with Superior Marble and Granite model number SMGW2 (two-year warranty on all seams). Supply with model SMGEZCUT where all cut outs to be insulated and prepared to receive equipment drop-ins. Cut out where appropriate shall receive model (ProtectX232) flanges.

Mount on eight 2 in. square 16 gauge stainless steel tubular legs with Component Hardware A15-0851 adjustable feet. Reinforce between all front and end legs with 2 in. square stainless steel tubing welded in place 6-1/4 in. clear above floor. Provide similar reinforcement between rear legs where an undershelf does not exist.

Undershelves shall be fabricated of 16 gauge stainless steel with reinforcing and sound deadening as specified for open base table undershelves. Front face shall be turned down 1-1/2 in. and in 1/2 in. at 45 degrees. Rear and ends shall be turned up 1-1/2 in. and corners welded. Weld to legs at a point

10 in. above floor. Shelf shall be mounted on the inside face of legs, not cut-out at each leg. Leave 2 in. clearance between the shelf edge and the counter front and end panels for passing of services by Related Trades.

Front and ends of counter shall be provided with plastic laminate clad panels. Plastic laminate manufacturer shall be as selected by the Architect. Plastic laminate color shall be as selected by the Architect from Wilsonart's full range of colors. Panels shall be mounted with a minimum of joints. All joints to be hairline type. Joint between a front and end panel shall appear on the end panel face. Panels shall be secured to counter legs and crossrails with welded stainless steel clips and stainless steel wood screws. Do NOT secure THROUGH the legs or crossrails. Provide a continuous 14 gauge support-protector strip at the lower edge of all finish panels, extending 1/16 in. past front face.

Apron shall be provided per elevations, fabricated of 18 gauge stainless steel, and shall be used for the mounting of switches, outlets, and controls. Apron shall include a formed reinforced bottom edge and shall be set in 1 in. from leg face.

Accessories - Provide with a 55 in. long (between end posts on centers) Versa-Gard VG21-SK convertible food protector (Item B25a) with brushed stainless steel uprights, end panels, concealed mount flanges, mounted per plan, and with mounted and pre-wired Hatco GRNH-48 heat lamp with remote control enclosure for mounting in counter apron.

Item B25a
CONVERTIBLE GLASS FOOD PROTECTOR WITH WARMER
Specified as part of Item B25

Item B26
AIR SCREEN GRAB AND GO DISPLAY REFRIGERATOR
Make - Federal LPRSS4-SC or equal by Structural Concepts or RPI
Size - 48 in. by 34 in. by 46 in. high
Power - 15 amps - 120/60/1 - cord and plug
Description - Display case shall be all standard construction with stainless steel display deck and black enamelled interior ends and back panel, two tiers of solid black enamel shelves, top and shelf mounted LED lights, plastic laminate clad exterior in color as selected by Architect from standard offerings, self-contained refrigeration system with adjustable thermostat and solid state controlled defrost, condensate evaporator, glass end panels, and night curtain.
Accessories - Provide unit recessed casters, special base laminate option.

Item B27
ENTREE SERVING COUNTER
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.
Size - 12 in. by 40 in. by 34 in. high
Power - 20 amps circuit - 120/60/1 to each of two apron mounted GFI receptacles;
20 amps circuit - 120/60/1 to body mounted GFI receptacle;
American Disabilities Act Requirements - Self-service food pans and food protectors shall be mounted in accordance with ADA code requirements for side reach per code section 4.2.6.
Construction - Top shall be 1-1/4 in. Quartz over a 3/4 in. marine grade plywood substrate. Mount on angle frame, and provide openings for the drop-in equipment with thermal protection at all edges per detail. Provide stainless steel cladding on exposed underside of substrate.

Counter tops: Superior Marble and Granite LLC (Middleton, Ma) or equal (submit warranty letter for stone top and installation with counter submittal)

Description - Stone counter top to be provided per details with color selected by the Architect. The edge details/treatments shall be supplied in accordance with the counter details. Supply tops with Superior Marble and Granite model number SMGW2 (two-year warranty on all seams). Supply with model SMGEZCUT where all cut outs to be insulated and prepared to receive equipment drop-ins. Cut out where appropriate shall receive model (ProtectX232) flanges.

Mount on eight 2 in. square 16 gauge stainless steel tubular legs with Component Hardware A15-0851 adjustable feet. Reinforce between all front and end legs with 2 in. square stainless steel tubing welded in place 6-1/4 in. clear above floor. Provide similar reinforcement between rear legs where an undershelf does not exist.

Undershelves shall be fabricated of 16 gauge stainless steel with reinforcing and sound deadening as specified for open base table undershelves. Front face shall be turned down 1-1/2 in. and in 1/2 in. at 45 degrees. Rear and ends shall be turned up 1-1/2 in. and corners welded. Weld to legs at a point 10 in. above floor. Shelf shall be mounted on the inside face of legs, not cut-out at each leg. Leave 2 in. clearance between the shelf edge and the counter front and end panels for passing of services by Related Trades.

Front and ends of counter shall be provided with plastic laminate clad panels. Plastic laminate manufacturer shall be as selected by the Architect. Plastic laminate color shall be as selected by the Architect from Wilsonart's full range of colors. Panels shall be mounted with a minimum of joints. All joints to be hairline type. Joint between a front and end panel shall appear on the end panel face. Panels shall be secured to counter legs and crossrails with welded stainless steel clips and stainless steel wood screws. Do NOT secure THROUGH the legs or crossrails. Provide a continuous 14 gauge support-protector strip at the lower edge of all finish panels, extending 1/16 in. past front face.

Apron shall be provided per elevations, fabricated of 18 gauge stainless steel, and shall be used for the mounting of switches, outlets, and controls. Apron shall include a formed reinforced bottom edge and shall be set in 1 in. from leg face.

Accessories - Provide with a 51 in. long (between end posts on centers) Versa-Gard VG9 two-tier display (Item B27b) with brushed stainless steel uprights, end panels, concealed mount flanges, and mounted per plan. Provide with a 66 in. long (between end posts on centers) Versa-Gard VG6S full-service food protector (Item B27a) with brushed stainless steel uprights, end panels, concealed mount flanges, and mounted per plan.

Item B27a
TWO-TIER GLASS FOOD DISPLAY CASE
Specified as part of Item B27

Item B27b
FULL-SERVICE GLASS FOOD PROTECTOR CASE
Specified as part of Item B27

Item B28

COLD PAN, DROP-IN

Make - Hatco CWB-3*C166 or equal by Atlas or Wells

Size - 45 in. by 27 in. by 25-1/2 in. high

Power - 6.7 amps - 1/4 HP - 120/60/1 phase - cord and plug

Description - The NSF 7 approved refrigerated drop-in well shall be standard construction per the manufacturer's standard details with an angled interior wall design. Unit shall utilize R-404A refrigerant and consist of aluminized steel housing with a stain-less bezel, mounted electronic temperature control, pan support bars for full-size pans, condenser unit (can be rotated), compressor with flexible refrigerant lines, sight glass, service valves, receiver, and dryer/filter.

Accessories - Provide optional five year warranty on the compressor. Provide with 20 in. pan support bars and perforated false bottom.

Item B29

HOT FOOD WELL ASSEMBLY, DROP-IN

Make - MOD400-DM*C166 or equal by Hatco or Alto-Shaam

Size - 57-1/2 in. by 23-5/8 in. by 9-3/4 in. high

Power - 17.3 amps - 3.6 KW - 208/60/1

Description - Modular food warmer shall be all standard construction and shall consist of a stainless steel mounting frame, gasket and locking system, four individually controlled stainless steel 6 in. deep "wet or dry" hot food wells with 1 in. thick fiberglass insulation on five sides enclosed in an aluminized steel enclosure, and a mounting panel for installation in the counter apron complete with gasket, infinite heat controls with positive off position, high temperature limit thermostats, and pilot lights. Wells shall be provided with drain outlets factory manifolded with 1 in. diameter line and a gate valve.

Accessories - Provide with drain valve extension kit and Wellslok extension kit.

Item B30

EXISTING COFFEE BREWER

Make - Bunn

Work - Relocate unit per plan and leave ready for reconnection of service by Related Trades.

Item B31

WATER FILTER ASSEMBLY

Make - 3M BREW110-MS Modified or equal by Everpure or Selecto

Size - 4 in. diameter by 11 in. verify clearance below to remove cartridge

Description - Unit shall be all standard construction and consist of a head assembly with integral mounting bracket, quarter-turn cartridge release mechanism, "valve-in-head" automatic shut-off upon removal of cartridge, and filter cartridge with internal pre-filter membrane designed for coffee and tea brewers. Cartridge shall be capable of removal to .5 micron or larger particles, remove chlorine and off tastes and odors, inhibit scale build-up, service flow rate of up to 1.5 gallons per minute, and meet requirements of NSF Standards 42 and 53 and be so listed.

Accessories - Provide three spare filter cartridges

Item B32

No item

Item B33

MILK COOLER

Quantity - Two

Make - Beverage-Air SMF58HC-1-S or equal by Continental or True

Size - 58 in. by 33-1/2 in. by 47 in. high; sixteen 13 in. by 13 in. by 11 in. milk crate capacity

Power - 3.3 amps - 1/3 HP - 120/60/1 - cord and plug

Description - Milk cooler shall be all standard construction with stainless steel interior and exterior front and ends, self-contained refrigeration system with thermostatic controls and blower, urethane foam insulation, exterior dial thermometer, and hinged and lockable drop-front covers. Interior shall be fitted with a vinyl coated wire rack. Mount on 4 in. diameter swivel casters and provide with R-290 refrigerant.

Accessories - Provide unit with optional five year compressor warranty.

Item B34

TRAFFIC BARRIER BOLLARD

Quantity - Four

Make - Lawrence Tensabarrier 889 Advance/Universal Base or equal

Size - 38-1/4 in. high post; 13-1/2 in. diameter base; 7 ft., 6 in. maximum belt length

Description - Units shall be all standard construction with satin stainless steel finish, and retractable belts.

Belt color shall be as selected by Architect from standard options.

Item B35

SALAD BAR COUNTER

Quantity - Two

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 6 ft., 0 in. by 45 in. by 34 in. high; mitered corners per plan

Power - 20 amps circuit - 120/60/1 to body mounted GFI receptacle

American Disabilities Act Requirements - Self-service food pans and food protectors shall be mounted in accordance with ADA code requirements for side reach per code section 4.2.6.

Construction - Top shall be 1-1/4 in. Quartz over a 3/4 in. marine grade plywood substrate. Provide openings for the drop-in equipment with thermal protection at all edges per detail. Provide stainless steel cladding on exposed underside of substrate.

Counter tops: Superior Marble and Granite LLC (Middleton, Ma) or equal (submit warranty letter for stone top and installation with counter submittal)

Description - Stone counter top to be provided per details with color selected by the Architect. The edge details/treatments shall be supplied in accordance with the counter details. Supply tops with Superior Marble and Granite model number SMGW2 (two-year warranty on all seams). Supply with model SMGEZCUT where all cut outs to be insulated and prepared to receive equipment drop-ins. Cut out where appropriate shall receive model (ProtectX232) flanges.

Mount on six 2 in. square 16 gauge stainless steel tubular legs with Component Hardware A15-0851 adjustable feet. Reinforce between all front and end legs with 2 in. square stainless steel tubing welded in place 6-1/4 in. clear above floor. Provide similar reinforcement between rear legs where an undershelf does not exist.

Undershelf shall be fabricated of 16 gauge stainless steel with reinforcing and sound deadening as specified for open base table undershelves. Front face shall be turned down 1-1/2 in. and in 1/2 in. at 45 degrees. Rear and ends shall be turned up 1-1/2 in. and corners welded. Weld to legs at a point 10 in. above floor. Shelf shall be mounted on the inside face of legs, not cut-out at each leg. Leave 2

in. clearance between the shelf edge and the counter front and end panels for passing of services by Related Trades.

All four sides of counter shall be provided with plastic laminate clad panels. Plastic laminate manufacturer shall be as selected by the Architect. Plastic laminate color shall be as selected by the Architect from Wilsonart's full range of colors. Panels shall be mounted with a minimum of joints. All joints to be hairline type. Joint between a front and end panel shall appear on the end panel face. Panels shall be secured to counter legs and crossrails with welded stainless steel clips and stainless steel wood screws. Do NOT secure THROUGH the legs or crossrails. Provide a continuous 14 gauge support-protector strip at the lower edge of all finish panels, extending 1/16 in. past front face. Provide concealed hinge doors in control side. Provide stainless steel louvered vents at end panels.

Accessories - Provide with an 66 in. long (between end posts on centers) Versa-Gard VG7-DS double-sided self-service food protector (Item B35a) with brushed stainless steel uprights, end panels, concealed mount flanges, LED lighting, and mounted per plan.

Item B35a
DOUBLE-SIDED SELF-SERVE GLASS FOOD PROTECTOR WITH LIGHTS
Quantity - Two
Specified as part of Item B35

Item B36
COLD PAN, DROP-IN
Quantity - Two
Make - Hatco CWB-4*C166 or equal by Atlas or Wells
Size - 58 in. by 27 in. by 25-1/2 in. high
Power - 5.9 amps - 1/3 HP - 120/60/1 - cord and plug
Description - The NSF 7 approved refrigerated drop-in well shall be standard construction per the manufacturer's standard details with an angled interior wall design. Unit shall utilize R-404A refrigerant and consist of aluminized steel housing with a stainless bezel, mounted electronic temperature control, pan support bars for full-size pans, condenser unit (can be rotated), compressor with flexible refrigerant lines, sight glass, service valves, receiver, and dryer/filter.
Accessories - Provide optional five year warranty on the compressor. Provide with 20 in. pan support bars and perforated false bottom.

Item B39
MOBILE CONDIMENT COUNTER
Quantity - Two
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.
Size - 48 in. by 27 in. by 34 in. high
Construction - Top shall be 1-1/4 in. Quartz over a 3/4 in. marine grade plywood substrate. Mount on angle frame and provide stainless steel cladding on exposed underside of substrate. Mount on four 2 in. square legs with undershelf and plastic laminate clad panels on four sides all of similar construction

to the serving counter. Rear face shall be provided with a pair of hinged doors in a 36 in. wide opening. Provide 5 in. diameter swivel casters; two with brakes.

Item B40

MOBILE CASHIER STAND

Quantity - Two

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 30 in. by 30 in. by 36 in. high main section with two 42 in. by 10 in. trayslides set at 33 in. above floor

Construction - Top shall be 1-1/4 in. Quartz over a 3/4 in. marine grade plywood substrate. Mount on angle frame and provide stainless steel cladding on exposed underside of substrate. Provide neat hole in top for cord passage behind casher terminal. Mount on four 2 in. square legs with crossrails on three sides, footrest set in 8 in., undershelf and plastic laminate clad panels on three sides all of similar construction to the serving counter, with solid stainless steel trayslides. Provide 5 in. diameter swivel casters; two with brakes.

Accessories - Provide unit with a Component Hardware S95-1000 locking cashier drawer.

Item B41

CASHIER TERMINAL

Quantity - Two

No work in this Section. Item to be provided by Owner.

Item B44

MOP SINK AND SERVICE FAUCET

No work in this Section. Item to be provided and installed by Plumbing Contractor.

Item B45

MOP RACK/SHELF

Make - Advance Tabco K-245 or equal

Size - 24 in. by 8 in. by 7-1/2 in. high, mounted 60 in. above floor

Description - Unit shall be all standard construction of welded 18 gauge stainless steel type 430 polished satin finish, back and sides turned up 1-1/2 in., mounted on two die formed wall brackets and furnished with two mop hangers and three rag hooks.

Item B46

DETERGENT STORAGE CABINET

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 36 in. by 18 in. by 72 in. high

Construction - 16 gauge stainless steel top with edges turned down, 18 gauge stainless steel cabinet body, fixed bottom shelf, three adjustable intermediate shelves, and 63 in. high double pan hinged doors at front. Mount on 6 in. high stainless steel adjustable legs.

Accessories - Provide unit with two (2) three point "T" handles, one locking and barrel bolts mounted to inside top and bottom of door. Provide slotted "L" bracket a top rear for securing to wall.

Item B47

MOBILE SHELVING UNIT, FOUR-TIER

Make - MetroMax Q*C166 or equal by Cambro or Fermod

Size - 48 in. by 21 in. by 69 in. high on casters; four tier

Description - Shelving unit shall be all standard construction and shall consist of four shelves with removable injection molded polypropylene mats with antimicrobial product protection, supported on epoxy coated steel shelf frames and similar uprights with capped tops, and mounted on 5 in. diameter polyurethane tired swivel casters with donut bumpers.

Accessories - Provide with polymer posts in lieu of standard.

Item B48

CLEAN WARE TABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 79 in. by 30 in. by 34 in. high plus 10 in. splash at walls; 3 in. high raised roll at front

Construction - 14 gauge stainless steel top and splash over channel frame with raised roll front and end, tall splash at rear, turned down into dishwasher and secured with stainless steel machine screws, and mounted on four legs with gussets, adjustable feet and undershelf. Secure table 3 in. off face of wall.

Item B49

EXISTING WAREWASHER, CONVEYOR TYPE

Make - Champion 86 PRO

Power - 98 amps - 208/60/3

Work - Relocate unit per plan, level in place, and leave ready for reconnection of service by Related Trades. Provide with new drain water tempering kit.

Item B49a

WATER FILTER ASSEMBLY

Make - WaterSpec WS-SSEXT or equal by 3M or Everpure

Description - Unit shall be all standard construction designed for vertical wall mounting per plan and consisting of a mounting bracket, manifold, and filter cartridge with housing. Assembly shall have an operating inlet water temperature range of 35 to 160 degrees Fahrenheit.

Accessories - Provide four spare SS-EXT filter cartridges.

B49b

EXISTING BOOSTER HEATER

Make - Hatco C24

Power - 66.7 amps - 208/60/3

Work - Relocate unit per plan, level in place, and leave ready for reconnection of service by Related Trades.

Item B50

STAINLESS STEEL EXHAUST DUCT

Quantity - Two

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 4 in. by 16 in. with length as necessary to reach 3 in. above finished ceiling

Construction - 18 gauge stainless steel welded exhaust ducts, sized to suit the vent stacks. Ducts shall be provided with a one-piece perimeter angle collar at the ceiling, installed "leg up".

Item B51

HOSE REEL ASSEMBLY

Make - T&S Brass B-1457-7102-01C or equal by Fisher or Reel Craft

Size - 12 foot hose, 3/8 in. ID

Maximum Water Use - 1.07 Gallons per minute

Description - Unit shall be all standard construction with stainless steel open type reel, adjustable bumper, blue hose, B-107-J low flow spray valve, heat resistant spray valve handle, chrome risers, two wall brackets, continuous pressure vacuum breaker, 36 in. flexible water hose, control valve, and deck type base faucet, designed for wall mounting per plan up 7 ft., 6 in. measured at the inlet.

Accessories - Provide with G019430-45 stainless steel wall mount swing bracket.

Installation - The hose reel bracket for wall mounted units shall be rotated 90 degrees downward and installed such that it allows the hose to hang straight down and parallel to the wall. Refer to T&S Brass instructions manual page four figure one for further details.

Item B52

SOILED TRAY TABLE WITH SCRAP SINK AND INTEGRAL PASS-THRU WINDOW FRAME

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML

Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 8 ft., 9 in. by 30 in. plus 48 in. by 30 in. return to dishwasher, plus pass-thru by 34 in. high plus 10 in. high splash at walls; 3 in. high raised open roll on working faces; 54 in. by 49 in. pass thru with 35 in. sill height; 18 in. by 18 in. by 8 in. deep integral sink

Construction - 14 gauge stainless steel top, sink basin and splash, channel frame, nine legs with gussets, adjustable feet, and eight crossrails. Secure 3 in. off wall. Turn end down into dishwasher and secure with stainless steel machine screws. Top of splash shall be fitted with integral flat spot for mounting of the pre-rinse fixture. Top shall pass through the wall and be an integral part of the pass window. Pass-thru ledge shall extend through the wall and be secured to the frame. Provide a 16 gauge stainless steel telescoping window frame at the opening with front edges turned out 2 in. and returned 1/2 in. Rear edges to be turned out 2-1/2 in. flat to wall. Integral scrapping sink shall be provided with a 2 in. by 1/4 in. bar stock rack guide attached to the reinforced splash with stainless steel through bolts. Sink shall be provided with two 16 gauge perforated stainless steel scrapping baskets, 6 in. deep, on 1/2 in. high angle legs set back to clear the basin cove, and integral tubular handles flush with counter tops.

Accessories - Provide unit with a 2 in. free flow waste outlet Component Hardware D36-2080

Item B53

ROLL-DOWN SHUTTER

Make - Raynor DuraShutter Select/surface mount or equal by Alpine or Cornell

Size - Opening approximately 54 in. wide by 50 in. high; verify

Description - Assembly shall be all standard construction and shall consist of a self-coiling rolling counter shutter, all anodized aluminum construction with interlocking extruded slats, extruded aluminum bottom bar with rubber astragal, designed for surface type mounting with extruded guides with wool pile inserts, and complete with recessed inside lifting handles and thumb-turn locks, and complete covers.

Installation - Install with tracks located 1 in. clear above table surface to permit proper cleaning.

Item B54

WASTE BARREL

No work in this Section. Item to be provided by Owner.

Item B55

HAND SINK

Make - Advance 7-PS-70-CM*C166 or equal by IMC Teddy or Krowne

Description - Unit shall be all standard stainless steel construction with mounting bracket. Mount on wall with rim at 36 in. above floor

Accessories - Provide with a splash mounted faucet set with wrist handles (Item B55a), 3 in. flat strainer type (non-basket, non-lever) open type waste, chrome plated tailpiece, "P" trap and clean-out cap.

Item B55a

FAUCET

Make - T&S Brass B-0330-04 modified or Fisher 1953 modified, or Encore

Description - Unit shall be all standard construction with mixing body, 8 in. center inlets, and wrist blade handles. Modified unit shall be provided with 119X gooseneck with B-0199-02-F10 aerator tip in lieu of the standard.

Item B56

WASTE BIN

No work in this Section. Item to be provided by Owner.

Item C01

MOBILE INSULATED ICE CART

Make - Cambro ICS125LB*C166 or equal

Size - 23 in. by 31-1/2 in. by 29-1/4 in. high

Capacity - 125 pounds

Description - All standard molded polyethylene body with sliding lid, molded-in handle, 11-1/2 in. by 17 in. service opening, leak proof quarter turn faucet at front and mounted on two locking swivel casters and two 8 in. diameter "Easy Wheels".

Item C02

No item

Item C03

ICE MAKER WITH BIN

Make - Manitowoc IDT0500A/D-570 or equal by Scotsman or Hoshizaki

Size - 30 in. by 34 in. by 71-1/2 in. high

Power - 11.5 A - 120/60/1

Capacity - 520 pounds of cubes per day at 70/50 degrees

Maximum Water Use - 19 gallons/100 Lbs of ice

Certification - Unit shall be Energy Star compliant

Description - Ice cuber shall be all standard construction with an air cooled condenser, automatic controls, R410A refrigerant, self cleaning and sanitizing system, digital display diagnostic, system information and programmable ice production, vertical freezing plate with half dice sized cubes, bin level thermostat, and housed in a stainless steel cabinet with gray ABS accents. Bin shall have 383 pound capacity with compression molded composite resin base, hinged lift-up door, internal scoop holder, polyethylene liner and stainless steel exterior wrap. Mount on stainless steel adjustable legs. Provide unit with standard 3 year parts and labor warranty on total machine, 5 year parts and labor warranty on the evaporator and 5 year parts warranty on the compressor.

Item C04

FLOOR PAN AND GRATE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 30 in. by 12 in. by 4 in. deep inside dimensions; 33 in. by 15 in. overall

Construction - Pan shall be fabricated of 14 gauge stainless steel, all welded construction, pitched to a 4 in. ID drain fitting with stainless steel removable, perforated basket and perforated dome strainer.

Long sides shall be fitted with integral grate support ledges. Provide a model CGF molded fiberglass grate (Chemgrate) with 1 in. by 4 in. pattern, 3/4 in. clear slots and ends finished in accordance with manufacturer's instructions. Grate shall be cut in a manner that closed pockets will not be formed where they rest on the pan ledges.

Item C05

WALK-IN COOLER

Make - American Panel or equal by Bally or Thermo-Kool

Size - 9 ft., 0 in. by 12 ft., 10 in. by 7 ft., 10 in. high minimum inside dimensions; 7 ft., 8 in. high after finished floor is installed by the General Contractor

Power - 1.1 KW - 120/60/1 to light fixtures, temperature monitor/alarm, and door defrost heater strip

Installation, Construction, Materials and Accessories - See Item C06

Guarantee - See Item C06

Item C06

WALK-IN FREEZER

Make - American Panel or equal by Bally or Thermo-Kool

Size - 9 ft., 0-1/2 in. by 12 ft., 10 in. by 7 ft., 10 in. high minimum inside dimensions; 7 ft., 8 in. high after finished floor is installed by the General Contractor.

Power - 1.3 KW - 120/60/1 to light fixtures, temperature monitor/alarm, door defrost heater strip, and pressure relief port

Installation - The walk-in refrigerated room shall be installed in a 7 in. deep ID recess (below finished floor). Recess depth allows 1 in. for use of leveling sand; 4 in. for the insulated floor panels; 2 in. for finished floor and setting bed that shall be carried in from the adjacent room and level to same. The finished floor and setting bed shall be furnished and installed by the General Contractor, and shall have coved joints at all walls, turned up a minimum of 4 in. inside and out. The unit shall be set level on a bed of clean, dry mason's sand. Shims are not acceptable for leveling material.

Construction - All standard construction per the manufacturer, modified to meet the specific following points:

- Walls to be 4 in. thick with CFC free urethane foam insulation, UL Class 1 rated
- Cam type locking devices
- 36 in. by 80 in. minimum door clearance
- Polished hardware (hinges and latch to match)
- Three hinges on doors (to include one Kason 1248 spring assist hinge per door)
- Leveraged pull handle (mechanical advantage type, Kason 1236 or equal)
- Quarter turn inside safety release lever handle mechanism (not screw type)
- Prewired door sections with heater wires and light fixtures and switches
- Kason 1806 LED light fixtures or Kason 1808 LED light fixtures
- Dial type thermometers at doors
- Model IC+ (with dry contacts) temperature and HACCP monitoring system at doors. Cooler and freezer alarms to interconnect with access control system for alert monitoring. Provide each system with a pair of 22 gauge low voltage wires. Wires shall be installed by the Controls Contractor. Wires shall run from the dry contacts to the access control panel. Kitchen Equipment Contractor to verify

length prior to purchasing. To avoid false triggering, provide a shielded two-conductor cable with the shield connected to the receiving equipment.

- NSF construction throughout with exception of buried floor panels
- Interior and exterior faces of doors and exposed exterior walls shall be provided with aluminum diamond tread plate protective material to a height of 48 in. above finished floor. Hold diamond plating up 6 in. from the finish floor to accommodate the coved base.

Minimum materials - Interior and exterior wall surfaces shall be clad with .038 in. pebble finished aluminum. The ceiling shall be finished in white polyester over 24 gauge galvanized steel. Interior floor shall be 14 gauge galvanized steel.

Accessories - Freezer shall be provided with an electrically heated pressure relief port. Each door shall be provided with a heated vision panel, 14-1/2 in. by 23 in. constructed of three panels of tempered unbreakable glass, electrically heated, with sealed air spaces between. Provide matching trim strips and closure panels to adjoining surfaces, fabricated per details, made of largest pieces available to minimize number of joints, and installed in accordance with NSF Brochure 770202, Installation Manual for Walk-in Refrigerators and Freezers. Provide eight total extra Kason 1806 LED OR Kason 1808 LED light fixtures for mounting in the rooms and deliver to Electrical Contractor for field installation.

Guarantee - The walk-in refrigerated room panels shall be guaranteed for a period of ten (10) years from the date of approved installation for defects in materials and workmanship when subjected to normal use and service; remainder of rooms for one year.

Item C07

MECHANICAL REFRIGERATION SYSTEM

Quantity - Two

Make - Heatcraft, Bohn, Larkin, Climate Control, Chandler

Scope - Furnish and install complete refrigeration systems for the walk-in refrigerated rooms in accordance with the plans. The systems shall include condensing units, evaporator coils, piping, all specified accessories, and those components required to provide complete and satisfactory systems in accordance with accepted refrigeration practice.

Important: The installation work shall be performed by a fully qualified refrigeration contractor employing a certified mechanic fully trained in the installation of commercial refrigeration systems. Submittal shall list the installing company and the qualified system installer.

Piping - Furnish and install the interconnecting piping between the condensing units and their respective unit coolers. Piping shall be installed in a neat and workmanlike manner with adjustable hangers spaced at no more than ten foot intervals on horizontal runs; six foot intervals, vertical runs.

Line sizes shall be in accordance with ASHRAE standards and best refrigeration practice to assure proper feed to evaporator, avoid excessive pressure drop, and prevent excessive amounts of lubricating oil from being trapped in any part of the system. Line sizing shall be such that it will protect the compressor from loss of lubrication at all times, prevent liquid refrigerant from entering the compressor during operating or idle time, and maintain a clean and dry system.

Refrigeration piping shall be Type L, ACR grade, hard drawn seamless copper tubing, wrought type copper fittings, and silver soldered joints. Precharged lines are not acceptable.

Furnish and install sleeves for refrigerant and evaporator drain piping wherever piping passes through a wall or ceiling. Sleeves shall be non-conductive gray plastic tubing, with interior dimension sized at least 1/4 in. larger than piping, and shall be neatly packed with brine putty after installation.

Furnish and install condensate drain piping from the unit cooler to an open drain. Piping shall consist of not less than 7/8 in. Type L copper tubing, supported 36 in. on center maximum, in such a way that there will be 1 in. clearance between the wall and the tubing. Provide a union or slip fitting at the

connection to the evaporator drain pan to allow easy disassembly for service and cleaning. Drain piping shall be pitched 4 in. to the foot and carried through the wall of the refrigerated area. It shall be trapped to prevent entry of warm air and insects to the refrigerated rooms and discharged to a floor drain with the code required air gap. The exposed drain piping shall be spray painted.

Provide an electric drainline heater tape in the freezer, with a length equal to five wraps per foot of length of the drainline located within the freezer compartment. Wrap and secure in accordance with manufacturer's recommendations.

Provide chrome plated escutcheon plates at all exposed points where piping penetrates the wall or ceilings.

Insulation - Suction lines for refrigerated rooms having a temperature above freezing shall be covered with 3/4 in. wall thickness closed cell HT Armaflex insulation with ultra violet radiation protection.

Suction lines for refrigerated rooms having a temperature below freezing shall be covered with 1 in. wall thickness closed cell HT Armaflex insulation with ultra violet radiation protection.

The insulation shall be applied to these lines in accordance with manufacturer's recommendations, and as they are being installed so that insulation will not be split. All joints shall be completely sealed with overlapping, cemented material to prevent the formation of frost on the lines.

Controls - Each evaporator shall be provided with an iNtelliGen electronic control as manufactured by Heatcraft Refrigeration. Provide each system with a pair of twisted 24 gauge low voltage wires, Belden 9841 or equal. Wires shall be installed by the Controls Contractor. Wires shall run from the dry contacts at the evaporators to the access control panel. Kitchen Equipment Contractor to verify length prior to purchasing. To avoid false triggering, provide a shielded two-conductor cable with the shield connected to the receiving equipment. The time clock and heater contactor shall be removed from the condensing unit. No control wiring will be required from evaporator to the condensing unit.

Refrigerant Testing - The entire system shall be pressure and leak tested at no less than 100 PSIG, cleaned and dehydrated by maintaining a vacuum of 500 microns or lower for a period of twelve hours. The required operating charge of refrigerant and oil, if necessary, shall be added and the entire system tested for performance. Each system shall be clearly marked as to the type refrigerant required.

Guarantee - The equipment shall be guaranteed to maintain the specified temperatures. All mechanical refrigeration equipment shall be mechanically guaranteed for a period of one year after date of acceptance by the Owner. The emergency service shall be provided free of charge, whenever necessary on a 24 hour, seven day-per-week basis during the guarantee period.

Any leaks that occur during the first year of operation after acceptance by the Owner, shall be repaired and the necessary refrigerant added at no expense to the Owner.

The year's service shall be provided by the installing company, and under no circumstances will the service policy be sublet to another refrigeration contractor. The name of the installer/service agency for the guarantee period shall be located at a prominent place on the condensing units.

The condensing units shall be provided with an additional four year parts warranty to commence upon the completion of the aforementioned guarantee, bringing the total parts warranty to five years.

Condensing Units - The condensing units shall consist of an EC energy saving motor with variable speed controller, compressor, refrigerant condenser, liquid receiver, compressor service valves, and a dual high-low pressure control. The units shall be as manufactured by Heatcraft Refrigeration.

The condensing units shall be outdoor type, wall mountable, and quiet type with an approximate 51 to 63 decibel rating at 100 percent fan speed. The compressor shall be Microchannel Coil Technology scroll type per schedule, and fitted with gold coated aluminum fin condenser, suction service valve, discharge service valve, compressor contactor, high and low pressure controls, receiver with fusible plug, liquid shut-off valve and charging port, mounted non-fused disconnect switch, waterproof electrical control box, discharge line vibration eliminator, weather resistant UL painted steel cabinet, access guard, liquid line assembly, suction line filter and vibration eliminator, crankcase heater, and 1-1/2 in. high raised steel base.

Mount on roof per drawings with structural supports, roof penetrations and weatherproofing provided by the General Contractor. Mount with clearance above roof deck per Manufacturers recommendation.

Evaporator Coils - Each evaporator shall be provided with iNtelliGen electronic control as manufactured by Heatcraft Refrigeration, thermostatic expansion valve, and solenoid valve. The time clock and heater contactor shall be removed from the condensing unit. No control wiring will be required from evaporator to the condensing unit. iNtelliGen Controls to include iIC integration card for BMS connection direct to evaporator controls.

The freezer shall be provided with an automatic electric defrost system consisting of one evaporator coil as indicated in the schedule. Evaporator shall be low profile type six fins per inch complete with variable speed EC energy saving fan motors with controller. Coil shall be NSF and UL Listed.

The cooler shall be provided with one evaporator coil as indicated in the schedule. Evaporator shall be low profile type six fins per inch complete with EC energy saving fan motors. Coil shall be NSF and UL Listed.

Furnish and install 1/4 in. minimum diameter stainless steel threaded mounting rods for the hanging of the evaporator coils, with stainless steel washers and nuts on the interior ends, and reinforcing angle at the exterior top of the room. Plated steel running thread is not acceptable.

Refrigeration Equipment Schedule

Cooler (C05)	Room Temp: +35 degrees F			TD: 10 degrees F

Item C07a
COOLER REMOTE CONDENSING UNIT
Specified as part of Item C07

Item C07b
COOLER EVAPORATOR COIL
Specified as part of Item C07

Item C07c
FREEZER REMOTE CONDENSING UNIT
Specified as part of Item C07

Item C07d
FREEZER EVAPORATOR COIL
Specified as part of Item C07

Item C08
MOBILE SHELVING UNIT, FOUR-TIER
Quantity - 18
Make - MetroMax Q*C166 or equal by Cambro or Fermod
Size - (2) 54 in. by 21 in., (12) 48 in. by 21 in., (1) 42 in. by 21 in., and (3) 36 in. by 21 in., all 69 in. high on casters; four tier
Description - Shelving unit shall be all standard construction and shall consist of four shelves with removable injection molded polypropylene mats with antimicrobial product protection, supported on epoxy coated steel shelf frames and similar uprights with capped tops, and mounted on 5 in. diameter polyurethane tired swivel casters with donut bumpers.
Accessories - Provide with polymer posts in lieu of standard.

Item C09
PAN RACK, MOBILE
Quantity - Four
Make - New Age 1332*C166 or equal by Channel
Size - 20-1/2 in. by 26 in. by 69 in. high
Capacity - Fifteen 18 in. by 26 in. pans on 4 in. centers
Description - Rack shall be fabricated of welded extruded aluminum 1 in. by 1 in. by .070 in. tubular uprights and framing, and 1-1/4 in. by 1-5/8 in. by .100 in. angle pan slides with corners chamfered and deburred. Gussets of 1-1/2 in. by 1-1/2 in. by 5/8 in. angle aluminum shall be welded to the bottom inside angles where horizontal bracing meets vertical uprights. Mount on platform type, 5 in. polyurethane tired swivel casters.

Item C10
UTILITY CART
Quantity - Three
Make - Lakeside 521 or equal by Channel or Kelmax
Size - 32-5/8 in. by 19-3/8 in. by 34-1/2 in.
Description - Cart shall be all standard NSF construction, stainless steel throughout, with top and bottom shelves supported by an angle frame, and mounted on two 8 in. fixed and two 5 in. swivel casters.
Capacity of cart to be 650 pounds.

Item C11
No item

Item C12
No item

Item C13
DUNNAGE RACK
Quantity - Five
Make - New Age 2000 Series or equal by Channel or Kelmax
Size - (4) 48 in. by 20 in. and (1) 42 in. by 20 in., all 12 in. high
Description - Dunnage platforms shall be all standard construction with 1-1/2 in. by 1-3/4 in. by .070 in. thick wall extruded Type 6063-T5 aluminum tubing with four horizontal tubes and four legs welded together, and each unit capable of supporting a minimum of 2,500 pounds.

Item C14
STORAGE SHELVING, FIVE-TIER
Quantity - 16
Make - Metro Super Adjustable Super Erecta or equal by ISS or Cambro
Size - (10) 48 in. by 21 in., (2) 42 in. by 21 in., (3) 36 in. by 21 in., and (1) 36 in. by 18 in., all 74-5/8 in. high; five tier with bottom shelf up 14 in. clear above floor
Description - Unit shall be all standard construction with Super Adjustable Chrome plated wire shelves and tubular steel uprights with capped tops, adjustable feet, and 1 in. shelf height adjustment capability with Corner Release System. Each unit shall include four legs.

Item C15
MOP SINK AND SERVICE FAUCET
No work in this Section. Item to be provided and installed by Plumbing Contractor.

Item C16
MOP RACK/SHELF
Make - Advance Tabco K-245 or equal
Size - 24 in. by 8 in. by 7-1/2 in. high, mounted 60 in. above floor
Description - Unit shall be all standard construction of welded 18 gauge stainless steel type 430 polished satin finish, back and sides turned up 1-1/2 in., mounted on two die formed wall brackets and furnished with two mop hangers and three rag hooks.

Item C17
FRONT LOAD CLOTHES WASHER
Make - UniMac UFNE5BJP115TW01 or equal Wascomat or Speed Queen
Size - 27 in. by 27-3/4 in. by 40-1/2 in. high
Power - 20 amps circuit - 120/60/1 - cord and plug
Water factor - 3.7 gallons/ft3/cycle
Certification - Unit shall be Energy Star compliant and CEE qualified.
Description - Washer shall be all standard front loading construction with white exterior, see-thru door with heavy duty stainless steel hinge, 3.42 cubic foot front loading stainless steel basket, detergent dispensers, electronic controls, three wash/rinse temperatures, and five selectable wash cycles.

Item C18

FRONT LOAD CLOTHES DRYER

Make - UniMac UDEE5BGS173CW01 or equal Wascomat or Speed Queen

Size - 27 in. by 28 in. by 40-1/2 in. high

Power - 30 amps circuit - 120/240/60/1 - cord and plug

Description - Dryer shall be all standard front loading construction with white exterior, 7 cubic foot capacity, galvanized drum, electronic controls, lint filter, and interior light.

Item C19

No item

Item C20

No item

Item C21

THREE-COMPARTMENT SINK

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 10 ft., 0 in. by 30 in. by 34 in. high plus 10 in. high splash at walls; 3 in. high raised open roll on front and end; three 21 in. by 27 in. by 12 in. deep integral sink basins

Construction - 14 gauge stainless steel drainboards, basins and splash, stainless steel channel reinforced, mounted on four legs with gussets, adjustable feet, three lengths of crossrail, and secured 3 in. off face of wall.

Accessories - Two pot sink faucet sets, three 2 in. lever waste outlets.

Item C22

WALL SHELF

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 60 in. by 12 in. mounted 54 in. above floor

Construction - Wall shelf shall be fabricated of 16 gauge stainless steel with back and ends raised 1-1/2 in., front edges of ends angled back, all corners broken, and front turned down 1-1/2 in., and in 1/2 in. at 45 degrees. Shelf corners shall be welded, ground and polished. Mount shelf 1 in. off face of wall with suitable fasteners on 14 gauge stainless steel flag brackets, 48 in. on center maximum. Flag brackets shall have a web angle of 30 degrees measured from horizontal.

Item C23

HAND SINK

Make - Advance 7-PS-70-CM*C166 or equal by IMC Teddy or Krowne

Description - Unit shall be all standard stainless steel construction with mounting bracket. Mount on wall with rim at 36 in. above floor

Accessories - Provide with a splash mounted faucet set with wrist handles (Item C23a), 3 in. flat strainer type (non-basket, non-lever) open type waste, chrome plated tailpiece, "P" trap and clean-out cap.

Item C23a

FAUCET

Make - T&S Brass B-0330-04 modified or Fisher 1953 modified, or Encore

Description - Unit shall be all standard construction with mixing body, 8 in. center inlets, and wrist blade handles. Modified unit shall be provided with 119X gooseneck with B-0199-02-F10 aerator tip in lieu of the standard.

Item C24

WASTE BIN

No work in this Section. Item to be provided by Owner.

Item C25

EYE/FACE WASH

Make - Guardian Equipment G1814*C166 or equal by Bradley or Speakman

Size - 11-1/2 in. diameter by 6-7/8 in. high bowl

Construction - Unit shall be standard construction with stainless steel bowl and lid, cast aluminum, corrosion resistant power coated wall bracket, and flip-top covered spray head assembly with internal flow control and filter.

Accessories - Provide a chrome plated brass tailpiece and trap with 1-1/2 in. waste connection and a TMV-G3600 thermostatic mixing valve assembly.

Item C26

WATER FILTER ASSEMBLY

Make - 3M DP260 Modified or equal by Everpure or Selecto

Size - 23-5/16 in. by 5-1/4 in. by 18-1/8 in. high plus 3 in. bottom clearance to remove cartridges

Description - Unit shall be all standard construction and consist of a mounting bracket, quarter-turn cartridge release mechanisms, integral quarter turn shut-off valve, pressure gauge, outlet check valve, external scale inhibitor cartridge, two filter cartridges with internal prefilter membrane designed for multiple equipment combinations. Cartridges shall be capable of removal to .2 micron or larger particles, remove chlorine and off tastes and odors, inhibit scale build-up, service flow rate of up to 10 gallons per minute, and meet requirements of NSF Standards 42 and 53 and be so listed.

Accessories - Provide six spare filter cartridges and three spare scale inhibitor cartridges.

Item C27

DETERGENT STORAGE CABINET

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 36 in. by 18 in. by 72 in. high

Construction - 16 gauge stainless steel top with edges turned down, 18 gauge stainless steel cabinet body, fixed bottom shelf, three adjustable intermediate shelves, and 63 in. high double pan hinged doors at front. Mount on 6 in. high stainless steel adjustable legs.

Accessories - Provide unit with two (2) three point "T" handles, one locking and barrel bolts mounted to inside top and bottom of door. Provide slotted "L" bracket a top rear for securing to wall.

Item C28

CLEAN WARE TABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 63 in. by 30 in. by 34 in. high plus 10 in. splash at walls; 3 in. high raised roll at front

Construction - 14 gauge stainless steel top and splash over channel frame with raised roll front and end, tall splash at rear, turned down into dishwasher and secured with stainless steel machine screws, and mounted on four legs with gussets, adjustable feet and undershelf. Secure table 3 in. off face of wall.

Item C29

WAREWASHER, RACK CONVEYOR

Make - Hobart CL44eN-BAS R-L*C166, or equal by Meiko or Stero

Size - 43-1/2 in. by 30-1/8 in. by 65-1/2 in. high

Power - 68 amps - 480/60/3

Conveyor speed - 5.6 feet per minute; 202 racks per hour

Maximum Water Usage - 0.62 gallon per rack

Certification - Unit shall be Energy Star compliant

Description - Unit shall be standard construction, double tank, fully automatic, rack conveyor type with 16 gauge stainless steel wash and rinse chambers, welded stainless steel frame and motor supports, stainless steel chambers, housing, insulated inspection doors and legs with adjustable feet. Conveyor structure, tracks, and drive unit to be all stainless steel with a conveyor speed of 5.6 feet per minute. Warewasher to be complete with with 30 KW booster heater, insulated cabinet style doors, dirty water indicator, configurable de-lime notification, top mounted computer controls with "start/stop" button and digital display, NSF approved pot and pan cycle mode, 19-1/2 in. standard chamber height, and and ten plastic racks.

Accessories - Provide with 30 KW internal booster heater, two standard vent hoods with 4 in. by 16 in. stainless steel stacks all welded water tight complete with locking dampers, table limit switch, drain water tempering kit, and four plastic peg racks and two plastic flat racks.

Item C29a

WATER FILTER ASSEMBLY

Make - WaterSpec WS-SSEX or equal by 3M or Everpure

Description - Unit shall be all standard construction designed for vertical wall mounting per plan and consisting of a mounting bracket, manifold, and filter cartridge with housing. Assembly shall have an operating inlet water temperature range of 35 to 160 degrees Fahrenheit.

Accessories - Provide four spare SS-EXT filter cartridges.

Item C30

STAINLESS STEEL EXHAUST DUCT

Quantity - Two

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 4 in. by 16 in. with length as necessary to reach 3 in. above finished ceiling

Construction - 18 gauge stainless steel welded exhaust ducts, sized to suit the vent stacks. Ducts shall be provided with a one-piece perimeter angle collar at the ceiling, installed "leg up".

Item C31

SOILED WARE TABLE WITH SCRAP SINK

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 10 ft., 6 in. by 27 in. plus an 18 in. by 30 in. return to warewasher, and a 57 in. by 36 in. dish drop extension by 34 in. high, plus 10 in. high splash at walls; 3 in. high raised open roll on working faces; 8 in. deep raised plate landing shelf on exterior side; 18 in. by 18 in. by 8 in. deep integral sink

Construction - 14 gauge stainless steel top, sink basin and splash, channel frame, eight legs with gussets and adjustable feet, and seven crossrails. Secure 3 in. off walls. Turn end down into dishwasher and secure with stainless steel machine screws. Top of splash shall be fitted with integral flat spot for mounting of the pre-rinse fixture. Provide end splash with finished exterior. Prepare top of splash for rack shelf uprights. Integral scrapping sink shall be provided with a 2 in. by 1/4 in. bar stock rack guide attached to the reinforced splash with stainless steel through bolts. Sink shall be provided with two 16

gauge perforated stainless steel scrapping baskets, 6 in. deep, on 1/2 in. high angle legs set back to clear the basin cove, and integral tubular handles flush with counter tops.

Accessories - Provide unit with a 2 in. free flow waste outlet Component Hardware D36-2080

Item C32

HOSE REEL ASSEMBLY

Make - T&S Brass B-1457-7102-01C or equal by Fisher or Reel Craft

Size - 12 foot hose, 3/8 in. ID

Maximum Water Use - 1.07 Gallons per minute

Description - Unit shall be all standard construction with stainless steel open type reel, adjustable bumper, blue hose, B-107-J low flow spray valve, heat resistant spray valve handle, chrome risers, two wall brackets, continuous pressure vacuum breaker, 36 in. flexible water hose, control valve, and deck type base faucet, designed for wall mounting per plan up 7 ft., 6 in. measured at the inlet.

Accessories - Provide with G019430-45 stainless steel wall mount swing bracket.

Installation - The hose reel bracket for wall mounted units shall be rotated 90 degrees downward and installed such that it allows the hose to hang straight down and parallel to the wall. Refer to T&S Brass instructions manual page four figure one for further details.

Item C33

DOUBLE-SIDED RACK SHELF

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 84 in. by 24 in. mounted up 18 in. clear above counter top

Description - Shelf shall be fabricated of 14 gauge stainless steel and mounted 18 in. clear above dish table with six stainless steel tubular uprights, two mounted through the table and four mounted thru the splash on ends to brackets below the counter top. Secure ends to wall with brackets and suitable fasteners for additional stability. Provide drain holes located over dish table, no down spouts

Item C34

WASTE BARREL

Quantity - Three

No work in this Section. Item to be provided by Owner.

Item C35

No item

Item C36

No item

Item D01

DUAL TEMP, REFRIGERATOR/FREEZER, REACH-IN

Make - Victory RFSA-2D-S1-HD-HC or equal by Continental or Turbo Air

Size - 52-1/8 in. by 35 in. by 84-1/4 in. high overall

Power - 6.5 amps - 1/3 HP - 120/60/1 - cord and plug(refrigerator), 9.1 amps - 3/4 HP - 120/60/1 - cord and plug (freezer)

Capacity - Refrigerator compartment: 21.01 cubic feet; Freezer compartment: 21.01 cubic feet

Doors - Half height, hinged on left

Description - Dual-temperature refrigerator/freezer shall be all standard construction with stainless steel exterior, aluminum interior, self-closing door hardware with a hold-open at 120 degrees, door locks, anti-condensate door perimeter heaters, automatic LED interior lighting, exterior digital thermometer, silver freeze coated wire shelves adjustable in one inch increments, separate compartments for

refrigerator and freezer sections, refrigerator on left side, freezer on right side, separate self-contained top mounted refrigeration systems capable of maintaining a 36 degrees to 38 degrees product temperature range in the refrigerator compartment, and a -10 degrees product temperature range in the freezer compartment, with R-290 refrigerant, adaptive defrost, and condensate evaporator.

Mount on 6 in. high stainless steel legs.

Accessories - Mount on 6 in. high casters and provide with Secure-Temp temperature monitoring technology. Provide adjustable Type A/C tray slide kit spaced 3 in. on center in the top half of the refrigerator compartment.

Item D02

PAN RACK, MOBILE

Make - New Age 1332*C166 or equal by Channel

Size - 20-1/2 in. by 26 in. by 69 in. high

Capacity - Fifteen 18 in. by 26 in. pans on 4 in. centers

Description - Rack shall be fabricated of welded extruded aluminum 1 in. by 1 in. by .070 in. tubular uprights and framing, and 1-1/4 in. by 1-5/8 in. by .100 in. angle pan slides with corners chamfered and deburred. Gussets of 1-1/2 in. by 1-1/2 in. by 5/8 in. angle aluminum shall be welded to the bottom inside angles where horizontal bracing meets vertical uprights. Mount on platform type, 5 in. polyurethane tired swivel casters.

Item D03

MICROWAVE OVEN

No work in this Section. Item to be provided by Owner.

Item D04

WORK COUNTER WITH SINK

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 7 ft., 9 in. by 28 in. by 36 in. high plus 6 in. high splash at wall; 20 in. by 18 in. by 10 in. deep integral work sink basin

Construction - 14 gauge stainless steel top, basin and splash over angle frame and mounted on a stainless steel cabinet base of box type construction with bottom shelves, partial intermediate shelves per elevations, hinged double-pan stainless steel door front full width horizontal folded top pull, and mounted on 6 in. high adjustable legs. Secure to wall and seal. Provide cut-out in bottom shelf with turned down edge and corners welded at floor sink location. Drain cutout must be large enough to access and remove floor sink grates for cleaning and provided with stainless steel cover with slot for drain pipe. Front and ends of top shall be formed in a turndown, rear formed in short splash.

Accessories - Provide with 2 in. lever waste outlet at work sink.

Item D05

No item

Item D06

WASTE BIN

No work in this Section. Item to be provided by Owner.

Item D07

HAND SINK

Make - Advance 7-PS-70-CM*C166 or equal by IMC Teddy or Krowne

Description - Unit shall be all standard stainless steel construction with mounting bracket. Mount on wall with rim at 36 in. above floor

Accessories - Provide with a splash mounted faucet set with wrist handles (Item D07a), 3 in. flat strainer type (non-basket, non-lever) open type waste, chrome plated tailpiece, "P" trap and clean-out cap. Provide with welded stainless steel left end splash

Item D07a

FAUCET

Make - T&S Brass B-0330-04 modified or Fisher 1953 modified, or Encore

Description - Unit shall be all standard construction with mixing body, 8 in. center inlets, and wrist blade handles. Modified unit shall be provided with 119X gooseneck with B-0199-02-F10 aerator tip in lieu of the standard.

Item D08

No item

Item D09

STAINLESS STEEL UTILITY CHASE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML

Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 6" x 6" x height to reach 5" above finished ceiling

Construction - Chase shall be fabricated of 16 gauge stainless steel channels with full height exposed rear channel, partial height infitting front channel and tack welded in place, and a removable infitting channel extending from bottom plate to 78" above floor. Bottom of exposed channel shall be provided with an integral sloped plate at 30° to horizontal. Exposed channel shall be secured to the side of the demonstration counter (Item D10) with 10" high opening in back of channel coordinated to line up with opening in side of demonstration counter for gas pipe passage. Removable rear panel shall be installed following the completion of gas piping and shall be held in place with eight minimum stainless steel machine screws. Secure chase to structure above ceiling and to the side of Item D10.

Item D10

DEMONSTRATION COUNTER

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML

Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 11 ft., 0 in. by 39 in. by 36 in. high; 37 in. by 32 in. notch at range

Construction - 14 gauge stainless steel top over angle frame with edges formed in turndown, and mounted on a stainless steel cabinet base of box type construction with partial bottom shelves, partial intermediate shelf, hinged locking double-pan stainless steel door front with full width folded top pull per details, notched top and base for inset range, full width integral rear chase with interior access panels for gas and electrical lines, and mounted on 6 in. high adjustable legs with flanged feet at corners for securing to floor. Prepare right end to support attached utility chase (Item D09). Provide opening in right end of integral rear counter chase to line up with utility chase opening for passage of gas piping through chase from above.

Accessories - Provide a body mounted electric outlet behind the range complete with work box, GFI receptacle and stainless steel cover plate, and two front body mounted electric outlets complete with work boxes, GFI receptacles and stainless steel cover plates.

Item D11

TWO-BURNER/GRIDDLE RANGE WITH OVEN

Make - Vulcan 36S-2B24GN or equal by Garland or Southbend

Size - 36 in. by 34 in. by 37 in. high to work surface; 41 in. high overall

Rating - 3/4 in. gas inlet at 215,000 BTU/hour

Description - Range shall be all standard construction with stainless steel front, sides, backriser, with 3/4 in. thick 24 in. manual griddle, 4 in. wide front grease trough, two 30,000 BTU/hour open burners with lift-off heads, shrouded flash tube pilot system per section, level cast iron removable grates, pull-out crumb tray, 27 in. deep by 26-3/8 in. by 14 in. high 35,000 BTU/hour thermostatically controlled oven with two adjustable racks, porcelain bottom and door panel, and provided with pressure regulator.

Accessories - Provide with stainless steel back, and a 4 in. high stainless steel stub back. Provide with thermostatically controlled griddle and Flame Safety device with manual spark ignition. Mount unit on heavy duty swivel casters, two with brakes and provide assembly with a 36 in. long by 3/4 in. line size Dormont 1675 KIT2S plastic covered hose assembly with full port gas ball valve, two Supr-Swivels, brass disconnect, 90 degrees street elbow and restraining cable. Mount the nipple on the rear of the range, and the hose assembly with disconnect device connected to the building supply line.

Item D12

EXHAUST VENTILATOR

Make - CaptiveAire 6024 ND-2WI (Job #5465035) or equal by Gaylord or Halton

Size - 5 ft., 6 in. by 60 in. by 24 in. high plus 4 in. high collar, mounted up 6 ft., 8 in. above finished floor; flat bottom

Power - 120/60/1 power to lights from Item D13

Exhaust - 1,842 CFM through a 14 in. diameter collar at -1.034 in. static pressure. Blower and ductwork provided and installed by Ventilation Contractor.

Description - Ventilator shall be of all standard construction, built of not less than 18 gauge 304 stainless steel throughout with welded joints and seams in accordance with NFPA-96, with reinforced front bottom edge with integral front baffle, double wall insulated front, and NSF Listed. Unit shall have grease collection trough, storage container, and hanger brackets. Provide with 430 stainless steel Captrate Grease-Stop Solo Filter UL classified S-baffle extractors that shall remove at least 75percent of grease particles five microns in size, and 90percent of grease particles seven microns in size and larger, with a corresponding pressure drop not to exceed 1.0 inches of water gauge. Provide all materials necessary for the hanging of the ventilator, and seal to wall.

Accessories - Provide unit with two recessed UL Listed light LED fixtures factory prewired and left ready for final connection by the Electrical Contractor. Provide closure trim per detail to a point 3 in. above finished ceiling to close to adjacent surfaces on four sides. Provide one filter removal tool, finished back panel, and a full System Design Verification to be performed by a Factory Certified Technician once system start-up and inspections are completed.

Item D13

VENTILATOR DEMAND CONTROL SYSTEM

Make - CaptiveAire DCV-1011 (Job #5465035) or equal by Gaylord or Halton

Power - 15 amps circuit - 120/60/1 to logic controller

Scope - Furnish and install complete exhaust control system for the exhaust canopy in accordance with the plans and Manufacturers shop drawings. The system shall include programmable logic controller (PLC), variable frequency drive (VFD), stainless steel control enclosure, exhaust duct temperature sensors, room temperature sensor, LCD screen interface with cable, all specified accessories, and those components required to provide complete and satisfactory systems in accordance with accepted HVAC practice. System shall control Item D12. Mount LCD screen control Mount LCD screen control per plan in a recessed junction box provided by the General Contractor. The system processor cabinet shall be wall mounted per plan at 80 in. high minimum above the floor. Mount the room air temperature sensor on the wall 60 in. above the finished floor.

Important: The installation work shall be performed by a fully qualified contractor employing a certified mechanic fully trained in the installation of the DCV hood system. Submittal shall list the installing company and the qualified system installer. Provide wiring diagrams and guidance to related trades to achieve correct operation of the system.

Accessories - Service Design Verification: Factory Services and on site coordination to be performed by the Manufacturers service technician (not a sales representative). On site supervision shall include two site visits: One visit to coordinate preparations for installation, and a second visit at startup and calibration. Provide BacNet monitoring system.

Item D13a
VENTILATOR CONTROL INTERFACE SCREEN
Specified as part of Item D13

Item D13b
ROOM TEMPERATURE SENSOR
Specified as part of Item D13

Item D14
FIRE SUPPRESSION SYSTEM
Make - Ansul R-102 or equal by Kidde or Pyro-Chem
Power - 20 amps circuit - 120/60/1
Protection for hood: D12

Design - Provide an automatic liquid fire suppressant system sized to meet all local codes, UL 300 and NFPA Codes. System shall provide surface protection for cooking equipment, hood and the exhaust duct work, if required. Tanks shall be mounted on wall per plan, 80 in. high to bottom and within a 16-1/2 in. by 7-1/2 in. by 23-1/2 in. high stainless steel cabinet and piping shall run hidden wherever possible. All pipes and fittings used to convey the chemical shall be scale free steel, 40 weight. Exposed piping located within the ventilator shall be stainless steel or chrome and limited to vertical drops only. Horizontal piping shall be run over the ventilator's top. Nozzles shall be swivel type with metal caps. Detection shall be fusible links rated per codes, and system shall rely on no outside source of power. The system shall be provided with a control box with indicator to indicate system status. Control head shall also include integral micro switch offering "normally open" and "normally closed" terminals for use by the Electrical Contractor for the shut-down of equipment and the sounding of alarms. Suppressant tanks shall be stainless steel. Provide a properly sized mechanically operated gas shut-off valve (up to 3 in. diameter) for mounting by the Plumber at a point in the gas supply that will shut off fuel to all gas fired equipment. Provide and install a remote pull station per codes, complete with cables, conduit and pulleys. Coordinate installation of remote pull station with General Contractor to provide a recessed junction box mounted for installing the pull box with cable conduit concealed within walls. Provide system with class-K extinguisher as required.

Workmanship - Exposed stainless steel fittings and piping shall be assembled with special care to avoid marring or damaging the surfaces. Any pieces showing marks shall be removed and replaced with new materials. Chrome sleeves are not acceptable.

Test - Perform a puff test on the completed system and obtain the written approval of the local Fire Inspector.

Accessories - Provide metal blow-off caps on all nozzles.

Item D15
MOBILE WORK TABLE
Quantity - 12

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 48 in. by 24 in. by 34 in. high

Construction - 14 gauge stainless steel top over angle frame with edges formed in turndown and mounted on four legs with gussets, 5 in. diameter swivel casters, two with brakes, and three crossrails.

Item E01

PAN RACK, MOBILE

Quantity - Four

No work in this Section. Item to be provided by Owner.

Item E02

VENTILATOR DEMAND CONTROL SYSTEM

Make - CaptiveAire DCV-1011 (Job #5465035) or equal by Gaylord or Halton

Power - 15 amps circuit - 120/60/1 to logic controller

Scope - Furnish and install complete exhaust control system for the exhaust canopy in accordance with the plans and Manufacturers shop drawings. The system shall include programmable logic controller (PLC), variable frequency drive (VFD), stainless steel control enclosure, exhaust duct temperature sensors, room temperature sensor, LCD screen interface with cable, all specified accessories, and those components required to provide complete and satisfactory systems in accordance with accepted HVAC practice. System shall control Item E04. Mount LCD screen control Mount LCD screen control per plan in a recessed junction box provided by the General Contractor. Mount system processor in the cabinet mounted on the right end of exhaust ventilator E04. Mount the room air temperature sensor on the wall 60 in. above the finished floor.

Important: The installation work shall be performed by a fully qualified contractor employing a certified mechanic fully trained in the installation of the DCV hood system. Submittal shall list the installing company and the qualified system installer. Provide wiring diagrams and guidance to related trades to achieve correct operation of the system.

Accessories - Service Design Verification: Factory Services and on site coordination to be performed by the Manufacturers service technician (not a sales representative). On site supervision shall include two site visits: One visit to coordinate preparations for installation, and a second visit at startup and calibration. Provide BacNet monitoring system.

Item E02a

VENTILATOR CONTROL INTERFACE SCREEN

Item E02b

ROOM TEMPERATURE SENSOR

Specified as part of Item E02

Item E03

FIRE SUPPRESSION SYSTEM

Make - Ansul R-102 or equal by Kidde or Pyro-Chem

Protection for hood: E04

Design - Provide an automatic liquid fire suppressant system sized to meet all local codes, UL 300 and NFPA Codes. System shall provide surface protection for cooking equipment, hood and the exhaust duct work, if required. Tanks shall be mounted in the hood manufacturer provided utility cabinet and piping shall run hidden wherever possible. All pipes and fittings used to convey the chemical shall be scale free steel, 40 weight. Exposed piping located within the ventilator shall be stainless steel or chrome and limited to vertical drops only. Horizontal piping shall be run over the ventilator's top. Nozzles shall be swivel type with metal caps. Detection shall be fusible links rated per codes, and system shall rely on no outside source of power. The system shall be provided with a control box with indicator to indicate system status. Control head shall also include integral micro switch offering "normally open" and "normally closed" terminals for use by the Electrical Contractor for the shut-down of equipment and the sounding of alarms. Suppressant tanks shall be stainless steel. Provide a properly sized mechanically operated gas shut-off valve (up to 3 in. diameter) for mounting by the

Plumber at a point in the gas supply that will shut off fuel to all gas fired equipment. Provide and install a remote pull station per codes, complete with cables, conduit and pulleys. Coordinate installation of remote pull station with General Contractor to provide a recessed junction box mounted for installing the pull box with cable conduit concealed within walls. Provide system with class-K extinguisher as required.

Workmanship - Exposed stainless steel fittings and piping shall be assembled with special care to avoid marring or damaging the surfaces. Any pieces showing marks shall be removed and replaced with new materials. Chrome sleeves are not acceptable.

Test - Perform a puff test on the completed system and obtain the written approval of the local Fire Inspector.

Accessories - Provide metal blow-off caps on all nozzles.

Item E04

EXHAUST VENTILATOR

Make - CaptiveAire 6024 ND-2 (Job #5465035) or equal by Gaylord or Halton

Size - 15 ft., 6 in. plus a 12 in. utility cabinet at right end by 60 in. by 24 in. high plus 4 in. high collars, mounted up 6 ft., 8 in. above finished floor; flat bottom

Power - 120/60/1 power to lights from Item E02

Exhaust - 3,488 total CFM through two 14 in. diameter collars at -0.728 in. static pressure. Blower and ductwork provided and installed by Ventilation Contractor.

Description - Ventilator shall be of all standard construction, built of not less than 18 gauge 304 stainless steel throughout with welded joints and seams in accordance with NFPA-96, with reinforced front bottom edge with integral front baffle, double wall insulated front, and NSF Listed. Unit shall have grease collection trough, storage container, and hanger brackets. Provide with 430 stainless steel Captrate Grease-Stop Solo Filter UL classified S-baffle extractors that shall remove at least 75percent of grease particles five microns in size, and 90percent of grease particles seven microns in size and larger, with a corresponding pressure drop not to exceed 1.0 inches of water gauge. Provide all materials necessary for the hanging of the ventilator, and seal to wall.

Accessories - Provide unit with four recessed UL Listed light LED fixtures factory prewired and left ready for final connection by the Electrical Contractor. Provide closure trim per detail to a point 3 in. above finished ceiling to close to adjacent surfaces on three sides. Provide one filter removal tool, balancing dampers, quarter end panels, and a full System Design Verification to be performed by a Factory Certified Technician once system start-up and inspections are completed.

Item E05

STAINLESS STEEL WALL FLASHING

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 15 ft., 6 in. extending from bottom of ventilator to floor or top of coved material

Construction - Wall shall be clad with 20 gauge type 304 stainless steel cut in largest sheets to minimize joints and secured to wall with adhesive and no exposed fasteners. Provide Component Hardware J64-1450 "T" dividers at joints and J63-1451 cap strips at ends. Provide carefully punched holes at all service locations.

Item E06

DONUT FRYER WITH FILTER DRAWER

Make - Pitco 24RUFM*C166 or equal by Frymaster or Dean

Size - 29-1/2 in. plus 28 in. drain board by 43-1/4 in. by 34 in. high to rim, 57 in. high overall

Power - 0.5 amps - 120/60/1 - cord and plug (controls)

7 amps - 120/60/1 - cord and plug (for filter system)

Rating - 1/2 in. gas inlet at 72,000 BTU/Hour

Description - Fryer shall all standard construction and shall be complete with stainless steel body, splash, top and fryer tank, under fryer filter, flush hose, solid state thermostat with melt cycle, boil out capability, standing pilot, on/off switch, operation indicating lights, drainboard, hinged wire mesh submerger screen with safety grid handles, filter heater, two nickle plated wire mesh screens with handles, wire mesh tube screen, one drain extension, one drain line clean-out rod, heat deflector, and two donut turner sticks.

Accessories - Mount on 6 in. adjustable casters, front locking. Provide with a 48 in. long by 1/2 in. line size Dormont 1650 KIT2S plastic covered hose assembly with full port gas ball valve, two Supr-Swivels, brass disconnect, 90 degrees street elbow and restraining cable. Mount the nipple on the rear of the unit, and the hose assembly with disconnect device connected to the building supply line. Provide electronic ignition, donut dropper bracket, cover, and 100 filter envelopes.

Item E07

DOUBLE CONVECTION OVEN

Make - Blodgett ZEPHAIRE-200-G-ES Double*C166 or equal by Montague or Southbend

Size - 38-1/4 in. by 46 in. to include fan motor by 70-5/8 in. high

Power - (2) 8 amps - 3/4 HP - 120/60/1 - cords and plugs

Rating - 3/4 in. gas inlet at 100,000 BTU/Hour

Description - Units shall be all standard construction with stainless steel front, sides and top, porcelain enameled steel interior with 29 in. by 28-1/4 in. by 20 in. high inside dimensions, 1 in. solid block insulation and 1 in. thick mineral fibre sheet insulation for 2 in. on insulation on top, back and sides, stainless steel doors with simultaneous operation, removable rack supports capable of holding eleven racks and five chrome plated steel wire racks, electronic ignition with fail-safe controls, solid state manual controls with separate dials for temperature and time settings, timer with buzzer, removable dual tube burners, pressure regulators, two-speed blowers with thermal overload protection and door interlock, and interior lighting with two halogen bake oven lamps. Provide standard one year parts and labor warranty on the total oven and additional three year warranty on the door assembly, parts only.

Accessories - Mount on heavy duty swivel casters. Manifold the two ovens for a single gas connection. Provide assembly with a 48 in. long by 3/4 in. line size Dormont 1675 KIT2S plastic covered hose assembly with full port gas ball valve, two Supr-Swivels, brass disconnect, 90 degrees street elbow and restraining cable. Mount the nipple on the rear of the oven, and the hose assembly with disconnect device connected to the building supply line.

Item E08

SIX-BURNER RANGE WITH OVEN

Make - Vulcan 36S-6B-N*C166 or equal by Garland or Southbend

Size - 36 in. by 34 in. by 37 in. high to work surface; 45 in. high overall; 58 in. high overall with overshef

Rating - 3/4 in. gas inlet at 215,000 BTU/hour

Description - Range shall be all standard construction with stainless steel front, sides, backriser, and lift-off high shelf, with six 30,000 BTU/hour open burners with lift-off heads, shrouded flash tube pilot system per section, level cast iron removable grates, pull-out crumb tray, 27 in. deep by 26-3/8 in. by 14 in. high 35,000 BTU/hour thermostatically controlled oven with two adjustable racks, porcelain bottom and door panel, and provided with pressure regulator.

Accessories - Provide a 10 in. high stainless steel stub back. Provide with Flame Safety device with manual spark ignition. Mount unit on heavy duty swivel casters, two with brakes. Provide with a 36 in. long by 3/4 in. line size Dormont 1675 KIT2S plastic covered hose assembly with full port gas ball valve, two Supr-Swivels, brass disconnect, 90 degrees street elbow and restraining cable. Mount the nipple on the rear of the oven, and the hose assembly with disconnect device connected to the building supply line.

Item E09

REFRIGERATOR, REACH-IN

Make - Victory RSA-2D-S1-HD-HC, or equal by Continental or Turbo Air

Size - 52-1/8 in. by 35 in. by 84-1/4 in. high overall

Power - 6.5 amps - 1/3 HP - 120/60/1 - cord and plug

Doors - Half height, standard hinging

Certification - Unit shall be Energy Star compliant

Description - Refrigerator shall be all standard construction with stainless steel exterior, aluminum interior, self-closing door hardware with a hold-open at 120 degrees, Humidity control wires around the door jamb, automatic LED interior lighting, exterior digital thermometer, heavy duty epoxy plated wire shelves adjustable in one inch increments, self-contained top mounted refrigeration system capable of maintaining a 33 degrees to 38 degrees temperature range with Secure-Temp 1.0 temperature monitoring technology, R-290 refrigerant, and condensate evaporator.

Accessories - Provide adjustable Type A/C tray slide kit spaced 3 in. on center in the top half, and two shelves in the bottom half. Provide unit mounted on 6 in. high casters.

Item E10

No item

Item E11

No item

Item E12

WATER FILTER ASSEMBLY

Make - 3M ScaleGard HT SF165 Modified or equal by Everpure or Selecto

Description - Unit shall be all standard construction designed for wall mounting and consisting of a mounting bracket, quarter-turn cartridge release mechanism, manifold with integral pressure gauge, integral quarter turn shut-off valve, outlet check valve, filter cartridge with internal prefilter membrane and external scale feeder cartridge. Provide with HF95-CL chloramine reduction filter cartridge in lieu of standard HF65 cartridge.

Accessories - Provide four spare HF95-CL filter cartridges and four spare HF8-S cartridges.

Item E13

DOUBLE COMBINATION OVEN

Make - Alto-Shaam CTP7-20G/CTP7-20G*C166 or equal by ConvoTherm or Rational

Size - 44-1/8 in. by 46-3/16 in. over handle by 74-3/16 in. high

Rating - (2) 3/4 in. gas inlet at 98,000 BTU/hour

Power - (2) 6.8 amps - 120/60/1 - cord and plug

Capacity - Seven full size sheet pans per compartment

Certification - Unit shall be Energy Star compliant

Description - Combination steamer/ovens shall be boiler-free with all standard construction with stainless steel exterior and interior, tempered triple pane window glass panel in right hand hinged 130 degree door swing with hinged interior pane, easily replaced door gasket, air circulation system with auto reverse fan with five fan speeds, removable probe, door mounted self-draining drip tray, LED lit

interior, automatic quenching system, retractable hand shower with automatic rewind, and ProTouch Control panel system with programmable cool-down, four cooking modes (steam, convection, combination and retherm) plus three power levels and 0-100 percent humidity level control. Provide unit with factory authorized start-up service and one year warranty. Mount assembly on casters. Accessories - Provide one case of liquid cleaner and one case of CombiClean tablets. Provide with four flexible water line hoses and a cord and plug for each unit. Provide assembly with two 48 in. long by 3/4 in. line size Dormont 1675 KIT2S plastic covered hose assemblies with full port gas ball valve, two Supr-Swivels, brass disconnect, 90 degrees street elbow and restraining cable. Mount the nipple on the rear of the oven, and the hose assembly with disconnect device connected to the building supply line.

Item E14

EXISTING ROLL-IN PROOFER CABINET

Make - Wilder

Work - Relocate unit per plan, level in place, and leave ready for reconnection of service by Related Trades.

Item E15

MOBILE WORK TABLE

Quantity - Two

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 60 in. by 30 in. by 36 in. high

Construction - 14 gauge stainless steel top over angle frame with edges formed in turndown and mounted on four legs with gussets, 5 in. diameter swivel casters, two with brakes, and full undershelf.

Accessories - Drawer assembly.

Item E16

MAPLE TOP WORK BENCH

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 63 in. by 36 in. by 36 in. high

Construction - Bally Block Versatable 1-3/4 in. thick hard maple table top with penetrating oil finish, mounted on four legs with gussets, adjustable feet, three lengths of crossrail and 1 in. by 4 in. by 1 in. by 14 gauge stainless steel channels welded to the gussets. Break sharp corners of channels. Top shall be secured through slotted holes in the channels to permit expansion and contraction in the top.

Item E17

UTENSIL RACK, CEILING MOUNT

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 5 ft., 0 in. by 18 in. mounted up 6 ft., 6 in. and 7 ft., 6 in. above floor

Construction - Rack shall be fabricated of 1/4 in. by 2 in. stainless steel bar stock throughout, fully welded construction, consisting of a two bar upper rail with full radiused ends, a single lower rail, reinforcing straps, and suspended from the overhead structure on four hangers. Provide unit with forty Component Hardware J77-4401 stainless steel double pot hooks.

Item E18

DOUGH DIVIDER/ROUNDER

No work in this Section. Item to be provided by Owner.

Item E19

MOBILE SHEETER STAND

No work in this Section. Item to be provided by Owner.

Item E20

SHEETER

No work in this Section. Item to be provided by Owner.

Item E21

FIVE-QUART MIXER

Quantity - Six

No work in this Section. Item to be provided by Owner.

Item E22

STORAGE SHELVING, FOUR-TIER

Make - Metro Super Adjustable Super Erecta or equal by ISS or Cambro

Size - 42 in. by 21 in. by 63-1/2 in. high; four tier with bottom shelf up 14 in. clear above floor

Description - Unit shall be all standard construction with Super Adjustable Metroseal coated wire shelves and tubular steel uprights with capped tops, adjustable feet, and 1 in. shelf height adjustment capability with Corner Release System. Each unit shall include four legs.

Item E23

EYE/FACE WASH

Make - Guardian Equipment G1814*C166 or equal by Bradley or Speakman

Size - 11-1/2 in. diameter by 6-7/8 in. high bowl

Construction - Unit shall be standard construction with stainless steel bowl and lid, cast aluminum, corrosion resistant power coated wall bracket, and flip-top covered spray head assembly with internal flow control and filter.

Item E24

EXISTING THIRTY-QUART MIXER

Make - Hobart

Work - Relocate unit per plan, level in place, and leave ready for reconnection of service by Related Trades.

Item E25

SINGLE BAR UTENSIL RACK, WALL MOUNTED

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 36 in. by 9 in. off face of wall with rail mounted 75 in. above floor

Construction - Rack shall be single rail type, fabricated of 2 in. by 1/4 in. stainless steel bar stock throughout, fully welded with bar extended 9 in. from wall. Two end brackets to be secured to wall with suitable fasteners.

Accessories - Provide unit with eight stainless steel wire double pot hooks.

Item E26

FILL FAUCET

Make - T&S Brass B-0610*C166 or equal by Fisher or Encore

Description - Faucet assembly shall be all standard construction with 8 in. centers, 1/2 in. IPS inlets, built-in check valves, vacuum breaker connection for hose, finger hook, all chrome plated, and provided with a 68 in. long polished stainless steel hose with hook nozzle, self-closing valve and retaining ring.

Item E27

EXISTING SIXTY-QUART MIXER

Make - Hobart

Work - Relocate unit per plan, level in place, and leave ready for reconnection of service by Related Trades.

Item E28

No item

Item E29

WORK TABLE WITH DOUBLE OVERSHELF AND PAN SLIDES

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 60 in. x 30 in. x 36 in. high plus 6 in. high rear splash; overshelf 60 in. long with shelves at 54 in. and 66 in. above floor; 12 in. deep shelves

Construction - 14 gauge stainless steel top and splash over angle frame, front and ends formed in turndown, rear formed in short splash with finished exterior, four legs with gussets, adjustable feet, and full undershelf. Pan slide assembly shall be mounted below top, sized to fit full size sheet pans, with welded 1 in. square tubular frame and six pairs of 1 in. x 1-1/2 in. angle slides welded to frame with 3 in. spacing. Overshelves shall be 16 gauge stainless steel with edges formed in turndown, channel reinforced, and welded to four 1 in. tubular stainless steel uprights secured to table below top.

Accessories - Drawer assembly.

Item E30

DROP CORD REEL

Quantity - 12

No work in this Section. Item to be provided and installed by Electrical Contractor.

Item E31

MAPLE TOP WORK BENCH

Quantity - 12

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 63 in. by 36 in. by 36 in. high

Construction - Bally Block Versatable 1-3/4 in. thick hard maple table top with penetrating oil finish, mounted on four legs with gussets, adjustable feet, three lengths of crossrail and 1 in. by 4 in. by 1 in. by 14 gauge stainless steel channels welded to the gussets. Break sharp corners of channels. Top shall be secured through slotted holes in the channels to permit expansion and contraction in the top.

Item E32

DOUGH SCALE

Quantity - 12

No work in this Section. Item to be provided and installed by FF&E.

Item E33

MOBILE INGREDIENT BIN

Quantity - 24

No work in this Section. Item to be provided by Owner.

Item E34
SLICER, BREAD

No work in this Section. Item to be provided by Owner.

Item E35
WASTE BARREL

No work in this Section. Item to be provided by Owner.

Item E36
PREP TABLE WITH SINKS

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 9 ft., 0 in. by 30 in. by 36 in. high to work surface plus 10 in. high splash at rear; two 18 in. by 20 in. by 10 in. deep integral sink basins

Construction - 14 gauge stainless steel top, basins and splash, channel reinforced, six legs with gussets and adjustable feet, partial undershelf, two crossrails, tall splash rear, and marine front and ends, secured 3 in. off face of wall.

Accessories - Drawer assembly, splash mounted faucet set and two 2 in. lever waste outlets.

Item E37
WALL SHELF

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 66 in. by 12 in. mounted 54 in. above floor

Construction - Wall shelf shall be fabricated of 16 gauge stainless steel with back and ends raised 1-1/2 in., front edges of ends angled back, all corners broken, and front turned down 1-1/2 in., and in 1/2 in. at 45 degrees. Shelf corners shall be welded, ground and polished. Mount shelf 1 in. off face of wall with suitable fasteners on 14 gauge stainless steel flag brackets, 48 in. on center maximum. Flag brackets shall have a web angle of 30 degrees measured from horizontal.

Item E38
ADA COMPLIANT HAND SINK

Make - Advance 7-PS-25 modified or equal by IMC Teddy or Krowne

Size - 20 in. by 24 in. by 13 in. high overall, 14 in. by 16 in. by 5 in. deep sink bowl

Description - Unit shall be all standard stainless steel construction with wall mounting bracket. Mount on wall with rim at 34 in. above floor. Modify faucet holes to be two holes spaced 8 in. apart on center.

Delete standard faucet.

Accessories - Deck mounted soap dispenser, 3 in. flat strainer type (non-basket, non-lever) open type waste, chrome plated tailpiece, "P" trap and clean-out cap.

Item E38a
FAUCET

Make - T&S Brass B-0322-04 modified or equal by Fisher or Encore

Description - Unit shall be all standard construction with deck mounted mixing body, 8 in. center inlets, and wrist blade handles. Modified unit shall be provided with B-0199-02F-12 aerator tip in lieu of the standard.

Item E39
WASTE BIN

No work in this Section. Item to be provided by Owner.

Item E40

MOBILE SHELVING UNIT, FOUR-TIER

Make - MetroMax Q*C166 or equal by Cambro or Fermob

Size - 36 in. by 21 in. by 69 in. high on casters; four tier

Description - Shelving unit shall be all standard construction and shall consist of four shelves with removable injection molded polypropylene mats with antimicrobial product protection, supported on epoxy coated steel shelf frames and similar uprights with capped tops, and mounted on 5 in. diameter polyurethane tired swivel casters with donut bumpers.

Accessories - Provide with polymer posts in lieu of standard.

Item E41

MOBILE EQUIPMENT STAND

Quantity - Two

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 30 in. by 30 in. by 32 in. high

Construction - 14 gauge stainless steel top over channel frame, edges formed in turn down, mounted on four legs with gussets, undershelf, and 5 in. diameter casters, two with brakes.

Item E42

VACCUUM PACKAGING MACHINE

No work in this Section. Item to be provided by Owner.

Item E43

TWENTY-QUART MIXER

Quantity - Two

No work in this Section. Item to be provided by Owner.

Item E44

No item

Item E45

MOBILE EQUIPMENT STAND

Quantity - Two

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 30 in. by 30 in. by 32 in. high

Construction - 14 gauge stainless steel top over channel frame, edges formed in turn down, mounted on four legs with gussets, undershelf, and 5 in. diameter casters, two with brakes.

Item F01

WORK TABLE

Quantity - Six

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 60 in. by 30 in. by 36 in. high

Construction - 14 gauge stainless steel top over angle frame, edges formed in turndown, four legs with gussets, adjustable feet, and full undershelf.

Accessories - Drawer assembly

Item F02

DROP CORD REEL

Quantity - Three

No work in this Section. Item to be provided and installed by Electrical Contractor.

Item F03

UTILITY CART

Quantity - Two

Make - Lakeside 521 or equal by Channel or Kelmax

Size - 32-5/8 in. by 19-3/8 in. by 34-1/2 in.

Description - Cart shall be all standard NSF construction, stainless steel throughout, with top and bottom shelves supported by an angle frame, and mounted on two 8 in. fixed and two 5 in. swivel casters.

Capacity of cart to be 650 pounds.

Item F04

ADA COMPLIANT PREP STATION TABLE WITH SINK

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML

Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 96 in. by 30 in. by 34 in. high plus 6 in. splash at wall, 14 in. by 16 in. by 6-1/2 in. deep integral sink basin; offset drain to rear right.

Construction - 14 gauge stainless steel top, basin and splash over angle frame with rear formed in short splash, front and ends formed in turndown and mounted on six legs with gussets and adjustable feet, flanged feet at front for securing to floor, and five crossrails. Provide basin with a lift out, 16 gauge stainless steel cover with all edges flanged down 1 in. and corners rounded, provided with two neatly punched thumb holes, and designed to rest on 1/4 in. rod stock supports welded across the basin corners at proper height to provide a flush surface. Secure table 3 in. of face of wall.

Accessories - Crumb cup waste outlet, T&S Brass B-0323-04 faucet, or equal by Fisher or Encore, with 6 in. wrist blade handles.

Item F05

WATER FILTER ASSEMBLY

Make - 3M ScaleGard HT SF165 Modified or equal by Everpure or Selecto

Description - Unit shall be all standard construction designed for wall mounting and consisting of a mounting bracket, quarter-turn cartridge release mechanism, manifold with integral pressure gauge, integral quarter turn shut-off valve, outlet check valve, filter cartridge with internal prefilter membrane and external scale feeder cartridge. Provide with HF95-CL chloramine reduction filter cartridge in lieu of standard HF65 cartridge.

Accessories - Provide four spare HF95-CL filter cartridges and four spare HF8-S cartridges.

Item F06

HAND SINK

Make - Advance 7-PS-70-CM*C166 or equal by IMC Teddy or Krowne

Description - Unit shall be all standard stainless steel construction with mounting bracket. Mount on wall with rim at 36 in. above floor

Accessories - Provide with a splash mounted faucet set with wrist handles (Item F06a), 3 in. flat strainer type (non-basket, non-lever) open type waste, chrome plated tailpiece, "P" trap and clean-out cap.

Item F06a

FAUCET

Make - T&S Brass B-0330-04 modified or Fisher 1953 modified, or Encore

Description - Unit shall be all standard construction with mixing body, 8 in. center inlets, and wrist blade handles. Modified unit shall be provided with 119X gooseneck with B-0199-02-F10 aerator tip in lieu of the standard.

Item F07

WASTE BIN

No work in this Section. Item to be provided by Owner.

Item F08

MOBILE WORK TABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 60 in. by 30 in. by 36 in. high

Construction - 14 gauge stainless steel top over angle frame with edges formed in turndown and mounted on four legs with gussets, 5 in. diameter swivel casters, two with brakes, and full undershelf.

Accessories - Drawer assembly.

Item F09

COOK'S WORK TABLE WITH SINK

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 8 ft., 0 in. by 30 in. by 36 in. high plus 6 in. high splash at wall; 18 in. by 20 in. by 10 in. deep integral sink

Construction - 14 gauge stainless steel top sink basin, and splash over angle frame, three edges formed in turndown, right end formed in tall splash, six legs with gussets, adjustable feet, flanged feet at corners for securing to floor, two crossrails and partial undershelf. Overshelf shall be 16 gauge stainless steel, formed similar to a wall shelf, channel reinforced, and welded to two extended rear table legs with support webs, and supported in integrally welded inverted gussets with sleeved joints for rigidity.

Accessories - Drawer assembly. Provide three rigid stainless steel brackets for mounting of electric outlets in setback positions complete with work boxes, GFI receptacles and stainless steel cover plates.

Item F10

MOBILE WORK TABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 60 in. by 30 in. by 36 in. high

Construction - 14 gauge stainless steel top over angle frame with edges formed in turndown and mounted on four legs with gussets, 5 in. diameter swivel casters, two with brakes, and full undershelf.

Accessories - Drawer assembly.

Item F13

EXHAUST VENTILATOR

Make - CaptiveAire 6024 ND-2 (Job #5465035) or equal by Gaylord or Halton

Size - 11 ft., 0 in. by 60 in. by 24 in. high plus 4 in. high collar, mounted up 6 ft., 8 in. above finished floor; flat bottom

Power - 120/60/1 power to lights from Item F19

Exhaust - 2,475 CFM through a 16 in. diameter collar at -0.872 in. static pressure. Blower and ductwork provided and installed by Ventilation Contractor.

Description - Ventilator shall be of all standard construction, built of not less than 18 gauge 304 stainless steel throughout with welded joints and seams in accordance with NFPA-96, with reinforced front bottom edge with integral front baffle, double wall insulated front, and NSF Listed. Unit shall have grease collection trough, storage container, and hanger brackets. Provide with 430 stainless steel Captrate Grease-Stop Solo Filter UL classified S-baffle extractors that shall remove at least 75percent of grease particles five microns in size, and 90percent of grease particles seven microns in size and larger, with a corresponding pressure drop not to exceed 1.0 inches of water gauge. Provide all materials necessary for the hanging of the ventilator, and seal to wall.

Accessories - Provide unit with five recessed UL Listed light LED fixtures factory prewired and left ready for final connection by the Electrical Contractor. Provide closure trim per detail to a point 3 in. above finished ceiling to close to adjacent surfaces on two sides. Provide one filter removal tool, balancing damper, quarter end panel, and a full System Design Verification to be performed by a Factory Certified Technician once system start-up and inspections are completed.

Item F14

EXHAUST VENTILATOR

Make - CaptiveAire 6024 ND-2 (Job #5465035) or equal by Gaylord or Halton

Size - 11 ft., 0 in. by 60 in. by 24 in. high plus 4 in. high collar, mounted up 6 ft., 8 in. above finished floor; flat bottom

Power - 120/60/1 power to lights from Item F19

Exhaust - 2,200 CFM through a 16 in. diameter collar @ -0.689 in. static pressure. Blower and ductwork provided and installed by Ventilation Contractor.

Description - Ventilator shall be of all standard construction, built of not less than 18 gauge 304 stainless steel throughout with welded joints and seams in accordance with NFPA-96, with reinforced front bottom edge with integral front baffle, double wall insulated front, and NSF Listed. Unit shall have grease collection trough, storage container, and hanger brackets. Provide with 430 stainless steel Captrate Grease-Stop Solo Filter UL classified S-baffle extractors that shall remove at least 75percent of grease particles five microns in size, and 90percent of grease particles seven microns in size and larger, with a corresponding pressure drop not to exceed 1.0 inches of water gauge. Provide all materials necessary for the hanging of the ventilator, and seal to wall.

Accessories - Provide unit with five recessed UL Listed light LED fixtures factory prewired and left ready for final connection by the Electrical Contractor. Provide closure trim per detail to a point 3 in. above finished ceiling to close to adjacent surfaces on two sides. Provide one filter removal tool, balancing damper, quarter end panel, and a full System Design Verification to be performed by a Factory Certified Technician once system start-up and inspections are completed.

Item F15

UTILITY DISTRIBUTION SYSTEM (UDS)

Make - CaptiveAire UDI (Job #5465035) or equal by Gaylord or Halton

Size - 22 ft., 0 in. by 12 in. by 6 ft., 8 in. high

Power - 80 amps circuit - 120/208/60/3

Rating - 2 in. looped service gas manifold at 1,499 MBTU/Hour (2,350 MBTU/Hour capacity)

Description - Utility distribution system shall be all standard construction of 300 series stainless steel with primary service riser, secondary riser and a horizontal raceway with separate compartments for plumbing and electrical services. Raceway plumbing compartment shall include gas and water piping, service drops with shut-off valves, Dormont quick disconnect gas hoses and flexible water connectors. Raceway electrical compartment shall include wiring to appliance connectors along and individual appliance electrical connectors with weatherproof covers. Primary service riser shall include load center with individual service breakers, main shunt trip breaker with reset handle, emergency kill switch, status indicators lights, DCV control interface, gas delay reset, GFI convenience outlet, pre-plumbed 2 in. electric gas valve, and manual gas shut-off valve. Secondary riser shall include a pre-plumbed 2 in. electric gas valve, manual shut-off valves for gas and water supply, and GFI convenience outlet. Mount DCV interface screen in main service riser.

Item F16

EXHAUST VENTILATOR

Make - CaptiveAire 6024 ND-2 (Job #5465035) or equal by Gaylord or Halton

Size - 8 ft., 0 in. by 60 in. by 24 in. high plus 4 in. high collar, mounted up 6 ft., 8 in. above finished floor; flat bottom

Power - 120/60/1 power to lights from Item F19

Exhaust - 1,400 CFM through a 12 in. diameter collar @ -0.600 in. static pressure. Blower and ductwork provided and installed by Ventilation Contractor.

Description - Ventilator shall be of all standard construction, built of not less than 18 gauge 304 stainless steel throughout with welded joints and seams in accordance with NFPA-96, with reinforced front bottom edge with integral front baffle, double wall insulated front, and NSF Listed. Unit shall have grease collection trough, storage container, and hanger brackets. Provide with 430 stainless steel Captrate Grease-Stop Solo Filter UL classified S-baffle extractors that shall remove at least 75percent of grease particles five microns in size, and 90percent of grease particles seven microns in size and larger, with a corresponding pressure drop not to exceed 1.0 inches of water gauge. Provide all materials necessary for the hanging of the ventilator, and seal to wall.

Accessories - Provide unit with four recessed UL Listed light LED fixtures factory prewired and left ready for final connection by the Electrical Contractor. Provide closure trim per detail to a point 3 in. above finished ceiling to close to adjacent surfaces on two sides. Provide one filter removal tool, balancing damper, quarter end panel, and a full System Design Verification to be performed by a Factory Certified Technician once system start-up and inspections are completed.

Item F17

EXHAUST VENTILATOR

Make - CaptiveAire 6024 ND-2 (Job #5465035) or equal by Gaylord or Halton

Size - 13 ft., 0 in. plus a 12 in. utility cabinet at right end by 60 in. by 24 in. high plus 4 in. high collars, mounted up 6 ft., 8 in. above finished floor; flat bottom

Power - 120/60/1 power to lights from Item F19

Exhaust - 3,315 total CFM through two 14 in. diameter collars at -0.723 in. static pressure. Blower and ductwork provided and installed by Ventilation Contractor.

Description - Ventilator shall be of all standard construction, built of not less than 18 gauge 304 stainless steel throughout with welded joints and seams in accordance with NFPA-96, with reinforced front bottom edge with integral front baffle, double wall insulated front, and NSF Listed. Unit shall have

grease collection trough, storage container, and hanger brackets. Provide with 430 stainless steel Captrate Grease-Stop Solo Filter UL classified S-baffle extractors that shall remove at least 75percent of grease particles five microns in size, and 90percent of grease particles seven microns in size and larger, with a corresponding pressure drop not to exceed 1.0 inches of water gauge. Provide all materials necessary for the hanging of the ventilator.

Accessories - Provide unit with seven recessed UL Listed light LED fixtures factory prewired and left ready for final connection by the Electrical Contractor. Provide closure trim per detail to a point 3 in. above finished ceiling to close to adjacent surfaces on two sides. Provide one filter removal tool, balancing dampers, quarter end panel, and a full System Design Verification to be performed by a Factory Certified Technician once system start-up and inspections are completed.

Item F18

FIRE SUPPRESSION SYSTEM

Make - Ansul R-102 or equal by Kidde or Pyro-Chem

Power - 20 amps circuit - 120/60/1

Protection for hoods: F13, F14, F16, and F17

Design - Provide an automatic liquid fire suppressant system sized to meet all local codes, UL 300 and NFPA Codes. System shall provide surface protection for cooking equipment, hood and the exhaust duct work, if required. Tanks shall be mounted in the hood manufacturer provided utility cabinet and piping shall run hidden wherever possible. All pipes and fittings used to convey the chemical shall be scale free steel, 40 weight. Exposed piping located within the ventilator shall be stainless steel and limited to vertical drops only. Horizontal piping shall be run over the ventilator's top. Nozzles shall be swivel type with metal caps. Detection shall be fusible links rated per codes, and system shall rely on no outside source of power. The system shall be provided with a control box with indicator to indicate system status. Control head shall also include integral micro switch offering "normally open" and "normally closed" terminals for use by the Electrical Contractor for the shut-down of equipment and the sounding of alarms. Suppressant tanks shall be stainless steel. Provide and install a remote pull station per codes, complete with cables, conduit and pulleys. Coordinate installation of remote pull station with General Contractor to provide a flush mounted pull box with cable conduit concealed within walls. Provide system with class-K extinguisher as required. Delete standard gas valve and reset relay switch. Gas valve(s) and reset switch shall be provided as part of Item F15.

Workmanship - Exposed stainless steel fittings and piping shall be assembled with special care to avoid marring or damaging the surfaces. Any pieces showing marks shall be removed and replaced with new materials. Chrome sleeves are not acceptable.

Test - Perform a puff test on the completed system and obtain the written approval of the local Fire Inspector.

Accessories - Provide metal blow-off caps on all nozzles.

Item F19

VENTILATOR DEMAND CONTROL SYSTEM

Make - CaptiveAire DCV-1011 (Job #5465035) or equal by Gaylord or Halton

Scope - Furnish and install complete exhaust control system for the exhaust canopy in accordance with the plans and Manufacturers shop drawings. The system shall include programmable logic controller (PLC), variable frequency drive (VFD), stainless steel control enclosure, exhaust duct temperature sensors, room temperature sensor, LCD screen interface with cable, all specified accessories, and those components required to provide complete and satisfactory systems in accordance with accepted HVAC practice. System shall control Items F13, F14, F16, and F17. Mount LCD screen control in UDS riser. Mount system processor in the cabinet mounted on the right end of exhaust ventilator F17. Mount the room air temperature sensor on the wall 60 in. above the finished floor.

Important: The installation work shall be performed by a fully qualified contractor employing a certified mechanic fully trained in the installation of the DCV hood system. Submittal shall list the installing

company and the qualified system installer. Provide wiring diagrams and guidance to related trades to achieve correct operation of the system.

Accessories - Service Design Verification: Factory Services and on site coordination to be performed by the Manufacturers service technician (not a sales representative). On site supervision shall include two site visits: One visit to coordinate preparations for installation, and a second visit at startup and calibration. Provide BacNet monitoring system.

DOUBLE TWENTY-QUART TILTING KETTLE

Make - Groen (2)CTDC/3-20-SG or equal by Market Forge or Cleveland

Size - 36 in. by 34-3/16 in. by 28 in. high to countertop

Power - 15 amps - 120/60/1

Rating - 1/2 in. gas inlet at 200,000 BTU/Hour

Description - Kettle assembly shall be all standard construction with two twenty quart tilting steam jacketed kettles with individual controls mounted on a cabinet base housing a steam generator. Unit shall be constructed with stainless steel interior and exterior and top provided with integral drain troughs and filler faucet. Steam generator shall be ASME Code constructed and National Board Registered for operation up to 15 psi, design certified by AGA, and UL Listed. Generator shall be complete with control switches, electronic ignition, gas control valve, low-water cut-off, pop safety valve, sight glass, automatic fill and automatic blow down. Unit shall be NSF Listed and provided with the standard three year warranty. Mount on 6 in. high stainless steel legs with adjustable feet.

Accessories - Provide with basket inserts and kettle brush kit.

Item F23

FORTY-QUART KETTLE WITH DRAIN CART STAND

Make - Groen TDHC-40C*C166 or equal by Market Forge or Cleveland

Power - 1 amp - 120/60/1

Rating - 1/2 in. gas inlet at 52,000 BTU/Hour

Description - Kettle shall be all standard construction, self-contained gas fired type, stainless steel throughout, ASME inspected, stamped and registered with the National Board for operation up to a maximum working pressure of 50 psi, design certified by AGA, and NSF Listed. Unit shall be thermostatically controlled, capable of producing temperatures from 150 to 298 degrees F., filled with chemically pure water, and provided with low-water cut-off, safety valve, pressure gauge, on-off switch, spark ignition, gas regulator and water sight glass. Unit shall be fitted with a crank tilt mechanism and the burner shall turn off when the kettle is tilted.

Accessories - Provide unit with swing spout mixing faucet with aerator tip and bracket, lift-off cover, cover holder, basket insert, support stand with drain cart, drain cart plumbing kit, and a kettle brush kit.

Item F24

FORTY-GALLON TILTING BRAISING PAN

Make - Groen BPP-40GA*C166 or equal by Market Forge or Cleveland

Size - 35-3/4 in. by 28-1/4 in. by 10 in. deep inside pan dimensions

Power - 5 amps - 120/60/1

Rating - 1/2 in. gas inlet at 144,000 BTU/Hour

Description - Unit shall be all standard stainless steel construction, with tubular support frame, adjustable feet, flanged feet at rear, electric motorized crank tilt mechanism with manual override and three position control switch, torsion bar counterbalanced hinged cover with vent, and a 40 gallon pan. The cooking surface shall be constructed with 5/8 in. thick stainless steel and bonded clad plate with integral heat transfer fins, and a multi-tube gas burner. Pan shall be polished to a 100 emery grit finish and provided with electronic ignition, 7 degrees off level cooking capable, power on switch and indicator light, heat on indicating light, thermostatically controlled and provided with a high limit cut-off, temperature and time set knob, LED display of set temperature or cook time, buttons for reset of Low Temp and High Temp presets, "Manual" mode button for knob-setting of pan temperature, and timer-set button with indicator light.

Accessories - Provide unit with a faucet mounting bracket with a double pantry water fill faucet and aerator tip, and BPC pan carrier.

Item F25

SIX-BURNER RANGE WITH OVEN

Make - Vulcan 36S-6BN*C166 or equal by Garland or Southbend

Size - 36 in. by 34 in. by 37 in. high to work surface; 45 in. high overall; 58 in. high overall with overshef

Rating - 3/4 in. gas inlet at 215,000 BTU/hour

Description - Range shall be all standard construction with stainless steel front, sides, backriser, and lift-off high shelf, with six 30,000 BTU/hour open burners with lift-off heads, shrouded flash tube pilot system per section, level cast iron removable grates, pull-out crumb tray, 27 in. deep by 26-3/8 in. by 14 in. high 35,000 BTU/hour thermostatically controlled oven with two adjustable racks, porcelain bottom and door panel, and provided with pressure regulator.

Accessories - Provide with Flame Safety device with manual spark ignition for all open top burners, and oven pilot. Provide a 10 in. high stainless steel flue riser, and mount on casters.

Item F26

DOUBLE STACKED SMOKER OVEN

Make - Alto-Shaam 767-SK Double Stacked or equal

Size - 25-3/4 in. by 31-5/8 in. by 63-1/4 in. high on casters

Power - (2) 16 amps - 1.9 KW - 120/60/1 - cord and plug

Description - Unit shall be all standard construction with two individually controlled smoker oven compartments, stainless steel interior and exterior, hinged doors with chrome plated hardware and vision panels, insulated on all sides, provided with wraparound heating system with individual programmable electronic controls and each interior fitted with stainless steel side racks, one stainless steel rib rack, two stainless steel shelves, wood chip container, stainless steel drip pan, and an external drip tray. Exterior shall be provided with a perimeter bumper and an external drip tray with removable pan. Mount on swivel casters, two rigid, and two swivel with brakes.

Accessories - Mount on 5 in. diameter casters. Provide with stacking hardware and full perimeter bumper on bottom unit.

Item F27

COMBINATION OVEN ON MOBILE STAND

Make - Alto-Shaam CTP7-20G*C166 or equal by ConvoTherm or Rational

Size - 44-1/8 in. by 46-3/16 in. over handle by 38 in. high

Rating - 3/4 in. gas inlet at 98,000 BTU/hour

Power - 6.8 amps - 120/60/1 - cord and plug

Capacity - Seven full size sheet pans

Certification - Unit shall be Energy Star compliant

Description - Combination steamer/oven shall be boiler-free with all standard construction with stainless steel exterior and interior, tempered triple pane window glass panel in right hand hinged 130 degree door swing with hinged interior pane, easily replaced door gasket, air circulation system with auto reverse fan with five fan speeds, removable probe, door mounted self-draining drip tray, LED lit interior, automatic quenching system, retractable hand shower with automatic rewind, and ProTouch Control panel system with programmable cool-down, four cooking modes (steam, convection, combination and retherm) plus three power levels and 0-100 percent humidity level control. Provide unit with factory authorized start-up service and one year warranty.

Accessories - Mount on stainless steel mobile stand with tray slides and undershelf. Provide one case of liquid cleaner and one case of CombiClean tablets. Provide with four flexible water line hoses and a cord and plug for each unit.

Item F28

TEN-PAN STEAMER

Make - Market Forge ETP-10G*C166 or equal by Groen or Vulcan

Power - 15 amps circuit - 120/60/1 - cord and plug

Rating - 3/4 in. gas inlet at 84,000 BTU/Hour

Description - Steam cooker shall be all standard construction with two five-pan capacity compartments mounted on a stainless steel cabinet base with close coupled individual atmospheric steam generators mounted at the rear of the compartments with pilotless ignition system, automatic water level control, low water cut-off, built-in water filtration system, safety relief valve, pre-heat and high limit thermostats, condensate and water tempering tank, and delimer/descaler port. Compartments shall be fitted with stainless steel liners and removable pan supports, and shall be independently and automatically controlled with 60 minute electromechanical timer with continuous end of cooking signal, and holding mode. Doors to be field reversible, positive closing, insulated, slam action type with one-piece silicone rubber gasket and door interlock to cut power to the heater when the doors are opened. Mount cabinet base on 6 in. high stainless steel adjustable legs.

Accessories - Provide unit with ten 12 in. by 20 in. by 2-1/2 in. deep stainless steel pans; six perforated and four solid, and replacement filter kit.

Item F29

CONVECTION OVEN

Make - Blodgett ZEPHAIRE-200-G-ES*C166 or equal by Montague or Southbend

Size - 38-1/4 in. by 46 in. to include fan motor by 57 in. high

Power - 8 amps - 3/4 HP - 120/60/1 - cord and plug

Rating - 3/4 in. gas inlet at 50,000 BTU/Hour

Description - Unit shall be all standard construction with stainless steel front, sides and top, porcelain enameled steel interior with 29 in. by 28-1/4 in. by 20 in. high inside dimensions, 1 in. solid block insulation and 1 in. thick mineral fibre sheet insulation for 2 in. on insulation on top, back and sides, stainless steel doors with simultaneous operation, removable rack supports capable of holding eleven racks and five chrome plated steel wire racks, electronic ignition with fail-safe controls, solid state manual controls with separate dials for temperature and time settings, timer with buzzer, removable dual tube burners, pressure regulators, two-speed blowers with thermal overload protection and door

interlock, and interior lighting with two halogen bake oven lamps. Provide standard one year parts and labor warranty on the total oven and additional three year warranty on the door assembly, parts only.

Accessories - Provide a stainless steel finished back panel. Mount on 25 in. stainless steel stand with rack guides and casters.

Item F30

FILL FAUCET

Make - T&S Brass B-0610*C166 or equal by Fisher or Encore

Description - Faucet assembly shall be all standard construction with 8 in. centers, 1/2 in. IPS inlets, built-in check valves, vacuum breaker connection for hose, finger hook, all chrome plated, and provided with a 68 in. long polished stainless steel hose with hook nozzle, self-closing valve and retaining ring.

Item F31

SIX-BURNER RANGE WITH OVEN AND BACKSHELF BROILER

Make - Montague 136-5 / SB36-HB*C166 or equal by Vulcan, Garland, or Southbend

Size - 36 in. by 36-5/8 in. by 36 in. high to work surface

Rating - 1 in. rear inlet at 252,000 BTU/Hour

Description - Range shall be all standard construction with three cast iron sections, each containing two individually controlled 30,000 BTU/hour star burners, constant burning pilot burners, removable spillover tray and insulated, porcelain enamelled oven, 26 in. by 28 in. by 15 in. high, complete with throttling thermostatic control, automatic ignition and 100percent safety pilot, weight counterbalanced door mounted in self lubricating bearings, two rack positions, and one nickel plated oven rack. Front panel shall be stainless steel; ends and rear enamelled steel. Mount on 6 in. high adjustable stainless steel legs.

Accessories - Provide a 18 in. high back guard with stainless steel front and ends for receiving mounted broiler, capped manifolds with stainless steel covers on both sides, stainless steel left end panel, stainless steel right end panel, stainless steel back panel. Electronic rangetop pilot ignition and flame failure rangetop safety valves, and electronic oven control. Provide with a mounted SB36-HB salamander broiler, all standard construction per the manufacturers specification, and with stainless steel back panel, stainless steel bottom, and gas interconnect with range.

Item F32

HEAVY DUTY UNDERFIRED BROILER

Make - Montague UFS-30R*C166 or equal by Vulcan, Garland, or Southbend

Size - 30 in. by 32-7/8 in. by 36 in. high to work surface; 41-3/8 in. high overall 24 in. by 24 in. broiling area

Rating - 3/4 in. gas inlet at 95,000 BTU/hour

Description - Broiler shall be all standard construction with stainless steel front, top rail and trim, enamelled sides, and a steel frame with cabinet base. Unit shall have five individually controlled stainless steel burners with stainless steel radiants, reversible cast iron top grate with removable sections, two position adjustable angled top grid, full width drip tray and grease trough with removable container. Burners to have constant burning pilots.

Accessories - Mount unit on casters and provide with stainless steel ends and back panel.

Item F33

GRIDDLE RANGE WITH OVEN AND BACKSHELF BROILER

Make - Montague 136-8 / SB36-HB*C166 or equal by Vulcan, Garland, or Southbend

Size - 36 in. by 36-5/8 in. by 36 in. high to work surface

Rating - 1-1/4 in. manifold inlet at 100,000 BTU/Hour

Rating - 3/4 in. rear inlet at 100 BTU/Hour

Description - Range shall be all standard construction with precision ground steel fry top 36 in. by 28 in. by 3/4 in. thick with 4 in. high welded splash on rear and sides, heated by four thermostatically controlled cast iron burners rated at 15,000 BTU/hour, constant burning pilot burners, removable spillover tray with tall receiver, and insulated, porcelain enamelled oven, 26 in. by 28 in. by 15 in. high, complete with throttling thermostatic control, automatic ignition and 100percent safety pilot, weight counterbalanced door mounted in self lubricating bearings, two rack positions, and one nickel plated oven rack. Front panel shall be stainless steel; ends and rear enamelled steel. Mount on 6 in. high adjustable stainless steel legs.

Accessories - Provide a 18 in. high back guard with stainless steel front and ends for receiving mounted broiler, capped manifolds with stainless steel covers on both sides, stainless steel left end panel, stainless steel right end panel, stainless steel back panel. Electronic rangetop pilot ignition and flame failure rangetop safety valves, and electronic oven control. Provide with a mounted SB36-HB salamander broiler, all standard construction per the manufacturers specification, and with stainless steel back panel, stainless steel bottom, and gas interconnect with range.

Item F34

FRYER ASSEMBLY WITH FILTER DRAWER

Make - Pitco 2-SSH55-SSTC-S/FD*C166

Size - 31-1/4 in. by 34-3/8 in. by 34 in. high to rim

Power - 3.4 amps - 120/60/1 - cord and plug (controls)

7 amps - 120/1 - cord and plug (for filter system)

Rating - 1 in. gas inlet at 160,000 BTU/Hour

Description - Fryers shall be factory assembled into a single unit of all standard construction and shall be complete with stainless steel body, splash, top and fryer pots, blower free atmospheric burner system, self cleaning thermostatically controlled burners and solid state fail-safe thermostats. Mount unit on 10 in. adjustable legs

Accessories - Provide assembly with four twin sized baskets. Provide unit with a built-in filter drawer system, flush hose and provide 100 filter bags. Mount on legs with casters and provide with stainless steel back, and 12 in. reversible splash guard.

Item F35

FLOOR PAN AND GRATE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 20 in. by 36 in. by 4 in. deep inside dimensions; 23 in. by 39 in. overall

Construction - Pan shall be fabricated of 14 gauge stainless steel, all welded construction, pitched to a 4 in. ID drain fitting with stainless steel removable, perforated basket and perforated dome strainer.

Long sides shall be fitted with integral grate support ledges. Provide a model CGF molded fiberglass grate (Chemgrate) with 1 in. by 4 in. pattern, 3/4 in. clear slots and ends finished in accordance with manufacturer's instructions. Grate shall be cut in a manner that closed pockets will not be formed where they rest on the pan ledges.

Item F36

Item F37
No item

Item F38

CHEF'S COUNTER ASSEMBLY WITH DOUBLE OVERSHELF AND LOAD CENTER

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc., or Randell Custom

Size - 21 ft., 6 in. by 54 in. by 34 in. high to top of pick-up side cabinet, 36 in. high to prep side; full length by 23 in. deep double overshelf per elevation with shelves mounted at 56 in. and 68 in. above floor; 15 in. by 18 in. by 10 in. deep integral work sink basin; 10 in. by 14 in. by 10 in. deep integral sink basin

Power - 200 amps circuit - 120/208/3 supply to mounted load center. Panel to be mounted in an accessible location. Panel to be provided with circuit breakers and main disconnect breaker, pre-wired by the Fabricator in accordance with local, national and UL Codes to all counter assembly mounted receptacles and equipment connections.

Description - Pick-up side shall be all standard construction with 14 gauge stainless steel top and basin and 2-5/8 in. nosing, bottom and partial intermediate shelves per elevation and body to be 22 gauge stainless steel with marine edge at front, integrally welded channel bracing, breaker panel located on the end per plan behind hinged access door. Provide opening in shelf below breaker panel for electrical connection from below. Provide 6 in. high stainless steel splash at sides and rear of basin with front edges of ends angled back. Provide top mount drop-in soap dispenser at hand sink, apron at sink with front mount C-fold paper towel dispenser. Prepare partial cabinet section for built-in drawer warmer (Item F50), Mount on 6 in. high stainless steel with adjustable bullet feet. Provide neatly punched holes in the bottom shelf for passage of drain lines from the dipper well, hot well, and soup wells. Legs mounted to full length channel frame assembly integrally welded to bottom of body assembly. Provide cut-outs in top to accommodate dipper well (F47), soup wells (Item F51) and hot well, (Item F52), and front apron at wells for mounting switches and controls. Provide two interior cabinet mounted GFCI receptacles for the soup wells and a NEMA 6-15R receptacle for the hot well, pre-wired back to the main breaker panel.

Sink section (Item F39) shall be all standard construction with 14 gauge stainless steel top and basin, 22 gauge body with bottom shelf, and finished stainless steel exterior end. Legs to be 6 in. high stainless steel with adjustable bullet foot mounted to full length channel frame assembly which is integrally welded to bottom of body assembly. Provide cut-out in bottom shelf with turned down edge and corners welded at floor sink location. Drain cutout must be large enough to access and remove floor sink grates for cleaning and provided with stainless steel cover with slot for drain pipe.

Prep top refrigerator (Item F40) shall be all standard construction with 14 gauge stainless steel top and raised coldwall pan, 18 gauge stainless steel front and exposed end, coved stainless steel interior rear and bottom, and vacuum formed thermoplastic interior ends and jam, two pairs of refrigerated drawers with each drawer capable of accommodating two 12 in. by 20 in. pans, and magnetic drawer gaskets. Top openings shall be complete with anti-freezing pan assist capable of holding eighteen 1/6 size pans and hinged slide back removable cover. Unit shall be insulated with foamed in place polyurethane and provided with self-contained air-cooled refrigeration systems with expansion valve, thermostatic controls and hot gas condensate evaporator, forced air coil and independent pan control, and interior thermometer. Mount refrigeration compartment at right end and pre-wire back to the main breaker panel.

Hot well section (Item F41) shall be all standard construction with 14 gauge top, three individually and thermostatically controlled electrically heated wells, controls for 1100 watt elements mounted on front of 8 in. deep removable stainless steel plate shelf. Connections to heating elements to be located outside of heated zone to avoid wiring deterioration. Individual wells wired to common junction box

and with apron mounted disconnect switch, and pre-wired back to main breaker panel. Provide with deck mount fill faucet. Provide unit with 6 in. high adjustable legs.

Prep top refrigerator (Item F42) shall be all standard construction with 14 gauge stainless steel top and raised coldwall pan, 18 gauge stainless steel front and exposed end, coved stainless steel interior rear and bottom, and vacuum formed thermoplastic interior ends and jam, a pair of refrigerated drawers with each drawer capable of accommodating two 12 in. by 20 in. pans, and magnetic drawer gaskets. Top openings shall be complete with anti-freezing pan assist capable of holding twelve 1/6 size pans and hinged slide back removable cover. Unit shall be insulated with foamed in place polyurethane and provided with self-contained air-cooled refrigeration systems with expansion valve, thermostatic controls and hot gas condensate evaporator, forced air coil and independent pan control, and interior thermometer. Mount refrigeration compartment at left end and pre-wire back to the main breaker panel.

Work top freezer (Item F43) shall be all standard construction with 14 gauge stainless steel top, 18 gauge stainless steel front and exposed end, coved stainless steel interior rear and bottom, and vacuum formed thermoplastic interior ends and jam, two pairs of refrigerated drawers with each drawer capable of accommodating two 12 in. by 20 in. pans, and magnetic drawer gaskets, and drawer heaters with backup elements to prevent gasket freezing. Unit shall be insulated with foamed in place polyurethane and provided with self-contained air-cooled refrigeration systems with expansion valve, thermostatic controls, automatic defrost, condensate evaporator, and interior thermometer. Mount refrigeration compartment at right end and pre-wire back to the main breaker panel.

Overshelf shall be all standard 16 gauge construction, channel reinforced, edges formed in turndown, made to accept heat lamp assemblies below top shelf, and provide with three point of sale printer mounting shelves, each with enclosed 120/60/1 GFCI receptacle and data receptacle with work boxes and stainless steel cover plates. All receptacles shall be mounted below the shelf by the fabricator and pre-wired through uprights back to the load center. Data receptacles shall be pre-wired back to hub mounted in the load center compartment. Leg assembly to consist of square tubular stainless steel uprights and mounted to countertop and raised rails, and provided with chase at one end per elevation for mounting remote heat lamp controls.

Accessories - Deck mounted faucet set and 2 in. lever waste outlet at work sink. T&S Brass B-0325-WH4 deck mount faucet and strainer type drain outlet at hand sink. Provide a drop-in type soap pump adjacent to hand sink. Provide a B-526 drop-in style C-fold paper towel dispenser for mounting in hand sink counter apron. Provide overshelf with three Hatco GRAH-60D heat lamps (Item F45), all with remote infinite controls. Provide refrigerators with optional five year compressor warranty, and Richlite cutting boards. Provide raised rail sections with adapter bars and full complement of stainless steel 1/6 size pans. Provide hot well section with a single pantry fill faucet and a Richlite cutting board. Wells shall be provided with drain outlets factory manifolded with 1 in. diameter line and a gate valve left ready for extending to the floor drain by the Plumbing Contractor.

Item F39

HAND SINK
Specified as part of Item F38

Item F45
HEAT LAMP, SHELF MOUNT
Quantity - Three
Make - Hatco GRAH-60°C166 or equal
Power - 6.7 amps - 1.4 KW - 208/60/1
Description - Warmer shall be all standard construction with extruded aluminum body, prefocused reflector, high wattage tubular heating element, and wire element guard. Mount tight to underside of shelf with standard clips.
Accessories - Provide with remote control enclosure with infinite control and toggle switch for mounting in overself control chase and pre-wired through to counter mounted load center.

Item F46
PIZZA OVEN
Make - Turbochef Fire FRE-9600 or equal
Size - 19 in. by 26-1/2 in. by 22-3/4 in. high on legs
Power - 17.5 amps - 3.7 KW - 208/60/1 - cord and plug (NEMA 6-30P)
Description - Oven shall be all standard construction with powder coated steel exterior, color to be selected by Architect, fits up to a 14-inch diameter pizza, integral catalytic converter for ventless operation, removable bottom access panel, independent top and bottom electronic temperature control, top and bottom convection motors, and six preset timers. Provided with aluminum paddle, and two aluminum pizza screens.

Item F47
DIPPERWELL AND FAUCET
Make - Krowne 16-149 or equal by T&S Brass or Fisher
Description - Dipperwell assembly shall be all standard construction with stainless steel inner and out can with 1-1/2 in. tailpiece, chrome plated brass faucet.

Item F48
POS PRINTER
Quantity - Three
No work in this Section. Item to be provided by Owner.

Item F49

POP-UP TOASTER

Quantity - Two

Make - Hatco TPT-208 or equal by Waring or Toastmaster

Power - 2.6 KW - 12.5 amps - 208/60/1 - cord and plug (NEMA 6-15P)

Description - Toaster shall be all standard construction with stainless steel exterior body, four self-centering 1-1/4 in. wide slots, two individual controls for pairs of slots, removable crumb trays, and bagel selector switches.

Item F50

WARMER, DRAWER TYPE

Make - Wells RW-26 or equal by Alto-Shaam or Hatco

Size - 29-1/4 in. by 21-1/2 in. by 21-1/8 in. high

Power - 3.3 amps - 676 watts - 208/60/1

Description - Warmer shall be all standard construction with stainless steel body, pan support tracks and bearings, individual warming drawers with humidity and thermostatic controls, and two removable 12 in. by 20 in. by 6 in. deep drawer pans.

Item F51

SOUP WELL, DROP-IN

Quantity - Two

Make - Wells SS-10TDUCI-120, or equal by Hatco or Alto-Shaam

Power - 825 watts each - 120/60/1 - cord and plug

Description - Wells shall be all standard construction, fully insulated, built-in circular type with Wellslok and sealing gasket, one-piece, coved corner stainless steel interior, galvanized steel element outer wrap, and provided with a cord and plug, drain outlet, thermostatic controls with off position, power "on" indicator light, and mounting hardware. Mount the controls per details. Manifold pairs of wells into a single 3/4 in. copper drain line fitted with quarter turn ball type drain valve, clean-out, and leave ready for connection by Plumber.

Accessories - Provide with inserts and hinged lids.

Item F52

HOT FOOD WELL, DROP-IN

Make - Wells MOD100TD

Power - 1.24 KW - 208/60/1 - cord and plug (NEMA 6-15P)

Description - Modular food warmer shall be all standard construction and shall consist of a stainless steel mounting frame, gasket and locking system, stainless steel 6 in. deep "wet or dry" hot food well with 1 in. thick fiberglass insulation on five sides enclosed in an aluminized steel enclosure, and a thermostatic control with mounting panel for installation in the counter apron complete with gasket, lead wires encased in flexible armored conduit, drain outlet, and mounting hardware.

Accessories - Provide a quarter turn ball type shut-off valve Fabricator installed 3/4 in. copper drain, complete with cleanout, left ready for extending to the floor drain by the Plumbing Contractor.

Item F53

ICE CREAM DIPPING CABINET

Item F56

ADA COMPLIANT HAND SINK

Make - Advance 7-PS-25 modified or equal by IMC Teddy or Krowne

Size - 20 in. by 24 in. by 13 in. high overall, 14 in. by 16 in. by 5 in. deep sink bowl

Description - Unit shall be all standard stainless steel construction with wall mounting bracket. Mount on wall with rim at 34 in. above floor. Modify faucet holes to be two holes spaced 8 in. apart on center. Delete standard faucet.

Accessories - Deck mounted soap dispenser, 3 in. flat strainer type (non-basket, non-lever) open type waste, chrome plated tailpiece, "P" trap and clean-out cap. Provide stainless steel welded splash on right end.

Item F56a

FAUCET

Make - T&S Brass B-0322-04 modified or equal by Fisher or Encore

Description - Unit shall be all standard construction with deck mounted mixing body, 8 in. center inlets, and wrist blade handles. Modified unit shall be provided with B-0199-02F-12 aerator tip in lieu of the standard.

Item F57

WASTE BIN

No work in this Section. Item to be provided by Owner.

Item F58

WALL SHELF

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 66 in. by 12 in. mounted 54 in. above floor

Construction - Wall shelf shall be fabricated of 16 gauge stainless steel with back and ends raised 1-1/2 in., front edges of ends angled back, all corners broken, and front turned down 1-1/2 in., and in 1/2 in. at 45 degrees. Shelf corners shall be welded, ground and polished. Mount shelf 1 in. off face of wall with suitable fasteners on 14 gauge stainless steel flag brackets, 48 in. on center maximum. Flag brackets shall have a web angle of 30 degrees measured from horizontal.

Item F59

PREP TABLE WITH SINKS

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 9 ft., 0 in. by 30 in. by 36 in. high to work surface plus 10 in. high splash at rear; two 18 in. by 20 in. by 10 in. deep integral sink basins

Construction - 14 gauge stainless steel top, basins and splash, channel reinforced, six legs with gussets and adjustable feet, partial undershelf, two crossrails, tall splash rear, and marine front and ends, secured 3 in. off face of wall.

Accessories - Drawer assembly, splash mounted faucet set and two 2 in. lever waste outlets.

Item F60

WASTE BARREL

Quantity - Two

No work in this Section. Item to be provided by Owner.

Item G01

CAFE COUNTER

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 9 ft., 6 in. by 39 in. plus a 7 ft., 3 in. by 33 in. back wall extension and a 21 in. by 33 in. cashier extension by 34 in. high plus 4 in. high splash at walls

Power - 20 amps circuit - 120/60/1 to each of five two duplex receptacles

20 amps circuit - 120/60/1 to body mounted NEMA L5-15R at display case end

Construction - Top shall be 1-1/4 in. Quartz over a 3/4 in. marine grade plywood substrate and mounted on a stainless steel cabinet base of box type construction with bottom shelf, open sections at undercounter equipment, partial intermediate shelves per elevations, double pan stainless steel hinged doors on front with full width folded top pulls and locks, and mounted on 6 in. high adjustable legs. Provide cutouts in top for undermount sinks, and neat hole for utility passage at the ice dispenser. Secure to wall and seal. Provide cut-out in bottom shelf with turned down edge and corners welded at floor sink location. Drain cutout must be large enough to access and remove floor sink grates for cleaning and provided with stainless steel cover with slot for drain pipe. Provide two-piece adjustable stainless steel angle kick on front and exposed end with one angle mounted to bottom under the base, with 12 in. openings at all legs for leveling access, for securing second angle to extend to floor, and designed for adjustability at uneven floors.

Quartz counter top (to be selected by Architect) with marine grade plywood substrate

Counter tops: Superior Marble and Granite LLC (Middleton, Ma)

Description - Stone counter top to be provided per details with color selected by the Architect. The edge details/treatments shall be supplied in accordance with the counter details. Supply tops with Superior Marble and Granite model number SMGW2 (two-year warranty on all seams). Supply with model SMGEZCUT where all cut outs to be insulated and prepared to receive equipment drop-ins. Cutouts where appropriate shall receive model (ProtectX232) flanges.

Plastic Laminate panel fronts and cashier extension end shall be provided with color/pattern per drawing details and Architectural finish schedule. Comply with NEMA LD-3 for type, thickness, color, pattern and finish indicated for each application, or if not indicated, as selected by Architect from manufacturer's premium product selection.

Item G02

WASTE BIN

Make - Rubbermaid FG295700GRAY

Item G03

PAPER TOWEL DISPENSER, DROP-IN

Make - Bobrick B-526

Description - Unit shall be all standard construction per the manufacturer's specification.

Item G04

UNDERMOUNT HAND SINK WITH FAUCET AND SOAP DISPENSER

Make - Advance Tabco 1014B-05 or equal by Fabricator

Size - 12-1/2 in. by 16-1/2 in. overall, sink bowls shall be 10 in. by 14 in. by 5 in. deep

Description - Unit shall be all standard single basin construction formed from 20 gauge stainless steel with sound deadening.

Accessories - Provide with T&S Brass B-0325-WH4 deck mount faucet with wrist blade handles, Bobrick B-823 soap pump dispenser, and an open type free-flow drain assembly with strainer plate.

Item G05

COFFEE BREWER

No work in this Section. Item to be provided and installed by Owner's Vendor.

Item G06

PRE-RINSE UNIT WITH ADD-ON FAUCET

Make - T&S Brass MPJ-8CLN-08-CR or equal by Fisher or Encore

Description - Pre-rinse sprayer shall be all standard construction with deck mounted mixing body, tubing riser, spring action gooseneck, wall bracket, add-on faucet with 8 in. swing nozzle, and a B-107-J water saver pre-rinse spray.

Item G07

UNDERMOUNT WORK SINK

Make - Advance Tabco 1620A-10 or equal by Fabricator

Size - 18-1/2 in. by 22-1/2 in. overall, sink bowls shall be 16 in. by 20 in. by 10 in. deep

Description - Unit shall be all standard single basin construction formed from 18 gauge stainless steel with sound deadening and one 1-1/2 in. basket drain.

Accessories - Provide with mounting hardware and basket drain assembly

Item G08

HOT WATER DISPENSER

Make - Bunn H5X Element SST or equal by Curtis or Bloomfield

Power - 19.5 amps - 4.0 KW - 208/60/1

Description - Hot water dispenser shall be all standard construction with stainless steel exterior, insulated tank, digital temperature control (from 608 degrees to 212 degrees Fahrenheit), and LED display.

Item G09

ICE DISPENSER, MANUAL FILL

Make - Servend M-90 or equal by Scotsman or Manitowoc

Size - 15 in. by 28 in. by 32 in. high

Capacity - 90 pounds

Power - 2.5 amps - 120/60/1 - cord and plug

Description - Ice dispenser shall be all standard construction with stainless steel exterior, plastic drain tray with grate and drain outlet, molded plastic ice bin with full insulation, removable front for access to all controls and mechanism, paddle wheel dispensing mechanism with breaker bar, ice control gate, and cup operated dispenser lever.

Item G10

TRASH BIN

No work in this Section. Item to be provided by Owner.

Item G11

ESPRESSO MACHINE

No work in this Section. Item to be provided by Owner's Vendor.

Item G12

REFRIGERATOR, UNDERCOUNTER

No work in this Section. Item to be provided by Owner.

Item G13

CASHIER TERMINAL

No work in this Section. Item to be provided by Owner.

Item G14

REFRIGERATED SERVICE CASE

No work in this Section. Item to be provided by Owner.

Item G15

NON-REFRIGERATED SERVICE CASE

No work in this Section. Item to be provided by Owner.

Item G16

Item G18

REFRIGERATOR, REACH-IN

Make - Victory RSA-1D-S1-HD-HC or equal by Continental or Turbo Air

Power - 6.5 amps - 1/3 HP - 120/60/1 - cord and plug

Capacity - 22.9 cubic feet

Doors - Half height, hinged on left

Certification - Unit shall be Energy Star compliant

Description - Unit shall be all standard construction with stainless steel exterior, and aluminum interior.

Unit shall include automatic interior LED lighting with proximity door switch, condensate evaporator, self-closing cam lift door hinges, automatic energy saver switch, plasticized fin coil, stainless steel interior door liners, non-conductive thermal breaker strips, and electronic microprocessor control system with exterior LED display. Refrigeration shall be a self-contained, air cooled system with R-290 refrigerant, interior temperature governed by an adjustable pre-set control, supercool mode feature with a lower "set-point" refrigeration condition for a set period of time, and automatic energy saving mode which reverts when there are no door openings for four hours. Unit shall be provided with HACCP compliant monitoring and reporting system with Wi-Fi communication.

Accessories - Mount on 6 in. high casters.

Item G19

WAIT STATION COUNTER

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML

Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - Approximately 10 ft., 1 in. by 33 in. plus a 15 in. by 30 in. extension at refrigerator end and a 20 in. by 20 in. extension at cashier end by 36 in. high plus 6 in. high splash at walls

Construction - 14 gauge stainless steel top and splash over angle frame and mounted on a stainless steel cabinet base of box type construction with bottom shelf, adjustable intermediate shelves per elevations, double-pan stainless steel hinged door front with locks and full width horizontal folded top pull, and mounted on 6 in. high adjustable legs. Secure to wall and seal. Provide two-piece adjustable stainless steel angle kick on front and ends with one angle mounted to bottom under the base with 12 in. openings at all legs for leveling access, and for securing second angle to extend to floor. Front edges of top shall be formed in a turndown, and rear and ends formed in short splash with finished exterior end at refrigerator.

Item G20

WALL CABINETS

Quantity - Three

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 36 in. by 15 in. by 24 in. high at front face; 28 in. high overall; mount 18 in. above countertop

Construction - 18 gauge stainless steel body and shelves, adjustable intermediate shelf, sloped top, double-pan stainless steel door front with locks.

Item G21

WARMER, DRAWER TYPE

Make - Wells RW-26 or equal by Alto-Shaam or Hatco

Size - 29-1/4 in. by 21-1/2 in. by 21-1/8 in. high

Power - 3.3 amps - 676 watts - 208/60/1

Description - Warmer shall be all standard construction with stainless steel body, pan support tracks and bearings, individual warming drawers with humidity and thermostatic controls, and two removable 12 in. by 20 in. by 6 in. deep drawer pans.

Item G22

CASHIER TERMINAL

No work in this Section. Item to be provided by Owner.

Item H01

ICE MAKER WITH BIN

Quantity - Two

No work in this Section. Item to be provided by Owner.

Item H02

REFRIGERATED ROOM

Make - American Panel or equal by Bally or Thermo-Kool

Size - 6 ft., 1-1/2 in. by 5 ft., 2 in. by 7 ft., 10 in. high minimum inside dimensions

Power - 1.3 KW - 120/60/1 to light fixtures, temperature monitor/alarm, door defrost heater strip, and pressure relief port

Installation - The refrigerated room shall be complete with reinforced insulated floor installed directly on the sub floor prepared by the General Contractor prior to installation of the finished floor and sealed thereto. The freezer shall be provided with finished interior ramp. The ramp edge shall be held up the thickness of the adjacent finished floor and setting bed to provide a flush transition. The finished floor and setting bed shall be furnished and installed by the General Contractor, and shall have coved joints at all exposed exterior walls, turned up a minimum of 4 in.

Construction - All standard construction per the manufacturer, modified to meet the specific following points:

- Walls to be 4 in. thick with CFC free urethane foam insulation, UL Class 1 rated
- Cam type locking devices
- 34 in. by 80 in. minimum door clearance
- Polished hardware (hinges and latch to match)
- Three hinges on doors (to include one Kason 1248 spring assist hinge per door)
- Leveraged pull handle (mechanical advantage type, Kason 1236 or equal)
- Quarter turn inside safety release lever handle mechanism (not screw type)
- Prewired door sections with heater wires and light fixtures and switches
- Kason 1806 LED light fixtures or Kason 1808 LED light fixtures
- Dial type thermometers at doors

- Model IC+ (with dry contacts) temperature and HACCP monitoring system at doors.
- NSF construction throughout
- Interior and exterior faces of doors and exposed exterior walls shall be provided with aluminum diamond tread plate protective material to a height of 48 in. above finished floor. Hold diamond plating up 6 in. from the finish floor to accommodate the coved base.

Minimum materials - Interior and exterior wall surfaces shall be clad with .038 in. pebble finished aluminum. The ceiling shall be finished in white polyester over 24 gauge galvanized steel. Interior floor and ramp shall be 16 gauge diamond embossed aluminum over 3/4 in. thick marine plywood and insulation with a total thickness not to exceed 4 in.

Accessories - Room shall be provided with an electrically heated pressure relief port. Door shall be provided with a heated vision panel, 14-1/2 in. by 23 in. constructed of three panels of tempered unbreakable glass, electrically heated, with sealed air spaces between. Provide one total extra Kason 1806 LED OR Kason 1808 LED light fixtures for mounting in the rooms and deliver to Electrical Contractor for field installation.

Guarantee - The walk-in refrigerated room panels shall be guaranteed for a period of ten (10) years from the date of approved installation for defects in materials and workmanship when subjected to normal use and service; remainder of rooms for one year.

Item H03

MECHANICAL REFRIGERATION SYSTEM

Quantity - Two

Make - Heatcraft, Bohn, Larkin, Climate Control, Chandler

Scope - Furnish and install complete refrigeration systems for the walk-in refrigerated rooms in accordance with the plans. The systems shall include condensing units, evaporator coils, piping, all specified accessories, and those components required to provide complete and satisfactory systems in accordance with accepted refrigeration practice.

Important: The installation work shall be performed by a fully qualified refrigeration contractor employing a certified mechanic fully trained in the installation of commercial refrigeration systems. Submittal shall list the installing company and the qualified system installer.

Piping - Furnish and install the interconnecting piping between the condensing units and their respective unit coolers. Piping shall be installed in a neat and workmanlike manner with adjustable hangers spaced at no more than ten foot intervals on horizontal runs; six foot intervals, vertical runs.

Line sizes shall be in accordance with ASHRAE standards and best refrigeration practice to assure proper feed to evaporator, avoid excessive pressure drop, and prevent excessive amounts of lubricating oil from being trapped in any part of the system. Line sizing shall be such that it will protect the compressor from loss of lubrication at all times, prevent liquid refrigerant from entering the compressor during operating or idle time, and maintain a clean and dry system.

Refrigeration piping shall be Type L, ACR grade, hard drawn seamless copper tubing, wrought type copper fittings, and silver soldered joints. Precharged lines are not acceptable.

Furnish and install sleeves for refrigerant and evaporator drain piping wherever piping passes through a wall or ceiling. Sleeves shall be non-conductive gray plastic tubing, with interior dimension sized at least 1/4 in. larger than piping, and shall be neatly packed with brine putty after installation.

Furnish and install condensate drain piping from the unit cooler to an open drain. Piping shall consist of not less than 7/8 in. Type L copper tubing, supported 36 in. on center maximum, in such a way that there will be 1 in. clearance between the wall and the tubing. Provide a union or slip fitting at the connection to the evaporator drain pan to allow easy disassembly for service and cleaning. Drain piping shall be pitched 4 in. to the foot and carried through the wall of the refrigerated area. It shall be

trapped to prevent entry of warm air and insects to the refrigerated rooms and discharged to a floor drain with the code required air gap. The exposed drain piping shall be spray painted.

Provide an electric drainline heater tape in the freezer, with a length equal to five wraps per foot of length of the drainline located within the freezer compartment. Wrap and secure in accordance with manufacturer's recommendations.

Provide chrome plated escutcheon plates at all exposed points where piping penetrates the wall or ceilings.

Insulation - Suction lines for refrigerated rooms having a temperature above freezing shall be covered with 3/4 in. wall thickness closed cell HT Armaflex insulation with ultra violet radiation protection.

Suction lines for refrigerated rooms having a temperature below freezing shall be covered with 1 in. wall thickness closed cell HT Armaflex insulation with ultra violet radiation protection.

The insulation shall be applied to these lines in accordance with manufacturer's recommendations, and as they are being installed so that insulation will not be split. All joints shall be completely sealed with overlapping, cemented material to prevent the formation of frost on the lines.

Controls - Each evaporator shall be provided with an iNtelliGen electronic control as manufactured by Heatcraft Refrigeration. Provide each system with a pair of twisted 24 gauge low voltage wires, Belden 9841 or equal. Wires shall be installed by the Controls Contractor. Wires shall run from the dry contacts at the evaporators to the access control panel. Kitchen Equipment Contractor to verify length prior to purchasing. To avoid false triggering, provide a shielded two-conductor cable with the shield connected to the receiving equipment. The time clock and heater contactor shall be removed from the condensing unit. No control wiring will be required from evaporator to the condensing unit.

Refrigerant Testing - The entire system shall be pressure and leak tested at no less than 100 PSIG, cleaned and dehydrated by maintaining a vacuum of 500 microns or lower for a period of twelve hours. The required operating charge of refrigerant and oil, if necessary, shall be added and the entire system tested for performance. Each system shall be clearly marked as to the type refrigerant required.

Guarantee - The equipment shall be guaranteed to maintain the specified temperatures. All mechanical refrigeration equipment shall be mechanically guaranteed for a period of one year after date of acceptance by the Owner. The emergency service shall be provided free of charge, whenever necessary on a 24 hour, seven day-per-week basis during the guarantee period.

Any leaks that occur during the first year of operation after acceptance by the Owner, shall be repaired and the necessary refrigerant added at no expense to the Owner.

The year's service shall be provided by the installing company, and under no circumstances will the service policy be sublet to another refrigeration contractor. The name of the installer/service agency for the guarantee period shall be located at a prominent place on the condensing units.

The condensing units shall be provided with an additional four year parts warranty to commence upon the completion of the aforementioned guarantee, bringing the total parts warranty to five years.

Condensing Units - The condensing units shall consist of an EC energy saving motor with variable speed controller, compressor, refrigerant condenser, liquid receiver, compressor service valves, and a dual high-low pressure control. The units shall be as manufactured by Heatcraft Refrigeration.

The condensing units shall be outdoor type, wall mountable, and quiet type with an approximate 51 to 63 decibel rating at 100 percent fan speed. The compressor shall be Microchannel Coil Technology scroll type per schedule, and fitted with gold coated aluminum fin condenser, suction service valve, discharge service valve, compressor contactor, high and low pressure controls, receiver with fusible plug, liquid shut-off valve and charging port, mounted non-fused disconnect switch, waterproof electrical control box, discharge line vibration eliminator, weather resistant UL painted steel cabinet, access guard, liquid line assembly, suction line filter and vibration eliminator, crankcase heater, and 1-1/2 in. high raised steel base.

Mount per plan on minimum 18 in. high stands.

Evaporator Coils - Each evaporator shall be provided with iNtelliGen electronic control as manufactured by Heatcraft Refrigeration, thermostatic expansion valve, and solenoid valve. The time clock and heater contactor shall be removed from the condensing unit. No control wiring will be required from evaporator to the condensing unit. iNtelliGen Controls to include iIC integration card for BMS connection direct to evaporator controls.

The freezer shall be provided with an automatic electric defrost system consisting of one evaporator coil as indicated in the schedule. Evaporator shall be low profile type six fins per inch complete with variable speed EC energy saving fan motors with controller. Coil shall be NSF and UL Listed.

The cooler shall be provided with one evaporator coil as indicated in the schedule. Evaporator shall be low profile type six fins per inch complete with EC energy saving fan motors. Coil shall be NSF and UL Listed.

Furnish and install 1/4 in. minimum diameter stainless steel threaded mounting rods for the hanging of the evaporator coils, with stainless steel washers and nuts on the interior ends, and reinforcing angle at the exterior top of the room. Plated steel running thread is not acceptable.

Refrigeration Equipment Schedule

Cooler (H02)	Room Temp: +35 degrees F			TD: 10 degrees F	
<u>Condensing unit (H03a)</u>	<u>Amps</u>	<u>Ref</u>	<u>BTU/hour</u>	<u>Evap Temp</u>	<u>Cond Temp</u>

Item H03a

COOLER REMOTE CONDENSING UNIT

Specified as part of Item H03

Item H03b
COOLER EVAPORATOR COIL
Specified as part of Item H03

Item H03c
FREEZER REMOTE CONDENSING UNIT
Specified as part of Item H03

Item H03d
FREEZER EVAPORATOR COIL
Specified as part of Item H03

Item J01
STORAGE SHELVING, FIVE-TIER
Quantity - Two
Make - Metro Super Adjustable Super Erecta or equal by ISS or Cambro
Size - 48 in. by 21 in. by 74-5/8 in. high; five tier with bottom shelf up 14 in. clear above floor
Description - Unit shall be all standard construction with Super Adjustable Chrome plated wire shelves and tubular steel uprights with capped tops, adjustable feet, and 1 in. shelf height adjustment capability with Corner Release System. Each unit shall include four legs.

Item J02
MOBILE HOT FOOD HOLDING CABINET
Make - Food Warming Equipment MTU-12*C166 or equal by Vulcan or CresCor
Size - 29-3/4 in. by 30-1/4 in. by 69 in. high
Power - 13.85 amps - 16.5 KW - 120/60/1 - cord and plug
Certification - Unit shall be Energy Star compliant
Description - Cabinet shall be all standard construction with stainless steel interior and exterior, stainless steel base frame with tubular perimeter and 10 gauge stainless steel reinforcing plates at corners, high density fiberglass insulation on all sides, flush mounted door with high temperature gasket mounted on the cabinet, edge mounted heavy duty hinges and latch, twelve pair of removable universal chrome plated and epoxy coated rod type pan slides capable of supporting 18 in. by 26 in. or 12 in. by 20 in. pans on 4-1/2 in. centers, mounted thermometer, recessed controls, thermostatically controlled system with separate heat and humidity controls, air distribution blower and removable stainless steel reservoir, and 10' cord set and cord storage loop. Mount on 5 in. diameter plate mounted polyurethane tired casters; two swivel, two rigid. Provide with two year warranty.
Accessories - Provide unit with see-thru Lexan Dutch doors, perimeter vinyl bumper and push/pull handles.

Item J03
FROZEN NOVELTY CHEST FREEZER
Make - Beverage-Air NC43-1-W or equal by True or Master-Bilt
Size - 42-3/4 in. by 25 in. by 36 in. high
Power - 4.8 amps - 120/60/1 - cord and plug
Capacity - 8.7 cubic feet
Description - Display freezer shall be all standard construction with painted steel insulated cabinet, rounded exterior edges, angle top design with Low-e tempered glass sliding lids, removable lids, integrated lid stop, thermometer, baskets and divider, lid lock and keys, bottom cabinet drain with plug, self-contained refrigeration system, dual cap tube design, static skin condenser, and mounted on heavy duty casters.

Item J04

REFRIGERATOR, REACH-IN, GLASS DOOR

Make - Victory RSA-2D-S1-HC-GD, or equal by Continental or Turbo Air

Power - 6.5 amps - 1/3 HP - 120/60/1 - cord & plug

Size - 52-1/8 in. by 33-5/8 in. by 84-1/4 in. high

Capacity - 44.5 cubic feet

Doors - Full Height, standard hinging

Certification - Unit shall be Energy Star compliant

Description - Unit shall be all standard construction with stainless steel interior and exterior. Unit shall include automatic interior LED lighting with proximity door switch, condensate evaporator, self-closing cam lift door hinges, automatic energy saver switch, plasticized fin coil, glass doors with vertical low profile handles, non-conductive thermal breaker strips, and electronic microprocessor control system with exterior LED display. Mount on 6 in. high stainless steel adjustable legs. Refrigeration shall be a self-contained, air cooled system with R-290 refrigerant, interior temperature governed by an adjustable pre-set control, and automatic energy saving mode which reverts when there are no door openings for four hours. Unit shall be provided with HACCP compliant monitoring and reporting system with Wi-Fi communication.

Accessories - Provide unit mounted on 6 in. high casters. Provide with four additional shelves, and optional four year compressor warranty.

Item J05

REFRIGERATOR, REACH-IN

Make - Victory RSA-2D-S1-HD-HC, or equal by Continental or Turbo Air

Size - 52-1/8 in. by 35 in. by 84-1/4 in. high overall

Power - 6.5 amps - 1/3 HP - 120/60/1 - cord and plug

Doors - Half height, standard hinging

Certification - Unit shall be Energy Star compliant

Description - Refrigerator shall be all standard construction with stainless steel exterior, aluminum interior, self-closing door hardware with a hold-open at 120 degrees, Humidity control wires around the door jamb, automatic LED interior lighting, exterior digital thermometer, heavy duty epoxy plated wire shelves adjustable in one inch increments, self-contained top mounted refrigeration system capable of maintaining a 33 degrees to 38 degrees temperature range with Secure-Temp 1.0 temperature monitoring technology, R-290 refrigerant, and condensate evaporator.

Accessories - Provide two shelves in the top half and two shelves in the bottom half. Provide unit mounted on 6 in. high casters.

Item J06

MOBILE WORK TABLE

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 60 in. by 30 in. by 36 in. high

Construction - 14 gauge stainless steel top over angle frame with edges formed in turndown and mounted on four legs with gussets, 5 in. diameter swivel casters, two with brakes, and full undershelf.

Accessories - Drawer assembly.

Item J07

THREE-COMPARTMENT SINK WITH PRE-RINSE SPRAY

Make - Advance K7-CS-21, Eagle, Aero, or an approved equal

Size - 58 in. by 19-1/2 in. by 34 in. high to drain board plus 8 in. high rear splash, 2-1/2 in. high raised open roll on three sides; three 10 in. by 14 in. by 10 in. deep integral sink basins

Description - Sink shall be all standard stainless steel construction with stainless steel legs with gussets adjustable feet, and crossrails.

Accessories - Provide unit with three lever waste outlets and a T&S Brass MPZ-8WLN-08 pre-rinse spray with add-on faucet and modified with a B-107-J spray valve.

Item J08

WALL SHELF

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 60 in. by 10 in. mounted 54 in. above floor

Construction - Wall shelf shall be fabricated of 16 gauge stainless steel with back and ends raised 1-1/2 in., front edges of ends angled back, all corners broken, and front turned down 1-1/2 in., and in 1/2 in. at 45 degrees. Shelf corners shall be welded, ground and polished. Mount shelf 1 in. off face of wall with suitable fasteners on 14 gauge stainless steel flag brackets, 48 in. on center maximum. Flag brackets shall have a web angle of 30 degrees measured from horizontal.

Item J09

HAND SINK WITH FAUCET

Make - Advance 7-PS-70-CM*C166 or equal by Krowne or IMC/Teddy

Description - Unit shall be all standard stainless steel construction with mounting bracket. Mount on wall with rim at 36 in. above floor

Accessories - Provide with a splash mounted faucet set with wrist handles (Item J09a), 3 in. flat strainer type (non-basket, non-lever) open type waste, chrome plated tailpiece, "P" trap and clean-out cap.

Item J09a

FAUCET

Make - T&S Brass B-0330-04 modified or Fisher 1953 modified

Description - Units shall be all standard construction with mixing body, 8 in. center inlets, and wrist blade handles. Modified unit shall be provided with a B-0413 swivel to rigid adapter, and a 119X gooseneck with B-0199-02-F10, 1.0 gallons per minute aerator tip in lieu of the standard.

Item J10

WASTE BIN

No work in this Section. Item to be provided by Owner.

Item J11

CONCESSIONS TABLE WITH SINK

Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, SML Stainless Steel Group, LTI Low Temp Industries, or Julien Inc.

Size - 18 ft., 6 in. by 28 in. plus 32 in. by 30 in. sink extension by 34 in. high plus 4 in. high partial splash at walls; 15 in. by 18 in. by 10 in. deep integral sink basin

Construction - 14 gauge stainless steel top, basin and splash, stainless steel channel reinforced, fourteen legs with gussets, adjustable feet, two lengths of crossrail, and two partial undershelves. Secure to wall and seal. Provide neatly punched grommets hole for cable passage at Item J12. Rear shall be formed in short splash at walls, terminating at roll-down shutter tracks remaining rear edge formed in turndown at pass-thru opening; front and ends formed in turndown. Verify and coordinate counter

height with pass-thru sill height. Counter top should be flush with sill and sealed. Pass-through sill and roll-down shutter shall be provided and installed by General Contractor.

Item J12

CASHIER TERMINAL

No work in this Section. Item to be provided by Owner.

Item J13

WASTE BIN

No work in this Section. Item to be provided by Owner.

PART 3 - EXECUTION

3.1 SANITATION REQUIREMENTS

- A. Equipment specified herein shall be fabricated to conform to the "Food Service Equipment Standards" of the National Sanitation Foundation prepared by the Committee on Food Service Standards, and published by the National Sanitation Foundation, Ann Arbor, Michigan. Any differences of opinion on sanitation will be referred to the State Department of Health for a ruling.
- B. Equipment shall be installed in accordance with the manufacturer's instructions and the best practices of the food service industry, with careful attention to eliminating all cracks, crevices and concealed spaces in wet areas that would be difficult to clean or keep free of vermin and soil.

3.2 EXAMINATION AND ACCEPTANCE

- A. Determine whether the General Contractor will furnish and provide temporary power and light, openings and storage space to permit scheduled delivery of equipment. Verify water pressure and provide necessary reducing valves.
- B. Examine space in which specified work is to be installed to assure that conditions are satisfactory for the installation of specified work. Report in writing to the Architect, any deficiency in the work of other contractors affecting specified work. Commencement of specified work will be construed as acceptance of space conditions.
- C. Obtain and verify all measurements and conditions on the job, and assume responsibility in respect to same.
- D. Inspect flooring and raised concrete bases, wall finishes, painting, ceiling installation and all related work for readiness to commence installation of foodservice equipment. Verify the existence of required mechanical and electrical rough-ins.

3.3 CLEANING UP

- A. Debris and surplus materials resulting from installation work shall be removed promptly as work progresses, to a location indicated by the General Contractor.
- B. Following completion, and before final acceptance by the Owner, clean finished surfaces in accordance with the manufacturer's instructions, and leave specified work free of imperfections.

3.4 DEMONSTRATION AND OPERATING INSTRUCTIONS

- A. Before final acceptance, and by appointment with the Owner and his representatives, completely demonstrate with power, the correct operation of each new item of operating equipment.
- B. Prior to the demonstration, turn on all mechanical and electrical foodservice equipment. Test for leaks, poor connections, and inadequate or faulty performance and correct if necessary. Adjust for proper operation. Thermostatically controlled equipment and equipment with automatic features shall be operated for a sufficient length of time with proper testing equipment to prove controls are functioning as intended. Recalibrate thermostats if necessary.
- C. Provide Architect or Consultant with a loose leaf bound manual of operating data and maintenance instructions containing complete description, wiring diagrams, operating data, maintenance requirements and other information pertaining to the proper operation and upkeep of the various items of electrical or mechanical equipment. Include names, addresses and telephone numbers of authorized service agencies for all items. Arrange all material in alphabetical order by Manufacturer. Provide with a list of equipment to include make, model, and serial number where applicable. Book shall be turned over to Owner after review and approval.
- D. Submit guarantees and warranties to the Architect in the above specified manual with all warranty cards completed and becoming effective at the time the equipment was satisfactorily demonstrated.

3.5 PROTECTION OF WORK

- A. Protect specified work from damage during transportation to the project site, storage at the site, during installation, and after completion until acceptance by the Owner.
- B. Protect adjacent work under other contracts during installation until completion of specified work. After completion, the contractor for other work shall be responsible for the protection of his work until acceptance by the Owner.
- C. Damaged work as determined by the Architect, shall be repaired or replaced as determined by the Architect.

3.6 EXISTING EQUIPMENT

- A. Foodservice equipment that is scheduled for reuse shall be removed and stored in a location provided by the General Contractor on site. This Contractor shall provide transportation of equipment.
- B. Verify and document the operating condition of all relocated equipment prior to its being disconnected. Document the condition of the equipment to note any dents, scratches, broken components or other damage prior to placing it in storage. Protect equipment during transport and storage, and assume responsibility for its re-installation in the condition viewed prior to removal. Transport and install the equipment in accordance with Item Specifications.
- C. This Contractor is not responsible for refurbishing equipment noted as "Existing" on plans or specifications unless work is specifically called for in the Item Specifications.

- D. Disconnecting and reconnecting of services to "Existing" equipment shall be performed by related trades.
- E. This Contractor shall restart all existing equipment following its reconnection to building services and verify its correct operation as viewed prior to removal.
- F. This Contractor shall not provide a warranty or guarantee on "Existing" equipment. In the case of a new component being provided by this Contractor for an "Existing" piece of equipment, the component shall be warranted or guaranteed as specified hereinbefore.
- G. Foodservice equipment that is scheduled for reuse must be verified for NSF certification.
- H. Foodservice equipment that is scheduled for reuse and that requires plumbing and/or gas fitting work performed in the Commonwealth of Massachusetts, must be Board of State Examiners of Plumbers and Gas Fitters approved.

END OF SECTION

SECTION 114500
RESIDENTIAL APPLIANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this section.
- B. Related Sections:
 - 1. Section 123000 – Manufactured Casework
 - 2. Sections within Division 22 and 23 – Plumbing and HVAC for service fixtures, service waste lines, connections, and vents.
 - 3. Sections within Division 26 – Electrical

1.2 SUMMARY

- A. Section Includes:
 - 1. Cooking appliances.
 - 2. Refrigeration appliances.
 - 3. Clothes washers and dryers

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include installation details, material descriptions, dimensions of individual components, and finishes for each appliance.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
 - 3. Show left-handed and right-handed appliance door opening as indicated on drawings.
- B. LEED Submittals:
 - 1. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED V4 Green Building Rating System, of the US Green Building Council. Refer to 018113.23 SUSTAINABLE DESIGN REQUIREMENTS - LEED FOR SCHOOLS for certification level and certification requirements.
 - 2. Product Data for: For appliances indicated, documentation that products are ENERGY STAR rated.
- C. Product Schedule: For appliances. Use same designations indicated on Drawings.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Manufacturer.

- B. Product Certificates: For each type of appliance.
- C. Field quality-control reports.
- D. Sample Warranties: For manufacturers' special warranties.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each residential appliance to include in operation and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Maintains, within 100 miles of Project site, a service center capable of providing training, parts, and emergency maintenance repairs.
- B. Certification Labels: Provide residential appliances which complies with standards and bears certification labels as follows:
 - 1. Energy ratings: Provide energy guide labels with energy cost analysis (annual operating costs) and energy information required by Federal Trade Commission.
 - 2. UL Standards: Provide residential equipment with UL labels.

1.7 WARRANTY

- A. Special Warranties: Manufacturer agrees to repair or replace residential appliances or components that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Appliances: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Accessibility: Where residential appliances are indicated to comply with accessibility requirements, comply with applicable provisions in the DOJ's 2010 ADA Standards for Accessible Design and ICC A117.1.

2.2 COOKTOP

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. General Electric Company (GE Appliances).
 - 2. KitchenAid: a division of Whirlpool Corporation.
 - 3. Summit Appliance
 - 4. Bosch Appliances
 - 5. Samsung Appliances

B. Cooktop (CT-1): Basis of design, General Electric, "JP5030SJSS

1. Type: Four radiant smooth top
2. Dimensions:
 - a. Width: 30 inches
 - b. Depth: 21 inches
 - c. Height: 5-1/2 inches
3. Cook burner type: Four elements, (2) 7" elements, and (1) 6" elements, (1) 9"/6" Power Boil element.
4. Cooktop Surface: Black ceramic glass
5. Controls: Electronic touch, front center location.
6. Features:
 - a. ADA Compliant
 - b. Heating element "ON" indicator light
 - c. Control safety lock.
7. Appliance Color/Finish: Stainless steel on black.

2.3 EXHAUST HOOD

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Air King Ventilation Products
2. Broan-NuTone, LLC
3. KitchenAid: A division of Whirlpool Corporation

B. Ductless Exhaust Hood with Charcoal Filter (EH-1): Basis of design – Air King Ventilation Products, "ES368ADA"

1. Dimensions:
 - a. Width: 36 inches
 - b. Depth: 20 inches
 - c. Height: 7-1/2 inches
2. Motor/Blade: Fully enclosed PSC 4 pole motor. 2 Speed, thermally protected, permanently lubricated. Polymetric axial fan blade 9-1/8" diameter with 7 paddles.
3. Controls: Cabinet mounted dual rocker switch with plate, white finish.
4. Lighting: Include 8 Watt GU24 base LED lamp and 4 Watt night light with a bulb.
5. Ductless: Removable front vent.
6. Filters: Charcoal Filter; CF-01
7. Feature: ADA Compliant.
8. Appliance Finish: Stainless Steel.
9. Energy Performance: Provide appliances that qualify for the EPA/DOE ENERGY STAR product-labeling program.

2.4 MICROWAVE OVENS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. General Electric Company (GE Appliances).
2. KitchenAid: a division of Whirlpool Corporation.
3. LG Electronics.
4. Samsung.

B. Microwave Oven (MW-1): Basis of design, GE Appliances, "PEM31SFSS"

1. Type: Conventional.
2. Dimensions:
 - a. Width: 24 inches.
 - b. Depth: 12-7/8 inches.
 - c. Height: 12-1/8 inches.
3. Capacity: 1.1 cu. ft.
4. Features:
 - a. ADA Compliant
 - b. Child safety lock
5. Controls: Electronic touch controls and timer display.
6. Material: Stainless steel.

2.5 REFRIGERATOR/FREEZERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. General Electric Company (GE Appliances).
2. Summit Appliance.
3. Samsung.

B. Refrigerator/Freezer (REF-1): Basis of design, GE Appliances model "GTE21GSHSS"

1. Type: Two door, with top freezer
2. Dimensions:
 - a. Width: 32-3/4 inches
 - b. Depth: 34-1/2 inches.
 - c. Height: 66-3/8 inches.
3. Storage Capacity:
 - a. Total capacity: 21.9 cu ft
 - b. Fresh food capacity: 15.25 cu ft
 - c. Freezer capacity: 6.68 cu ft
4. Features:
 - a. ADA Compliant
 - b. LED lighting
5. Freezer Features: freezer compartment(s) with door(s).
 - a. Defrost type: Frost free
 - b. Temperature management: Air tower in freezer
6. Energy Performance, ENERGY STAR: Provide appliances that qualify for the EPA/DOE ENERGY STAR product-labeling program.
7. Appliance Color/Finish: Stainless Steel

C. Refrigerator/Freezer (REF-1A): Basis of design, GE Appliances model "GIE21GSHSS"

1. Type: Two door, with top freezer
2. Dimensions:
 - a. Width: 32-3/4 inches
 - b. Depth: 34-1/2 inches.
 - c. Height: 66-3/8 inches.
3. Storage Capacity:
 - a. Total capacity: 21.9 cu ft
 - b. Fresh food capacity: 15.25 cu ft
 - c. Freezer capacity: 6.68 cu ft
4. Features:
 - a. ADA Compliant
 - b. LED lighting
 - c. Factory installed ice maker
5. Freezer Features: freezer compartment(s) with door(s).
 - a. Defrost type: Frost free
 - b. Temperature management: Air tower in freezer
6. Energy Performance, ENERGY STAR: Provide appliances that qualify for the EPA/DOE ENERGY STAR product-labeling program.
7. Appliance Color/Finish: Up to two finishes shall be selected.

D. Undercounter Refrigerator (REF-2): Basis of design, Summit Appliance model "CT66LWBISSHVADA"

1. Type: Single door with inner door for freezer
2. Dimensions:
 - a. Width: 23.63 inches
 - b. Depth: 23.5 inches.
 - c. Height: 32 inches.
3. Storage Capacity:
 - a. Total capacity: 5.1 cu ft
4. Features:
 - a. ADA Compliant
 - b. Factory installed lock
 - c. Dual evaporator system
5. Freezer Features: freezer compartment(s) with door(s).
 - a. Defrost type: Automatic for fresh food and manual defrost operation for freezer compartment.
6. Appliance Color/Finish: Stainless steel.

2.6 ICE MACHINE

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering product that may be incorporated into the Work include, but are not limited to, the following:
1. Summit Appliance
 2. Ice-O-Matic
 3. Manitowoc
 4. True
- B. Ice Maker (IM-1); Basis of design, Summit Appliances "BIM470SADA"
1. Type: Water cooled with built-in pump
 2. Dimensions: Ice Machine
 - a. Width: 14-1/2inches
 - b. Depth: 23-1/4inches.
 - c. Height: 32-3/8 inches.
 3. Features:
 - a. ADA compliant
 - b. Internal pump
 4. Ice Shape: Cube
 5. 24 Hour Ice Production: 50 lbs
 6. Ice Storage Capacity: 25 lbs
 7. Defrost Type: Automatic
 8. Energy Performance, ENERGY STAR: Provide appliances that qualify for the EPA/DOE ENERGY STAR product-labeling program.
 9. Appliance Color/Finish: Stainless steel.

2.7 DISHWASHERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Electrolux Home Products (Frigidaire).
 2. General Electric Company (GE Appliances).
 3. KitchenAid; a division of Whirlpool Corporation.
 4. LG Electronics.
 5. Whirlpool Corporation.
- B. Dishwasher (DW-1); Basis of design, GE Appliance model "GDT225SSLSS"
1. Type: Built-in undercounter.
 2. Dimensions:
 - a. Width: 24 inches.
 - b. Depth: 24 inches.
 - c. Height: 32-11/32 inches.
 3. Sound Level: Maximum 57 dBA

4. Quiet Features: Door insulation, quiet power motor, tub collar trim and tub insulation.
5. Tub and Door Liner: Stainless Steel
6. Rack System: One piece molded silverware basket with 1 cell cover, 2 plastic utility shelves with stem safe ball tipped tines.
7. Controls: 3 touchpads, fully integrated electronic top controls
8. Features:
 - a. ADA Compliant.
 - b. "Sanitized" Light Cycle Progress and "Clean" indicators.
 - c. 5-Level, Towerless wash system
 - d. 2-Stage self-cleaning filtration with extra fine filter.
 - e. Delay-wash option.
9. Energy Performance, ENERGY STAR: Provide appliances that qualify for the EPA/DOE ENERGY STAR product-labeling program.
10. Appliance Color/Finish: Stainless steel.

2.8 CLOTHES WASHERS AND DRYERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Bosch – BSH Home Appliances Corporation
 2. General Electric Company (GE Appliances).
 3. LG Electronics.
 4. Maytag; a division of Whirlpool Corporation.
- B. Clothes Washer (W-1): Complying with AHAM HLW-1. Basis of design, Whirlpool model, "WFW5605MW"
 1. Type: Freestanding, front-loading unit.
 2. Drum: Stainless steel
 3. Dimensions:
 - a. Width: 27 inches.
 - a. Depth: 32 inches.
 - b. Height: 40 inches.
 4. Capacity: 4.5 cu. ft.
 5. Include power cord.
 6. Controls: Electronic touch controls with LEDs
 7. Wash Cycles: Bulky items, cold wash, delicates, normal, quick-wash, sanitize, wrinkle control and whites.
 8. Door Style: Reversible, Chrome outer ring with chrome vent, see-through glass with tinted door.
 9. Features:
 - a. ADA compliant. Requires bottom of basket opening between 15" – 36" above floor finish.
 - b. Control lock.
 - c. Advanced vibration control.
 10. Energy Performance, ENERGY STAR: Provide appliances that qualify for the EPA/DOE ENERGY STAR product-labeling program.
 11. Appliance Finish: White

C. Clothes Dryer (D-1): Complying with AHAM HLD-1. Basis of design, Whirlpool model "WED560LH"

1. Type: Freestanding, frontloading unit.
2. Drum: Powder coated steel
3. Dimensions:
 - a. Width: 27 inches.
 - b. Depth: 30-5/8 inches.
 - c. Height: 40 inches.
4. Controls: Electronic touch controls with LEDs.
5. Capacity: 7.4 cu. ft.
6. Include power cord – 3 prong, single phase, 20/240V.
7. Features:
 - a. ADA compliant.
 - b. Extended dryer vent length 160'
 - c. Sanitize cycle.
 - d. Control lock.
8. Energy Performance, ENERGY STAR: Provide appliances that qualify for the EPA/DOE ENERGY STAR product-labeling program.
9. Appliance Finish: White.

2.9 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, power connections, and other conditions affecting installation and performance of residential appliances.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
- D. Beginning of installation means acceptance of existing site conditions.

3.2 INSTALLATION

- A. Install appliances according to manufacturer's written instructions.

- B. Refer to drawings for left or right hinged door opening installation.
- C. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and that rough openings are completely concealed.
- D. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.
- E. Sequence installation and erection to ensure correct mechanical and electrical utility connections are achieved.
- F. After installation is completed, ensure that operating parts work freely. Adjust hardware and catches. Repair or replace damaged parts, dents, buckles, abrasions, or other damage affecting the appearance or serviceability.

3.3 FIELD QUALITY CONTROL

- A. An appliance will be considered defective if it does not pass tests and inspections.
- B. Prepare test and inspection reports.

3.4 CLEANING

- A. Clean and polish glass, plastic, hardware and accessories, fixtures and fittings.
- B. Remove protective coverings from prefinished work just prior to Owner's acceptance of facility.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain residential appliances.

END OF SECTION

SECTION 115214
LARGE VENUE TENSIONED FRONT PROJECTION SCREEN

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Electrically-operated projection screens, ceiling recessed, and exposed suspended
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 06 – ROUGH CARP for above ceiling wood blocking
 2. Section 092110 – GYPSUM BOARD ASSEMBLIES for abutting drywall soffits
 3. Section 116133 – THEATRE RIGGING for suspension from rigging
 4. Division 26 - ELECTRICAL for electrical service and connections including metal device boxes for switches and conduit, where required, for low-voltage control wiring.

1.3 DEFINITIONS

- A. Gain: Indication of screen's luminance or brightness, measured perpendicular to screen center and relative to magnesium carbonate block, which serves as standard for 1.0 gain. Higher numbers indicate greater brightness.
- B. Viewing Angle: Horizontal angle from perpendicular center of screen at which gain or brightness decreases by 50%.
- C. Format: Proportion of projection screen viewing area expressed as a ratio of height to width.
1. NTSC or Video Format: 1.00 to 1.33.
 2. HDTV Format: 1.00 to 1.78.
 3. Wide Format: 1.00 to 1.6.
 4. Square: 1.0 to 1.0.
 5. Cinemascope or Anamorphic Format: 1.00 to 2.35.
 6. Widescreen (Letterbox) Format: 1.00 to 1.85.

1.4 SUBMITTALS

- A. Product Data: For each type of screen indicated.
- B. Shop Drawings: Show layouts and types of projection screens. Include the following:
 - 1. Location of screen centerline relative to ends of screen case.
 - 2. Location of wiring connections.
 - 3. Location of seams in viewing surfaces.
 - 4. Drop length.
 - 5. Connections to supporting structure for pendant- and recess-mounted screens.
 - 6. Anchorage details.
 - 7. Details of juncture of exposed surfaces with adjacent finishes.
 - 8. Frame details.
 - 9. Accessories.
 - 10. Wiring Diagrams: For electrically operated units.
 - 11. Provide installation templates for work installed by others.
 - 12. Show all interfaces and relationships to work of other trades. Provide wiring diagrams for electrically operated units.
- C. Test Reports: Certified test reports showing compliance with specified performance characteristics and physical properties.
- D. Certificates: Product certificates signed by manufacturer certifying that materials comply with specified performance characteristics, criteria and physical requirements.
- E. Maintenance Data: For projection screens to include in maintenance manuals.

1.5 REFERENCES

- A. Society of Motion Picture and Television Engineers (SMPTE):
SMPTE RP 94-2000, Gain Determination of Front Projection Screens.
- B. Underwriters Laboratories Inc. (UL).

1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver projection screens until building is enclosed and other construction within spaces where screens will be installed is substantially complete and ready for screen installation.
- B. Store rear-projection screens in manufacturer's protective packaging and according to manufacturer's written instructions.

1.8 COORDINATION

- A. Coordinate layout and installation of projection screens with adjacent construction, including ceiling framing, light fixtures, HVAC equipment, and partitions.

1.9 WARRANTY

- A. Manufacturer's Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty document executed by authorized company official. Manufacturer's warranty is in addition to, and does not limit, other rights Owner may have under Contract Documents.
- B. Provide manufacturer's warranties against manufacturing defects in material and workmanship for a period no less than five (5) years commencing from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Da-Lite Screen Co., Inc., Warsaw IN.
 - 2. Draper Shade and Screen Co., Inc., Spiceland, IN.
 - 3. Bretford Manufacturing Co., Schiller Park, IL
 - 4. Or Equal

2.2 ELECTRICALLY OPERATED LARGE VENUE TENSIONED PROJECTION SCREENS

- A. Type : Tensioned System.
- B. Screen Operation: Electrically operated, UL listed, plenum rated, retractable, heavy duty, with rigid metal roller and motor housed within the roller. Tab guide cable tensioning system to maintain even, lateral tension and hold viewing surface flat. Bottom end of fabric to be inserted into a custom aluminum slat bar with added weight to provide vertical tension on the screen surface.
 - 1. Motor:
 - a. 2 UL Certified 120 V, 60 Hz, 3-wire permanently lubricated reversal-type, attached to header.
 - b. Amperage: not more than 2.4 amps.
 - c. Include automatic thermal overload protection, integral gears, capacitor and electric brake to prevent coasting.
 - d. Preset, adjustable limit switches to automatically stop viewing surface in UP or DOWN position.
- C. Screen Mounting:
 - 1. Cafeteria A114: Ceiling recessed. Include all necessary mounting hardware.
 - 2. Multipurpose Room C117: Suspended, Include all necessary mounting hardware
 - 3. Gymnasium D202: Suspended, Include all necessary mounting hardware
- D. Screen Case: Extruded aluminum with self-trimming flange. Case is designed to receive mounting hardware and is sized to suit projection screen.
 - 1. Case Finish: Powder coated black or white as determined by Architect.

2. Case Closure Door: Include automatically operated, hinged powder coated aluminum finish screen closure door on case bottom.
3. Case Access Door: Hinged, powder coated aluminum finish screen access door on case bottom for maintenance access.

E. Screen Size:

1. Cafeteria A114 Viewing Area: 108 inches H × 192 inches W.
2. Multipurpose Room C117 Viewing Area: 135 inches H × 240 inches W.
3. Gymnasium D202 Viewing Area: 135 inches H × 240 inches W.

F. Screen Viewing Surface:

1. High resolution, flexible projection fabric capable of both front and rear projection, flame retardant, mildew-resistant seamless vinyl, with standard black borders, easily cleaned with mild soap and water solution.
2. Gain: 0.9
3. Viewing angle: 65.
4. Format: HDTV 16:10.
5. Viewing Surface: "Dual Vision" as manufactured by Da-Lite Screen Company, Inc.

G. Accessories:

1. Screen Drop:
 - a. Cafeteria A114: Extra drop of 3' in black fabric at top of the viewing area.
 - b. Multipurpose Room C117: Extra drop of 17' in black fabric at top of the viewing area.
 - c. Gymnasium D202: Extra drop of 14' in black fabric at top of the viewing area.
2. Single Motor Low Voltage Control: Built-In Standard.
3. Key Locking Cover Plate: Hinged cover plate with brushed stainless steel finish provides keyed access to low voltage control wall switch.
4. 3/8" threaded steel mounting rod and mounting brackets.
5. All other pertinent accessories necessary for complete and functional installation.

PART 3 - EXECUTION

3.1 COORDINATION

- A. Coordinate electric projection screen placement with other ceiling and wall mounted components.

3.2 EXAMINATION

A. Site Verification of Conditions:

1. Verify that conditions of substrates previously installed under other sections or contracts are acceptable with electrically operated projection screen installation.
2. Ensure secondary support framing for screen has been properly installed.
3. Ensure electrical power supply is installed to meet electrically operated large venue projection screen requirements.

- a. Verify type and location of power supply.
 4. Inform General Contractor of unacceptable conditions immediately upon discovery.
 5. Proceed with installation only after unacceptable conditions have been corrected.
- 3.3 INSTALLATION
- A. General: Install projection screens at locations indicated and in compliance with manufacturer's printed instructions.
 - B. Install screen housing and make electrical connections prior to installation of drywall soffit.
 - C. Securely install screens plumb and level to supporting substrate. Install projection screens with screen case in position and relationship to adjoining work as indicated on approved shop drawings. Securely anchor work to supporting substrate.
 - D. D. Permanently attach screen fabric to roller.
 1. Install viewing surface and drive assembly in housing only after interior construction is substantially complete.
- 3.4 FIELD QUALITY CONTROL
- A. Testing and Inspection: Operate each screen 3 times to ensure viewing surfaces extend and retract through full range of motion.
 1. Verify controls, limit switches, automatic doors and other components function as designed and meet project requirements.
 2. Ensure that viewing surface raising operation fully engages and moves screen and closure door into closed position.
 3. Adjust motors, controls and components to allow for smooth, unobstructed screen operation.
- 3.5 PROTECTING AND CLEANING
- A. Upon completion, remove surplus materials, rubbish, tools and equipment. Perform final cleaning of all exposed surfaces and lubricate all moving parts in accordance with manufacturer's instructions.
 - B. Protect projection screens from damage during construction.
 - C. Repair damage to adjacent construction caused by electrically operated projection screen work.

END OF SECTION

SECTION 11 60 00

VOCATONAL SHOP

EQUIPMENT

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.
- B. Examine all other Sections of the Specifications for requirements that affect the work of this Section whether or not such work is specifically mentioned in this Section.
- C. Coordinate work with that of all other trades affecting or affected by work of this Section. Cooperate with such trades to assure the steady progress of all work under the Contract.

1.2 DESCRIPTION OF WORK

- A. Furnish vocational shop equipment listed in this Specification and/or shown on the Equipment Drawing. Include delivery to the building, unpacking, setting in place and attachment to structure, as required for complete installation.
- B. Remove all debris, dirt and rubbish accumulated as a result of this installation and leave the premises clean and ready for use.
- C. Verify and confirm all building dimensions relative to equipment to be furnished and installed by taking actual field measurements at the job site prior to equipment fabrication.
- D. Become familiar with job conditions and building measurements to coordinate the planning, design, delivery, and installation of equipment furnished under these specifications, with all other related trades and associated work during the term of this contract.
- E. This Vocational shop Equipment Subcontractor shall supply an installation of equipment that is equal to or exceeding the quality and function described in this minimum requirement Specification and shown on the Drawing.
- F. Bolt machines securely to floor or workbench where shown on the equipment drawings. Machines shall be properly leveled and provided with vibration pads prior to bolting to floor or workbench. All installation work shall be done in accordance with manufacturer's recommendations.

1.3 RELATED WORK UNDER OTHER SECTIONS

- A. The final electrical connections to machinery controls and plumbing complete with shut offs and final connection shall be by the Electrical and Plumbing Subcontractors.

- B. Furnishing of all building plumbing, electrical and venting roughing-in within the area of the equipment to accommodate all services called for in the specification or shown on the drawings.
- C. Furnish and install in coordination with the Paint Booth vendor: explosion proof exit signage, explosion proof emergency strobe, explosion proof emergency horn, explosion proof alarm tied into EPO, breathable air system alarm tied into EPO.

1.4 SUBMITTALS

- A. Prepare and submit Shop Drawings in accordance with requirements of Division 1 and in the manner described therein.
- B. The Drawings shall be 1/4" scale and shall show the layout of all equipment. 1/2" scale Drawings shall be submitted for all fabricated or shop-made equipment. Drawings shall be submitted in one (1) complete package.
- C. The exact location of all connections shall be dimensioned for all equipment and labeled with the necessary information. This Vocational Shop Equipment Subcontractor shall obtain and verify all dimensions, measurements, and conditions, and shall assume all responsibility in respect to same.
- D. No fabrication, shipment, or installation shall take place until drawings and manufacturer's cuts have been approved and returned to the Vocational shop Equipment Subcontractor.
- E. LEED Submittal – refer to Division 01 Section “LEED v4 BD+C Requirements”
 - 1. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
 - 2. Project Materials Cost Data: Provide statement indicating total cost for materials used for Project.
 - 3. LEED Action Plans: Provide preliminary submittals indicating how the following requirements will be met:
 - a. Construction Waste Management in compliance with Division 01 Section “Construction Waste Management.”
 - b. List of proposed materials with recycled content: Manufacturers certification of recycled content indicating percentage by weight of both pre-consumer and post-consumer recycled content.
 - c. Local/Regional Materials:
 - 1.) Sourcing location(s): Indicate location of extraction, harvesting, and recovery of raw materials used in the products manufacturing; indicate distance between extraction, harvesting, and recovery and the project site.
 - 2.) Manufacturing location(s): Indicate location of manufacturing facility; include distance between manufacturing facility and the project site.

1.5 SAMPLES

- A. Submit samples of all materials requested by the Architect.
- B. Samples shall be prepared and submitted in accordance with the requirements of Division 1.

1.6 PERMITS, LAWS, ORDINANCES AND CODES

- A. Comply with laws, ordinances, rules and regulations of all local, state and federal authorities having jurisdiction, the rules and regulations of the National Board of Fire Underwriters and the local electric code.

1.7 OPERATING INSTRUCTIONS AND MAINTENANCE MANUAL

- A. Instruct to the Owner's satisfaction such persons as the Owner designates, in the proper operation and maintenance of the equipment and their parts.
- B. Furnish in accordance with Division 1, operating and maintenance manuals and forward same to the Architect for transmittal to the Owner.
- C. For maintenance purposes, provide shop Drawings, parts lists, Specifications and manufacturer's maintenance bulletins for each piece of equipment.
- D. Provide name, address and telephone number of the manufacturer's representative and service company for each piece of equipment, so that service or spare parts can be readily obtained.

1.8 GUARANTEE

- A. Attention is directed to provisions of Division 1 regarding guarantees and warranties for work under this Contract.
- B. Manufacturers shall provide their standard guarantees for work under this Section. However, such guarantees shall be in addition to and not in lieu of all other liabilities which manufacturers and the Vocational shop Equipment Subcontractor may have by law or by other provisions of the Contract Documents.
- C. Upon receipt of notice from the Owner of failure of any part of the equipment during the guarantee period, the affected part or parts shall be replaced.
- D. Furnish, before the final payment is made, a written guarantee covering the above requirements.

PART 2 – PRODUCTS

GENERAL

- A. All machines shall be delivered completely wired with starters having overload protection. Motors 1/2 H.P. or over as specified herein, shall have motor control which consists of low voltage, push-button magnetic control system with three-leg overload protection. All light accessories, where called for, shall be furnished complete with bulbs and wired through motor control to operate when machine is being used. Plugs, where called for, on 120V machines shall be three-prong type, and plugs for 208V, or greater shall be four-prong type. Motors shall be of same manufacturer as the machines or Westinghouse, General Electric, or equal

VOCATIONAL SHOP EQUIPMENT

- B. For purposes of identification of style and level of quality of equipment desired, these specifications refer to Vocational shop Equipment as currently manufactured by companies listed herein under Paragraph 2.2. These references are not intended to be restrictive or limiting to competitive makes and models of comparable quality and design. Bidders must submit sufficient illustrative material with their proposal to permit comparisons, for all items included in the proposal.

2.1 Type AT-01: TWO-POST ABOVE GROUND ASYMMETRICAL LIFT (10,000 LBS.)

A. GENERAL

1. Location: Auto Technology #D003: Eight (8) required. As shown on drawing EQ 2.3.
2. Make & Model: Rotary Lift#SPOA10; or equal.
3. Dimensions: 11'-5-1/2"W x 11'-8-1/2"H O.A.
4. Power: 2 H.P., 208V/60C/1 phase.

- B. Description: Provide two-post above ground asymmetrical lift complete with standard construction, features and accessories, including 10,000 lbs. lifting capacity; electric-hydraulic operation; two (2) full stroke high-pressure cylinders, one (1) in each column; three-position flip-up adapters with built-in truck adapters; patented "Double S" single –piece construction column design that provides a channel for the bearings to travel that maximize the strength of the column; adjustable height options; slider block bearings; overhead padded switch bar; single point lock releases which release the locks at the same time; latches every 4"; arm restraints that allow for easy lift arm positioning; dual controls; third party tested by ETL and certified by ALI to meet strict ANSI standards. The three-stage arm shall increase overall arm sweep and minimum arm reach to precisely lift vehicles that have uni-body construction, visually marked pick-up points on the vehicle; wider vehicle tread width and lower profile; and a short or long wheelbase. The true asymmetrical design allows for easy vehicle entry with columns at rotated 30°. The factory rotated columns allow doors of vehicle to be fully opened while properly positioned on lift. This places the approximate center of gravity of the vehicle in line with the optimum load capability of the column. Lift shall be provided with conventional two-hand operating control, power unit down; and manual release locking system.

- Rise: 78-1/4"
- Drive-Thru Clearance: 95-1/4"
- Floor to Overhead Switch: 11'-2-3/4"
- Reach (Front Arm Min.): 20-1/2"
- Reach (Front Arm Max.): 40-3/4"
- Reach (Rear Arm Min.): 40-1/4"
- Reach (Rear Arm Max.): 61"
- Min. Adapter Height: 4-3/4"
- Low Step Height: 7"
- High Step Height: 10-1/4"
- Inside Columns: 107-1/4"
- Cylinder Height: 11'-10-3/4"
- (Full Rise) 12'-4-3/4"
- Lifting Capacity: 10,000 lbs.
- Time of Full Rise: 45 seconds
- Max. Load (Per Arm): 2,500 lbs.
- Min. Bay Size: 12' x24'
- Ceiling Height Required: 12'

- C. Note: Item shall be installed complete and ready for use. Electrical Subcontractor shall provide final connection, including safety wiring. Provide O&M Manuals for use by General Contractor and Owner.

2.2 Type AT-02: TWO-POST ABOVE GROUND SYMMETRICAL LIFT (16,000 LBS.)

A. GENERAL

- AT-02 Location: Auto Technology #D003. Two (2) required. As shown on drawing EQ 2.3.
- Make & Model: Rotary Lift #SP016-CARGO; or equal.
- Dimensions: 11'-5/8"W x 14'-9"H O.A. Power: 2 H.P., 208V/60C/1 phase.

- B. Description: Provide two-post above ground symmetrical lift with standard construction, features and accessories, including 16,000 lbs. lift capacity; thread-up pad adapters; lifting pad 3" higher than standard model and top overhead beam height 2' taller than standard model; patented "Double S" single –piece construction column design that provides a channel for the bearings to travel that maximize the strength of the column; overhead equalization system; electric-hydraulic operation; slider block bearings; overhead padded switch bar; single point lock releases which release the locks at the same time; latches every 4"; arm restraints that allow for easy lift arm positioning; dual controls; third party tested by ETL and certified by ALI to meet strict ANSI standards. The three-stage arm shall increase overall arm sweep and minimum arm reach to precisely lift vehicles that have uni-body construction, visually marked pick-up points on the vehicle; wider vehicle tread width and lower profile; and a short or long wheelbase. Columns are not rotated on true symmetrical design lifts. The vehicle load shall be centered between the columns to maximize lifting capacity, with more width between columns to accommodate larger vehicles and improve vehicle access; and shall allow maximum door opening on trucks and vans for improved access to vehicle interior. Lift shall be provided with one touch control on each column, power unit down; and manual release locking system. Lifts shall be provided with polymer adapters that thread-up, and have stackable inserts.

Rise:	78-23/32"
Drive-Thru Clearance Standard:	13'-5"
Overall Height:	15'-0" to 16'-6"
Reach (Front and Rear Arm Min.):	34-13/16"
Reach (Front and Rear Arm Max.):	64-13/16"
Min. Adapter Height:	5-13/32"
Max. Adapter Height:	8-1/32"
Inside Columns:	126-15/32"
Lifting Capacity:	16,000 lbs.
Time of Full Rise:	81 seconds
Max. Load (Per Arm):	4,000 lbs.
Min. Bay Size:	15' x 30'
Ceiling Height Required:	17'-9"

- C. Note: Item shall be installed complete and ready for use. Electrical Subcontractor shall provide final connection, including safety wiring. Provide O&M Manuals for use by General Contractor and Owner.

Manuals for use by the General Contractor. Provide two (2) days of Staff Training, on-site, for the proper operation and use of items AT-01 and AT-02.

2.3 Type AC-06 TWO-POST ABOVE GROUND SYMMETRICAL LIFT (16,000 LBS.)

Auto Collision #C022

(1)

(EQ 2.2)

A. GENERAL

- AC-06 Location: Auto Collision #C022. One (1) required. As shown on drawing EQ 22.
- Make & Model: Rotary Lift #SPO16N0ALBL (CARGO LOW CEILING); or equal.
- Dimensions: 13'-5"W x 14'-9"H O.A. Power: 2 H.P., 208V/60C/1phase.

- B. Description: Provide two-post above ground symmetrical lift with standard construction, features and accessories, including 16,000 lbs. lift capacity; thread-up pad adapters; lifting pad 3" higher than standard model and top overhead beam height 2' taller than standard model; patented "Double S" single –piece construction column design that provides a channel for the bearings to travel that maximize the strength of the column; overhead equalization system; electric-hydraulic operation; slider block bearings; overhead padded switch bar; single point lock releases which release the locks at the same time; latches every 4"; arm restraints that allow for easy lift arm positioning; dual controls; third party tested by ETL and certified by ALI to meet strict ANSI standards. The three-stage arm shall increase overall arm sweep and minimum arm reach to precisely lift vehicles that have uni-body construction, visually marked pick-up points on the vehicle; wider vehicle tread width and lower profile; and a short or long wheelbase. Columns are not rotated on true symmetrical design lifts. The vehicle load shall be centered between the columns to maximize lifting capacity, with more width between columns to accommodate larger vehicles and improve vehicle access; and shall allow maximum door opening on trucks and vans for improved access to vehicle interior. Lift shall be provided with one touch control on each column, power unit down; and manual release locking system. Lifts shall be provided with polymer adapters that thread-up, and have stackable inserts.

Rise:	77-13/32" - 78-13/32"
Drive-Thru Clearance Standard:	111-11/32"
Overall Height:	13'-6" to 14'-6"
Reach (Front and Rear Arm Min.):	36-13/16"
Reach (Front and Rear Arm Max.):	74-13/16"
Min. Adapter Height:	5-13/32"
Inside Columns:	126-15/32"
Lifting Capacity:	16,000 lbs.
Time of Full Rise:	81 seconds
Max. Load (Per Arm):	4,000 lbs.
Min. Bay Size:	15'x30'
Ceiling Height Required:	13'-8"-14'8"

- C. Note: Item shall be installed complete and ready for use. Electrical Subcontractor shall provide final connection, including safety wiring. Provide O&M Manuals for use by General Contractor and Owner.

2.4 Type AC-01: AUTOMOTIVE PAINT BOOTH

A. GENERAL

- Location: Auto Collision #C022. Two (2) required. As shown on drawing EQ 2.2.
- Make & Model: AFC Finishing Systems, #DDATE2714, Auto Thermal Xtreme - Full Downdraft over concrete pit (by others); or equal
- Working Dimensions: 14'-0"W x 27'-0"L x 10'-0"H;
- Outside Dimensions: 14'-6"W x 27'-6"L x 11'-10"H

- Dimensions of exhaust pit to be coordinated with the requirement of this section as follows: 6'-0"W x 23'-0"L x 2'-6"D
- B. Description: Provide Automotive Paint Booth with all standard construction, features and accessories as described and outlined herein. The paint booth shall be a full downdraft utilizing 6' wide exhaust pit for balanced air flow. The paint booth shall be a double wall, insulated wall panel construction that is powder coated with bright white finish.
- C. Construction: The booth shall be constructed of double wall, 18-gauge, powder coated (white), insulated sheet metal panels. The panels shall use interlocking flanges for an airtight joint. The panels shall be joined with ¼" self-drilling TEK screws. To ensure a dust free environment in the paint booth, the panels shall be sealed with acrylic latex caulking. A 14-gauge angle shall be used to anchor the paint booth to the floor.
- D. Doors: One set of 10' wide x 8' high bi-fold doors shall include observation windows with clear tempered glass. Doors shall be constructed of 18-gauge steel with tube frames. Door frames shall be constructed of ¼" steel angle and shall be equipped with heavy duty chrome hinges and feature rubber gasket and cam locking mechanism to ensure airtight seal.
- E. Light Fixtures: Fourteen (14) 4-tube (total of 56 light tubes), 120 Volt, 4' LED light fixtures. All of the fourteen light fixtures shall be rated as Class 1 Division 2 inside service for placement in a class 1 Division 2 area. Provide 90 minute minimum ballast battery backup at 1 candle.
- F. Intake Plenum: A ceiling-type intake plenum shall be located at the top of the booth enclosure to introduce clean air into the paint booth. The intake plenum shall be equipped with disperser basket to always ensure even airflow into the paint booth cabin. It shall be designed with a quantity of twelve (12) 35"x54" Laminar III diffusion intake filters with over 99% efficiency at 10 microns. Intake filters shall last 1,500 hours and to be accessed from hinged, drop-down intake filter racks.
- G. Exhaust Fan: One (1) 34", 6-blade exhaust fan used to pull the overspray from the paint booth. The fan shall provide a total of 14,000 CFM at ½" s.p. The fan shall be tube axial, belt driven, with non-sparking polypropylene blades. The fan shall feature a streamlined belt tunnel to isolate the motor, drives and bearings from the air stream. One (1) 3HP O.T.D.P. 230 VAC 3 phase motor shall be used to drive the exhaust fan. Motor shall be an energy efficient industrial motor that meets or exceeds EPACT energy standards.
- H. Exhaust Plenum and Duct: The paint booth shall be designed with a 6' wide exhaust pit with rugged steel grating with a single row of steel diamond plate in the center. The pit shall include two (2) rows of 20" fiberglass exhaust paint arrester media to provide paint overspray removal and protection of exhaust system. The exhaust plenum shall include roof flashing, storm collar and up-flow type weather cap with back draft damper.
- I. Included Accessories: All necessary door gasket, caulking and assembly hardware, one nanometer, one door limit switch and one air valve as required by national codes, bioluminescent exit signs.
- J. Air Make-up System
 - Make/Model: AFC Finishing Systems, #DFM800R; or equal

- Recirculating: The air make-up unit shall be direct-fired (flame directly in air stream) type to provide rapid booth temperature rise. During the cure cycle the unit shall recirculate 100% fresh air using "superheating" process. Approximately 50% of partially heated air shall be returned past the heater several times before entering the paint booth, providing up to a 140° F booth temperature rise in the cure cycle. The recirculation shall not occur when the unit is in the paint mode, providing up to an 80° F temperature rise. No solvent contaminated air shall be returned to the paint booth, preventing hazing and die back and to allow paint jobs to get better gloss and sheen. The unit shall work to maintain positive pressure inside of the paint booth cabin during painting operation. The digital temperature controls and modulating gas valve shall maintain minimum temperature fluctuation inside of the booth. The unit shall be configured to sit behind the booth.
- Burner: Power Flame gun-type burner rated at 1,075,000 BTU. The burner shall include Honeywell flame safe guard control, UV scanner, electric spark igniter, ignition transformer, pilot and main gas valves, pilot and main gas regulators, leak test valve, combustion blower with automatic inlet louvers, on/off switch, indicator lights, lockout alarm bell, control cabinet with terminal strip. The burner fuel shall be natural gas.
- Intake Fan: One (1) 34" intake fan rated at 14,000 CFM. The fan shall be tube axial, belt driven, with non-sparking polypropylene high temperature blades. The belt shall feature streamlined belt tunnel to isolate the motor, drives, and bearings from the air stream. One (1) 5HP O.T.D.P. 230 VAC 3 phase motor shall be used to drive the intake fan. Motors shall be energy efficient industrial motors that meet or exceed EPACT energy standards.
- Intake Duct: Air make-up system shall include 6' of intake duct with 90-degree elbow and flashing for secure connection between the air make-up unit and the paint booth.
- Included Accessories: air make-up unit support platform and prefilter box with polyester intake panel filters, high temperature limit switch, air flow switch and service disconnect.

K. Control Panel with Digital Thermostat:

- Make/Model: AFC Finishing Systems, #CP2D; or equal
- Included Accessories:
- VFD
- System switch to switch between off, paint and cure modes.
- Eaton Cutler Hammer motor protection and control devices
- Digital thermostat
- Burner on/off switch
- Lighting on/off switch
- Terminal strip for easy field wiring of all factory supplied components on paint booth.
- Dry contact for all intake/exhaust fan status
- Dry contact for fire suppression tie in

L. Note: Provide two (2) days of Staff Training, on-site, for the proper operation and use of Items AC-01, AC-02 and AC-03.

2.5 Type: AC-02: PAINT MIXING ROOM

- A. GENERAL Location: Auto Collision #C022. One (1) required. As shown on drawing EQ 2.2
- Make & Model: AFC Finishing Systems, #SMR1804; or equal
 - Working Dimensions: 6'-0"W x 18'-0"L x 8'-0"H;

- Outside Dimensions: 6'-0"W x 18'-4"L x 8'-6"H
- B. Construction: The paint mixing room shall be made of 18 gauge, galvanized sheet metal panels. The panels shall use interlocking flanges for a sturdy, airtight joint. The panels shall be joined with ¼" self drilling TEK screws. To ensure a dust free environment, the panels shall be sealed with acrylic latex caulking. A 14-gauge angle shall be used to anchor the paint mixing room to the floor.
- C. Access Door: One (1) access door, 36"W x 7' high, including 18" x 30" observation window with clear tempered glass. Door shall be constructed of 18-gauge steel with tube frame. Door frame shall be made of 12-gauge steel angle and equipped with heavy duty hinges and shall feature rubber gasket and brixon latch to ensure an airtight seal and to provide explosion venting to comply with the national fire codes.
- D. Light Fixtures: Four (4) 4-tube, 120 Volt, 4' light fixtures with energy efficient electronic T8 ballasts. All light tubes shall be color corrective. The light fixtures shall be ETL listed. Provide 90 minute minimum ballast battery backup at 1 candle.
- E. Exhaust Fan: One (1) 12", 4-blade exhaust fan shall be used to pull the vapors from the paint mixing room. The fan shall provide a total of up to 1,200 CFM at ½" s.p. The fan shall be tube axial, belt driven, with non-sparking polypropylene blades. The fan shall feature a streamlined belt tunnel to isolate the motor, drives and bearings from the air stream. One (1) 1/2HP O.T.D.P. 230 VAC 1 phase motor shall be used to drive the exhaust fan. Motor shall be an energy efficient industrial motor that meets or exceeds EPACT energy standards. A total of 6' of 12" diameter exhaust duct shall be provided, along with roof flashing, storm collar and up-flow type weather caps with back draft damper. Exhaust duct shall be constructed from 18 gauge galvanized steel with crimped ends.
- F. Included Accessories: All necessary door gasket, caulking and assembly hardware, bioluminescent exit signs, dry contact for all intake/exhaust fan status, Dry contact for fire suppression tie in.
- G. Note: Provide two (2) days of Staff Training, on-site, for the proper operation and use of Items AC-01, AC-02, AC-03 and AC04

2.6 Type AC-03: POWDERCOATING BOOTH

- A. GENERAL Location: Auto Collision #C022. One (1) required. As shown on drawing EQ 2.2.
- B. Construction: Powder coating booth shall feature double wall 18-gauge, powder coated, insulated sheet metal panels. The panels shall use interlocking flanges for a study, airtight joint. The panels shall be joined with ¼" self drilling TEK screws. To ensure a dust free environment in the paint boot, the panels shall be sealed with acrylic latex caulking. A 14-gauge angle shall be used to anchor the paint booth to the floor.
- C. Doors: One set of 8' wide x 8' high bi-fold doors shall include observation windows with clear tempered glass. Doors shall be constructed of 18-gauge steel with tube frames. Door frames

shall be constructed of ¼" steel angle and shall be equipped with heavy duty chrome hinges and feature rubber gasket and cam locking mechanism to ensure airtight seal.

- D. The booth system shall consist of the following components:
- Powder Coating Cartridge Booth, Quantity (1) – Make/Model: AFC Finishing Systems, #FPCC208; or equal
 - Inside Dimensions: 20'W x 12'D x 8'H
 - Outside Dimensions: 20'-4"W x 16'-2"D x 8'-8"H
 - Light Fixtures 5-Open type, 120 Volt, 4 Tube
 - Product Doors: 1 – Set of 8' x 8'
 - Includes: Assembly screws and 8' x 20' filter wall.
 - The booth shall consist of four (4) modules.
 - Powder Coat Collector Module, Quantity (4) – Make/Model: AFC Finishing Systems, #PC408 Includes:
 - Powder recovery bin.
 - 6 Cartridge filters with reverse pulse cleaning
 - Exhaust fan and 5 HP motor, 3Phase, 230VAC, 4,800 CFM
 - Pulsing Air Valves
 - Powder Coating Control Panel, Quantity (1) - Make & Model: AFC Finishing Systems, #PC/CP-1 Includes:
 - Automated controls.
 - Panel mounted disconnect.
 - System on/off switch
 - Motor controls and overloads
 - Timed pulse cleaning sequence on/off switch
 - After shift pulse sequence
 - Magnehelic gauge
 - Indicator lights.
 - Bioluminescent exit signs
 - Provide 90 minute minimum ballast battery backup at 1 candle.
 - Dry contact for all intake/exhaust fan status
 - Dry contact for fire suppression tie in
- E. The powder coating booth system shall be designed to comply with tall federal, NFPA and OSHA regulations.
- F. Note: Provide two (2) days of Staff Training, on-site, for the proper operation and use of Items AC-01, AC-02, AC-03 and AC04

2.7 Type AC-04: POWDER COATING OVEN

- A. GENERAL
- Location: Auto Collision #C022. One (1) required. As shown on drawing EQ 2.2.
 - Make & model: AFC Finishing Systems, #PCO8820, or equal
 - Design Operating Temperature: 400° F
 - Inside Working Dimension: 8'-0"W x 20'-0"D x 8'-0"H
 - Outside Dimension: 8'-8"W x 24'-6" D x 10'-0"H
 - Door Opening: 8'-0"W x 8'-0"H
 - Doors: 1 Set Horizontal Swing with heavy duty hinges.
 - Air Recirculating Fan: Forward Curve Fan, 8,000 CFM with 5 HP Motor
 - Exhaust Fan: Centrifugal compact GI Fan, 575 CFM, ½ Motor – 6' Exhaust Stack to supplied and installed by others.
 - Electrical Load Requirements: 230 VAC, 3 Phase, 30/15 AMPS

- Natural Gas Requirements: 1,075 SCFH Delivered at 7-14" W.C.
- B. Burner: 1,075,000 BTUH Modulating power flame burner complete with all safety switches and control cabinet.
 - Includes: UV flame detection, Pre-Purge Timer, Honeywell Flame Safeguard Control with Lockout Alarm Bell, Dual Gas Valves, Main and Pilot Gas Regulators, Honeywell Modulating Gas Valve Main, Pilot and Leak test Shut Off Valves, High and Low Gas Pressure Safety Switches, High Temperature Limit Switch, Recirculating Air Proving Switch and exhaust Air Proving Switch.
- C. Controls: PLC Computerized controls for complete operation of the oven enclosed in an ETL listed industrial control panel.
 - Includes: Panel mounted disconnect, Digital temperature controller, process timer with alarm, Cutler Hammer Motor Starters and Overloads, Control Switches and Indicator Lights, Bioluminescent exit signs, dry contact for all intake/exhaust fan status, dry contact for fire suppression tie in.
- D. Construction: Heavy duty construction of interlocking panels with 4" 9.5# insulation. 16 gauge aluminized steel interior, 18 gauge mild steel exterior.
- E. The powder coating oven shall be manufactured to National Electric and Fire Codes and built to NFPA 86 standards.

2.8 Type AT-12: CEILING MOUNTED BRIDGE CRANE SYSTEM & CHAIN FALL

- A. GENERAL Location: Auto Technology, Small Engine #D003H. (One (1) required, as shown on drawing EQ2.3. Note: Crane system shall be coordinated with the entry door and steel.
 - Description: Ceiling mounted bridge crane system shall include hanger assemblies, runways, Festoon stack section, enclosed bridge, end trucks, hoist trolley, end stops, and other accessories required for complete installation.
 - Lift: 14' High
 - Hoist: Manual
 - Trolley: Manual
 - Festooning: Spark resistant package with filter and lubricator
- B. HANGER ASSEMBLIES: Includes hanger assemblies required for suspending runways from overhead steel beam support structure. Two-piece hangers suspending runways below support beams shall consist of upper hanger bracket with beam clips and lower runway bracket connected with threaded B7 alloy steel rod. 12-inch (304 mm) drop rods shall be included. Assembly shall be designed for supporting either plain enclosed steel track runways or trussed steel runways.
- C. RUNWAYS: Vertical truss fabricated from square steel tubes and enclosed steel track. Track: Enclosed, cold formed, steel box track that serves as bottom cord of runway and permits end trucks and festoon carriers to ride on lower inside flanges. Fabricate lower running flanges with flat surface for higher durability and wheel contact. Splice Joint: Includes truss splice plates, channel-shaped track splice joint, bolts, lock washers, and nuts for joining runway sections. Splice joints must be located within four feet of a support point.
- D. FESTOON STACK SECTION: Shall include enclosed track extension to account for stacking festoon carriers at end of runway.

- E. BRIDGE, ENCLOSED: Cold formed steel box track that permits hoist trolleys and festoon carriers to ride along track's lower inside flanges. Fabricate lower running flanges with flat surfaces.
- F. END TRUCKS: Rigid frame end truck shall be designed to ride inside enclosed runway rack and connect to and suspend bridge.
- Construction: Stamped steel fabrication with both vertical and horizontal wheels to prevent binding in runway.
 - Wheels: Removable, self-centering steel wheels with sealed lifetime lubricated bearings. Vertical wheels shall be flat to match track profile.
 - Drop Lugs: shall be included on both sides of truck to limit truck drop in the event of wheel or axle failure.
 - Connection to the Bridge: Shall include a sliding or flexible connection between bridge and end truck.
- G. HOIST TROLLEY: Rigid body trolley shall be designed to ride inside enclosed track of bridge and to carry hoist and load.
- Construction: Two-piece stamped steel body with two wheels on each side and tapered clevis positioning hoist hook at center of trolley, so load weight is evenly distributed to all four trolley wheels. The trolley shall include removeable clevis pin.
 - Wheels: Shall be removable, self-centering steel wheels with sealed lifetime lubricated bearings. Vertical wheels shall be flat to match track profile.
 - Drop Lugs: shall be included on both sides of trolley to limit trolley in the event of wheel, axle, or load bar failure.
 - Hoist trolley shall be designed for hook attachment of hoist.
- H. END STOPS: shall be molded composite, resilient bumper installed in runway and bridge tracks to prevent end trucks, hoist trolley, and festoon carriers from rolling out of track.

MF-61 OVERHEAD SINGLE GIRDLE CRANE SYSTEM & CHAIN FALL

- I. GENERAL
- Location: Metal Fabrication, One (1) required, as shown on drawing EQ2.1
 - Description: Ceiling mounted workstation steel monorail crane system including hanger assemblies, enclosed track monorail, hoist trolley, festooning system, bumpers, and other accessories required for complete installation.
 - Lift: 14' High
 - Hoist: Manual
 - Trolley: Manual
 - Festooning: Spark resistant package with filter and lubricator
- J. HANGER ASSEMBLIES:
- Includes hanger assemblies required for suspending monorail from overhead steel beam support structure.
 - Two-piece hangers suspending monorails below support beams shall consist of upper hanger bracket with beam clips and lower runway bracket connected with threaded B7 alloy steel rod. 12-inch (304 mm) drop rods are included. 12-inch drop rods are standard, but drop rods can be virtually any length.
- K. MONORAIL: Enclosed, cold formed, steel box track that permits hoist trolley and festoon carriers to ride along monorail.

- Fabricated lower running flanges with flat surfaces. Sloped flanges not permitted.
 - Splice Joint: Includes channel-shaped track splice joint with bolts, lock washers, and nuts for joining monorail sections.
- L. FESTOON STACK SECTION: Includes enclosed track extension to account for stacking festoon carriers at end of monorail.
- M. HOIST TROLLEY: Rigid-body trolley designed to roll inside enclosed track of monorail and to carry hoist and load. Articulating trolleys are not acceptable.
- Construction: Two-piece stamped steel body with two wheels on each side and tapered clevis positioning hoist hook at center of trolley, so load weight is evenly distributed to all four trolley wheels. Includes removable clevis pin (type and size determined by manufacturer for specified capacity). Trolleys with non-removable clevis pins are not acceptable. Holes provided in body for mechanical connections.
 - Wheels: Removable, self-centering steel wheels with sealed lifetime lubricated bearings. Vertical wheels shall be flat to match track profile. Non-removable or tapered wheels are not acceptable.
 - Drop Lugs: Included on both sides of trolley to limit trolley in the event of wheel, axle, or load bar failure.
 - Designed for hook attachment of hoist.
- N. END STOPS: Molded composite, resilient bumper installed in monorail to prevent hoist trolley and festoon carriers from rolling out of track. Bolt stops without energy absorbing bumper are not acceptable.

PART 3 - EXECUTION

3.1 EXAMINATION AND ACCEPTANCE

- A. Examine space in which specified work is to be installed to assure that conditions are satisfactory for the installation of specified work. Report in writing to the Architect, any deficiency in the work of other contractors affecting specified work. Commencement of work shall be construed as acceptance of space conditions.
- B. This Vocational shop Equipment Subcontractor shall obtain and verify all measurements and conditions on the job and shall assume all responsibility in respect to same.

3.2 CLEANING UP

- A. All debris and surplus materials resulting from installation work shall be removed promptly as work progresses by this Vocational shop Equipment Subcontractor, to a location indicated by the General Contractor.
- B. Following completion, and before final acceptance by the Owner, clean finished surfaces in accordance with the manufacturer's instructions, and leave specified work free of imperfections.

3.3 PROTECTION OF WORK

- A. Protect specified work from damage during transportation to the project site, storage at the site, during installation, and after completion until acceptance by the Owner.

- B. Protect adjacent work under other contracts during installation until completion of specified work. After completion, the Contractor for other work shall be responsible for the protection of his work until acceptance by the Owner.
- C. Damaged work as determined by the Architect, shall be repaired, or replaced as determined by and to the satisfaction of the Architect.

END OF SECTION

SECTION 116133
THEATRE RIGGING

PART 1- GENERAL

1.1 SUMMARY

- A. This specification covers the fabrication, furnishing, delivery, and installation of the stage rigging system. The form of contract, general conditions, and the project drawings are considered to be parts of these specifications.
- B. The Rigging Contractor shall provide all items necessary for a complete, safe, fully functional system as described herein, including all tools, scaffolding, labor, and supervision, even though they may not be specifically enumerated. Any errors, omissions or ambiguities do not relieve the Rigging Contractor of this responsibility but shall be brought to the attention of the Architect and Theatre Consultant for clarification.
- C. Base bid shall consist of, but not be limited to, the following:
 - 1. Dead hung battens supporting lighting, sound, drapery, and scenery.
 - 2. All drapery hardware, including motorized traveler tracks and control system for stage drapery.
 - 3. Install stage drapes provided by Theatre Drapery Contractor of Section 116143.

1.2 RELATED WORK

- A. Division 5 Structural Steel: Structural steel and miscellaneous metals not specifically called out as part of this section
- B. Section 116153 Stage Dimmers & Controls
- C. Division 26: Electrical connections, conduit, boxes and interconnecting wiring for stage rigging equipment as shown on the drawings.

1.3 DEFINITIONS

- A. "Owner" as used in this section shall mean the representative of Northeast Metropolitan Regional Vocational High School.
- B. "Theatre Consultant" or "Consultant" as used in this section shall mean Studio T+L, LLC.
- C. "Rigging Contractor" OR "RC" as used in this section shall mean the contractor responsible to provide, furnish and/or install, as noted, the stage rigging system.
- D. "Architect" as used in this section shall mean Drummey Rosane Anderson., Inc.
- E. "Structural Engineer" as used in this section shall mean EDG Consulting Engineers.
- F. "Electrical Contractor" as used in this section shall mean the contractor for Division 26.
- G. Wherever the words "Approved", "Approval", and "Approved equal" appear, it is intended that items other than the model numbers specified shall be subject to the approval of the Architect.
- H. "Provide", as used herein, shall mean that the RC is responsible for furnishing and installing said item or equipment.
- I. "Furnish", as used herein, shall mean that the RC shall acquire and make available said item or equipment and that the installation shall be under other sections of these specifications.

- J. "Contract Documents" as used in this section shall be deemed to include both the specification section and related bid drawings.
- K. "NIC" as used in the contract documents means, "Not Included in this Contract"
- L. "Or As Approved" as used in the contract documents means "substitution only after written approval by the theatre consultant" and as noted in section 1.11.

1.4 RIGGING REFERENCE STANDARDS

- A. Statically suspended rigging systems shall comply with ANSI E1.2-2 – 2021 Entertainment Technology – Statically Suspended Rigging Systems

1.1 RIGGING CONTRACTOR

A. General

1. The provider of the rigging system herein described shall be acknowledged in business as a Stage Rigging Contractor, hereafter referred to as RC. This company shall employ full time Systems Designers and Project Managers with experience in completing work of similar or greater size and scope. The role of the RC in this project shall be to provide and install all equipment listed in this section. The RC shall furnish a complete working system meeting the intent of this specification. The RC shall coordinate delivery schedules and installation of equipment with the CM. Additionally, the RC shall be responsible for all documentation for equipment in this section, system record drawings, final testing of the system and training of the Owner's personnel as required by this specification.

B. Qualifications

1. The RC shall have a minimum of 10 years experience in the operation and installation of similar equipment associated with the construction and/or renovation of facilities similar in scope to this project.
2. The RC shall have been in business for a minimum of 10 consecutive years and shall have no history of bankruptcy.
3. The RC shall be an authorized dealer for an adequate number of manufacturers of system products necessary to provide a complete working system meeting the intent of this specification.
4. The RC shall have on staff at least two full-time manufacturer-certified field service technicians and have technical support and assistance accessible 24 hours a day, seven days a week.
5. The RC shall offer a Maintenance and Service Contract.
6. The RC shall provide a one-year system warranty for the complete system, not including expendable supplies, effective from the date of system acceptance. Within this warranty period, the RC shall be responsible as the Owner's sole contact for the remedy, repair, or replacement of system deficiencies (through the manufacturer's warranty where applicable).
7. The RC shall employ an Entertainment Technician Certification Program (ETCP) Certified Theatre Rigger for this project. The Certified Rigger shall be the project manager and/or site foreman, and shall be responsible for the overall project including the layout, inspection, and training.

C. Project Management

1. The RC shall designate a dedicated Project Manager. The RC's Project Manager shall be the main contact between the RC, the manufacturers, the Architect, Theater Consultant, and the Contractors from contract award until final sign off.
 2. The RC's Project Manager will provide Project Status Reports. These status reports shall provide the basis for analysis of completion as well as for progress meetings between the RC and the Architect.
 3. The RC's Project Manager shall provide the Construction Manager or General Contractor with a two-week Look Ahead Schedule to help with the coordination of other trades, as needed.
- D. Approved rigging equipment manufacturers for this part of the work are as follows.
1. J.R. Clancy, Syracuse, NY – 800.836.1885
 2. I. Weiss, Long Island City, NY – 800.325.7192
 3. Thern Stage Equipment, Winona, MN – 800.553.2204
 4. Texas Scenic Studio, San Antonio, TX – 800.292.7490
 5. Automated Devices Company, Allentown, PA – 610.797.6000
- E. Approved rigging equipment Installers for this part of the work are as follows.
1. High Output, Canton, MA – 781.364.1800
 2. I. Weiss, Fairview, NJ – 201.402.6500
 3. Syracuse Scenery & Stage Lighting Co, Inc., Liverpool, NY – 800.453.7775
 4. Texas Scenic Studio, Bronx, NY – 718.402.2677

1.2 RIGGING CONTRACTOR RESPONSIBILITIES

- A. All work of this section shall be the responsibility of the RC except where specifically assigned as work under other sections of these specifications
- B. The stage rigging systems are specified to a minimum performance standard. Do not interpret listing of standard products from acceptable RC's as specifying or accepting those products. Make any and all alterations to standard design and construction of any equipment necessary to meet any and all requirements of this section.
- C. This specification section, related sections and the contract drawings describe performance attributes of systems to be provided, including means of operation and control, dimensions and profiles and visual appearances. Assume all responsibility for engineering of systems described herein, including modification of and addition to any details required fulfilling the design intent of the specification section.
- D. Provide only those products listed herein. Provide products that are manufactured in accordance with the manufacturer's published specifications in effect on the date of this specification.
- E. The system(s) shall conform to all applicable code requirements and shall be in conformance with industry standards of operation and practices. All materials, arrangements, and procedures shall comply with applicable code requirements, allowing the users to arrange and operate a safe assembly and provide a safe working environment for audience and user personnel.
- F. All equipment shall be thoroughly tested in the RC's shop prior to shipment to ensure mechanical and electrical integrity.

- G. Omissions and/or errors within this specification section shall not relieve the RC of the responsibility for providing a properly functioning installation of the rigging system.
- H. Correct and replace, at no cost to the Owner, any system or part of the system that does not meet the requirements of this section at the time of Completion Check-out or any time during the warranty period.

1.3 REVIEW AND INTERPRETATION DURING BIDDING

- A. All bidders shall fully inform themselves of the conditions under which the work is to be performed. No additional compensation shall be allowed for any labor or item the bidder could have been fully informed of prior to the bid date.
- B. Notify Architect and Theatre Consultant of any omissions, discrepancies or ambiguities in the specification section and the contract drawings so a clarification may be issued. Notify Architect and Theatre Consultant if exception is taken to any statement, indication or criterion in the contract documents.
- C. Obtain all other contract documents, including architectural, electrical, structural and mechanical to ensure there are no conflicts with the work of this section. Notify Architect and Theatre Consultant of all such conflicts and propose modifications to resolve the conflicts.
- D. Submit the notifications, A and B above, in writing to Architect and Consultant in a timely manner prior to bid opening date. Lack of notification shall be understood to indicate acceptance of all requirements of the contract documents and shall preclude any future claims.
- E. Interpretations or corrections to the contract documents shall be issued by Addendum. Interpretations or corrections given by any other method will not be binding.

1.4 SUBSTITUTIONS

- A. Substitutions in the contract documents will only be considered where noted "OR AS APPROVED." Submit requests for substitutions, in writing, to Theatre Consultant in a timely manner prior to bid opening. Theatre Consultant shall be the sole judge of acceptability of proposed substitutions.
- B. Approved substitutions will be listed by Addendum. Verbal or other written approvals will not be binding.

1.5 BID SUBMITTALS

- A. Provide a complete Bill-of-Materials as part of the bid proposal. Include a list of all equipment, systems, components, sub-assemblies, etc., proposed to fulfill the requirements of the contract documents.
- B. The Bill-of-Materials will be used to evaluate whether the proposal meets the letter and intent of the contract documents. Bids not meeting the specification, based upon a review of the Bill-of-Materials, may be rejected. The Bill-of-Materials will not, however, be the exclusive determinant of the equipment and services required for the work of this section.
- C. List any exceptions taken. Cite specific reference by page and section and briefly describe the nature of the exception. The absence of this list shall indicate acceptance of all terms of the contract documents. Exceptions taken after acceptance of bids shall only be considered at the discretion of the Theatre Consultant.
- D. Include standard catalog cut-sheets and specifications for all proposed equipment. Note all modifications or deviations from those standard sheets.

- E. The owner reserves the right to waive all formalities, to be sole judge of quality and equality of the several bid proposals, and reserves the right to reject any and all bids.

1.6 POST TENDER MEETING

- A. Meet with the Theatre Consultant prior to beginning work on the shop drawings. Project manager and project engineer must attend and be prepared to review the project schedule and to discuss concepts described in the contract documents and proposed methods and means of executing those concepts.
- B. Present a preliminary schedule of submittals, fabrication, and installation work for review by Theatre Consultant.

1.7 SUBMITTALS

- A. Shop Drawings
 - 1. Submit complete sets of submittals to Theatre Consultant in quantities as noted in the General Conditions or as directed by Architect for approval prior to fabrication. Indication by arrow and boxed caption all deviations from contract drawings and specifications, beyond deviations discussed at the Post Tender Meeting, must be included.
 - 2. Prepare shop drawings under the supervision of a qualified project engineer. Include names and contact telephone numbers of project manager and project engineer with shop drawing package.
 - 3. All shop drawings shall be stamped and sealed by the project engineer, who shall be licensed by the State of Massachusetts.
 - 4. All shop drawings shall represent actual fabrication and details. Copies or tracing of contract documents are not acceptable.
 - 5. Shop drawings shall show material, finishes, metal gauges, overall and detail dimensions, sizes, electrical and mechanical connections, fasteners, welds, provisions for the work of others, and similar information. Shop drawings shall indicate complete details of equipment, including manufacturer's catalog numbers for components and shall include complete wiring diagrams (as required). The shop drawings shall be reviewed by the Theatre Consultant before the equipment is manufactured. The drawings will be used by the RC when installing the equipment.
 - 6. Shop drawings and related data must be submitted complete sets. Isolated items will not be considered for approval. Required re-submissions similarly must in complete sets unless exceptions are previously authorized in writing.
 - 7. Review of shop drawing by Theatre Consultant, Architect and Engineer is for conformance with the design concept and information provided in the contract documents. Non-conformities and errors detected during review shall be noted on shop drawings and returned to RC upon completion of review.
 - 8. Theatre Consultant, Architect and Engineer are not responsible for completeness or accuracy of RC's shop drawings. Review of shop drawings containing deviations and inconsistencies not detected does not relieve the RC from sole responsibility to provide materials and work conforming to the contract documents.
 - 9. No equipment shall be manufactured, fabricated, shipped or installed prior to review of shop drawings by Consultant, Architect and Engineer. Only shop drawings returned and marked APPROVED or APPROVED AS NOTED may be used by the RC. Correct and re-submit any shop drawings marked REVISE AND RE-SUBMIT or NOT APPROVED.

10. If field dimensions and/or other coordination information obtained after review of shop drawings requires changes in size, detail or similar considerations, notify Theatre Consultant and re-submit the relevant shop drawings.

11. All shop drawings shall identify Studio T+L, LLC as the Theatre Consultant.

1.8 SAMPLES AND MOCKUPS

- A. Provide samples and mock-ups identified in the contract documents or as requested by Consultant.

1.9 AS-BUILT DRAWINGS

- A. The RC shall submit to the Theatre Consultant a set of accurately marked-up plans indicating all changes encountered during the installation to reflect the “as built” installation.
- B. A Lineset Schedule shall be included in the as-built set of drawings. All dimensions shall be listed for each lineset from the plaster line to the position of the line set over the stage.
- C. The as-built drawings shall show all supplemental steel installed by the RC.

1.10 MAINTENANCE AND OPERATION MANUALS

- A. The RC shall furnish to the Owner four bound sets of maintenance and operating instructions for the rigging. Included in this document shall be recommendations for routine maintenance; the frequency of maintenance tasks; lists of lubricants and torques of nuts and bolts; recommendations for establishing safe operation procedures; and flame-proofing certificates.
- B. The Operation Manuals shall be subject to approval by the Theatre Consultant and must be submitted for review prior to instruction of staff.

1.11 PROJECT CONDITIONS

- A. All dimensions shall be verified in the field prior to fabrication by the RC, who shall make at least one (1) visit to the job site prior to preparation of shop drawings.
- B. No extras will be allowed for any misunderstanding by the RC as to the amount of work involved or his lack of knowledge about conditions pertaining to the work.
- C. The RC shall immediately notify the Architect and Theatre Consultant of any site conditions or variations which affect installation or completion of work and, when appropriate, shall indicate suggested remedial procedures by drawings and/or descriptions.
- D. Work not included:
 - 1. Structural steel for building structure.
 - 2. Electrical connections for motors.
 - 3. Primary and secondary wiring for any electrical equipment.
 - 4. Furnishing of stage lighting equipment.
- E. Substitutions, changes or deletions from these plans and specifications will not be allowed without prior approval, in writing, of the Architect.
- F. Substitutions for specified equipment or installation methods must be approved by the Consultant. Appropriate drawings or other significant data must be submitted proving the equivalence or superiority in quality and performance of the proposed substitution(s) to be considered. Any proposed substitution(s) must be submitted to the Theatre Consultant in a timely manner in order to be considered.

- G. All questions requiring clarification or interpretation of the specifications should be addressed to the Architect.

1.12 PRODUCT DELIVERY, HANDLING, AND STORAGE

- A. All material and equipment shall be delivered and unloaded by the RC within the project site and as directed by the CM.
- B. The RC shall protect all material and equipment from breakage, theft or weather damage. No material shall be stored directly on the ground.

1.13 COMPLETION DATE

- A. The work shall be complete in all respects during 2025. An exact date will be determined at the time the contract is awarded.
- B. A final check-out by the Architect and Theatre Consultant and a reasonable allowance of time to complete "punch-list" items must be included in the RC's planning and job schedule.

1.14 TESTS AND INSPECTIONS

- A. Upon completion of all work, the RC shall certify in writing that work is complete and ready for inspection for final approval. Upon receipt of written notice, final inspection shall be scheduled by the Architect, Theatre Consultant, and Owner's representative at their convenience and that of their representatives and consultants, within a period of 15 to 20 days following receipt of such notification.
- B. After the inspection, the RC shall make any adjustments or modifications necessary to bring the work into conformance with established contract requirements.
- C. Should deficiencies, due to faulty equipment or installation, require reinspection after corrective work, all expenses of such reinspection, including time and travel of the Architect, Theatre Consultant and Owner representatives, shall be the responsibility of the RC, without cost to the Owner, regardless of other contractor's negligence or failures.

1.15 STAFF INSTRUCTION

- A. RC's supervisor shall instruct designated staff members, or Owner's technical representatives, in safe operation, servicing, care and maintenance of all equipment. Instruction shall be for a minimum of eight (8) hours.
- B. The Architect and Theatre Consultant may be present or represented.
- C. Instruction is to be scheduled in conformance with test and inspection schedules, and availability of Owner representatives, Architects, Theatre Consultant and Staff.

1.16 TUNE UP

- A. RC's supervisor shall visit the theater six (6) months after acceptance by the Owner to make any required adjustments to the rigging system and to answer any questions posed by the staff.

1.17 WARRANTY

- A. The RC shall provide a written guarantee against defects in materials or workmanship for three years (one year for motorized equipment) starting from the date of acceptance of equipment by the Owner's representative. During the warranty period, repair or replacement of defective materials and/or repairs of faulty workmanship shall be provided, at no cost to the Owner, within thirty days written notification of defect(s).

- B. The guarantee shall not cover equipment that has become defective due to misuse, abuse, accident, act of God, alteration, vandalism, ordinary wear and tear, improper maintenance, or used not in a manner intended.

PART 2 – PRODUCTS

2.1 MINIMUM STANDARDS

- A. Materials shall conform to the edition of the following standards current on this document's bid date:
1. ASTM A53 Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless
 2. ASTM B210 Standard Specification for Aluminum and Aluminum-Alloy Drawn Seamless Tubes
 3. ASME B18.2.1 Square, Hex, Heavy Hex, And Askew Head Bolts and Hex, Heavy Hex, Hex Flange, Lobed Head, And Lag Screws (Inch Series)
 4. ASME B18.2.2 Nuts for General Applications: Machine Screw Nuts, Hex, Square, Hex Flange, and Coupling Nuts (Inch Series)
- B. In order to establish minimum standards of safety, the following criteria shall be followed:
1. Cables and fittings: Safety Factor of 8
 2. Cable bending ratio: Sheave is 30 times diameter of cable
 3. Maximum tread pressures: 500 lbs. for cast iron; 900 lbs. for Nylatron; 1000 lbs. for steel
 4. Maximum cable fleet angle: 1-1/2°
 5. Steel: 1/5 of stress yield
 6. Bearings: Two times required load at full speed for 2,000 hours
 7. Bolts: Minimum SAE J429 Grade 5 (ISO R898 Class 8.8), zinc plated
 8. Motors: 1.0 Service Factor
 9. Gearboxes: 1.25 Mechanical Strength Service Factor
 10. A minimum of three (3) dead wraps shall be provided on any winch drum.
- C. All materials used in this project shall be new, unused and of the latest design. Re-furbished and obsolete materials are not permitted.
- D. WIRE ROPE AND FITTINGS
1. Lift Cables: All lift cables shall be 7 x 19 construction, galvanized aircraft cable, sized as required, and with a minimum breaking strengths as follows:
 - a. 1/8" diameter - 2,000 pounds
 - b. 3/16" diameter - 4,200 pounds
 - c. 1/4" diameter - 7,000 pounds
 - d. 5/16" diameter - 9,800 pounds

- e. 3/8" diameter - 14,400 pounds
 - 2. Cable fittings and clips shall conform to wire rope manufacturer's recommendations as to size, number and method of installation and shall be forged steel only, galvanized finish. Clips shall be drop forged "Crosby" or "Nicopress."
 - 3. Eyes at cable terminations shall be formed over thimbles of correct size.
 - 4. All wire rope rigging shall be installed so as to prevent abrasion of the wire rope against any part of the building structure or other equipment. Pulleys and sheaves shall be aligned to provide fleet angles not exceeding one and one-half (1.5) degrees.
 - 5. Mule blocks, cable rollers and guides shall be installed as required to provide proper alignment.
 - 6. Turnbuckles shall be drop forged and galvanized. Turnbuckles shall be drilled and moused after adjustment to prevent loosening. Jam nuts are not acceptable.
- E. ALUMINUM MATERIALS AND ACCESSORIES
- 1. Thicknesses, gauges and tempers of aluminum products shall be as required for proper forming operations and to meet structural standards.
 - 2. Aluminum Extrusions, Structural Shapes, Anchors and Clip: 6061 alloy.
 - 3. Aluminum Castings: 214 or 356 alloy, per strength requirements.
 - 4. Fasteners: Includes bolts, nuts, washers, screws, nails, rivets and other fastenings necessary for proper erection and/or assembly of aluminum work.
- F. FINISHES FOR ITEMS WITHOUT FACTORY FINISH
- 1. Interior Ferrous Metal: Welds, burrs and rough surfaces shall be ground smooth and completed assembly cleaned and given one shop prime coat of paint. Two finished coats of paint shall be applied in field during, or at completion of erection.
 - 2. Aluminum: No painted finish required.
 - 3. All Exposed Fastenings: To match color and finish of adjacent material.
- G. RECOMMENDED WORKING LOADS
- 1. This specification calls for minimum recommended working loads for many hardware items. This is the maximum load which the manufacturer recommends be applied to properly installed, maintained, and operated new equipment. Manufacturer's recommended working loads shall be determined by calculations by a Licensed Professional Engineer and destructive testing by an independent testing laboratory. These calculations and reports shall be available for review.

2.2 PIPE GRID

A. General

- 1. Pipe grids shall be constructed from lengths of 1-1/2" nominal I.D. schedule 40 black iron pipe. All joints shall be sleeve spliced with 18" long sleeves with 9" extending into each pipe and held by two 3/8" hex bolts and lock nuts on each side of the joint. Grids shall be installed as indicated on the TR drawings.
- 2. Each pipe shall terminate just off the wall. Internally sleeved wall plates shall securely brace the grid against the wall once it is in place. Supply sufficient braces to prevent lateral movement of the pipe grid.

3. The grid shall be hung from the overhead steel structures on centers not exceeding 8 feet using approved beam clamps and forged turnbuckles attached to pipe clamps.

B. Components

1. All statically suspended rigging system components shall contain rated, traceable hardware throughout the load path of the system.
2. Fasteners
 - a. Unless otherwise specifically noted, fasteners shall have a minimum of SAE J429 Grade 5 or be appropriately rated for the intended application.
 - b. Fasteners shall be self-locking or secured by alternate means to prevent loosening.
 - c. Attachments made through slotted, elongated, or oversized holes (more than 1/16" over the fastener diameter), shall use appropriate flat washers.
3. Beam clamps with jaws attaching to both sides of a flange shall be used whenever possible and such clamps shall use either an adjustable or fixed locking mechanism.
4. Eye Bolts and Eye Nuts
 - a. Open hooks and bent eye bolts shall not be used.
 - b. Eyebolts and eye nuts shall incorporate a thread locking method (e.g. jamb nut, lock washer and nut, thread locking adhesive or peening).
 - c. Eyebolts without shoulders and eye nuts shall only be used for in-line loads and shall not be subjected to any side loads.
5. Shackles
 - a. All shackles shall be forged carbon or alloy steel permanently marked with the manufacturer's identification, size and load rating.
 - b. Screw pin shackles shall be provided with a redundant fixing means to prevent pin rotation.
6. Fasteners
 - a. All bolted connections shall be secured by through-bolting.
 - b. Building structure (beams, braces, purlins, angles, tube, et cetera) shall not be drilled for through-bolting unless reviewed and approved by a registered design professional.
 - c. Installation and use of concrete and masonry anchors shall be done in accordance with manufacturer's instructions and specification.

C. Suspension Media – Threaded Rod

1. Threaded rod shall only be used in straight tension.
2. Statically suspended rigging systems shall be stabilized to prevent the bending of threaded rod.
3. Bending or other deformation of threaded rod shall not be permitted.
4. Welding of threaded rod shall not be allowed as the primary method of attachment unless approved by a registered design professional.

D. Supplemental Structure

1. Components installed by the rigging contractor, including but not limited to I-beams (e.g. Wide Flange or S), hollow structural section (HSS), or other structural shapes (e.g. angle, channel, bar stock), may be mounted to the building structure to accommodate suspension points.
2. The structural component(s) shall be rated with a minimum design factor of 3:1 based upon the design load against ultimate breaking strength and a design factor of 2:1 shall be used based upon the design load against yield, as applicable.
3. Bolts used for the attachment of load bearing components shall be a minimum grade 5 and incorporate a thread locking method (e.g. jamb nut, lock washer and nut, thread locking adhesive or peening) unless otherwise specified by the manufacturer.

E. Turnbuckles

1. All turnbuckles shall be forged carbon steel or alloy steel and permanently marked with the manufacturer's identification and size.
2. Turnbuckles shall only be used for in-line loads.
3. No part of the turnbuckle shall be replaced with common hardware regardless of grade.
4. Turnbuckles shall be provided with a redundant fixing means to ensure they hold position.

2.3 Pipe Battens

1. All battens shall be pipe battens of 1-1/2" nominal diameter schedule 40 steel pipe in lengths as shown on the drawings.
2. The battens shall be capable of supporting at minimum 30 lbs/ft of uniformly distributed load (UDL). Battens shall be capable of sustaining a point load of 100 pounds at mid-span between any two suspension points with a maximum span deflection of 1/180 of the span.
3. All joints shall be spliced with a .120 x 1 9/16 dia. DOM tube 18" long with 9" of tube inserted into each half of the splice. The tight fitting splice tube shall be held in place by a pair of 3/8 x 2 1/2" grade 5 hex bolts on each side of the joint. The bolts shall pass through the pipe at an angle of 90° to each other. There shall be two bolts on each side of the joint spaced 1" and 8" from the joint. Alternatively, one pair of bolts on one side of the joint may be replaced with either plug welds or tight fitting steel rivets. Pipes shall be straight and painted flat black.
4. Each off stage end of the batten shall be covered with a bright yellow, closed end, soft vinyl safety cap at least 4" in length. Write line set number on upstage and downstage of the cap.
5. Wire rope termination at pipe shall be accomplished through the use of trim chains or batten clamps as shown on the drawings.

B. Pipe Clamps

1. Full Pipe Clamps:
2. Pipe clamps shall be made of two strips of 12 Ga. by 2 inch hot rolled steel formed to encompass and clamp the pipe batten to prevent its rotation. Corners shall be rounded.
3. There shall be a 3/8 inch x 1 inch hex bolt with lock nut above and below the batten. A 5/8 inch hole in the top of each clamp half allows the attachment of cable, chain, or other fittings.
4. Full pipe clamps shall have a manufacturer's recommended load rating of at least 750 lbs.

C. rail on the fly floor and on the loading bridge. Signage shall be in conformance with ANSI-Z535.

2.4 STAGE DRAPERY TRACKS

- A. Curtain tracks shall be of 14-gauge steel construction with a black finish, entirely enclosed except for slot in bottom, each half to be in one continuous piece except where splicing clamps are required.
- B. Each curtain carrier shall be spaced on 12" centers and shall be of steel construction with two neoprene-tired ball-bearing wheels held to steel body by rustproof nickel-plated rivet, such wheels rolling on two separate parallel treads.
- C. Each curtain carrier shall consist of a free-moving plated swivel and sufficient trim chain to accommodate curtain snap hook.
- D. Live-end pulley and Dead-end pulley blocks shall be adjustable and shall be equipped with 8" diameter ball-bearing wheels adequately guarded.
- E. A rubber bumper shall be attached to each curtain carrier to function as noise reducer.
- F. The manufacturer shall furnish two end stops for placement at each track end.
- G. Drapery track shall be ADC model noted on drawings, or approved equal.

2.5 DRAPERY TRACK MOTORS

A. Large Draw Curtain Machine

- 1. The large draw curtain machine shall be fully automatic type equipped with a 1-HP motor connected to gear unit, on the output drive shaft of which shall be mounted elevator-type grooved aluminum cable drum and outboard bearing to support and align extended shaft.
- 2. A cable tension device shall be provided to help automatically remove slack from cable and retain cable within drum grooves.
- 3. The drum shall deliver a cable speed of 72 feet per minute.
- 4. The mechanism shall include a magnetic contactor to provide reversing action at any point along the travel and shall include three-button control switch mounted on the unit and one for remote control.
- 5. Control shall be accomplished through a low voltage (24vac) system running from the control switch on the machine to the remote-control station.
- 6. Integral rotary limit switches for the "open" and "close" directions shall be driven from the output drive shaft of gear reduction unit.
- 7. The machine shall be equipped with disconnect switch, overload protective breaker and emergency hand crank for conversion to hand operation.
- 8. The entire mechanism shall be mounted on heavy steel base.
- 9. Model 7005-TV as manufactured by Automatic Devices Company of Allentown, PA, or approved equal.

B. Small Draw Curtain Machine

- 1. The small draw curtain machine shall be fully automatic type equipped with a 1/2 HP fixed speed AC motor directly driving a right-angle gear reduction unit, on the output shaft of which shall be mounted a dual N-grooved drive wheel.
- 2. Cable tension shall be provided by an integral adjustable tension pulley.
- 3. The drive wheel shall deliver a fixed cable speed of 90 feet per minute.

4. The mechanism shall include magnetic contactor to provide reversing action at any point along the travel and shall include three-button control switches, one mounted on the machine's control box and one for use as a remote control.
5. Control switch wiring shall be accomplished through a low voltage system running from the machine control box to the remote-control switch station.
6. Track mounted limit switches shall provide stop signals to machine for full open and full close positions.
7. The machine shall be equipped with disconnect switch, overload protective circuit breaker and control protective circuit breaker.
8. The entire machine shall be mounted on a heavy steel base designed to be attached to end of curtain track and supported from the building structure.
9. Model 2928-S as manufactured by Automatic Devices Company of Allentown, PA., or approved equal.

2.6 SIGNAGE

1. Signage with basic operating instructions and warnings shall be posted in the area where the equipment will be operated. Furnish and install signs per the drawings, adjacent to the locking

PART 3 – EXECUTION

3.1 DELIVERY, STORAGE, AND HANDLING

- A. The Rigging Contractor shall be responsible for storage of stage equipment, tools, and equipment during the period of the installation.
- B. Drapery shall be delivered to the site under other sections of these specifications and handed over to the RC on-site.

3.2 INSTALLATION

- A. All specified equipment shall be installed by fully trained superintendents and workmen who are fully responsible to, and fully represent the stage rigging company. Equipment shall be installed in a workman like manner, per plans and specifications. Equipment shall be aligned, adjusted, and trimmed for the most efficient operation, the greatest safety and for the best visual appearance.
- B. Installation practices shall be in accordance with OSHA Safety and Health Standards and all local codes. All welding must be performed in full compliance with the latest edition of the Structural Welding Code (ANSI/AWS D1.1).

3.3 FINISHES

- A. All welds must be touched up to match disturbed finishes.
- B. All finishes which are disturbed during shipping and installation shall be touched up to match the original.

3.4 BUILDING INTERIOR PROTECTION

- A. The RC shall ensure the protection of the stage floor throughout each and every rigging phase of the project.
- B. The RC shall ensure the protection of the auditorium throughout each and every rigging phase of the project.

3.5 CLEAN UP

- A. The RTC shall be responsible for clean up, including removal of packing materials etc. and the protection of surfaces or equipment provided under other sections of these specifications.

3.6 INSPECTION

- A. During the installation of equipment, the RC shall arrange for access as necessary for inspection of equipment by the Owner's representatives.
- B. Special Testing: If specifications, the Architect's instructions, laws, ordinances, or any public authority require any work to be specially tested or approved, the Rigging Contractor shall give the Architect timely notice of its readiness for inspection, and of dates of inspections to be made by other authorities.
- C. Completion Testing: Upon completing the installation of all work specified under this section, the Contractor shall so notify the Architect, who will schedule an inspection. At the time of this inspection, the Rigging Contractor shall furnish sufficient workers to operate all equipment and to perform such adjustments and tests as may be required by the Owner's representative. Any equipment which fails to meet with the specifications shall be repaired or replaced with suitable equipment and the inspection shall be re-scheduled under the same conditions as previously specified. At the time of these inspections, no other work shall be performed in the auditorium and stage areas. All temporary bracing, scaffolding, etc. shall be removed to permit full operation of and access to all equipment. Final approval will be withheld until all systems have been thoroughly tested and found to be in first class operating condition in every particular.

SILENT STEEL® MODEL 280 [380]

SILENT STEEL is the most famous name in heavy duty stage tracks. Model 280 steel (380 steel (aluminum available)) is used in the majority of stage installations with heavy weight curtains of almost any length and is particularly quiet in operation. Models 281(381) and 282(382) can be used for heavier curtains. They are essentially identical to Model 280(380) except Model 281(381) is equipped with neoprene-tired ball-bearing carriers and Model 282(382) is supplied with nylon tired ball-bearing carriers. Both systems are equipped with larger diameter floor and end pulleys.

MODEL 281 [381]

Model 281(381) features quiet and smooth operating No. 2849(BL) Neoprene Ball-Bearing Single Carriers and No. 2850(BL) Neoprene Ball-Bearing Master Carriers. No.2827 Rubber Spacers are used to reduce noise even further. With Model 281(381) Back Pack® tracks No. 2826 and No. 2827 Rubber Spacers are used.

MODEL 282 [382]

Model 282(382) features No. 2851(BL) Nylon Ball-Bearing Single Carriers and No. 2852(BL) Nylon Ball-Bearing Master Carriers. No. 2827 Rubber Spacer is used in place of No. 2825. No. 2863(BL) 5" Live End Pulley, No. 2864(BL) 5" Dead End Pulley and No. 2866(BL) 5" Adjustable Floor Pulley help in easing the operation of heavy curtains. With Model 282(382) Back Pack® tracks No.2826 and No. 2827 Rubber Spacers are used.

**280(380) Series tracks
cannot be curved.**

MODEL 280-A [380-A]

Model 280-A(380-A) is identical to Model 280(380) except No. 2801-B(BL) Single Carriers (with plated steel block) are used instead of the nylon blocked No. 2801(BL).

MODELS 283-N [383-N] and 283-R [383-R]

Model 283-N(383-N) and Model 283-R(383-R) employ No. 2863-A(BL) 8" Live End Pulleys, No. 2864-A(BL) 8" Dead End Pulleys and No. 2866-A 8" Adjustable Floor Pulleys which combined with the No. 2830 1/2" Sash Cord reduce operating effort on systems with heavy curtains. The difference between Model 283-N(383-N) and 283-R(383-R) is as follows: Model 283-N(383-N) uses No. 2851(BL) Nylon Ball-Bearing Single Carriers and No. 2852(BL) Nylon Ball-Bearing Master Carriers while Model 283-R(383-R) uses No. 2849(BL) Neoprene Ball-Bearing Single Carriers and No. 2850(BL) Neoprene Ball-Bearing Master Carriers. Not recommended for light duty applications.

Model 284 [384], 284-N [284-N], and 284-R [284-R]

Model 284(384), 284-N(384-N), and 284-R(284-R) are for walk-along operation only and are provided with no pulleys or operating cord. The difference between Model 284-N(384-N) and 284-R(384-R) is as follows: Model 284(384) employs 2801(BL) single and 2802(BL) master carriers. Model 284-N(384-N): No. 2851(BL) Nylon Ball-Bearing Single Carriers and No. 2852(BL) Nylon Ball-Bearing Master Carriers are used. Model 284-R(384-R): No. 2849(BL) Neoprene Ball-Bearing Single Carriers and No. 2850(BL) Neoprene Ball-Bearing Master Carriers are used. Not recommended for light duty applications.

NOTE: Component parts also available in black. Designated by [BL] after part number.

Full Size End View
(NOTE: TRIM CHAIN NOT SHOWN)

No. 2800 Channel [2800 BL]

1' - 2 lbs. 12 oz.

No. 2800-ABL Channel

1' - 15 oz.

14 gauge galvanized steel. 2800 BL powder coated black finish. (No. 2800-ABL supplied in 12 gauge aluminum with a black finish) Obtainable in unspliced lengths up to 26'. Holes can be drilled for direct ceiling attachment. Approximately: 2-5/8" wide x 2-3/4" high.

No. 2801 (BL) Single Carrier

1 - 3-1/4 oz.

Carrier spacing: 12". Block constructed of nylon material supported from ball-bearing with 2 heavy duty polyethylene wheels. Plated swivel for free, effortless curtain movement. Trim chain supplied for curtain trimming. Combined carrier and bumper width: Approximately 2". Length from bottom of track to bottom of 5 chain links: Approximately 9-1/4" from bottom of track to bottom of trim chain.

SILENT STEEL® 280 SERIES CURTAIN TRACKS

280

No. 2801-A (BL) Single Carrier

1 - 7 1/4 oz.

Carrier spacing: 12". Block constructed of plated steel supported from ball-bearing with 2 heavy duty polyethylene wheels. Plated swivel for free, effortless curtain movement. Trim chain supplied for curtain trimming. Gate precludes need for removing and rethreading operating cord. Combined carrier and bumper width: Approximately 2". Length from bottom of track to bottom of 5 chain links: Approximately 9-1/4" from bottom of track to bottom of trim chain.

No. 2801-B (BL) Single Carrier

1 - 6.4 oz.

Carrier spacing: 12". Block constructed of plated steel supported from ball-bearing with 2 heavy duty polyethylene wheels. Plated swivel for free, effortless curtain movement. Trim chain supplied for curtain trimming. Combined carrier and bumper width: Approximately 2". Length from bottom of track to bottom of 5 chain links: Approximately 9-1/4" high from bottom of track to bottom of trim chain.

No. 2802 (BL) Master Carrier

1 - 9 oz.

Block constructed of plated steel supported from 2 ball-bearings with 4 heavy duty polyethylene wheels and 2 cable clips which clamp cord to carrier.

Carrier width: Approximately 3-1/2". Length from bottom of track to bottom of 5 chain links: Approximately 9-1/4" high from bottom of track to bottom of trim chain.

No. 2802B Master Carrier with brake

1 - 1 lb. 12 oz.

One foot in length and features nylon-tired, ball-bearing wheels. The spring-loaded brake is released by pulling down on an operating line when positioning the carrier. For walk-draw applications only.

No. 2802B4 Master Carrier with brake

1 - 2 lbs. 3 oz.

This custom unit is similar to the 2802B but is 4 feet in length and features nylon-tired, ball-bearing wheels. The spring-loaded brake is released by pulling down on an operating line when positioning the carrier. For walk-draw applications only.

No. 2849 (BL) Neoprene Ball-Bearing Single Carrier

1 - 12 oz.

Block constructed of plated steel supported from 2 sealed and greased neo-prene-tired ball-bearing wheels. Provides quieter operation. No. 2827 Rubber Spacer must be inserted between each carrier. Used with Model 281 & 283-R.

Approximately: 9-1/4" from bottom of track to bottom of trim chain.

No. 2850 (BL) Neoprene Ball-Bearing Master Carrier

1 - 1 lb. 12 oz.

Block constructed of plated steel supported from 4 sealed and greased neo-prene-tired ball-bearing wheels. Used with Model 281 & 283-R.

Approximately: 9-1/4" high from bottom of track to bottom of trim chain.

No. 2851 (BL) Nylon Ball-Bearing Single Carrier

1 - 9 oz.

Block constructed of plated steel supported from 2 nylon-tired ball-bearing wheels. Provides longer service life and easier operation. Used with Model 282 & 283-N.

Approximately: 9-1/4" high from bottom of track to bottom of trim chain.

SILENT STEEL® 280 SERIES CURTAIN TRACKS

280

No. 2852 (BL) Nylon Ball-Bearing Master Carrier

1 - 1 lb. 8 oz.

Block constructed of plated steel supported from 4 sealed and greased nylon-tired ball-bearing wheels. Used with Model 282 & 283-N.

Approximately: 9-1/4" high from bottom of track to bottom of trim chain.

No. 2839 Overlapping Master Carrier

1 - 2 lbs. 13 oz.

Used with single section tracks to create a fixed 12" center overlap. Approximately: 15-1/2" long x 2" wide x 9-1/4" high from bottom of track to bottom of trim chain.

No. 2840 Masking/Panel Master Carrier

1 - 2 lbs. 9 oz.

For moving panels or side masking curtains. Steel plate is attached to masking or panel frame. Constructed of painted steel and equipped with 4 nylon-tired ball-bearing wheels and 2 cord/cable connectors (Model C098) to clamp.

Carrier width: Approximately 4"

No. 2861 Door Carrier

1 - 28 oz.

Constructed of 4 nylon-tired ball-bearing wheels mounted to plated steel body. Adjustable design permits leveling of door height without removing door from carrier. Rated for 100 pound load on properly supported track. Approximately 4" long x 1-3/4" wide x 6-3/8" high (to base of plate).

No. 2861A Basic Scenery Carrier

1-16 oz.

Rated for 150 pound load on properly supported track. Approximately 4-1/2" long x 3-1/4" high, 3/8" thread

No. 2848 Space Saver

1 - 1 oz.

For reducing curtain stacking area. Used in place of carrier. Recommended spacing: no more than 1 between two carriers at end pulley area only. 3/16" thickness. Not used with Model 283-N and Model 283-R manually operated tracks. Total quantity should not exceed 10% of curtain width. (Example: 40' curtain would use 2 per side).

No. 2833(BL) Back Pack Guide® (Optional)

1 - 1 oz.

Provides sliding door effect. Prevents curtain from accumulating until track ends are reached. Thickness 1/8"

No. 2834 (BL) Back Pack Guide® (Optional)

1 - 1 oz.

For machine operated tracks. Prevents curtain from accumulating until track ends are reached. Thickness 1/8"

No. 2833-A(BL) Back Pack Guide® (Optional)

Used with Model 283-N and Model 283-R manually operated tracks. Sized for No. 2830 Cord. Thickness 1/8"

11

Curtain Track
Accessories

SILENT STEEL® 280 SERIES CURTAIN TRACKS

280

No. 2803 (BL) Live End Pulley

1 - 2 lbs. 5 oz.

Equipped with 2 oil-impregnated sleeve-bearing nylon wheels. Steel block anchorable to any position under track without drilling.

Pulley width: Approximately 4".

No. 2804 (BL) Dead End Pulley

1 - 1 lb. 8 oz.

Equipped with 1 oil-impregnated sleeve-bearing nylon wheel. Same type adjustment block as Live End.

Pulley width: Approximately 4".

No. 2803-F Flying Live End Pulley

1 - 4 lbs. 13 oz.

Used with flying type curtain machines to route the cable 180 degrees, back over the track to the track-mounted machine. Extends beyond track approximately 4".

2803H Horizontal Live End Pulley

1 - 3 lbs 12 oz.

Used in place of the standard Model 2803 Live End Pulley. The pulley routes the operating lines horizontally and at a 90 degree angle relative to the track. A mule sheave (Model MB-2) can be used at the back wall to route the cables to a floor mounted machine or tension pulley. Dimensions: 7-1/4"L x 4" W

No. 2803-B Center Take Off Pulley

1 - 5 lbs. 12 oz.

Used to route the operating cables perpendicular to the track. Must be located a minimum of 4' from the end of the track. Add 1 each 2804 Dead End Pulley to system when this device is used. Extends 5" from side of track.

NOTE: Additional pulleys may be required to mule operating lines to machine or floor pulley.

No. 2863 (BL) 5" Live End Pulley

1 - 4 lbs.

Painted steel construction equipped with two 5" diameter glass filled nylon ball-bearing wheels. Used with Model 282. Pulley width: 5-1/2".

No. 2864 (BL) 5" Dead End Pulley

1 - 4 lbs. 12 oz.

Painted steel construction equipped with one 5" diameter glass filled nylon ball-bearing wheel. Used with Model 282. Pulley width: 10".

No. 2863-A 8" Live End Pulley

1 - 6 lbs.

Painted steel construction equipped with two ball-bearing equipped 8" diameter nylon wheels. Used with Model 283-N and Model 283-R. Pulley width: 7".

No. 2864-A 8" Dead End Pulley

1-5 lbs.

Painted steel construction with single 8" diameter ball-bearing equipped nylon wheel. Used with Model 283-N and Model 283-R. Pulley width: 10".

SILENT STEEL® 280 SERIES CURTAIN TRACKS

280

No. 2864R45 Dead End Pulley 45 Degree Angle

1-6 lbs.

Used when track systems need to fit in narrow ceiling pockets or when 2 track systems need to be placed closely side by side. Used with Model 2863A Live End Pulley. Painted steel construction with single 8" diameter ball-bearing nylon wheel. Can be used with any Model 280 track system.

10"W x 11"L

No. 2824 (BL) Suspended Splicing Clamp

1 pr. - 6 lbs. 6 oz.

Two piece 11 gauge steel clamp for joining track sections assuring proper alignment of track channels. Approximately 12" long x 2-3/4" wide x 5-1/2" high.

NOTE: For suspended tracks only.

No. 2824-A (BL) Ceiling Splicing Clamp

1 pr. - 2 lbs. 14 oz.

Two piece 11 gauge steel clamp for joining track sections assuring proper alignment of track channels.

Approximately: 12" long x 7/8" wide x 2-13/16" high.

NOTE: For ceiling mounted tracks only.

No. 28081D Hanging Clamp with Cord Support

Idle pulley device. Used to support and help prevent the cord or cable from sagging below the track sightline. Suggested spacing 6'. Pulley width approximately 4". Available for bi-part and one-way applications.

No. 2808 (BL) Hanging Clamp

1 pr. - 16 oz.

Recommended spacing: 7 ft. Steel, chain or cable suggested for track suspension. Adjustable to any location on the track. Pipe battens recommended for long and heavy curtain installations.

No. 2809 (BL) End Stop

1 - 6.4 oz.

Prevents carriers from moving beyond selected position in track.

Cannot be used with Rotodrapers®. Correct hardware supplied with Rotodrapers®.

No. 2807 (BL) Lap Clamp

1 - 1 lb. 8 oz.

For securing bi-parting tracks at the center overlap.

NOTE: For use with suspended track systems only.

Sold individually.

No. CPS-1 Center Pipe Support

1 pr - 15.2 oz.

To facilitate the clamping of steel track channel to a single pipe batten. The Center Pipe Support is placed at the overlap and the two lap clamps are used in the normal manner.

(Lap and pipe clamps sold separately.)

No. 2821 Pocket Mounting Bracket for Model

2800 Track

1 - 1 lb.

Steel offset bracket for mounting Model 2800 track to side of ceiling pocket. Projects track approximately 4 1/2" from side of pocket. Must be used with Model 2808 Hanging Clamp (not included). Plated steel construction.

4-1/2" L x 2" W

13

Curtain Track
Accessories

SILENT STEEL® 280 SERIES CURTAIN TRACKS

280

No. 2822 Pocket Mounting Bracket for Model 2800 Track

1 - 12 oz.

Steel offset bracket for mounting Model 2800 track to side of ceiling pocket. Projects track approximately 2" from side of pocket. Must be used with Model 2808 Hanging Clamp (not included). Plated steel construction. 4-1/2"L x 2"W

NOTE: If using pocket mounting brackets with bi-parting track system, both 2821 & 2822 pocket brackets must be used.

NOTE: These brackets are not designed for wall mounted track systems. They do not project enough to allow the curtain to stack without rubbing against the wall.

No. 2823 Ceiling Bracket

1 - 13 oz.

Ceiling Bracket used when it is not possible to drill through track and attach directly to ceiling.

Approximately: 5-1/4" long x 2" wide x 2-3/4" high.

THREADER

1 - 1 lb

Designed to allow suspension of our various track models from tensile rated threaded rod. The bracket is fabricated from hardened steel and has centered hole designed to accept 1/2" threaded rod. Track hanging clamps not included. Dimensions: 3-7/8"H x 1-1/2"W x 3-1/4"L

No. 2814 [BL] Pipe Clamp

1 pr. - 13 oz.

For 1-1/4" I.D. Schedule 40 pipe

No. 2815 [BL] Pipe Clamp

1 pr. - 16 oz.

For 1-1/2" I.D. Schedule 40 pipe

No. 2816 [BL] Pipe Clamp

1 pr. - 18 oz.

For 2" I.D. Schedule 40 pipe

No. 2865 [BL] Tension Floor Pulley

1 - 1 lb. 12 oz.

Equipped with 1 oil-impregnated sleeve bearing nylon wheel. Tension spring provides continuous cord tension. Can be either wall or floor mounted. Spring-loaded latch maintains wheel in uppermost position during installation. Approximately: 1-1/2" long x 3-1/2" wide x 13" high.

Multi-Purpose Carrier

6" wide x 8-1/4" high

1 - 4 lbs.

Nylon-tired ball-bearing wheels. Rated capacity 225 lbs.

SILENT STEEL® 280 SERIES CURTAIN TRACKS

280

Back Pack Drawings

2833 Back Pack

2833A Back Pack

2834 Back Pack

Note: Do not use back-pack guides on master carriers or the last single carrier of any system.

No. 2828 Cord

100' - 5 lbs. 7 oz.
Synthetic center and stretch-resistant.
For manually-operated 280, 281, 282 tracks. 3/8" (No. 12)

No. 3529 Cable

100' - 2 lbs. 7 oz.
Wire center with woven polyester cover.
Used with drum-drive machines. 3/16" (No. 6)

No. 2829 Cable

100' - 2 lbs. 15 oz.
Wire center. Used with machine operated track systems. 1/4" (No. 8)

No. 2830 Cord

100' - 6 lbs. 2 oz.
Synthetic center and stretch resistant.
For manually operated Model 283-N and Model 283-R tracks. 1/2" (No. 14)

Model 2928

Consider using a 2928 Inline Machine with your 280 Track System.

DRAW CURTAIN MACHINES: VARIABLE

SILVER SERVICE® Model 2905-TV HERCULES® Models 6505-TV and 7005-TV

Model 2905-TV

Close-up of RCS-TV
(wall [standard] and flush mount
[optional] units shown)

NOTE: Guard not shown. Required for ETL compliance.

Models 2905-TV, 6505-TV and 7005-TV combine versatility with the power and drum capacity needed to operate large draw curtains. Equipped with electronic frequency drives, the TV series machines are the most versatile in the ADC line. Designed for draw applications, these machines offer a multitude of parameters that can be programmed in the field to meet a variety of applications. Parameters such as run speed, maximum obtainable speed, minimum obtainable speed, acceleration ramp time and deceleration ramp time are easily changed at the drive. Each machine is provided with deceleration limit switches which allow the machine to decelerate to a stop rather than abruptly stop at the end of its travel. These machines also feature emergency overtravel limit switches and push buttons which bypass the deceleration ramp time and shut the machine off immediately. The operation of these machines is Start/Stop/Reverse from any point of travel and low voltage control is standard. If versatility is a project requirement, this series of machines is the best option.

A Cable Tension Device is included as standard equipment. A magnetic brake, for precise stopping, is available as an option.

OUTSTANDING FEATURES:

GROOVED CABLE DRUM

Assures positive drive without cable slippage. Aluminum construction 8" diameter x 12" long. Coated wire-center cable must be used. Drum must be at least 14' from track live end pulley, or last pulley in system to allow cable to wind properly on drum.

VARIABLE SPEED (0-72 RPM) Speed cannot be adjusted while machine is operating without effecting limit positions.

	Model No.		
	2905TV	6505TV	7005TV
Horsepower	1/2	3/4	1
Input Voltage/Phase	120/220 1 208/230 3	120/220 1 208/230 3	120/220 1 208/230 3
Cable Speed (fpm)	0-72	0-72	0-72
Number of Remote Wires	6	6	6
Control Voltage (Plus Ground)	24 VAC	24 VAC	24VAC
Length With Guard	42	42	42
Width With Guard	30	30	30
Height With Guard	18	18	18
Shipping Weight Without Guard	230	235	245

Frequency drive machines must be used for any motorized system over 100 feet wide. Failure to do so would void the factory warranty.

CABLE TENSION DEVICE

Helps eliminate cable slack automatically. Also helps retain cable within drum grooves.

EMERGENCY HAND CRANK

Facilitates hand operation of curtain in case of mechanical or power failure.

ROTARY LIMIT SWITCH

Allows for user defined decelerated pre-set stops for the "Full Open" and "Full Close" positions. The limit assembly is also supplied with emergency overtravel limit switches which bypass the deceleration ramps and shut the machine off immediately.

DISCONNECT SWITCH

Toggle switch which removes power to machine's internal circuitry.

Power will still be active at the machine terminal strip and on one side of the disconnect switch. To completely remove power from the machine for servicing, power must be shut off at its source and locked out according to OSHA regulations.

OVERLOAD PROTECTIVE BREAKER

Automatic type help protect machine, track and curtain against effects of accidental overload. Must be manually reset.

FREQUENCY CONTROL DRIVE

Provides user definable parameters of operation. Examples are: run speed, maximum obtainable speed, minimum obtainable speed, acceleration ramp time and deceleration ramp time.

SUGGESTED SPECIFICATIONS FOR MODELS 2905-TV, 6505-TV OR 7005-TV

Curtain machines shall be fully automatic type equipped with ... HP motor connected to gear unit, on the output drive shaft of which shall be mounted elevator-type grooved aluminum cable drum and outboard bearing to support and align extended shaft. Cable tension device shall be provided to help automatically remove slack from cable and retain cable within drum grooves. Drum shall deliver a variable cable speed of 0-72 feet per minute. Mechanism shall include electronic frequency drive to provide variable speed, accelerated starts, decelerated stops and reversing action at any point along the travel and shall include three-button control switch mounted on unit and one for remote control. Control switch wiring shall be accomplished through low voltage system running from control box on the machine to the remote control station. Special limit switch shall be driven from output drive shaft of gear reduction unit. Machine shall be equipped with disconnect switch, overload protective breaker and emergency hand crank for conversion to hand operation. The entire mechanism shall be mounted on heavy steel base. Model ... as manufactured by Automatic Devices Company of Allentown, PA.

These machines are not to be used for the lifting, supporting, or transporting of people. These machines should not be used to move objects over areas where people are present unless suitable safety devices are installed. Other data will be found in the Curtain Machine Selector Guide (page 86).

Specifically designed for projects requiring the curtain machine to be located off of the finished floor. This model machine is designed to attach to, and align with, the curtain track and be supported by an overhead structure via eye-bolts mounted to the machine's base. The machine eliminates the vertical operating cables that normally run from a floor mounted machine to the track live-end pulley. The control box for this model machine is connected by 6' of BX cable to the machine. Control is stop/start/reverse from any point of travel.

OUTSTANDING FEATURES:

N-GROOVE WHEEL DRIVE

Double machined N-grooves in conjunction with an adjustable tension idler provide maximum friction for a near slip free operation.

REMOTE CONTROL STATION

Three-button type and marked Open, Close and Stop. Any number of remote control stations can be used with this model machine. Machine is supplied with remote control station which can be mounted up to 2000 feet away from control box.

CONTROL BOX

Supplied attached to but separate from the machine for placement on an adjacent wall. Control box is supplied pre-wired and to machine with 6' of BX cable.

LIMIT SWITCHES

Track mounted limit switches are used to provide positive stops for the curtain. Two limits are provided with the machine - one for the open direction and one for the close direction. Limit switch voltage is 24 VAC. Master carrier with tripping dog included.

OVERLOAD PROTECTIVE BREAKER

Automatic type which helps to protect the machine, track and curtain from the effects of accidental overload. Must be manually reset.

SAFETY RELAY

Prevents single phase motor from continuing to run in the same direction when a push-button is pressed at the same instant a limit switch is tripped.

OPTIONAL EQUIPMENT

Wireless remote control (Model WRC-1)
Key operated remote control (Model KOS-1)

Specifications for Models 2928, 2950, 2917 & 2914 Silver Service Machine

Curtain machine shall be fully automatic type equipped with a 1/2 HP fixed speed AC motor directly driving a right-angle gear reduction unit, on the output shaft of which shall be mounted a dual N-grooved drive wheel. Cable tension shall be provided by an integral adjustable tension pulley. Drive wheel shall deliver a fixed cable speed of 90 feet per minute. Mechanism shall include magnetic contactor to provide reversing action at any point along the travel and shall include three-button control switches, one mounted on the machine's control box and one for use as a remote control. Control switch wiring shall be accomplished through a low voltage system running from the machine control box to the remote control switch station. Track mounted limit switches shall provide stop signals to machine for full open and full close positions. Machine shall be equipped with disconnect switch, overload protective circuit breaker and control protective circuit breaker. The entire machine shall be mounted on a heavy steel base designed to be attached to end of curtain track and supported from the building structure. Model 2928, 2950, 2917 & 2914 as manufactured by Automatic Devices Company of Allentown, PA.

SECTION 116153

STAGE LIGHTING POWER AND CONTROL

(This Section is a Sub Sub-Bid To Section 260000 - Electrical)

PART 1- GENERAL

1.1 SUMMARY

- A. The General Provisions of the Contract, including Conditions of the Contract and Division 1 of the Specifications, apply to the work in this Section.
- B. All work of this section shall be furnished under a single subcontract and shall be the responsibility of the Lighting System Integrator (LSI) except where specifically assigned to the general contractor or electrical contractor.
- C. Work of this Section includes, but is not limited to, the following:
 - 1. Furnish wiring devices, back boxes, panels, dimmer racks and modules, lighting control racks, as described herein and on the drawings.
 - 2. Coordination with the Electrical Contractor (EC) for a complete and working theatrical dimming and control system.
 - 3. Engineering as required by the Contract Documents.
 - 4. Provide continuous liaison with the Construction Manager (CM) and other trades during construction, and coordinate delivery schedules and installation of equipment.
- D. This specification shall be considered as an outline form and other appurtenances that may be required for the efficient and safe operation of the dimming and control systems specified in this section shall be furnished by the LSI, the same as if specified herein.
- E. Any quantities, measurements or dimensions listed or shown are for the convenience of the Lighting System Integrator in the preparation of his estimate but will not relieve the SI of his responsibility for the determination of the exact quantities, measurements, and dimensions required for a complete job.

1.2 RELATED WORK

- A. Receipt and installation of stage lighting and architectural lighting system as per Division 26.
- B. Electrical service from power mains through fused safety switches to primary terminals of dimmer racks.
- C. Emergency power supply, distribution, and protection, except as noted.
- D. Placement and installation of equipment, except as noted.
- E. All conduit, junction boxes, wire and wire pulling.
- F. Back boxes as shown on the drawings.
- G. All wire terminations.
- H. Architectural lighting fixtures.
- I. Interior work as specified in Division 9.
- J. Rigging work as specified in Section 116133.

STAGE LIGHTING POWER AND CONTROL

- K. Dimmer room and control room finishes and glazing.
- L. Equipment painting and finishing, except as noted.

1.3 DEFINITIONS

- A. "Owner" as used in this section shall mean the representative of Northeast Metropolitan Regional Vocational High School.
- B. "Theatre Consultant" as used in this section shall mean Studio T+L, LLC.
- C. "Lighting System Integrator" (LSI) as used in this section shall mean the contractor responsible to provide, furnish and/or install, as noted, the theatre lighting and architectural lighting dimming and control system as defined by Section 116153.
- D. "Architect" as used in this section shall mean Drummey Rosane Anderson, Inc.
- E. "Electrical Engineer" (EE) as used in this section shall mean Bala Consulting Engineers.
- F. "Electrical Contractor" (EC) as used in this section shall mean the contractor for Division 26.
- G. Wherever the words "Approved", "Approval" and "Approved equal" appear, it is intended that items other than the model numbers specified shall be subject to the approval of the Architect and Theatre Consultant.
- H. "Provide", as used herein, shall mean that the LSI is responsible for furnishing and installing said item or equipment.
- I. "Furnish", as used herein, shall mean that the LSI shall acquire and make available said item or equipment and that the installation shall be by others.
- J. "Install", as used herein, shall mean that the LSI shall make installation of items or equipment furnished by others.
- K. "Contract Documents", as used herein, shall be deemed to include both the specification section and related bid drawings.
- L. "NIC" as used in the contract documents means, "Not Included in this Contract".
- M. "By Others" as used in the contract documents means "Provided by Another Subcontractor".
- N. "Or As Approved" as used in the contract documents means "Substitution only after written approval by Consultant".

1.4 SCOPE OF WORK

- A. Provide and/or Furnish and/or Install, as noted herein, new and unused equipment and materials to create a complete and functional dimming and control system for the stage lighting and architectural lighting as specified herein and in the contract drawings
- B. The LSI shall provide all materials, labor and engineering to manufacture and deliver all equipment including but not limited to, items shown on the drawings and specified herein:
 - 1. Furnish all dimmer banks, including all dimmer modules and control electronics as specified herein.
 - 2. Furnish all relay racks, as may be required.
 - 3. Furnish all stage lighting control systems including: control console(s), control console accessories and video accessories; house lighting control systems; work lighting control system and all panels and pendants as specified herein for Architectural, DMX512 and Ethernet control networks.

4. Furnish all stage lighting power and data distribution devices including: plugging strips, plugging box face panels, multi-cables, multi-cable connectors and junction boxes as specified herein.
 5. Furnish all back boxes for stage lighting and architectural panels and devices except as noted.
 6. Site inspection reports and installation instructions.
 7. Factory testing, engineering check-out, field testing and completion check-out as noted herein.
 8. Program all architectural lighting and stage lighting control stations. The Theatre Consultant will provide the LSI with a complete list of dimmer and channel assignments for each button and slider on each architectural lighting control station. The LSI shall provide a minimum of two (2) weeks notice to the Theatre Consultant when such information is required.
 9. Provide "as built" drawings, guarantee and warranty, operation manuals, staff instruction and software updates as noted herein.
- C. All equipment and systems specified herein shall perform as specified when installed on site. Examine all sections of Division 26 and determine their relationship to the work of this section. Perform all work of this section in accordance with the applicable requirements of Division 16 to provide an interrelated electrical system.

1.5 CONTROL PROTOCOL REFERENCE STANDARDS

- A. Products utilizing the "DMX" or "DMX512" control protocol shall comply with ANSI E1.11 – 2008 (R2018), Entertainment Technology - USITT DMX512-A, Asynchronous Serial Digital Data Transmission Standard for Controlling Lighting Equipment and Accessories.
- B. Products utilizing the "ACN" control protocol shall comply with ANSI E1.17 – 2015, Entertainment Technology - Architecture for Control Networks (ACN).
- C. Products utilizing the "RDM" control protocol shall comply with the following standards:
 1. ANSI E1.20 – 2010, Entertainment Technology - RDM - Remote Device Management over USITT DMX512 Networks
 2. ANSI E1.37 - 1 – 2012 (R2017) – Entertainment Technology – Additional Message Sets for ANSI E1.20 (RDM) Part 1
 3. ANSI E1.37 - 2 (RDM) – Part 2 – 2015, Entertainment Technology, Additional Message Sets for ANSI E1.20 (RDM) – Part 2, IPv4 & DNS Configuration Messages
- D. Products utilizing the "RDMnet" control protocol shall comply with ANSI E1.33 - 2019, Entertainment Technology -- (RDMnet) -- Message Transport and Device Management of ANSI E1.20 (RDM) Compatible and Similar Devices Over IP Networks.
- E. Products utilizing "Lightweight/Streaming ACN" control protocol shall comply with ANSI E1.31 – 2018, Entertainment Technology – Lightweight streaming protocol for transport of DMX512 Using ACN.
- F. Products utilizing a "0 – 10V" control protocol shall comply with ANSI E1.3 - 2001 (R2016), Entertainment Technology - Lighting Control Systems - 0 to 10V Analog Control Specification.
- G. Portable data cables used to transmit "DMX" or "DMX512" data shall comply with ANSI E1.27-1-2006 (R2014), Entertainment Technology-Standard for Portable Control Cables for Use with USITT DMX512/1990 and E1.11 (DMX512-A) Products.

- H. Permanently installed data cables used to transmit "DMX" or "DMX512" data shall comply with ANSI E1.27-2 – 2009 (R2019), Entertainment Technology - Recommended Practice for Permanently Installed Control Cables for Use with ANSI E1.11 (DMX512-A) and USITT DMX512/1990 Products.

1.6 SYSTEM INTEGRATOR

A. General

1. The supplier of the system herein described shall be acknowledged in business as a Theatre Lighting Systems Integration Company, hereafter referred to as LSI. This company shall employ full time Systems Integrators and Project Managers with experience in completing work of similar or greater size and scope. The role of the LSI in this project shall be to provide all equipment listed in this section to the Electrical Installer for installation. The LSI shall furnish a complete working system to the Electrical Contractor, meeting the intent of this specification. The LSI shall coordinate delivery schedules and installation of equipment with Electrical Contractor. Additionally, the LSI shall be responsible for all documentation for equipment in this section, system record drawings, final testing of the system and training of the Owner's personnel as required by this specification.

B. Qualifications

1. LSIs that are not pre-approved shall provide with their bid the following information or statements.
 - a. The LSI shall have a minimum of 10 years experience in the installation and operation of similar equipment associated with the construction and/or renovation of facilities similar in scope to this project.
 - b. The LSI shall have been in business for a minimum of 10 consecutive years and shall have no history of bankruptcy.
 - c. The LSI shall be an authorized dealer for an adequate number of manufacturers of system products necessary to provide a complete working system meeting the intent of this specification. System products shall include but are not limited to the following:
 - 1) Dimming Equipment
 - 2) Control Systems
 - 3) Stage Lighting Fixtures
 - 4) Power Distribution Devices and Faceplates
 - 5) Stage Lighting Accessories
 - a. The LSI shall have on staff at least two full-time manufacturer-certified field service technicians and have technical support and assistance accessible 24 hours a day, seven days a week.
 - b. The LSI shall offer a Maintenance and Service Contract.
 - c. The LSI shall provide a one-year system warranty for the complete system, not including expendable supplies, effective from the date of system acceptance. Within this warranty period, the LSI shall be responsible as the Owner's sole contact for the remedy, repair, or replacement of system deficiencies (through the manufacturer's warranty where applicable).

C. Project Management

1. The LSI shall designate a dedicated Project Manager. The LSI's Project Manager shall be the main contact between the LSI, the manufacturers, the Architect, the Theatre Consultant and the Contractors from contract award until final sign off. The LSI's Project Manager shall be the same person throughout the entire course of the project, unless otherwise approved by the Architect.
2. The LSI's Project Manager shall attend a Kick-Off Meeting at the project site office or a place to be designated.
 - a. Introduce the Project Team Members
 - b. Review the Project Schedule
 - c. Review the Scope of Work and any additional materials and documents not in the Scope of Work
 - d. Review the creative intent of the Project
3. The LSI's Project Manager will provide Project Status Reports. These status reports shall provide the basis for analysis of completion as well as for progress meetings between the LSI and the Architect.
4. The LSI's Project Manager shall provide the Construction Manager or General Contractor with a two-week Look Ahead Schedule to help with the coordination of other trades, as needed.

1.2 SYSTEM INTEGRATOR RESPONSIBILITIES

- A. This specification section, related sections and the contract drawings describe performance attributes of systems to be provided, including means of operation and control, dimensions and profiles and visual appearances. Assume all responsibility for engineering of systems described herein, including modification of and addition to any details as required fulfilling the design intent of the specification section.
- B. All work shall be manufactured in accordance with the latest editions of applicable publications and standards of the following organizations:
 1. National Electric Code (NEC) and all prevailing local regulations.
 2. Underwriter's Laboratories, Inc.(UL)
 3. National Electrical Manufacturers Association (NEMA)
- C. All equipment, systems, components and assemblies shall be UL and/or CSA listed and meet all applicable local codes, standards and customary practice applying to the work of this section.
- D. All equipment shall be thoroughly tested in the LSI's shop prior to shipment to ensure mechanical and electrical integrity.
- E. Provide timely inspection and instruction to EC to ensure proper installation of the dimming system.
- F. Omissions and/or errors within this specification section shall not relieve the LSI and the EC of the responsibility for providing a properly functioning installation of the dimmer system.
- G. Correct and replace, at no cost to the Owner, any system or part of the system that does not meet the requirements of this section at the time of Completion Check-out or any time during the warranty period.

1.3 QUALITY ASSURANCE

- A. The manufacturer of the dimming and control equipment (both theatrical control and architectural control) shall be:
 - 1. Electronic Theatre Controls, Middleton, WI – 608.831.4116
 - 2. Strand Lighting, Dallas, TX – 214.647.7880
- B. Approved manufacturers of the wiring devices shall be:
 - 1. Union Connector, Jacksonville, FL – 631.753.9550
 - 2. SSRC, Duncan, SC - 864.848.9770
 - 3. Lex Products, Shelton, CT – 800.643.4460
 - 4. Electronic Theatre Controls, Middleton, WI – 608.831.4116
 - 5. Strand Lighting, Dallas, TX – 214.647.7880

1.4 REVIEW AND INTERPRETATION DURING BIDDING

- A. Notify Architect and Consultant of any omissions, discrepancies or ambiguities in the specification section and the contract drawings so that a clarification may be issued. Notify Architect and Theatre Consultant if exception is taken to any statement, indication or criterion in the contract documents.
- B. Obtain all other contract documents, including architectural, electrical, structural and mechanical to ensure there are no conflicts with the work of this section. Notify Architect and Theatre Consultant of all such conflicts and propose modifications to resolve the conflicts.
- C. Submit the notifications, A and B above, in writing to Architect and Theatre Consultant at least fourteen (14) days prior to bid opening date. Lack of notification shall be understood to indicate acceptance of all requirements of the contract documents and shall preclude any future claims.
- D. Interpretations or corrections to the contract documents shall be issued by Addendum. Interpretations or corrections given by any other method will not be binding.

1.5 SUBSTITUTIONS

- A. Substitutions in the contract documents will only be considered where noted “OR AS APPROVED”. Submit requests for substitutions, in writing, to Theatre Consultant no less than fourteen (14) days prior to bid opening. Theatre Consultant shall be the sole judge of acceptability of proposed substitutions.
- B. Approved substitutions will be listed by Addendum. Verbal or other written approvals will not be binding.

1.6 BID SUBMITTALS

- A. The LSI shall provide the following information as part of their bid package:
 - 1. The LSI shall submit a list of at least five systems of similar scope and size which have been in service for at least six months. Include name, address and telephone number of owner, architect and theater consultant.
 - 2. List of staff to be assigned to this project.
- B. Provide a complete Bill-of-Material sets as part of the bid proposal. Include a list of all equipment, systems, components, sub-assemblies, etc., proposed to fulfill the requirements of the contract documents.
- C. The Bill-of-Materials will be used to evaluate whether the proposal meets the letter and intent of the contract documents. Bids not meeting the specification, based upon a review of the Bill-of-

Materials, will be rejected. The Bill-of-Material will not, however, be the exclusive determinant of the equipment and services required for the work of this section.

- D. List any exceptions taken. Cite specific reference by page and section and briefly describe the nature of the exception. The absence of this list shall indicate acceptance of all terms of the contract documents. Exceptions taken after acceptance of bids shall only be considered at the discretion of the Theatre Consultant.
- E. Include standard catalog cut-sheets and specifications for all proposed equipment. Note all modifications or deviations from those standard sheets.
- F. The owner reserves the right to waive all formalities, to be sole judge of quality and equality of the several bid proposals, and reserves the right to reject any and all bids.

1.7 POST TENDER MEETING

- A. Meet with the Theatre Consultant prior to beginning work on the shop drawings. Project manager and project engineer must attend and be prepared to review the project schedule and to discuss concepts described in the contract documents and proposed methods and means of executing those concepts.
- B. Present a preliminary schedule of submittals, fabrication and installation work for review by the Consultant.

1.8 SHOP DRAWINGS

- A. Submit complete sets of submittals to the Theatre Consultant in quantities as noted in the General Conditions or as directed by the Architect for approval prior to fabrication. Indication by arrow and boxed caption of all deviations from contract drawings and specifications beyond deviations discussed at the Post Tender Meeting must be included.
- B. Prepare shop drawings under the supervision of a qualified project engineer. Include names and contact telephone numbers of project manager and project engineer with shop drawing package.
- C. All shop drawings shall represent actual fabrication and details. Copies or tracing of contract documents are not acceptable.
- D. Shop drawings shall show material, finishes, metal gauges, overall and detail dimensions, sizes, electrical and mechanical connections, fasteners, welds, provisions for the work of others, and similar information. Shop drawings shall indicate complete details of equipment, including manufacturer's catalog numbers for components and shall include complete wiring diagrams. The shop drawings shall be reviewed by the Consultant before the equipment is manufactured. The drawings will be used by the LSI and Electrical Contractor when installing the equipment.
- E. Shop drawings for wiring devices shall utilize the exact circuit numbering system as detailed on the contract drawings. Furnish catalog cuts, drawings and/or descriptive material of catalog items as requested by the Architect.
- F. Shop drawings and related data must be submitted complete and at one time. Isolated items will not be considered for approval. Required re-submissions similarly must include all items at one time unless exceptions are previously authorized in writing.
- G. All product data sheets shall be submitted as hard copies or PDFs. QR codes or other forms of outbound links are not acceptable.
- H. Review of shop drawing by the Theatre Consultant, Architect and Engineer is for conformance with the design concept and information provided in the contract documents. Non-conformities and errors detected during review shall be noted on shop drawings and returned to LSI upon completion of the review. The Theatre Consultant, Architect and Engineer are not responsible for

completeness or accuracy of LSI's shop drawings. Review of shop drawings containing deviations and inconsistencies not detected does not relieve the LSI from sole responsibility to provide materials and work conforming to the contract documents.

- I. No equipment shall be manufactured, fabricated, shipped or installed prior to review of shop drawings by the Theatre Consultant, Architect and Engineer. Only shop drawings returned and marked APPROVED or APPROVED AS NOTED may be used by the LSI. Correct and re-submit any shop drawings marked REVISE AND RE-SUBMIT or NOT APPROVED.
- J. If field dimensions and/or other coordination information obtained after review of shop drawings requires changes in size, detail or similar considerations, notify the Consultant and re-submit the relevant shop drawings.
- K. All shop drawings shall identify Studio T+L, LLC. as the Theater Consultant.

1.9 SAMPLES AND MOCKUPS

- A. Provide samples and mock-ups identified in the contract documents or as requested by the Theatre Consultant.

1.10 MAINTENANCE AND OPERATION MANUALS

- A. After the installation is complete, the LSI shall provide four copies of an Operations Manual which shall include:
 - 1. Catalog cuts of dimmers and control console.
 - 2. Operation manual for control console.
 - 3. Recommendations for periodic maintenance.
 - 4. Catalog numbers and manufacturer's names and addresses for perishable items such as pilot lamps and fuses.
 - 5. Diagnostic procedures.
 - 6. Emergency and normal repair telephone contact sheet for 24-hour service.
 - 7. As built drawings showing all changes encountered during the installation.
- B. The Operation Manuals shall be subject to approval by the Theatre Consultant and must be submitted for review prior to instruction of staff.

1.11 COMPLETION DATE

- A. Completion of the entire dimming system shall be according to the Construction Manager's schedule. An exact date will be set at contract award.
- B. A final check-out by the Theatre Consultant and a reasonable allowance of time to complete "punch-list" items must be included in the LSI's planning and job schedule.

1.12 TESTS AND INSPECTIONS

- A. Upon completion of all work, the LSI shall certify in writing that work is complete and ready for inspection for final approval. Final inspection shall be scheduled by the Architect and Theatre Consultant at their convenience and that of their representatives and consultants, within a period of 15 to 20 days following receipt of such notification.
- B. After the inspection, the LSI shall make any adjustments or modifications necessary to bring the work into conformance with established contract requirements.
- C. Should deficiencies, due to faulty equipment or installation, require re-inspection after corrective work, all expenses of such re-inspection, including time and travel of the Consultants, the

Architect and Owner representatives, shall be the responsibility of the LSI, without cost to the Owner.

1.13 STAFF INSTRUCTION

- A. The LSI shall instruct designated staff members, or the Owner's technical representatives, in the safe operation, servicing, care and maintenance of all equipment.
- B. The Architect and Theatre Consultant may be present or represented.
- C. Instruction is to be scheduled in conformance with test and inspection schedules, and availability of Owner's representatives, Architect, Theatre Consultant and staff.
- D. Instruction period shall be no less than two 4-hour days, subject to the discretion of Owner's representatives, Architect, Theatre Consultant and staff.
- E. LSI shall include and overview of the operation manual during this period.

1.14 MAINTENANCE PERIOD

- A. The LSI shall assure that the dimming system is properly installed, free of defects in materials and workmanship, and shall provide a warranty on all equipment and workmanship provided under this contract for a period of one year from the date of owner acceptance.
- B. During the maintenance period, repair or replacement of defective materials and/or repairs of faulty workmanship shall be provided, at no cost to the Owner, within two days written notification of defect(s).
- C. Three copies of the above warranty are required as a condition for final approval of the work.
- D. Submit with the warranty a yearly cost for dimming system maintenance contract covering three years subsequent to expiration of initial period. System is to be maintained at no less a level than when system was accepted upon completion.

PART 2 – PRODUCTS

2.1 LIGHTING CONTROL NETWORK

A. General

- 1. The lighting control network shall provide data distribution over TCP/IP Ethernet networks. Data shall be layer 3 routable. Systems using proprietary formats or formats other than 10/100/100Mbit wired Ethernet or non-layer 3 routable networks shall not be accepted.
- 2. Connections shall be made between consoles, face panels, architectural processors, dimmers, Net3 Gateways, and computers over standard Ethernet distribution systems using 100BaseT, 100BaseFL, or greater wiring. All installations shall conform to established Ethernet wiring practice, and installation shall be performed by contractors qualified to do this type of work. All wiring shall be tested at Category 5e or higher for full bandwidth operation to the appropriate IEEE standard.
- 3. The Lighting Control system must be supplied by a single manufacturer and must have seamless integration over Ethernet between the Entertainment and Architectural lighting control.

B. Capacities

- 1. The network shall support DMX routing, patching, and prioritization for up to 63,399 universes (32,767,488 DMX addresses). Each address may be input or output from any port on any DMX gateway in the system. DMX input, routing and output shall be specifically supported on

the system from multiple sources and locations up to the maximum number of gateways supported by the Ethernet topology.

2. The network shall support multiple network hosts including consoles, gateways, dimming racks, computers, file servers, printers, and architectural control processors with discrete command lines and control. The lighting network shall support multiple venues within a system and discrete systems on the same network.

C. System Configuration and Monitoring

1. Network device configuration shall be via Net3 Gateway Configuration Editor (GCE) software, network PC, and/or ANSI E1.17 Architecture for Control Networks (ACN).
2. Patch addresses shall support viewing and manipulation via ANSI E1.17 ACN.
 - a. The system shall permit complete user flexibility allowing the system operator to patch each DMX input address to any ANSI E1.31 streaming ACN address, and DMX output to span streaming ACN universes.
 - b. The lighting system shall support assignment of DMX offsets, truncation of DMX universes, and provide choice of DMX port prioritization.
 - c. The lighting system shall support the DD start code extension to ANSI E1.31 which provides priority per address such that multiple control sources can share universes with discrete control per address.
 - d. Lighting systems that do not support the above mentioned address patching capabilities shall not be suitable.
3. The system shall allow assignable labels for all network devices to allow easy identification by system users.
4. Each network device shall have a discrete and unique IP address provided automatically by the software. The user may edit this IP address. Systems that do not support automated IP allocation with IP collision avoidance, and systems that do not allow complete reconfiguration of the above mentioned features over ANSI E1.17 ACN shall not be acceptable.
5. All configuration data for each network device shall be held at the device and system operation shall not require continuous on-line operation of the network configuration software.
6. Lighting console operators shall be able to backup the network configurations in the lighting control console. In the event of a network device failure, the operator shall be able to apply the configuration of the failed device to a replacement device of the same type without manually reentering settings. Systems that do not support configuration backup as described above shall not be accepted.
7. Architectural and Entertainment systems connected to the same network shall be capable of arbitrating control over E1.31 Streaming ACN (sACN) level data. The system shall be capable of alternating control of individual address data between architectural and entertainment systems without intervention by the user. The user shall dictate the conditions under which system shall automatically take control. The network shall allow user override of the selected defaults. Systems which require direct user intervention to allocate control of dimmers between architectural and entertainment lighting systems shall not be accepted.
8. The lighting control network shall allow multiple DMX input sources to be prioritized on the same universe as network native sources using E1.31 Streaming ACN prioritization. Multiple DMX inputs may be assigned to the same streaming ACN address (this provides multi-source control for a particular address). Likewise, the system shall support E1.31 prioritization of

multiple simultaneous network sources. Systems that cannot prioritize multiple DMX inputs and multiple native network sources on a network shall not be deemed suitable.

9. The lighting network shall allow each DMX input address to be assigned a priority on the network allowing each DMX control level coming into the system to participate in full arbitration. Addresses with the highest priority shall have control, with lower priority addresses being ignored. Addresses assigned the same numeric priority, between 1 and 200, shall respond in highest level takes precedence (HTP) manner. The network shall require a valid DMX signal present at the input to initiate prioritization. Systems that do not allow for prioritized HTP for DMX inputs to the network shall not be allowed.

D. Operational Features

1. Each DMX gateway shall control up to 512 DMX addresses per port, within the confines of up to 63,999 DMX universes (32,747,488 address). The specific DMX data input or output by the gateway shall be configurable by the user.
2. Duplicate outputs of DMX data (DMX splitter) and discrete outputs shall be fully supported.
3. Merging of multiple DMX input sources on a single gateway without gateway with DMX output on the same gateway shall be supported without connection to the network. The gateway shall support assignment of priority to each input source independently
4. File transmission, synchronization and access to software shall be supported.

2.2 DMX/RDM ETHERNET GATEWAYS

A. General

1. The lighting control gateway shall be a microprocessor-based unit specifically designed to provide DMX-512 control of lighting systems and transport of RDM configuration and status messages. The gateway shall permit DMX-512 data to be encoded, routed over an Ethernet network and decoded back to DMX-512.
2. Gateways shall communicate over Ethernet directly with at least ETC, Inc.'s entertainment and architectural lighting control products and other Ethernet interfaces.
3. Connections shall be made between gateways, consoles, architectural systems, and PCs over standard Ethernet distribution systems using 10/100BaseT.
4. The gateway shall support multiple protocols including:
 - a. ANSI E1.17 Architecture for Control Networks (ACN)
 - b. ANSI E1.31 Streaming ACN (sACN)
 - c. ANSI E1.11 USITT DMX512-A
 - d. ANSI E1.20 Remote Device Management (RDM)
5. The gateway shall be tested to UL standards and labeled ETL Listed.
6. The gateway shall be RoHS Compliant (lead-free).
7. The gateway shall be CE compliant.

B. DMX Ports

1. DMX Ports shall comply with the requirements of ANSI E1.11 USITT DMX512-A standards.
2. Each DMX port shall be software-configurable for either input or output functionality.
3. DMX input shall be optically-isolated from the gateway electronics.

4. DMX output shall be earth-ground referenced.
5. DMX Port shall be capable of withstanding fault voltages of up to 250vAC without damage.
6. Each port shall incorporate one DMX512-A Connection
 - a. Each DMX port of the portable unit shall be modular and hot swappable
 - b. Each DMX port location shall support a single 5-pin male XLR, 5-pin female XLR, Ethercon RJ-45, or terminal strip module for DMX wiring.
7. Network gateways that do not indicate input/ output port configuration or presence of valid data shall not be accepted

C. Processor

1. Each gateway shall have sufficient processing power to manage up to 63,999 universes (32,767,488 addresses).
2. Maximum delay time from input to output shall not be greater than one packet time (approximately 22 mSec.).
3. A minimum DMX update rate of 40Hz shall be sustained under all conditions unless specifically configured for a slower rate for the sake of compatibility with 3rd party DMX devices.

D. Mechanical

1. The gateway shall be available in three versions
 - a. Rack-Mount
 - 1) The Gateway shall be fabricated of 16-gauge steel, finished in fine-texture, scratch-resistant, black powder coat (RAL 9004).
 - 2) Dimensions shall be 8.5" (22 cm) wide x 8.0" (20 cm) deep x 1.75" (5 cm) high.
 - 3) The weight of the gateway shall be 3.5 lbs. (1.6 kg) with four DMX modules. An individual module shall weight no more than .25 lbs. (.1 kg).
 - 4) The gateway shall support table top use
 - b. Portable gateway
 - 1) The portable gateway shall include a complete enclosure finished in a black fine texture powder coat paint
 - 2) Two wiring connections shall be required for connection to the lighting system
 - a) Ethernet connection that supports standard Cat5 patch cables or Ethercon cables. Gateways that do not support the use of Ethercon cables shall not be accepted
 - b) DMX input or output connection using is 5-pin XLR style connector
 - 3) Dimensions shall not be more than 4.5" wide (115mm) x 3.5" (89mm) deep x 6.34" (161mm) high (not including mounting hardware)
 - c. DIN Rail Mount
 - 1) The DIN Rail mounted gateway shall be included in an extruded aluminum enclosure.
 - 2) Two wiring connections shall be required for connection to the lighting system
 - a) Ethernet connection that supports standard Cat5 patch cables

- b) DMX input or output connection using is terminal strip style connector
- 3) Dimensions shall not be more than 8.03" wide (204mm) x 4.13" (105mm) deep x 1.22" (31mm) high (not including mounting hardware)

E. Power

1. Power for the gateway shall be provided over the Category 5 (or better) cable, utilizing IEEE 802.3af compliant Power over Ethernet (PoE). Power consumption using shall not be greater than 5 watts.
2. An optional low-voltage DC power input shall be available utilizing an isolated in-line power supply capable of an operating range of 8-28vDC. The Power supply shall be provided by the gateway manufacturer.
3. The gateway electronics shall be electrically isolated from the power supplied over the Catagory5 (or better) cable.

F. Configuration

1. Each gateway on the network shall be individually configurable using freely available software configuration tools. The primary configuration tool shall be Net3 Concert configuration software running on a network connected PC. The PC shall only be required for configuration, and shall not be required for normal operation of the system.
2. Each DMX gateway shall control up to 512 DMX addresses, within the confines of 63,999 universes.
3. The specific DMX data input or output by the gateway shall be freely configurable by the user.
4. Duplicate outputs of DMX lines (DMX splitter) and discrete outputs shall be fully supported.
5. Multiple DMX universes may be configured with any length up to 512 total addresses. Any range of DMX input addresses shall support selection and routing to the specified sACN output.
6. Multiple sACN sources may be combined with a priority may be assigned to each source sending data to the gateway
7. All relevant routing information shall be stored in non-volatile memory at each gateway. The system shall recover from a power outage without requiring the PC to be online. Gateways that do not support non-volatile storage of data routing shall not be accepted.

G. Network

1. Communications physical layer shall comply with IEEE 802.3i for 10BASE-T, 802.3u for 100BASE-TX and 802.3af for Power over Ethernet specifications.
2. All network cabling shall be Category 5 (or better), conforming to TIA-568A/B, and shall be installed by a qualified network installer.
3. Data transport shall utilize the TCP/IP suite of protocols to transfer the DMX data.
4. ANSI E1.17 Architecture for Control Networks (ACN) and streaming ACN (sACN) shall be supported. Gateways that do not support ANSI E1.17 shall not be acceptable.
5. Switches shall comply with power-over-Ethernet IEEE802.3af, unless a separate in-line power supply is provided.

6. Multiple DMX signal routing patches and multiple facilities shall be supported and limited only by the file storage capacity of the computer with ETC Gateway Configuration Editor (GCE) Software installed.
 7. Each DMX gateway shall control up to 512 DMX addresses, per DMX port within the confines of up to 64,399 universes (32,767,488 addresses) using Streaming ACN (sACN).
 - a. Any range of DMX addresses may be selected for each universe.
 - b. Multiple sources shall be supported by prioritized Highest Takes Precedence (HTP with priority). Each source shall support assignment of priority to allow override of default HTP behavior.
 - c. Each DMX port shall support its own universe and start address.
 8. Gateways shall have built in DMX merger capability on a universe or channel-by-channel basis.
 9. Gateways shall support have built in priority on a per-universe or channel-by-channel basis. Gateways that do not support prioritized merging of multiple network sources at independent priorities shall not be accepted.
- H. DMX Connector modules (Rack-Mount/Portable only)
1. Each gateway shall support up to four connector modules containing a single DMX connector and its associated electronics
 2. Connector module options shall include
 - a. 5-pin Male DMX connector for DMX Input
 - b. 5-pin female DMX connector for DMX output
 - c. RJ-45 Ethercon connector for DMX input or output
 - d. Eight position terminal connector for DMX input or output. Terminal connections shall support screw terminals or Insulation displacement (IDC) wire terminations.
 3. Each connector module shall be optically-isolated from the gateway electronics and from other DMX modules in the same gateway.
 4. DMX connector modules shall be capable of withstanding fault voltages of up to 250vAC without damage.
- I. Environmental
1. The ambient operating temperature shall be 0° to 40°C (32° to 104°F).
 2. The storage temperature shall be -40° to 70°C (-40° to 158°F).
 3. The operating humidity shall be 5% - 95% non-condensing.
- J. Accessories
1. Hanging bracket kit shall allow unit to be mounted in three orientations.
 - a. U-Bolt or C-Clamp mounting hardware shall be available
 2. One E.I.A. rack space mounting bracket kit shall support either one or two complete units and allow for up to eight ports of DMX
 3. Front Access Panel kit shall allow the connectors on the rear of the gateway to be accessed from the front of an equipment rack. Options for 5-pin XLR style connectors that support DMX input or output shall be available

4. A Universal Power Supply with international plug-set shall be available. Multiple power supplies shall be able to fit in a vertically stacked power strip.
5. ETC Net3 Concert Configuration and monitoring Software

K. System Requirements

1. Provide the quantity and type of gateways required, as scheduled. Gateways and software shall be as manufactured by Electronic Theatre Controls Inc. of Middleton, WI.
2. Provide Ethernet switches and power supplies as scheduled and as shown on drawings.
3. Provide a current generation PC with Windows7 operating system equipped with a 10/100 Ethernet card.
4. Systems that do not provide the above capabilities shall not be acceptable

2.3 DMX/RDM REPEATER

A. General

1. The DMX/RDM Repeater shall permit star-wiring and repeating of DMX512 and RDM signals over the connected DMX cabling.
2. The DMX/RDM Repeater shall fully isolate and protect DMX transmitters and receivers, and RDM controllers and responders, from high common mode voltages, ground loop currents and other potentially damaging or disrupting electrical faults.
3. The DMX/RDM Repeater shall have one primary bi-directional input port and eight bi-directional input/output (I/O) ports.
4. The DMX/RDM Repeater shall be capable of repeating and distributing simplex protocols other than DMX512, provided the protocol meets the electrical requirements of EIA RS422 or RS485.
5. It shall be possible to configure the unit such that there is no in-line processing of the input signal, to ensure that the output signal is an exact duplicate of the input signal with no processing delays.

B. Physical

1. The enclosure shall be constructed of formed or cast aluminum and steel.
2. The DMX/RDM Repeater shall be designed to mount in a single rack unit of height and shall include all necessary mounting hardware for this purpose
3. The housing shall be provided in satin black textured powder-coat finish. The front and rear panels will clearly identify ports and connectors with black print on a white background for legibility
4. An LCD screen with switchable backlight and six context-sensitive pushbuttons shall be on the front face, for configuration and status reporting.

C. Connectors

1. Input and bi-directional connections shall be any combination of:
 - a. 5-pin XLR-type
 - b. Two-part Phoenix-type screw terminal strips
 - c. RJ45 Etherncon®

D. Electrical

1. The power supply shall be a field-replaceable, wide-range input (85-264VAC, 50/60Hz) switching power supply. There shall be no power switch to reduce chances of being shut off in error.
2. There shall be 4000-volt electrical isolation between mains power supply and low voltage circuits.
3. There shall be 2500-volt electrical isolation between all input and I/O sections and between adjacent I/O sections.
4. The input port and each I/O port shall be capable of withstanding the continuous application of up to 250V without damage to internal components. Protection shall be of a self-resetting type, rated for 250V. Replaceable fuses are not acceptable.

E. Features

1. Three user-selectable operating modes shall be available.
 - a. In RDM splitter mode, the unit shall function as a 1-in, 8-out DMX opto-splitter. This mode shall also provide full compliance with the ANSI E1.20 Remote Device Management protocol standard. It shall be possible for the user to disable RDM functionality on a port-by-port basis to ensure correct operation of legacy, DMX-only equipment.
 - b. DMX Merger mode shall provide an HTP merge of the DMX input signal from the primary input and one other I/O port, on a first-discovered basis. The merged signal shall be output to the other I/O ports.
 - c. DMX Hub mode shall allow one active DMX input to be applied to any I/O port and that signal shall be output from all remaining I/O ports. This "repatching" feature shall be automatic and transparent to the user.
2. The DMX/RDM Repeater shall act as an RDM Controller while in RDM splitter mode and, upon user command, shall discover all RDM-enabled devices connected to its bi-directional ports and report their presence.
3. The DMX/RDM Repeater shall provide trouble shooting tools that allow a user to monitor incoming DMX levels and to send valid DMX to specific output channels. These tools shall report DMX levels both graphically and numerically on the LCD display.
4. Signal loss behavior, DMX output speed and LCD backlight shall be user determined. A keypad lockout function shall provide basic security.
5. In normal operation, DMX status, RDM status and operating status shall be reported on the LCD screen without requiring user intervention.
6. All features shall be accessed from the front panel, using the six pushbuttons and a menu system displayed on the LCD screen. The pushbuttons shall be selectively back-lit according to context and function.
7. It shall be possible to field-update the module firmware via the DMX/RDM input port.

F. Compliance

1. The DMX/RDM Repeater shall be compliant with ANSI E1.11 DMX512-A, USITT DMX512 or any EIA 422/485-based protocol.
2. The DMX/RDM Repeater shall be compliant with ANSI E1.20 RDM Remote Device Management protocol.
3. The DMX/RDM Repeater shall be compliant with the RoHS 2002/95/EC directive.

2.4 DMX Emergency Bypass Control

- A. Where required to trigger special-purpose lighting presets and bypass normal lighting controls during emergency or panic situations, the bypass means shall be the DMX Emergency Bypass Controller (DEBC) as manufactured by ETC, Inc., or equal.
- B. Functional
 - 1. The DMX Emergency Bypass Controller shall be capable of overriding a single universe of ANSI E1.11–2008, USITT DMX512-A control signals from “Normal” to “Bypass” when a trigger signal is detected via a contact closure trigger input
 - a. The DMX Emergency Bypass Controller shall output to a single DMX output or up to six optically-isolated DMX outputs
 - b. The DMX Emergency Bypass Controller shall poll the bypass trigger input after a power loss and react upon start up
 - c. The default or recorded preset shall be recalled immediately on restart if the trigger is also applied at restart
 - d. Controllers that do not support E1.11–2008 compliant DMX communication shall not be acceptable
 - 2. The DMX Emergency Bypass Controller shall be capable of recording a single DMX preset (snapshot) of 512 channels for recall during “Bypass” mode
 - 3. The DMX Emergency Bypass Controller (DEBC) shall have internally accessible, labeled DIP switches for configuration of:
 - a. DMX Record Mode
 - 1) All 512 channels (default)
 - 2) Selected channels, snapshot
 - b. Contact input type
 - 1) Normally open (default)
 - 2) Normally closed
 - c. Wait Time for Restore incoming DMX (bypass trigger removed)
 - 1) 0 Seconds (default)
 - 2) 10 Second Wait
 - 3) 30 Second Wait
 - 4) 10 Minute Wait
 - 4. The DMX Emergency Bypass Controller shall support a single bypass input using two input modes:
 - a. Bypass triggering shall be supported via a maintained contact input configurable for normally open (N.O.) or normally closed (N.C.) operation
 - b. The contact input shall support +12VDC wet input to provide interface with fire alarm or secondary triggering systems. Bypass controllers that do not support a fire alarm input shall not be acceptable.
- C. Mechanical

1. The DMX Emergency Bypass Controller (DEBC) enclosure shall be a surface mounted enclosure with a removable cover, constructed of 16-gauge, formed steel with a removable front cover
 - a. All components shall be properly treated and finished in fine textured, scratch-resistant, powder coat paint
 - b. DEBC enclosure shall have a minimum of four keyed mounting holes for wall attachment
 - c. DEBC enclosure shall have a visible label stating the product name, manufacturer name, indicator functions, control functions, ratings and listings
2. The DMX Emergency Bypass Controller (DEBC) enclosure shall provide discrete high and low voltage wiring compartments with voltage barrier
3. The DMX Emergency Bypass Controller (DEBC) shall have a single bi-color LED indicator visible from the exterior of the enclosure
 - a. LED shall indicate Normal state with a "green" color light
 - 1) Normal state illuminates steady green when Power and DMX are present
 - 2) LED Off indicates Power or DMX are not present
 - b. LED shall indicate Bypass state with a "red" color light
 - 1) Bypass state includes bypass input contact trigger or 'test' active
4. The DMX Emergency Bypass Controller (DEBC) shall have a single test button accessible from the front of the enclosure without removing any panels
 - a. The test button shall immediately trigger bypass state for as long as it is held down, and release the bypass state immediately upon release of the button
 - 1) The test button shall be momentary only
 - 2) The test button shall be recessed to prevent accidental triggering
5. The DMX Emergency Bypass Controller (DEBC) shall have a single, internally accessible button for DMX Record (snapshot) with an indicator LED for record action
 - 1) The record button shall be momentary only and held for at least 3 seconds before activation to prevent accidental recording
 - 2) The LED indicator will flash rapidly when record function is active
 - 3) The LED indicator will illuminate steady when record function is complete
6. The DMX Emergency Bypass Controller (DEBC) dimensions and weights shall not exceed:
 - a. 9" H x 11" W x 2" D,
 - b. 8lbs (single output); 14.5lbs (multi-output)

D. Electrical

1. The DMX Emergency Bypass Controller shall be completely internally pre-wired by the manufacturer
2. The contractor shall provide input feed and control wiring to the provided terminals
 - a. DMX Emergency Bypass Controllers (DEBC) shall support 100 to 277 volt input power, 50/60 Hz, 150mA maximum current

3. DEBC shall support labeled terminations for two 24 – 10 AWG solid or stranded power wires
4. DEBC shall support one Grounding Lug for 24-14 AWG solid or stranded ground wire
5. DEBC shall support labeled, socketed termination connections for DMX Input and DMX Output wiring
 - a. Terminations shall support Belden 9729 cable or equivalent
 - 1) DMX Termination kits for Belden 9729 shall be supplied with the controller
 - 2) Optional Termination kits for Belden 1583A (or equivalent Category 5 cable) shall be available from the manufacturer
6. DEBC shall support labeled, socketed termination for the bypass contact input
 - a. Termination shall support two, 30-12 AWG low-voltage wires
 - b. The bypass input shall support a maintained normally open (N.O.) or normally closed (N.C.) dry contact input
 - c. A +12VDC wet contact input shall also be available for interface to fire alarm systems.
 - d. DEBC shall support socketed DMX transceiver chips
 - 1) A spare DMX transceiver chip shall be supplied in a labeled, inactive socket
7. The DMX Emergency Bypass Controller (DEBC) shall internally switch from the normal DMX input (pass through) to the bypass DMX output using electromechanical relays when triggered
 - a. The DEBC shall have non-volatile memory for storage of a single recorded sequence of 512 channels
 - 1) The recorded sequence shall persist through power outages
 - 2) The default sequence shall have all 512 channels at “full” if no sequence is recorded
 - b. The DEBC shall have a DMX baud rate of “Slow” (20 packets per second) for increased compatibility during bypass DMX output
8. The DEBC shall be available in two versions capable of output to a single DMX line or up to six optically-isolated DMX lines
9. The DMX Emergency Bypass Controller shall be UL and cUL Section 924 listed for interaction with similarly listed products

E. Thermal

1. Ambient room temperature: 0-40°C / 32-104°F
2. Ambient humidity: 10-95% non-condensing
 - a. for structural support are not equivalent and are not acceptable.

2.5 INTELLIGENT BREAKER SYSTEM

A. General

1. Intelligent breaker system shall be 120V Sensor IQ as manufactured by ETC, Inc., or equal as determined by the Theatre Consultant.
2. Breaker Panels shall be UL508, UL67, and UL924 Listed, and shall be so labeled when delivered.

3. Breakers shall be UL489 listed and shall be labeled when delivered.
4. Breaker Panels shall consist of a main enclosure with 12, 24, or 48 pole breaker subpanels, integral control electronics for low voltage terminations and provision for accessory cards.
 - a. Up to two accessory cards shall be supported per breaker panel

B. Mechanical

1. The panel shall be constructed of 16-gauge galvanized steel. All panel components shall be properly treated or finished in fine-textured, scratch resistant paint
2. Breaker panels shall be capable of being mounted on the surface of a wall or recessed mounted
3. Breaker panels shall be available in 12, 24, and 48 pole configurations
 - a. 12 pole MLO (No provision for main Breaker)
 - 1) 31 inches high, 14.25" wide and 4" deep (with front panel attached)
 - b. 12 pole (with provision to add main breaker)
 - 1) 40.25 inches high, 14.25" wide and 4" deep (with front panel attached)
 - c. 24 pole (with provision to add main breaker)
 - 1) 50.25 inches high, 14.25" wide and 4" deep (with front panel attached)
 - d. 48 pole (with provision to add main breaker)
 - 1) 64 inches high, 20" wide and 5.25" deep (with front panel attached)
4. Choice of panel covers shall be available for surface or recess mount applications. This outer panel shall ship complete with a locking door to limit access to electronics and breakers
 - a. Optional center-pin reject security screws shall be available for all accessible screws
 - b. Optional recess mount doors shall extend 1" beyond all panel edges to hide wall cut-out
5. The unit shall provide interior cover over the control electronics and accessory cards to allow access only to class 2 wiring and prevent direct access to class 1 line voltage components
6. The panel shall support up to twelve, twenty-four, or 48 single pole branch circuits
 - a. Branch circuits shall range from 15A to 30A capable of holding full rated load for minimum of three hours continuously
 - b. Two and three-pole circuits shall be supported at decreased density where each pole constitutes one of the available single-pole circuits. Mixing of circuits in any combination shall be supported
7. Breakers shall provide manual switching control while power is unavailable to the panel such that critical lighting can be set to an on state, without the need for power to the panel
8. Breaker output lugs shall accept 10-14 AWG dual conductor wire
9. Breaker output lug shall support solid or stranded 6-14 AWG class B, C, or K copper wire
10. Control wiring for DMX, station bus, and Emergency input terminations shall land on a removable headers for contractor installation

C. User Interface

1. The user interface shall contain an LCD display with button pad to include 0-9 number entry, up, down back arrow navigation and enter
2. Test shortcut button shall be available for local activation of preset, sequence and set level overrides
3. The user interface shall have a power status LED indicator (Blue), a DMX status LED indicator (Green), a network status LED indicator (Green) and an LED indicator (red) for errors
4. Interface shall allow the backlight to timeout and shall provide user editable options to shut off backlight completely as well as adjust screen contrast
5. Ethernet interface shall default to automatic IP through link local and DHCP. Upon receiving IP address, the address of the Network Interface Card (NIC) shall display in the about menu. Static address and settings shall also be possible
6. The control interface shall support a USB memory stick interface for uploads of configurations and software updates
7. The user interface shall support power input from an external Uninterruptible Power Supply (UPS) supplying 800W-2400W AC power

D. Functional

1. Panel setup shall be user programmable. The control interface shall provide the following breaker setup features (per circuit):
 - a. Type (1 pole, 2 pole, or 3 pole)
 - b. Name
 - c. Circuit Number
 - d. DMX address
 - e. sACN address
 - f. Space Number
 - g. Circuit Modes
 - 1) Normal (priority and HTP based activation and dimming)
 - 2) Latch-lock
 - 3) Fluorescent
 - 4) DALI
 - h. On threshold level
 - i. Off threshold level
 - j. Include in UL924 emergency activation
 - k. Allow Manual
2. Breaker panels shall support discrete addressing of each breaker. Panels that are restricted to use of start address with sequential addressing, and cannot assign each 0-10V output control to any internal circuit shall not be acceptable
3. The panel shall be capable of switching 6 poles on or off at once, or in a user-selectable delay per breaker using a period of 0.1 to 60 seconds, in 0.1 second increments

4. An Ethernet connection shall provide advanced control of relays over streaming ACN (sACN) and transmit status, control override, and measured energy usage per branch circuit via an internal Web UI or central monitoring interface
 - a. Control electronics shall report the following information per branch circuit.
 - 1) Breaker state (On/Off)
 - 2) Breaker state (Open/Closed)
 - 3) Current draw (In Amps)
 - 4) Voltage
 - 5) Energy usage
 - 6) Panels that do not report this information shall not be acceptable.
5. Built-in Control shall include:
 - a. Ability to record up to 16 presets in each space from the control panel, connected control stations, or timed events
 - b. Presets shall be programmable by recording current levels (as set by DMX or connected control stations), by entering levels on the control panel directly, manually selecting breaker state on each breaker, or a combination of these methods. From the control panel, stations, or timed events it shall be possible to record values for up to 16 zones per space
 - c. Up to 8 spaces in a single rack for total of up to 16 spaces shall be supported per system or system subnet
 - d. Indication of an active preset shall be visible on the control panel display
 - e. One 16-step sequence per space for power up and power down routines
 - f. The panel shall have a UL924-listed contact input for use in Emergency Lighting systems. The panel shall respond to the contact input by setting included breakers to "on", while setting non-emergency breakers "off". Each breaker can be selected for activation upon contact input
 - g. Upon Data loss the system shall provide options to hold last look infinitely or hold for a configured time period set by the installing technician then fade/switch to the input of the next available priority
 - h. Control electronics shall respond directly to control stations for zone, preset, and sequence control. Systems that require secondary control systems for this functionality are not acceptable
 - i. After power loss, electronics shall be capable of holding the system in its previous state until new level data (DMX, architectural presets, sequences and zones, or local overrides) is received to make each breaker change state
6. The control of lighting and associated systems via timed and Astronomical clock controls
 - a. The breaker panel shall allow the activation of presets, sequence, and zone programming of up to 50 time clock events via a built in real and astronomical time clock
 - b. System time events shall be programmable via the control panel

- 1) Time clock events shall be assigned to system day types. Standard day types include: everyday, weekday, weekend, Sunday, Monday, Tuesday, Wednesday, Thursday, Friday and Saturday
- 2) Time clock events shall be activated based on sunrise, sunset, time of day or periodic event
- 3) System shall automatically compensate for regions using a fully configurable daylight saving time
- 4) Presets shall be assigned to events at the time clock
- c. The time clock shall support event override
 - 1) It shall be possible to override the timed event schedule from the face panel of the time clock
- d. The time clock shall support timed event hold
 - 1) It shall be possible to hold a timed event from the face panel of the processor
- e. Timed event hold shall meet California Title 24 requirements
7. The panel shall receive ESTA DMX512-A control protocol. Addressing shall be set via the user interface button keypad with any circuit patched to any DMX control address
 - a. 2,500V of optical isolation shall be provided between the DMX512 inputs and the control electronics as well as between control and power components
 - b. The breakers shall respond to control changes (DMX or Stations) in less than 25 milliseconds. DMX512 update speed shall be 40Hz
 - c. Setting changes shall be able to be made across all, some, or just one selected breaker in a single action from the face panel
 - d. DMX data loss shall allow for levels/breakers to be held for ever or for a specified time before switching to a lower priority source
 - e. Initial Panel setup
 - 1) The breaker panel shall automatically detect the type of breaker or dimmer installed in each location without need for manual configuration of the physical arrangement
 - 2) Quick rack setup shall be available to apply address settings across all circuits for rack number, DMX Start Address, sACN universe, and sACN start address
 - 3) Emergency Setup Menu shall provide optional delays when emergency is activated or deactivated, and option to turn off non-emergency circuits shall be available. Record function shall allow circuits that are turned on to be added to the emergency setting

E. Electrical

1. Breaker Panels shall be available to support power input from:
 - a. 120/208V three phase 4-wire plus ground
 - b. 120/240V single phase 3-wire plus ground
2. Conduit Entry:
 - a. Feeders:
 - 1) Top or upper 6" of either side

- 2) Bottom or lower 6" of either side
 - 3) Feeders shall enter through the top or bottom according to the orientation of the enclosure.
 - 4) Feeder entry shall be nearest to the location of the feeder lugs or main breaker.
- b. Load:
 - 1) Load wiring shall enter through the top or bottom of the enclosure through the surface nearest to the breaker sub panel
 - 2) Load wiring may also enter through left and/or right side provided a low voltage chase is not required through the same area. If class 2 chase is required, a field installable barrier panel shall be provided upon request. The side of the panel where the barrier has been installed shall not permit load wiring
- c. Low Voltage:
 - 1) Top or upper 6" of either side
 - 2) Bottom or lower 6" of either side
 - 3) For low voltage conduit entry at the breaker end of the cabinet, conduits shall be located at the outer 3" of the top/bottom panel
- 3. Breaker
 - a. Bus connection type: Stab on
 - b. 1, 2, or three poles
 - c. UL489 listed
 - d. 15 amp, 20 amp, or 30 amp
 - e. 22,000 SCCR; 65,000A series rated with main breaker
 - f. High inrush trip curve (matches all Sensor breakers)
 - g. Maintains trip curve through entire thermal range
 - h. Guaranteed not to trip at full load
 - i. Load lugs accept 6-14awg load wiring
 - j. Multi-conductor listed output terminal
 - k. Integral mechanically held air gap relay
 - l. Manual control of relay state using breaker handle w/o power
 - m. Integral current sensing
 - n. Integral position and trip sensing
 - o. Control and status provided by contact pads directly at bottom of the breaker case
 - p. No external wires or connections required for control or feedback
 - q. The breaker shall be capable of switching up to 30A
- 4. The breaker panel shall support a maximum feed size
 - 1) 100 Amps at 12 circuits
 - 2) 200 Amps at 24 circuits

- 3) 400 Amps at 48 circuits
 - b. Breaker panels shall support main circuit breaker options:
 - c. Main breaker options shall be optional and available for purchase upon request
 - d. Main breakers shall be field installable
 - e. Main breakers shall be available in up to 100 Amps for 12 circuit panels, up to 200 Amps for 24 circuit panels, and up to 400A for 48 circuit panels at 120V
 - f. Series SCCR ratings apply as follows with appropriate main breaker:
 - 1) 22,000A or 64,000 at 120/208V
 - g. Main breakers shall allow the following range of wire sizes:
 - 1) Up to 300kcmil at 100A and 200A
 - 2) Up to 2x250kcmil at 400A
 - h. Main Lug input shall support up to 2x250kcmil
 - i. Breaker panel shall support a 500kcmil main lug option for 48-circuit panels
- F. Breaker remote switching ratings
- 1. Mechanical 1,000,000 cycles
 - 2. 24A Resistive 100,000 cycles
 - 3. 16A Ballast (HID) 75,000 cycles
 - 4. 15A Electronic (LED) 100,000 cycles
 - 5. 15A Tungsten 45,000 cycles
 - 6. 30FLA; 180 LRA Motor Load 50,000 cycles
 - 7. Tested duty cycle: 12 operations (6 cycles) per minute
 - 8. Decreasing duty cycle significantly increases switch life
 - 9. Isolation: 4000V RMS
 - 10. Current reporting accuracy: 5%
 - 11. Latching state mechanical relay
- G. Breaker Panel Accessories
- 1. A low voltage 0-10V dimming option shall provide up to 24 0-10v control outputs that are linked to relay circuits within the panel. Each output shall support up to 400mA of current sink per output
 - 2. A contact input option shall provide 24 dry contact inputs to be linked for direct or group relay control, to activate a preset, or to activate a sequence. Controller software shall allow for normally open maintained, normally closed maintained, or momentary toggle
 - 3. A DALI control option shall provide 24 control loops of broadcast DALI control, with each loop controlling up to 64 DALI devices
 - 4. A RideThru option shall provide short-term power backup of control electronics by automatically engaging when power is lost, and recharging when normal power is present

5. An Isolated Ground option shall provide each circuit in the panel with a ground terminal that is electrically isolated from the equipment ground
6. Main Breaker options shall be available as shown in Section E.4

H. Thermal

1. The panel shall be convection cooled. Panels that require the use of cooling fans shall not be acceptable
2. The panel shall operate safely in an environment having an ambient temperature between 32°F (0°C) and 104°F (40°C), and humidity between 5-95% (non-condensing)

2.6 EMERGENCY LIGHTING TRANSFER SYSTEM

A. General

1. The Emergency Lighting Transfer System (ELTS) shall provide automatic transfer of branch circuits from normal to emergency power when normal power fails. Each system shall consist of power transfer switches and a control circuitry interconnected to provide complete, automatic protection.
2. The ELTS shall transfer designated lighting load branch circuits from dimmers or secondary control outputs to a second power source in the event of a loss of power to the dimmer rack, a normal system failure, or activation of fire alarm.
3. The system shall comply with ANSI / UL1008 Transfer Switch Equipment, ANSI / NFPA 110 Standard for Emergency and Standby Power Systems, and ANSI / NFPA 70 (NEC), including Article 700, 701 and 702 safety standards. Emergency transfer systems that do not comply with the below stated NEC articles and sections shall not be permitted
 - a. Satisfies requirements of the National Electrical Code (NFPA 70):
 - 1) Article 700 – Emergency Systems
 - 2) Article 701 – Legally Required Standby Systems
 - 3) Article 702 – Optional Standby Systems
 - 4) Section 518.3(C) – Assembly Occupancies
 - 5) Section 520.7 – Theatres and Similar Locations
 - 6) Section 540.11(C) – Motion Picture Projection Rooms
4. Emergency Transfer equipment shall comply with the US seismic requirements of the International Building Code (IBC) for equipment in the emergency life-safety chain and be approved for seismic applications. Seismic certification shall include installation applications for Roof, Grade, Below Grade, and Intermediate Level installation in the USA with an Ss level of 3.42 and SDS level of 2.28. Emergency transfer equipment that does not meet or exceed the seismic acceptance criteria for non-structural components and systems per the applicable building code or as set forth in the ICC AC-156 shall not be acceptable.
 - a. The following building codes are addressed under this certification.
 - IBC 2000 – referencing ASCE 7-98 and ICC AC-156
 - IBC 2003 – referencing ASCE 7-02 and ICC AC-156
 - IBC 2006 – referencing ASCE 7-05 and ICC AC-156
 - IBC 2009 – referencing ASCE 7-05 and ICC AC-156

5. The ELTS shall be a self-contained system for up to 24 circuits at 20 amps and available for single or three phase power (120/208V, 120/240V or 277/480V). The unit shall be available with either discrete emergency branch circuit feeds from an external circuit breaker panel (by others) or emergency main feed with built-in branch circuit distribution and over current protection.

B. Transfer Switch

1. The switch shall be a UL 1008 LISTED, electrically operated and mechanically held (maintained) transfer switch.
2. The switch shall be positively locked and unaffected by voltage variations or momentary outages so constant contact pressure is maintained and temperature rise at the contacts is minimized.
3. The switch shall be mechanically interlocked to ensure only one of the two possible positions, either Normal or Emergency.
4. Each switch shall be configured as guaranteed break-before-make
5. Built-in fuses shall provide up to 65000A Short Circuit Current Rating (SCCR) on connected emergency circuits.
6. Built-in fuses class G shall be provided on each output for compliance with NEC Section 700.27 Coordination – larger upstream breakers cannot be tripped by downstream branch circuit faults.
7. Switch contacts shall withstand transfer without welding, with 180° phase displacement between Normal and Emergency power sources, both sources energized and with 80% load.
8. Transfer switch contacts shall be rated for mixed loads, including electric discharge lamps and tungsten filament lamps.
9. Transfer switches shall be rated for 6000 cycles at full tungsten load.

C. Control Circuit

1. The control circuitry shall direct the operation of the transfer switch.
2. User configurable timing delays shall be provided for power transfer between:
 - a. loss of normal power and the transfer to emergency up to 10 seconds.
 - b. restoration of normal power and the transfer from emergency back to normal power up to 60 seconds.
3. A normally closed dry contact closure fire alarm input shall be provided.
4. Transfer switch shall support connections for up to 5 Remote Stations which can manually switch between normal and emergency power.

D. Operation

1. Transfer to alternate supply will occur when normal supply voltage drops below 80V when used at 120V, or 185V for the A phase and 80V for the B and C phase when used at 277V.
2. A self-supervising isolated signal input shall be provided for connection to the facility fire alarm. The ELTS2 shall automatically transfer the loads to the Emergency power source when the facility fire alarm is activated as part of a normally-closed loop.

3. A key-operated switch shall be provided to manually control the ELTS2. All automatic functions shall override this control. Two indicator lights shall be provided to show the position of the transfer switch.
4. All automatic functions shall override remote control functions. Any combination of open or shorted wiring to remote stations shall not affect automatic functions, or disable the local switch.

E. Remote Stations (Optional)

1. Optional remote control stations shall be available for the ELTS2. Each remote control station shall contain a 3-position key switch. The left and right positions shall be momentary and the switch shall always return to the center position.
2. The faceplate shall be labeled Normal for the left switch position, Emergency for the right switch position and Auto for the center position.
3. The faceplate shall contain two LEDs to confirm transfer switch position.
4. Each remote station shall mount in a standard, two-gang wall box (4" x 4" x 3.5").
5. Remote stations shall not be incorporated into or mounted onto other equipment.
6. All wiring to remote stations shall be by 5-conductor, Class 2 wiring (24V DC). A terminal strip shall be provided for contractor wiring.

F. Enclosure

1. The ELTS2 shall be mounted in a NEMA 1 interior or NEMA 4 watertight type enclosure finished in textured epoxy paint. It shall be equipped with a hinged locking door. Material shall be no less than 14 gauge steel.
2. An enclosure containing no more than 12 (twelve) 20A circuits shall be 36"H x 24"W x 8.5"D.
3. An enclosure containing up to 24 (twenty-four) 20A circuits shall be 48"H x 30"W x 8.5"D.
4. The enclosure shall provide power distribution and branch circuit protection for all emergency power circuits. Systems requiring external emergency power circuit protection shall not be acceptable.
5. The enclosure shall be separate and independent of all other equipment. In no instance shall the ELTS2 be enclosed in a dimmer rack or in an enclosure containing other equipment.
6. The system shall be provided with an approved overlay mounted on the front of the enclosure, stating, "EMERGENCY LIGHTING TRANSFER SYSTEM".
7. The enclosure shall be provided with an approved label indicating that the system is UL1008 LISTED.

2.7 COMPANY SWITCH

A. General

1. The Company Switch shall be available in 2 models: PowerSafe Pro, and PowerSafe Compact; as designed by Electronic Theatre Controls or equal as determined by the Theatre Consultant.
2. Compact Models shall be available at 120/208V: 100A, or 200A; 3-phase, 4-wire plus ground.
3. Pro Models shall be available at 120/208V: 100A, 200A or 400A; 3-phase, 5-wire (double neutral) plus ground.
4. The Company Switch shall be UL and cUL listed and shall meet all applicable NEC standards.

5. The enclosure shall be NEMA 1 rated.

B. Mechanical

1. The Company Switch shall be fabricated of 16 gauge steel and finished using ETC styling with fine-textured scratch resistant epoxy paint.
2. The door which provides access to output connections shall be lockable with shunt trip interlock.
3. The "Compact" Enclosure size shall not exceed 25" high by 15.5" wide and 6" deep. The "Pro" Enclosure size shall not exceed 43.8" high by 18" wide and 6" deep.
4. Company Switch shall protect against access to power connections while the cabinet is energized so it can be guaranteed that output is in a "power off" state while connecting or disconnecting portable output cabling.
5. The company switch shall protect the user from unsecured access to output terminals and connectors in the following methods:
 - a. PowerSafe Compact: Door brackets shall lock swing hinged covers in place until the front door is opened. These brackets shall prevent insertion of connections under power.
 - b. PowerSafe Pro: Front access connector compartment shall protect against access to output connections behind a locked door while the cabinet is energized
6. The "Pro" Enclosure size shall not exceed 43.8" high by 18" wide and 6" deep.
7. Conduit entry shall be made via top, or side. Top and side panel shall free of conduit knockouts to allow for greater flexibility in contractor conduit entry.
8. A method of field isolating company switch chassis ground and connected equipment ground ("ISO ground") shall be supported without installation of additional kits or parts. Company Switch products that require additional parts to be shipped or factory configuration of "ISO ground" shall not be deemed acceptable.
9. Company switch shall accept 3rd party locks on built-in bracket for support of NFPA 70E safety lockout/tagout procedures.
10. The unit shall be capable of mounting on a wall with integral keyhole fixing points.
11. LED power indicators shall be provided to show that power is on/available between each phase and neutral.
12. PowerSafe "Pro" shall provide an LED Work Light which shall automatically illuminate the output connectors and lugs during "hook up" of portable equipment cabling.
13. Lugs shall support up to 4/0 class K cable for bare end tie-in through 500kcmil screw terminals.

C. Electrical

1. PowerSafe Pro shall include six CAM style connectors for each phase, dual neutral, and ground. Standard order connector genders shall be females for each phase, with male ground and neutral connectors. Other connector gender combinations shall be available on request.
2. PowerSafe Compact shall include five CAM style connectors for each phase, neutral, and ground. Standard order connector genders shall be females for each phase, with male ground and neutral connectors. Other connector gender combinations shall be available on request.
3. PowerSafe Pro shall include dual neutral output connections for support of 200% rated neutral.
4. The enclosure shall accept up to 200A or 400A copper or aluminum to the full name plate rating of the enclosure at 100% of the rated main breaker with a minimum AIC rating of 65,000A.

5. System rating of Company Switch shall be 65,000 amps symmetrical Short Circuit Current Rating (SCCR). Company Switch products that rely only on breaker AIC rating as a short circuit safety factor shall be deemed unacceptable. Company Switch products that have not proven this safety rating through high current short circuit testing with UL shall not be deemed safe for use under UL SCCR requirements and therefore are not acceptable.

D. Available Accessories

1. An option shall be provided and approved by UL for connection of field installed current transformers around incoming power conductors for connection to external 3rd party power meters.
2. An option shall be available in the PowerSafe Pro for strain relief.

2.8 LIGHTING CONTROL CONSOLE AND ACCESSORIES

A. Ion XE 20

1. General

- a. The lighting control console shall be a microprocessor-based system specifically designed to provide complete control of stage, studio, and entertainment lighting systems. The console shall be the Ion Xe 20 as manufactured by Electronic Theatre Controls, Inc., or equal as determined by the Theatre Consultant.
- b. The system shall provide control of either 2,048 or 12,288 outputs on a maximum of 32,768 control channels, which may be any number from 1 to 99,999. Systems that require external co-processing to control 12,288 outputs shall not be acceptable. Output shall be distributed over a 10/100 MB Ethernet network using Net3/ACN, ETCNet2, Avab and/or Artnet (multi-cast) protocols. The user shall be able to control the application of protocols at an individual address level.
- c. The system shall support full bi-directional RDM communication with compatible devices via DMX/RDM Gateways. RDM communication shall adhere to ANSI standard E1.20-2006 Entertainment Technology – RDM – Remote Device Management Over DMX512 Networks. Supported RDM features shall include:
 - 1) Discovery and Identification of RDM capable devices
 - 2) Setting of start addresses, operating modes and additional settings as exposed by connected devices and controllable via RDM
 - 3) Viewing of Sensor data as provided by connected devices
 - 4) Error reporting as provided by connected device
- d. A maximum of 10,000 cues, 1000 groups, 1000 presets, 4 x 1000 palettes (Intensity, Focus, Color and Beam), 99,999 macros, 1000 effects, 1000 curves, 1000 Color Paths and 1000 snapshots may be contained in non-volatile electronic memory and stored to an onboard solid-state hard drive or to any USB storage device.
- e. Recorded cue lists may be played back simultaneously on a maximum of 200 faders. Channels shall respond to cue information by last instruction with discrete rate control provided for all cues. The console may be placed in Tracking or Cue Only mode by the user as a system default and overridden on individual record actions as required. HTP/LTP intensity flags, assert, proportional, intensity master or manual master fade control. Priority and Background Priority may be placed on each cue list. It shall also be possible for a cue list to contribute to playback background states or to withhold such contributions.

- f. A Master Playback fader pair shall be provided. The 100mm fader pair may execute crossfades or all-fades, with IFCB cue level timing,
- g. 20 45mm faders shall be user configurable across 100 pages and provide additional playback faders (up to 200), additive or inhibitive submasters (up to 999), and grand master control. Associated displays provide content identification. Presets and IFCB palettes may be loaded to faders for playback control, either individually or in user-defined lists. Virtual fader control is also provided.
- h. A high-resolution level wheel shall be provided to control intensity for selected channels and scrolling within selected displays. Four pageable encoders shall be provided for control of non-intensity parameters. Non-intensity encoders toggle between coarse and fine control. The expand function for frame table devices shall provide a graphic representation of all images and colors in the associated device for instant selection. A graphic shutter representation shall provide additional control of shutter parameters. The display shall also provide an indication of the current value for the associated parameter, based on channel selection. A high-resolution rate wheel, which may also be used for fader paging shall be provided.
- i. Control surface buttons shall be backlit. This backlighting provides indication of functional states. Backlight intensity shall be user controllable, and shall automatically dim after a defined period of inactivity.
- j. Control and programming features for automated fixtures shall also include: a standard library of fixture profiles, the ability to copy and edit existing profiles and create new profiles, patch displays including channel and output addressing, 16-bit fade resolution, color characterization allowing color mixing in up to six different color spaces.
- k. System information, including playback status, live output and blind values for all record targets shall be displayed on a maximum of two external high resolution monitors, which may also be multi-touch touch-screens. Every display shall support three user-definable workspaces. Each of these workspaces shall provide individually configured frames, with size/scaling controls. Any Windows 7 compatible display may be used.
- l. A context sensitive on-line Help feature shall explain and provide an example of the operation of each feature of the system. This help system shall be integrated into the on-board user manual via hyperlinks.
- m. A fully integrated Virtual Media Server feature shall allow user to map images and animations to a rig array. 40 such maps may be created, each with 12 layers. System that rely on external hardware or software for this functionality shall not be acceptable.
- n. User-definable, interactive displays may be created. These displays, which can be used in live and blind operating modes, allow graphical layout of channels, desk buttons and programming tools. Standard symbols are provided, and the user may import their own symbols or graphics. Each symbol may be individually defined with data feedback characteristics. Non-interactive status information, such as a mirror of other user's command lines, may also be included in the display. A graphical browser is provided for fast selection of these views. Multiple zoom factors and placements may be stored and recalled for each display.
- o. A detachable alphanumeric keyboard shall be provided. The keyboard shall allow labeling of all show content. An integrated virtual alphanumeric keyboard shall also be provided.

- p. Console software upgrades shall be made by the user via flash drive. It shall be possible to install software updates in all consoles, processor units and remotes from one device over the network.
 - q. The console operating software shall be loaded into program execution memory from the internal hard drive when the console is powered. In the event of an uncontrolled shutdown, the console shall return to its last output state when power is restored. Devices requiring a UPS to provide such protections shall not be acceptable.
 - r. Integrated dimmer monitoring features shall be provided to allow indication of dimming system status, error states and dimmer load monitoring. Adjustment of dimmer configuration from the console shall also be supported. Communications with the dimming system shall utilize ANSI E1.17 2006 - Entertainment Technology - Architecture for Control Networks.
 - s. Integrated RDM device features shall be provided. The console shall discover and patch RDM devices. The console shall monitor RDM devices to allow indication of RDM device online/offline status error states. The console shall be capable of changing settings of RDM devices such as the DMX start address. Communications with the RDM devices shall utilize ANSI E1.20 2006 – Remote Device Management.
 - t. Network configuration tools shall be provided from within the desk.
 - u. Show data may be created and modified on a personal computer, using either Windows 7 or higher or a Macintosh platform running OS 10.11 or later via a free offline editing application. The program shall run natively on Apple operating systems. Applications requiring PC emulation programs shall not be acceptable.
 - v. A PC, using either Windows 7 (or higher), or a Macintosh running OS 10.11 (or later) using the offline software application shall be able to connect to a control system via the network and view or modify current show data in an independent display environment, using an ETCnomad key. When connected without the key, the computer shall operate in Mirror Mode, with the device to be mirrored selectable by the user.
 - w. Synchronized backup shall be provided via another full console on the network, an ETCnomad/Puck, or by use of a remote processor unit. The backup console/RPU shall maintain synchronized playback with the master and shall take over control of the lighting system upon loss of communication with the master. Use of two RPUs to service and backup system output is also supported.
 - x. A maximum of 99 users may access and interact with show data simultaneously. Each user shall have an individual workspace. User identification may be assigned to more than one control device, allowing users to work in tandem, or allowing a designer/ALD to mirror the current display format, mode and command line of the associated programmer. Partitioned control allows discrete control of channel/parameter groupings by user. Partitioned control may be easily enabled and disabled with no need to merge show data from multiple users.
 - y. The system shall support up to 32 individual simultaneous Time Code inputs or Event lists using Show Control Gateways.
 - z. Systems that do not provide the above capabilities shall not be acceptable.
2. Controls and Playback
- a. Manual Control and Programming Section

- 1) The console keyboard shall be grouped by function. Major groupings shall be record target functions, numeric keys, level assignment functions, display navigation functions and controls, as well as non-intensity parameter controls.
 - 2) The command keypad shall be fully interactive with direct selects and other virtual controls, which provide “one touch” selection of channels, groups, palettes, presets, effects, snapshots and macros.
 - 3) Non-intensity parameters may be set numerically via an extensible keypad. This control shall be fully interactive with the moving light encoder controls and the virtual controls. The controls shall also access available modes for each parameter type, min and max values for each parameter as applicable, as well as home position on a parameter basis. Each encoder shall support shift functions for fine control. The range of motion of coarse control may be set by the user. Tactile feedback shall indicate full and half frame positioning of certain controls.
 - 4) Only those parameters available for control in the active lighting system shall be displayed for control. Displays shall condense or lowlight parameters not available to selected channels. Alternatively, the encoders may be placed in a state allowing parameters not applicable to the current selection to be suppressed.
 - 5) Lamp controls provide direct access to luminaire functions such as striking and dousing arc lamps and calibrating entire fixtures or individual mechanisms of fixtures, as provided by the luminaire manufacturer. User access to these features is normalized across all manufacturers for ease of use. Use of a “control channel” for accessing these functions shall not be required and systems requiring use of control channels for these functions shall not be acceptable.
 - 6) Fan functions shall be provided both via command line operation and through encoder controls.
 - 7) Highlight shall be supported, with user definable highlight values. Lowlight conditions may be defined for selected, but not specified channels. Rem Dim commands, at specific levels by channel, may be optionally and automatically called with the highlight command.
 - 8) Advanced color control functions provide color mixing in any of six different color spaces. Gel matches are provided via gel picker or by command line control. Tinting tools allow adjusting the color mix irrespective of the native mixing system. Spectrum tools support adjusting the output of additive color systems with more than three emitter types, allowing the X/Y coordinate to be held while adjusting the recipe that achieves that mix. Color Path tools allow the user to control the live fade of fixtures through the color space.
 - 9) The Virtual Media Server function shall allow the user to create layouts of devices, identified as pixel maps. Media content (images, movies, text and procedurally generated effects) may then be applied, manipulated and stored. Stock content is provided and the user may import his own imagery and animations.
 - 10) Macros may be set to run as default. Default macros called manually shall post to the command line, but executed via cue lists shall run in the background. The user may override this behavior by defining the macro to always execute in the foreground or background, regardless of the recall method. Startup, Shutdown and Disconnect macros may also be defined.
- b. Playback Section

- 1) The playback faders shall consist of a 100mm Master Fader pair and 20 45mm additional pageable playbacks. Additional playbacks may be defined via external wings and/or virtual controls.
- 2) Up to 200 cue playback faders may be defined on the fader array. Each playback shall have an associated potentiometer and definable buttons.
- 3) Faders may be grouped for playback, with sliders and button action defined by the user.
- 4) It shall be possible to instantaneously halt an active cue, back to the previous cue, manually override the intensity fade or manually override the entire fade.
- 5) It shall be possible for a cue list to contribute to the background state or for the contents of each cue list to be withheld from such. Background and background priority states may be established.
- 6) Playback faders shall have the following associated controls:
 - a) Freeze, which halts the output of the fader
 - b) Stop Effect, which stops the action of an effect
 - c) Filter, to assign filter states to a fader
 - d) Go To Cue 0, to reset a cue list
 - e) Off, to turn off the contents of a playback, releasing control to the background state or to set to null.
 - f) Assert, to replay an active cue
 - g) Release, to release control to the background and reset the cue list.
 - h) Timing disable, channel filters, parameter filters, priority and background priority status may also be defined.
 - i) The potentiometer shall be configurable as a proportional master, an intensity master, or manual master. Support for rate, effect rate, effect size and Master Only controls is also provided. Filtered manual timing masters may be configured.
 - j) Rate override and fader paging are supported with a wheel encoder and associated controls.

3. Submasters

- a. Up to 999 proportional, fully overlapping additive or inhibitive submasters may be defined. Submasters shall have colored LEDs to indicate submaster status. Each submaster may have fade up, dwell and down fade times. Submasters may be set to priority and background priority status.
- b. Submasters may be set to HTP or LTP intensity. Non-intensity parameters on submasters shall be LTP only.
- c. Exclusive mode for a submaster shall prohibit the live contribution of that submaster from storing to cues or other submasters. Shield mode prohibits access of associated channels from any other playback or manual control operations.
- d. A submaster potentiometer may be defined as proportional, master only or intensity master. When set as an intensity master, a mark and unmark feature is supplied.

- e. The submaster blind buffer shall be linked directly to live playback.
 - f. It shall be possible to set submaster values directly from the command line.
 - g. Submasters may be set to fade to background or to minimum value when the fader is returned toward zero.
 - h. Submaster values may contribute to the background state or withheld from such.
4. Grand Master Faders
- a. The location of the Grand Master shall be user definable. The grand master shall have associated blackout and blackout enable buttons.
 - b. Blackout shall send all associated intensity outputs to zero. Non-intensity outputs shall not be affected. It shall be possible to exclude channels from Grand Master control.
5. Display Controls
- a. Format shall change the view of selected displays.
 - b. It shall be possible for the user to choose which parameter categories or parameters (s)he wishes to display.
 - c. Flexichannel modes shall change which channels are viewed in selected displays, as follows:
 - 1) No modes
 - 2) Masters only/cells only
 - 3) Use Partitions
 - d. Flexichannel states shall change which channels are viewed in selected displays, modified by the modes, as follows:
 - 1) All channels
 - 2) Patched channels
 - 3) Show channels
 - 4) Active/Moved channels
 - 5) Selected channels
 - 6) Manual Channels
 - 7) View channels (user identified list)
 - 8) Channels with discrete timing
 - e. Expand shall extend the selected view sequentially across connected displays.
 - f. [Time] depressed shall display discrete timing data. [Data] suppressed shall display absolute values of referenced data. These functions may be latched.
 - g. Displays may also be toggled to show stored data currently manually overridden, the source of the current parameter data, output level, patch assignment, part structure and referenced marking data.
 - h. Playback status displays are provided with a variety of different formats. Indications are provided per cue for live moves (lights fading from zero and also moving non-intensity parameters) and dark moves (inactive lights which have stored non-intensity parameter moves).

- i. Display content including which of the workspaces is in focus on any of the two monitors and what views are docked in those workspaces may be instantly recalled using snapshots.
6. Operating Modes
 - a. Live Mode
 - 1) Channel lists may be constructed using the +, -, and Thru keys as well as the direct selects. Channel selection and deselection is fully interactive, regardless of the method used.
 - 2) Levels may also be set with the keypad, level wheel and non-intensity encoders. "Selected" channels shall be those last addressed and under keypad control. Controls are provided for single button access to the last selected channel list, all channels with manual levels and all active channels.
 - 3) Channels may be set at a user defined default level using the Level key. +% and -% keys adjust channels quickly by user definable values.
 - 4) Channels and/or channel parameters may be captured. Capture mode shall allow the user to selectively capture channel data at specific levels. Captured data shall be indicated on the Live display.
 - 5) Sneak shall be used to restore specified channels to background states, default values, or to send them to specified values, in user specified times.
 - 6) Selected channels may be set at a level or held to current values while all other channels are set to zero using Rem Dim. Toggling Rem Dim shall restore all unselected channels to original levels. The Rem Dim level shall be user definable via the command line or with a default setup value.
 - 7) Channels may be recorded into groups for fast recall of commonly used channels. 1000 groups shall be available. Groups shall store selection order. The Offset function supports rapid creation of ordered groups, including reverse and random order.
 - 8) Parameter settings may be stored to Intensity, Focus, Color and Beam Palettes and to Presets. All referenced data may be stored to whole numbers or to up to 99 decimal places between each whole number.
 - 9) The following conditions may be placed on a channel or channel parameter to be included with a cue record action.
 - a) Discrete fade time and/or delay
 - b) Block flag
 - c) Assert flag
 - d) IFCB Filters, which may be set at a parameter level.
 - e) Release and Restore
 - 10) 999 cue lists may be stored. Cues may be recorded in any order. Up to 99 decimal cues may be inserted between any two whole number cues. Each cue may contain a maximum of twenty parts.
 - 11) It shall be possible to record cues and cue parts with the following information:

- a) Any collection of channel data, as determined by the use of "Record", "Record Only" or selective store commands, combined with parameter filters.
 - b) Cue Level timing and delays for Intensity Up, Intensity Down, Focus, Color and Beam.
 - c) Follow or hang time
 - d) Link instruction
 - e) Loop value
 - f) Block, Assert, Preheat, and/or Mark Flag
 - g) Curve
 - h) Allfade
 - i) Label and note
 - j) Execute list to trigger other activity
- 12) Non-intensity channel parameters may be marked (preset), in two ways. Automark presets any parameters transitions in the cue just prior to intensity becoming active. Automark may be disabled on a cue or cue part basis, enabling a "live" move. Alternatively, non-intensity parameters may be marked to a specific cue with a single command instruction. It shall not be necessary to store these parameters directly into the cue in which the movement is to occur.
- 13) Any channel parameter may be stored with an effect instruction. These effects may contain relative offsets from current value, or absolute instructions. Effects may be progressive action or on/off states. Entry and exit behaviors shall modify the channel parameters activity when beginning and ending the effect.
- 14) Update may be used to selectively add modified parameter data quickly to that parameter's current source. Update may be specified to modify referenced data content or break the link to that content. A dialogue informs the user of the content that will be updated. A trace command may be used to modify the data to the original source of its move instruction. It shall be possible to update inactive record targets.
- 15) Recall From quickly pulls specified data from record targets or other channels into the current view.
- 16) Copy To quickly copies selected data to specified channels or other record targets.
- 17) Address and channel check functions shall be provided.
- 18) Channel parameters may be "parked" at levels. Those levels are not added to any live record operations, nor may they be changed until the parked element is "unparked". Scaled park provides real time proportional adjustment of stored intensity values. Address Park shall also be provided.
- 19) About shall provide detailed status of selected channels or specified record targets. This shall include current source, current value, discrete timing, parked value, marked to and for indications. Background levels and current DMX output are also displayed. Channel usage indicates submaster and cue information and also provide a "dark moves" report on a per channel basis.
- 20) 1000 snapshots may be stored which instantly recall specified front panel and display configurations.

- 21) Live data may be displayed in a summary view or detailed table orientation.
 - 22) Query shall allow selection of channels by their current or possible state. Keywords and fixture types shall allow quick access to fixtures.
 - 23) User definable home positions, on a per channel basis, may be defined.
 - 24) Channel level offset commands provide channel ordering and sub-grouping functions.
 - 25) Undo shall be used to sequentially step back through manual operations or to undo record and delete actions. It shall be possible to undo multiple commands in one action.
- b. Blind
- 1) The Blind display allows viewing and modification of all record targets without affecting stage levels.
 - 2) Record target data may be displayed in a summary view, a detailed table orientation or a spreadsheet view, which allows quick data comparisons, move and replace functions.
 - 3) Changes to blind data shall be automatically stored. Range selection of both record targets and channels shall be supported.
- c. Patch Display
- 1) Patch shall be used to display and modify the system control channels with their associated library data.
 - 2) Each channel may be provided with a proportional patch level, curve, label, swap and invert functions, as well as keywords to service Query.
 - 3) Offset functions in patch shall allow selection of channel ranges and shall allow the user to establish a "custom" footprint for any device output.
 - 4) Custom color wheels, color scrolls and gobo wheels shall be defined in patch. These devices shall be created with a simple table and graphical user interface supported by images of major manufacturers.
 - 5) RDM discovery and device monitoring shall be supported.
 - 6) Copy to and Move functions shall be supported in patch.
- d. Setup/Browser
- 1) Setup shall access system, user and device configurations.
 - 2) It shall be possible to partially import Eos show files. Users shall be able to select as much or as little of the show file as required, with renumber tools.
 - 3) It shall be possible to import ASCII and Lightwright data files. It shall be possible to export as ASCII or .csv.
 - 4) Setup shall also access show data storage, import, export, print to .pdf and clear functions, as well as show data utilities.
 - 5) The system shall support programming and playback of real time clock events, including cue, submaster and macro execution at specific times of specified days or at a time based on astronomical events.

- 6) A control screen shall be provided for network configuration, selecting date/time, software update controls, selecting functional language and/or keyboard for labeling option, as well as other system level tools.
 - 7) Available languages for prompts, advisories and help messages shall include English, Bulgarian, German, Spanish, French, Italian, Japanese, Korean, Russian, Chinese, simplified and Chinese, traditional.
 - 8) Supported keyboards shall include American, United Kingdom, French, German, Italian, Korean, Norwegian, Russian, Slovakian, Turkish, Swiss, Swedish, Finnish and Bulgarian.
7. Dimmer Monitoring and Configuration
- a. The lighting control system shall provide communication with an ETC Sensor+, Sensor3 or FDX dimming system for remote monitoring and configuration of show specific functions from within the software application.
 - b. Circuit level configuration and monitoring functions shall include but not be limited to:
 - 1) Control mode (dimnable, switched, latch-lock, always on, off or fluorescent).
 - 2) Curves
 - 3) Control threshold
 - 4) Min and Max Scale Voltage
 - 5) Preheat
 - 6) Scale load
 - c. Rack status messages shall include but not be limited to:
 - 1) State of UL924 panic closure
 - 2) DMX port error/failure
 - 3) Network error/failure
 - 4) A, B, C Phase below 90 or above 139 volts and headroom warning
 - 5) Ambient temperatures out of range
 - d. Circuit status shall include but not be limited to:
 - 1) Module type and location
 - 2) Output level
 - 3) Control Source
 - 4) Overtemp
 - e. Advanced circuit feedback shall include but not be limited to:
 - 1) Load higher or lower than recorded value
 - 2) DC detected on output
 - 3) SCR failed on/off
 - 4) Breaker trip
 - 5) Module has been removed

- 6) Load failure
- 7) Shutdown due to Overtemp
- 8. Interface Options
 - a. The console shall support a variety of local interfaces.
 - 1) AC input
 - 2) USB (five ports for items such as alpha-numeric keyboard, mouse, touch screens, USB Flash drive)
 - 3) Ethernet (two ports)
 - 4) Two Display Port output connectors, supporting Windows 7 compliant monitors as 1280x1024 resolution minimum. Touchscreen/multi-touch support of any/all of these monitors is provided.
 - 5) Contact Closure trigger via D-Sub connector
 - 6) 4 DMX/RDM ports
 - 7) Alternative Contact Closure trigger through Gateway
 - 8) OSC Transmit/Receive
 - 9) MIDI In/Out, MSC and MIDI Notes through Gateway
 - 10) SMPTE Timecode through Gateway
- 9. Accessories
 - a. ETCpad (ETC Portable Access Device)
 - b. iRFR and iRFR Preview (applications for iPhone, iPod Touch and iPad units)
 - c. aRFR (application for Android devices)
 - d. Net3 Remote Video Interface 3
 - e. 20 Fader or 40 Fader non-motorized fader wings
 - f. 10 Fader or 20 Fader motorized fader wings
 - g. Gateways
 - 1) Net3/ETCNet 2 to DMX/RDM Gateways (one to four ports)
 - 2) MIDI/SMPTE Gateway
 - 3) I/O Gateway with 12 analog inputs, 12 SPDT contact outputs, RS-232 interface
 - h. Synchronized Backup
 - i. An optional Backup system shall consist of one of the following combinations of devices:
 - 1) Two networked Consoles.
 - 2) One (or more) Console with one Remote Processor Unit (RPU)
 - 3) One (or more) Consoles with two Remote Processor Units (RPUs)
 - 4) ETCnomad/Puck
- 10. Physical

- a. All operator controls and console electronics for a standard system shall be housed in a single desktop console, not to exceed 30" wide, 15" deep, 4.5" high, weighing 16.6 pounds. Console power shall be 90 – 240V AC at 50 or 60Hz, supplied via a detachable locking power cord.
- B. ColorSource 20 AV
 - 1. Model CS20 AV
 - a. 80 channels / multi-parameter devices.
 - b. 20 Channel / Playback faders with color indication.
 - c. DMX/RDM Port: Two.
 - d. USB Port: Two
 - e. RJ45 for Network: One
 - f. HDMI port for monitor: One
 - g. Onboard Storage for Show Files: 2 5GB.
 - 2. Mechanical:
 - a. One home and five configurable softkey buttons.
 - b. Four configurable function faders.
 - c. Color Multi-Touch Touchscreen: 7 inch.
 - 3. Playback Controls:
 - a. One cue list with 999 cues.
 - b. 10 pages of 20 or 40 playbacks.
 - 1) Static memories or sequences.
 - c. Playback Toy for filtered and timed execution of playbacks.
 - d. Multiple bump modes; Flash, Solo, Solo Change, Move/Go.
 - e. Full-history rubber banding for playbacks.
 - f. On-board help system.
 - g. Extensive library for controlling moving lights.
 - 4. Regulatory and Compliance: cETLus Listed. CE Compliant.
 - 5. Programming Tools:
 - a. Color and white pickers.
 - b. Reference based Position, Color and Beam palettes.
 - c. Innovative touch-based parameter controls.
 - d. Auto fixture selection on fader moves.
 - e. Virtual Level/Rate wheel.
 - f. Customizable Channel display using Stage Map.
 - g. Effects: Intensity, color, shape, and parameter.
 - h. Fixture Tags for Quick Selects.

- i. 27 Quick Select groupings.
- j. Two independent channels.
- k. Virtual keypad for level entry.

2.9 ARCHITECTURAL CONTROL PROCESSOR

A. General

1. The Architectural Control Processor shall be the Unison Paradigm Series, P-ACP Control Processor as manufactured by Electronic Theatre Controls, Inc., or equal as determined by the Theatre Consultant.

B. Mechanical

1. The Architectural Control Processor (ACP) assembly shall be designed for use in DRd Series Power Enclosures and ERn Series Control Enclosures.
2. The processor shall utilize microprocessor based, solid state technology to provide multi-scene lighting and building control.
 - a. ACP module electronics shall be contained in a plug-in assembly.
 - 1) The module shall be housed in a formed steel body and contain no discrete wire connections.
 - 2) No tools shall be required for module removal or insertion.
3. The ACP shall be convection cooled.
4. User Interface
 - a. The ACP shall utilize a backlit liquid crystal display capable of graphics and eight lines of text.
 - b. The ACP shall provide an alpha-numeric keypad for data entry and navigation.
 - c. The ACP shall provide a touch-sensitive control wheel for navigation.
 - d. The ACP shall provide shortcut buttons to assist in navigation, selection, and data entry.
 - e. The ACP keypad, buttons, and wheel shall be backlit for use in low-light conditions.
 - f. The backlight shall have a user selectable time out, including no time out.
5. The ACP shall provide a front-panel RJ45 receptacle for Ethernet connection to the processor for configuration, live control, and web-browser-based system access.
 - a. The RJ-45 receptacle shall be secured behind the locking door.
6. The ACP shall provide a Secure Digital (SD) Removable Media slot on the front panel for transfer of configuration data.
 - a. The SD slot shall be secured behind the locking door.
7. The ACP shall provide a Universal Serial Bus (USB) port on the front panel for transfer of configuration data.
 - a. The USB port shall be secured behind the locking door.
8. Architectural Lighting System configuration and program information shall be stored in flash memory, which does not require battery backup.
 - a. The ACP shall provide a Compact Flash (CF) Card as backup flash memory and storage.

- b. The CF Card is located in the back of the ACP, and can be accessed only by removing the ACP.
- c. The ACP data can be exchanged by inserting the CF card into another ACP.

C. Electrical

- 1. The ACP shall require no discrete wiring connections; all wiring shall be terminated into Dimming or Control Enclosure.
- 2. The ACP shall require low-voltage power supplied by the Dimming or Control enclosure.
- 3. The ACP shall be hot-swap capable.
- 4. The ACP shall support Echelon LonTalk with LinkPower communications with control stations and other remote devices, including button stations, button/fader stations, Touchscreen stations, sensors, and third party LonMARK compliant products.
 - a. The LinkPower network shall utilize polarity-independent, low-voltage Class II twisted pair wiring, type Belden 8471 (unshielded) or Belden 8719 (shielded) or equivalent. One # 14 AWG drain wire will be required for system not using grounded metal conduit. Touchscreen stations, interface stations and portable stations connectors will also require (2) #16 AWG wires.
 - b. The LinkPower network shall be topology free. Network wiring may be bus, loop, home run, star or any combination of these.
 - c. Link power wiring shall permit a total wire run of 1640 ft. (500m) without a repeater. Repeater option modules shall be available to increase wiring maximums in increments of 1640 ft. (500m).
 - d. Link power wiring between stations shall not exceed 1313 ft. (400m).
- 5. The ACP shall support 10/100BaseTX, auto MDI/MDIX, 802.3af compliant Ethernet networking using TCP/IP, ESTA BSR E1.17 Advanced Control Networks (ACN) and ESTA BSR E1.31 (sACN) Protocols for internal communication and integration with third-party equipment.
- 6. The ACP shall support EIA-RS232 serial protocol for bi-directional command and communication with third-party equipment.
- 7. The ACP shall support two discrete ESTA DMX512A ports, configurable as input or output ports.*
 - a. *When used in a Dimming Enclosure, the second port is always an output port.
- 8. The ACP shall provide four onboard dry contact closure inputs for integration with third-party products.
- 9. The ACP shall provide four onboard contact closure outputs, rated at 1A@30VDC, for integration with third-party equipment.

D. Functional

- 1. Capacity
 - a. Shall support 1024 channels of control
 - b. Shall support 2 physical DMX ports, each of which may be configured as an input or output
- 2. System

- a. Runtime application shall utilize support Net3 system interoperability
 - b. System shall support the use of Network Time Protocol for real time clock synchronization
 - c. System shall support remote firmware upload an over Ethernet connection from a connected PC running the Light Designer software or another connected processor.
 - d. System shall support local firmware upload from removable media (SD Card, USB Flash Drive)
3. Diagnostics
- a. Shall output an Event log
 - b. Standard log shall store a fixed-length history of recent activity
 - c. Separate critical log shall only store important messages (such as boot-up settings)
4. Configuration Data
- a. Configuration Data can be uploaded over an Ethernet connection from a PC running Light Designer application
 - b. Configuration Data can be retrieved from another Paradigm Processor
 - c. A Paradigm Processor shall make its configuration data available for retrieval by another Processor as a backup/recovery mechanism
 - d. Configuration Data shall be stored on solid-state media that can be removed to facilitate transfer between Processor units
 - e. Configuration Data may be loaded to and from removable media access provided on front panel
 - f. Configuration Data for the entire System shall be available for download from any single Processor
 - g. Shall store configuration data for Dimming enclosure processors and shall make available for download
5. Scalability
- a. Adding additional Processors to a System shall proportionately increase its overall capabilities up to a maximum project size
 - b. The maximum number of Processors configured as a project shall be at least 12. The use of a Central Control Processor (P-CCS) shall allow for larger system sizes up to 72 processors
 - c. Multiple Processors shall utilize the Ethernet network to remain time synchronized and share control information
 - d. Multiple Processors shall utilize the Ethernet network to maintain configuration data synchronization as modifications are made
 - e. Failure of a single Processor shall not prohibit continuing operation of the remaining Processors
 - f. It shall be possible for multiple Systems to coexist on the same physical network with logical isolation between Systems
6. Local User Interface

- a. Shall provide access to Processor setup (IP address)
 - b. Shall provide access to Processor status and diagnostics
 - c. Where the Processor is installed within a Dimming enclosure, shall provide access to Dimming enclosure setup, status and diagnostics
 - d. Shall provide control functionality for Control Channels, Zones, Fixtures, Groups, Presets, Macros, Walls and Sequences within the current configuration.
 - e. Shall provide functionality to schedule astronomical and real time events (add/edit/delete)
 - f. Shall allow for display of local DMX information
 - g. Shall allow for transfer of log files to local removable media
 - h. Shall allow to perform firmware upgrades for connected Dimming enclosures
 - i. Shall allow for transfer of configuration to and from Dimming enclosures using removable media
 - j. Shall allow for transfer of configuration to and from LCD Stations using removable media
 - k. Shall allow for binding of Stations
7. Access Controls
- a. There shall be 2 user accounts - Administrator, and User with separate password protection
 - b. Account and password settings shall be local to each Processor
 - c. Access Controls shall be applied to certain areas of the Paradigm Local User Interface and Web Interface
8. Web User Interface
- a. Shall be an internal web server accessible via Ethernet port
 - b. Shall support common web browsers on Windows and Mac platforms
 - c. Shall provide functionality to Activate and Deactivate Presets
 - d. Shall provide functionality to schedule timed events (add/delete)
 - e. Shall display status information
 - f. Shall display log files
 - g. Shall allow for configuration of Processor settings (date, time)
 - h. Shall allow for upload and download of configuration data
 - i. There shall be links to other web-enabled devices in the System, including other Paradigm Processors
9. Stations
- a. Stations shall be connected to a Paradigm Processor via a LinkPower network or Ethernet
 - b. Station discovery and binding shall be accomplished from the Local User Interface or Light Designer
10. Net3 and ACN Devices

- a. Paradigm Processors shall provide DMX-Net3 gateway functionality
- b. Net3 devices shall be connected to and controlled from the Processor via Ethernet
- c. It shall be possible to send and receive Macro triggers defined within the System configuration via Net3
- d. There shall be support for a maximum of 1024 Streaming ACN outputs configured to a maximum of 12 universes per Processor

11. Operation

- a. When contained in a dimming enclosure, a snapshot of the dimming enclosure output data shall be stored in persistent memory so that hardware can access it for immediate output on boot
- b. DMX output refresh rate shall be configurable
- c. There shall be support for 16-bit DMX Attributes
- d. DMX inputs may be patched to DMX and Streaming ACN outputs as external sources
- e. Streaming ACN inputs shall be patched to DMX outputs (gateway) as external sources
- f. Where there are multiple external sources then priority and HTP shall be used to perform arbitration
- g. External and internal sources shall be arbitrated based on user-selection of standard or custom rules
- h. On Preset Record, the values of Attributes within the Preset shall be updated to reflect the current output
- i. The total output may be the combination of many different Presets running concurrently
- j. There shall be no hard limit on number of concurrent cross fades
- k. Multiple Presets controlling the same Attribute shall first interact based on priority and second based on Latest Takes Precedence (LTP) or Highest Takes Precedence (HTP)
- l. LTP and HTP operation shall be supported simultaneously and interact (at the same priority) using HTP
- m. Settings due to LTP Presets may be automatically discarded from operation when overridden
- n. It shall be possible to specify that a Preset or Attribute Control will persist when overridden
- o. A Preset may be designated as an HTP Override and shall cause HTP values to be discarded
- p. It shall be possible to modify the rate of a Preset (Cross fades, Effects) from a Control within the System
- q. Each Preset shall have a status that can be Activated, Deactivated or Altered
- r. Preset status may be set based on matching levels in the current output as an option
- s. On startup the System shall be capable of automatically executing timed events within the previous 24 hours to synchronize its initial output state with the current time of day

12. Serial Input/Output

- a. RS232 shall support 8-bit word length, parity selection and 1 or 2 stop bits
- b. RS232 shall support baud rates from 4800 to 115,200 bps
- c. Serial input and output messages are fully customizable
- d. Serial output messages can be generated by any Control or Event

2.10 DIGITAL BUTTON AND FADER STATIONS

A. Button and Fader Stations

1. General

- a. The control station shall be the Paradigm Inspire Station Series as manufactured by ETC, Inc., or equal as determined by the Theatre Consultant.
- b. It shall be a remote station on a LinkConnect network that can recall presets, provide direct zone control, play macros and provide room combine actions for a control system
- c. The station shall consist of a dual function (control/ record) push-button with an integral tri-color backlight for each corresponding button and fader

2. Mechanical

- a. Control stations shall operate using one, two, four, six or eight buttons. A four button with fader station shall also be available
- b. All button stations shall be available with cream, grey, black or white decorator style faceplates
- c. Stations shall have tri-color backlights for each button and fader
 - 1) Indicators shall utilize a configurable color backlight for active status
 - 2) Indicators shall utilize a configurable color backlight for inactive status to assist in locating stations in dark environments. Stations that do not support a lit inactive or deactivated state shall not be accepted
 - 3) Stations shall support an off backlight state of inactive status when required
- d. All faceplates shall be designed for flush or surface mounting and have no visible means of attachment
- e. Station faceplates shall be constructed of ABS plastic and designed based on a standard decorator style faceplate.
- f. Buttons shall be indelibly laser marked for each button function
- g. Control station electronics shall mount directly behind the faceplate. The entire assembly shall mount into a single gang back box. Back boxes for flush mounted stations shall be industry standard back boxes. The manufacturer shall supply back boxes for surface mounted stations.

3. Electrical

- a. Control station wiring shall be LinkConnect control wiring utilizing low-voltage, Class II unshielded twisted pair, type Belden 8471 or equivalent, and one #14 ESD drain wire (when not installed in grounded metal conduit).
- b. The station shall operate on class 2 voltage provided by the control system via the LinkConnect network.

- c. Station wiring must be topology free. It may be point-to-point, bus, loop, home run or any combination of these.
 - d. Wiring termination connectors shall be provided with all stations.
 - e. Control stations shall be UL/ cUL listed and CE marked and meet WEEE Compliance
4. Functional
- a. The Control System shall be designed to allow control of lighting and associated systems via Button and Fader controls.
 - 1) System presets shall be programmable via LightDesigner configuration software.
 - a) Presets shall have a discrete fade time, programmable from zero to 1,000 hours with a resolution of one millisecond.
 - 2) System macros and sequences shall be programmable via LightDesigner configuration software.
 - a) Macro and sequence steps shall provide user selectable steps, and allow the application of conditional logic.
 - b) Macro and sequences shall be activated by button, time clock event or LightDesigner software.
 - b. Control components shall be designed to operate default or custom system functions. Components shall operate default functions unless re-assigned via LightDesigner, the software-based configuration program.
 - 1) Optional button functions include: preset selection, manual mode activation, record mode activation, station lockout, raise, lower, macro activation, or room join/separate.
 - 2) Optional fader functions include manual master control, individual zone control, color control fade rate control or preset master control.
 - c. Stations (Button and Button/Fader) shall allow programming of station and component electronic lockout levels via LightDesigner.

2.11 DUAL TECHNOLOGY OCCUPANCY SENSOR

- A. Product: Unison Paradigm Dual Tech Occupancy/Vacancy Sensors.
 - 1. Model P-DOC-C-SR: Dual Tech Occupancy Sensor with several coverage options.
- B. Standards Compliance: UL and cUL Listed, CE Compliant.
- C. Functional:
 - 1. Supports software-configured Auto-On/Auto-Off functionality (occupancy sensing) or Manual-On/Auto-Off (vacancy sensing) functions.
 - 2. Ceiling Sensor:
 - a. 360 degree coverage pattern.
 - b. Includes configurable coverage masks.
 - c. Small Room: 450 sq. ft. at 8 ft ceiling, 800 sq. ft. at 12 ft ceiling.
 - d. Large Room: 1800 sq. ft. at 8 ft ceiling, 3000 sq. ft. at 12 ft ceiling.
 - e. High Ceiling: 300 sq. ft. at 10 ft ceiling, 7000 sq. ft. at 40 ft ceiling.

3. Wall Sensors:
 - a. Wide: 60 ft coverage at 7-10 ft mounting height. 140 degree field of detection.
 - b. Narrow: 16 by 75 ft coverage pattern at mounting height of 7-10 ft. 40 degree field of detection.
4. Supports walk-thru mode for verifying coverage area.
 - a. Sensor lens illuminates for walk-thru and test mode operation.
5. Sensor coverage tested to NEMA WD 7-2000.

D. Mechanical:

1. Constructed of injection-molded, ABS plastic.
2. Electronics assembly and mounting accessories included.
3. Accessible configuration buttons.
4. No visible means of attachment.
5. Ceiling Mount:
 - a. Surface- or box-mountable.
 - b. Supports drywall, plaster, wood, and concrete mounting.
 - c. Mounts to standard electrical box (supplied by others).
 - d. Mounts to compressed fiber ceilings with included wire mounting option.
 - e. Wall Mount: Flush-mount to industry standard backbox, RACO 690 or equivalent.

E. Electrical:

1. Connect via LinkConnect two-wire control network utilizing low-voltage Class 2 wiring.
 - a. Topology-free and polarity-independent wiring over Belden 8471 or equivalent and one No. 14 ESD drain wire.
 - b. Wiring may be bus, loop, homerun, or any combination of these/

F. Operating Temperature Range: 32 to 104 degrees F (0 to 40 degrees C).

G. Relevant Humidity Non-Condensing: 10 to 90 percent.

2.12 POWER AND DATA DISTRIBUTION

A. OUTLET AND PIGTAIL BOXES

1. General
 - a. Connectors shall be available as 20A, 50A and 100A grounded stage pin, 20A twist lock and 20A "U" ground (dual rated "T-slot"); other connectors shall be available as specified
 - b. Pigtails shall be three-wire type "S" jacketed cable sized for the maximum circuit ampacity
 - c. Pigtails with 20 amp stage pin connectors shall be terminated using 12 gauge 4 way indent crimp (with inspection window) type where the wire is inserted and crimped directly in the socket
 - d. Terminations for pigtail connectors shall utilize feed- through terminals individually labeled with corresponding circuit numbers
 - 1) 20 amp circuits shall use screwless tension clamp terminals listed for 20 – 8 gauge wire

- 2) 50 amp circuits shall use compression terminals listed for 10 – 1 gauge wire
 - 3) 100 amp circuits shall use compression terminals listed for 8 – 2/0 gauge wire
 - 4) Terminals that place a screw directly on the wire are not acceptable
 - e. Outlet and pigtail boxes shall be supplied with appropriate brackets and hardware for mounting as shown on the drawings
 - 1) Standard mounting options shall include pipe or wall mounting
 - 2) Brackets shall be made from ASTM A36 steel
 - 3) Hardware shall be ASTM A307 grade 5
 - f. A low voltage distribution system shall be available to incorporate DMX, Ethernet or other protocols as specified in the power distribution box
 - 1) A voltage barrier shall be used to separate the low voltage wiring for the electrical circuits
 - g. Power distribution equipment shall be listed by a nationally recognized test lab (NRTL)
2. Physical
- a. Outlet and pigtail boxes shall be 6.25" H x 3.3" D and fabricated from 18 gauge galvanized steel and finished in black fine-texture powder coat paint
 - 1) Covers shall be fabricated from 16-gauge galvanized steel
 - b. Outlet and pigtail boxes shall be available in any length specified in increments of 3-inches with a maximum length of up to 3-feet
 - c. Pigtails and outlets shall be spaced on 18" centers or as otherwise specified
 - d. Outlets shall be mounted on individual 3" panels
 - e. Circuits shall be labeled with 1.25" lettering
 - 1) Circuit labeling options shall include:
 - a) Circuits shall be labeled on the front side of the connector strip with white lettering on black background labels
 - b) Circuits shall be labeled on front and back sides of the connector strip with white lettering on black background labels
 - c) Circuits shall be labeled on the front side of the connector strip with engraved lamacoid labels utilizing white lettering on black background labels
 - d) Circuits shall be labeled on the front and rear sides of the connector strip with engraved lamacoid labels utilizing white lettering on black background labels
 - e) Circuits shall be labeled on one side of the connector strip using individual circuit cover plates with lettering engraved in the cover and filled with the specified color
 - f) Circuits shall be labeled using specified labeling per plans and drawings
 - f. Outlet and pigtail boxes shall support optional LED indicators to indicate the presence of power at each local circuit. The indicator shall be red in color and mounted in outlet or pigtail box
 - 1) The LED indicator shall be mounted in the lower right corner of the outlet panel
 - 2) The LED indicator shall be mounted in the bottom of the outlet or pigtail box directly below the outlet panel

- 3) The LED indicator shall be mounted in the cover plate directly below the circuit label for pigtail circuits

B. FLOOR POCKETS

1. General

- a. The floor pocket shall be a wiring device designed for flush mount installation into the floor.
- b. Connectors shall be available as 20A grounded stage pin, 20A twist lock and 20A "U" ground (dual rated "T-slot"); other connectors shall be available as specified.
- c. Terminations shall be made at each connector by the installer contractor.
20 amp circuits shall use tension clamp terminals listed for 20 – 8 gauge wire.
Terminals that place a screw directly on the wire shall not be acceptable.
- d. Floor pockets shall be supplied with back box and cover plate
- e. The floor pocket back box shall have provisions for an integral voltage barrier for low voltage circuits.
- f. Floor pockets shall be listed by a nationally recognized test lab (nrtl).

2. Physical

- a. Floor pocket back boxes shall be 9"H x 13"W x 9"D and fabricated from 16-gauge cold rolled steel, finished in black fine-texture powder coat paint.
- b. Floor pocket covers shall be constructed of 3/8" cast iron with a non-skid tread pattern utilizing a low-gloss black finish.
 - 1) The cover shall be constructed with integral hinges and four (4) cable notches.
 - 2) Covers are attached to the floor using four (4) mounting holes at the corners with hardware provided by the installing contractor
- c. Floor pocket connectors shall be mounted in a connector panel fabricated of 16-gauge steel finished in a low gloss black powder coat paint
 - 1) The connector plate shall be attached to the floor pocket cover.
- d. Circuits shall be labeled on the connector strip with 9/16" lettering.
 - 2) Circuit labeling options shall include:
 - a) Circuits shall be labeled on the front side of the connector panel with white lettering on black background labels.
 - b) Circuits shall be labeled on the front side of the connector panel with engraved lamicoid labels utilizing white lettering on black background labels.
 - c) Circuits shall be labeled using specified labeling per plans and drawings

2.13 EQUIPMENT RACK

A. The Lighting Equipment Rack shall be constructed of the following materials:

1. Top and base shall be 14-gauge steel
2. Center section shall be 16-gauge steel
3. Back pan shall be 16-gauge steel
4. Rack rail shall be 11-gauge steel, with tapped 10-32 holes in universal E.I.A spacing

5. The center section shall key lock close, key lock and padlock draw latch shall be provided.
6. The rack shall be phosphate pre-treated and finished in a durable black powder coat.
7. The rack shall be of welded construction.
- B. The front door shall be of steel framing with a solid steel door. It shall be hinged on the right side as you face the rack. It shall be provided with a key lock.
- C. The same key shall operate all locks on the Lighting Equipment Rack.
- D. Provide tubs, lacing bars, punch down blocks, and terminal strips as required.
- E. Provide adjustable leveling feet
- F. 115 volt vertical power strip with minimum 12 - 20A outlets.

2.2 SUNDRIES

- A. Furnish 6 extra low voltage fuses and other perishables which may be required.
- B. Furnish framed schedules (for house/work light dimming racks and lighting)

PART 3 – EXECUTION

3.1 COORDINATION

- A. The LSI shall coordinate delivery shop drawings, samples and equipment as specified herein with the CM, EC and Consultant.
- B. The LSI shall furnish scheduling information based on the product manufacturers lead time at time of contract award.

3.2 SYSTEM COMMISSIONING

- A. LSI shall provide system commissioning when notified by the EC that installation is complete.
- B. A 14 day lead time from notification to arrival on site shall be satisfactory for scheduling a factory licensed field service technician.
- C. System Commissioning shall consist of, but not be limited to, the following:
 1. System testing as specified herein.
 2. Low voltage device terminations.
 3. Console, dimmer and device activation and initialization.
 4. Stage Lighting and Architectural Systems Programming.
 5. Software installation, configuring and networking of rack mounted PC.
 6. Programming of architectural lighting presets.

3.3 SYSTEM TESTING, COMMISSIONING AND PROGRAMMING

- A. Field Check-Out by EC
 1. The EC shall furnish all equipment and instruments necessary for testing the complete wiring system during the progress of the work as well as after installation. Tests shall be demonstrated to the satisfaction of the architect, theatre consultant and/or owner. Test the following:
 - a. All circuits are continuous and free from short circuits.

- b. All circuits are free from unspecified grounds.
 - c. All circuits are properly connected in accordance with the applicable wiring diagram.
 - d. Voltage drop at each end of the circuit with a 2000-watt load is within 2% tolerance.
 - e. All low voltage circuits comply with industry standards.
 - f. All DMX controlled architectural luminaires are addressed according to the contract drawings or shop drawings.
 - 2. Any defects shall be repaired at once and the tests re-conducted.
- B. Final Check-Out and System Commissioning by LSI
- 1. Final check-out and system commissioning by the LSI shall occur after the EC's check-out as noted above, and after all defects have been remedied. The EC shall give adequate notice to the LSI that the system is ready for commissioning by the LSI
 - 2. The LSI shall furnish all equipment and instruments necessary for testing the complete system at the conclusion of installation. Tests shall be demonstrated to the satisfaction of the architect, theatre consultant and/or owner. Test the following:
 - a. All dimmers and relays are fully functioning.
 - b. All equipment in the lighting control rack is fully functioning.
 - c. The emergency transfer switch and DMX emergency transfer are fully functioning.
 - d. All dimmers and relays respond to commands from the stage lighting console and the architectural lighting processor and control stations.
 - e. All numbered outlets are connected to the correspondingly numbered dimmer or relay.
 - f. All numbered RJ45 ports are connected to the correspondingly numbered port in the patch panel and are exchanging data with the stage lighting console and/or the architectural lighting processor and control stations as designed.
 - g. All DMX port numbers are connected to the correspondingly numbered DMX repeater and are exchanging DMX/RDM data with the stage lighting console and/or the architectural lighting processor and control stations as designed.
 - h. All architectural luminaires are correctly connected to the system and are responding in accordance with the zones shown on the RCPs
 - 3. Any defects shall be repaired at once and the tests re-conducted.
- C. Final Check-out by the Theatre Consultant
- 1. When the work on the entire structure has been completed and is ready for final review, a visit will be made by the Theatre Consultant or his duly authorized representative, at which time the LSI shall demonstrate that the requirements of the contract as it applies to his work have been carried out and that the system has been adjusted and operates as designed. Demonstrate the following:
 - a. The emergency transfer switch and DMX emergency transfer are fully functioning.
 - b. Spot demonstrate, at circuits outlets selected by the theatre consultant, that dimmers and relays respond to commands from the stage lighting console and the architectural lighting processor and control stations.

- c. Spot demonstrate, at ports selected by the theatre consultant, that RJ45 ports are exchanging data with the stage lighting console and/or the architectural lighting processor and control stations as designed.
 - d. Spot demonstrate, at ports selected by the theatre consultant, that DMX port numbers are connected to the correspondingly numbered DMX repeater and are exchanging DMX/RDM data with the stage lighting console and/or the architectural lighting processor and control stations as designed.
 - e. Demonstrate that the architectural luminaires correctly connected to the system and are responding in accordance with the zones shown on the RCPs
2. With the theatre consultant, architectural lighting designer, architect and/or owner, assign zones to all faders, set and record presets in all buttons, and map zones and presets to the touchscreen(s) as directed.
 3. Any defects shall be repaired at once and the tests re-conducted

3.4 CLEAN UP

- A. Upon completion inspect entire lighting equipment installation and clean all surfaces, make all necessary adjustments, remove all protective coverings, dirt, dust, finger marks, smears, contamination, extraneous materials and foreign matter and leave entire installation in clean and properly serviced, finished and operating condition.

3.5 OWNERS STAFF TRAINING AND SYSTEM ACCEPTANCE

- A. The LSI shall gather in one place and at one time all loose equipment, keys and as-built drawings which shall be turned over to the Owner. He shall have all items typed on a sheet of paper ready to be signed by an authorized representative of the Owner.
- B. The LSI shall provide a competent instructor to familiarize Owner's staff with the operation and maintenance of the system.
- C. The instructor shall provide a minimum instruction period of two full days. Instruction shall include but not be limited to familiarization with all software, network protocols and systems configuration, console operations and dimmer rack configuration.
- D. The LSI shall provide three (3) copies of black and white prints on the system corrected in red to indicate all changes made during construction and turned over to the Theatre Consultant upon completion and acceptance of the electrical work.

3.6 GUARANTEE

- A. Guarantee in writing that all material and workmanship to the apparatus installed under this contract are first class in every respect and conform to operating design criteria specified. Make good any defects, mechanical or electrical, not due to ordinary wear and tear or improper use or care, which may develop within a period of one (1) year, beginning from the day of final acceptance of the work by the Owner.
- B. The LSI shall also, during this one (1) year guarantee period, be responsible for the proper adjustments of all systems, equipment and apparatus furnished by him and do all work necessary to insure efficient and proper functioning of the systems and equipment.
- C. Any equipment malfunctions due to equipment failure or poor installation, shall be made good or be replaced as directed by the Architect or the Owner, at no cost to the Owner and at such times as designated by the Owner.

GENERAL INFORMATION

Ion Xe 20 is a compact console that includes programming and playback controls. In addition to the backlit keyboard and full-featured software that are a part of other Eos Family consoles, Ion Xe 20 also has twenty non-motorized faders and dedicated displays to easily run control manually.

Eos Family software includes:

- Approachable yet powerful syntax for programmers of every level
- Industry-leading color control tools
- Magic Sheets for custom programming and displays
- Augment3d 3D programming and visualization environment
- Virtual Media Server function for pixel-mapping
- Timecode and automation integration
- Multi-user and multi-programmer working environment

For drawings, photos, and more, visit the [ion Xe 20](http://ion.xe.20) product webpage. To explore the latest software features, accessories, and other Eos Family products, visit etcconnect.com/Eos.

Ion Xe 20 FC	Ion Xe 20 Flight Case	I10032

* Add -US for Edison, -EU for Schuko/UK13A, -AZ for Australasian Type I

HARDWARE AND INTERFACES

- Supports two external display port monitors (1920x1080 minimum, 3840x2160 maximum), with optional single-touch or multi-touch screen control and DDC/CI support
- 20 45mm standard faders, 100 10-fader pages configurable as channels, submasters, palettes/presets, timing and effect rate/speed playback control
- Two internal monochromatic LCD displays for fader content
- Main Playback with two 100mm standard faders
- Four encoders for non-intensity parameter control
- Dedicated high-resolution intensity level wheel
- Backlit Eos keypad
- Included USB keyboard
- Solid-state hard drive
- IEC power input (100-240 VAC at 50/60Hz), fused mains power switch, locking regionalized power cable included
- Two individually configurable Gigabit Ethernet ports, RJ45 connectors
- One 802.11ac WiFi Ethernet adapter (to be enabled with future software)
- Bluetooth 5.1 for connecting input accessories (to be enabled with future software)
- sACN and Art-Net network output protocols
- Four DMX-512 / RDM 5-pin XLR ports
- Contact closure triggers via D-Sub connector
- USB 3.1 ports, for flash drives, pointing devices, keyboards (5 USB-A ports, 2 USB-C ports)
- One Littlite XLR port
- One Kensington lock port
- Multiple MIDI and/or SMPTE timecode inputs, MIDI In and Out, Analog/Serial Inputs, OSC transmit/receive, UDP transmit/receive through network interface or Response Gateways

Ion Xe 20 in flight case	212	8.3	1146	45.1	494	19.5	18.94	41.8

* Dimensions and weights typical

ELECTRICAL AND THERMAL

- Power consumption approximately 2 amps at 120V or 230/240V
- Ambient room temperature 0°-35° C (32°-95° F)
- Ambient humidity up to 90% non-condensing

REGULATORY AND COMPLIANCE

- CE Compliant
- cETLus listed
- UKCA marked
- FCC compliant
- RoHS compliant
- WEEE

Power Control Series

Type(s) Project Date Notes

GENERAL INFORMATION

ETC's Sensor IQ Intelligent Breaker System provides mains-fed power distribution for up to 48 branch circuits in the industry's most compact footprint. Sensor IQ breakers combine high-inrush rated overcurrent protection, switched power control, and power usage/breaker status reporting in a single device. With built-in station, sensor, DMX and TimeClock controls and Ethernet connectivity, plus optional 0–10 V dimming, DALI output, contact inputs, and isolated ground bar for audio loads, the Sensor IQ integration opportunities are limitless.

APPLICATIONS

- Theaters
- Schools
- Houses of worship
- Conference centers
- Studios
- Arenas and stadiums

FEATURES

- Mains Feed: Three-phase 120 / 208 V four-wire plus ground or single (bi) phase 120 / 240 V three-wire plus ground
- 12-, 24- or 48-position breaker subpanel
- Breakers
 - Hydraulic magnetic breaker with high inrush trip curve
 - 22 kA SCCR (up to 65 kA series rated with main breaker)
 - Freely mix one-, two- and three-pole breakers up to 30 A
 - Integrated air-gap relay switching
 - Integrated on/off/tripped and connected load feedback
 - No power required for handle operation at the breaker
- Echo, sACN, DMX-512, TimeClock, or stand-alone control
- Built-in EchoConnect power supply for up to 6 Echo stations/sensors and 5 output products
- Built-in network interface provides:
 - Advanced control of relays over streaming ACN (sACN)
 - Measured energy usage reporting per branch circuit
 - Web UI for configuration
- Available 0–10 V, contact input or DALI control cards
- UL924 Listed emergency control bypass with load shedding

ORDERING INFORMATION

Panel Models

MODEL	DESCRIPTION
IQ12MLO	120 / 208 V 12-circuit breaker panel, main lug only
IQ12	120 / 208 V 12-circuit breaker panel, MCB optional
IQ24	120 / 208 V 24-circuit breaker panel, MCB optional
IQ48	120 / 208 V 48-circuit breaker panel, MCB optional
IQ12-1	120 / 240 V 12-circuit breaker panel, MCB optional
IQ24-1	120 / 240 V 24-circuit breaker panel, MCB optional
IQ48-1	120 / 240 V 48-circuit breaker panel, MCB optional

Note: Select surface or recess door below

Door Options

MODEL	DESCRIPTION
IQ DOOR 120-12MLR	Recess-mount door for IQ12MLO
IQ DOOR 120-12MLS	Surface-mount door for IQ12MLO
IQ DOOR 120-12R	Recess-mount door for IQ12/IQ12-1
IQ DOOR 120-12S	Surface-mount door for IQ12/IQ12-1
IQ DOOR 120-24R	Recess-mount door for IQ24/IQ24-1
IQ DOOR 120-24S	Surface-mount door for IQ24/IQ24-1
IQ DOOR 120-48R	Recess-mount door for IQ48/IQ48-1
IQ DOOR 120-48S	Surface-mount door for IQ48/IQ48-1

Optional Main Disconnects

MODEL	DESCRIPTION
IQ-MB100A22K*	Main Breaker: 120 / 208 V, 100 A, 22 kA SCCR
IQ-MB100A65K	Main Breaker: 120 / 208 V, 100 A, 65 kA SCCR
IQ-MB200A22K	Main Breaker: 120 / 208 V, 200 A, 22 kA SCCR
IQ-MB200A65K	Main Breaker: 120 / 208 V, 200 A, 65 kA SCCR
IQ-MB225A65K	Main Breaker: 120 / 208 V, 225 A, 65 kA SCCR
IQ-MB250A22K	Main Breaker: 120 / 208 V, 250 A, 22 kA SCCR
IQ-MB400A65K	Main Breaker: 120 / 208 V, 400 A, 65 kA SCCR
IQ1-MB100A22K*	Main Breaker: 120 / 240 V, 100 A, 22 kA SCCR
IQ1-MB200A22K	Main Breaker: 120 / 240 V, 200 A, 22 kA SCCR
IQ1-MB400A65K	Main Breaker: 120 / 240 V, 400 A, 65 kA SCCR
IQ-MF1003P	Main Fuse: 120 / 208 V, 100 A, 65 kA SCCR
IQ-MF2003P	Main Fuse: 120 / 208 V, 200 A, 65 kA SCCR
IQ1-MF1002P	Main Fuse: 120 / 240 V, 100 A, 65 kA SCCR
IQ1-MF2002P	Main Fuse: 120 / 240 V, 200 A, 65 kA SCCR

*100 A, 22 kA SCCR Main Breaker kits are not compatible with IQ48 panels.

NOTE: IQ panels with Main Fuse Kits to increase SCCR must be fed by an upstream breaker that is rated at the amperage of the fuse kit or greater.

Please see page 4 for Echo power requirement and supply information.

Please see page 5 for more accessory information.

SPECIFICATIONS

REGULATORY AND COMPLIANCE

- Breakers Listed to UL 489
- Enclosures listed to UL 67, UL 508, UL 924
- Complies with ANSI DMX512-A standard
- Complies with ANSI E1.31 streaming ACN standard

USER INTERFACE

- Graphical display
- Button interface
 - 0-9 number entry
 - Up, down and back-arrow navigation with enter
 - Test shortcut for local activation of preset, sequence and set level overrides
- USB interface for uploads of setup and software updates
- Onboard Web UI for simple configuration and management

BREAKER

- Hydraulic magnetic breaker maintains trip curve through entire thermal range, reducing nuisance tripping Bus connection type: Stab on
- One, two or three poles
- UL 489 Listed
- 15 A, 20 A or 30 A
- 50/60 hz frequency
- Inrush-pulse tolerance: 25 times rated current for half-cycle
- Integrated hall-effect sensors detect contact positions
- Integrated solenoid for remote operation
- Trips on overload even if handle is forcibly held in the "on" position
- Load lugs accept 14-6 AWG load wiring
- Multi-conductor rated output terminal
- Integral mechanically held air gap relay
- Integral current sensing
- Integral position and trip sensing
- Supports manual control of relay state using breaker handle without power
- Control and status provided by contact pads directly at bottom of the breaker case. No external wires or connections required for control or feedback
- Remote Feedback for breaker state, breaker type, current draw and phase voltage
- Visible state indication:

LED	HANDLE	INDICATION
LED on	Handle on	Output active
LED off	Handle on	Remotely controlled off
LED off	Handle off	Breaker tipped/Manually off

BREAKER CONTROL OPERATIONAL RATINGS

- No load-remote switching 1,000,000 cycles
- 24 A Resistive 100,000 cycles
- 15 A Electronic ballast (LED) 100,000 cycles
- Handle operations 10,000 cycles
- Duty cycle of 6 full cycles (12 operations) per minute
- Supports voltage isolation of 4000 V RMS
- Utilizes latching state relays
- Relays are mechanically held

SPECIFICATIONS

MECHANICAL

- Enclosure constructed of 16-gauge steel finished in black, fine-textured, scratch-resistant powder coat paint
- Removable outer panel includes integral locking door to limit access to electronics, breakers and local relay overrides
- Full front access with no side clearance required
- Removable covers for access to Class 1 and Class 2 wiring
- Complies with California building code - seismic zone four

ELECTRICAL

- Mains feed power input to support 120 / 208 V three-phase four-wire or 120 / 240 V bi-phase three-wire plus ground
- Max current input: 100 A at 12 circuits, 200 A at 24 circuits and 400 A at 48 circuits
- Quiescent draw: <10 W with relays at steady state
- Optional isolation between chassis and equipment grounding
- Short-circuit current rating: 22,000 A or 65,000 A symmetrical (see chart a right)
- Overloads occurs at 50 operations of 600% of rated current
- Integrated current transformer
- Current measurement range of 1–30 A. The maximum crest factor of primary current is 2.5
- Feeder entry supported at top or top side
 - Bottom or bottom side entry supported by rotating enclosure during installation
- Load wire entry supported on top, sides or bottom

SHORT-CIRCUIT CURRENT RATING AND LUG SIZING

TYPE	MAX RATING	SCCR RATING	INPUT LUG WIRE SIZE
Main Lug	100 A, 200 A, 400 A	22 kA	2x6 AWG-250 kcmil (or 1x500 kcmil w/ kit for 48ckt panels), 1x6 AWG-350 kcmil neutral (dual lug on 48-channel panel), 1x14 AWG-2/0 ground (1x6 AWG-350 kcmil on 48 channel panel)
Main Breaker	100 A	22 kA	1x4 AWG-1 AWG
	100 A 200 A 225 A	65 kA 22 kA, 65 kA 65 kA	1x1AWG-300 kcmil
	250 A	22 kA	1x4 AWG-300 kcmil
	400 A	65 kA	2x3/0 AWG-250 kcmil
Main Fuse	100 A	65 kA	2x6 AWG-250 kcmil
	200 A	65 kA	2x6 AWG-250 kcmil
Branch Breaker	15 A, 20 A, 30 A	22 kA	6-18AWG solid or stranded class B, C, K; 10, 12 or 14 AWG dual conductor
Branch GND/ Neutral	NA	NA	6-14 AWG

Note: Main feed lugs accept copper or aluminum wire; branch breakers accept copper wire only.

SPECIFICATIONS

ENVIRONMENTAL

- Thermal: 0°–40° C (32°–104° F) operating temperature
 - 24 A circuit (30 A breaker) - 1.4 W, 4.8 BTU/hr
 - 16 A circuit (20 A breaker) - 1 W, 3.4 BTU/hr
- Humidity: 5–95% non-condensing
- Complies with ESD immunity to IEC standard 1000-4-2

FUNCTIONAL

- **System-Wide control**
 - DMX input
 - Per-circuit patching
 - Per-circuit patch exclusions
 - Per-circuit threshold
 - 0-200 prioritization (matches sACN priorities)
 - Choice of DMX loss behavior: Hold last look or wait time
 - sACN input
 - Circuit-by-circuit patching
 - Circuit-by-circuit patch exclusions
 - 0-200 prioritization (matches sACN priorities)
 - Choice of sACN loss behavior: Hold last look or wait time
 - Global data loss behavior
 - UL 924 emergency lighting with load shedding
 - Load shedding requires a UPS Control Backup Wiring Kit (7131K1817) and Uninterruptable Power Supply (UPS) by others
 - UPS to supply 800 W–2400 W AC power to control processor
- **Application/Space segmented Control**
 - Space segmenting: up to 16 spaces per panel
 - Power sequencing
 - One 16-step sequence per space
 - Presets: up to 64 per space configurable via local UI or Echo Inspire control stations
 - Presets 1-16 can be configured remotely via Echo Access or integrated Web UI
 - Zone control: up to 16 zones per space
 - TimeClock (up to 50 events)
 - Event types: Preset and sequence activation, Flick warn
 - Timed hold (24 hours max.)
 - Auto-timed hold
 - Indefinite holds
 - Scheduled event overrides
 - Calendar and time of day based event scheduler
 - Holiday shut off
 - Astronomical time events: sunrise/sunset offsets
 - Integral station power supply (for up to six stations with up to six power panels connected)
- **Global monitoring**
 - Per circuit
 - Breaker-trip notification
 - Relay state
 - Current draw per circuit
 - Phase voltage
 - Energy usage
 - Per space
 - Active sequences
 - Active presets
 - Zone levels
 - Active-clock events

SPECIFICATIONS

OPTION CARDS AND ACCESSORIES

0-10 Dimming Option

- 24 outputs of 0–10 V sink dimming control rated for 400 mA per output

Contact Input Option

- 24 dry contact inputs which can be used to:
 - trigger presets and sequences, which will play at the priority configured for architectural sources, or;
 - directly control one or more outputs. The priority of these outputs is configurable. If nothing is configured, the last action takes precedence

DALI Control Option

- 24 control loops of broadcast DALI control
- Each loop supports up to 64 ballasts
- External DALI power supply required

Ride Thru Option

- Short-term power backup of control electronics
- Automatically engages when power is lost
- Recharges during normal power operation

UPS Backup Kit for Load Shedding

- Allows Power Control Processor to be powered via external UPS (by others)
- Required for load shedding applications
- UPS provides power to drive relays off when normal power is lost
- UPS for each Sensor IQ panel must be UL 924 Listed and rated for a minimum of 200 W peak load

Branch Circuit Fuse Kit

- Aids engineers in selective coordination* of emergency circuits

*Note: Selective coordination is a study on emergency systems that assures that an overcurrent on the output of any downstream branch circuit results in that branch tripping/clearing before the upstream mains breakers.

Echo Power Requirements

EchoConnect:	One unit of output power
Auxiliary Power:	Not required

Built-in EchoConnect Power Supply

EchoConnect:	Provides 6U of control power and an additional 5U of output power*
Auxiliary Power:	Not provided

*Note: Built in power supply can be disabled.

Echo Presets

Supports 64 Echo Presets per space; up to 16 Echo spaces
--

For more information, download the [Echo Quick Guide](#).

SENSOR IQ BREAKERS

GENERAL INFORMATION

ETC's Sensor IQ breaker is a high-quality, UL 489 Listed circuit breaker which incorporates the ability to rapidly switch the load using an internal solenoid when the breaker is in the 'on' position. The IQ breaker is designed with a high-inrush trip curve to handle the demands of modern entertainment and architectural lighting fixtures. IQ's unique hydraulic-magnetic trip mechanism maintains this trip curve throughout the operating temperature of the breaker, giving you outstanding protection against nuisance tripping.

A variant of the breaker without switching is available for standard breaker applications.

Sensor IQ breakers are designed for use in Sensor IQ panels only.

Intelligent Breakers with Switching

MODEL	RATED CURRENT	POLES
IQ SM B15	15 A	1-Pole
IQ SM B20	20 A	1-Pole
IQ SM B30	30 A	1-Pole
IQ SM B152	15 A	2-Pole

9100 SERIES

9200 SERIES

GENERAL INFORMATION

Outlet boxes are designed for surface or recess mounting in theatres, television studios and other spaces for distribution of lighting circuits.

FEATURES

- Surface and recess mounting available
- 1, 2, 3, 4, 5, 6, and 8 connectors
- Panel mount connector Options:
 - Edison (20A)
 - Stage Pin (20, 60 and 100 amp)
 - Grounded Twist-Lock (20A)
- Over- and Under-hung U-bolt and C-clamp pipe mount options available
- Listed by a nationally recognized test lab (NRTL)

PHYSICAL

- Fabricated from 18-gauge steel with 16-gauge covers and 14-gauge end caps
- Finished with black fine-textured, scratch-resistant powder coat
- 1.25" or .75" labels with white numbers on black background (sized to match product)
- Pin outlets spaced on 1.25" or 3" centers
- Edison or Twist-Lock outlets spaced on 3" centers only

	# of Outlets	Back box Dimensions	9100 Panel Widths	9200 Panel Widths
PIN 1.25" Centers	1	3" W x 6.25" H x 3.25" D	3"	4"
	2, 3, 4	6" W x 6.25" H x 3.25" D	6"	7"

8	9208A	9208B	9208BD	9208C

For outlets not listed, use manufacturer's part number (must be UL listed).

Gateway Series

Type(s) Project Date Notes

GENERAL INFORMATION

ETC's Response Mk2 Four-Port Gateway provides data distribution using the quality and reliability of ETC's network technology. Built for Net3 using industry-standard sACN, DMX and RDM, the Response Gateway unlocks the power of your networked system.

APPLICATIONS

- Road houses
- Touring
- University/professional theaters
- Convention halls
- Tech tables
- Stage manager panels
- System integration

FEATURES

- Distributes DMX and RDM data to any input/output device over Ethernet
- Supports Net3 protocol powered by ACN
- Configurable DMX/RDM Output or Input
- Simple configuration and service of each port
- Onboard screen and buttons for labeling, status and configuration
- Power, network and port direction status indicators
- Touch to Wake Sensor
- Power over Ethernet (PoE) or external DC power supply
- Configurable using Concert Software

ORDERING INFORMATION

Four-Port Gateways

MODEL	DESCRIPTION
RSN-DMX4-O	Response Mk2 4-Port Gateway - 4 Output
RSN-DMX4-I	Response Mk2 4-Port Gateway - 4 Input
RSN-DMX4-3O1I	Response Mk2 4-Port Gateway - 1 In 3 Out
RSN-DMX4-T	Response Mk2 4-Port Gateway - 4 Terminal
RSN-DMX4-R	Response Mk2 4-Port Gateway - 4 RJ45

Four-Port Gateway Accessories

MODEL	DESCRIPTION
N34G-FP4F ¹	Gateway Front-Panel Kit - DMX 4 Out
N34G-FP4M ¹	Gateway Front-Panel Kit - DMX 4 Input
N34G-4P2M2F ¹	Gateway Front-Panel Kit - DMX 2 In 2 Out
PS-INTL ²	Gateway Universal Power Supply
N3GA-RM	Gateway Rack-Mount Kit
N3GA-HBU	Gateway Hanging-Bracket Kit with U-Bolt

¹Does not include required Rack-Mount kit

²Includes plugs for United States/Japan, Europe, and Great Britain.

SPECIFICATIONS

FUNCTIONAL

- Supports Net3/ACN (ANSI E1.31 and E1.17)
- Supports RDM (ANSI E1.20)
- Supports USITT DMX512-A (ANSI E1.11)
- USITT DMX512 and ANSI E1.11 DMX512-A compliant
- Flexible Output Patch allows a 512-address universe to begin at any output address
- Advanced Input Patch
- Support for per-address- or per-universe-level priority
- Maximum delay time from input to output not greater than one packet time
- Selectable DMX refresh rate with a maximum at least 40Hz
- Supports up to 256 total RDM devices

MECHANICAL

- Intuitive four-button interface
- Onboard display for identification, status and configuration
- Fabricated from 16-gauge cold-rolled steel
- Black, Fine-textured, powder-coat finish
- C-clamp and U-bolt hardware available
- Half 19" equipment rack width allows for up to eight DMX ports in 1U height
- Network, power and data activity LED indicators
 - Blue power indicator, green network activity indicator
 - Bi-color DMX activity indicator
- RJ45 for connection to lighting network
- Reset button for hard reset or forced reboot

ENVIRONMENTAL

- Ambient operating temperature: 0°–40° C (32°–104° F)
- Operating humidity: 5–95% non-condensing
- Storage temperature: -40°–70° C (-40°–158° F)

ELECTRICAL

- Compliant with IEEE 802.3i for 10BASE-T, 802.3u for 100BASE-TX and 802.3af for Power over Ethernet
- 12–24 VDC power input for use with non-PoE systems
- Maximum seven watt current draw
- Screw down and IDC connector options provided for terminal version

CONFIGURATION

- Local configuration options
- Remote configuration provided by Net3 Concert
 - Supports up to 512 DMX addresses per port
 - Supports up to 63,999 Streaming ACN universes
- DMX data input or output configurable by user
- Multiple sources may be combined to the network with each source or address allowed an independent priority
- Individual port start address and offset
- User-configurable labeling

REGULATORY AND COMPLIANCE

- cETLus Listed
- CE compliant
- EAC certified
- RoHS compliant
- WEEE

ADDITIONAL INFORMATION

DMX512

Often shortened to DMX (Digital Multiplex), this communication protocol is used mainly to control dimmers and multi-parameter fixtures. A universe of DMX is defined as 512 channels. DMX sends a nearly continuous stream of level information for each control channel. It is a form of RS-485 digital serial communication.

RDM

Remote Device Management (ANSI E1.20) is a protocol enhancement to DMX512 that allows low-speed bidirectional communication between a system controller and attached RDM devices over a standard DMX line. This protocol will allow remote configuration, status monitoring, and management of devices.

sACN

Streaming ACN (ANSI E1.31), sends DMX-style control over TCP/IP networks. It provides a fast and efficient mechanism to transport the well-understood DMX protocol over Ethernet using an industry-standard protocol.

ACN

Architecture for Control Networks (ANSI E1.17) is a standard for high-speed bidirectional communication over TCP/IP on Ethernet network infrastructure. ACN is an open suite of protocols used between network devices for the purposes of greater and more adaptive control.

NET3

ETC's enhanced implementation of the standard ACN Protocol Suite (ANSI E1.17 and E1.31) including additional communication protocols for specialized applications and support of legacy systems.

Response Series

Type(s) Project Date Notes

GENERAL INFORMATION

The ETC Response Opto-Splitter provides quality and reliable DMX data distribution. Using industry-standard DMX and RDM, the Response Opto-Splitter unlocks the power of your DMX system.

FEATURES

- Multi-port DMX splitter with DMX-in and DMX-thru
- Optically isolated DMX512 ports
- Supports Remote Device Management (RDM) Protocol
- DIN rail and rack-mount versions
- Power and DMX presence status indicators
- Supports update of connected ETC fixtures
- DIN enclosures variants available for UL 924 Emergency ControlIn Bypass applications

APPLICATIONS

- Road houses and touring
- University/professional theatres
- Hotels and Convention halls
- System integration
- Houses of worship
- House lighting
- Museums
- Themed environments

SPECIFICATIONS

FUNCTIONAL

- No configuration required
- Supports DMX512, DMX512 (1990), and DMX512-A
- Supports ANSI E1.20 Remote Device Management (RDM)
- Supports up to 256 total RDM devices

MECHANICAL

- Rack-mount form factor:
 - Fabricated from aluminum
 - Black, Fine-textured, powder-coat finish
 - Full 19" equipment rack width
 - Front or rear facing mounting options
- DIN rail form factor:
 - Molded plastic enclosure
 - Mounting complies with DIN43880 (35/7.5 rail)
 - Unit is 9 DIN units wide
 - DIN installation enclosure available
- Power and data activity LED indicators
 - Blue power indicator
 - Green DMX activity indicator

ELECTRICAL

- Supports DMX input and DMX thru
- Provides optically isolated DMX/RDM outputs
- Rack-mount form factor:
 - 100–240 VAC 50/60 Hz power input
 - User configurable front or rear IEC C13 power connector position
 - 35 W max power draw
 - XLR, RJ45 and Terminal connector options
- DIN rail form factor:
 - 12–48 VDC power input
 - 8 W max power draw
 - Wiring connections use plugable rising clamp terminals
- Optional IDC termination kits available
- DIN Box form factors include a suitable power supply. For more details on using this power supply with other products please contact ETC's Application Engineering Department

ENVIRONMENTAL

- Ambient operating temperature: 0°–40° C (32°–104° F)
- Operating humidity: 5–95% non-condensing
- Storage temperature: -40°–70° C (-40°–158° F)

REGULATORY AND COMPLIANCE

- cETLus Listed
- cETLus Listed to UL 924 (Emergency DIN Boxes Only)
- CE compliant
- EAC certified
- RoHS compliant

Unison Control Series

Type(s) Project Date Notes

GENERAL INFORMATION

With the ERn enclosure, you choose the features you need for your facility's unique lighting and building-control requirements: processing, station support, power options, and networking. By isolating core components as a module, we optimize the system's longevity and performance. Compact external control enclosures available in two sizes: ERn2 and ERn4.

APPLICATIONS

- Houses of worship
- Hotels
- Resorts
- Convention centers
- Theaters
- Schools
- Restaurants
- Theme parks
- Cruise ships

FEATURES

- LinkConnect: using Echelon® LonTalk® protocol with LinkPower, the two-wire topology-free system gives you the freedom to put stations where you need them
- Use of low-cost, easy-to-install Cat5/5e cable with PoE to connect touchscreen stations and other devices to a networked Paradigm system
- Optional 5-port Power Over Ethernet (PoE) Ethernet Switch*
- Optional Redundant Rack Power Supply*
- Wall-mount or 19 in equipment rack-mount

*Option module required

Options and Accessories

MODEL	DESCRIPTION
ERn-Net*,**	ERn Ethernet Switch with Power over Ethernet
ERn-RPS**	ERn Redundant Power Supply
URTO	Unison RideThru Option
UBPO*	Unison BatteryPack Option

* For use with wall-mount ERn enclosures only

** Not compatible with ERn-4-___S

ORDERING INFORMATION

100-120 Volt ERn Enclosure

MODEL	DESCRIPTION
ERn2-W-___ ¹	Single Processor Control Enclosure-Wall Mount
ERn2-RM-___ ¹	Single Processor Control Enclosure-Rack Mount
ERn4-W-___ ¹	Dual Processor Control Enclosure-Wall Mount
ERn4-RM-___ ²	Dual Processor Control Enclosure-Rack Mount
ERn4-W-___S ^{1,3}	Single Processor Enclosure -Wall Mount with P-TS7 opening

¹ Available for 100 V, 120 V, 230 V and 240 V options. Enter desired voltage in blank space when ordering. Example: ERn4-W-120

² Available for 100 V, 120 V and 240 V options for UL markets. Enter desired voltage in blank space when ordering. Example: ERn4-W-120

³P-TS7 purchased separately

Control Module Options

MODEL	DESCRIPTION
P-ACP	Paradigm Architectural Control Processor

Option Modules

MODEL	DESCRIPTION
P-SPM-E	Paradigm Station Power Module
ERn-BM	ERn Blank Module

*For use with ERn4 only

SPECIFICATIONS

GENERAL

- External Processing Enclosure designed for one ERn2 or two ERn4 control processors plus options and accessories
- Full two-year warranty

MECHANICAL

- 18-gauge formed steel construction
- Fine-texture, scratch-resistant epoxy paint
- Wall-mount and 19 in rack-mount variants
- Rack-mount enclosure sizes:
 - ERn2: 5U
 - ERn4: 8U
- Convection-cooled
- Locking door with limited access to control processor
- Tool-free module removal and installation
- 19 in equipment-rack mount offers connectorized rear panel for all wiring connections
- Wall-mount offers front access wiring terminations
- Top, bottom and side knockouts for conduit entry
- Optional variant with field installed Touchscreen Control Station

ELECTRICAL

- External control enclosure rated for 100 V, 120 V, 230 V CE or 240 V UL single phase configurations, 3.5 A maximum draw at 120 V
- Completely pre-wired by the manufacturer
- Designed to support the following wire terminations
 - AC (single phase)
 - 24 VDC (2-16AWG)
 - LinkConnect®
 - Two configurable DMX512A ports
 - RS232 Bi-directional serial
 - Cat5/5e UTP Ethernet
 - Contact I/O, 4in/4out (14-26AWG)
 - Contact output rated 1 A at 30 VDC
- Contractor-supplied input and control wiring
- Factory-provided connectors for wiring terminations
- UL and cUL Listed

THERMAL

- Ambient room temperature: 0° to 40° C (32° to 104° F)
- Ambient humidity: 10–90% non-condensing

RACK OPTIONS AND ACCESSORIES

CONTROL PROCESSORS

- Paradigm Architectural Control Processor (P-ACP)

STATION POWER MODULES

- Station Power Module (P-SPM-E)
 - Provides Echelon LinkPower for up to 63 stations
 - Provides 24 V auxiliary power for interface and touchscreen stations
 - Provides 500 m (1,640 ft) of station bus from the ERn enclosure

OPTION MODULES

- Ethernet Switch (ERn-NET)
 - Five-port Ethernet switch with four ports supplying Power over Ethernet (PoE)
 - 100BaseTX 802.3af PSE compliant
 - For use in wall-mount ERn only
 - Not compatible with ERn4-W-__-S
- Redundant Power Supply (ERn-RPS)
 - Seamless power for control processors upon failure or removal of the primary power supply
 - Front-panel indicator for RPS status

ACCESSORIES

- Unison RideThru Option (URTO)
 - Short-term power backup of control electronics for at least 10 seconds during short power outages
 - Automatically engages when power is lost
 - Recharges during normal power operation
- Unison Battery Pack Option (UBPO)
 - Long-term power backup of control electronics for at least 90 minutes
 - Automatically engages when power is lost
 - Recharges during normal power operation

Paradigm Control Series

Type(s) Project Date Notes

GENERAL INFORMATION

Sophisticated and stylish - with the control you need. These LinkConnect-powered stations are designed to initiate preset, zone, and space controls for your entire lighting system. They communicate efficiently with a single space or the rest of the Paradigm family of lighting controls to provide necessary control for any installation. Paradigm Inspire are an elegant way to add control to any facility.

APPLICATIONS

- Education
- Hospitality
- Healthcare facilities
- Office buildings
- Conference rooms
- Meeting rooms
- Retail

FEATURES

- LinkConnect: two-wire topology-free system gives you the freedom to easily place stations wherever they are needed
- Fastener-Free Faceplate System: no visible means of attachment
- Decorator style face plates available in one-, two-, three- and four-gang options
- Color control: the four button with fader station provides live feedback and control for:
 - Variable Color: Intensity, Saturation and Hue
 - Variable White: Intensity, Tint and Color Temperature
- Color condition: rear-illuminated indicators that reflect system status using RGB LEDs. Allowing for customized control indication on a per-button basis
- Laser engraved legend system with custom button labeling available

GENERAL

- UL and cUL LISTED
- CE marked

ORDERING INFORMATION

Paradigm Inspire Stations

MODEL	DESCRIPTION
PI1001-__	Inspire 1-Button Control Station
PI1002-__	Inspire 2-Button Control Station
PI1004-__	Inspire 4-Button Control Station
PI1006-__	Inspire 6-Button Control Station
PI1008-__	Inspire 8-Button Control Station
PI1104-__	Inspire 4-Button with Fader Control Station

Enter station color code in __ space provided:

1 = Cream (RAL 9001), 3= Grey (RAL 7001), 4 = Black (RAL 9004),
5 = Signal White (RAL 9003)

Stations flush-mount (F) in industry-standard gang boxes. (By others)

Surface mount boxes available from manufacture upon request.

Additional Faceplates

MODEL	DESCRIPTION
1IFP-__	Inspire 1-gang faceplate
2IFP-__	Inspire 2-gang faceplate
3IFP-__	Inspire 3-gang faceplate
4IFP-__	Inspire 4-gang faceplate

Enter station color code in __ space provided:

1 = Cream (RAL 9001), 3= Grey (RAL 7001), 4 = Black (RAL 9004),
5 = Signal White (RAL 9003)

Stations do not ship with faceplates. Please specify the faceplate needed when ordering stations.

Compatible Control Systems

MODEL	DESCRIPTION
P-ACP	Paradigm Architectural Control Processor

Note: A Paradigm Station Power Module (P-SPM) is required

Architectural
Control Sta-
tions

SPECIFICATIONS**FUNCTIONAL**

- Zone or preset control from any station
- RGB button illumination for activity status
- Button functions include: preset selection, record mode activation, station lockout, raise, lower, macro activation, zone on/off control, timed-event override and wall open/close or toggle
- Fader functions include: zone or group intensity, color control, variable white control
- Custom button functionality programmable via LightDesigner configuration software
- Programmable electronic lockout levels
 - Allows for programming of individual lockout levels

MECHANICAL

- 1, 2, 4, 6 and 8 buttons or 4 buttons with rotary fader
- Gangable for custom applications
- Enclosed electronics assembly
- Cantilevered switch arrays with replaceable button caps
- No visible means of attachment
- Flush-mount in industry standard backbox, RACO 690 or equivalent
- Surface-mount backboxes available from ETC upon request
- Constructed of injection-molded, ABS plastic in four RAL standard colors:
 - Cream (RAL 9001)
 - Grey (RAL 7001)
 - Black (RAL 9004)
 - White (RAL 9003)

ELECTRICAL

- Connect via LinkConnect two-wire control network utilizing low-voltage Class 2 wiring
 - Topology-free and polarity-independent wiring over Belden 8471 or equivalent and one #14 ESD drain wire
 - Wiring may be bus, loop, home run or any combination of these
- All station terminations utilize removable connectors
- UL and cUL LISTED, CE marked

THERMAL

- Ambient room temperature: 0° to 40° C (32° to 104° F)
- Ambient humidity: Maximum 90% non-condensing

Architectural
Control Sta-
tions

GENERAL INFORMATION

Buildings waste electricity as a result of lights being left on in an unoccupied room. Occupancy and Vacancy Sensors are a convenient and simple solution for any facility to eliminate wasted energy by automatically turning off lighting loads when a room is empty. The low-profile, sleek sensors can be installed anywhere to provide uninterrupted, 24/7/365 operation, without affecting the look and beauty of their surroundings.

APPLICATIONS

- Houses of worship
- Education
- Hospitality
- Healthcare facilities
- Office buildings
- Conference rooms
- Meeting rooms
- Retail

FEATURES

- Support for occupancy or vacancy detection as required
 - Mode programmed via commissioning software
- Passive infrared (PIR) and Acoustic sensing technology
- Two mounting options available:
 - Ceiling-Mount
 - Wall-Mount
- Multiple Lensing options available
- Walk-thru mode for coverage verification
- Field-installed coverage masks (Ceiling only)
- LinkConnect: two-wire, topology-free bus for power and communication
- Ceiling Sensor available in black and white
- Wall Sensor available in cream, black and white

REGULATORY AND COMPLIANCE

- UL and cUL LISTED
- CE marked

ORDERING INFORMATION

Ceiling Mount Occupancy and Vacancy Sensors

MODEL	DESCRIPTION
P-DOC-C-SR-__	Dual Tech Occupancy Sensor - Small Room
P-DOC-C-LR-__	Dual Tech Occupancy Sensor - Large Room
P-DOC-C-HC-__	Dual Tech Occupancy Sensor - High Ceiling

Enter sensor color code in __ space provided:

4 = Black (RAL 9004), 5 = Pure White (RAL 9010)

Wall Mount Occupancy and Vacancy Sensors

MODEL	DESCRIPTION
P-DOC-W-NR-__	Dual Tech Occupancy Sensor - Narrow Coverage
P-DOC-W-WD-__	Dual Tech Occupancy Sensor - Wide Coverage

Enter sensor color code in __ space provided:

1 = Cream (RAL 9001), 4 = Black (RAL 9004), 5 = Signal White (RAL 9003)

Compatible Control Systems

MODEL	DESCRIPTION
P-ACP	Paradigm Architectural Control Processor

Note: A Paradigm Station Power Module (P-SPM) is required

Occupancy
Sensor

SPECIFICATIONS**FUNCTIONAL**

- Supports software-configured Auto-On/Auto-Off functionality (occupancy sensing) or Manual-On/Auto-Off (vacancy sensing) functions
- Ceiling Sensor:
 - 360-degree coverage pattern
 - Includes configurable coverage masks
 - Small room: 450 sq. ft. at 8' ceiling, 800 sq. ft. at 12' ceiling
 - Large room: 1800 sq. ft. at 8' ceiling, 3000 sq. ft. at 12' ceiling
 - High ceiling: 300 sq. ft. at 10' ceiling, 7000 sq. ft. at 40' ceiling
- Wall Sensors
 - Wide: 60' coverage at 7-10' mounting height. 140 degree field of detection
 - Narrow: 16' by 75' coverage pattern at mounting height of 7-10'. 40 degree field of detection
- Supports walk-thru mode for verifying coverage area
 - Sensor lens illuminates for walk-thru and test mode operation
 - Red illumination for PIR detection
 - Green illumination for Acoustic Detection
- Sensor coverage tested to NEMA WD 7-2000

MECHANICAL

- Constructed of injection-molded, ABS plastic in Pure White (RAL9010), Black (RAL 9004) or Cream (RAL 9003 - Wall only)
- Electronics assembly and mounting accessories included
- Accessible configuration buttons
- No visible means of attachment
- Ceiling Mount:
 - Surface- or box-mountable
 - Supports drywall, plaster, wood and concrete mounting
 - Mounts to standard electrical box (supplied by others)
 - Mounts to compressed fiber ceilings with included wire mounting option
- Wall Mount:
 - Flush-mount to industry standard backbox, RACO 690 or equivalent

ELECTRICAL

- Connect via LinkConnect two-wire control network utilizing low-voltage Class 2 wiring
 - Topology-free and polarity-independent wiring over Belden 8471 or equivalent and one #14 ESD drain wire
 - Wiring may be bus, loop, homerun or any combination of these

ENVIRONMENTAL

- Ambient room temperature: 0–40° C (32–104° F)
- Ambient humidity: Maximum 90% non-condensing

ROOM COVERAGE PATTERNS

FLOOR COVERAGE PATTERNS

Small Room Floor Coverage

For mounting height of 8 feet (2.4m)

Large Room Floor Coverage

For mounting height of 8 feet (2.4m)

High Ceiling Floor Coverage

For mounting height of 30 feet (12.2m)

WALL MOUNT COVERAGE PATTERNS

WALL MOUNT NARROW LENS

WALL MOUNT WIDE LENS

GENERAL INFORMATION

The DMX Emergency Bypass Controller provides a simple and cost-effective solution for control bypass of LED houselight systems in emergency lighting applications. The DMX Emergency Bypass Controller uses a single contact-closure input to bypass the DMX control signal and output a pre-configured DMX signal.

APPLICATIONS

- DMX houselights
- Permanently-installed, DMX-controlled LEDs
- Theaters
- Auditoriums
- Houses of worship

FEATURES

- UL924 LISTED DMX control bypass
- Single DMX input available with one output or six optically-isolated outputs
- Wires in-line with DMX fixtures or other DMX devices
- Uses a single maintained contact closure to activate DMX bypass
- Contact closure may be normally-open or normally-closed, wet or dry, configurable in the field
- Drives all 512 channels to full, or to customized DMX snapshot preset, when contact closure is present

REGULATORY AND COMPLIANCE

- cULus Listed to UL 924 and CSA C22.2 No. 141
- CE compliant
- RoHS compliant
- WEEE compliant

ORDERING INFORMATION

DMX Emergency Bypass Controller

MODEL	DESCRIPTION
DEBC-1	DMX Emergency Bypass Controller, 1-output
DEBC-6	DMX Emergency Bypass Controller, 6-output

Related Products

MODEL	DESCRIPTION
EBDK	Emergency Bypass Detection Kit
SC1008	Branch Circuit ELTS (BCELT)
ELTS2	Emergency Lighting Transfer System

Note: the DMX Emergency Bypass Controller is suitable for use with UL924 listed fixtures and power panels as part of a control bypass system for emergency lighting.

Appropriate UL1008 listed power transfer equipment is required to comprise a complete emergency lighting system.

DMX Emer-
gency Bypass

SPECIFICATIONS**FUNCTIONAL**

- Overrides a single universe of ANSI E1.11–2008, USITT DMX512-A control signals from “Normal” to “Bypass” when a trigger signal is detected via a contact closure
- Sends DMX signal to a single output or up to six (6) optically-isolated outputs
- Polls the bypass trigger input after a power loss to ensure proper state at startup
- Provides unprocessed DMX pass-through in normal operation mode
- Supports a single configurable DMX preset (snapshot) of 512 channels for recall when control is bypassed
- Recalls default or recorded preset immediately whenever the bypass input is triggered and power is present

MECHANICAL

- Enclosure constructed of 18-gauge, formed steel panels with a removable front cover finished in fine-textured powder-coat paint
- Designed for wall-mount applications
- Internal voltage barrier provides separate wiring compartments for power and control wiring
- Bi-color LED status indicator visible from the exterior of the enclosure.
 - Green: power is present and controller is functioning in normal state
 - Red: controller is functioning in bypass state
- Recessed test button to manually trigger bypass state is user-accessible without removing covers
- Internally-accessible DIP switches for configuration of:
 - DMX record mode
 - Contact input type
 - Wait-time to restore incoming DMX (bypass trigger removed)
- Internally accessible button for DMX record (snapshot) of bypass preset with an indicator LED for record action

ELECTRICAL

- Supports 100 V to 277 V input power, 50/60 Hz, 0.2 A maximum current
- Power input terminals accept two 24–10 AWG solid or stranded wires
- Grounding lug accepts 14–2 AWG solid or stranded ground wire
- Bypass contact input supports two 30–12 AWG low-voltage wires with two modes:
 - Configurable dry contact input supports maintained normally open (NO) or normally closed (NC) triggering
 - Wet contact input for interface with external systems, including fire alarms
- Supports one universe (512 channels) of DMX data compliant with ANSI E1.11–2008, USITT DMX512-A
 - DMX output and DMX input terminals for Belden 9729 cable or equivalent
- Non-volatile memory storage for a single recorded scene of 512 channels
- DEBC-1 passes RDM data in normal mode
- DEBC-6 passes RDM data through DMX Thru port in normal mode

THERMAL

- Ambient room temperature: 0–40° C / 32–104° F
- Ambient humidity: 10–95% non-condensing

GENERAL INFORMATION

Available in two sizes with optional audiovisual and ethernet capabilities, ColorSource consoles provide hands-on control designed for the latest technology. These affordable, portable desks specialize in streamlined, plug-and-play setup; the console recognizes intelligent lights in the rig via RDM and auto-populates them in patch, and the on-board touchscreen allows fixtures to be dragged into place on a customizable stage map for quick selection and programming. The faders and touchscreen can be used to control moving lights, mix LED colors, play stored looks and effects and - with the AV consoles - play sound and visual media.

APPLICATIONS

- One-off events
- Corporate theaters
- Touring productions
- School auditoriums/theaters
- Community theaters
- Houses of worship
- Small TV studios
- Tradeshow

ORDERING INFORMATION

ColorSource consoles

MODEL	PART NUMBER	DESCRIPTION
CS20	7225A1000-US	20 Fader ColorSource console (80 Channels or Devices)
CS40	7225A1001-US	40 Fader ColorSource console (80 Channels or Devices)
CS20AV	7225A1100-US	20 Fader ColorSource AV console with network, audio, and video features (80 Channels/Devices)
CS40AV	7225A1101-US	40 ColorSource AV console with network, audio, and video features (80 Channels or Devices)

CS40DC	7225A4021	Dust cover CS40 and CS40AV
CS20RK	7225K1002	19" Rack mount kit for CS20 and CS20AV consoles
	I1865	Pelican Case with foam for CS20 and CS20AV consoles
	I1866	Pelican Case with foam for CS40 and CS40AV consoles
	7225A2020-US	Replacement Power supply (Edison connector)

SHIPS WITH:

- Power supply

TV Studio
Lighting
Controller

SPECIFICATIONS

MECHANICAL

- One home and five configurable softkey buttons
- Four configurable function faders
- 7" color multi-touch touchscreen

PLAYBACK CONTROLS

- One cue list with 999 cues
- 10 pages of 20 or 40 playbacks
 - Static memories or sequences
- Playback Toy for filtered and timed execution of playbacks
- Multiple bump modes (Flash, Solo, Solo Change, Move/Go)
- Full-history rubberbanding for playbacks
- On-board help system
- Extensive library for controlling moving lights

MEDIA

- Audio input type:
 - 3.5 mm (1/8") TRS, Stereo, unbalanced
 - Line in -10 dBV (316 mV RMS)
 - Input Impedance: 29k ohms
 - Audio output type:
 - 3.5 mm (1/8") TRS, Stereo, unbalanced
 - Line out -10 dBV (316 mV RMS) at 10k ohms "Line Level"
 - Load Impedance : 10k – 200k ohms
 - Supported media file formats:
 - Audio: mp3, aac and wav files (44.1 kHz sample rate, 4 GB maximum file size)
 - Image: jpg, png, tiff, and bmp files (1280 x 720 maximum resolution)
- Please note: visual output is limited to still images and effects from the VideoToy feature of the ColorSource AV console. Movie files are not supported

REGULATORY AND COMPLIANCE

- cETLus Listed
- CE Compliant

SPECIFICATIONS

PROGRAMMING TOOLS

- Color and white pickers
- Reference based Position, Color and Beam palettes
- Innovative touch-based parameter controls
- Auto fixture selection on fader moves
- Virtual Level/Rate wheel
- Customizable Channel display using Stage Map
- Effects (intensity, color, shape, and parameter)
- Fixture Tags for Quick Selects
- 27 Quick Select groupings
- Two independent channels
- Virtual keypad for level entry

UNIQUE FEATURES

- **COLORSOURCE 20**
 - 80 channels / multi-parameter devices
 - 20 Channel / Playback faders with color indication
 - One DMX/RDM port
 - One USB port
 - 2 GB onboard storage for show files
- **COLORSOURCE 40**
 - 80 channels / multi-parameter devices
 - 40 Channel / Playback faders with color indication
 - One DMX/RDM port

SECTION 116163
STAGE LIGHTING FIXTURES

(This Section is a Sub Sub-Bid To Section 260000 - Electrical)

PART 1- GENERAL

1.1 SUMMARY

- A. The Stage Lighting Supplier (herein after referred to as the SLS), shall furnish to the Owner all items as specified herein.

1.2 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to this section.

1.3 DEFINITIONS

- A. "Owner" as used in this section shall mean the representative of Northeast Metropolitan Regional Vocational High School.
- B. "Theatre Consultant" as used in this section shall mean Studio T+L, LLC.
- C. "Stage Lighting Supplier" (SLS) as used in this section shall mean the contractor responsible to provide the stage lighting fixtures as noted in the schedule below.
- D. Wherever the words "Approved", "Approval", and "Approved equal" appear, it is intended that items other than the model numbers specified shall be subject to the written approval of the Consultant.
- E. "Provide", as used herein, shall mean that the SLS is responsible for furnishing and installing said item or equipment.
- F. "Furnish", as used herein, shall mean that the SLS shall acquire and make available said item or equipment and that the installation shall be by others.
- G. "Install", as used herein, shall mean that the SLS shall make installation of items or equipment furnished by others.
- H. "Contract Documents" as used in this section shall be deemed to include both this specification section and related bid drawings.
- I. "NIC" as used in the contract documents means, "Not Included in this Contract"
- J. "By Others" as used in the contract documents means "provided by another subcontractor"

1.4 CONTROL PROTOCOL REFERENCE STANDARDS

- A. All products utilizing the "DMX" or "DMX512" control protocol shall comply with the following ANSI/ Entertainment Services & Technology Association (ESTA) standards:
 - 1. ANSI E1.11 – 2008 (R2018), Entertainment Technology - USITT DMX512-A, Asynchronous Serial Digital Data Transmission Standard for Controlling Lighting Equipment and Accessories.
 - 2. ANSI E1.27-1-2006 (R2021), Entertainment Technology-Standard for Portable Control Cables for Use with USITT DMX512/1990 and E1.11 (DMX512-A) Products.
 - 3. ANSI E1.27-2 – 2009 (R2019), Entertainment Technology - Recommended Practice for Permanently Installed Control Cables for Use with ANSI E1.11 (DMX512-A) and USITT DMX512/1990 Products

- B. Products utilizing the “ACN” control protocol shall comply with Entertainment Services & Technology Association (ESTA) ANSI E1.17 – 2015 (R2020), Entertainment Technology - Architecture for Control Networks.
- C. Products utilizing the “RDM” control protocol shall comply with Entertainment Services & Technology Association (ESTA) ANSI E1.20 – 2010, Entertainment Technology - RDM - Remote Device Management over USITT DMX512 Networks.
- D. Products utilizing the “RDMnet” control protocol shall comply with ANSI E1.33 - 2019, Entertainment Technology -- (RDMnet) -- Message Transport and Device Management of ANSI E1.20 (RDM) Compatible and Similar Devices Over IP Networks.
- E. Products utilizing “Lightweight/Streaming ACN” control protocol shall comply with Entertainment Services & Technology Association (ESTA) ANSI E1.31 – 2018, Entertainment Technology – Lightweight streaming protocol for transport of DMX512 using ACN.
- F. Entertainment Services & Technology Association (ESTA) ANSI E1.27-1 – 2006 (R2021) Entertainment Technology – Standard for Portable Control Cables for use with ANSI E1.11 (DMX512-A) and USITT DMX51231990 Products.

1.5 QUALITY ASSURANCE

- A. The SLS shall be the exclusive provider of stage lighting fixtures and accessories. The SLS shall provide the following information as part of their bid package.
 - 1. The SLS shall have been continuously engaged in the sale of stage lighting equipment for at least ten years.
 - 2. The SLS shall submit a list of at least five systems of similar scope and size which have been in service for at least six months. Include name, address and telephone number of owner, architect and theater consultant.
- B. Pre-approved Stage Lighting Suppliers are:
 - 1. 4 Wall Entertainment, Canton, MA – 781.961.3066
 - 2. Barbizon Lighting, Woburn, MA – 781.935.3920
 - 3. High Output, Canton, MA – 781.364.1800
- C. Pre-approved Manufacturers for the stage lighting fixtures and accessories are:
 - 1. Chauvet Professional, Davie, FL - 800-762-1084
 - 2. City Theatrical, Carlstadt, NJ – 201.549.1160
 - 3. ETC, Middleton, WI – 608.831.4116
 - 4. Lex Products, Trumbull, CT – 203.363.3742
 - 5. TMB, San Fernando, CA – 818.899.8818
 - 6. Union Connector, Jacksonville, FL – 631.753.9550

ART 2 – PRODUCTS

2.1 STAGE LIGHTING FIXTURES

- A. All units, unless otherwise designated, shall be shipped with "C" clamp; 3'-0" 3-wire non-asbestos leads, Edison 20 amp, 125 volt male connector, installed; 1 black (both sides) color frame; light

STAGE LIGHTING FIXTURES

116163 -2

source, and safety cable. SLS shall coordinate unit and lamp type where alternate fixtures utilizing different lamps are listed below:

Item	Manufacturer	Description	Quantity	Notes
1	ETC ColorSource Spot with LED50LT Lens Tube	50° LED profile fixture utilizing RGBL system	3	Include: 1 C-clamp per unit 1 Safety Cable (black) per unit 1 Color Frame (black) per unit 1 5' TRU-1 Powercon to male Edison power cable per unit
2	ETC ColorSource Spot with LED36LT Lens Tube	36° LED profile fixture utilizing RGBL system	5	Include: 1 C-clamp per unit 1 Safety Cable (black) per unit 1 Color Frame (black) per unit 1 5' TRU-1 Powercon to male Edison power cable per unit
3	Chauvet Professional onAIR IP Panel 1	Soft Light fixture utilizing RGB system	6	Include: 2 Safety Cables (black) per unit 1 5' Seetronic Powercon to male Edison power cable per unit 1 Omega bracket per unit
4	Chauvet Professional onAIR IP Panel 2	Soft Light fixture utilizing RGB system	3	Include: 2 Safety Cables (black) per unit 1 Color Frame (black) per unit 1 5' Seetronic Powercon to male Edison power cable per unit 1 Omega bracket per unit
5	Chauvet Professional onAIR IP Panel 1 Barn Doors	Light beam modifiers	6	1 Safety Cable (black) per unit
6	Chauvet Professional onAIR IP Panel 2 Barn Doors	Light beam modifiers	3	1 Safety Cable (black) per unit
7	Chauvet Professional onAIR IP Panel 1 60deg Honeycomb	Light beam modifiers	4	
8	LightSource Mega Claw Clamp -Black	Clamps to hang softlites from Grid	9	SLS to confirm compatibility with Chauvet units
9	Mathews 40" C-Stand w/Spring-Loaded Base, Grip Arm Kit PN339764	Floor stands for studio fixtures	2	
10	Kupo Baby Drop Down Pin	Hardware for rigging softlites to c-stand gobo arms	2	
11	Kopul DMX5PT-S 5-Pin DMX Terminator	End of run Terminator (one per position)	6	
12	25 lb. Sandbags	Counterweight for C-Stands	6	
13	City Theatrical 6" VET PN091	Vert. Ext. Tubes for S4s	3	
14	City Theatrical "A" size Template Holder	For Gobos / ColorSources	4	

STAGE CABLES

- B. In addition to power cables supplied with stage lighting fixtures, provide the following power and data cables.
1. Power cables shall be listed extra-hard usage cables and shall be 12/3 unless otherwise noted.
 2. Two-fers and adapters shall be listed extra-hard usage cables or hard usage (junior hard service) cables and shall be 12/3 unless otherwise noted.
- C. All stage cables shall be labeled and coded as follows:
1. Color code the cable for length at both ends using two full wraps of colored electrical tape or other approved means. Color codes for length are:

5'	Red
10'	Green
15'	Blue
20'	Brown

25'	Purple
50'	Orange
100'	Yellow

Item	Description	Quantity
1	5' Edison 14/3 jumper	10
2	10' Edison 14/3 Jumper	10
3	25' Edison 14/3 Jumper	2
4	Edison Two-fers	6
5	5' Tru-1 to Tru-1 Jumpers	5
6	10' Tru-1 to Tru-1 Jumpers	5
7	5' 5-pin XLR cable	12
8	10' 5-pin XLR cable	12
9	25' 5-pin XLR cable	4

2.2 PERISHABLES

A. Provide the following perishable items.

Item	Description	Quantity
1	Sheets color media	2
2	Roll Black Gaffer Tape, 2" wide	2
3	Roll White Gaffer Tape, 2" wide	2
4	Black Permanent Marker (Sharpie)	2
5	Paint Pen, medium, white	2
6	China Marker, white	2
7	300' Spool Black Tie Line	1
8	Templates, size A, steel	6
9	Roll 12" Blackwrap	1
10	Roll Black Tak	1

PART 3 – EXECUTION

3.1 All fixtures shall be delivered according to the Construction Manager's schedule and neatly stacked in a dry place off the floor.

3.2 Installation

- A. Provide a non-union crew of two (one head stage electrician and one stage electrician) to install the TV Studio lighting design. Full and final lighting design documentation will be delivered two weeks prior to the first day of installation.
1. Allow for one day of shop preparation prior to the installation of the stage lighting equipment. Preparation is exclusive of the work described in 2.1.B and 2.2.A above. Shop prep will occur at the SLD's facility. Shop prep will not include the University's student crew
 2. Allow installation time of 1 day at 8 hours per day inclusive of meals and breaks, but exclusive of travel time to and from the job site. Start time will be coordinated with the GC.

END SECTION 116163

ColorSource Series

Type(s) Project Date Notes

GENERAL INFORMATION

An LED luminaire crafted by lighting experts with a proven history of quality spot fixtures, ColorSource Spot V brings a richness of color, increased brightness, and leading technology at a price point you'll love. Featuring a five-color array of red, green, blue, indigo, and lime, the ColorSource Spot V provides soft pastels and bold saturated colors from a single fixture. Featuring wireless DMX/RDM control using Multiverse® technology, NFC configuration from your mobile device, and next level brightness, ColorSource Spot V is the ultimate in versatility.

APPLICATIONS

- Theatres and performance spaces
- Houses of worship
- Universities and schools
- Hospitality
- Retail
- Exhibition centers
- Meeting rooms
- Clubs
- Cafeteriums

PRODUCT FEATURES

- Five-color array (red, green, blue, indigo, and lime)
- Simple user interface with seven-segment display
- powerCON® TRUE1® TOP connector
- DMX/RDM in and thru (5-pin XLR)
- Multiverse wireless DMX/RDM
- NFC (near field communication) configuration
- LED droop compensation
- Optically calibrated
- Tour-ready, aluminum housing
- Combine with available adapters to transform your fixture into a fully functional Fresnel or CYC light

ORDERING INFORMATION

ColorSource Spot V Light Engine with Shutter Barrel

(For use with fixed-field lens tubes only)

MODEL	DESCRIPTION	ETL PART NUMBER	CE PART NUMBER	
CSSPOTVMVS	ColorSource Spot V with Multiverse, with shutter barrel, black	7423A1011	7423A1211	

ColorSource Spot V Light Engine Body

(For use with zoom lens tubes and adapters and for retrofit of existing fixtures)

MODEL	DESCRIPTION	ETL PART NUMBER	CE PART NUMBER	
CSSPOTVMV	ColorSource Spot V with Multiverse, body only, black	7423A1010	7423A1210	

Color options: -1 = white, -5 = silver gray, -8 = custom colors.

Also available without Multiverse wireless control. Contact your dealer for ordering information.

Fixture ships with a soft-focus diffuser in a gobo holder, a C-clamp, and a 1.5 m powerCON TRUE1 TOP power-input cable with a connector of choice. See page 5 for connector options.

Please note: Lens tubes to be ordered separately. C-clamps included in North America regions only.

PRODUCT SPECIFICATIONS

Source

LED details	60 Lumileds LUXEON® C and LUXEON Rebel LEDs
Max lumens	9,498
Lumens per watt	48
L70 rating (hours to 70% output)*	54,000 hours

Color

Colors used	Red, green, blue, indigo, lime
Color temperature range	Color mixing
Calibrated array	Yes
Red shift	No

Optical

Beam angle range	Swappable lens tubes, 5–90 degrees
Gate size	80 mm
Aperture size	6.25–14 in (depending on lens tube)
Pattern projection	Yes
Pattern size	A or B
Camera flicker control/Hz range	5,000 Hz (default) and 25,000 Hz (via RDM)
Notes	Can be used with LED CYC and Fresnel adapters

Control

Input method	DMX512 via 5-pin XLR connector
Protocols	DMX512/RDM
Modes (footprint)	4 modes, see page 4
RDM configuration	Yes
UI type	Seven-segment, three-button interface
Local control	Yes
Onboard presets	Yes (12)
Onboard sequences	Yes (5)
Onboard effects	No
FixtureLink	Yes
Notes	15-bit virtual dimming engine

Wireless

Band	2.400–2.480 GHz
Range	100 m indoors, 500 m line of sight (subject to conditions)
Max receivers	DMX: No limit RDM: Varies by transmitter used Multiverse SHoW Baby®: 585 Multiverse Transmitter: 5,000
Broadcast power	100 mW

Electrical

Voltage range	100–240 VAC 50/60 Hz
Input method	powerCON TRUE1 TOP power in and thru
Inrush	55 A at 120 V (First half-cycle) 59 A at 240 V (First half-cycle)
Fixtures per circuit*	8 fixtures (R20 module or similar)
Wattage typical / standby	199 W / 2 W at 100 V 197 W / 2 W at 120 V 194 W / 2 W at 240 V
Current draw typical / standby	2 A / 0.07 A at 100 V 1.65 A / 0.08 A at 120 V 0.90 A / 0.10 A at 240 V

*Note: All measurements are for 120 V, 60 Hz. Results may vary in different regions.

Thermal

Ambient operating temp	0°–40° C (32°–104° F)
Fan (controllable)	Yes (yes)
Droop compensation	Yes
dB range	24.4 dBA average at 1 m
BTUs/hour	672

Physical

Materials	Die-cast, all metal housing
Color options	Black, white, silver, or custom color
Mounting options	Yoke
IP rating	IP20
Weight	7.7 kg (17 lb) (without lens)
Included accessories	Hanging yoke, 1.5 m power cable, soft-focus diffuser in an A-size gobo holder
Notes	See page 5 for power cable options

Warranty

Fixture	5 years
LED array	10 years

Regulatory and Compliance

Approved regulatory standards	cETLus Listed Conforms to UL 1598 Listed Conforms to UL 924 Listed Certified to CSA C22.2 No. 250 Listed Certified to CSA C22.2 No. 141 Listed CE, UKCA, RCM, and CCC Compliant
-------------------------------	--

All LED sources experience some lessening of light output and some color shift over time. LED output will vary with thermal conditions. In individual situations, LEDs will be used for different durations and levels. This can eventually lead to minor alterations in color performance, necessitating slight adjustments to presets, cues or programs.

PRODUCT FEATURES

**LED DROOP COMPENSATION**

ETC's custom software adjusts for the changes that naturally occur as LEDs heat up and cool down so you never have to worry about color shift.

**RGBIL ARRAY**

The custom five-color blend of LEDs incorporates indigo and lime to increase spectral reach and color depth.

**WIRELESS**

Multiverse gives you up to 10 universes of wireless DMX/RDM control. And NFC configuration is standard with ETC's free Set Light app on your mobile device.

Fixture Accessories

MODEL	DESCRIPTION	PART NUMBER	
400CC	C-clamp (not included with CE fixtures)	7060A2009 (not CE)	
400SC	Safety cable	7060A1022	
400PH-A	Pattern holder (A size) (included)	7060A1013	
400PH-B	Pattern holder (B size)	7060A1014	
400PH-G	Glass pattern holder	7060A1019	
400RS	Drop-In iris	7060A1012	
400CF	Color frame, 159 mm (6.25 in)	7060A3043	
407CF	Square color frame, 190 mm (7.5 in)	7061A3007	
400DN	Donut	7060A1015	
400TH	Top hat, 159 mm (6.25 in)	PSF1021	
400PTH6	Top hat, 191 mm (7.5 in)	PSF1023	
410TH	Top hat, 305 mm (12 in) (for 10° standard lens tubes)	PSF1024	
405TH	Top hat, 356 mm (14 in) (for 5° standard lens tubes)	PSF1025	
400HH	Half hat	PSF10216	

Power Input Cables

Use information below to order 1.5 m (5 ft) power input leads with factory-fitted connectors. CE fixtures ship with powerCON TRUE1 TOP to bare end cables in the box.

MODEL	DESCRIPTION	PART NUMBER (NOT CE)	
T1PA-A	1.5 m (5 ft) Edison plug to TRUE1 receptacle, UL 1573, black	2500B7029-A	
T1PA-B	1.5 m (5 ft) Stage Pin plug to TRUE1 receptacle, UL 1573, black	2500B7029-B	
T1PA-C	1.5 m (5 ft) Twist Lock plug to TRUE1 receptacle, UL 1573, black	2500B7029-C	
T1PA-X	1.5 m (5 ft) Bare end pigtail to TRUE1 receptacle, UL 1573, black	2500B7029-X	

Power Thru Jumpers

Note: Power thru jumpers connect to a fixture's output (thru) connector to provide a link to successive fixtures.

MODEL	DESCRIPTION	PART NUMBER	
T1PJ-5	1.5 m (5 ft) TRUE1 plug to TRUE1 receptacle fixture power jumper, UL rated, black	2500B7030	
T1PJ-10	3 m (10 ft) TRUE1 plug to TRUE1 receptacle fixture power jumper, UL rated, black	2500B7031	
DPT1A-5	1.5 m (5 ft) powerCON plug (gray) to TRUE1 receptacle adapter cable, black	2500B7038	
T1DPA-5	1.5 m (5 ft) TRUE1 plug to powerCON receptacle (blue) adapter cable, black	2500B7039	

Diffusers

The Soft Focus Diffuser fits into a standard A-size pattern holder and delivers beautiful, homogenized light. You can also use the Soft Focus Diffuser with patterns for dappled and soft-edge projections.

The Smooth Wash Diffuser is used when extra-smooth blending of multiple ColorSource Spot V luminaires is required. The smooth wash diffuser is placed into the gel-frame slot of the lens tube.

MODEL	DESCRIPTION	PART NUMBER	
S4LED-SFD	Soft Focus Diffuser (included)	7460A4019	
S4LED-SWD6	Smooth Wash Diffuser for 159 mm (6.25 in) gel frame slots	7460K1001	
S4LED-SWD7	Smooth Wash Diffuser for 190 mm (7.5 in) gel frame slots	7460K1002	
S4LED-SWD12	Smooth Wash Diffuser for 305 mm (12 in) gel frame slots (for 10° standard lens tubes)	7460K1003	
S4LED-SWD14	Smooth Wash Diffuser for 356 mm (14 in) gel frame slots (for 5° standard lens tubes)	7460K1004

SPECIFICATIONS

Optical

- Light Source: 224 LEDs (tri-color RGB) 1.4 W, (150 mA), 50,000 hours life expectancy.
- Light Source: 224 LEDs (WW) 0.50 W, (150 mA), 50,000 hours life expectancy.
- Color Temperature (range): 2800 to 8000 K
- Color Temperature (at full): 7566 K
- CRI: 95
- Beam Angle: 99.3°
- Field Angle: 154°
- Lumens: 10,092
- Illuminance: 165 lux @ 5 m
- Selectable PWM: 600 Hz, 1200 Hz, 2000 Hz, 4000 Hz, 6000 Hz, 25,000 Hz

Dynamic Effects

- Dimmer: Electronic
- Shutter/Strobe: Electronic
- Strobe Rate: 0 to 28 Hz
- Standalone Color Mixing: Yes
- Color Temperature Presets: Yes
- Dim Modes: 4
- Dim Curves: 4
- Built-in Automated Programs: Yes

Optional Accessories

- onAir IP Panel 1
- onAir IP Panel 1
- onAir IP Panel 1
- onAir Panel 1 IP Diffusion Filter Pack
- onAir IP Panel 1
- onAir IP Panel 1
- Professional Clamps: CTC-50HC, CTC-50HCN
- Seetronic Powerkon power linking cables
- 5-pin DMX Cables
- Ethernet Cables

FEATURES

- Full-spectrum LED 1x1 format soft light panel style fixture for broadcast, film, and special events
- IP65 rating for all weather use indoors or out.
- Linear color temperature presets from 2800 K to 8000 K with high CRI and CQS
- Virtual color wheel with color matched to popular gel colors
- +/- Green adjustment and emulated red-shift via DMX or on-board control
- RDM (Remote Device Management) and CRMX Wireless Control for added flexibility
- Adjustable PWM (Pulse Width Modulation) to avoid flickering on camera
- Virtually silent operation for use in studio applications
- Ultra-smooth 16-bit dimming curves and speeds to complement any lighting scheme.
- Easily switch mounting options from Jr Pin to Omega Bracket
- Drop-in slot for diffusers and intensifier filter (sold separately)
- Rugged design for years of rough use in the most extreme conditions.
- Easy to use on-board control with full access to all the features of the fixture without the need for a dedicated controller.
- USB port for fixture software updates
- 28 VDC power input via 3-pin XLR to power the fixture from an external battery pack

Construction / Physical

- Dimensions: 22 x 5.74 x 21.81 in (559 x 146 x 554 mm)
- Weight: 28 lb (12.7 kg)
- Exterior Color: Black
- Housing Material: Aluminum alloy

Connections

- Power Connection: Edison (Local) plug to Seetronic Powerkon IP65
- Power Input: Seetronic Powerkon IP65

- Power Output: Seetronic Powerkon IP65
- Power Input: 28 VDC, 3-pin IP65 XLR
- Data Connectors: 5-pin IP65 XLR, Seetronic etherCON® Compatible
- Cable Length (power): 5 ft (1.5 m)
- Software Connection: USB

Control

- Control Protocol: Art-Net, sACN, DMX, CRMX, RDM
- DMX Channels: 1, 3, 4, 5, 6, 8, 10, 11, 15, 16
- Art-Net Channels: 1, 3, 4, 5, 6, 8, 10, 11, 15, 16
- Modes/Personalities: 12 personalities (1, 3, 4, 5, 6, 8Ch1, 8Ch2, 10, 11, 15Ch1, 15Ch2, 16)

Electrical

- Input Voltage: 100 to 240 VAC, 50/60 Hz (auto-ranging)
- Power Linking: 7 units @ 100 V; 8 units @ 120 V; 15 units @ 208 V; 16 units @ 230 V, 17 units @ 240 V
- Power and Current: 184 W, 1.524 A @ 120 V, 60 Hz
- Power and Current: 187 W, .891 A @ 208 V, 60 Hz
- Power and Current: 180 W, .824 A @ 230 V, 50 Hz

Certifications / Qualifications

- CE, MET, FCC,
- IP Rating: IP65, temporary outdoor use, with pressure equalizing M12 GORE valve
- Temperature (Ambient): -4 °F to 113 °F (-20 °C to 45 °C)

What's Included

- onAir Panel 1 IP
- Seetronic Powerkon IP65
- Omega bracket with mounting hardware

SECTION 116620
ATHLETIC EQUIPMENT

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 – GENERAL REQUIREMENTS, which are hereby made a part of this Section of the Specifications.
- B. Examine all other Sections of the Specifications for additional requirements that affect this Section whether or not specifically mentioned in this Section.
- C. Coordinate work with that of all other trades affecting, or affected by work of this Section. Cooperate with such trades to assure the steady progress of all work under the Contract.

1.2 SUMMARY

- A. Furnish and install backboards, cables and other athletic equipment as indicated on Drawings, as specified herein, or both. Include delivery to the building, unpacking, setting in place and attachment, as required for complete installation.
- B. Verify all dimensions relative to equipment to be installed by taking actual field measurements at the job site prior to equipment fabrication.
- C. The Work of this Section includes, but is not limited to, the following:
 - 1. Motorized and folding basketball backstops.
 - 2. Wall padding.
 - 3. Volleyball net and standards.
 - 4. Scoreboards and Shot Clocks
 - 5. Motorized Gymnasium divider curtain.
 - 6. Motorized wrestling mat storage system.
 - 7. Steel required to support backstops, athletic equipment and divider curtain from structure.
- D. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council
 - 1. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- E. Products furnished, but not installed, under this Section include the following:
 - 1. Volleyball floor inserts, for installation under Division 096460, Wood Athletic Flooring sections.
 - 2. Wall-mounted controls, installed under Section 260000 – ELECTRICAL.
- F. Related Work: The following items are not included in this Section and are specified under the

designated Sections

1. Section 051200 – STRUCTURAL STEEL FRAMING for steel supports
2. Section 096460 – WOOD ATHLETIC FLOORING for sleeve coordination
3. Section 126600 – TELESCOPING STANDS for coordination and layout
4. Section 26 – ELECTRICAL for power and lighting coordination

1.3 SUBMITTALS

- A. Prepare and submit submittals in accordance with requirements of Section 013300 - Submittals and in the manner described therein.
- B. LEED Submittal: For each product specified, complete the PRODUCT DATA REPORTING FORM for LEED v4 PRODUCTS – See Section 018110 – SUSTAINABLE DESIGN REQUIREMENTS. All columns of information must be completed, and back-up documentation provided for all attributes being claimed as pertaining to the following credits:
 1. MR Credit: Building Product Disclosure and Optimization (BPDO) – Environmental Product Declarations (EPD); See Section 018110 - 2.3B.
 2. MR Credit: Building Product Disclosure and Optimization (BPDO) – Sourcing of Raw Materials; See Section 018110 - 2.3C.
 3. MR Credit: Building Product Disclosure and Optimization (BPDO) – Material Ingredients; See Section 018110 - 2.3D.
- C. Shop Drawings:
 1. Scale: No less than 1/4" scale and shall show layout of all equipment and all electrical connections required.
 2. 1/2" scale Shop Drawings shall be submitted for all fabricated and shop-made equipment showing details of construction and attachment to work of other trades.
 3. The exact location of all connections shall be dimensioned on Shop Drawings for all equipment and labeled with information necessary for coordination of work with other trades.
 4. Obtain and verify all dimensions, measurements and conditions, and assume responsibility for correctness of same.
- D. Samples:
 1. Gymnasium divider curtain Fabric: Not less than 4 inches square of open mesh, and of opaque fabric.
- E. Manufacturer's Data: Submit manufacturer's product data with performance, operating and electrical characteristics for all equipment together with catalogue cuts.
- F. No fabrication, shipment, or installation shall take place until Shop Drawings and manufacturer's cuts have been approved.

1.4 OPERATION INSTRUCTIONS AND MAINTENANCE MANUALS

- A. Instruct to the owner's satisfaction such persons as the Owner designates, in the proper operation and maintenance of the equipment and their parts.
- B. Furnish in accordance with Division 1, operating and maintenance manuals and forward same to the Architect for transmittal to the Owner.

- C. For maintenance purposes, provide Shop Drawings, parts lists, specifications and manufacturer's maintenance bulletins for each piece of equipment.

1.5 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of athletic equipment from a single manufacturer with resources to provide materials of consistent quality in appearance and physical properties without delaying the work.

1.6 GUARANTEES

- A. Attention is directed to provisions of the GENERAL CONDITIONS regarding guarantees and warranties for work under this Contract.
- B. Manufacturers shall provide their standard guarantees for work under this Section. However, such guarantees shall be in addition to and not in lieu of all other liabilities that manufacturers and Contractor may have by law or by other provisions of the Contract Documents.
- C. Upon receipt of notice from the Owner of failure of any part of the equipment during the guarantee period, the affected part or parts shall be replaced.
- D. Furnish, before final payment is made, a written guarantee covering the above requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with specifications, acceptable manufacturers include but are not limited to the following:
 - 1. Basketball backstops, mat storage, wall padding, volleyball equipment:
 - a. Draper, Inc.
 - b. Performance Sports Systems.
 - c. Porter Athletic Equipment Company.
 - d. Or equal.
 - 2. Gymnasium Divider Curtains:
 - a. Draper Inc.
 - b. Performance Sports Systems.
 - c. Porter Athletic Equipment Company.
 - d. Or equal.
 - 3. Basketball scoreboards and shot clocks:
 - a. Daktronics, Inc.
 - b. Sportable Scoreboards
 - c. NEVCO, Inc.
 - d. Or equal

2.2 MOTORIZED SIDE-FOLDING BACKSTOPS

- A. General: Ceiling suspended, side-fold, braced, motorized basketball backstop with adjustable goal height and rectangular glass backboard. Refer to Drawings for locations.
 - 1. System: Steel pipe component assembly, regulation bank, official goal with a no-tie net, and a motorized safety hoist.
 - 2. Support: Each backstop shall be suspended from 3-1/2" o.d. or heavier steel pipe to provide the required support and span available structural steel. Overhead members spanning more than 16 feet shall be bridged or reinforced according to manufacturer's engineering instructions.
 - 3. Backstops shall be operable on the swing-up principle, storing in minimal area when not in use.
- B. Product: Porter Athletic Equipment Company, *Model 90955-000*, or equal by approved manufacturer.
- C. Materials:
 - 1. Fittings: Certified malleable iron castings or heavy gauge steel stampings.
 - 2. Pipe: Certified wrought iron or heavy gauge steel meeting ASTM A513.
 - 3. Factory Finish: Provide manufacturer's high performance finish system in colors as selected by Architect from manufacturer's full range.
- D. Hoisting Equipment:
 - 1. Cable: 1/4" diameter 7 x 19 aircraft cable with a breaking strength of 7,000 lbs.
 - 2. Pulleys: Swivel and fixed pulleys shall be machined and polished steel 3" diameter x 1" wide complete with 1/2" diameter self-lubricating bronze oilite bushings. Pulley holders shall be fully enclosed providing a fail-safe system that will capture and retain the hoist cable.
 - 3. Safety Strap: Nylon webbing safety strap to prevent accidental drop of backboard from "up" position.
 - a. Strap shall be rated to withstand 1,000 lb. free fall load.
 - b. Product: Porter Athletic Equipment Company, *Model No. 797 Saf-Strap* or equal by backstop manufacturer.
- E. Frame:
 - 1. Main Vertical Mast: 6 5/8" o.d. steel pipe. Mast shall be offset 4" for positive locking.
 - 2. Bracing: Anti-sway braces shall be rectangular 2 1/2" x 1 1/2" steel bracing welded to mast to form a unitized frame. Backstop shall have a rigid hinged front brace of 1-7/8" o.d. pipe designed to jack knife when closing.
 - 3. The entire assembly shall be self-aligning in the down position and self-releasing at the beginning of the folding cycle.
- F. Backboards:
 - 1. Dimensions: Official 3'-6" x 6'-0" rectangular.
 - 2. Material:
 - a. Backboard: Fully tempered glass, 1/2" thick with extruded aluminum frame.
 - b. Markings: Backboard border and center target shall be fired into glass with brilliant white vitreous enamel.
 - 3. Frame: Welded, unitized construction fabricated from heavy wall rectangular steel tubing.
 - 4. Product: Porter Athletic Equipment Company, *Model 00208-000 Center-Strut Mount Rectangular Glass Backboard*, or equal by manufacturer of backstop.
- G. Padding:

1. Type: Bolt-on, molded profile with steel attachment channels; self-aligning with interlocking joints; provide square molded corners and lengths to cover entire bottom edge and lower portions of side edges.
 2. Material: 1-1/2" thick x 2" wide shock absorbing vinyl or neoprene foam pad with durable integral skin, in color as selected by Architect from manufacturer's standard range.
 3. Product: Porter Athletic Equipment Company, *Model 00326-00 Pro-Pad Backboard Padding Kit*, or equal by manufacturer of backstop.
- H. Goal: Positive lock, movable rim goal with pressure release mechanism.
1. Rim: 5/8" diameter cold drawn alloy steel, round formed to 18" diameter ring, with integral net attachment system; epoxy paint finish.
 2. Pressure Release Mechanism: Adjustable, positive lock, pressure release mechanisms to provide rebound characteristics identical to those of a non-movable ring.
 3. Mounting: Rigid steel bracing, welded in position.
 4. Net: Anti-whip net.
 5. Product: Porter Athletic Equipment Company, *Model 00245-500 Ultra-Flex Goal*, or equal by manufacturer of backstop
- I. Adjustment: Unit shall be provided with a 6" adjustment up or down for obtaining proper goal height. Goal shall be adjustable in height from 8'-0" to 10'-0" above the finished floor.
1. Product: Porter Athletic Equipment Company, *Model 00900-506 Center-Strut Height Adjustment System*, or equal by manufacturer of backstop.
- J. Motorized Winch: Worm gear type, 1/2 horsepower electric winch designed to hold backstop at any position when raising or lowering.
1. Materials:
 - a. Winch housing, base, cable drum and bracket: Machined from high strength aluminum alloy.
 - b. Worm: High strain tempered steel bar.
 - c. Worm gear: Machined from high strength forged bronze alloy.
 2. Hoisting Capacity: 1200 pounds.
 3. Electrical Characteristics: 1/2 horsepower, 60 cycle, 115 volt, single phase electric motor with automatic thermal overload protection, manufactured to MEMA specifications.
 4. Power Connections: 6'-0" long SJO cord with twist-lock type plug and 4-pole twist-lock receptacle.
 5. Product: Porter Athletic Equipment Company, *Model No. 00706-000 1/2 H.P. Electric Winch*, or equal by manufacturer of backstop.
- K. Control Switch for Motorized Winch: Flush, wall-mounted key switch with separate up and down keys. Product: Porter Athletic Equipment Company, No. 791 Key Switch Control System for Electric Winches.
- L. Accessories: Provide all fastenings and other accessories as required for a fully functioning backstop installation.

2.3 WALL PADDING

- A. General: Fire-retardant wall padding with concealed attachment to walls.
1. Overall dimensions of each pad: 2'-0" (610 mm) wide by 6'-0" (1.9 m) high.
- B. Core: 1-1/2" thick fire-retardant, open cell neoprene foam filler bonded to 7/16" oriented strand

wood board.

1. Density: 5.5 lb/cubic foot.
2. Indentation Force Deflection: 25-45 lb.

C. Cover: 14-ounce non-tear vinyl laminated industrial polyester.

1. Vinyl facing material shall be mildew and rot resistant.
2. Covering shall be flame retardant with a rating according to ASTM E-84 as follows:
 - a. Class: A.
 - b. Flame spread: 0-25.
 - c. Smoke development: 0-450.
3. Color: As selected by the Architect from manufacturer's standard colors. Provide 3 colors and custom graphics. Graphics to match Owner's artwork.

D. Fabrication:

1. The fabric shall be placed over the filler, folded and blind stitched.
2. Provide concealed fastening system using "Z" Clips or as recommended by manufacturer.
3. Pads shall be reversible.

E. Accessories:

1. Provide suitable wall attachment clips, hooks or other such devices as approved by the Architect.
2. Molded Inserts: Fire-retardant, molded inserts designed to accommodate pad thickness specified, in size to fit electrical receptacles and switch plates indicated on Drawings.
 - a. Product: Porter Athletic Equipment Company, *Model No. 00342-124 Double-Gang/Graphite*, or equal by manufacturer of padding.

F. Product: Porter Athletic Equipment Company, 00575-1XX 2 Fire Safe Wall Pad, or equal by approved manufacturer.

2.4 VOLLEYBALL EQUIPMENT

A. Volleyball Standards: Two pair of rigid-braced, telescoping, portable standards with adjustable height net attachment.

1. Poles: Aluminum pole uprights, for installation in floor sleeves, constructed as follows:
 - a. Material: Extruded high-strength, lightweight aluminum, 6063T alloy.
 - b. Finish: Clear anodized.
 - c. Bottom upright: 3-1/2-inch (89 mm) diameter, with foot designed to protect finished floor when moving standards.
 - d. Upper telescoping upright: Infinitely adjustable upright with integral pulley.
2. Height Markings: Labels designating "Boys'/Men's", "Girls'/Women's" and "12 Years and Under" height settings.
3. Pads: One pair of protective pads to fit specified uprights.
 - a. Product: Porter Athletic Equipment Company, *Model 00839-003* or equal by manufacturer of volleyball standards.
4. Winch: Tensioning winch incorporating a heavy-duty, self-locking ratchet mechanism with a compression, disc-brake type release mechanism.
 - a. Product: Porter Athletic Equipment Company, *Model 00026-000 Powr-Winch* or equal by manufacturer of volleyball standards.

B. Net: Regulation 32'-0" x 39" net.

1. Include all rigging and attachment devices.

2. Product: Porter Athletic Equipment Company, *Model 02295-640 Powr-Line Volleyball Net* or equal by manufacturer of volleyball standards.
- C. Floor Inserts: Furnish floor sleeves with cover plate assemblies designed by manufacturer of volleyball standards for installation in raised athletic wood flooring system. Refer to Drawings for locations and quantities.
 1. Cover Assembly: Brass cover plate flush with surface of flooring, secured to floor sleeve collar by swivel hinge and lock.
 2. Sleeve: 9-inch (229 mm) long brass sleeve with diameter to fit 3-1/2" diameter pole.
 3. Adapters for elevated slab conditions: Provide Draper - Model #501007, or approved equal; fully welded 6" OD steel tube with anchoring accessories.
- D. Product: Porter Athletic Equipment Company, *Model No. 01991-000 Powr-Line International Competition Volleyball Standards (Pair)*, or equal by approved manufacturer.

2.5 GYMNASIUM DIVIDER CURTAINS

- A. Gymnasium Divider Curtains: Electrically operated, roll up, and as follows:
- B. Upper Curtain, Mesh: Woven fabric of 100 percent polyester yarn coated with PVC weighing not less than 6.5 oz./sq. yd (220 g/sq. m).
 1. Mesh Color: As selected by Architect from manufacturer's full range.
- C. Lower Curtain, Solid: Woven polyester coated with PVC, 18 oz./sq. yd (610 g/sq. m), embossed, 8-foot (2.4-m) height above floor.
 1. Fabric Color(s): As selected by Architect from manufacturer's full range for one color.
- D. Gymnasium Divider Curtain Flame-Resistance Ratings: Passes NFPA 701, inherently and permanently flame resistant.
 1. Permanently attach label to each fabric of curtain assembly indicating whether fabric is inherently and permanently flame resistant or treated with flame-retardant chemicals, and whether it will require retreatment after designated time period or cleaning.
- E. Curtain Fabrication: Fused seams and the following:
 1. Top Hem: Reinforce with double thickness mesh for continuous pipe batten.
 2. Bottom Hems for Roll-up Curtains: Floor-length curtains with hems 2 inches (50 mm) above finished floor and with manufacturer's standard 3-1/2- to 4-inch- (89- to 102-mm) roll-up tube and lifting tape.
- F. Accessories:
 1. Curtain Battens: Fabricate battens from steel pipe with a minimum number of joints. As necessary for required lengths, connect pipe with drive-fit pipe sleeve not less than 18 inches (450 mm) long, and secure with 4 flush rivets, plug welds, threaded couplings, or another equally secure method. Shop-paint completed pipe battens with black paint.
 - a. Steel Pipe: ASTM A 53/ A 53M, Grade A, standard weight (Schedule 40), black, 1-1/2-inch (40-mm) nominal diameter, unless otherwise indicated.
- G. Gymnasium Divider Curtain Operator: Roll-up drive tube.

- H. Gymnasium Divider Curtain Electric Operator: Provide operating machine of size and capacity recommended by manufacturer for equipment specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, and remote controls. Coordinate wiring requirements and electrical characteristics with building electrical system.
1. Operator Type: Electric motor, enclosed gear-head-reduction drive, with chain and sprocket secondary drive.
 2. Motor Characteristics: Sufficient to start, accelerate, reverse, and operate connected loads at designated speeds within installed environment and with indicated operating sequence, and without exceeding nameplate rating or considering service factor. Comply with NEMA MG 1, and the following:
 3. Voltage: 120 V.
 4. Horsepower: 3/4 hp.
 5. Enclosure: Manufacturer's standard.
 6. Duty: Continuous duty at ambient temperature of 105 deg F (40 deg C) and at altitude of 3300 feet (1005 m) above sea level.
 7. Service Factor: 1.15 for open dripproof motors; 1.0 for totally enclosed motors.
 8. Phase: One.
 9. Remote-Control Station(s): NEMA ICS 6, Type 1 enclosure for recessed or flush mounting, momentary-contact, three-position switch-operated control.
 - a. Keys: Provide two key(s) per station.
 - b. Product: Porter Athletic Equipment Company, *Model No. 791 Key Switch Control*, or equal by approved manufacturer.
- I. Product: Porter Athletic Equipment Company, *Model No. 90675-00 Roll-Up Gymnasium Divider Curtain*, or equal by approved manufacturer.

2.6 SCOREBOARD AND SHOT CLOCKS

- A. General: Scoreboard and shot clocks shall meet requirements for FCC Class A.
1. [Provide two scoreboards and six shot clocks in Gymnasium.]
- B. Basketball Scoreboard: Standard electronic scoreboard with LED displays controlled by wireless remote control system.
1. General:
 - a. Scoreboard face and perimeter material: 0.063" (1.60 mm) thick aluminum.
 - b. Scoreboard back material: 0.050" (1.27 mm) thick aluminum.
 - c. Overall Dimensions: 4'-0" (1.2 m) tall by 8'-0" (2.4 m) long by 8 inches (203 mm) deep.
 - d. Finish: Powder-coat; color as selected by Architect from manufacturers full range.
 2. Display:
 - a. Digits: 100,000 hour-rated, LED digits, minimum 13 inches high,
 - b. Dots and Arrows: 100,000 hour-rated, LED circular or triangular shapes, 3 inches (76 mm) high.
 - c. Captions: Vinyl lettering to identify each type of information.
 3. Information displayed: Scoreboard shall display the following information:
 - a. Three-digit HOME score; red LED
 - b. Three-digit GUEST score; red LED
 - c. One-digit PERIOD; orange LED

- d. Home and Guest BONUS circular dots; red LED
- e. Home and Guest POSSESSION arrows; red LED
- f. Four-digit count-down CLOCK; orange LED

4. Product: Daktronics Model BB-2101-15, or equal by approved manufacturer.

C. Shot Clocks

- 1. General:
 - a. Shot clock face and perimeter material: 0.063" (1.60 mm) thick aluminum.
 - b. Shot clock back material: 0.050" (1.27 mm) thick aluminum.
 - c. Overall Dimensions: 2'-0" (610 mm) tall by 2'-0" (610 mm) long by 8 inches (203 mm) deep.
 - d. Finish: Powder-coat; color as selected by Architect from manufacturers full range.
 - e. Quantity: Two shot clocks for each scoreboard.
- 2. Display: 100,000 hour-rated, LED digits, 13 inches (330 mm) high,
- 3. Information displayed: Scoreboard shall display the following information: Two-digit count-down CLOCK; orange LED
- 4. Product: Daktronics BB-2114-15 or equal by approved manufacturer.

D. Remote Control for Scoreboard and Shot Clocks: Manufacturer's standard wireless system comprising the following:

- 1. Controller: Universal LCD keyboard controller, with nine keypad inserts for basketball, volleyball and wrestling.
- 2. Transformer: 12-volt DC wall transformer
- 3. Transmitter: FCC Part 15-certific, 2.4 GHz transmitter connected to keyboard
- 4. Receiver: 2.4 GHz receiver, in conformance with the requirements of FCC Part 15, connected to scoreboard.

E. Power Requirements:

- 1. Scoreboard: Hard-wired into 20-amp, 120-volt, 60-Hz grounded AC circuit.
- 2. Shot Clock: Hard-wired into 20-amp, 120-volt, 60-Hz grounded AC circuit
- 3. Keyboard: Plug-in to receptacle on 20-amp, 120-volt, 60-Hz grounded AC circuit.

2.7 WRESTLING MAT STORAGE SYSTEM

A. Wrestling Mat Storage System: Provide an overhead-supported storage system for wrestling mats equal to Draper, *Model No. 502060*.

- 1. Location: As indicated on Drawings.
- 2. Standard Hoist, Load Bar, and Sling: Capable of lifting and supporting standard wrestling mat weighing 1 pound per square foot.
- 3. Attachment: Provide storage system framing and attachment to overhead structural support members.

B. Wrestling Mat Storage System Hoisting Unit:

1. Each Hoisting Unit: 1.5-hp, C-faced, electric motors, with integral 6 ft./lb. brake mechanisms and automatic overload protection, attached to 200:1 ratio gearbox assembly. Operating with 208 volts, 3.6 amps, 230 volts, 3.4 amps, or 460 volts, 1.7 amps; in 3 phase. Coordinate with electrical contractor.
 2. Under No-Load Conditions: Motor 1,725 rpm. Drum 8.625 rpm.
 3. Approximate Hoist Speed: 8.5 feet per minute, in both up and down travel cycles.
 4. Key Switch: Motors shall be controlled by dual-keyed, flush, wall-mounted, momentary key switch, which cannot be instantly reversed, providing safety provision to prevent damage to motor.
 5. Key Switch Assembly: Switch assembly shall be furnished with 4-1/2-inch square stainless steel cover plate for mounting into masonry wall box as specified in Division 26 electrical section.
 6. Locate Key Switch: To allow operator full view of Mat-Mover during raising and lowering.
- C. Wrestling Mat Storage System Control Panel: Hoist mechanisms shall be monitored by factory-wired, preset control panel, and shall provide following safety/monitoring systems:
1. Enclosure: 20-inch by 20-inch by 8-inch steel enclosure, complete with lock and keys, house master control system including:
 - a. Main Disconnect Switch: 208 volts, 230 volts, or 460 volts, 3-phase, 60 Hz; coordinate with electrical contractor.
 - b. Control Circuit Transformer: Primary and secondary protection.
 - c. Two full-voltage reversing contacts, with motor circuit protection.
 - d. Motion Logic Controller: Monitor take-up and pay-out of cable at each hoist, ensuring units remain synchronized throughout up/down cycle.
 - e. Watchdog Timers: Ensure motion of each hoist is transmitted to control system minimum of 8 times per 12 inches of travel, providing consistent, level operation.
 - f. Audible Motion Alarm: Activates when unit is in raising or lowering cycle, to increase athlete's awareness of mats being moved into and out of storage.
 2. Mount Control Panel: Within close proximity of Mat-Mover for ease in field wiring and effectiveness of motion alarm system.
- D. Hoisting:
1. Hoisting of Mats: Accomplished with two 5/16-inch, 6-strand, 37 wires per strand, fiber-core, 4.26-ton breaking strength, steel cables. Each cable secured to 4-inch diameter drum, and terminating at heavy-wall, 2-inch by 6-inch by 40'-0" long steel load bar.
 2. Sling: Mats shall be carried by 19 ounce per square yard vinyl fabric sling with antibacterial, fungi-resistant, and flame-retardant chemicals.
 - a. Conformance: ASTM E 84, Class A Rating (25 flame spread, 450 smoke development); NFPA 701 large scale; ULC S-109 large and small scale; and California test requirements.
 - b. Attach Sling to Load Bar: 2-inch wide nylon strap, encompassing full sling perimeter, terminating at load bar with load-rated ring with 5,000-pound breaking strength.
 - c. Sling Capacity: Govern lift capacity of system.
 - d. Sling Color: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION AND PREPARATION

- A. Examine space in which specified work is to be installed to assure the conditions are satisfactory for the installation of backstop work. Report in writing to the Contractor, any unsatisfactory conditions affecting work of this Section. Commencement of work shall be construed as acceptance of conditions.
- B. Obtain and verify all measurements and conditions on the job, and assume all responsibility for correctness of conditions prior to commencement of installation.
- C. Become familiar with all building conditions to coordinate installation of backstops with ductwork, lighting and structural steel. Refer to related drawings for other trades.

3.2 INSTALLATION OF BACKSTOPS , MAT HOISTS, AND PRACTICE CAGES

- A. Modify superstructure as required and provide new fittings. Frames shall remain securely and permanently attached to building construction. Attach new equipment in strict accordance with manufacturer's instructions.
- B. Coordinate installation with the work of Section 260000 – Electrical, for power supply and completion of the keyswitch controls for equipment.

3.3 INSTALLATION OF WALL PADDING

- A. Install wall padding on walls where shown on Drawings, in accordance with manufacturer's instructions.
- B. Field cut all cutouts in pads as required to preserve access to wall-mounted electrical devices and other wall-mounted items.
- C. Notch the back of panels as required to cover pilasters and corners.

3.4 INSTALLATION OF VOLLEYBALL EQUIPMENT

- A. Furnish floor inserts for volleyball standards to the Contractor for installation under Division 09 FINISHES, Athletic Flooring specification sections.
- B. Install standards in strict accordance with manufacturer's instructions.
- C. Distance between volleyball standards shall be approximately 35"-0".

3.5 INSTALLATION OF GYMNASIUM DIVIDER CURTAIN

- A. Install curtain in strict accordance with manufacturer's instructions.

- B. Mount curtain from overhead structure, using supports and framing as recommended by manufacturer.
- C. Coordinate installation with the work of Section 260000 – Electrical, for power supply and completion of the keyswitch controls for raising and lowering curtain

3.6 INSTALLATION OF SCOREBOARD AND SHOT CLOCKS

- A. Install scoreboard and shot clocks in strict accordance with manufacturer's instructions.
- B. Mount enclosures to substrate as indicated, using type and quantity of fasteners recommended by manufacturer for substrate.
- C. Coordinate installation with the work of Section 260000 – Electrical, for power supply and wiring for the remote control system.

3.7 TESTING AND DEMONSTRATION

- A. General: Test all electrically operated athletic equipment to verify its proper operation. Demonstrate operation to Owner in accordance with Division 1 - Closeout Procedures.

3.8 CLEANING UP

- A. All debris and surplus materials resulting from installation of work in this Section shall be removed promptly as work progresses to a location indicated by the Contractor.
- B. Following completion, and before Substantial Completion, lubricate and clean finished surfaces in accordance with the manufacturer's instructions, and leave work free of imperfections.

3.9 PROTECTION OF WORK

- A. Protect work from damage during transportation to the project site, storage at the site, during installation, and after completion until acceptance by the Owner.
- B. Protect adjacent work during installation. Damaged work shall be repaired or replaced as determined by the Architect.

END OF SECTION

SECTION 11 68 00
PLAYGROUND EQUIPMENT

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

- A. This section is only a portion of the Contract Documents. All of the Contract Documents, including Conditions of the Contract and Division 1 General Requirements, apply to this section.

1.02 DESCRIPTION OF WORK

- A. The work of this section includes, but is not limited, to the following:
1. Furnish and install Playground Equipment Playground on roof.
 2. CPSI inspection and certification of completed installation.
- B. The following items shown on the Drawings and/or noted herein shall be furnished and installed under their Sections of the specifications:
1. Concrete for concrete footings under 32 13 13 Exterior Concrete

1.03 RELATED WORK

- A. Carefully examine all the Contract Documents for requirements that affect the work of this Section. Other specification sections that directly relate to the work of this Section include, but are not limited to the following:
1. Section 31 10 00 – Site Clearing and Preparation
 2. Section 32 18 16.13 – Playground Protective Surfacing
 3. Section 32 30 00 – Site Improvements
 4. Section 32 33 00 – Site Furnishings

1.04 SUBMITTALS

- A. Provide detailed shop drawings for all play equipment and individual components for review and approval by the Landscape Architect prior to ordering materials. This submittal must include the following items to be considered complete:
1. Large-scale drawing showing all play components including color choices, their attachment to each other and the associated use zones.
 2. Manufacturer's specifications for all play components.
 3. Manufacturer's recommended installation including concrete footings if required. Mounting details for all equipment.
 4. Evidence of compliance with IPEMA certification (ASTM F 1487-95) "Standard Consumer Safety Performance Specification for Playground Equipment for Public Use."

5. Supply documentation stating the system installer is a manufacturer's certified installer.
- B. Provide manufacturer's product material information and system performance data along with material and system samples for each item specified in this Section for the Architect's review and approval prior to ordering materials.
- C. The Contractor shall verify by field inspection that all items within this section conform to the specified requirements and approved submittals prior to installation.
- D. After installation, provide CPSI written certification of installation.

1.05 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials and products and provide adequate protection against damage. Handle in strict compliance with manufacturer instructions and recommendations and store off the ground. Protect from all possible damage including, but not limited to chipping, staining, cracking and other damage.
- B. Deliver materials in manufacturer's original unopened and undamaged packages with labels legible and intact.
- C. Store materials in unopened packages in a manner to prevent damage from the environment and construction operations.
- D. Handle in accordance with manufacturer's instructions.

1.06 COORDINATION

- A. The work of this Section shall be coordinated with that of other trades affecting, or affected by, this work as necessary to assure the steady progress of the work of this Contract.
- B. Substrates: Proceed with work only when substrate construction and penetrating work is complete.

1.07 GUARANTEE

- A. In addition to the specific guarantee requirements of the GENERAL CONDITIONS and SUPPLEMENTARY GENERAL CONDITIONS, the Contractor shall provide the manufacturers' standard written warranty for each product within this specification. All of these guarantees shall be in addition to, and not in lieu of, other liabilities that the Contractor may have by law or other provisions of the Contract Documents.

1.08 DEFINITIONS

- A. The following items are included herein and shall mean:
 1. S.S.H.B. - Standard Specifications for Highway and Bridges, the Commonwealth of Massachusetts, Department of Public Works, latest edition.
 2. A.S.T.M. - American Society for Testing and Materials. The following standard specifications are applicable to the associated items as listed.

- 1) F1487 ...Playground Equipment for Public Use

- 2) A36...Steel
- 3) A153...Zinc Coating (hot-dip) on hardware
- 4) A307...Carbon Steel bolts 66000 psi tensile
3. CPSC - Consumer Product Safety Commission.
4. ADA - Americans with Disabilities Act and its current regulations.
5. MAAB: Massachusetts Architectural Access Board
6. AWS: American Welding Society
7. SSPS: Steel Structures Painting Council

B. Quality Assurance

1. Equipment Installer Qualifications: An experienced and certified installer who has completed work with similar equipment, materials, and design, and to the extent similar with this project and whose work has resulted in construction with a record of successful performance in a minimum of 10 installations over 5 years. Contractor to provide their subcontractor's appropriate qualifications including references and experience. Installer shall follow manufacturer's instructions and installation documentation for all equipment.

PART 2 - PRODUCTS

2.01 PLAY EQUIPMENT AGES 2-5

- A. The new playground equipment has been selected by the Owner and School Committee to meet their children's needs and fit within the site layout and function. In order for another product to be considered equal, it must meet or exceed the basis of design in every aspect including, but not limited to play value, type & quantity of play components, design character, material type & quality, colors & finishes, durability and warranty.
- B. NOTE: All the play equipment is intended to be light weight polyethylene so it can be mounted to custom base plates (provided by the play manufacturer as well) that rest on the roof membrane with gravity support.
- C. The play manufacturer must have the layout and use zones of the play equipment specified in our drawings by their CPSI during the submission process.
- D. Basis of Design for all playground equipment is by Little Tikes Commercial www.littletikescommercial.com
- E. Other acceptable manufacturers to meet basis of design are:
 1. Playworld (www.playworld.com)
 2. Landscape Structures (www.playlsi.com)
- F. The new playground design shall consist of the following play equipment shown by their representative photo and product numbers
 1. Product #: 200201328 Clever Climbers – All In (Main Climbing Structure)

1. The photo of the basis of design is as follows:

2. The structure shall offer 2 slides, a deck, a built-in shade, various climbers and places under the structure for social and pretend play.
 3. The colors of this structure will be all nature based – Beige/Brown/Grey/Yellow/Dark Green/Bright Green only and Landscape Architect will specify the color choices for the individual components during the submittal process.
 4. The manufacturer shall submit the installation instructions to base plates on the roof, along with engineered drawings for wind overload.
 5. The manufacturer shall be responsible of either providing the exact base plates with the right sizes needed for the install or provide the contractor with sources to manufacture them based on provided plate specifications.
 6. The Contractor shall coordinate with the playground manufacturer's representative for the necessary installation details and dimensions of base plates to attach to.
2. Caterpillar Climber - Product #:200200171 Calvin The Caterpillar

1. The photo of the basis of design is as below:

2. This climber shall offer imaginative, inclusive play.
 3. The material of the climber shall be rotomolded durable fade resistant plastic.
 4. The climber shall offer a tunnel.
 5. The climber shall accommodate several children at once.
 6. The color of the climber shall be as shown in photo above.
 7. The manufacturer shall submit the installation instructions to base plates on the roof, along with engineered drawings for wind overload.
 8. The manufacturer shall be responsible of either providing the exact base plates with the right sizes needed for the install or provide the contractor with sources to manufacture them based on provided plate specifications.
 9. The Contractor shall coordinate with the playground manufacturer's representative for the necessary installation details and dimensions of base plates to attach to.
3. Friendly Fence - Product #:LT0902 Tot Builders Pretend Play

1. The photo of the basis of design is as below:

2. The two-sided sensory activity panel shall be appropriate for 2-5 year olds to develop their cognitive, social and motor skills.
3. The panel should have minimum of 12 play activities and shall be inclusive
4. The color of the panel shall be as shown in the photo above.
5. The manufacturer shall submit the installation instructions to base plates on the roof, along with engineered drawings for wind overload.
6. The manufacturer shall be responsible of either providing the exact base plates with the right sizes needed for the install or provide the contractor with sources to manufacture them based on provided plate specifications.
7. The Contractor shall coordinate with the playground manufacturer's representative for the necessary installation details and dimensions of base plates to attach to.

2.02 PRODUCT TECHNICAL SPECIFICATIONS

A. Product Number and Description (Manufacturer: PlayPower Operations, Monett, Missouri)

Part Number	Description
200111492	LABEL, IDENTIFICATION STAMPED W/RIVETS
200200171	CATERPILLAR SCULPTURE
200201328	CLEVER CLIMBER "ALL IN(ALL OUT)"BOX1,2,3
200305597	14' LARGE CRATE (ASSY DOMESTIC)
787Z	RISK MANAGEMENT SIGN - ENGLISH
925960	THUMB DRIVE 2GB - PPLT
926020	LITTLE TIKES CARD F/THUMB DRIVE
INSTALL BOOK	INSTALL BOOK FOR PP ORDERS
LT0902	TOT BUILDERS FRIENDLY FENCE

B. General Equipment Specifications:

1. Plastic Caps shall fit snugly into 127 mm (5") and 33 mm (1.315") tube ends and shall be injection molded Low Density Polyethylene. This plastic shall be stabilized against ultraviolet (UV) degradation and shall have color molded in. All caps will be installed at the factory and 127 mm (5") caps will be secured with aluminum hammer drive pins.
3. Aluminum Caps shall fit snugly into 127 mm (5") tube ends. The
4. Aluminum cap shall be made from SAE 413 aluminum with a minimum wall thickness of 4 mm. Prior to insertion into the post, all caps shall be painted per PPLT PAINT Specification. All caps will be installed at the factory and 127 mm (5") caps will be secured with aluminum hammer drive pins.
5. PPLT PAINT Specification: Primer shall be electrostatically applied and
6. cured in an infrared oven. Paint shall be an electrostatically applied polyester TGIC (triglycidyl isocyanurate) powder coating which shall be cured at temperatures between

- 400 and 500 degrees Fahrenheit. The thickness of the combined primer/paint shall be between 5 mils and 11 mils. The polyester powder shall comply with ASTM standards: D-2794 (Impact Resistance Test), B-117 (Salt Spray Resistance Test), G26 (Weatherability Test), and D3359B (Adhesion Crosshatching Test).
7. PlayPower Operations ROTO Specification: Rotationally Molded Plastic
 8. Parts shall be molded from linear low density polyethylene with ultraviolet (UV) light stabilizers, anti-static guard (for Molding purposes) and color molded in. This material shall comply with ASTM-D-790 (Flex Modulus), ASTM -D-638 (Tensile Strength), ASTM-D-648 (Heat Deflection Temperature), ARM-STD (Low Temperature Impact) and rated UL 94.
 9. PPLT PVC Specification: Textured Poly-Vinyl-Chloride coating shall be an average of 3 mm (.125") thick. Poly-vinyl-chloride coating shall be oven cured and textured for added traction when wet or dry.
 10. Hardware: Bolts, Nuts, Screws, Threaded Spacers, Washers and Other
 - a. Hardware used in the assembly of components shall be metric stainless
 - b. steel and tamper resistant. All necessary hardware shall be provided.
 11. Deck Clamp assemblies shall consist of two steel half-clamps. Clamp
 12. profiles shall be designed to eliminate protrusions. Clamps shall be die formed from 12 gauge HRPO steel. Clamps shall have a 6 mm (.25") radius rib formed in the top and bottom of the clamp for structural integrity. The clamp attachment bracket shall be formed from 11 gauge sheet steel and shall be welded securely to the clamp half. All clamp halves shall be zinc plated, yellow dichromate coated and phosphate coated before being TGIC (triglycidyl isocyanurate) polyester powder coated. Tamper-resistant fasteners shall be used to retain clamps and shall consist of M10 six lobe socket head stainless steel cap screws and M10 slab-base Tee nuts. All clamps shall be provided with aluminum hammer drive pins to protect against slippage.
 13. Rail Clamp assemblies shall consist of two steel half-clamps. Clamp profiles shall be designed to eliminate protrusions. Clamps shall be die formed from 12 gauge HRPO steel. Clamps shall have a minimum 6 mm (.25") radius rib formed in the top and bottom of the clamp for structural integrity. All clamp halves shall be zinc plated, yellow dichromate coated and phosphate coated before being TGIC (triglycidyl isocyanurate) polyester powder coated. Tamper-resistant fasteners shall be used to retain clamps and shall consist of M10 six lobe socket head stainless steel cap screws and M10 slab-base Tee nuts. All clamps shall be provided with aluminum hammer drive pins to protect against slippage.
 14. Wing and Panel Clamp assemblies shall consist of two steel half-clamps. Clamp profiles shall be designed to eliminate protrusions. Clamps shall be die formed from 12 gauge HRPO steel. Clamps shall have a 6 mm (.25") radius rib formed in the top and bottom of the clamp for structural integrity. The clamp wing bracket shall be formed from 7 gauge sheet steel and shall be welded securely to the clamp half. All clamp halves shall be zinc plated, yellow dichromate coated and phosphate coated before being TGIC (triglycidyl isocyanurate) polyester powder coated. Tamper-resistant fasteners shall be used to retain clamps and shall consist of M10 six lobe socket head stainless steel cap screws and M10 slab-base Tee nuts. All clamps shall be provided with aluminum hammer drive pins to protect against slippage.
 15. All Steel Tube Components shall comply with ASTM standards: A-500,
 16. Or A-513. The steel tube components contain five layers including an inside galvanized coating, high tensile strength cold formed steel, hot dipped pure zinc meeting ASTM B-6

applied at 3.5 tenths of an ounce per square foot, and a proprietary conversion and advanced polymer coatings. The components are freed of excess weld spatter and shall be cleaned in a multiple bath system which shall include a rust-inhibitive iron phosphate wash prior to painting. Exceptions: 127 mm (5") O.D. aluminum posts.

17. Brackets shall be fabricated from punched and formed 4.5 mm pre-
18. galvanized sheet steel.
19. Gaskets shall be rubber injection molded from ultraviolet (U.V.) protected
20. synthetic rubber. Rubber gaskets shall provide an aesthetic seal around the wonder fastener and bracket.
21. Footing for 127 mm (5") diameter upright posts shall be 305 mm (12")
22. diameter x 940 mm (37") depth. Galvanized steel posts shall be 127 mm (5") O.D., 11 gauge pre-galvanized round tubing. Minimum tensile strength shall be 330MPa (48,000 psi). Minimum yield point shall be 310MPa (45,000 psi). The bottom portion of all upright posts shall be crimped slightly

C. Component Specifications:

1. CATERPILLAR PLAYGROUND SCULPTURES shall be a nominal eight foot long multi-sensory adventure designed for children ages 2 -12 years to climb, explore, and learn.Â The Caterpillar sculpture shall have six different pairs of shoes with eight fun items to find.Â Each sculpture shall have a ladybug counting game molded on the back, the life cycle of a caterpillar and a hidden "inner" butterfly molded on the belly.Â A full set of curriculum designed specifically for the caterpillar sculpture shall be available to order with each unit. Each set of curriculum was created to build skills from math to literacy including sensory, cognitive, auditory, imaginative development possibilities. The Caterpillar shall be a rotationally molded per PPLT ROTO Specification.Â The molded in graphics shall not be raised above the surface of the sculpture.Â The ground supports shall be fabricated from 38mm (1.5") in-line galvanized square tubing.Â Any welds are coated with spray cold galvanization.
2. Curvy Weldment - 1" 14Ga galvanized tube, 7Ga galvanized sheet, and painted per PPLT PAINT Specification
Plastic Walls - 3/4" HDPE
Play Events - 3/4" HDPE, 1/2" HDPE, rotationally molded LLDPE, 319 aluminum, 3/8" flexthead, 16mm Rope, 1.6MM stainless steel and 1/4" Koda X
Hardware - 18-8 grade stainless steel that requires tooling to install or remove
3. Frame shall be fabricated from 60.3 mm (2-3/8") O.D. tubing and 12 ga galv steel Tube. The frame shall be painted per PPLT PAINT Specification. Sign shall be aluminum 3003-H14 .08" thick-powder coated white with screen printed overlay. The sign is to be fastened to the frame using all stainless steel hardware and will be fully supported by the steel frame.
4. Identification label shall be fabricated from alluminum sheet .016" (4 mm) thick and attached with aluminum pop rivets.

PART 3 - EXECUTION

3.01 PLAY EQUIPMENT

- A. The Contractor shall coordinate with the playground manufacturer's representative to ensure the timely completion of tasks necessary to install the equipment on the roof deck using base plates prior to installing the synthetic tr

- B. The Contractor shall prepare the subgrade, drainage system and excavate below proposed play area. After the area is prepared and play equipment installed, the Contractor is responsible to complete the installation of the remainder of the site work (sidewalks, poured in place surfacing, etc.)
- C. Play equipment to be installed per manufacturer's directions. Provide safety use zones in accordance with ASTM, CPSC and ASTM standards.
- D. Equipment shall be assembled to conform to the approved shop drawings. All fastenings shall be made as shown on the drawings and shall be securely tightened. All work shall be done so that no hazardous projections shall be left on the finished work.
- E. Cleanup: Upon completion of the work under this Section, all excess materials and debris resulting from work under this Section shall be cleaned up, removed from the Site, and properly disposed of.

F. Manufacturer's Guarantees and Insurance

- 1. Product Liability Insurance: The manufacturer of the playground equipment shall maintain, and have in effect at the time of the completed installation, an insurance policy covering completed operations (Product Liability) with a minimum limit of \$1,000,000.00 (One Million Dollars). A certificate of insurance shall be available to the project owner on request.
- 2. Guarantees: The manufacturer shall furnish a written guarantee, covering the replacement of any damaged Structures or components, at no extra charge for the period of 15 (Fifteen) years. This guarantee does not cover Structures damaged by improper use or vandalism. Labor is not covered in this guarantee.

G. Warranties

- 1. 10-Year Limited Warranty for all stainless steel fasteners, aluminum posts, clamps, beams and caps, against structural failure due to corrosion/natural deterioration or manufacturing defects. This warranty does not include any cosmetic issues or wear and tear from normal use.
- 2. 15-Year Limited Warranty for all plastic and steel components, against structural failure due to corrosion/natural deterioration or manufacturing defects. This warranty does not include any cosmetic issues or wear and tear from normal use.
- 3. The Contractor shall warrant that all structures and/or equipment installed will conform in kind and quality to the specifications set forth above, and will be free of defect in workmanship and material.
- 4. The Contractor shall offer a 10-year limited warranty for all aluminum and all posts, clamps, beams, and caps against structural failure due to corrosion, deterioration, or workmanship (cosmetic issues excluded).
- 5. The Contractor shall offer a 10-year limited warranty for all plastic and steel components against structural failure due to corrosion, deterioration, or workmanship (cosmetic issues excluded).

6. The Contractor shall offer a 1-year limited warranty for all moving parts, swing seats and swing hangers bumpers and other equipment not included above against failure due to corrosion, deterioration, or workmanship.

3.02 INSPECTION

- A. An authorized representative of the play equipment manufacturer must inspect and approve the completed installation. The play equipment will not be accepted by the play equipment manufacturer or the Owner until they are satisfied with the installation. No additional compensation will be given for any necessary corrective work. Contractor shall submit written certification from Manufacturer's Representative that all play equipment has been installed in accordance with manufacturer's prescribed standards.
- B. After installation of equipment, safety surfacing and immediate surrounding improvements, the playground installation contractor shall provide written certification by a Certified Playground Safety Inspector (CPSI) that the installed equipment conforms to all applicable safety and accessibility standards including, but not limited to ASTM, CPSC, ADA, and MAAB. The Owner reserves the right to retain an independent CPSI to inspect the playground equipment and surfacing after reinstallation. The Contractor will be responsible for correcting any deficiencies at their own expense to the satisfaction of the Landscape Architect.

3.03 CLEANING, REPAIR AND PROTECTION

- A. Repair minor damage to eliminate all evidence of repair. Remove and replace work that cannot be satisfactorily repaired.
- B. Provide temporary protection to ensure that the work will be without dirt, stains, damage or deterioration at time of final acceptance. Clean up stains and spills as they occur. Remove protections and clean as necessary immediately before final acceptance.
- C. Upon completion of the work and before acceptance, the Contractor shall remove and dispose of in an approved manner all surplus materials, rubbish, etc. which the Contractor may have accumulated during the course of the work and shall leave the site in a clean and orderly condition. The Contractor shall not abandon any material at or near the site regardless of whether it has any value.

END OF SECTION

SECTION 11 68 33
ATHLETIC FIELD EQUIPMENT

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

- A. All of the Contract Documents, including General and Supplementary Conditions, Division 0 and Division 1, General Requirements, apply to the work of this Section.

1.02 DESCRIPTION OF WORK

- A. The work of this section includes, but is not limited, to the following:

1. Grading and Compaction of Sub-base
2. Concrete Footings for all Field Equipment
3. Combo Football/Soccer Goal Posts & Pads
4. Team Benches at Dugouts
5. Foul Poles at Softball Field
6. Softball Fence Safety Cap
7. Softball/Baseball Home Plate, Bases, and Pitcher's Rubber
8. Sports Netting system at multi-purpose fields
9. Bleachers at Softball
10. Dugout Shelter at Softball
11. Discus Cage and Throwing Ring
12. Shot Put Throwing Ring
13. Shot Put Toe Board
14. Pole vault box
15. Long and Triple Jump Pit Forms with Covers
16. Long Jump Take-off Boards
17. Cleaning Repair and Protection

- B. The following items shown on the Drawings and/or noted herein shall be furnished and installed under their Sections of the specifications:

1. Concrete for concrete footings included herein

2. Materials for grading and compacting subbase under 312000 EARTH MOVING

C. Sustainable Building Requirements:

1. The Contractor is to implement practices and procedures to meet the project's sustainable performance goals, which include achieving LEED v4 Silver certification based on USGBC's "LEED Version 4 for Building Design and Construction: Schools" (LEED v4 BD+C: Schools).
2. The work of this Section includes responding to Architect or Contractor requests for additional information or product data and may be required following initial Green Building Certification Institute (GBCI) review of LEED Application.
3. Product substitution requests are subject to additional LEED submittal requirements including, but not limited to, Environmental Product Declarations (EPD), Health Product Declarations (HPD), and General Emissions Testing.

1.03 RELATED WORK

- A. Carefully examine all the Contract Documents for requirements that affect the work of this Section. Other specification sections that directly relate to the work of this Section include, but are not limited to the following:

- 1) Section 012300 – Alternates.
- 2) Section 133416 - Bleachers.
- 3) Section 312000 - Earth Moving.
- 4) Section 321313 – Concrete Pavement.
- 5) Section 321813 – Synthetic Turf.
- 6) Section 321823.13 – Baseball and Softball Field Surfacing
- 7) Section 321823.39 – Resilient Sport Surfacing.
- 8) Section 323000 - Site Improvements.
- 9) Section 323100 – Fencing.
- 10) Section 329200 - Turf and Grasses.

1.04 SUBMITTALS

- A. Refer to individual site improvements for additional submittal requirements.
- B. Provide manufacturer's product material information and system performance data along with material and system samples for each item specified in this Section for the Landscape Architect's review and approval prior to ordering materials.
- C. The General Contractor shall verify by field inspection that all items within this section conform to the specified requirements and approved submittals prior to installation.

1.05 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials and products and provide adequate protection against damage. Handle in strict compliance with manufacturer instructions and recommendations and store off the ground. Protect from all possible damage including, but not limited to chipping, staining, cracking and other damage. Sequence deliveries to avoid delays, but minimize on-site storage.

1.06 COORDINATION

- A. The work of this Section shall be coordinated with that of other trades affecting, or affected by, this work as necessary to assure the steady progress of the work of this Contract.
- B. Substrates: Proceed with work only when substrate construction and penetrating work is complete.

1.07 GUARANTEE

- A. In addition to the specific guarantee requirements of the GENERAL CONDITIONS and SUPPLEMENTARY GENERAL CONDITIONS, the Contractor shall provide the manufacturers' standard written warranty for each product within this specification. All of these guarantees shall be in addition to, and not in lieu of, other liabilities that the Contractor may have by law or other provisions of the Contract Documents.

1.08 REFERENCE STANDARDS

- A. National Federation of State High School Associations (NFSHSA)
- B. Massachusetts Interscholastic Athletic Association (MIAA)
- C. National Collegiate Athletic Association (NCAA)

PART 2 - PRODUCTS AND EXECUTION (Combined)

2.01 GRADING AND COMPACTION OF SUB-BASE

- A. Do all necessary grading in addition to that specified under Section 312000 EARTH MOVING to bring subgrade or foundation after final compaction to required grades and sections to obtain a foundation of uniform bearing surface. In absence of specific requirements, compact foundation by such means as shall provide firm base and insurance against settlement of superimposed work.
- B. Sub-base preparation, including material, shall be of properly approved quality as specified under Section 312000 EARTH MOVING. Start of work under this Section shall constitute acceptance of the foundation conditions to which this work is to be applied. Any defects in work resulting from such conditions shall be corrected under this Section - Play Field Equipment, at no additional cost to the Owner.

2.02 CONCRETE FOOTINGS FOR FIELD EQUIPMENT

- A. Construct concrete footings where shown on the Drawings and per manufacturer requirements.
- B. Concrete for footings shall be 4,000 psi concrete as specified in Section 321313 Concrete Pavement
- C. Place concrete on moist subgrade or against prepared footings in continuous operation between transverse joints or individual sections. Vibrate all concrete. Do not place concrete in freezing temperatures or on frozen base. Refer to the shop drawings and manufacturer's recommendations for footing requirements and depth

2.04 COMBINATION H-STYLE GOAL POSTS: (FOOTBALL/SOCCER)

- A. Provide all equipment and materials, and do all work necessary to furnish and install (2) H-Style High School Combination Goal with 20' Uprights model GPHC20HS Sportsfield Specialties or approved equal.
- B. Product components
 - 1. Height: 30' Above Finish Grade
 - 2. Inside Dimensions: 23'-4" Between Football Uprights (High School) and 24' Between Soccer Posts
 - 3. Football Crossbar/Uprights: 4" Aluminum Tube (4" O.D. x 0.125" Wall)
 - 4. Soccer Crossbar/Uprights: 3.5" Schedule 40 Aluminum Pipe (4" O.D. x 0.226" Wall)
 - 5. Welded Aluminum Net Clips with Lifetime Guarantee
 - 6. 4'L (48"L) 1" Schedule 40 6063-T6 Aluminum Pipe (1.32" O.D.) Rear Net Stays
 - 7. Super Durable Powder Coated Finish color White.
 - 8. Soccer Net: 5mm Braided, Knotless Polypropylene, 4" Square Mesh, Color: White or Orange
 - 9. Ground Sleeve: 4.3" O.D., 4.1" I.D. Aluminum Tube with Welded Base Plate, 4'L (48"L)
 - 10. Access Frame Kit: 1/8" (0.125") Aluminum Construction with 1" PVC Drain Stub,
 - 11. Removable Pads at each post shall be, constructed of min. 5-inch thick cylindrical high-density polyurethane foam filler and heavy coated vinyl cover shall completely enclose foam filler. Vinyl cover shall have full-length Velcro closure flap. Pads to be 6' high. Color shall be selected by the Landscape Architect.

2.04 ALUMINUM TEAM BENCHES WITH BACKREST – SEMI- PERMANENT

- A. Furnish and install new and fully assembled players benches.
- B. Team Benches shall be provided from one of the following suppliers:
 - a) AAE Sports, 1000 Enterprise Drive, Royerford, PA 19468, (610) 825-6565.
 - b) Gill Athletics, Champaign, IL 800 637-3090
 - c) Jay-Pro Sports: 976 Hartford Tpk, Waterford, CT 06385. 800-243-0533
- C. Benches shall be constructed of heavy-duty extruded aluminum with a powder coated finish. Color selection by Landscape Architect. Frame shall be 2-3/8" O.D galvanized steel. Bench shall have a 10" wide continuous aluminum seat, end caps and a backrest.
- D. Surface mount bench to concrete pavement utilizing galvanized or stainless-steel tamperproof anchor bolts.

2.05 FOUL POLES

- A. Furnish and install Foul Poles, as shown on the drawings.
- B. Foul Poles shall be one of the following or Landscape Architect approved equal:
 - a) Long Gone Foul Pole provided by Sportsfield Specialties 888-975-3343.
 - b) Standard Foul Poles provided by Beacon Athletics, 800-747-5985
 - c) Varsity Foul Poles provided by On Deck Sports, 800- 365-6171
- C. Foul Poles shall be 20' height, 4" O.D. minimum aluminum pipe with 8' aluminum mesh wing. Poles shall be ground sleeve insert mounted in a concrete footing.

- D. Softball Foul Poles shall be powder coated white, Baseball shall be powder coated yellow.
- E. Foul Poles shall be integrated in the chain link fencing as line post where shown on the drawings.

2.06 SOFTBALL AND BASEBALL FENCE GUARD (SAFETY CAP)

- A. Furnish and install chain link fence guard (safety cap) where indicated in the drawings
- B. Product: Premium Fence Guard available at Beacon Athletics, Middleton, WI 800-747-5985 or approved equal.
- C. Product shall be UV Treated Polyethylene with teardrop shaped profile predrilled to accept ties at 23" O.C. Color shall be yellow or black. 3"Wx4-1/2"Tx7'L each section

2.07 BASEBALL/SOFTBALL HOME PLATE, BASES, AND PITCHER'S RUBBER

- A. Furnish and install home plate, bases, and pitcher's rubber, per manufacturer's specifications for all softball fields and bullpens. These items shall be home plate (Hollywood LMB Pro Style with 6" stanchion and accessories), bases (Hollywood-Style Base with 7" Stanchion), and Pitcher's rubber (24" Hollywood Dual stanchion removable pitching rubber and accessories) as manufactured and/or Supplied by Schutt, Litchfield, IL, 800-426-9784. Or one of the following:
 - 1) BSN Sports, Dallas TX, 800-856-3488
 - 2) Bulldog Field Equipment, Roanoke VA, 540-315-6453

2.08 SPORTS NETTING AT MULTI-PURPOSE AND SOFTBALL FIELDS

- A. Provide manufacturer's product data for approval prior to ordering.
- B. Provide and install sports netting/backstop netting posts, tension posts, netting, hardware and tie downs in accordance with the Details indicated on the Drawings.
- C. Submittals: Contractor shall submit for approval by landscape architect,
- D. Manufacturers product data, installation requirements and color samples.
- E. Shop drawings: structural engineered calculations accounting for wind loads, soil conditions including footings/foundations and post sizes. The netting system shop drawings shall be an engineered system stamped and signed by a P.E.
- F. Quality Assurance: The Manufacturer shall have a current American Sports Builders Association (ASBA) Supplier Certificate of Distinction designation.
- G. Pole-to-pole Tension Netting System Basis of Design shall be as manufactured by Sportsfield Specialties or approved equal.
- H. The net shall extend to 20' total height.
- I. Other approved vendors:

- 1) AAE, 1000 Enterprise Dr., Royersford, PA 19468 tel 1-800 523-5471,
- 2) Beacon Athletics, tel 800-747-35985. Or approved equal.

J. Sports netting pre-engineered, tensioned pole system components:

1. Schedule 40 Steel Pipe (4" O.D as per detail.), standard Powder Coated Black Finish. Refer to the drawings for heights.
2. Ground Sleeves with Welded Base Plates: aluminum tube with alignment bolt
3. Net with Perimeter Rope Binding:
4. Overall dimensions in accordance with the drawings, 1-3/4" Square Mesh
 - 1) Dyneema® Ultra-High Molecular Weight Polyethylene (UHMWPE) SK-75 Black Fiber Construction
 - 2) 4 Ply, 1.2 mm (0.0472") Diameter Twine
 - 3) 95% Open Mesh Area (See-Through Visibility)
 - 4) 58,445 psi Minimum Breaking Strength
 - 5) 30% Maximum Elongation at Break
 - 6) 1-3/4" (44 mm) Square Mesh Size, 0.009 lbs. per Square Foot
 - 7) 4-Strand, Braided, Continuous Monofilament Dyneema® Fiber
 - 8) Black Multi-Filament Polypropylene Solid Braid Derby Rope Sewn Binding on Perimeter Edges - 1/4" Diameter, 530 lb. Minimum Breaking Strength
 - 9) Urethane Black Bonded Finish
 - 10) Strong Resistance to Ultraviolet (UV) Light Degradation
 - 11) Excellent Resistance to Chemicals and Water Absorption
 - 12) Length, Height, and Configuration as Required

K. Accessories: Stainless Steel and/or Galvanized Steel Assembly Hardware, Fixed Welded Upper Tab and Adjustable Lower Bracket with Tensioned Vertical Slide Cable System, Secure Snap Clips for Net Attachment, 3/16" Diameter Galvanized Wire Rope Black Vinyl Coated to 1/4" Diameter, Black Plastic Friction Fit Ground Sleeve Caps,

1. Wire Rope Support Structure:
2. 7 x 19 GAC Galvanized Aircraft Cable - 5/16" Diameter Main Horizontal Support, 9,800 lb. Minimum Breaking Strength, 3,267 lb. Minimum Working Load Limit
3. 7 x 19 GAC Galvanized Aircraft Cable - 1/4" Diameter Vertical and Bottom Horizontal Supports, 7,000 lb. Minimum Breaking Strength, 2,333 lb. Minimum Working Load Limit
4. Hot Dipped Galvanized Attachment and Assembly Hardware - Quantities, Sizes and Configurations

2.09 DUGOUT SHELTER – SOFTBALL

- A. The basis of design for the dugout shelters shall be model GD8X32 - GameShade® Dugout 8'W x 32'L (height as indicated on dwgs) as Manufactured and Supplied by Sportsfield Specialties, Inc. P.O. Box 231 41155 State Highway 10 Delhi, NY 13753 p. 607-746-1460
www.sportsfieldspecialties.com

B. Approved equal shall meet all criteria specified herein and as indicated on the Drawings.

1. Model 8'W x 32'L (custom length) Premium Team Dugout – as manufactured by Beacon Athletics, 8233 Forsythia St STE 120 Middleton WI 53562

C. SUBMITTAL REQUIRED: Stamped and Sealed Shop Drawings and Calculations by a Licensed Professional Engineer of Record in the State of Project Location

D. DESIGN CRITERIA:

- 1) Building Code: ASCE 7-10
- 2) 2. Maximum Wind Speed Rating: 140mph, Exposure Category C
- 3) 3. Maximum Ground Snow Load: 60psf
- 4) 4. Seismic Design: Category E, $S_s=1.5g$, $S_1=0.75g$
- 5) 5. Roof Pitch: 2" Rise Back-to-Front

E. COMPONENTS:

1. Overall Dimensions: 8'W x 32'L
2. Structural Columns Fabricated of:
 - 1) 3-1/2" x 3-1/2" x 3/16" (0.1875") Structural Steel Tube with Factory Pre-Drilled 9" x 9" x 5/8" (0.625") A36 Steel Base Mounting Plates and 9" x 9" x 5/8" (0.625") A36 Steel Roof and Column Cap Plates
 - 2) Fully Welded Construction
 - 3) Maximum Allowable Spacing Between Structural Steel Columns is Fifteen (15') On-Center
3. Roof Frame Fabricated of:
 - 1) 5" x 2" x 3/16" (0.1875") Structural Steel Rectangular Perimeter, Transverse, and Longitudinal Roof Tubes
 - 2) Fully Welded Construction
4. Structural Steel Columns and Roof Frame Receive a Powder Coated Primer and Coated Finish, Various Standard and Custom Colors Available
5. Roofing Material is 29 Gauge, Classic Rib® Style Corrugated Metal with J-Channel Drip Cap Installed on Front and Sides, Various Standard Paint Finish Colors Available. Submit standard paint colors for review and approval.
6. Structural Columns Attached to Roof Structure with Galvanized Hardware
7. Includes Carbon Steel Anchoring Hardware, Epoxy and Lifting Eye Bolts
8. Model Specific Hardware Kit and Installation Instructions
9. Representative photo of the GameShade Dugout

F. INSTALLATION OF EQUIPMENT

1. Dugout Shelter and Accessories shall be installed as recommended per manufacturer's written instructions and as indicated on the drawings. Concrete anchoring foundations to be determined by others based on local soil conditions and building codes. Installer should have a minimum of five (5) baseball/softball equipment installations or similar experience in the previous three (3) years.

2.12 PORTABLE BLEACHERS (Refer to Section 133416 HEAVY DUTY ALL-ALUMINUM BLEACHER for bleachers at the Track.)

- A. Furnish and install portable bleachers where indicated on the drawings. The portable bleacher system shall include 2 complete bleacher assemblies consisting of:
 1. Softball and Baseball bleachers: 5 row x 21-24' length capacity 50 seats (includes 46 standard seats, 2 HC and 2 companion spaces)
- B. Submittals:
 1. Layout of bleacher system to include dimensions, details, and finishes of components, accessories, and structure.
 1. Drawing/s to include engineers stamp certifying the bleacher system is in code compliance with all state regulations and meets manufacturer's structural requirements. Shall include anchoring/tie down system.
 2. Product data: Manufacturer's catalog cuts indicating material compliance and specified options. Warranty data indicating 1 year for materials and workmanship and 5 years for seat and foot plank extrusions.
- C. Bleacher systems shall be a portable aluminum bleacher system by the following manufacturers or approved equal:
 1. Dant Clayton Louisville, KY 800-626-2177.
 2. GT Grandstands Inc. Plant City, FL 1-866-550-5511
 3. National Recreation Systems, Ft Wayne, IN 888-568-9064

D. Bleachers shall have the following components and properties:

1. Non-elevated front row. 8" rise x 24" tread.
2. Angle frame galv. Steel understructure
3. Seating surface: 2 x 10 seat planks anodized
4. Floor surface: Double 2 x 10 mill finish foot planks at each row.
5. Singler riser board rows 1-4, double riser rows 5 and higher.
6. (1) 48" wide vertical aisle with mid aisle handrail
7. A.D.A. seats integrated in front row.
8. Chain link guardrail – MA code compliance

E. Installation: The bleachers shall be installed onto reinforced cast in place concrete 5000 PSI. Galvanized hardware shall be provided by the manufacturer to affix bleachers level and plumb into and onto these grade beams. Core and grout threaded anchor bolts.

2.03 SHOT PUT THROWING RING

A. Furnish and install Rolled Aluminum Depressed Pad Shot Put Throwing Circle which shall be one of the following or Landscape Architect approved equal.

1. Model TRSPHAA as manufactured by Sportsfield Specialties 888-975-334
2. UCS Model#725-2575 Model #369 as manufactured by UCS Inc., 511 Hoffman Road, Lincolnton, NC, 28092, (800) 526-4856.
3. Model # SC-2/2 as manufactured by AAE Sports, 1000 Enterprise Drive, Royerford, PA 19468, (610) 825-6565 or approved equal

B. Shall comply with NCAA and NFHS requirements.

2.04 SHOT PUT TOE BOARD

A. Furnish and install Shot Put Toe Board which shall be one of the following or Landscape Architect approved equal:

1. Model # 359 Synthetic Shot Toe Board - as manufactured by Gill Athletics, 2808 Gemini Court, Champaign, IL 61822, (800) 637-3090.
2. Model # 3943 Polyethylene Shot Toe Board – as manufactured by VS Athletics, 1450 W. 228th St. #8, Torrance, CA 90501, (800) 676-7463.
3. Model # STB Synthetic Toe Board – as manufactured by AAE Sports, 1000 Enterprise Drive, Royerford, PA 19468, (610) 825-6565.

B. Toe Board shall be installed level with concrete pad throwing area.

2.05 DISCUS CAGE AND THROWING RING

A. Provide new, fully assembled, including ground sleeves, removable discus cage.

B. Discus Cage shall be one of the following or Landscape Architect approved equal:

- 1) Model # DCHS High School Discus Cage – as manufactured by SportsField Specialties, P.O. Box 231, 41155 St. Hwy, Delhi, NY 13753, (888) 975-3343.

- 2) UCS High School Discus Cage with Ground Sleeves, Powder Coated Black - Model#570-0100R - as manufactured by UCS Inc., 511 Hoffman Road, Lincolnton, NC, 28092, (800) 526-4856
 - 3) Gill Athletics High School Brutus Discus Cage, Powder Coated Black - Model#9010 - as manufactured by Gill Athletics, 2808 Gemini Court, Champaign, IL 61822, (800) 637-3090. or approved equal
- C. Discus Cage shall be all aluminum construction with stainless steel hardware. Posts to be powder coated black.
- D. Netting shall be 1-3/4" mesh, weather treated black nylon. Backup net shall be included.
- E. Throwing Ring Shall be a rolled aluminum 3/4" Depressed Pad Throwing Ring Model TFD099AL by Sportsfield Specialties or approved equal.
- 1) Other approved suppliers: Gill Athletics and AAE Sports

2.06 LONG JUMP/TRIPLE JUMP PIT FORMS WITH COVERS

- A. Furnish and install fully assembled Long Jump/Triple Jump Pits, including Sand pit modular forming systems catchers, metal grates, rubber mats, vinyl covers and sand.
- B. Long Jump/Triple Jump Pits systems shall be one of the following or Landscape Architect approved equal:
1. SP6020 JumpForm® (SPSCHS) High School 3M x 7M Sand Pit with Sand Catchers as manufactured by SportsField Specialties, P.O. Box 231, 41155 St. Hwy, Delhi, NY 13753, (888) 975-3343. Vinyl cover shall be a model SPCVRM or approved equal, color to be selected by Landcape Architect
 2. UCS Long Jump/Triple Jump Pit Form, Sand Catcher and Cover - Model#519-3216 - as manufactured by UCS Inc., 511 Hoffman Road, Lincolnton, NC, 28092, (800) 526-4856.
 3. Gill Athletics Long Jump/Triple Jump Pit Form, Sand Catcher and Cover - F46225 and F44023C - as manufactured by Gill Athletics, 2808 Gemini Court, Champaign, IL 61822, (800) 637-3090. or approved equal
- C. Sand shall conform to latest MIAA standards for jump pit sand. Sand shall be a washed sand, without organic components, maximum 2mm granules, of which not more than 5% in weight is less than 0.2mm.
- D. Equipment and Accessories shall be installed as recommended per manufacturer's written instructions and as indicated on the drawings. Installer shall have a minimum of five (5) track and field equipment installations or similar experience in the previous three (3) years.

2.07 LONG JUMP TAKEOFF BOARDS

- A. Furnish and install Long Jump Takeoff Boards (one each runway) which shall be one of the following or Landscape Architect approved equal:
1. Model # LTJTOB8, 8" Long Jump Take-Off Board - as manufactured by SportsField Specialties, P.O. Box 231, 41155 St. Hwy, Delhi, NY 13753, (888) 975-3343.

2. Model # 4445 Synthetic Take Off Board with Base – as manufactured by Gill Athletics, 2808 Gemini Court, Champaign, IL 61822, (800) 637-3090.
3. UCS Model#519-2200 Long Jump Take-Off board as manufactured by UCS Inc., 511 Hoffman Road, Lincolnton, NC, 28092, (800) 526-4856. or approved equal

2.08 CLEANING, REPAIR AND PROTECTION

- A. Repair minor damage to eliminate all evidence of repair. Remove and replace work that cannot be satisfactorily repaired.
- B. Provide temporary protection to ensure that the work shall be without dirt, stains, damage or deterioration at time of final acceptance. Clean up stains and spills as they occur. Remove protections and clean as necessary immediately before final acceptance.
- C. Upon completion of the work and before acceptance, the Contractor shall remove and dispose of in an approved manner all surplus materials and rubbish. which the Contractor may have accumulated during the course of the work and shall leave the site in a clean and orderly condition. The Contractor shall not abandon any material at or near the site regardless of whether or not it has any value.

END OF SECTION

SECTION 118129
FACILITY FALL PROTECTION

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Tie back and lifeline anchors for fall protection, exterior maintenance, and window cleaning applications.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 051200 - STRUCTURAL STEEL FRAMING.
 - 2. Section 053000 - STEEL DECKING.
 - 3. Section 075400 - THERMOPLASTIC MEMBRANE ROOFING for roof system assembly.

1.3 DESIGN AND PERFORMANCE REQUIREMENTS

- A. The equipment supplier is responsible for the design and erection of equipment and anchors and for coordination and proper relation of his work to the building structure and to the work of all trades. The equipment supplier shall verify all dimensions of the building that relate to fabrication of the equipment and shall notify the Architect of any discrepancy before the order for the equipment is finalized.
- B. Design a system that complies with applicable regulatory requirements.
- C. Design anchor components to provide an adequate attachment means suited to current practices and compatible with industry standard equipment.
- D. Ensure that anchor components meet proper engineering principles and have been designed by a company qualified in required applications and safety.
- E. Design a horizontal lifeline system which allows the worker to walk freely along without having to manipulate his lanyard in order to pass by an intermediate bracket (hand free). Include any hardware required to attach the components to the building structure.

- F. The system must be designed with fall arrest capability (FAS). The system shall comply with Federal OSHA regulatory requirements for FAS limiting the total fall to 6 feet, ensure a user is not exposed to maximum arrest force (MAF) in excess of 1800 lbs. System shall include all hardware, two safelink lanyards attached to the horizontal life line system complete with body harnesses.

1.4 SUBMITTALS

- A. Product Data: Submit manufacturer's printed product data, installation instructions, use limitations and recommendations for window washing equipment and accessories specified.
 - 1. Provide certifications stating that products comply with specified requirements.
- B. Shop Drawings: Provide shop drawings for fabrication, layout, and configuration of the system, including all installation and erection of all parts of the work, and including all accessories. Shop drawings shall meet the relevant health and safety standards of all agencies having jurisdiction. Shop drawings shall identify necessary restrictive and non-restrictive working usage notes and general safety notes.
 - 1. Provide plans, elevations, and details of anchorages, connections and accessory items. Provide installation templates for work installed by others.
 - 2. Show the general arrangement of all components, clearances and principal dimensions, assemblies of equipment.
 - 3. Include weights of components and maximum loads and spacings.
 - 4. Include the seal of a qualified Professional Engineer.
 - 5. As part of shop drawings, include a safety inspection log book for yearly inspections.
 - 6. Submit two copies of as-built shop drawings showing anchor locations and details. This drawing shall be posted near exits onto the roof.
- C. Operation and Maintenance Manuals: Submit operation and maintenance data.
- D. Welding certificates.
- E. Qualification Data: For professional engineer.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Firm shall be specialized in the design, fabrication, and installation of fall arrest roof anchors.
 - 1. Equipment supplier/installer shall carry specific liability insurance, products and completed operations insurance, in an amount of not less than \$2,000,000.00. This insurance shall cover the failure of the safety anchor itself.
- B. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer.
- C. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of metal fabrications that are similar to those indicated for this Project in material, design, and extent.

- D. Regulatory Requirements: Strictly comply with applicable codes, regulations, and requirements of authorities having jurisdiction, including but not limited to the following:
 - 1. OSHA 1910.66 Subpart F, "Powered Platforms" and Subpart I "Fall Protection".
 - 2. OSHA 1910.66 Subpart D, "Walking and Working Surfaces and Personal Protective Equipment (Fall Protection Systems).
 - 3. 29 CFR 1910 - Occupational Safety and Health Standards and 29 CFR 1910.306 - Specific Purpose Equipment and Installations.
 - 4. AISC Specifications.
- E. Welding: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1, "Structural Welding Code--Steel."
 - 2. AWS D1.2, "Structural Welding Code--Aluminum."
 - 3. AWS D1.3, "Structural Welding Code--Sheet Steel."
 - 4. AWS D1.6, "Structural Welding Code--Stainless Steel."

1.6 DELIVERY, STORAGE, AND PROTECTION

- A. Deliver equipment and accessories in accordance with manufacturer's recommendation. Store and handle in strict compliance with manufacturer's instructions and recommendations. Protect from damage.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Provide products of one of the following manufacturers that meet or exceed specified requirements, or approved equal.:
 - 1. Guardian.
 - 2. Hayn Enterprises, LLC.
 - 3. Pro-Bel Enterprises, Limited.
 - 4. Thaler Metal USA Inc.
 - 5. Or equal
- B. Other manufacturers producing equipment meeting this specification may be submitted for Architect's review provided that proposed substitute supplier can demonstrate qualifications and experience and furnish evidence of insurance coverage.

2.2 EQUIPMENT

- A. General: Provide equipment required to satisfy design requirements and proposed equipment layout.
- B. Tieback Lifeline Anchors:
 - 1. System shall resist pullout with force of 5000 pounds in any direction.
 - 2. Safety anchoring eye, bolts and connecting hardware shall be fabricated of stainless steel.
 - 3. Steel bases shall be fabricated of hot-dipped galvanized mild steel.

2.3 MATERIALS

- A. Exposed Structural Components: Stainless steel, conforming to ASTM A 276 or A 666, Type 304, with minimum yield strength of 42 ksi.
- B. Cast-In-Place Inserts: Stainless steel, conforming to ASTM A 276 or A 666, Type 304.
- C. Nonexposed Steel: Steel, conforming to ASTM A 36, Type 350W with 50 ksi yield strength for HSS and 43 ksi for plate and all other sections; hot dip galvanized to ASTM A 123 or A 153.
- D. Exposed Non-Structural Aluminum: Aluminum, conforming to ASTM B 221 or ASTM B 209, seamless spun type, alloy and temper as recommended by manufacturer.
- E. Cold-Formed Sections: Steel tubing, conforming to ASTM A 500, yield strength 55 ksi, tensile strength 66 ksi.

2.4 FLASHINGS

- A. Provide proper flashing at anchors. Coordinate with Division 07 Roofing Sections.

PART 3 - EXECUTION

3.1 ERECTION AND INSTALLATION

- A. Erect and install tieback and lifeline anchor systems complete in accordance with the approved shop drawings and all applicable codes, and in accordance with manufacturer's recommendations.

3.2 ERECTION SERVICES

- A. The fall arrest equipment manufacturer shall provide supervisory erection services, including the services of a registered professional engineer to oversee installation of equipment.

END OF SECTION

SECTION 122216
VERTICAL LOUVER BLINDS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Vertical louver blinds.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 061000 - ROUGH CARPENTRY for wood blocking and grounds for mounting horizontal louver blinds and accessories.

1.3 SUBMITTALS

- A. Samples: Submit single sample of each vertical blind type to Architect for approval, to determine manufacturer and product type and quality. Include complete line of fabric samples for Architect's selection and approval.
- B. Product Data: Submit complete product data to Architect for approval, including complete manufacturer's specifications and installation instructions sufficient to fully describe the proposed materials and installation.
- C. Do not order materials or begin installation work until Architect's approval of submittals has been obtained.

1.4 STANDARDS AND CERTIFICATION

- A. Vertical louver blinds, including fabric materials, shall meet or exceed the fire hazard requirements of the local Fire Department.
- B. Provide manufacturer's written certifications of compliance with these requirements.

PART 2 - PRODUCTS

2.1 VERTICAL LOUVER BLINDS

- A. Vertical louver blinds shall be "Sol-R-Veil Vertical Blinds", manufactured by Sol-R-Veil Inc., Bronx, NY 10451-5435; or equal by Hunter Douglas or Levelor.
 - 1. Blind shall be of the traverse and rotating vane type.
 - 2. Blind shall have top track to support vanes with bottom vane spacing chains.
 - 3. Blind shall be chain operated with controls on one side.
 - 4. Vanes shall be stacking to one side.
 - 5. Each blind shall include concealed mounting brackets and hardware.
- B. Blinds located in all Media Center and Administration Glazing.
- C. Fabric vanes shall 3-1/2 in. wide fabric constructed of clean cut, unraveled fray. Vane shall have 1 in. face trim with fabric finish.
- D. Fabric shall be comprised of an nonflammable woven vinyl yarn woven, meeting NFPA Class A requirements. Color and weave shall be selected by the Architect from manufacturer's full range of available colors.
- E. Each blind shall be made to tilt and traverse, one way draw in the direction indicated on the Drawings with the placement of the controls as indicated on the Drawings.

PART 3 - EXECUTION

3.1 MEASUREMENTS

- A. Vertical louver blind installer shall field-measure finished openings.
- B. Each opening and blind shall be numbered. In multiple installations, opening shall be considered as space required for each blind. Numbers may be stamped on unexposed surface of openings. Blinds shall have corresponding brass or aluminum plates with numbers fastened to back of head track.

3.2 INSTALLATION

- A. Vertical louver blinds shall be delivered and installed by approved manufacturer or authorized dealer or agent, in strict accordance with approved Submittals, including manufacturer's published installation instructions and recommendations, submitted to Architect as specified hereinbefore.
- B. Install tracks in accordance with manufacturer's recommendations. Install all components level, true, and properly centered in, and fitted to, window openings. Upon completion, adjust for proper operation.

3.3 PROTECTION AND CLEAN-UP

- A. Protect vertical louver blinds against defacement, warpage of vanes, and bending of rails. Warped or damaged vanes shall be removed from the site immediately and replaced. Scratches and other defacements shall be repaired or replaced, subject to Architect's approval.

- B. Upon completion, remove cartons, wrappings, and debris, and leave work areas broom clean.

END OF SECTION

SECTION 122400

SHADES

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Roller shades with manual and motorized shade operators.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 061000 - ROUGH CARPENTRY for wood blocking and grounds for mounting roller shades and accessories.
 - 2. Division 26 - ELECTRICAL for electrical service and connections for motor operators, controls, limit switches, and other powered devices and for system disconnect switches for motorized shade operation.

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Include styles, material descriptions, construction details, dimensions of individual components and profiles, features, finishes, and operating instructions.
 - 2. Motorized Shade Operators: Include operating instructions.
 - 3. Motors: Show nameplate data, ratings, characteristics, and mounting arrangements.
- B. LEED Submittals:
 - 1. Building Product Disclosure and Optimization, Material Ingredients:
 - a. Option 1, Material Ingredient Reporting: For shadecloth, submit Cradle to Cradle (C2C) certifications, Health Product Declarations (HPD), or Declare product labels.

2. Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.2–2017.
 - a. For shade cloth materials, submit GreenGuard Gold certification.
- C. Shop Drawings: Show location and extent of roller shades. Include elevations, sections, details, and dimensions not shown in Product Data. Show installation details, mountings, attachments to other work, operational clearances, and relationship to adjoining work.
 1. Motorized Shade Operators: Show locations and details for installing operator components, switches, and controls. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.
 2. Wiring Diagrams: Power, system, and control wiring.
- D. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 1. Ceiling suspension system members and attachment to building structure.
 2. Ceiling-mounted or penetrating items including light fixtures, air outlets and inlets, speakers, sprinklers, recessed shades, and special moldings at walls, column penetrations, and other junctures of acoustical ceilings with adjoining construction.
 3. Shade mounting assembly and attachment.
 4. Size and location of access to shade operator and adjustable components.
 5. Minimum Drawing Scale: 1/4 inch = 1 foot.
- E. Samples for Initial Selection: For each colored component of each type of shade indicated.
 1. Include similar Samples of accessories involving color selection.
- F. Samples for Verification:
 1. Complete, full-size operating unit not less than 16 inches wide for each type of roller shade indicated.
 2. For the following products:
 - a. Shade Material: Not less than 12-inch- square section of fabric, from dye lot used for the Work, with specified treatments applied. Show complete pattern repeat. Mark top and face of material.
 - b. Valance: Full-size unit, not less than 12 inches long.
- G. Window Treatment Schedule: For roller shades. Use same designations indicated on Drawings.
- H. Product Certificates: For each type of roller shade, signed by product manufacturer.
- I. Qualification Data: For Installer.
- J. Product Test Reports: For each type of roller shade.
- K. Maintenance Data: For roller shades to include in maintenance manuals. Include the following:
 1. Methods for maintaining roller shades and finishes.

2. Precautions about cleaning materials and methods that could be detrimental to fabrics, finishes, and performance.
3. Operating hardware.
4. Motorized shade operator.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. Source Limitations: Obtain roller shades through one source from a single manufacturer.
- C. Fire-Test-Response Characteristics: Provide roller shade band materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 1. Flame-Resistance Ratings: Passes NFPA 701.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver shades in factory packages, marked with manufacturer and product name, fire-test-response characteristics, and location of installation using same designations indicated on Drawings and in a window treatment schedule.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install roller shades until construction and wet and dirty finish work in spaces, including painting, is complete and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Field Measurements: Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operable glazed units' operation hardware throughout the entire operating range. Notify Architect of discrepancies. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.7 EXTRA MATERIALS (ATTIC STOCK)

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Rollers Shades: Before installation begins, for each size, color, texture, and pattern indicated, full-size units equal to 5 percent of amount installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
1. Draper Inc.
 2. Hunter Douglas Contract; Nysan Shading Systems.
 3. Lutron Electronics Co.
 4. MechoShade Systems, Inc.
 5. Or equal

2.2 ROLLER SHADES

- A. Shadecloth: 100% polyester or PLA biopolymer fabric, PVC-free.
1. Solar Control Type: Provide transparent type shadecloth with percentage as acceptable to Architect.
 2. Black-Out Type: Provide black-out type shadecloth at selective locations as directed by Architect.
 3. Fire-Test-Response Characteristics: Passes NFPA 701, with no chemical flame retardants.
 4. Building Product Disclosure and Optimization, Material Ingredients: Cradle to Cradle (C2C) Gold certification.
 5. Low-Emitting Materials: Provide adhesives and sealants in compliance with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
 - a. GreenGuard Gold certification.
 6. Bottom Hem: Straight.
 7. Colors: To be selected by Architect from manufacturer's full range.
- B. Rollers: Electrogalvanized or epoxy primed steel or extruded-aluminum tube of diameter and wall thickness required to support and fit internal components of operating system and the weight and width of shade band material without sagging; designed to be easily removable from support brackets; with removable spline fitting integral channel in tube for attaching shade material.
1. Direction of Roll: Regular, from back of roller
- C. Mounting Brackets: Galvanized or zinc-plated steel.
- D. Fascia: L-shaped, formed-steel sheet or extruded aluminum; long edges returned or rolled; continuous panel concealing front and bottom of shade roller, brackets, and operating hardware and operators; length as indicated on Drawings removable design for access.
- E. Top/Back Cover: L-shaped; material and finish to match fascia; combining with fascia and end caps to form a six-sided headbox enclosure sized to fit shade roller and operating hardware inside.

- F. Pocket-Style Headbox: U-shaped, formed-steel sheet or extruded aluminum; long edges returned or rolled; with a bottom cover consisting of slot opening of minimum dimension to allow lowering and raising of shade and a removable or an openable, continuous metal access panel concealing shade roller, brackets, and operating hardware and operators within.
- G. Bottom Bar: Steel or extruded aluminum. Provide concealed, by pocket of shade material, internal-type bottom bar with concealed weight bar as required for smooth, properly balanced shade operation.
- H. Mounting: As indicated on Drawings, mounting permitting easy removal and replacement without damaging roller shade or adjacent surfaces and finishes.
- I. Hold-Down Brackets and Hooks or Pins: Manufacturer's standard for anchoring roller shade bottom in place and keeping shade band material taut.

2.3 ROLLER SHADE FABRICATION

- A. Product Description: Roller shade consisting of a roller, a means of supporting the roller, a flexible sheet or band of material carried by the roller, a means of attaching the material to the roller, a bottom bar, and an operating mechanism that lifts and lowers the shade.
- B. Concealed Components: Noncorrodible or corrosion-resistant-coated materials.
 - 1. Lifting Mechanism: With permanently lubricated moving parts.
- C. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings as follows, measured at 74 deg F:
 - 1. Shade Units Installed between (Inside) Jambs: Edge of shade not more than 1/4 inch from face of jamb. Length equal to head to sill dimension of opening in which each shade is installed.
 - 2. Shade Units Installed Outside Jambs: Width and length as indicated, with terminations between shades of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.
- D. Installation Brackets: Designed for easy removal and reinstallation of shade, for supporting fascia, roller, and operating hardware and for hardware position and shade mounting method indicated.
- E. Installation Fasteners: No fewer than two fasteners per bracket, fabricated from metal noncorrosive to shade hardware and adjoining construction; type designed for securing to supporting substrate; and supporting shades and accessories under conditions of normal use.
- F. Color-Coated Finish: For metal components exposed to view, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

2.4 MANUALLY OPERATED SHADES WITH SINGLE ROLLERS

- A. Chain-and-Clutch Operating Mechanisms: With continuous-loop bead chain and clutch that stops shade movement when bead chain is released; permanently adjusted and lubricated.
 - 1. Bead Chains: Manufacturer's standard.

- a. Loop Length: Full length of roller shade.
- b. Limit Stops: Provide upper and lower ball stops.

2.5 MOTORIZED ROLLER SHADE OPERATORS

- A. General: Provide factory-assembled motorized shade operation systems designed for lifting shades of type, size, weight, construction, use, and operation frequency indicated. Provide operation systems of size and capacity and with features, characteristics, and accessories suitable for Project conditions and recommended by shade manufacturer, complete with electric motors and factory-prewired motor controls, remote-control stations, remote-control devices, power disconnect switches, enclosures protecting controls and all operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with the building electrical system.
- B. Comply with NFPA 70.
- C. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6 with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc.
- D. Electric Motors: UL-approved or -recognized, totally enclosed, insulated motor, complying with NEMA MG 1, with thermal-overload protection, brake, permanently lubricated bearings, and limit switches; sized by shade manufacturer to start and operate size and weight of shade considering service factor or considering Project's service conditions without exceeding nameplate ratings.
 - 1. Service Factor: According to NEMA MG 1, unless otherwise indicated.
 - 2. Motor Characteristics: Single phase, 220 V, 60 Hz.
 - 3. Motor Mounting: Within manufacturer's standard roller enclosure.
- E. Position of Motor and Electrical Connection: Right side of roller, as determined by hand of user facing shade from inside, unless otherwise indicated on Drawings.
- F. Remote Controls: Electric controls with NEMA ICS 6, Type 1 enclosure for recessed or flush mounting. Provide the following devices for remote-control activation of shades:
 - 1. Control Stations: Keyed, maintained-contact, three-position, switch-operated control station with open, close, and off functions. Provide two keys per station.
 - a. Color: White.
 - 2. Group Control Stations: Maintained-contact, three-position, rocker-style, wall switch-operated control station with open, close, and center off functions for single-switch group control.
 - a. Color: White
 - 3. Microprocessor Controls: Electronic programmable means for setting, changing, and adjusting control features. Provide unit isolated from voltage spikes and surges.
- G. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop shade at fully raised and fully lowered positions.

- H. Operating Function: Stop and hold shade at any position
- I. Operating Features: Include the following:
 - 1. Group switching with integrated switch control; single face plate for multiple switch cut-outs.
 - 2. Capable of interface with audiovisual control system.
 - 3. Capable of accepting input from building automation control system.
 - 4. Override switch.
 - 5. Backup gear and crank operator for manual operation during power failures with detachable handle, length required to make operation convenient from floor level

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, other conditions affecting performance.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 ROLLER SHADE INSTALLATION

- A. Install roller shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions, and located so shade band is not closer than 2 inches to interior face of glass. Allow clearances for window operation hardware.
- B. Connections: Connect motorized operators to building electrical system.

3.3 ADJUSTING

- A. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.4 CLEANING AND PROTECTION

- A. Clean roller shade surfaces after installation, according to manufacturer's written instructions.
- B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that roller shades are without damage or deterioration at time of Substantial Completion.

- C. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain roller shades. Refer to Division 01 Sections for contract closeout procedures.

END OF SECTION

DIVISION 123000

MANUFACTURED CASEWORK

PART 1 - GENERAL

1.1 SUMMARY

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.
- B. Examine all other sections of the Specifications for requirements that affect work of this Section whether or not such work is specifically mentioned in this Section.
- C. Coordinate work with that of all other trades affecting or affected by work of this Section. Cooperate with such trades to assure the steady progress of all work under the Contract.

1.2 DESCRIPTION OF WORK

- A. Furnish and install casework and accessories as shown and listed on drawings and specified herein. Includes all countertop types, epoxy sinks, cutouts for plumbing, HVAC and electrical fixtures, splashes, supports, shelving, and filler panels necessary for a complete casework installation.
- B. Furnish plumbing fixtures, including nipples and locknuts, required for mounting in or on the equipment. Furnish all fixtures unattached and unassembled to the Plumbing Subcontractor appropriately tagged and identified with installation information. Casework Contractor shall provide and install epoxy resin integral sinks. Casework shall coordinate and provide cut outs for plumbing utilities.
- C. Furnish sinks, including overflows, plugs, strainers and tailpieces which occur above the floor and required for mounting in the casework. Furnish sink basins installed in the cabinet work. Furnish fittings unattached and unattached and unassembled to the Plumbing Subcontractor tagged and identified with installation information.
- D. Furnish electrical service fixtures, including nipples, required for mounting in or on casework and equipment. Furnish all fixtures unattached and unassembled to the Electrical Subcontractor appropriately tagged and identified with installation information.
- E. Furnish light fixtures including switches, integral convenience receptacles and other components, as required, for installation in or on the casework.
- F. Furnish all items requiring air exhaust.
- G. Furnish and provide all materials and services as may be additional and/or separately described under other sections of this Specification.

- H. Verify and confirm all building dimensions relative to the casework and equipment items to be furnished and installed taking actual field measurements at the job site prior to fabrication.
- I. Provide joint sealant for joints between work of this section and adjacent construction. Joint sealant materials and procedures shall comply with Section 079200 – JOINT SEALANTS.
- J. Coordinate installation of sealants to allow final Painting by Section 099000 to occur in sequence with final painting of adjacent surfaces.

1.3 RELATED WORK UNDER OTHER SECTIONS

- A. Connecting all plumbing and electrical service fixtures to building services.
- B. Furnishing, installing, and connecting all service lines, traps, drain lines, vents, piping and conduit within equipment, in service turrets or tunnels, trough, under, or along the backs of work surfaces.
- C. Furnishings of all building plumbing, electrical and vented roughing-in within the area of the equipment to accommodate all services called for in the Specifications and shown on the Drawings.
- D. Furnishings of framing and reinforcement for walls, floors, and ceilings to support the casework and equipment and all blocking and material grounds required for proper anchoring of casework and equipment.
- E. Furnishing, installing, and connecting all ductwork, blowers, blower platforms, switches and other exhaust system components from the equipment duct stub connection to the atmosphere on all equipment requiring mechanical exhausting.

1.4 RELATED SECTIONS:

- A. Section 018110 - SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- B. Section 018111 - SUSTAINABLE DESIGN REFERENCE DOCUMENTS.
- C. Section 055000 – Metal Fabrications
- D. For Blocking within walls where indicated: Section 061000 – Rough Carpentry
- E. Millwork, trim and custom Cabinetry: Section 064020 – Interior Architectural Millwork
- F. Section 079200 - Joint Sealers.
- G. Section 096500 - Resilient Flooring: Base material.
- H. Section 099000 – Painting and Coating
- I. Section 114500 – Residential Appliances
- J. Division 22 and 23 – Plumbing and HVAC for Sinks and service fixtures, service waste lines, connections, and vents.
- K. Division 26 – Electrical for electrical service fixtures.

1.7 DEFINITIONS

- A. Exposed: In casework, surfaces visible when drawers and opaque doors (if any) are closed; behind clear glass doors; bottoms of cabinets 42" or more above finished floor; and tops of cabinets less than 78" above finished floor.
- B. Semi-Exposed: In casework, surfaces that become visible when opaque doors are open, or drawers are extended; bottoms of cabinets more than 30" or tops of cabinets less than 42" above finished floor.

1.8 DESIGN REQUIREMENTS

- A. Manufacturers shall provide AWI custom grade construction.
 - 1. Casework shall meet or exceed load tests as outlined in ANSI A161.1.
 - 2. Manufacturers shall comply, per architect's specifications, with special requirements related to the Americans with Disabilities Act, Title II Regulations, ADA Standards for Accessible Design and Massachusetts Architectural Access Board Regulations, MAAB.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED v4 Green Building Rating System, of the US Green Building Council. Refer to Section 01 8113 Sustainable Design Requirements – for compliance with certain prerequisites and credits needed for Project to obtain "LEED Version 4 for Building Design and Construction" (LEED v4 BD+C) Silver certification based on USGBC's LEED v4 BD+C: Schools.
- C. Items shall suit space conditions and where equipment is intended to occupy fixed locations, the physical conditions, roughing-in, etc., of the building are to control the absolute sizes and arrangements.
- D. Filtered fume hoods shall function as enclosed workspaces, designed to capture, contain and filter fumes, vapors and particulate matter produced or generated within the enclosure.
- E. Filtered fume hood control module shall include sash sensor that can be programmed to function as either constant blower speed or proportional blower speed based on sash opening position.

F. Project Standard:

1. Stock numbers of items of equipment, as indicated on Equipment Schedules, have been selected from one manufacturer's catalog for design purposes only.
2. Items of equipment by approved manufacturers (other than the Project Standard) need not be identical to the items indicated, however, they must satisfy the same requirements, provide the same facilities (doors, drawers, etc.) and fulfill the same functions as the specified items.
3. Where items of equipment by approved manufacturers (other than Project Standard) are not of the same lengths as the items indicated, adjust equipment layouts as follows:
 - a. Where items of equipment are against the wall and confined by walls at both ends.
 - 1) Add a filler panel that does not exceed 2 inches, and/or
 - 2) Increase the length of one or more units, and/or
 - 3) Add an additional item of equipment.
 - b. Where items of equipment are freestanding or are not confined by walls at both ends, adjust as above, except that overall length need only be approximate.
4. Conditions where toe-kicks of two corner cabinets come together, provide filler to conceal the gap.
5. Materials used by all manufacturers must meet the requirements of these specifications; it is understood that the manufacturers vary in joinery; these specifications describe the construction offered by the first-named manufacturer.
6. It is intended that wood dowels shall secure cabinet body components and glue, but the use of concealed interlocking mechanical fasteners as approved by AWI 1600B-S-4.A especially designed for use with particleboard shall be acceptable.
7. Where items of equipment by approved manufacturers (other than the Project Standard) necessitate changes in mechanical or electrical services, said changes shall be the Contractor's responsibility and shall be coordinated and accomplished at no additional cost to the Owner.

1.9 SUBMITTALS

- A. Prepare and submit Shop Drawings in accordance with requirements of Division 1 and in the manner described therein.
- B. Shop Drawings:
 1. Indicate casework locations, large-scale plans, elevations, cross sections, rough in and anchor placement dimensions, tolerances and clearances required.
 2. Include utility rough-in dimensions.
- C. Product Data:
 1. Submit component dimensions, configurations, construction details, joint details, and attachments, utility and service requirements and locations.
 2. Include associated components, including grommets, sink, sink fittings, appliances, fume hoods and other items as indicated on drawings.
 3. Include manufacturer's literature.
- D. Samples (per Architect's request): shall be prepared and submitted in accordance with requirements of Division 1.
 1. Wood samples
 2. High Pressure Laminate samples
 3. Finish samples
 4. Edge banding
 5. Hinges
 6. Pulls

7. Catches
 8. Grill
 9. Grommets
 10. Fume hood exterior finishes, interior lining and epoxy work tops.
- E. Sample Unit:
1. When requested by the Architect, submit full-size cabinet, as herein specified.
 2. Submitted cabinets may be used in the Project.
- F. Coordination Submittals:
1. Copy same submittals to other trades and other Prime Contractors who have connecting or adjacent Work for coordination review and for locating their Work connected to or adjacent to the equipment specified herein.
- G. Provide test results per ANSI A161.1.
- 1.10 QUALITY ASSURANCE
- A. Qualifications:
1. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum ten years of experience.
- B. Mockup (per architect's request):
1. Section 014000 - Quality Requirements: Mockup requirements.
 2. Construct full size mockup including base and upper cabinet, complete with drawers, door and adjustable shelf.
 3. Locate where directed by Architect.
 4. Incorporate accepted mockup as part of Work.
- 1.11 DELIVERY, STORAGE AND HANDLING
- A. Provide warranty for manufactured product.
- B. Accept casework on site; inspect on arrival for damage.
- C. Store and handle casework in a manner to prevent damage and deterioration.
- D. All casework and lab fume hoods shall be blanket wrapped or covered with cardboard and foam for protection during shipping.
- E. Protect finished surfaces of the Fume Hood during handling and installation with protective covering of polyethylene film or another suitable material.
- F. Store casework in a protected dry area, provided by the owner, away from direct sunlight, with temperature 70 degrees F (+/- 10) and relative humidity of 25–50%. Casework shall be stored elevated above moisture contact. Storage area must be isolated from outside weather conditions. Casework shall be installed only in areas where temperature and humidity are maintained within the above-stated range. Storage and installations in conditions other than those stated above will void all product warranties.

G. All cabinets to be complete with hardware attached (or provided loose where not practical to ship attached) with all necessary scribes, fillers and molding; all items to be marked on outside of packaging for identification.

H. Protect exposed finish surfaces by suitable means.

I. Coordinate size of access and route to place of installation.

1.12 SEQUENCING AND SCHEDULING

A. Coordinate casework installation with location and installation of service utilities.

B. Sequence installation to accommodate required utility connections.

1.13 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install fume hoods until building is enclosed, wet work and utility roughing-in are complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Locate concealed framing, blocking, and reinforcements that support fume hoods by field measurements before being enclosed and indicate measurements on Shop Drawings.

1.14 WARRANTY

A. The manufacturer shall guarantee the casework against defects in materials and workmanship for a period of one year from date of acceptance.

B. Warranty shall cover the repair or replacement, at the manufacturer's discretion of defective material.

C. Non-manufactured components and accessories, such as faucets, fittings, and fume hoods, shall be covered by the specific manufacturer's warranty.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Drawings and standards for casework and equipment are based on Plastic Laminated casework as manufactured by Case Systems, 2700 James Savage Road, Midland, Michigan 48642 (989) 496-9510 and/or approved dealers.

1. The specifications outline a quality standard necessary for required performance. Only products which meet or exceed these standards, shall be considered acceptable.

2. Acceptance of a bid for the required materials does not indicate product acceptance. All manufacturers must meet minimum construction requirements, must submit necessary materials and documentation for approved substitution and must revise their construction as necessary to meet the standards set forth herein.

3. Acceptable Manufacturers:

a. Case Systems, Midland, MI 48642

- b. Stevens Industries, 704 West Main Street, Teutopolis, IL 62467
- c. Advanced Cabinet Systems (ACS), 1629 S. Joaquin Drive, Marion, IN 46953
- d. OnePointe Solutions, 1112 Swenson Blvd., Elgin, TX 78621
- e. Or equal

2.2 PLASTIC LAMINATE FACED CABINETS

A. Particleboard Core:

1. All particleboard shall be ULEF/FSC M-3i and shall meet or exceed all requirements as set by ANSI-A208.1-2016.

Modulus of Rupture	2176 psi
Modulus of Elasticity	362600 psi
Internal Bond	73 psi
Linear Expansion	0.40%
Thickness Tolerance	+/- 0.008"
Face Screw Holding	225 pounds Min

- a. MR (Moisture Resistant)/FSC Core shall be:
 - 1) Interior-Grade moisture resistant particleboard.
 - 2) Meet or Exceed M-3i Grade, according to ANSI-A208.1-2016.
- b. Surface Material:
 - 1) Acceptable laminate color, pattern, and finish as either scheduled or otherwise indicated on drawings or as selected by Architect from manufacturer's standard types and nominal thickness including:
 - a) Vertical surface decorative grade VGS.
 - b) General purpose decorative grade HGS.
 - c) Cabinet decorative liner grade CLS.
 - d) Non-decorative backer grade BKH.
 - e) Thermally fused melamine laminate
 - f) Chemical resistant decorative laminate
 - 2) Edge banding: shall be 3mm PVC applied utilizing hot melt adhesive and radiused by automatic trimmers.
 - 3) Adhesive:
 - a) PVA – Adhesive shall be ULEF mechanically applied.
 - b) EVA – Adhesive shall be mechanically applied.

2.3 Hardware

A. Hinges:

1. Standard hinges for wall cabinets, base cabinets and tall cabinet doors shall be of the heavy-duty, wrap around, institutional type with five-knuckles, non-removable pin and rounded ends. Hinges for overlay door construction shall be 2-³/₄" high by .095" thick and hinges for lipped Radius construction shall be 2-¹/₂" high by .072" thick. Hinge swing shall be

270 degrees. Hinges shall be finished in colors selected from the manufacturer's standard colors. The door of the tall cabinet against a wall shall be provided with 90- degree swing.

2. Offset kitchen cabinet type, plain butt hinges or hinges with removable pins will not be acceptable.
3. Hinge screws shall be concealed when door is closed.
4. Doors up to 36" in height shall have 2 hinges and doors over 36" in height shall have three hinges.

B. Pulls

1. ADA Compliant wire pulls shall be satin aluminum bent wire style with 4" centers.

C. Drawer Slides

1. Standards slides shall be single extension, bottom-mounted, epoxy powder-coated with positive in stop, out-stop and out keeper, lift-out disconnect, stay-closed design. Slides shall have captive nylon rollers both front and rear, 100-pound load rating and manufacturer's lifetime warranty.
2. File and paper storage drawers shall have full extension, 3-part, progressive opening slide, with 150-pound load rating, zinc-coated or epoxy-coated at manufacturer's option.

D. Catches

1. Elbow Catches shall be magnetic, spring activated and come complete with strike plate.
2. Door catches shall be magnetic at base and wall, 2 rollers at tall.
3. Roller Catch shall have heavy-duty, spring-loaded roller, with molded plastic bumper mounted at door top to keep door securely shut.
4. Chain pulls shall be zinc plated, spring-loaded door catch used to hold door securely shut.
5. Chain stops shall be zinc plated, looped chain used to limit door swing as specified, mounting plated at each end of chain shall use (4) #7 x 5/8" screws to secure to cabinet door and end panel. They shall be on cabinets at adjoining walls and where casework and countertops can interfere with the door swing of the tall cabinet.

E. Adjustable Shelf supports

1. Shelf supports shall be twin-pin design with anti-tip up shelf restraints for both ¾" and 1" and provide slot to mechanically fasten shelf to clip. Load rating shall be minimum 300 pounds per shelf support.

F. Locks

1. Locks shall be of a removable core design with 5-disk tumbler. Cabinets to be keyed alike per room, each room keyed differently and master-keyed, unless otherwise noted on drawings.
2. Two keys shall be provided per lock.

3. Six master keys shall be provided.
 4. Provide locks on all doors and drawers on base cabinets, wall cabinets, tall storage and wardrobe units. Keyed alike per room and mastered key.
- G. Wardrobe Rod and Mirror
1. Wardrobe rod and flanges to be 1 1/16" inch chrome rod supported by chrome flanges.
 - a. Rod: Knappe & Vogt #750 1
 - b. Flange: Knappe & Vogt #632
 2. At all wardrobe cabinet, provide an 1/8" thick 12" wide x 18" high break and impact resistant acrylic mirror with a shelf on a rod side door.
- H. Tote Tray: Tote tray shall be tan, high impact resistant polystyrene, with label holder permanently attached to face of tray. Supported by individual polycarbonate channels mounted to cabinet ends and partitions with two integral 5mm diameter pins and secured with one-euro style screw. Height adjustable on 32mm (1-1/4") centers. Quantity and locations as indicated on the drawings.
- I. Grills: shall be provided as specified on the drawings. Manufacturer's standard grills shall be installed on both sides of door openings to provide a uniform appearance. Punched metal louvers with exposed sharp edges shall not be permitted.
- J. Grommets at Counters: Molded-plastic grommets and matching plastic caps with slot for wire passage shall be provided where shown on drawings.
- K. Adjustable Shelf Standards and Supports: [BHMA A156.9, B04071; with shelf rests, B04081] [BHMA a156.9, b04102; with shelf brackets, B04112].
1. Standards: 304 stainless steel standard with brushed finish, 5/8" inch wide; Knappe & Vogt, 87SS Standard, or equal.
 2. Bracket for 18 inches deep shelves: 12 gauge cold-rolled steel with electro-zinc-plated and clear lacquered finish, with polyamide resin lock lever; Knappe & Vogt, 187 Shelf Bracket with Anochrome finish, or equal.
- L. Plastic Laminated Countertop Support bracket: Extruded aluminum complying with ASTM B221, 6063-T5, TIG welded along both 45 degree mitered sides and across the back. Ground and debur all edges. Provide pre-drilled holes for mounting. One-piece construction rated to support 450 lbs.
1. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to the following or equal:
 - a. A&M Hardware
 - b. Richelieu, North Reading, MA
 - c. Rangine Corporation, Millis, MA
 2. Basis of Design Products: Rakks Counter Bracket by Rangine Corporation, Needham, MA or equal.
 - a. Model EH-1824 for 30 inch deep tops
 - b. Model EH-1818 for 25 inch deep tops
 - c. Model EH-1212 for 18 inch deep tops.

- M. "H" Bar Assembly at Science Demo Table: The rods and fitting shall be manufactured from machined aluminum. The rods shall be $\frac{3}{4}$ " in diameter. The rod socket shall provide a taper fit design. The apparatus rod assembly shall consist of (2) 46" upright rods, (1) 36" crossbar and (2) adjustable clamps.

2.4 SPECIALTY CABINETS

- A. Flammable Cabinet (FA-CAB) and Corrosive Cabinet (CO-CAB): Basis of design, SciMatco, SC8080 Flammable Cabinet and SC8082 Corrosive Cabinet. Dimension: 30" wide x 18-1/2" deep x 32-1/2" high. Construction: Cabinets shall be constructed of 1" multiply, exterior grade plywood, finished with chemical resistant paint. All joints shall be rabbeted and shall be fastened in two directions with wood screws. Doors shall be constructed with a rabbeted overlap of not less than 1 inch. Doors shall be equipped with a means of latching, and hinges shall be constructed and mounted in such a manner as to not lose their holding capacity when subjected to fire exposure. A raised sill or pan capable of containing a 2-inch depth of liquid shall be provided at the bottom of the cabinet. The cabinets shall meet and exceed all applicable NFPA and OSHA standards and shall be UL listed.
- B. Safety Goggle Cabinet (G-CAB): Basis of design, Sellstrom #2000, Constructed of heavy gauge steel with baked white enamel finish and vandal-resistant locking double doors. Equipped with rack to hold up to forty (40) pairs of safety goggles. Built-in germicidal lamp fully shielded to prevent accidental exposure from front. Automatic timer shall control sanitizing period. Provide 7-6" grounded plug and cord. Dimensions: 24-1/2" wide x 9-1/2" deep x 32" high.

2.5 FABRICATION

- A. General Cabinet Body Construction:
1. Cabinet box style shall be reveal overlay.
 2. Cabinet core shall be ULEF/FSC particleboard. At sink cabinets the cabinet box core shall be MR/FSC board.
 3. Bottoms and ends of cabinets, and tops of tall cabinets and tops and bottoms of wall cabinets (all structural components) shall be $\frac{3}{4}$ " thick.
 4. All panels shall be manufactured with balanced construction.
 5. Fixed interior components such as fixed shelves, dividers and cubicle compartments shall be full $\frac{3}{4}$ " thick and attached with concealed interlocking mechanical fasteners.
 6. Cabinet body exterior and exposed surfaces shall be VGS.
 7. Cabinet body interior surfaces shall be thermally fused.
 8. Cabinet body front edge shall be 3mm PVC. Mounting stretchers shall be $\frac{3}{4}$ " thick structural components fastened to end panels and back by mechanical fasteners and shall be concealed by the cabinet back.
 9. Backs of cabinets shall be $\frac{1}{2}$ " thick surfaced both sides for balanced construction and fully captured on both sides and bottom.
 10. A 5mm diameter row hole pattern 32mm (1-1/4") on center shall be bored in cabinet ends for adjustable shelves. This row hole pattern shall also serve for hardware mounting and replacement and/or relocation of cabinet components.
- B. Base Cabinets:
1. All base cabinets, except sink cabinets, shall have a solid $\frac{3}{4}$ " thick sub-top of core (as specified above), fastened between the ends with interlocking mechanical fasteners.
 2. Sink cabinets shall be constructed with a vertical high head rail at both the front and rear of the cabinet. A false drawer head will be applied over the front high head rail.
 3. A fixed bottom and removable back shall be provided for all sink cabinets.

4. At location as indicated on the drawings provide cabinets without base/floor to accommodate plaster traps (provided by PLUMBING). Recessed toe-kicks for these cabinets shall be integrated/attached to the cabinet doors.
- C. Tall Cabinet Construction:
 1. All tall cabinets shall be provided with an intermediate fixed shelf to maintain internal dimensional stability under heavy loading conditions as well as an intermediate $\frac{3}{4}$ " thick stretcher located behind the back panel and be secured between the cabinet ends with mechanical fasteners. The stretcher shall be secured to the shelf through the back with #8 x 2" plated flat head screws.
- D. Wall Cabinet Construction:
 1. A lower $\frac{3}{4}$ " thick stretcher shall be located behind the back panel and attached between the end panels with mechanical fasteners. The stretcher shall also be secured through the back and into the cabinet bottom. Wall cabinets over 36" in width shall receive a fixed intermediate partition.
 2. All wall cabinet exterior bottoms shall match exterior surface.
 3. All wall cabinet tops shall be $\frac{3}{4}$ " thick.
- E. Tall and Wall Cabinet edges shall be .020" PVC at top of end panels, stretchers and back.
- F. Tall and Wall Cabinet exterior top finish shall be CLS to match interior.
- G. Base, Tall, Wall and Upper door reveal shall be 3mm reveal.
- H. Toe Base of Cabinet:
 1. Individual based shall be constructed of MR/FSC board factory applied to base and tall cabinets and shall support and carry the load of the end panels, and the cabinet bottom, directly to the floor. The base shall be let in from the sides and back of the cabinet to allow cabinets to be installed tightly together and tight against a wall, also to conceal to the top edge of applied vinyl base molding (not supplied by casework manufacturer). There shall be a front to back center support for all based over 30" wide.
 2. Toe base height shall be 102mm (nominal 4 inch) high unless otherwise indicated on the drawings.
- I. Drawer Fronts and Solid Doors:
 1. All drawer fronts and solid door components shall be $\frac{3}{4}$ " ULEF/FSC particleboard surfaced both sides with balanced construction. The drawer fronts and solid door surfaces shall be HPL grade VGS on the exterior and interior. The interior to match inside surface color. The door and drawer front edge shall be 3mm PVC.
- J. Drawer Boxes:
 1. Drawer box constructed with a full $\frac{1}{2}$ " thick core shall be pre-finished hardwood veneer plywood non-racking, non-deflecting platform bottom that is carried directly by "L" shaped, bottom mount drawer glides.
 2. Drawer slides shall be secured with 1-1/4" long screws driven through the platform and into the sides. Drawer box sides, backs, sub-front, and bottom shall be 1/2". The top edge shall be nominal 1mm (.020") PVC matching the drawer color. Drawer box corners shall be joined with fluted hardwood dowels and glue spaced at a minimum of 32mm on center. Drawer box fronts shall be removable and attached to drawer box sub-front with screws from inside of drawer. Horizontal parting rails between drawers shall be $\frac{3}{4}$ " thick core, with

balanced surfaces, secured to and further reinforcing cabinet ends. File drawer box shall have full-height sides supporting a heavy-duty support rail for hanging file folders constructed of pre-finished hardwood veneer plywood dovetail drawer boxes.

K. Doors:

1. Solid doors shall be $\frac{3}{4}$ " thick as per paragraph 2.5.I
2. Frame Glazed doors shall be $\frac{3}{4}$ " thick with clear acrylic panels. The panels shall be $\frac{1}{4}$ " thick. Glazing panel shall be set into the doorframe without the use of a separate molding. Glazing shall be held in place with removable stops.

L. Shelves:

1. Adjustable shelves:

- a. Adjustable shelves shall be ULEF/FSC particleboard core with balanced surfaces. Shelves shall be finished with HGS HPL on both sides.
- b. Adjustable shelves in closed cabinets shall be $\frac{3}{4}$ " shelves, 1" for shelves over 36" wide cabinets.
- c. All adjustable shelves in open cabinets shall be 1" thick, except for special use cabinets such as mail, cubbies, or locker type units.
- d. Adjustable shelf edge shall be 3mm PVC on front and back and .020" on sides.
- e. Shelves shall be full depth and adjustable on 32 mm centers.

2. Fixed:

- a. Fixed shelves shall be ULEF/FSC particleboard core with balanced surfaces. Shelves shall be finished with HGS HPL on both sides with 3mm PVC edge band.
- b. Fixed shelves in closed cabinets shall be $\frac{3}{4}$ " shelves, 1" for shelves over 36" wide cabinets.
- c. All fixed shelves in open cabinets shall be 1" thick, except for special use cabinets such as mail, cubbies, or locker type units.

M. Cubbies:

1. Top bottom, sides, and shelves shall be $\frac{3}{4}$ " thick MR/FSC board finished with VGS, vertical surface decorative laminate with 3mm vinyl edge.
2. Backs shall be $\frac{1}{2}$ " thick MR/FSC board surface both sides for balanced construction and fully captured on both sides and bottom.
3. External hanger rails, $\frac{3}{4}$ " thick and a minimum of 3" high, shall be mechanically fastened to sides, top and bottom.
4. Subbases to be separate, water-resistant plywood containing no added urea formaldehyde, with concealed fastening to cabinet bottom.
5. At open cubbies, provide single coat hook on back and sides as indicated on the drawings.
6. The doors at 3-Tier (6 compartment) cubbies shall be $\frac{3}{4}$ " thick as per paragraph 2.5.I

N. Countertops

1. High Pressure Plastic Laminated Top

- a. Countertop shall be constructed of 1" thick solid core conforming to NEMA Standard LD3-2005 and ANSI A161.2-1998.
- b. HGS high pressure laminate on horizontal surface bonded to M-3i MR/FSC particleboard core with PVA rigid adhesives. Core shall be balanced with backing grade BKL.
- c. All joints shall be secured with biscuits for alignment and tight joint fasteners.
- d. Provide 4" high back splashes with thickness matching countertop thickness where shown and at all ends abutting walls and adjacent cabinets.
- e. Provide 3mm PVC edging at countertop and back splashes.

- f. Incorporate maximum lengths of 12' HPL buildup particleboard top where possible.
- g. Colors: Provide up to 4 different colors as selected by Architects. The colors shall be selected from a full range of Formica, Nevamar, or Wilsonart colors available from the laminate manufacturer.

2. Epoxy Resin Countertops and Curbs

- a. Basis of Design: "Epoxy Resin" by Durcon, A Wilsonart Company.
- b. Physical Properties:
 - 1) Flexural Strength: Not less than 10,000 psi
 - 2) Modulus Elasticity: Not less than 2,000,000 psi
 - 3) Hardness (Rockwell M): Not less than 100
 - 4) Water Absorption (24 hours): Not more than 0.02 percent.
 - 5) Heat Distortion Point: Not less than 260 degrees Fahrenheit.
- c. Chemical Resistance: Epoxy-resin materials shall show no effect when tested with indicated reagents according to NEMA LD 3, test procedures 3.4.5.
- d. The countertops shall be 1 inch thick, unless otherwise shown on the Drawings, with drip grooves provided on the underside at all exposed edges. Further, all exposed edges except as indicated below, shall be eased at front top edge and at vertical corners. Form field joints using manufacturer's recommended adhesive, with joints inconspicuous in finished work.
- e. 4" separate curbs shall be the same thickness as the tops, bonded to the surface of the top to form a square joint.
- f. Provide drop-in sinks with color to match adjacent work surface. Mold sinks from thermosetting epoxy resin. Mold interior corners to radius. Slope sink base to drain outlet.
- g. Sink cutouts shall be machined to accommodate sink lips.
- h. Joints shall be maximum 1/8", bonded with epoxy grout.
- i. Finish exposed edges. Exposed corners shall be eased slightly.
- j. Acceptable alternate manufacturers:
 - 1) American Epoxy Scientific, Mountain Home, AR
 - 2) Prime Industries, Inc., Lisle, IL
 - 3) One Pointe Solutions, Austin, TX

3. Galvanized Steel Countertops

- a. Countertop shall be of 18 gauge galvanized steel backed by 5/4" plywood substrate. Galvanized sheet shall be used in largest possible sheets with as few joints as necessary. Shop seams and corners shall be welded, ground smooth and polished. All features of the countertop shall be individually shaped or welded to the work surface with joints and surfaces polished.
- b. Countertop shall be 1-1/2" thick with melamine backing. The edge shall be 1/8" radius all top edges and vertical corners.
- c. Four inch curbs shall be the same thickness as the top, and shall be integral to the countertop.
- d. Finish: ASTM 123 hot-dipped zinc coating.

2.6 FINISH AND PERFORMANCE REQUIREMENTS

A. Source Quality Testing

1. Base Cabinet testing shall be done in accordance with SEFA 8PL Recommended Practices Paragraph 4.0 Base Cabinets. All testing shall be performed by SEFA certified independent testing facilities.
2. Door testing shall be done in accordance with SEFA 8PL, Recommended Practices Paragraph 5.0 Doors.
3. Drawer testing shall be done accordance with SEFA 8PL, Recommended Practices Paragraph 6.0 Drawers.
4. Cabinet surface finish test shall be done accordance with SEFA 8PL, Recommended Practices Paragraph 8.0, Cabinet Surface Finish Tests.
5. Edge delaminating tests shall be done accordance with SEFA 8PL, Recommended Practices Paragraph 8.5, Edge Delaminating Tests.
6. Wall, Counter Mounted, and Tall Cabinets Load Test shall be done in accordance with SEFA 8PL, Recommended Practices Paragraph 9.0.

- B. Joint Sealant: Provide joint sealants in accordance with requirements of Section 079200 – Joint Sealants at locations indicated herein below in Part 3.

2.7 SINKS AND SERVICE FIXTURES

A. Epoxy Resin Sinks and Miscellaneous Fittings:

1. Epoxy resin sinks and drain fittings shall be non-glaring, and black in color. Sinks shall be molded to one degree dishing to outlets in bottom and have a minimum of 1/2" thick side walls and 5/8" thick bottoms. Materials shall be heat resistant up to 350 degrees F., water absorption of 0.05 in 24 hours, tensile strength of 12,700 P.S.I., and a density of 1.90 GR/CC and a Rockwell-M-Hardness rating of 114. Sinks and drain fittings, specified herein, shall be equal to that manufactured by the Durcon Company, Dayton, Ohio. Refer to drawing Legends.
2. Provide epoxy resin sink covers for a quantity of 50% of epoxy resin sinks being supplied.
3. Only products meeting or exceeding this minimum standard shall be acceptable.
4. The receiving of a bid does not necessarily indicate the manufacturer's standard product is acceptable.
5. Acceptable Alternative Manufacturers:
 - a. American Epoxy Scientific, Mountain Home, AR.
 - b. Prime Industries, Inc, Lisle, IL.
 - c. One Pointe Solutions, Austin, TX

- B. Plumbing Fixtures: Plumbing fixtures shall be of modern design and materials specifically designed for laboratory use equal to Chicago Faucet Company, T & S Brass Company, or Water Saver Faucet Company, with chrome laboratory type finish, unless otherwise noted. All resin sinks shall be furnished with 1-1/2" I.P.S. outlets, overflows, tailpiece, and bead adaptor of black epoxy resin. All water fixtures of the gooseneck type and any others normally furnished or so specified with laboratory serrated hose nozzles shall be furnished with integral vacuum breakers. Fixtures shall be all from one manufacturer. Refer to drawing legends. All faucets shall be provided with 0.5 GPM flow regulators. All plumbing fixtures shall conform to State and Local Plumbing Regulations.

C. Stainless Steel Sink and Fixtures:

1. Stainless steel sinks and tops shall be welded, ground and polished of #18-gauge nickel bearing #18-8 Type 302 stainless steel. Exposed surfaces to be 180 grit-No. 4 uniform satin finish. Interior corners of sink shall be rounded to minimum of 1- 3/4" radius. Sound dampening shall be applied to underside of all sink basins and tops. Stainless

steel sinks shall be self-rimmed and shall have a raised edge of 7/16". All handicap-accessible sinks shall be 5"D and provided with rear drain outlets.

2. Sinks and fittings are based upon products manufactured by Just Manufacturing Company, 9233 King Street, Franklin Park, Illinois 60131. Faucets are based upon products manufactured by Chicago Faucet Company.
 - a. Type S/F-SS1
 - 1) Sink Fixture: JCDGUX-1830-A: Single compartment, 10 1/2" deep. Construction of 18-gauge type 304 stainless steel. Top deck and interior surfaces polished to a non-porous Hand-Blended Just Finish, with a highlighted bowl rim. Fully coated underside insulates for sound and reduces condensation. Straight-sided compartment with large radius corners.
 - 2) Faucet: Chicago #2300-8ABCP
 - 3) Drain: Elkay #LK-35, 3-1/2 inch strainer with basket and neoprene stopper. CP brass 1-1/2 inch OD tailpiece.
 - b. Type S/F-SS2
 - 1) Sink Fixture: US-ADA-1830-A: Single compartment, 5-1/2 inch deep, ADA Compliant. Seamless die-drawn construction of 18 gauge, type 304, 18-8 stainless steel. Interior and top surfaces polished to a non-porous "hand-blended just finish" with highlighted bowl rim. Smooth, fully coated underside insulates for sound and reduces condensation. Certified to ASME A112.19.3/CSA B45.4, Canadian Standards Association (CSA), Uniform Plumbing Code (UPC), International Plumbing Code (IPC).
 - 2) Faucet: Chicago #2300-8ABCP
 - 3) Drain: Elkay #LK-35, 3-1/2 inch strainer with basket and neoprene stopper. CP brass 1-1/2 inch OD tailpiece
 - c. Type S/F-S01
 - 1) Sink Fixture: Epoxy resin drop-in sink with drain and tail piece. Dimension: 25"L x 15"W x 11"D.
 - 2) Faucet: Chicago #930-369CP
 - d. Type S/F-S02
 - 1) Sink Fixture: Epoxy resin ADA drop-in sink with drain and tail piece. Dimension: 25"L x 15"W x 5"D.
 - 2) Faucet: Chicago #930-369CP
 - e. Electrical Fixtures:
 - 1) Electrical fixtures shall be furnished with required holes or cut-outs where indicated on all cabinetwork or table tops. Pedestal boxes shall be cast aluminum type. Plates shall be polished stainless steel. Receptacles shall be equal to Arrow-Hart #GF-5342, duplex, 20.0 amp./120V GFI protected type; unless otherwise specified. Light fixtures shall be furnished complete per these specifications mounted in place with switch and lamps. Refer to drawing Legends.
 - f. Type F-EW:
 - 1) Dual purpose Eyewash/ Drench Hose: Deck mounted.
 - 2) The unit shall meet the provision of ANSI Z358.1 as both an eyewash and drench hose. The unit shall have flip top spray heads mounted side by side

with internal filters and flow control. The unit shall be equal to Guardian G5022. Provide flexible stainless steel hose and thermostatic mixing valve (TM2A equal to Guardian G3600LF) to provide tepid water.

- 3) Locate in counters adjacent to sinks where indicated on the drawings.

2.8 FUME HOOD

A. Ductless Fume Hood (FH-1)

1. Basis of design: Erlab, Captair Ductless filtering fume hood, Model 483.
2. Dimensions: 50" wide x 29-1/2" deep x 59-5/8" High.
3. Air Flow: 660 m3/h – 390 CFM
4. Sash type: Reverso – adjustable sash.
5. Filtration module: Polypropylene
6. Structure: Corrosion resistant electro-galvanized steel coated with anti-acid polymer. Side and front panels to be made of chemical resistant acrylic.
7. Worksurface: Trespa Toplab
8. Technology Communication by LED pulsation system: fan settings, usage timer, fan failure, face velocity, automatic filter saturation detection.
9. Filtration Technology:
 - a. Carbon Filter: Allows protection of your samples from VOCs.
 - b. HEPA (High Efficiency Particulate Air) Filters: a 99.99% efficient particulate filter for chemical powders and particulates.
 - c. Particulate Pre-filter: Protect particulate filters from dust contained in the laboratory environment
10. Internal lighting: LED lighting >650 Lux
11. Connectivity: RJ45 cable connection
12. Electronic Anemometer: to indicate the face velocity of the unit.
13. eGuard app: App for remote control to monitor the hood, change the settings, and deliver safety alerts immediately to Android and iOS devices.
14. ADA Compliant base: Basis of design: Labconco, 3730410. The base shall be constructed of 1.75" tubular, epoxy-coated steel frame with rear cross bar supports. The base dimension shall be 50.5" wide x 29" deep. The base shall feature telescoping legs with height adjustability in 1" increments from 27.5" to 34.5". The casters shall be 5" diameter, made of non-marking polyurethane and feature toe-locking and bearings for quiet operation.
15. Only products meeting or exceeding this minimum standard shall be acceptable.
16. Acceptable Alternative Manufacturers:
 - a. Air Master Systems Corporation: 6480 North Center Drive, Muskegon, MI 49441.
 - b. Air Science: 120 6th Street, Fort Myers, FL 33907
 - c. AirClean Systems: 2179 East Lyon Station Road, Creedmoor, NC 27522

B. Benchtop Bio Safety Filtered Fume Hood (FH-2)

1. Basis of design: Erlab, Captair Bio 391 Smart – 1C1P
2. Dimensions: 40" wide x 26-3/8" deep x 41-3/4" High.
3. Air Flow: 245 m3/h – 144 CFM
4. Sash type: Hinged sash
5. Filtration module: Polypropylene
6. Structure: Corrosion resistant electro-galvanized steel coated with anti-acid polymer. Side and front panels to be made of chemical resistant acrylic.
7. Particulate Filter (1P): HEPA H14: The filtration technology traps particulates larger than 0.1 µm with 99.995% efficiency according to the MPPS method set forth in the EN 1822-1 standard.

8. Carbon Filter (1C): Allows protection of your samples from VOCs.
9. Particulate Pre-filter: Protect particulate filters from dust contained in the laboratory environment.
10. Worksurface: Trespa Toplab
11. Bactericidal UV Lights: 15W – Wavelength: 254nm; 0.13 mJ/ s/cm²
12. Internal lighting: LED - IP 44 - 6000K; 950 lux
13. Connectivity: RJ45 cable connection
14. Electronic Anemometer: Anemometer monitors a drop in pressure that indicates pre-filter or filter replacement is required
15. eGuard app: Mobile app for real time remote control of Smart devices
16. Side panel utility ports: For allow electrical cables and/or fluid lines to enter the enclosure with ease - 2 per unit
17. ADA Compliant base: Basis of design: Erlab 391 Bechcap. 39.6" wide x 38.3" deep x 34.9" High. 304 stainless steel construction.

2.9 COLORS

- A. Selected by the architect from the manufacturer's standard color selection. Color selection shall include no less than ten standard colors.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install casework, components, and accessories under manufacturer representative's supervision whenever possible, using skilled labor especially trained for this work. Cabinets are to be installed in a professional and industry-accepted manner, including all scribes, moldings, and necessary trim, complete and in operating condition according to outlined plans and specifications.
- B. Set casework items plumb and square, securely anchored to building structure.
- C. Furnish and install casework complete with trim strips, fillers, backs, chase covers as required for finished assembly. All cutouts required for plumbing and electrical fixtures and utilities shall be made by the casework supplier.
- D. Coordinate electrical cut outs within casework.
- E. Field touch-up blemishes to original finish as approved and accepted by the Architect.
- F. Provide joint sealant for joints between work of this section and adjacent construction. Joint sealant materials and procedures shall comply with section 079200 – Joint Sealants.
- G. Coordinate installation of sealants to allow final Painting of installed sealants by Section – 099000 to occur in sequence with final painting of adjacent surfaces.

3.2 ADJUSTING

- A. Adjust doors, drawers, hardware and other moving or operating parts to function smoothly.
- B. Adjustable shelves shall be installed consistent with the shop drawings.

3.3 CLEANING

- A. All packaging material and installation-related debris shall be placed in an owner-provided dumpster on the construction site. The work area shall be left broom clean.
- B. Installer shall remove all pencil marks, adhesive and sawdust resulting from this work.
- C. Casework shall be cleaned inside and out to remove the installation related dust and debris.

3.4 PROTECTION OF INSTALLED CONSTRUCTION

- A. Protect specified work from damage during transportation to the project site, storage at the site, during installation, and after completion until acceptance by the Owner.
- B. Protect adjacent work under other contracts during installation until completion of specified work. After completion, the Contractor for other work shall be responsible for the protection of his work until acceptance by the Owner.
- C. Damaged work as determined by the Architect, shall be repaired or replaced as determined by and to the satisfaction of the Architect.

END OF SECTION

SECTION 124810
ENTRANCE FLOOR MATS AND FRAMES

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Carpet-type matting.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Section 033000 - CAST-IN-PLACE CONCRETE for concrete work, including forming, placing, and finishing concrete floor slabs, and for concrete materials for grouting and filling around and under recessed mats and frames.
 - 2. Division 08 Section "Aluminum -Framed Entrances and Storefronts - Exterior": for abutting aluminum thresholds at aluminum entrances.
 - 3. Division 08 Section "Door Hardware": for abutting thresholds.
 - 4. Division 09 – Finishes: for various abutting finish flooring.
 - 5. Division 09 Section "Rubber Wall Base": for abutting finish wall base.

1.3 REFERENCES

- A. ASTM International,
 - 1. C 1028 Standard Test Method for Determining the Static Coefficient of Friction of Ceramic Tile and Other Like Surfaces by the Horizontal Dynamometer Pull-Meter Method
 - 2. D 2859 Standard Test Method for Ignition Characteristics of Finished Textile Floor Covering Materials
 - 3. E 662 Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials
- B. Consumer Products Safety Commission (CPSC) FF 1-70: Pill Test.
- C. Department of Commerce (DOC) FF 1-70: Pill Test.
- D. Massachusetts:

1. 521 CMR - Massachusetts Architectural Access Board Regulations.
2. 780 CMR - Massachusetts State Building Code

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. LEED Submittals:
 1. Low-Emitting Materials, General Emissions Evaluation: Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010.
 - a. For adhesives, submit test results, including TVOC emissions and VOC content.
 - b. For wet-applied products, submit volume used.
- C. Shop Drawings: Show the following:
 1. Items penetrating floor mats and frames, including door control devices.
 2. Divisions between mat sections.
 3. Perimeter floor moldings.
 4. Certified test reports showing compliance with specified performance characteristics and physical properties.
- D. Samples for Verification: For each type of product indicated.
 1. Floor Mat: 12-inch- square, assembled sections of floor mat.
 2. Frame Members: 12-inch- long Sample of each type and color.
- E. Maintenance Data: For floor mat and frames to include in maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Source Limitations: Obtain floor mats and frames through one source from a single manufacturer.
- B. Accessibility Requirements: Provide installed floor mats that comply with Section 4.5 in the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG)" and the Massachusetts Architectural Access Board.
- C. Installer: Installer should be highly experienced in performing work of this section, having previously done work similar to that required for this project.
- D. Compatibility and adhesion test reports: Submit test reports confirming adhesive's effectiveness with the product(s) specified.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Where possible, verify actual measurements by field measuring before fabrication and include measurements in shop drawings. To avoid construction delays, coordinate field measurements and fabrication schedule based upon construction progress. COORDINATION
- B. Coordinate size and location of recesses in concrete with installation of finish floors to receive floor mats and frames.

1.7 WARRANTY

- A. Warranty shall be prepared and submitted in accordance with Division 01 Section "Warranties".
 - 1. Entrance tiles shall be fabricated free of defects in materials and workmanship in accordance with the General Conditions, and the manufacturer shall offer a 5-year extended warranty against defects in materials and workmanship.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Carpet-Type Matting (Designated on the drawings as WOC):
 - a. Tarket: Centiva
 - b. Mats Inc.
 - c. Milliken: Obex.
 - d. Or equal
- B. Basis of Design: "Trilogy Tile" as manufactured by Mats Inc., HARWICH, MA.

2.2 MATERIALS

- A. Polypropylene Modular Matting Tiles:
 - 1. Construction: 100% post consumer recycled solution-dyed polypropylene fiber with bitumen backing
 - 2. Tile size: 19 11/16" x 19 11/16" square
 - 3. Case pack: 20 tiles per case (54 square feet)
 - 4. Thickness: 1/8"
 - 5. Weight: 22 ounces/square yard
 - 6. Colors: WOC-1 to be selected by Architect in up to three colors from manufacturers full range of colors.
 - 7. Performance: Physical properties of the entrance matting shall conform to the following minimums:
 - a. Safety: Surface flammability ASTM D2859: Pass (equal to CPSC FF 1-70 and DOC FF 1-70)
 - b. Smoke density ASTM E662: Pass (flaming and non-flaming)

c. Performance:

- | | | |
|----|------------------------------|--------------------------------|
| 1) | Slip resistance | ASTM C1028: 0.63 wet; 0.65 dry |
| 2) | Sound insulation | ISO 140-8: > 24 dB |
| 3) | Static electrical propensity | EN 1815: < 2 kV |
| 4) | Color fastness to light | ISO 105 B02: 6 |
| 5) | Color fastness to water | ISO 105 E01: 5 |
| 6) | Color fastness to rubbing | ISO 105 X12: dry: 4; wet: 4 |
| 7) | Color fastness to shampoo | BS 1006: 5 |

8. LEED:

- a. MR Credit 4: 52.05% post-consumer recycled
- b. IEQ Credit 4.1: Release Bond VOC: 0 g/L
- c. IEQ Credit 4.3: Diagonal Tile Is Green Label Plus certified.
- d. IEQ Credit 5: Diagonal Tile is designed for semi-permanent installation.

B. Accessories:

- 1. Filler for patching, smoothing, and leveling substrate: Low VOC Portland cement-based latex underlayment acceptable to flooring manufacturer, equal to the following:
 - a. Ardex, Inc., products "Feather Flash" and "Ardex SD-P".
 - b. Quikrete Companies, product "Fast-Set Underlayment 1248".
 - c. Silpro Masonry Systems Inc., product "Masco Latex Cement".
 - d. Or equal.
- 2. Adhesive for mounting bitumen backing: Mats Inc. Release-Bond Low VOC Adhesive as recommended by manufacturer.
- 3. Aluminum framing: Aluminum ramping transitions to comply with ADA where applicable and as recommended by manufacturer.
- 4. Vinyl reducer: Ramp-Flex PVC reducer transition strip where applicable and as recommended by manufacturer.

2.3 FABRICATION

- A. General: Where possible, verify sizes by field measurement before shop fabrication.
- B. Floor Mats: Shop fabricate units to greatest extent possible in sizes as indicated. If not otherwise indicated, provide single unit for each mat installation; do not exceed manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning. Where joints in mats are necessary, space symmetrically and away from normal traffic lanes. Miter corner joints in framing elements with hairline joints or provide prefabricated corner units without joints.

2.4 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrate for compliance with requirements for location, sizes, minimum recess depth, and other conditions affecting installation of floor mats and frames.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install recessed mat frames to comply with manufacturer's written instructions. Set mat tops at height recommended by manufacturer for most effective cleaning action; coordinate top of mat surfaces with bottom of doors that swing across mats to provide clearance between door and mat.
 - 1. Install necessary shims, spacers, and anchorages for proper location and secure attachment of frames.
 - 2. Install grout and fill around frames and, if required to set mat tops at proper elevations, in recesses under mats. Finish grout and fill smooth and level.

3.3 PROTECTION

- A. After completing frame installation and concrete work, provide temporary filler of plywood or fiberboard in recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.
- B. Defer installation of floor mats until Project is near Substantial Completion.

END OF SECTION

SECTION 126600
TELESCOPING STANDS

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Attention is directed to the Contract and General conditions and all Sections within Division 1 – GENERAL REQUIREMENTS, which are hereby made a part of this Section of the Specifications.
- B. Examine all other Sections of the Specifications for requirements affect work of this Section whether or not such work is specifically mentioned in this Section.
- C. Coordinate work with that of all other trades affecting, or affected by work of this Section. Cooperate with such trades to assure the steady progress of all work under the Contract.

1.2 SUMMARY

- A. The Work of this Section includes, but is not limited to, the following:
 - 1. Motorized, wall-attached telescoping bleachers.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council
 - 1. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
 - 2. Refer to Section 018111, SUSTAINABLE DESIGN REFERENCE DOCUMENTS.
- C. Related work includes but is not limited to the following work covered in other sections:
 - 1. Wood flooring at gymnasium: Section 096466 – Wood Athletic Flooring.
 - 2. Finish painting, except as specified herein: Section 099000 – Painting and Coating.
 - 3. Gymnasium equipment, except as specified herein; Section 116600 – Athletic Equipment.
 - 4. Rough-in and final connection of electrical work: Section 260000 – Electrical.
 - 5. Bracing and support framing for wall-attached telescoping bleachers: Section 054000 – Cold-Formed Metal Framing.

1.3 PERFORMANCE REQUIREMENTS

- A. General: Engineer, fabricate and install telescopic seating systems to support the following loads without exceeding allowable design working stresses of materials involved, including anchors and connections.
- B. Seat Assembly: Bleachers shall support, in addition to their own weight, the following:

1. Uniformly distributed live load: Not less than 100 pounds per square foot of gross horizontal projection.
 2. All seat and footboard members shall be designed for live loads of not less than 120 pounds per linear foot.
 3. Bleachers shall resist a horizontal sway force applied to the seats in a direction parallel to their length of 24 pounds per linear foot and a force of 10 pounds per linear foot perpendicular to length of seats.
- C. Railings, posts and sockets shall be designed to withstand 50 pounds per foot acting outward at top rail and 25 pounds per foot acting outward at mid-rail, applied separately.
- D. Units shall comply with all applicable codes.

1.4 SUBMITTALS

- A. Prepare and submit the following submittals in accordance with the requirements of Section 013300 – Submittals.
- B. LEED Submittal: For each product specified, complete the PRODUCT DATA REPORTING FORM for LEED v4 PRODUCTS – See Section 018110 – SUSTAINABLE DESIGN REQUIREMENTS. All columns of information must be completed, and back-up documentation provided for all attributes being claimed as pertaining to the following credits:
1. MR Credit: Building Product Disclosure and Optimization (BPDO) – Environmental Product Declarations (EPD); See Section 018110 - 2.3B.
 2. MR Credit: Building Product Disclosure and Optimization (BPDO) – Sourcing of Raw Materials; See Section 018110 - 2.3C.
 3. MR Credit: Building Product Disclosure and Optimization (BPDO) – Material Ingredients; See Section 018110 - 2.3D.
- C. Product Data: Submit manufacturer's product data demonstrating that products meet the requirements specified herein.
- D. Shop Drawings; Submit Shop Drawings of all telescoping bleacher work for Architect's approval before fabrication.
1. Shop Drawings shall be at not less than 1/4" scale with details of fabricated items at 1/2" scale or larger.
 2. Show all dimensions, details of construction, details of installation, electrical connections, relation of adjoining work, reinforcement, welds, fastenings, anchorage and specifications of shop finishes.
 3. Show special graphics and logo.
 4. Take field measurements where required.
 5. Do no work without approved Shop Drawings.
- E. Calculations: Submit certified engineering calculations indicating forces impacting framing in adjacent wall assemblies. Coordinate with Section 054000 - Cold-Formed Metal Framing.
- F. Furnish samples of all materials and finishes requested by Architect.
- G. Qualification Data: For professional engineer licensed in the project location.

1.5 QUALITY ASSURANCE

- A. Certification by a Professional Engineer registered in the Commonwealth of Massachusetts that the equipment meets or exceeds the design criteria specified herein and all applicable Code requirements.

1.6 OPERATING INSTRUCTIONS AND MAINTENANCE MANUAL

- A. Instruct to the Owner's satisfaction such persons as the Owner designates, in the proper operation and maintenance of the equipment and its parts.
- B. Furnish in accordance with requirements of Division 1, operating and maintenance manuals and forward same to the Architect for transmittal to the Owner.
- C. For maintenance purposes, provide Shop Drawings, Specifications and manufacturer's maintenance bulletins for each piece of equipment.
- D. Provide name, address and telephone number of the manufacturer's representative and service company for each piece of equipment, so that service and spare parts can be readily obtained.

1.7 GUARANTEE

- A. Attention is directed to provisions of the GENERAL CONDITIONS regarding guarantees and warranties for work under this Contract.
- B. Manufacturers shall provide its standard guarantees for work under this Section. However, such guarantees shall be in addition to and not in lieu of all other liabilities which manufacturer and Contractor may have by law or by other provisions of the Contract Documents.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with specifications, acceptable manufacturers include but are not limited to the following:
 - 1. Hussey Seating Co.
 - 2. Interkal Inc.
 - 3. Universal Gym Equipment.
 - 4. Or equal.
- B. Basis of Design: Products below are designated in terms of names of products manufactured by Hussey Seating, Inc., to establish the general character and materials required for telescoping seating for this project. Equivalent products by acceptable manufacturers will be approved.
 - 1. Product: MAXAM Telescopic Gym Seat System by Hussey Seating Company
 - a. Model: MAXAM26 Series Telescopic Gym Seats, adjustable row spacing in two inch increments from 22 inches to 26 inches.

- b. Aisle Type: foot level aisles, front steps and intermediate aisle steps.
 - c. Seat Type: 10" Courtside plastic seat modules
 - 1) Seat color finish: As selected by Architect from manufacturers standard colors; allow for three (3) colors in random pattern.
 - 2) Graphics: Large scale decorative graphic logo applied to front vertical surface of seat modules and intermediate aisle steps; StepSign Graphic Logo by Hussey Seating System. Graphics to match artwork supplied by Architect.
 - d. Rail Type: Self-storing end rail and store-in-place aisle hand rails.
 - 1) Rail color finish: As selected by Architect from manufacturer's standard colors.
 - e. Operation: electrical power.
 - 1) Electrical Power System: Integral power with pendant control.
 - f. Partial Open feature for all assemblies
2. Product Description/Criteria:
- a. Assembly Type 1 (North Wall of Gymnasium)
 - 1) Quantity: 2
 - 2) Bank Length: 2 banks at 6'-0" and 1 bank at 16'-6".
 - 3) Aisle Widths: 4'-6"
 - 4) Number of Rows: 17
 - b. Assembly Type 2 (South Wall of Gymnasium)
 - 1) Quantity: 1
 - 2) Bank Length: 2 banks at 6'-0" and 1 bank at 16'-6".
 - 3) Aisle Widths: 4'-6"
 - 4) Number of Rows: 9
 - c. Assembly Type3 (South Wall of Gymnasium)
 - 1) Quantity: 1
 - 2) Bank Length: 1 bank at 6'-0", 1 bank at 4'-6", and 1 bank at 16'-6".
 - 3) Aisle Widths: 4'-6"
 - 4) Number of Rows: 9
 - d. Net Capacity: 1003 net seats total
3. Handicap Seating Provisions: Provide recoverable Flex Row handicapped locations to comply with ADA, as noted on drawings.
4. Special Seating Graphics: Provide contrasting or matching seats to create graphic pattern matching artwork supplied by Architect.
5. Partial Open option capabilities for all Assemblies: Provide a mechanical or electrical system used to specify a pre-determined or designated tier opening via the use of a mechanical or electrical locking system which ensures the integrity of the bleacher system. Partial open configurations that do not use a mechanical or electrical system are not permitted.

2.2 MATERIALS

- A. Lumber: ANSI/Voluntary Product 20, B & B Southern Pine
- B. Plywood: ANSI/Voluntary Product PS1, APA A-C Exterior Grade.
- C. Structural Steel Shapes, Plates and Bars: ASTM A 36.
- D. Uncoated Steel Strip (Non-Structural Components): ASTM A569, Commercial Quality, Hot-

Rolled Strip.

- E. Uncoated Steel Strip (Structural Components): ASTM A570 Grade 33, 40, 45, or 50, Structural Quality, Hot-Rolled Strip.
- F. Uncoated Steel Strip (Structural Components): ASTM A607 Grade 45 or 50, High-Strength, Low Alloy, Hot-Rolled Strip.
- G. Galvanized Steel Strip: ASTM A653 Grade 40, zinc coated by the hot-dip process, structural quality.
- H. Structural Tubing: ASTM A500 Grade B, cold-formed.
- I. Polyethylene Plastic: ASTM D 1248, Type III, Class B; molded, color-pigmented, textured, impact-resistant, structural formulation; as selected by Architect from manufacturer's standard colors. Allow for three (3) colors.
- J. Fasteners: Vibration-proof, of size and material standard with manufacturer.

2.3 UNDERSTRUCTURE FABRICATION

A. Frame System:

- 1. Wheels: Not less than 5" diameter by 1 1/4" with non-marring soft rubber face to protect wood floor surfaces, with molded-in sintered iron oil-impregnated bushings to fit 3/8" diameter axles secured with E-type snap rings.
- 2. Lower Track: Continuous Positive Interglide System interlocks each adjacent CPI unit using an integral, continuous, anti-drift feature and through-bolted guide at front to prevent separation and misalignment. CPI units at end sections of powered banks and manual sections shall contain a Low Profile Posi-Lock LX to lock each row in open position and allow unlocking automatically. Provide adjustable stops to allow field adjustment of row spacings.
- 3. Slant Columns: High tensile steel, tubular shape.
- 4. Sway Bracing: High tensile steel members through-bolted to columns.
- 5. Deck Stabilizer: High tensile steel member through-bolted to nose and riser at three locations per section. Interlocks with adjacent stabilizer on upper tier using low-friction nylon roller to prevent separation and misalignment. Incorporates multiple stops to allow field adjustment of row spacings.
- 6. Deck Support: Securely captures front and rear edge of decking at rear edge of nose beam and lower edge of riser beam for entire length of section.

B. Deck System:

- 1. Section Lengths: Each bank shall contain sections not to exceed 25'-6" in length with a minimum of two supporting frames per row, each section.
- 2. Nose beam and Rear Riser beam: Nose beam shall be continuously roll-formed closed tubular shape of ASTM A653 grade 40, Riser beam shall be continuously roll-formed of ASTM A653 grade 40. Nose and Riser beam shall be designed with no steel edges exposed to spectator after product assembly.
- 3. Attachment: Through-Bolted fore/aft to deck stabilizers, and frame cantilevers.
- 4. Decking: 5/8", AC grade, interior type with exterior glue, 5-ply, all plies Douglas Fir or Southern Pine, as standard with manufacturer, with plugged crossbands, produced in ac

cordance with National Bureau of Standards PS-1-97. Plywood shall be cut and installed with top, center and bottom ply grain-oriented from front of deck to rear of deck (nose beam to riser beam). Adjacent pieces shall be locked together with tongue and groove joint from front to rear of deck. Longest unsupported span: MAXAM 26, 21 ½".

5. Deck End Overhang: Not to exceed frame support by more than 5'-7".

2.4 SEATING FABRICATION

A. Plastic Seat System:

1. Seat Modules: 18" long assembled, injection-molded, high density polyethylene modules which provide scuff resistant textured 10" wide seat surface with ½" minimum interlock on seat and face. Unit structural tested to 360 lbs occupant load.
2. Comfort Profile: Designed with anatomically contoured seat surface using multiple internal reinforcement ribs that allow form-fit deflection for maximum spectator comfort. Cantilevered to the rear to provide not less than 3" smooth toe space beneath the seat.
3. Seat Support: Each plastic seat module shall be supported by internal steel structural members secured against fore/aft movement by 3/8" grade 5 steel fasteners creating a steel-to-steel connection, tying the seat structure firmly to the steel nose beam.
4. Number Plates: Seat module shall have recessed pockets to accept seat number plates.
5. End Caps: Each end of row shall be enclosed with matching end caps. End caps shall be designed flush with end-edge of seat top and provide indent for row letters. Color to match seat top.

2.5 SHOP FINISHES

- A. Understructure: For rust resistance, steel understructure shall be finished on all surfaces with black "Dura-Coat" enamel. Understructure finish shall contain a silicone additive to improve scratch resistance of finish.
- B. Wear Surfaces: Surface subject to normal wear by spectators shall have a finish that does not wear to show different color underneath:
 1. Steel nosing and rear risers shall be pre-galvanized with a minimum spangle of G-60 zinc plating.
 2. Decking shall have use-surfaces to receive both a sealer coat and wear-resistant high gloss clear urethane finish. Decking shall have 0.030" laminated polyethylene wear surface.
 3. Injection Molded plastic seats to be selected from (15) fifteen standard colors. Colors shall be per manufacturer's standards. Allow for three (3) colors.
- C. Railings: Steel railings shall be finished with powder-coated semi - gloss colors.

2.6 FASTENINGS:

- A. Welds: Performed by welders certified by AWS standards for the process employed.
- B. Structural Connections: Secured by structural bolts with prevailing torque lock nuts, free-spinning nuts in combination with lock washers, or Riv-nuts in combination with lock washers.

2.7 ELECTRICAL OPERATION

- A. Integral Power: Furnish and install Hussey PF2, an integral automatic electro-mechanical powered frame propulsion system, to open and close telescopic seating. Integral Power and Control System shall be Underwriters Laboratories, Inc. (UL) approved and listed.
 - 1. Operation shall be with a removable pendant control unit which plugs into seating bank for operator management of stop, start, forward, and reverse control of the power operation.
 - 2. Each Powered Frame unit shall consist of output shaft gear reducer with 6" diameter x 4" wide wheels covered with non-marring 1/2" thick composite rubber. Reducers shall be fitted with 3 phase induction motors which will provide an average operating speed of (46/25) f.p.m.
 - 3. Operating Loads: Each Powered Frame provides (220 / 550) lbs pull force which equals approximately (28 / 35) psi lateral force on the floor..
 - 4. Electrical: Seating Manufacturer shall provide all wiring within seating bank including pendant control.
 - a. Each unit for PF2 is power operated by a 1/2 horsepower, 1725 R.P.M., 208 Volts, 50/60 Hz., three phase 1.25 service factor motor. This motor draws a full load current of 2.2 amperes. Power supply required shall be 120/208 volts three phase 5 wire plus ground service with 20 amps. Motors, housing, and wiring shall be installed and grounded in complete accord with the National Electrical Code.

2.8 ACCESSORIES

- A. Front Aisle Steps: Provide at each vertical aisle location front aisle step. Front steps shall engage with front row to prevent accidental separation or movement. Steps shall be fitted with four non-skid rubber feet each 1/2" in diameter. Blow molded end caps shall have full radius on all four edges. Quantity and location as indicated.
- B. Non-Slip Tread: Provide at front edge of each aisle location an adhesive-backed abrasive non-slip tread surface.
- C. Foot Level Aisles: Provide deck level full width vertical aisles located as indicated.
- D. Intermediate Automatic Rotating Aisle Handrails: Provide single pedestal mount handrails 34" high with terminating mid rail. Permanently attached handrail shall rotate in a permanently mounted socket for rail storage. Rail shall automatically rotate, lock in the use position, unlock and rotate back to the stowed position as the gym seats open and close. Ends of the handrail shall return to the post, and not extend away from it.
- E. Self Storing End Rails: Provide steel self-storing 42" high above seat, end rail with tubular supports and intermediate members designed with 4" sphere passage requirements.
- F. Safety Accessories: Provide the following safety features:
 - 1. Coin Round or Roll all edges of exposed metal on top and underneath Bleacher to eliminate sharp edges. Provide safety ease edges, coined edges, or rounded edges for the bleacher understructure components, including but not limited to, diagonal or X braces and deck support or deck stabilizers. Systems provided with sharp edges or corners, to be rounded off in the field and field painted.

2. Provide plastic end cap on nose metal at Bank ends to close off edges to prevent spectator injury.
 3. Provide plastic end cap on back of deck supports on 1st 7 Rows to prevent spectator injury.
 4. On 1st Row, provide front and side skirt boards any where there is an exposed end to prevent players/balls from sliding underneath the 1st Row.
 5. Provide metal cover over motor chains and wheels to protect chains from debris and provide a safety switch that if cover is taken off the power system will not work.
 6. Provide metal end deck cover on each row to cover exposed edge of plywood at the ends of the bleachers.
 7. Powered frames systems without a metal protective housing, covering drive chain and drive wheels are not permitted under this specification
 8. Top seat flush filler mounted between top seat and rear wall.
 9. Audio-visual warning that activates when bleachers are in motion.
- G. Flex-Row: Provide first row modular recoverable seating units to be utilized by persons in wheelchairs and able-bodied persons. Each Flex-Row unit shall have an unlock handle for easy deployment if wheelchair or team seating access is needed. Unlock handle shall lock the bleacher seats into position when fully opened.
1. Provide a black full-surround steel skirting with no more than $\frac{3}{4}$ " floor clearance for safety and improved aesthetics.
 2. Provide a black injection molded end cap for the nose beam for safety and improved aesthetics.
 3. Provide a mechanical positive lock when the Flex-Row system is in the open and used position.
 4. Flex-Row modular units are designed to achieve multi-use front row seating to accommodate team seating, ADA requirements and facility specific requirements. Flex-Row units are available in modular units from 2 to 7 seats wide as well as full section widths.
 5. Provide Flex-Row modular unit in each bank of bleachers in quantity as required by accessibility regulations.
- H. End Closure Curtains: Provide closure curtains fabricated of vinyl-coated 14oz Polyester fabric on open ends of telescopic seating. Curtains to be permanently attached to wall or rear closure panel and secured to individual rows of seating. Curtain to open with seating unit into taut secure configuration and fold automatically as seating unit closes.
- I. Partial Open Option: All attachments and accessories required for the end user to partially open bleachers.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Verify area to receive telescoping gym seats are free of impediments interfering with installation and condition of installation substrates are acceptable to receive telescoping gym seats in accordance with telescoping gym seats manufacturer's recommendations. Do not commence installation until conditions are satisfactory.

3.2 INSTALLATION

- A. Manufacturer's Recommendations: Comply with telescoping gym seats manufacturer's recommendations for product installation requirements.
- B. General: Manufacturer's Certified Installers to install telescoping gym seats in accordance with manufacturer's installation instructions and final shop drawings. Provide accessories, anchors, fasteners, inserts and other items for installation of telescoping gym seats and for permanent attachment to adjoining construction.
- C. Coordinate with electrical trades for connections to building power.

3.3 ADJUSTMENT AND CLEANING

- A. Adjustment: After installation completion, test and adjust each telescoping gym seats assembly to operate in compliance with manufacturer's operations manual.
- B. Cleaning: Clean installed telescoping gym seats on both exposed and semi-exposed surfaces. Touch-up finishes to restore damage or soiled surfaces.

3.4 PROTECTION

- A. General: Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer to ensure telescoping gym seats are without damage or deterioration at time of substantial completion.

END OF SECTION

SECTION 126623
TELESCOPIC CHAIR PLATFORM

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Wall attached Telescoping Platform Seating includes, either manually or electrically operated systems of multiple-tiered seating rows comprising of seat, deck components, understructure that permits closing without requiring dismantling, into a nested configuration for storing or for moving purposes.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design, measured and documented according to the LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Related Work: The following items are not included in this Section and are specified under the designated Sections:
1. Section 033000 – CAST IN PLACE CONCRETE for leveling requirements
 2. Section 061000 – ROUGH CARPENTRY for in wall blocking
 3. Section 087100 - DOOR HARDWARE for gate interlock.
 4. Section 092110 – GYPSUM BOARD ASSEMBLIES for anchoring, plumbness and support of unit
 5. Section 096516 – RESILIENT FLOORING AND ACCESSORIES.
 6. Division 26 – ELECTRICAL.

1.3 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Engineer, fabricate and install telescopic gym seating systems to the following structural loads without exceeding allowable design working stresses of materials involved, including anchors and connections. Apply each load to produce maximum stress in each respective component of each gym seat unit.
1. Design Loads: Comply with ICC 300
- B. Manufacturer's System Design Criteria:
1. Gymnasium seat assembly; Design to support and resist, in addition to it's own weight, the following forces:
 - a. Live load of 120 lbs per linear foot [162.69 N/m] on seats and decking

- b. Uniformly distributed live load of not less than 100 lbs per sq. ft. [135.58N/m] of gross horizontal projection.
 - c. Parallel sway load of 24 lbs. [32.53 N/m] per linear foot of row combined with (b.) above
 - d. Perpendicular sway load of 10 lbs. [13.56 N-m] per linear foot of row combined with (b.) above
 - 2. Hand Railings, Posts and Supports: Engineered to withstand the following forces applied separately:
 - a. Concentrated load of 200 lbs. [90.72 kg] applied at any point and in any direction.
 - b. Uniform load of 50 lbs. per foot [.344 N/mm²] applied in any direction.
 - 3. Guard Railings, Post and Supports: Engineered to withstand the following forces applied separately:
 - a. Concentrated load of 200 lbs. [90.72 kg] applied at any point and in any direction along top rail.
 - b. Uniform load of 50 lbs. per foot [.344 N/mm²] applied horizontally at top rail and a simultaneous uniform load of 100 lbs. per foot [.689 N/mm²] applied vertically downward.
 - 4. Member Sizes and Connections: Design criteria (current edition) of the following shall be the basis for calculation of member sizes and connections:
 - a. AISC: Manual of Steel Construction
 - b. AISI: Specification for Design of Cold Formed Steel Structural Members
 - c. AA: Specification for Aluminum Structures
- A. NFOPA: National Design Guide For Wood Construction
- 1. Chairs
 - a. Seats:
 - b. Shall be cantilevered, self-centering, automatic three-quarters lift with over center retracting feature for ease of row passage and janitorial access.
 - c. Seat shall be tested and professionally certified through an independent testing laboratory to support and withstand an evenly distributed 600 lb [2669 N] static load without failure or irregularities that would impair usefulness.
 - d. Self-lifting seat shall be tested and professionally certified through an independent testing laboratory to withstand 350,000 operating cycles without failure of seat mechanism or measurable component wear.
 - e. Seat shall be tested and professionally certified to withstand 10,000 impacts of a 40 lb [178 N] sandbag dropped on the center of the seat from each of the following heights: 6"[152mm], 8"[203mm], 10"[254mm], and 12"[305mm]. The rate of impacts shall be approximately 18 per minute with the total quantity of impacts equaling 40,000.
 - 2. Backs:
 - a. Back shall withstand an evenly distributed front or rear static load of 450 lbs [2002 N].
 - b. Back shall be tested and professionally certified to withstand, without failure, 40,000 swinging impacts each to the front and rear of the back by means of two opposing

40 lb. [18 Kg] sandbags. The sandbags shall be moved horizontally and equally for 10,000 cycles each at the following distances of 6"[152mm], 8"[203mm], 10"[254mm], and 12"[305mm] at a rate of 35 cycles per minute.

- c. Back shall withstand, without failure, an evenly distributed Horizontal Traverse Static Load of 200 lbs [890 N] The load shall be applied to the top of the back at a 45-degree angle to the row of seats.

- 3. Armrests shall be tested and professionally certified to withstand, without failure, a 200 lb [890 N] static load applied both perpendicular to and vertically down on the arm.
- 4. Materials (Flammability) shall satisfy applicable test, codes, standards, or requirements as follows:
 - a. Copolymer polypropylene shall have a burn rate of 1 inch [25 mm] per minute or less per ASTM 635.
 - b. Upholstery materials shall meet requirements as set forth in the state of California Bureau of Home Furnishings Technical Bulletin 117.
 - c. Fire-performance Characteristics of Seat Padding: Provide seating that complies with test method: California Technical Bulletin 117.
 - d. Cushioning and padding shall be self-extinguishing as defined in the requirements as set forth in the State of California Bureau of Home Furnishings Technical Bulletin 117.
 - e.

B. Minimum Flooring Requirements:

- 5. Flooring shall be level and rear wall plumb within 1/8" [3mm] in 8'-0 [2438mm]. Maximum bleacher force on the floor, of a 25'-6" [7772] section, shall be a static point load of less than 300 psi [2.068 N/mm²].

1.4 MANUFACTURERS SYSTEM ENGINEERING DESCRIPTION

- A. Structural Performance: Engineer, fabricate and install telescopic gym seating systems to the following structural loads without exceeding allowable design working stresses of materials involved, including anchors and connections. Apply each load to produce maximum stress in each respective component of each gym seat unit.

- 1. Design Loads: Comply with ICC 300

B. Manufacturer's System Design Criteria:

- 1. Seating assembly; Design to support and resist, in addition to it's own weight, the following forces:
 - a. Live load of 120 lbs per linear foot [162.69 N/m] on seats and decking
 - b. Uniformly distributed live load of not less than 100 lbs per sq. ft. [135.58N/m] of gross horizontal projection.
 - c. Parallel sway load of 24 lbs. [32.53 N/m] per linear foot of row combined with (b.) above
 - d. Perpendicular sway load of 10 lbs. [13.56 N-m] per linear foot of row combined with (b.) above

2. Hand Railings, Posts and Supports: Engineered to withstand the following forces applied separately:
 - a. Concentrated load of 200 lbs. [90.72 kg] applied at any point and in any direction.
 - b. Uniform load of 50 lbs. per foot [.344 N/mm²] applied in any direction.
 3. Guard Railings, Post and Supports: Engineered to withstand the following forces applied separately:
 - a. Concentrated load of 200 lbs. [90.72 kg] applied at any point and in any direction along top rail.
 - b. Uniform load of 50 lbs. per foot [.344 N/mm²] applied horizontally at top rail and a simultaneous uniform load of 100 lbs. per foot [.689 N/mm²] applied vertically downward.
 4. Member Sizes and Connections: Design criteria (current edition) of the following shall be the basis for calculation of member sizes and connections:
 - a. AISC: Manual of Steel Construction
 - b. AISI: Specification for Design of Cold Formed Steel Structural Members
 - c. AA: Specification for Aluminum Structures
- C. NFOPA: National Design Guide For Wood Construction.
- Chairs
1. Seats:
 - a. Shall be cantilevered, self-centering, automatic three-quarters lift with over center retracting feature for ease of row passage and janitorial access.
 - b. Seat shall be tested and professionally certified through an independent testing laboratory to support and withstand an evenly distributed 600 lb [2669 N] static load without failure or irregularities that would impair usefulness.
 - c. Self-lifting seat shall be tested and professionally certified through an independent testing laboratory to withstand 350,000 operating cycles without failure of seat mechanism or measurable component wear.
 - d. Seat shall be tested and professionally certified to withstand 10,000 impacts of a 40 lb [178 N] sandbag dropped on the center of the seat from each of the following heights: 6"[152mm], 8"[203mm], 10"[254mm], and 12"[305mm]. The rate of impacts shall be approximately 18 per minute with the total quantity of impacts equaling 40,000.
 2. Backs:
 - a. Back shall withstand an evenly distributed front or rear static load of 450 lbs [2002 N].
 - b. Back shall be tested and professionally certified to withstand, without failure, 40,000 swinging impacts each to the front and rear of the back by means of two opposing 40 lb. [18 Kg] sandbags. The sandbags shall be moved horizontally and equally for 10,000 cycles each at the following distances of 6"[152mm], 8"[203mm], 10"[254mm], and 12"[305mm] at a rate of 35 cycles per minute.

- c. Back shall withstand, without failure, an evenly distributed Horizontal Traverse Static Load of 200 lbs [890 N] The load shall be applied to the top of the back at a 45-degree angle to the row of seats.
- 3. Armrests shall be tested and professionally certified to withstand, without failure, a 200 lb [890 N] static load applied both perpendicular to and vertically down on the arm.
- 4. Materials (Flammability) shall satisfy applicable test, codes, standards, or requirements as follows:
 - a. Copolymer polypropylene shall have a burn rate of 1 inch [25 mm] per minute or less per ASTM 635.
 - b. Upholstery materials shall meet requirements as set forth in the state of California Bureau of Home Furnishings Technical Bulletin 117.
 - c. Fire-performance Characteristics of Seat Padding: Provide seating that complies with test method: California Technical Bulletin 117.
 - d. Cushioning and padding shall be self-extinguishing as defined in the requirements as set forth in the State of California Bureau of Home Furnishings Technical Bulletin 117.
- C. Except as modified by governing codes and by the Contract Documents, comply with the applicable provisions and recommendations of the following:

1.5 REFERENCE

- 1. ICC 300 – Standard for Bleachers, Folding and Telescopic Seating and Grandstands
- 2. American Welding Society (AWS)

1.6 SUBMITTALS

- A. Product to be supplied shall have a current evaluation report issued by ICC Evaluation Services (ICC-ES) certifying that it meets all structural design requirements of the current ICC 300 Standard for Bleachers, Folding and Telescopic Seating, and Grandstands, including all specified load combinations.
- B. Provide Current Welding Certification[s] AWS or CSA.
- C. Provide Installer Name, Current Certification Number and Product Qualifications
- D. Provide Manufacturers' standard warranty documents.
- E. Shop Drawings: For telescoping stands in both stacked and extended positions. Show seat heights, row spacing and rise, aisle widths and locations, assembly dimensions, anchorage to supporting structure, material types and finishes.
 - 1. Electrical: Indicate power supply requirements.
 - 2. Graphic Drawing Proofs & Layouts
- F. Samples: Seat materials and color finish as selected by Architect from manufacturers standard offered color finishes.

1.7 Project Conditions

- A. Field Measurements: Coordinate actual dimensions of construction affecting telescoping bleachers installation by accurate field measurements before fabrication. Show recorded measurements on final shop drawings. Coordinate field measurements and fabrication schedule with construction progress to avoid delay of Work.

1.8 QUALITY ASSURANCE

- A. Installer qualifications: Bleacher installer shall be Factory Certified by the Manufacturer. Proof of Factory Certified Installation Certificate shall be provided.
- B. Service capability: The Bleacher Contractor must be able to show proof of full time service capability by factory certified technicians directly employed by the Bleacher Contractor.
- C. Manufacturer's Warranty: Includes the repair or replacement of the defective product; or defective component thereof, with a comparable product; or component thereof, or a refund of the purchase price prorated over the warranty period.

1. Includes: Labor, materials, and freight for replacement or repairs.
2. Structural Component parts of Understructure Warranty Period: 10 years from Date of Acceptance
3. Decking systems, seating collections, electrical, end closure curtains, surface material finishes Warranty Period 5 years from Date of Acceptance.

1.9 MAINTENANCE AND OPERATION

- A. Instructions: Both operation and maintenance shall be transmitted to the Owner by the manufacturer of the seating or his representative.
- B. Service: Maintenance and operation of the seating system shall be the responsibility of the Owner or his duly authorized representative, and shall include the following:
 1. Operation of the Seating System shall be supervised by responsible personnel who will assure that the operation is in accordance with the manufacturer's instructions.
 2. Only attachments specifically approved by the manufacturer for the specific installation shall be attached to the seating.
 3. An annual inspection and required maintenance of each seating system shall be performed to assure safe conditions. At least biannually the inspection shall be performed by a professional engineer or factory qualified service personnel.

PART 2 - PRODUCTS

2.1 MANUFACURERS

- A. Subject to compliance with specifications, acceptable manufacturers include but are not limited to the following:
 1. Hussey Seating Company, U.S.A.
 2. Irwin Seating Company
 3. Telescopic Seating Systems LLC
 4. Approved Equal
- B. Basis of Design: Products below are designated in terms of names of products manufactured by Hussey Seating Company, USA, to establish the general character and materials required for telescoping seating for this project. Equivalent products by acceptable manufacturers will be approved.
 1. Product: MAXAM+ Telescopic Platform System by Hussey Seating Company
 - a. MAXAM+ Series Telescopic Platform Seats, adjustable row spacing: 33 inches [838].
 - b. MAXAM+ Series Telescopic Platform Seats, adjustable rise: 11 5/8" [295] row rise at any dimensional increments. Variable/ Combination Rise solutions also available upon request. Consult your Hussey Representative for engineering details.
 - c. Aisle Type: Front steps and intermediate aisle steps.
 - (1) Seat Type:
 - (a) Metro Chairs color finish: Manufacturers 19 standard colors.
 - d. Rail Type: Self-storing end rail, store-in-place aisle hand rails, folding aisle hand rails.

- (1) Rail color finish: Standard black
 - e. Operation: Electric
 - (1) Electrical Power System: SELECT: Integral power with pendant Control, motion monitor, and limit switches.
 - f. Platform Type:
 - g. Wall Attached Telescoping Platform
 - h. Chair Quantity: 585 Fixed Seats, 8 Handicap Seats
 - i. Chair Operation: Manual
 - (1) Manual Operation with foot-assist: Chairs shall be ganged in group(s) of two to four, manually raised and lowered with foot-assist. Armrests shall be manually flipped down during raising of chairs.
 - j. Chair Dimensions
 - (1) Seat up envelope: 15 1/8" [384]
 - (2) Seat down envelope: 21 1/2" [546]
 - (3) Seat height: 17 5/8" [448]
 - (4) Armrest height: 25 1/4" [641]
 - (5) Back height: 31 3/4" [806]
 - k. Chair Construction:
upholstered seat, upholstered back
2. Product Description/Criteria
- a. Bank Length: 58'-5" (60'-5" with end rails)
 - b. Aisle Widths: 4'-6"
 - c. Number of Tiers: 20
 - d. Row Spacing(s): 33"
 - e. Open Dimension: 54' - 7-5/16"
 - f. Closed Dimension: 4'-5"
 - g. Overall Unit Height: 19'- 2-13/16"
 - h. Net Capacity: 600

2.2 MATERIALS

- A. Lumber: ANSI/Voluntary Product 20, B & B Southern Pine
- B. Plywood: ANSI/Voluntary Product PS1, APA A-C Exterior Grade.
- C. Structural-Steel Shapes, Plates, and Bars: ASTM A36.
- D. Galvanized-Steel Sheet: ASTM A653, Grade 40 (276 MPa) coating designation G60.
- E. Uncoated Steel Strip; Non-Structural Components: ASTM A1011, Commercial Quality, Type B, Hot-Rolled Strip.
- F. Uncoated Steel Strip; Structural Components: ASTM A1011 Grade 33 (228 MPa), Grade 36 (249 MPa), Grade 40 (276 MPa), Grade 45 (311 MPa), or Grade 50 (345 MPa), Structural Quality, Hot-Rolled.
- G. Galvanized Steel Strip: ASTM A653 Grade 40 (276 MPa), or Grade 64 (441 MPa), structural quality, coating designation G60.
- H. Tubing: ASTM A500, cold formed; Grade B, or ASTM A513, 46ksi min yield

- I. Polyethylene Polymer: ASTM D 1248, Type III, Class B; molded, color-pigmented, textured, impact-resistant, structural formulation; in color indicated or, if not otherwise indicated, as selected by Architect from manufacturer's standard colors.
- J. Fasteners: Vibration-proof, of size and material standard with manufacturer.

2.3 UNDERSTRUCTURE FABRICATION

A. Frame System:

- 1. Wheels: Not less than 5" [127] diameter by 1 1/4" [32] with non-marring soft rubber face to protect wood and synthetic floor surfaces, with molded-in sintered iron oil-impregnated bushings to fit 3/8" [10] diameter axles secured with E-type snap rings.
- 2. Lower Track: Continuous Positive Interglide System interlocks each adjacent CPI unit using an integral, continuous, anti-drift feature and through-bolted guide at front to prevent separation and misalignment. CPI units at end sections of powered banks and manual sections shall contain a Low Profile Posi-Lock LX to lock each row in open position and allow unlocking automatically. Provide adjustable stops to allow field adjustment of row spacings.
- 3. Slant Columns: High tensile steel, tubular shape.
- 4. Sway Bracing: High tensile steel members through-bolted to columns.
- 5. Deck Stabilizer: High tensile steel member through-bolted to nose and riser at three locations per section. Interlocks with adjacent stabilizer on upper tier using low-friction nylon roller to prevent separation and misalignment. Incorporates multiple stops to allow field adjustment of row spacings.
- 6. Deck Support: Securely captures front and rear edge of decking at rear edge of nose beam and lower edge of riser beam for entire length of section.

B. Deck System:

- 1. Section Lengths: Each bank shall contain sections not to exceed 19'-5" [5944] in length with a minimum of two supporting frames per row, each section.
- 2. Nose beam and Rear Riser beam: Nose beam shall be continuously roll-formed closed tubular shape of ASTM A653 grade 40 (276 MPa). Riser beam shall be continuously roll-formed of ASTM A653 Grade 64 (441 MPa). Nose and Riser beam shall be designed with no steel edges exposed to spectator after product assembly Attachment: Through-Bolted fore/aft to deck stabilizers, and frame cantilevers.
- 3. Deck End Overhang: Not to exceed frame support by more than 5'-11" [1804].
- 4. Decking Option
 - a. Carpeted Decks: Provide at decks and steps double tufted, anti-static, solid and crush resistant 100% polypropylene pile with high-density foam backing carpet. Mount to Classic Wood deck as substrate. Carpet color to be selected from manufacturer's full range of options.

2.4 SEAT FABRICATION

A. Metro Telescopic Platform Chair System

- 1. Chair System: Beam-mounted design, consisting of chairs independently mounted and armrests independently mounted to transverse beam. Top of support arms shall be designed to

capture and secure the beam in place. Support arms articulate from manual assist or semi-automatic operating mechanism.

2. Seat Support:
 - a. Each of the independent seat hinges shall be fitted with up and down stops as well as double acting; self-centering, preloaded coiled seat return springs with silencers.
 - b. Chairs must be designed with two independent return springs which position seat pan in 3/4 fold position with 100 percent (100%) fold position available for added aisle passage. Seat action shall be dampened for a constant velocity return and no final oscillations to the rest position.
 - c. Hinges, seat support, return springs, and stops shall be enveloped and concealed by the seat and back shells. Seat shall have the ability to achieve a full fold position when rearward pressure is applied. Superior comfort shall be derived through careful ergonomic engineering.
3. Upholstered Seats / Backs: (seats and backs)
 - a. Each seat and back shall be textured one-piece gas-assist injection molded pigmented polypropylene shells.
 - b. Upholstery shall be a complete self-retaining unit, welded to the seat and back surfaces using a hot plate welding technique.
 - c. Each unitized upholstery panel shall be comprised of medium density virgin urethane foam on a precision injection molded polypropylene backer. The fabric cover shall be tensioned over and neatly enclose both foam and backer.
 - d. Each seat and back shall be internal structured with peripheral gas channel frame. The frames shall support, resist, and transmit design loads to the aluminum chair beam.
 - e. Seat foam cushion shall be not less than 1 1/2" thick; back foam cushion shall not be less than 1" thick.
 - f. Seat "covers" shall be of a three-piece construction, without welts, taut, and securely retained.
 - g. Tailoring shall evidence a superior level of design, workmanship and fit.
 - h. Seat (bottom) closure shall be textured plastic with front and sides turned 180 degrees to regain and protect cover. Pan materials, texture, and color shall match chair back; non-matching seat pan/back construction materials and finishes are not acceptable.
4. Armrests: Shall be of injection-molded, leather textured polypropylene secured to polypropylene armrest base with concealed fasteners. Armrest standard to be of powder-coated cast aluminum grade AA 380 and independently secured to mounting beam.
5. Chair Beam: Shall be constructed of extruded aluminum with polymer end caps and serve as the focal attachment and shall in turn transmit all forces to the beam support.
6. Beam support: Shall be cast steel support arms. Closed seam steel tube standards are unacceptable. Top of support arms shall be designed to capture and secure the beam in place. Support arms articulate from manual assist or semi-automatic operating mechanism.

2.5 SHOP FINISHES

- B. Understructure: For rust resistance, steel understructure shall be finished on all surfaces with black "Dura-Coat" enamel. Understructure finish shall contain a silicone additive to improve scratch resistance of finish.

- C. Wear Surfaces: Surface subject to normal wear by spectators shall have a finish that does not wear to show different color underneath:
 - 1. Steel nosing and rear risers shall be pre-galvanized with a minimum spangle of G-60 zinc plating.
 - 2. Decking shall have use-surfaces to receive both a sealer coat and wear-resistant high gloss clear urethane finish. Optional decking to have 0.030" laminated polyethylene wear surface.
- D. Railings: Steel railings shall be finished with powder-coated semi - gloss black or optional 15 standard colors to match polymer seat color.
- E. Chair Components
 - 1. FINISH FOR Steel / Aluminum Components: (Indoor) Material shall be pre-treated in an iron phosphate wash system prior to finish application. Finish shall be a specially blended polyester T.G.I.C./Epoxy powder coating with a minimum dry film thickness of 1.5 mils [0.038 mm].
 - 2. Injection molded polypropylene or nylon: Shall be pigmented, in one of manufacturers standard colors and have a textured surface.
 - 3. Fabric: Upholstery material shall be one of manufacturers standard grade fabric offerings.
 - 4. Color: Shall be per manufacturer's standards. Seating Contractor shall submit color samples for owner's approval prior to manufacture.

2.6 FASTENINGS

- A. Welds: Performed by welders certified by AWS standards for the process employed.
- B. Structural Connections: Secured by structural bolts with prevailing torque lock nuts, free-spinning nuts in combination with lock washers, or Riv-nuts in combination with lock washers.

2.7 ELECTRICAL OPERATION SYSTEMS

- A. Integral Power
 - 1. Default operation shall be with a removable pendant control unit which plugs into seating bank for tethered operator management of stop, start, forward, and reverse control of the power operation. Other modes of operation are optional.
- B. PF4: Furnish and install Hussey PF(4), an integral automatic electro mechanical powered frame propulsion system, to open and close telescopic seating.
 - 1. Electrical - Seating Manufacturer shall provide all wiring within seating bank, including pendant control. Motors, housing, and wiring shall be installed and grounded in complete accord with the National Electrical Code. The control system shall operate at low voltage (24V). The electrical contractor shall perform all connections at and upstream of the equipment specified herein and ensure that supplied voltage drops no more than 4% below nominal where power connects thereto.
 - 2. Each unit for PF(4) is driven by a 1/2 horsepower, 1725 RPM motor.
 - a.) 208V 3 Phase:

- 1.) This 1.25 Service Factor motor runs on 208V at 60 Hz and draws a full load current of 1.8 amperes. The required power supply shall be 3 asynchronous phases of 120 Volts each, plus neutral plus ground, each with 20 Amp capacity.
- 2.) This system shall be UL Listed in its entirety (motors, circuit protection, motor controls, user interface, enclosures, conductors and connectors all evaluated and approved for correct sizing and compatibility under maximum rated load on the motors) under UL Product Category FHJU, titled Electrical Drive and Controls for Folding and Telescopic Seating.
- b.) 115V 1 Phase
 - 1.) This 1.25 Service Factor motor runs on 115V at 60 Hz and draws a full load current of 6.2 amperes. The required power supply shall be a single phase of 115 Volts, plus neutral plus ground, each with current capacity per the following schedule:
 - 2.) 15 Amps when 1 or 2 motors on the power supply
PART 2 30 Amps when 3 or 4 motors on the power supply
PART 3 40 Amps when 5 or 6 motors on the power supply
 - 1.) This system shall consist of UL Listed or Recognized components throughout (motors, circuit protection, motor controls, user interface, enclosures, conductors and connectors, all correctly sized and compatible under maximum rated load on the motors).
 - 2.) 230V 1 Phase This 1.25 Service Factor motor runs on 230V at 50 Hz and draws a full load current of 5.5 amperes. The required power supply shall be a single phase of 230 Volts, plus neutral plus ground, each with current capacity per the following schedule: 15 Amps when 1 or 2 motors on the power supply
 - a. 20 Amps when 3 or 4 motors on the power supply
 - b. 30 Amps when 5 or 6 motors on the power supply
 - 3.) This system shall consist of UL Listed or Recognized components throughout (motors, circuit protection, motor controls, user interface, enclosures, conductors and connectors, all correctly sized and compatible under maximum rated load on the motors).
- b.) Each pair of Powered Frames shall consist of output shaft gear reducer with [6 inch (152mm)] diameter x [4 inch (102mm)] wide wheels covered with non-marring [1/2 inch (13mm)] thick composite rubber, and operate the bleacher as follows:
 - 1.) PF1 – Pulls at 46 feet / min [16.8 meters / min] with ½ Hp through 60:1 speed reduction to 2 drive wheels. Max pull approx 261 lbs [1161 N];
 - 2.) PF2 – Pulls at 46 feet / min [16.8 meters / min] with ½ Hp through 60:1 speed reduction to 4 drive wheels. Max pull approx 261 lbs [1161 N];
 - 3.) PF3 – Pulls at 25 feet / min [9.3 meters / min] with ½ Hp through 111:1 speed reduction to 4 drive wheels. Max pull approx 478 lbs [2126 N];
 - 4.) PF4 – Pulls at 25 feet / min [9.3 meters / min] with 1 Hp through 111:1 speed reduction to 4 drive wheels. Max pull approx 956 lbs [4253 N];
2. Annual Service Light
 - a.) The annual service light unit is a low voltage (24V) system that is integrated into the electrical control system on a powered bleacher.
 - 1.) This system shall be UL Listed under UL Product Category FHJU, titled Electrical Drive and Controls for Folding and Telescopic Seating (UL File No. E467277).
 - b.) This unit serves two main functions:

- 1.) Keep a continuous timer running that will indicate to the end user that an annual inspection of the bleacher is required.
 - a.) The unit will retain the counting data for no less than 6 months without power.
 - b.) There will be a light illuminated at the front of the bleacher once the counter reaches one calendar year.
 - c.) The counter and light can be reset by authorized personnel once an inspection has been completed.
- 2.) Record the forward, reverse, and total operating time of bleacher.
 - a.) This data can be viewed at any time from inside of the unit.
- c.) Manufacturer shall furnish parts and instructions for installing an annual service light unit on the primary seating bank.

B. Options

1. Limit Switches

- a.) Limit switches will automatically stop integral power operation when seating has reached the fully extended or closed position. Manufacturer shall furnish and install both open and closed limit switches for the integral power system. Power operation shall utilize a combination of contactors and limit switches to insure the wiring is not energized except during operation.

2.8 ACCESSORIES | STANDARD TELESCOPIC GYMSEAT ACCESSORIES

- A. Front Aisle Steps: Provide at each vertical aisle location front aisle step. Front steps shall engage with front row to prevent accidental separation or movement. Steps shall be fitted with four non-skid rubber feet each 1/2" [13] in diameter. Blow molded end caps shall have full radius on all four edges. Quantity and location as indicated. Steel Aisle Steps.
- B. Intermediate Aisle Steps: Intermediate aisle steps shall be of boxed fully enclosed type construction. Blow molded end caps shall have full radius on all four edges. Step shall have adhesive-backed abrasive non-slip tread surface. Quantity and location as indicated. Steel Aisle Steps.
- C. Intermediate Automatic Rotating Aisle Handrails: Provide single pedestal mount handrails 34" [864] high with terminating mid rail. Permanently attached handrail shall rotate in a permanently mounted socket for rail storage. Rail shall automatically rotate, lock in the use position, unlock and rotate back to the stowed position as the gym seats open and close. Ends of the handrail shall return to the post, and not extend away from it. Rails having openings to avoid interference with closed decks are not acceptable.
- D. Self-Storing End Rails: Provide steel self-storing 42" [1066] high above seat, end rail with tubular supports and intermediate members designed with 4" [102] sphere passage requirements.
- E. Safety Accessories: Provide the following safety features:
 1. Coin Round or Roll all edges of exposed metal on top and underneath Bleacher to eliminate sharp edges. Provide safety ease edges, coined edges, or rounded edges for the bleacher understructure components as follows. Diagonal or X braces and deck support or deck stabilizers. Systems provided with sharp edges or corners, to be rounded off in the field and field painted.

2. Provide polymer end cap on nose metal at Bank ends to close off edges to prevent spectator injury.
 3. Provide polymer end cap on back of deck supports on 1st 7 Rows to prevent spectator injury.
 4. On 1st Row, provide front and side skirt boards anywhere there is an exposed end to prevent players/balls from sliding underneath the 1st Row.
 5. Provide metal cover over motor chains and wheels to protect chains from debris and provide a safety switch that if cover is taken off the power system will not work.
 6. Provide metal end deck cover on each row to cover exposed edge of plywood at the ends of the bleachers.
 7. Powered frames systems without a metal protective housing, covering drive chain and drive wheels are not permitted under this specification.
- P. Armrests, Injection Molded Polymer: Armrests shall be of injection molded, leather textured polypropylene. Armrest to be secured to standard with concealed fasteners.
- Q. Armrest, ADA Easy Access: Armrest shall hinge on end standards to allow equal access for disabled patrons. Swing-up end arms shall be provided for one percent of fixed seating capacity to meet the Americans with Disabilities Act (ADA). Each accessible chair shall include the universal handicap symbol on the end aisle standard for clear identification.
- R. Chair Numbers: Black text with gray background on a 23/32" x 2 7/32" [18.5mm x 56.5mm] elliptical Lexan plate. Plate fitted in a vandal resistant recess located in rear of armrest and secured with adhesive.
- S. Row Letters: Black text with gray background on a 23/32" x 2 7/32" [18.5mm x 56.5mm] elliptical Lexan plate. Plate fitted in a vandal resistant recess located in rear of armrest and secured with adhesive.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Verify area to receive telescoping gym seats are free of impediments interfering with installation and condition of installation substrates are acceptable to receive telescoping gym seats in accordance with telescoping gym seats manufacturer's recommendations. Do not commence installation until conditions are satisfactory

3.2 INSTALLATION

- A. Manufacturer's Recommendations: Comply with telescoping gym seats manufacturer's recommendations for product installation requirements.
- B. General: Manufacturer's Certified Installers to install telescoping gym seats in accordance with manufacturer's installation instructions and final shop drawings. Provide accessories, anchors, fasteners, inserts and other items for installation of telescoping gym seats and for permanent attachment to adjoining construction.

3.3 ADJUSTING AND CLEANING

- A. Adjustment: After installation completion, test and adjust each telescoping gym seats assembly to operate in compliance with manufacturer's operations manual.
- B. Cleaning: Clean installed telescoping gym seats on both exposed and semi-exposed surfaces. Touch-up finishes restoring damage or soiled surfaces.

3.4 PROTECTION

- A. General: Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer to ensure telescoping gym seats are without damage or deterioration at time of substantial completion.

END OF SECTION

SECTION 133416

HEAVY DUTY ALL-ALUMINUM BLEACHER

PART 1- GENERAL

1.01 Scope of Work

Furnish elevated and non-elevated bleachers equivalent to the Alum-A-Stand as manufactured by Dant Clayton Corporation, Louisville, KY at Football/Track, Baseball and Softball fields as indicated and the drawings.

A. Other acceptable manufacturers:

- a. E&D Specialty Stands Inc., 2081 Franklin Street, North Collins, NY 14111. 800.525.8515
- b. Outdoor Aluminum Inc. PO Box 118, Geneva, AL, 36340. 800-225-4249

1.02 Related Work

1. Section 116833 Athletic Field Equipment.
2. Section 312000 Earth Moving
3. Section 321313 Concrete Pavements
4. Section 323100 Fencing

1.03 Submittals

A. Submit the following samples:

1. Seatboard
2. Footboard with slip and stain resistant finish
3. Riser boards

B. Shop Drawings: Complete detailed drawings prepared, signed and sealed by a Registered Professional Engineer (P.E.) licensed in the State of Massachusetts. Include:

1. Seating plan indicating aisles, seating sections indicating location, size, details, and quantity of all steel, aluminum, and wood components
2. End elevation indicating riser and row depth, deck configuration, railings, size of framing members.
3. Include design load calculations

C. Qualifications of Professional Engineer who seals the shop drawings and calculations

D. Shop Drawings for ADA requirements. Handicap provision: Incorporate ramps and wheelchair spaces within bleacher system in accordance with local code requirements and ADA

1.04 Approvals

Any deviation from any item in overall specs shall be submitted to Owner/Architect Seven (7) days prior to bid for approval. This submittal shall include calculations by a registered

engineer showing the deviations meet or exceed the specified item they are intending to replace. Failure of Bidder to comply with this requirement is cause for rejection.

1.05 Design Criteria

- A. All material and workmanship shall be in accordance with the following:

AISC Manual, 8th Edition
ACI Building Code for Reinforced Concrete
Aluminum Association of America
Massachusetts State Building Code

- B. Design Loads:

Dead Load	6 psf	seat and footboards risers, etc.
Live Load	120 psf	to structural member
	120 plf	seatboards
	120 plf	footboards (individually)
Design Wind Speed	75 mph	on projected vertical surface
Sway	24 plf	parallel per ft. of seat parallel to seat run
	10 plf	perpendicular per foot of seat
Guardrail Loads	50 plf distributed or 200 lb concentrated load applied in any direction	

- C. Understructure Criteria:

The following criteria is used to establish a minimum requirement for strength, stiffness, and rigidity of the understructure components.

Moment of inertia of	.822
Section modulus of	.576
Radius of gyration of	.975
Axial loading of	.889

- D. Code Compliance: Submittals shall be based on specifications contained in the bid documents or the latest code edition adopted at the time of bidding.

1.06 Quality Assurance

- A. Manufacturer: Company specializing in spectator seating with a minimum of 10 years experience in manufacturing bleacher seating.
- B. Engineer Qualifications: The bleacher shall be designed under the supervision of a professional engineer registered in the state of Massachusetts.
- C. Warranty: Product shall be guaranteed for five (5) years on the structure and three (3) years on the finish together with labor. Damage resulting from abnormal use, vandalism, or incorrect installation (if done by other than authorized installer of the manufacturer) is not applicable.

PART 2 PRODUCTS

2.01 Basis of Design Manufacturer

The basis of design manufacturer for seating is Dant Clayton Corporation, 1500 Bernheim Lane, Louisville, KY 40210, 800-626-2177.

2.02 Materials

A. Understructure:

1. Understructure shall be fabricated from 6061-T6 alloy aluminum extrusions.
2. Vertical members shall be 2 7/8" o.d. tubing or minimum L3.5x3.5x1/4 angles.
3. Horizontal members and footboard supports shall be 3" x 2 7/8" channel or minimum L2.5xL2.5x3/16 angles.
4. Cross braces and diagonals shall be 2 1/4" x 7/8" channel or 2"x2" angle.
5. Handrail support shall be 2 5/8" o.d. tubing.
6. The understructure shall be assembled from the above items in an interlocking design and 7/16" x 3 1/2" hot-dipped galvanized bolts.
7. The structure shall be designed so that in the event of accidental damage, the sub-component parts may be replaced using common hand tools. Field welding for repair purposes shall not be considered.
8. Primary structural members shall be bolted together, or calculations must be submitted verifying that the structure has taken into account the weakening of aluminum associated with welding per 2005 AA ADAMI sections 7.2.1 and 7.2.3

B. Guardrail Systems:

1. Guardrails shall be of anodized aluminum extruded channel, 3 x 2 7/8", 6061-T6 alloy, anodized to clear 204R1.
2. The guardrail system shall be of interlocking design with positive through bolt fastening. The top rail shall be designed to fully cover the rail support posts for a totally snag-free area and eliminate the potential of sharp edge contact with the spectators.
3. Grabrails shall be extruded aluminum pipe of 6063-T6 alloy, 1 – 15/16" o.d.
4. Chain link fence shall be 2" mesh, 9 gauge black vinyl coated fabric

C. Hand & Grab Rails

1. Hand and Grab Rails shall be located in all areas as shown on the drawings.

2. Hand and Grab Rails shall be 1 15/16" O.D. extruded aluminum pipe.
3. Two-Line mid-aisle handrails shall be located in all interior aisles. All mid-aisle rails shall feature internal fittings for both lines of rail. External fittings are not permitted.

D. Extrusions

1. Seats shall be 6063-T6 extruded aluminum with a fluted surface and a wall thickness of .078". Seatboards shall be a minimum of 9½" wide actual, with outside legs of 1 ¾" actual vertical height, and shall have two internal legs with a vertical height of 2 5/8". Seatboards shall attach with one 3/8" diameter bolt and shall be designed for positive physical fastening. Bolt clips, bolt runners or other friction type fastening devices are not acceptable. Seats shall be pre-treated and clear anodized.
2. Footboards shall be 6063-T6 extruded aluminum with a fluted surface and a wall thickness of .078". Each footboard member (individually) shall have two internal legs with 2 1/8" actual vertical height. All footboards shall attach without the use of hardware. Attachment shall be positive snap and interlock with the support structure. Use of bolt clips, bolt runners, or other friction type fastening devices are not acceptable.
3. Riserboards shall be 6063-T6 extruded aluminum and shall be pre-treated and powder coated in color selected by architect from manufacturers standard color options, minimum of 6 colors including Gold and Black.

E. Stairs:

1. Shall conform to all above pertinent criteria consistent with the component design of the grandstand.
2. Shall be self-supporting and shall not attach to or be suspended from any footboard or decking member.
3. Stair risers shall be pre-treated and powder coated in color selected by architect from manufacturers standard color options, minimum of 6 colors including Gold and Black.

F. Aisles:

Aisles shall be designed so that all vertical and horizontal areas within the 6' bay of the aisles area shall be fully closed.

G. Hardware:

- i. Bolts used for field installation shall be hot dipped galvanized.
- ii. Primary connections, i.e. seat, crossbrace, handrail (rail and posts) shall be made with minimum of 3/8" diameter hardware.
- iii. End Caps – All end caps (seatboard, footboard and handrail) shall be cast aluminum.

2.03 WALKING SURFACE REQUIREMENT - All aluminum footboards shall have an enhanced stain resistant and slip resistant finish at all locations intended for use as a walking surface.

- a. This finish shall be produced by the bleacher manufacturer in addition to the mill extrusion process and shall be uniform in appearance. The slip and stain resistant surface treatment must be achieved with a blasted and anodized process. The metallic media blasting option must be performed in a controlled factory environment to ensure consistency. Hand processes or sand blasting is strictly prohibited as they produce an inconsistent finish that is not uniform in appearance or performance.
- b. This surface finish shall prevent oxidation staining and be resistant to staining from beverage spills and organic matter. Oxidation staining prior to warranty expiration shall be grounds for product replacement at the manufacturer's expense.
- c. This surface finish shall exhibit enhanced slip resistance beyond the mill extrusion process, resulting in an improved coefficient of friction under wet conditions in all directions of travel.
- d. Untreated mill finish aluminum with raised extruded "flutes" or "ribs" does not meet this requirement.

2.04 Reinforced Concrete

- A. All concrete work and materials shall be in accordance with ACI 318-83.
- B. Cast-in-place concrete shall have minimum compressive strength of 5,000 psi at 28 days.
- C. All exterior concrete shall be air entrained to 6% +/- 1%.
- D. Reinforcing steel shall be in accordance with ASTM A615 grade 60.
- E. Cover on reinforcement shall be as follows, unless otherwise noted in the drawings:
 - 3" Place directly against earth
 - 2" Concrete exposed to earth or weather poured against forms
 - 1 ½" Columns (to ties)

PART 3 EXECUTION

3.01 Installation

- A. Installation: Shall be handled directly by the manufacturer or by a factory certified installation subcontractor. Install bleachers in accordance with manufacturer's written instructions and approved shop drawings.
- B. Erect per plans, shop drawings and specifications.

- C. Securely attach bleachers to concrete slab with galvanized hardware per manufacturer's recommendations.
- 3.02 Cleaning
- A. Clean all surfaces according to manufacturer's recommendations.
 - B. Remove all packaging and construction debris.

SECTION 133420
PRE-ENGINEERED BUILDING SYSTEMS

PART 1 - GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:
 - 1. Pre-engineered modular building.
- B. Related Work: The following items are included in the Work of this Section and are specified under the designated Sections:
 - 1. Provide products, materials, and assemblies as specified in separate sections throughout Project Manual.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design pre-engineered building systems, including comprehensive engineering analysis by a qualified professional structural engineer, currently registered in the Commonwealth of Massachusetts, using performance requirements and design criteria indicated.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of pre-engineered building system component. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For the following pre-engineered building system components. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Anchor-Bolt or Welded-Connection Plans: Submit anchor-bolt or welding plans and templates before foundation work begins. Include location, diameter, and projection of anchor bolts or welded connections required to attach pre-engineered building to foundation. Indicate column reactions at each location.
 - 2. Structural-Framing Drawings: Show complete fabrication of primary and secondary framing; include provisions for openings. Indicate bolted connections, distinguishing between shop and field applications. Indicate welds, distinguishing between sizes and types. Include transverse cross-sections.
 - a. Show provisions for attaching parapets, roof curbs, service walkways, platforms, and pipe racks.

3. **Load Table: Show each individual unfactored load reaction [dead load, live load, snow load, wind load, seismic loads in each primary direction] at each column location.**
 4. **Wall Panel Layout Drawings:** Show layouts of exterior panels including methods of support. Include details of edge conditions, joints, panel profiles, corners, anchorages, trim, flashings, closures, and special details. Distinguish between factory- and field-assembled work; show locations of exposed fasteners.
 - a. Show wall-mounted items including doors, windows, and lighting fixtures.
 5. Show roof-mounted items including equipment supports, pipe supports and penetrations, and items mounted on roof curbs.
 6. **Accessory Drawings:** Include details of the following items, at a scale of not less than 1-1/2 inches per 12 inches:
 - a. Flashing and trim.
- C. **Samples for Initial Selection:** For units with factory-applied color finish.
- D. **Samples for Verification:** For each type of exposed finish required, prepared on Samples of sizes indicated below:
1. Exterior and Interior Panels: Nominal 12 inches long by actual panel width. Include fasteners, closures, and other exposed panel accessories.
 2. Flashing and Trim: Nominal 12 inches long. Include fasteners and other exposed accessories.
- E. **Delegated-Design Submittal:** For pre-engineered building systems indicated to comply with performance requirements and design criteria, including analysis data **and calculations** signed and sealed by the qualified professional structural engineer, currently registered in the Commonwealth of Massachusetts and responsible for their preparation.
- 1.5 **INFORMATIONAL SUBMITTALS**
- A. **Qualification Data:** For qualified erector, manufacturer, and professional engineer.
- B. **Welding certificates.**
- C. **Pre-Engineered Building System Certificates:** For each type of pre-engineered building system, from manufacturer.
1. **Letter of Design Certification:** Signed and sealed by a qualified professional engineer. Include the following:
 - a. Name and location of Project.
 - b. Order number.
 - c. Name of manufacturer.
 - d. Name of Contractor.
 - e. Building dimensions including width, length, height, and roof slope.
 - f. Governing building code and year of edition.
 - g. Design Loads: Include dead load, roof live load, collateral loads, equipment loads, roof snow load, deflection, wind loads/speeds and exposure, seismic design category or effective peak velocity-related acceleration/peak acceleration, and auxiliary loads (cranes).
 - h. Load Combinations: Indicate that loads were applied acting simultaneously with concentrated loads, according to governing building code.
 - i. Building-Use Category: Indicate category of building use and its effect on load importance factors.

- D. Erector Certificates: For each product, from manufacturer.
 - E. Manufacturer Certificates: For each product, from manufacturer.
 - F. Material Test Reports: For each of the following products:
 - 1. Wood framing including chemical and physical properties.
 - 2. Bolts, nuts, and washers including mechanical properties and chemical analysis.
 - G. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for insulation and vapor-retarder facings. Include reports for thermal resistance, fire-test-response characteristics, water-vapor transmission, and water absorption.
 - H. Source quality-control reports.
 - I. Field quality-control reports.
 - J. Warranties: Sample of special warranties.
- 1.6 QUALITY ASSURANCE
- A. Manufacturer Qualifications: A qualified manufacturer and member of the Pre-engineered Building Systems Association.
 - 1. Engineering Responsibility: Preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional structural engineer, currently registered in the Commonwealth of Massachusetts.
 - B. Engineer of Record: The specialty Engineer for the Pre-Engineered Building Manufacturer shall be the Structural Engineer of Record (SER) for the steel framed superstructure and shall be responsible for all design and construction affidavits, structural tests and special inspections, and all other SER duties required by the applicable local Building Code and Building Official.
 - C. Erector Qualifications: An experienced erector who specializes in erecting and installing work similar in material, design, and extent to that indicated for this Project and who is acceptable to manufacturer.
 - D. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.
 - E. Source Limitations: Obtain pre-engineered building system components, including primary and secondary framing and panel assemblies, from single source from single manufacturer.
 - F. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.3, "Structural Welding Code - Sheet Steel."
 - G. Wood Framing: Comply with ANSI/AF&PA NDS-2005, "National Design Specification for Wood Construction."

- H. Fire-Resistance Ratings: Where indicated, provide panel assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.
 - 2. Combustion Characteristics: ASTM E 136.
- I. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Refer to Section 014330 - MOCKUPS.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
- J. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01.
 - 1. Review methods and procedures related to pre-engineered building systems including, but not limited to, the following:
 - a. Condition of foundations and other preparatory work performed by other trades.
 - b. Structural load limitations.
 - c. Construction schedule. Verify availability of materials and erector's personnel, equipment, and facilities needed to make progress and avoid delays.
 - d. Required tests, inspections, and certifications.
 - e. Unfavorable weather and forecasted weather conditions.
 - 2. Review methods and procedures related to wall panel assemblies including, but not limited to, the following:
 - a. Compliance with requirements for support conditions, including alignment between and attachment to structural members.
 - b. Structural limitations of girts and columns during and after wall panel installation.
 - c. Flashings, special siding details, wall penetrations, openings, and condition of other construction that will affect wall panels.
 - d. Temporary protection requirements for wall panel assembly during and after installation.
 - e. Wall observation and repair after wall panel installation.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver manufactured items so as not to be damaged or deformed. Package for protection during transportation and handling.

1.8 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when weather conditions permit panels to be installed according to manufacturers' written instructions and warranty requirements.
- B. Field Measurements:
 - 1. Established Dimensions for Panels: Where field measurements cannot be made without delaying the Work, either establish framing and opening dimensions and proceed with fabricating panels without field measurements, or allow for field trimming panels.

Coordinate construction to ensure that actual building dimensions, locations of structural members, and openings correspond to established dimensions.

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete foundations and casting of anchor-bolt inserts or welding connections into foundation walls and footings. Concrete, reinforcement, and formwork requirements are specified in Section 033000 - CAST-IN-PLACE CONCRETE.
- B. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- C. Coordinate installation of materials and products specified in other Sections.

1.10 WARRANTY

- A. Special Warranty on Metal Panel Finishes: Refer to Section 074200 - METAL WALL AND ROOF PANELS.
- B. Special Warranty on Rooftop Units (RTUs): Refer to Division 23 - HVAC Sections.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Armstrong Steel Building Systems.
 - 2. Butler Manufacturing Co.
 - 3. Ceco Building Systems
 - 4. Metallic Building Co.
 - 5. Star Building Systems.
 - 6. Vanguard Modular Building Systems
- B. Basis of Design: Butler Manufacturing Co.
 - 1. Butler II Wall System, 24 gauge
 - 2. Butler II Roof System, 24 gauge

2.2 PRE-ENGINEERED BUILDING SYSTEMS

- A. Description: Provide a complete, integrated set of structurally-framed pre-engineered building system manufacturer's standard mutually dependent components and assemblies that form a building system capable of withstanding structural and other loads, thermally induced movement, and exposure to weather without failure or infiltration of water into building interior.
 - 1. Provide pre-engineered building system of size and with bay spacings, framing, roof slopes, and spans indicated.

2.3 PRE-ENGINEERED BUILDING SYSTEM PERFORMANCE

- A. Delegated Design: Design pre-engineered building system, including comprehensive engineering analysis by a qualified professional structural engineer, currently registered in the Commonwealth of Massachusetts, using performance requirements and design criteria indicated.
- B. Structural Performance: Pre-engineered building systems shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to procedures in MBMA's "Metal Building Systems Manual."
 - 1. Design Loads: As indicated on Drawings and as required by the Massachusetts State Building Code, current Edition.
 - a. Floor Loads: 100 psf live load + 5 psf collateral load.
 - b. Mezzanine Loads: 125 psf live load + 5 psf collateral load.
 - 2. Deflection Limits: Design pre-engineered building system assemblies to withstand design live loads with deflections no greater than the following:
 - a. Purlins and Rafters: Total vertical deflection of L/240 of the span and Live (and or Snow) Load vertical deflection of L/360 of the span.
 - b. Girts: Horizontal deflection of L/240 of the span.
 - c. Roof Panels: Total vertical deflection of L/240 of the span and Live (and or Snow) Load vertical deflection of L/360 of the span.
 - 1) PhotoVoltaic (PV) Array Loads: 5 psf.
 - d. Floor Framing: Total vertical deflection of L/240 of the span and Live Load vertical deflection of L/360 of the span.
 - e. Wall Panels: Horizontal deflection of L/240 of the span.
 - f. Design secondary-framing system to accommodate deflection of primary framing and construction tolerances, and to maintain clearances at openings.
 - 3. Drift Limits: Engineer building structure to withstand design loads with drift limits no greater than the following:
 - a. Lateral Drift for Earthquake: As required by the applicable local Building Code.
 - b. Lateral Drift for Wind: Maximum of L/240 of the building height.
 - 4. Wall panel assemblies shall withstand the effects of gravity loads and loads and stresses within limits and under conditions indicated according to ASTM E 1592.
- C. Seismic Performance: Pre-engineered building systems shall withstand the effects of earthquake motions determined according to ASCE/SEI 7 and the applicable local Building Code.
- D. Thermal Movements: Allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base engineering calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
- E. Air Infiltration for Wall Panels: Air leakage through assembly of not more than 0.06 cfm/sq. ft. of wall area when tested according to ASTM E 283 at static-air-pressure difference of 1.57 lbf/sq. ft.
- F. Water Penetration for Wall Panels: No water penetration when tested according to ASTM E 331 at a wind-load design pressure of not less than 2.86 lbf/sq. ft.

- G. Wind-Uplift Resistance: Provide roof assemblies that comply with UL 580 for Class 90.
- H. Thermal Performance: Provide insulated panel assemblies with the following maximum U-factors and minimum R-values for opaque elements when tested according to ASTM C 1363 or ASTM C 518:
 - 1. Roof Assemblies:
 - a. R-Value: As indicated on the Drawings.
 - 2. Wall Panel Assemblies:
 - a. R-Value: As indicated on the Drawings.

2.4 ACCESSORIES

- A. General: Provide accessories as standard with pre-engineered building system manufacturer and as specified. Fabricate and finish accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes. Comply with indicated profiles and with dimensional and structural requirements.
 - 1. Form exposed sheet metal accessories that are without excessive oil-canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
- B. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- C. Zinc-Rich Primer: Complying with SSPC-Paint 20 or SSPC-Paint 29 and compatible with topcoat.
 - 1. Provide interior, field-applied primer with a VOC content of 250 g/L or less, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- D. Galvanizing Repair Paint: High-zinc-dust-content paint for reglazing welds in steel, complying with SSPC-Paint 20.
 - 1. Provide interior, field-applied paint with a VOC content of 250 g/L or less, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.5 SOURCE QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to evaluate product.
- B. Testing: Test and inspect shop connections for pre-engineered buildings according to the following:
 - 1. Bolted Connections: Shop-bolted connections shall be tested and inspected according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
 - 2. Welded Connections: In addition to visual inspection, shop-welded connections shall be tested and inspected according to AWS D1.1/D1.1M and the following inspection procedures, at inspector's option:
 - a. Liquid Penetrant Inspection: ASTM E 165.

- b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
- c. Ultrasonic Inspection: ASTM E 164.
- d. Radiographic Inspection: ASTM E 94.

- C. Product will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

2.6 FABRICATION

- A. General: Design components and field connections required for erection to permit easy assembly.
 - 1. Mark each piece and part of the assembly to correspond with previously prepared erection drawings, diagrams, and instruction manuals.
 - 2. Fabricate structural framing to produce clean, smooth cuts and bends. Punch holes of proper size, shape, and location. Members shall be free of cracks, tears, and ruptures.
- B. Tolerances: Comply with AISC "Code of Standard Produce for Steel Building and Bridges."
- C. Primary Framing: Shop fabricate framing components to indicated size and section, with baseplates, bearing plates, stiffeners, and other items required for erection welded into place. Cut, form, punch, drill, and weld framing for bolted field assembly.
 - 1. Make shop connections by welding or by using high-strength bolts.
 - 2. Join flanges to webs of built-up members by a continuous, submerged arc-welding process.
 - 3. Brace compression flange of primary framing with steel angles or cold-formed structural tubing between frame web and purlin web or girt web, so flange compressive strength is within allowable limits for any combination of loadings.
 - 4. Weld clips to frames for attaching secondary framing.
- D. Secondary Framing: Shop fabricate framing components to indicated size and section by roll-forming or break-forming, with baseplates, bearing plates, stiffeners, and other plates required for erection welded into place. Cut, form, punch, drill, and weld secondary framing for bolted field connections to primary framing.
 - 1. Make shop connections by welding or by using non-high-strength bolts.
- E. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface preparation specifications and environmental exposure conditions of installed metal fabrications:
 - 1. Shop Priming Uncoated Primary and Secondary Framing: Comply with SSPC-SP 2, "Hand Tool Cleaning."
 - 2. Shop primer shall be compatible with finish paints, as specified per Section 099000 - PAINTING AND COATING.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with erector present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Before erection proceeds, survey elevations and locations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments to receive structural framing, with erector present, for compliance with requirements and pre-engineered building system manufacturer's tolerances.
 - 1. Engage land surveyor to perform surveying. Coordinate with requirements of Section 011000 - GENERAL REQUIREMENTS.
- C. Proceed with erection only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition.
- B. Provide temporary shores, guys, braces, and other supports during erection to keep structural framing secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural framing, connections, and bracing are in place unless otherwise indicated.

3.3 ERECTION OF STRUCTURE

- A. Erect pre-engineered building system according to manufacturer's written erection instructions and erection drawings.
- B. Do not field cut, drill, or alter structural members without written approval from pre-engineered building system manufacturer's professional engineer.
- C. Set structural framing accurately in locations and to elevations indicated, according to AISC specifications referenced in this Section. Maintain structural stability of frame during erection.
- D. Base and Bearing Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.
 - 1. Set plates for structural members on wedges, shims, or setting nuts as required.
 - 2. Tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
 - 3. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
- E. Align and adjust structural framing before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with framing. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.
 2. Make allowances for difference between temperature at time of erection and mean temperature when structure will be completed and in service.
- F. Primary Framing and End Walls: Erect framing level, plumb, rigid, secure, and true to line. Level baseplates to a true even plane with full bearing to supporting structures, set with double-nutted anchor bolts. Use grout to obtain uniform bearing and to maintain a level base-line elevation. Moist-cure grout for not less than seven days after placement.
1. Make field connections using high-strength bolts installed according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for bolt type and joint type specified.
 - a. Joint Type: Snug tightened or pretensioned.
- G. Erection Tolerances: Maintain erection tolerances of structural framing within AISC 303.
- 3.4 FIELD QUALITY CONTROL
- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
1. Inspection of fabricators.
 2. Wood frame construction.
- B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- C. Pre-engineered Building Structural Engineer of Record or his delegated representative shall visit the site a minimum of two times during construction, once during performance of the work and once after the work is complete.
- D. Tests and Inspections:
1. High-Strength, Field-Bolted Connections: Connections shall be tested and inspected during installation according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
 2. Welded Connections: In addition to visual inspection, field-welded connections shall be tested and inspected according to AWS D1.1/D1.1M and the following inspection procedures, at inspector's option:
 - a. Liquid Penetrant Inspection: ASTM E 165.
 - b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
 - c. Ultrasonic Inspection: ASTM E 164.
 - d. Radiographic Inspection: ASTM E 94.
- E. Survey the completed building frame layout and location, in accordance with Section 011000 - GENERAL REQUIREMENTS.
- F. Product will be considered defective if it does not pass tests and inspections.
- G. Prepare test and inspection reports.

3.5 CLEANING AND PROTECTION

- A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
- B. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.
- C. Touchup Painting: After erection, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted structural framing, bearing plates, and accessories.
 - 1. Clean and prepare surfaces by SSPC-SP 2, "Hand Tool Cleaning," or by SSPC-SP 3, "Power Tool Cleaning."
 - 2. Apply a compatible primer of same type and color as shop primer used on adjacent surfaces.
- D. Touchup Painting: Cleaning and touchup painting are specified in Section 099100 - PAINTING AND COATING.
- E. Wall Panels: Replace wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 140001

ELEVATORS

(TRADE BID REQUIRED)

Trade Contractors on this CM-at-Risk project are required by law to provide payment and performance bonds for the full value of their trade contracts, and trade contractors must include the full cost of the required payment and performance bonds in the bid price they submit in response to this RFB.

Bids will only be accepted from trade contractors pre-qualified by the awarding authority.

PART 1 – GENERAL

1.1 GENERAL PROVISIONS

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 01 - GENERAL REQUIREMENTS which are hereby made a part of this Section of the Specifications.
- B. Time, Manner and Requirements for Submitting Trade Bids:
 - 1. Refer to Division 00 "Invitation to Bid" for Bidding Instructions.
- C. Reference Drawings: The Work of this Trade Bid is primarily shown on the following Contract Drawings:
 - 1. Structural S0-0-1 through SS-1-1
 - 2. Code Plans CD1-1 through CD1-6
 - 3. Architectural A1-0-0 through AM-1-7
 - 4. Electrical E0-0-1 through E4-0-29
- D. Trade Contractor shall also examine all other Drawings and all other Sections of the Specifications for coordination and requirements therein affecting the work of this Section, not just those pertaining particularly to this sub-trade.

1.2 DESCRIPTION OF WORK

- A. Work Included: Provide labor, materials and equipment necessary to complete the work of this Section, including but not limited to the following:

- 1. All Work in Section 142150 – GEARLESS MACHINE ROOM LESS TRACTION ELEVATORS

1.3 LEED v4 BD+C: SCHOOL REQUIREMENTS

- A. The Project, including the work of this Section, is subject to the provisions of LEED "Silver" Certification Requirements. Trade Contractor, Supplier, Vendor, and Manufacturer of any tier shall be responsible for compliance with any and all applicable LEED administrative, procedural, submittal, and specification requirements. Filed Sub Bid Sub-Contractor, Supplier, Vendor, and Manufacturer of any tier shall endeavor to coordinate and cooperate with the General
ELEVATORS

Contractor's LEED Coordinator in acquiring required product and cost data, and to document and obtain the maximum Claimed Points in any and all applicable categories of the Scorecard. Refer to Division 01 Section "LEED v4 BD+C: School Requirements" and attached LEED Project Scorecard for further requirements affecting the work of this Section.

1.4 SCAFFOLDING AND STAGING

- A. Trade Contractor shall obtain required permits for, and provide scaffolds, staging, and other similar raised platforms required to access and execute the Work of this trade.
 - 1. Scaffolding and staging required for use by Trade Bid Sub-Contractor shall be furnished, erected, maintained in a safe condition, and dismantled when no longer required, by the Trade requiring such scaffolding and staging.
 - 2. Enclose all exterior scaffolding or staging outside of the construction fence with 8 foot height plywood enclosure at end of each work day to prohibit unauthorized access to the scaffolding or staging.
 - 3. Portable ladders and mobile platforms of all required heights shall also be provided.
- B. Trade Contractor shall provide heavy duty NFPA 701 compliant fire retardant, 10 oz/sq. yard, 22 mil polyethylene tarpaulins or other appropriate temporary protective measures covering his scaffolds and staging to protect workers, work in progress and installed work against inclement weather, and as additionally required for dust control, and to retain temporary heat provided by General Contractor during cold weather conditions.

1.5 HOISTING MACHINERY, EQUIPMENT, AND SERVICE

- A. Trade Bid Sub-Contractor shall obtain required permits for, and provide all hoisting machinery, rigging devices, crane services, and lift equipment required to access and execute the work of this trade.
 - 1. All hoisting machinery, rigging devices, crane services, and lift equipment shall be furnished, installed, operated, maintained in safe conditions, and dismantled when no longer required, by the trade requiring such equipment or service.

END OF SECTION

ELEVATORS

140001 - 2

SECTION 142150
GEARLESS MACHINE ROOM LESS TRACTION ELEVATORS

(Part of Work of Section 140001-ELEVATORS, Trade-Bid Required)

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

- A. Section Includes: Gearless Machine Room Less (MRL) Traction elevators as follows:
 - 1. 2 Passenger Elevators, Cars PE1-PE2.
 - 2. 1 Service Elevator, Car SE1.
- B. Sustainable Design Intent: Comply with project requirements intended to achieve sustainable design measured and documented according to LEED Green Building Rating System, of the US Green Building Council. Refer to Section 018110, SUSTAINABLE DESIGN REQUIREMENTS for certification level and certification requirements.
- C. Items To Be Furnished Only: Furnish the following items for installation by the designated Sections
 - 1. Section 033000 - CAST-IN-PLACE CONCRETE:
 - a. Lintels, sleeves, anchors, inserts, plates and similar items for elevators.
 - 2. Section 042000 - UNIT MASONRY:
 - a. Elevator rail bracket inserts.
- D. Related Work: The following items are not included in this Section and are specified under the designated Sections:
 - 1. Camera provisions.
 - 2. Elevator security devices, control unit, mounting brackets, wiring materials, logic circuits, security system interface terminals, boxes, and relays.
 - 3. Car flooring.
 - 4. Monitoring system interface.
 - 5. Section 051200- Structural Steel FRAMING for the hoist beams, attachment plates, angle brackets, and other preparation of structural steel for fastening guide-rail brackets.
 - 6. Section 055000 - METAL FABRICATIONS for miscellaneous framing and supports for hoisting machines, and for elevator door sills, cants in hoistways made from sheet steel, and elevator pit ladders.
 - 7. Division 26 - Electrical for telephone service to elevators.
 - 8. Division 26 - Electrical for electrical service for elevators to and including disconnect switches at machine room door and telephone wiring to elevator.
 - 9. Division 28 - ELECTRONIC SAFETY AND SECURITY for card readers.

1.2 ACTION SUBMITTALS

- A. Product Data:
 - 1. Include capacities, sizes, performance data, operation, control, signal systems operation, safety features, finishes, and similar information.
 - 2. Include product data for car enclosures and hoistway entrances.

3. Include product data for signal fixtures, lights, graphics, Tactile marking plates, and details of mounting.

B. Shop Drawings:

1. Provide scaled shop drawings of the following:
 - a. Plan and section layouts of hoistways, pits, overheads, machinery spaces and openings at each landing, to include the following:
 - 1) Location of all equipment.
 - 2) Static and dynamic loads imposed on building structure.
 - 3) Details of equipment isolation.
 - 4) Required clearances around equipment.
 - 5) Control room and machine heat release.
 - a) Provide heat loads based on a regenerative emergency power operation.
 - 6) Power requirements:
 - a) motor horsepower, code letter, starting current, full load running current, and demand factor.
 - b) Provide maximum and average power consumption.
 - 7) Service connections.
 - 8) Running Clearances.
 - 9) Location of fixtures.
 - b. Elevation section of hoistways:
 - 1) Overhead, pits: clearances, and runby.
 - 2) Entrance details.
 - 3) Sill support detail.
 - c. Pit Equipment:
 - 1) Buffers.
 - 2) Counterweight guards.
 - 3) Pit reactions.
 - 4) Service ladder, platform.
 - 5) Stop switches.
 - 6) Compensation equipment.
 - d. Elevator cabs:
 - 1) Car shell fabrication.
 - 2) Gasketing.
 - 3) Ventilation.
 - 4) Ceiling construction details.
 - 5) Wall construction details.
 - 6) Lighting details.
 - 7) Handrail mounting details.
 - 8) Transom, entrance returns.
 - e. Fixtures:
 - 1) Car operating panel.
 - 2) Hall stations.
 - 3) Destination / landing input stations.
 - 4) Hall Lanterns.
 - 5) Position indicators.
 - 6) Access key switches.
 - 7) Remote fixtures.
 - a) Emergency Power selector switches.
 - 8) Two-way communication device at all master stations.

C. Submittals:

1. All submittals are delivered via Portable Document Format (.pdf)
 2. All submittals are clearly marked and identified with project name and appropriate device identification.
 3. All submittals are subject to approval.
 4. Corrections requested are incorporated onto the submittals.
- D. Samples for Initial Selection:
1. For finishes involving surface treatment or paint.
- E. Samples for Verification:
1. For exposed car, hoistway door and frame, and signal equipment finishes.
 2. Samples of sheet materials: 3" (75 mm) square.
 3. Running trim members: 4" (100 mm) lengths.
 4. Include full component samples, if requested:
 - a. Signal fixtures
 - b. Lighting
 - c. Graphics
 - d. Tactile markings

1.3 CLOSEOUT SUBMITTALS

- A. Continuing Maintenance Proposal:
1. Submit executed Installer's standard five-year maintenance agreement, starting at the end of the warranty maintenance period.
 2. State services, obligations, conditions, and terms for agreement period and for future renewal options.
- B. Record Documents:
1. The following record documents are furnished upon completion and before final payment and delivered via Portable Document Format (.pdf):
 - a. Shop Drawings:
 - 1) Complete sets of as installed plan and section layouts of hoistways, pits, overheads, and equipment spaces, to include the following:
 - a) Static and dynamic loads imposed on building structure.
 - b) Details of equipment isolation.
 - c) Required clearances around equipment.
 - d) Control room heat release.
 - e) Power requirements.
 - 2) Elevation section of hoistways:
 - a) Overhead, pits and entrance details.
 - 3) Elevator cabs.
 - 4) Fixtures:
 - a) Car fixtures.
 - b) Hall fixtures.
 - c) Remote fixtures.
 - 5) Control room heat release and power requirements.
 - b. Wiring Diagrams:

- 1) Complete sets of as installed straight-line wiring diagrams, showing the electrical connections of all altered vertical transportation equipment, are furnished upon completion.
 - 2) A legend sheet is furnished with each set of drawings containing the following information:
 - a) Name and symbol of each relay, switch and other electrical or solid-state apparatus.
 - b) Location on drawings, drawing sheets, number and area of switches and relays, and location of all contacts.
 - c) Location of apparatus whether on controller, in hoistway or on elevator cab.
 - c. Maintenance and Operating Manuals:
 - 1) Description and sequence of operation of all equipment installed, including operating use for Building Personnel and tenants, as well as system troubleshooting manuals for technicians.
 - 2) Maintenance instructions and procedures of all vertical transportation equipment installed, including parts lists, for each elevator system.
 - 3) Lubrication charts indicating all lubricating points and type of lubricant recommended for all equipment.
 - 4) Complete parts catalogs for all replaceable parts.
- C. Tools:
1. The following equipment is furnished upon completion and before final payment:
 - a. The Elevator Contractor provides all the necessary tools, including laptop, hand-held devices, required software and manuals, required to troubleshoot, adjust, synchronize, calibrate, repair, and maintain the vertical transportation systems, as well as perform all necessary procedures to perform all safety tests as required by code and local governing authority.
 - b. Owner's equipment and software is updated regularly to properly troubleshoot, adjust, synchronize, calibrate, repair, maintain and test the vertical transportation systems. All equipment and/or software is of the same version as issued to technicians maintaining the vertical transportation systems.
 - c. The Elevator Contractor provides a backup copy of any software that resides on the troubleshooting tool.
 - d. Upon cancellation of service agreement, the Elevator Contractor provides all updates indicated above.
- D. Keys:
1. Four sets of keys to operate all keyed switches and locks are furnished upon completion.
 2. Keys properly tagged.
 3. All keying arranged with the Contractor.

1.4 PERMITS, TESTS & CERTIFICATES

- A. Permits:
1. The Elevator Contractor secures the permits required for work to be performed, including work of sub-contractors.
 2. The Elevator Contractor obtains and pays for all municipal and state permits necessary for execution of the elevator work, including fees for renewing permits.
 3. The Elevator Contractor is responsible for posting all permits as required by the AHJ.
 4. The Elevator Contractor is responsible for obtaining final sign-off and approval for each permit.

- B. Tests and Inspections:
 - 1. The Elevator Contractor performs all necessary tests as required by ASME A17.1 and recommended by A17.2.
 - 2. The Elevator Contractor is responsible for scheduling the necessary tests as required by the local authorities.
 - a. Any fees associated with a missed appointment, or for expediting of test or overtime tests due to delays caused by the Elevator Contractor are the responsibility of the Elevator Contractor.
- C. Certificates:
 - 1. Elevator Contractor is responsible for obtaining and providing Contractor with all temporary and final inspection certificates of the proper governing authorities and provides the Contractor with such certificates.
 - 2. The Elevator Contractor pays for all fees necessary for obtaining temporary and final inspection certificates.

1.5 QUALITY ASSURANCE

- A. Compliance with Regulatory Agencies:
 - 1. Comply with most stringent provisions of codes, laws, and/or authorities, including revisions and changes in effect.
- B. Progress Reviews:
 - 1. The Elevator Contractor is subject to reviews by the Consultant and/or Contractor at any time throughout the project.
 - 2. Contractor to assist without additional cost.

1.6 DELIVERY, STORAGE, AND HOISTING

- A. General:
 - 1. The protection of all equipment and exposed finishes is the responsibility of the Elevator Contractor during delivery, handling, and installation until final acceptance of elevator equipment.
 - 2. The Elevator Contractor replaces damaged materials with new, at no additional cost for material and labor.
- B. Delivery and Storage:
 - 1. It is the responsibility of the Elevator Contractor to properly store and protect all materials in space provided or designated by the Contractor against damage, stains, scratches, corrosion, weather, construction debris and environmental conditions.
 - 2. Deliver materials to the site in the manufacturer's original and unopened containers and packaging, bearing labels as to type of material, brand name and manufacturer's name.
 - 3. Store materials under cover in a dry and clean location, off the ground. Remove delivered materials that are damaged or not suitable for installation from the jobsite and replace with acceptable materials.
- C. Hoisting:
 - 1. All required hoisting and movement of equipment is the responsibility of the Elevator Contractor.

1.7 COORDINATION

- A. General:
 - 1. Coordinate the following requirements with the other trades.
- B. Cast-in-Place Concrete:
 - 1. Elevator Contractor to provide guide rail bracket inserts and the locations for the General Contractor to install.
 - 2. Provide other hoistway and pit requirements, including location of sump pits.
- C. Masonry Penetrations:
 - 1. Provide locations in elevator control room/hoistway walls where conduit, ropes, and wiring penetrate walls and slabs.
 - 2. Coordinate installation of sleeves, block outs, inserts, and items that are embedded in concrete or masonry for elevator equipment.
 - 3. Furnish inserts, templates and installation instructions and deliver to Project site in time for installation.
- D. Structural Steel:
 - 1. Including, but not limited to, elevator control rooms, hoistways and pits, sill supports, rail supports.
- E. Miscellaneous Steel:
 - 1. Pit ladders, working platforms, inspection platforms, guard rails, divider beams.
- F. Electric:
 - 1. Electrical service, mainline disconnects, 110 VAC disconnects, outlets, lights, switches in elevator control rooms and pits.
- G. HVAC:
 - 1. Provide necessary information to General Contractor and coordinate installation of equipment for elevator control rooms.
- H. Finishes:
 - 1. Cab interiors, hoistway entrances, fixtures.
- I. Elevator Cab Flooring:
 - 1. Material and finish as specified.
 - 2. Flooring installation must be coordinated to ensure car sill is installed level with finished floor.
- J. Security Equipment:
 - 1. Coordinate locations in elevator control rooms and cabs where cables, conduit, and other components for CCTV and/or security equipment must be installed.

1.8 WARRANTY

- A. Manufacturer's Warranty:
 - 1. Manufacturer agrees to repair, restore, or replace elevator equipment that fails due to defective materials or poor workmanship within specified warranty period.
- B. Warranty Period: 12 months from date of Substantial Completion:

1. The Elevator Contractor guarantees that the materials and workmanship of the apparatus installed by them and any subcontractor, under this contract, is first class in every respect and that they will make good on any defects not due to ordinary wear and tear or improper use, which may develop within one year from the date of final acceptance of all equipment.
2. Manufacturer's warranty to repair or replace defective products or their components in the event of defects within a specified period.
3. Neither the final payment nor any provisions of the contract documents relieve the Elevator Contractor of any obligation provided by law. They shall remedy any defects and pay all expenses for any damage to other work.
4. The warranty as outlined above, for all devices, starts from the date of final acceptance of each device, by the Consultant and the Owner, of all work specified and intended under these contract documents.

1.9 MAINTENANCE

A. General:

1. All maintenance is performed according to the guidelines stated in manufacturer's Maintenance and Operations manuals.
2. Maintenance records for each device, including lubrication logs, check charts, are provided in each control room.

B. Construction Maintenance:

1. Upon substantial completion of a device, after receiving sign-off from the governing authorities and acceptance from consultant and/or Contractor, the device may be accepted for service before completion of the entire project.
2. During the Construction Maintenance period, the necessary preventive maintenance is performed on a scheduled basis.
3. Provide the necessary protection of the hoistway entrances and sills, hoistway fixtures, cab interiors and fixtures and car door sills.
4. Replacement or repair of components, due to misuse by others, is the responsibility of the Contractor/Owner.
5. Include 24-hour-per-day, 7-day-per-week emergency callback service with response time of ninety minutes or less.

C. Warranty Maintenance:

1. Upon final acceptance of each device, subsequent to receiving acceptance and sign-off from the governing authorities and final acceptance, each device is accepted for full operation.
2. The warranty maintenance period begins for each device when all conditions in the above paragraph are met and will continue for a specified period.
 - a. Warranty Maintenance Period may begin at different times for each elevator.
3. The warranty maintenance program includes the following:
 - a. Monthly examinations, including adjustments, cleaning, and lubrication of equipment.
 - b. 24-hour Emergency Call back service is provided at no additional cost to Owner.
 - c. Replacement of components as required, using only components produced by the original manufacturer.
 - 1) Each control room is equipped with a lockable storage cabinet to contain the necessary spare parts.

D. Maintenance Specification:

1. Upon completion of the Warranty Maintenance period, the Elevator Contractor will provide the personnel to service the vertical transportation equipment.
 - a. Full-Service Maintenance Specification commences upon the completion of the warranty maintenance period for a term of five (5) years:
 - 1) If specifications for a comprehensive service agreement have not been provided, then the Contractor provides a proposal for a full-service agreement which covers the following:
 - a) All required inspections and tests.
 - b) 24-hour emergency call service at no additional cost to Owner.

2.2 MANUFACTURERS

- A. Subject to compliance with project requirements, provide products by one of the following:
 1. MRL Systems:
 - a. KONE Incorporated: MonoSpace 500.
 - b. Otis Elevator Company: Gen3, Edge
 - c. Schindler Elevator Corporation: 5500.
 - d. TK Elevator: EVO 200,

- e. Manufacturer's standard components, including machines, controllers, door equipment, fixtures, and cab enclosures, are approved.
- 2. Hoistway Entrance:
 - a. Wittur.
 - b. Columbia.
 - c. EDI-ECI.
 - d. National Elevator Cab & Doors.
 - e. Regency Elevator Cabs.
- 3. Passenger Elevator Door Equipment (Operators, interlocks, pickup assemblies, Tracks, Hangers, and Closers):
 - a. GAL.
 - b. Otis.
 - c. Wittur.
- 4. Elevator Car Enclosures:
 - a. Manufacturers Standard Collection.
- 5. Fixtures vandal resistant:
 - a. Manufacturers Standard Collection.
 - b. EPCO.
 - c. Monitor.
 - d. Innovation.
- 6. Two-Way Communication Device:
 - a. RingComm.
 - b. EMS.
 - c. TOA.

2.3 PERFORMANCE REQUIREMENTS

- A. Car Speed:
 - 1. $\pm 3\%$ of contract speed under any loading condition.
- B. Car Capacity:
 - 1. Safely lower, stop and hold 125% of rated load.
- C. Car Stopping Zone:
 - 1. $\pm 1/4"$ under any loading condition.
- D. Door Times:
 - 1. Seconds from start to fully open or fully closed:
 - a. Cars PE1, PE2: Door open 2.5 seconds, door close 4.0 seconds.
 - b. Car SE1: Door open 2.9 seconds, door close 4.8 seconds.
- E. Car Floor-to-Floor Performance Time:
 - 1. Seconds from start of doors closing until doors are 1/2 open for side opening doors, and car level and stopped at next successive floor under any loading condition or travel direction:
 - a. Cars PE1, PE2: 12 seconds.
 - b. Car SE1: 13.6 seconds.
- F. Car Ride Quality:
 - 1. Acceleration and Deceleration:
 - a. Smooth, constant, and not less than 2.5 feet/second² with an initial ramp between 0.5 and 0.75 second.

2. Sustained Jerk:
 - a. Not more than 6 feet/second³ or twice the rate of acceleration.
 3. Horizontal and vertical acceleration within car during all riding and door operating conditions.
 - a. Not more than 15 mg peak to peak (adjacent peaks).
 4. Measurement Standards:
 - a. Measure and evaluate ride quality consistent with ISO 18738, using low pass cutoff frequency of 10 Hz and A95 peak-to-peak average calculations.
- G. Noise and Vibration Control:
1. Airborne Noise:
 - a. Measured noise level of elevator equipment and its operation does not exceed 55 dBA inside car under any condition including door operation and car ventilation exhaust blower on its highest speed.
 - b. Limit noise level in the control room and control space relating to elevator equipment and its operation to no more than 80 dBA.
 - c. All dBA readings to be taken 3'-0" off the floor and 3'-0" from the equipment using the "A" weighted scale.
 2. Vibration Control:
 - a. All elevator equipment is mechanically isolated from the building structure and other components to minimize noise and vibrations being transmitted to occupied areas of the building.

2.4 ELEVATORS

- A. Passenger Elevators Description:
1. Elevator Identification: Car PE1.
 2. Capacity: 3500 lbs.
 3. Class of Loading: Class A.
 4. Contract Speed: 200 fpm.
 5. Roping: 2:1 Underslung
 6. Machine: Gearless.
 7. Machine Location: Overhead in Hoistway.
 8. Control System: Collective microprocessor-based: Simplex selective collective.
 9. Floors Served, Front: L, 2-4.
 10. Floors Served, Rear: *1.
 11. Openings: Front 4.
 12. Openings: Rear 1.
 13. Minimum Clear Height to underside of canopy: 8'-0" High.
 14. Entrance Size: 3'-6" Wide X 7'-0" High.
 15. Entrance Type: Single-speed, side-opening.
 16. Required Horsepower: 30 hp
- B. Passenger Elevators Description:
1. Elevator Identification: Car PE2.
 2. Capacity: 3500 lbs.
 3. Class of Loading: Class A.
 4. Contract Speed: 200 fpm.
 5. Roping: 2:1 Underslung
 6. Machine: Gearless.
 7. Machine Location: Overhead in Hoistway.
 8. Control System: Collective microprocessor-based: Simplex selective collective.
 9. Floors Served, Front: *1-2

10. Openings: Front 2.
11. Minimum Clear Height to underside of canopy: 8'-0" High.
12. Entrance Size: 3'-6" Wide X 7'-0" High.
13. Entrance Type: Single-speed, side-opening.
14. Required Horsepower: 30 hp

C. Service Elevators Description:

1. Elevator Identification: Car SE1.
2. Capacity: 5000 lbs.
3. Class of Loading: Class C3.
4. Contract Speed: 200 fpm.
5. Roping: 2:1 Underslung.
6. Machine: Gearless.
7. Machine Location: Overhead in Hoistway.
8. Control System: Collective microprocessor-based: Simplex selective collective.
9. Floors Served, Front: *1-4.
10. Openings: Front 4.
11. Minimum Clear Height to underside of canopy: 8'-0" High.
12. Entrance Size: 4'-6" Wide X 7'-0" High.
13. Entrance Type: Two-speed, side-opening.
14. Required Horsepower 40 hp

2.5 MATERIALS

A. Steel:

1. Sheet Steel (Furniture Steel for Exposed Work): Stretcher-leveled, cold-rolled, commercial quality carbon steel, complying with ASTM A366, matte finish.
2. Sheet Steel (for Unexposed Work): Hot-rolled, commercial quality carbon steel, pickled and oiled, complying with ASTM A568/A568M-03.
3. Structural Steel Shapes and Plates: ASTM A36.

B. Stainless-steel:

1. Type 302 or 304 series complying with ASTM A240, with standard tempers and hardness required for fabrication, strength, and durability.
2. Apply mechanical finish on fabricated work in the locations shown or specified, Federal Standard and NAAMM nomenclature, with texture and reflectivity required to match Architect's sample. Protect with adhesive paper covering.
 - a. No. 4 Satin:
 - 1) Directional polish finish.
 - 2) Graining directions as shown or, if not shown, in longest dimension.
 - b. Textured:
 - 1) .050 inches mean pattern depth with bright directional polish (No. 4 satin finish).
 - 2) 2WL, 5WL, 4LB as manufactured by Rigidized Metals.
 - 3) Windsor pattern 5-SM as manufactured by Rimex Metals.
3. Extruded stainless-steel:
 - a. 304 stainless-steel per ASTM A276.
 - b. Hot finished and stretched straightened.
 - c. Polished finish.

C. Bronze:

1. Stretcher-leveled, re-squared sheets composed of 60% copper and 40% zinc like Muntz Metal, Alloy Group 2, with standard temper and hardness required for fabrication, strength, and durability.
 2. Clean and treat bronze surfaces before mechanical finish.
 3. After completion of the final mechanical finish on the fabricated work, use a chemical cleaner to produce finish, Federal Standard, and NAAMM nomenclature, matching Architect's sample.
 - a. No. 4 Satin:
 - 1) Directional polish finish.
 - 2) Fine-satin clear-coated with clear-organic coating recommended by Fabricator.
 - 3) Provide graining direction as shown or, if not shown, in longest dimension.
 4. Extruded Bronze:
 - a. Muntz Metal, Alloy Group 2
 - b. Hot finished and stretched straightened.
 - c. No. 4 Satin Finish.
- D. Aluminum:
1. Extrusions per ASTM B221; sheet and plate per ASTM B209.
 2. Die Cast Aluminum – ASTM B108, Alloy 356.0, T6.
 3. Extruded Aluminum – FS QQ-A 200/8, Alloy 6061, T6.
- E. Nickel-Silver:
1. Extruded nickel-silver:
 - a. C77600 nickel-silver
 - b. Hot extruded, temper code M30
- F. Plastic Laminate:
1. ASTM E84 Class A and NEMA LD3.1, Fire-Rated Grade (GP-50), Type 7, 0.050" $\pm$ 0.005" thick.
 2. Exposed Surfaces: Color and texture selected by Architect.
 3. Concealed Surfaces: Manufacturer's standard color and finish.
- G. Fire-Retardant Treated Particle Board Panels:
1. Minimum 3/4" thick backup for natural finished wood and plastic laminate veneered panels, edged and faced as shown, provided with suitable anti-warp backing.
 2. Meet ASTM E84 with a flame-spread rating of 75 or less, and smoke development rating of 450 or less.
- H. Natural Finish Wood Veneer:
1. Standard thickness, 1/40" thoroughly dried conforming to ASME/HPMAHP-1983, Premium Grade.
 2. Place veneer, tapeless spliced with grain running in direction shown, belt, and polish sanded, book matched.
 3. Meet ASTM E84 with a flame-spread rating of 75 or less, and smoke development rating of 450 or less.
- I. Paint Finishes:
1. General:
 - a. Clean exposed metal parts and assemblies of oil, grease, scale, and other foreign matter and factory paint one shop coat of standard rust-resistant primer.
 - b. Galvanized metal need not be painted.

2. Prime Finish:
 - a. Apply one coat of rust-resistant primer followed by a filler coat over uneven surfaces.
 - b. Sand smooth and apply final coat of primer.
 3. All equipment and metal work installed under this contract, which does not have a baked enamel or special architectural finish, and which is exposed in the hoistway, is cleaned, and painted one field coat of enamel.
 4. All control room equipment is painted upon completion of the installation with the manufacturer's standard machinery enamel.
 5. Elevator designation (number and/or letter) is prominently indicated on all control room and machinery space equipment, top of car crosshead and pit equipment.
- J. Baked Enamel Finish:
1. Prime finish per above.
 2. Unless specified "prime finish" only, apply and bake three additional coats of enamel in the selected solid color.
- K. Powder Coating Finish
1. Apply one coat of baked-on powder coat finish of selected color.
- L. Glass:
1. Laminated safety glass, minimum 9/16" thick.
- 2.6 OPERATION
- A. General:
1. Cars automatically slow down and stop level at floors in response to car and landing calls with stops made in sequence in the established direction of travel, regardless of order in which buttons are pressed.
 2. Landing calls are canceled when the assigned car arrives at the landing.
 3. Automatic Dispatch Failure: Provide auxiliary dispatch system to automatically dispatch elevators in the event of failure of the primary control system.
 4. Hall Call Button Failure: Should failure of hall call button system occur, initiate operation providing predetermined service to all landings; elevators respond normally to car calls.
 5. Automatic Leveling:
 - a. When arriving at a floor cars level to within 1/8" above or below the landing sill prior to opening doors, without travelling past the landing during leveling
 - b. Maintain leveling accuracy regardless of carload, direction of travel, rope slippage or stretch.
 6. Power Conservation:
 - a. Shut off car interior illumination and ventilation after adjustable period (60-180 seconds) of no elevator demand.
 - b. turn on prior to opening car doors when elevator demand returns.
- B. Door Operation: All Cars:
1. Automatically open doors when car arrives at a floor.
 2. Stop and reopen doors or hold doors in open position upon activation of "door open" button.
 3. At expiration of normal dwell time, or upon activation of "door close" button, close doors:
 - a. Prevent doors from closing and reverse doors at normal opening speed if door reopening device beams are obstructed while doors are closing, except during nudging operation.

- b. In event of door reopening device failure, provide for automatic shutdown of car at floor level with doors open.
 - c. Close cycle does not begin upon activation of "door close" button until normal door dwell time for a car or hall call has expired, except firefighters' operation.
 - 4. Nudging Operation:
 - a. After beams of door reopening device are obstructed for a predetermined time interval (minimum 20.0-25.0 seconds), sound warning signal, and attempt to close doors with maximum of 2.5 foot-pounds kinetic energy.
 - b. Activation of the door open button overrides nudging operation and reopens doors.
 - 5. Interrupted Beam Time:
 - a. When beams are interrupted during initial door opening, hold door open a minimum of 3.0 seconds.
 - b. When beams are interrupted after the initial 3.0 second hold open time, reduce time doors remain open to an adjustable time of approximately 1.0-1.5 seconds after beams are reestablished.
 - 6. Differential Door Time:
 - a. Field adjustable time that doors remain open after stopping in response to calls.
 - b. Car Call: Hold open time adjustable between 3.0 and 5.0 seconds.
 - c. Hall Call:
 - 1) Hold open time adjustable between 5.0 and 8.0 seconds.
 - 2) Use hall call time when car responds to coincidental calls.
- C. Independent Service:
 - 1. When feature is activated from within the car, allow control of car from buttons and controls inside the car.
 - 2. Close doors by constant pressure on desired destination floor button or door close button.
 - 3. Open doors automatically upon arrival at selected floor.
- D. Load Weighing:
 - 1. Provide cars with adjustable load weighing device which monitors cable tension.
 - 2. Control system to provide dispatching at main floor in advance of normal intervals when car fills to a field adjustable, 10%-100%, percentage of rated capacity.
 - 3. Provide hall call by-pass when car is filled to a field adjustable, 10%-100%, percentage of rated capacity.
 - 4. Audible overload signaling device inside elevator cab shall be activated upon load weighing device sensing carload has reached or exceeded a pre-determined percentage of capacity.
 - 5. Doors will not close when overload signaling device is active.
- E. Simplex selective Collective Operation, All Cars:
 - 1. Elevators operate via momentary pressure buttons to:
 - a. Place hall call by selecting direction of travel at each hall landing (up and down buttons at each intermediate landing, single buttons at each terminal landing).
 - b. Place car call by selecting destination floor from inside the car (individual buttons for each floor served).
 - 2. Hall calls, other than calls placed at the landing at which car is standing, start car, and cause the car to stop at first landing for which a call is registered in the direction of travel.
 - 3. Stops are made in order in which landings are reached, irrespective of sequence in which calls are registered.
 - 4. Parked Car (No Demand):

- a. When feature is enabled, elevator remains at landing of last assignment (if no further demand) with doors closed, for a predetermined amount of time (programmable for any amount of time). Upon expiration of time, the elevator returns to the main egress landing with the doors closed.
 - b. If feature is disabled, if no further demand, the elevator remains at landing of last assignment with the doors closed until a hall call is registered.
- 5. Car and Hall Lanterns:
 - a. Lanterns provide audio and visual signal upon each stop, regardless of responding to car or hall call.
 - b. Visual signal remains active from commencement of door opening until doors are completely closed.
- F. Standby or Emergency Power Operation, PE1, SE1:
 - 1. The terms Standby Power and Emergency Power are both referred to as Emergency Power in this Section. Elevator operation is the same when either is provided.
 - 2. Where emergency power is provided to the elevator main disconnects and required by the Building Code the elevator installation shall comply with the Emergency Power Operation requirements of ASME A17.1 as modified by any superseding Building Code requirements.
 - 3. Operation is activated by a signal from an Automatic Transfer Switch (ATS) to elevator controls indicating the Emergency power source is operational.
 - a. Start and run one car in each group at contract car speed and capacity.
 - b. Illuminate "ELEVATOR EMERGENCY POWER" signals.
 - 4. Restoration of Normal Power:
 - a. At least 20 seconds prior to transfer from emergency power to normal power at the ATS, a pre-transfer signal is supplied to the elevator control system from the ATS.
 - b. Elevators operating on emergency power stop at the next available landing and remain there until normal power is restored.
- G. Firefighters' Emergency Operation:
 - 1. Provide equipment and operation in accordance with code requirements.
- H. Motion Control:
 - 1. Microprocessor-based AC variable-voltage, variable frequency with digitally encoded closed-loop velocity feedback suitable for operation specified and capable of providing smooth, comfortable car acceleration, retardation, and dynamic braking.
 - 2. Limit the difference in car speed between full load and no load to not more than $\pm 3\%$ of the contract speed.
- I. Emergency Lighting, Communication, and Alarm:
 - 1. Car mounted battery unit with solid-state charger to operate alarm bell, car emergency lighting, and communication system.
 - 2. Car lighting and communication shall be provided with a minimum of 4 hours of operation on back-up power during a loss of normal power, and a minimum of 1 hour of operation for car-mounted alarm and any remote alarm mounted at the designated level.
 - 3. Battery to be rechargeable with minimum five-year life expectancy.
 - 4. Provide constant pressure light test button in service compartment of car operating panel.
 - 5. Provide lighting integral with normal car lighting system.
- J. Emergency Battery Operation, PE2:
 - 1. Upon loss of normal power automatically move the car to the nearest landing depending on the load in the car.

2. Upon arrival at the landing, the elevator doors open automatically, and the elevator is removed from service.
3. Upon restoration of normal power, the elevator shall automatically resume normal operation.
4. The auxiliary power source is provided via 12-volt D.C. battery units installed in equipment space.
5. Include solid-state charger and testing means mounted in a common metal container.
6. Battery to be rechargeable lead acid or nickel cadmium with a five-year life expectancy.

K. Card/Proximity Reader Security System:

1. Provide provisions inside all cars for reader unit.
2. Mount reader unit as directed by Architect. Connect to card reader via traveling cable to terminal interface and relays in control room.
3. Provide output signal to facilitate system tracking of floor access.

2.7 EQUIPMENT SPACE EQUIPMENT

A. Arrange equipment in spaces shown on drawings.

B. Solid State Power Conversion and Regulation Unit:

1. Provide solid-state, alternating current, variable voltage, variable frequency (ACV³F), IGBT converter/inverter regenerative drive.
2. Design unit to limit current, suppress noise, and prevent transient voltage spikes into building power supply.
 - a. Provide internal heat sink cooling fans for the power drive portion of the converter panels.
 - b. Mechanically isolate unit to minimize noise and vibration transmission.
3. Conform to IEEE standard 519-2014 for line harmonics and switching noise.
4. Provide isolation transformers, filter networks, and choke inductors.
5. Suppress solid-state converter noises, radio frequency interference, and eliminate regenerative transients induced into the mainline feeders or the building standby power generator.
6. Supplemental direct-current power for the operation of hoist machine brake, door operator, dispatch processor, signal fixtures, from separate static power supply.
7. ACV³F Drives are regenerative and utilize IGBT converter/inverter and dynamic braking during overhauling condition.

C. Resistor Load Bank:

1. Provide means of diverting regenerated power during emergency power operation and restoring regenerated power delivery back to the electrical distribution system following emergency power operation termination.
2. Provide resistor load bank to discharge regenerative power during emergency power operation.
3. Load bank is installed on the load side of the mainline disconnect.

D. Encoder:

1. Direct drive, solid-state, digital type. Update car position at each floor and automatically restore after power loss.

E. Controller:

1. UL/CSA labeled.
2. Compartment:

- a. Securely mount all assemblies, power supplies, chassis switches, relays, on a substantial, self-supporting steel frame.
 - b. Completely enclose equipment with covers.
 - c. Provide means to prevent overheating.
3. Relay Design:
 - a. Magnet operated with contacts of design and material to insure maximum conductivity, long life, and reliable operation without overheating or excessive wear.
 - b. Provide wiping action and means to prevent sticking due to fusion.
 - c. Contacts carrying high inductive currents are provided with arc deflectors or suppressors.
4. Microprocessor Hardware:
 - a. Provide built-in noise suppression devices that provide a high level of noise immunity on all solid-state hardware and devices.
 - b. Provide power supplies with noise suppression devices.
 - c. Isolate inputs from external devices (such as pushbuttons) with opto-isolation modules.
 - d. Design control circuits with one leg of power supply grounded.
 - e. Safety circuits are not affected by accidental grounding of any part of the system.
 - f. System automatically restarts when power is restored.
 - g. System memory is retained in the event of power failure or disturbance.
 - h. Equipment is provided with Electro Magnetic Interference (EMI) shielding within FCC guidelines.
5. Wiring:
 - a. CSA labeled copper for factory wiring.
 - b. Neatly route all wiring interconnections and securely attach wiring connections to studs or terminals.
 - c. Provide labels for all extra or spare wires, neatly organized at base of controller cabinet.
6. Data Monitoring:
 - a. Provide an onboard monitor or screen, either inside the controller or in a stand-alone PC station, to display an easily understood format.
 - b. Upon command, the current operating parameters, individual car status, floor positions or other selected operational features will be displayed.
 - c. Display a minimum of 20 previous errors, which will be logged for statistical evaluation.
 - d. Provide means for hard copy printouts.
 - e. Diagnostic display will support monitoring of elevator motion, velocity, door operation parameters and timing functions.
 - f. Non-volatile memory is required to store group operation data with provisions for data logging and hard copy reporting.
 - g. Network connectivity provision is incorporated in the basic dispatching control system.
 - 1) This provision may be employed for traffic analysis, hard copy computation and/or remote monitoring of status conditions utilizing an isolated PC and compatible printer for reports or graphs.
 - 2) All reports are time and date stamped to confirm reporting period.
 - h. Monitor employs color video displays for the following information:
 - 1) Display screen (group operations statistics).
 - 2) Monitoring screen (diagnostics, system status).
 - 3) Performance screen (traffic analysis).
 - i. Features required regarding remote and additional location monitoring, as indicated in other applicable sections, apply.

7. Permanently mark components with symbols shown on wiring diagrams.
8. Provide control panel compliant with UL 508A SB.SCCR of 5000A required.

F. Electrical Wiring and Wiring Connections:

1. Conductors and Connections:
 - a. Copper throughout with individual wires coded and connections on identified studs or terminal blocks.
2. The use of splices or similar connections in wiring except at terminal blocks, control compartments, or junction boxes is prohibited. Conduit:
 - a. Galvanized steel conduit, EMT, or duct.
 - b. Flexible conduit length not to exceed 3'-0".
3. Traveling Cables:
 - a. Tag spares in equipment space.
 - b. Provide cables from controller to car top.
4. Auxiliary Disconnect:
 - a. Provide controller or machine mounted auxiliary, lockable "open" disconnect.
5. Auxiliary Wiring:
 - a. Provide dedicated equipment space junction boxes for the following:
 - 1) Fire alarm initiating devices.
 - 2) Emergency two-way communication system.
 - 3) Network connectivity.
 - 4) CCTV.
 - 5) Digital video display.
 - 6) Security system and card reader interface terminals and relays.
 - 7) Intercom, announcement speaker and/or background music.
 - b. Provide conduit, wiring and connections from controller space junction box to each controller in the equipment space for the following:
 - 1) Fire alarm initiating devices.
 - 2) Emergency two-way communication system.
 - 3) Network connectivity.
 - 4) CCTV.
 - 5) Digital video display.
 - 6) Security system and card reader interface terminals and relays.
 - 7) Intercom, announcement speaker and/or background music.

2.8 HOISTWAY EQUIPMENT

A. Gearless Traction Hoist Machine:

1. AC induction or P.M.S.M. ACV³F gearless traction motor with brakes, drive sheave, and deflector sheave mounted in proper alignment.
2. Provide hoist machine mounted direct drive, digital, closed-loop velocity encoder.
3. Provide machine with an electromechanical brake.
 - a. The brake is spring applied and electrically released.
 - b. Brake shoes are applied to the braking surface simultaneously and with equal pressure.
4. Provide means to prevent ascending car over-speed and unintended car movement via dual modular redundant braking system.
5. Provide ladders and platforms with handrails and toe boards for overhead sheave and governor access within the bounds of the equipment space.

- B. Machine and Equipment Support Beams:
 - 1. Provide structural steel beams required for direct support of and attachment to building structure of hoist machine, deflector sheaves, overhead sheaves, governor, and hoist rope dead-end hitch assemblies.
 - 2. Provide bearing plates, anchors, shelf angles, blocking, embedment, for support and fastening of machine beams or equipment to the building structure.
 - 3. Isolate machine and overhead sheave beams to prevent noise and vibration transmission to building structure.
- C. Governor:
 - 1. Centrifugal-type, car with pull-through jaws and bi-directional shutdown switches.
 - 2. Provide required bracketing and supports for attachment to building structure.
 - 3. Provide manual remote reset capability at controller.
- D. Guide Rails:
 - 1. Planed steel T-sections for car and counterweight of suitable size and weight for the application, including seismic reactions, including brackets for attachment to building structure.
 - 2. No additional structural points of attachment other than those shown on the Contract Documents will be provided.
 - 3. Provide rail backing and intermediate counterweight tie brackets.
 - 4. Provide bracketing, at top and bottom of floor beams.
- E. Sheaves:
 - 1. Machined grooves and sealed bearings.
 - 2. Provide mounting to machine beams, car, and counterweight structural members, or building structure.
- F. Counterweight:
 - 1. Steel frame with metal filler weights.
- G. Counterweight Guides:
 - 1. Spring dampened roller guides.
- H. Counterweight Runway Guard:
 - 1. Where counterweight is located between adjacent elevators, provide counterweight guard along entire runway next to the adjacent elevator.
- I. Seismic Equipment:
 - 1. Provide design, components, and operation per governing code.
 - 2. Dual counterweight derailment sensing wires located vertically on each side of counterweight the entire height of travel.
 - 3. Counterweight frame equipped with a minimum of four derailment rings.
 - 4. Provide dual axis seismic switch that activates at no less than 0.15 times gravity in the vertical or horizontal directions. A minimum of one seismic switch shall be provided per car or group of elevators.
 - 5. Counterweight retainer plates must be bolted.
 - 6.
- J. Governor Rope and Encoder Tape Tensioning Sheaves:
 - 1. Mount sheaves and support frame on pit floor or guide rail.

2. Provide frame with guides or pivot point to enable free vertical movement and proper tension of rope and tape.
- K. Suspension Means:
 1. 8 x 19 or 8 x 25 Seale construction, traction steel.
 - a. Fasten with staggered length, adjustable, spring isolated wedge shackles.
 2. Noncircular elastomeric-coated steel belt comprising of several steel cords arranged in parallel and molded within a coating.
 3. Approved governor rope.
- L. Terminal Stopping:
 1. Provide normal and final devices.
 2. Provide emergency terminal speed limiting devices where required by dimensional limitations.
- M. Electrical Wiring and Wiring Connections:
 1. Conductors and Connections:
 - a. Copper throughout with individual wires coded and connections on identified studs or terminal blocks.
 - b. The use of splices or similar connections in wiring except at terminal blocks, control compartments, or junction boxes is prohibited.
 - c. Provide 20% spare conductors for each wire type.
 - d. Run spare wires from car connection points to individual elevator controllers in the equipment space.
 2. Conduit:
 - a. Galvanized steel conduit, EMT, or duct.
 - b. Flexible conduit between isolated equipment, length not to exceed 3'-0".
 - c. Flexible heavy-duty service cord may be used between fixed car wiring and car door switches for door protective devices.
 - d. Coordinate conduit from the closest hoistway of each elevator or group or single elevator to the firefighters' control panel. Provide wiring.
 3. Traveling Cables:
 - a. Flame and moisture-resistant outer cover.
 - b. Prevent traveling cable from rubbing or chafing against hoistway or equipment within hoistway.
 - c. Provide the following minimum composition, which are not considered spares:
 - 1) Five pair of shielded 20-gauge wire for card reader.
 - 2) Two pair of shielded 18-gauge wire for CCTV, from car controller to car top junction box, plus 3'-0" excess loop at both ends.
 - 3) Two pair of 18-gauge wire for CCTV power.
 - 4) Two pair of 18-gauge wire for emergency communication system power.
 - 5) Two pair of 18-gauge wire for network connectivity power.
 - d. Provide eight pair of spare shielded communication wires in addition to those required to connect specified items.
 - e. Tag spares in control room. Provide cables from controller to car top.
 - f. Support traveling cable by suspending from supports by means that automatically tighten around the cable when tension is increased.
 4. Auxiliary Wiring:
 - a. Provide conduit, wiring and connections for systems specified.
- N. Entrance Equipment:

1. Two-point hanger roller with non-metallic roller surface and suspension with eccentric upthrust roller adjustment.
 2. Bar or formed, cold-drawn removable steel door tracks with smooth roller contact surface.
 3. Door Interlocks:
 - a. Operable door locks without retiring cam.
 4. Door Closers:
 - a. Spring, spirator, weighted, or jamb/strut mounted.
 - b. Design and adjust to ensure a smooth and quiet mechanical close of doors.
- O. Floor Numbers:
1. Stencil paint 4" high floor designations in contrasting color on inside face of hoistway doors and hoistway fascia. Must be visible from within car.

2.9 HOISTWAY ENTRANCES

- A. Entrance Assemblies:
1. Complete entrances bearing fire labels from a certified testing laboratory approved by authority having jurisdiction.
 2. Provide entrance assemblies bearing 1-1/2hr label.
 3. Paint all exposed ferrous metal black.
- B. Frames:
1. Bolted and lapped head to jamb assembly at all floors.
 2. Provide Arabic floor designation/Tactile marking plates:
 - a. Centered at 60" above finished floor.
 - b. Located on both side jambs of all entrances.
 - c. Minimum 4" in height.
 - d. Tactile indications below Arabic floor designation.
 3. Provide car identification label:
 - a. Mounted directly below floor designation/Tactile marking plates.
 - b. Located on both side jambs at the following levels:
 - 1) Designated Level.
 - 2) Alternate Level.
 - 3) Level designated for testing.
 - c. Finish and design to match floor designation/Tactile marking plates.
 4. Provide plates at main egress landing with "Star" designation.
 5. For designated emergency car, provide "Star of Life" cast designation plates at height of 78"-84" above finished floor on both side jambs at all floors.
- C. Door Panels:
1. Sandwich construction without binder angles.
 2. Provide one leading edge of doors with rubber astragals.
 3. Provide a minimum of two gibs per panel, one at leading and one at trailing edge with gibs in the sill groove entire length of door travel.
 4. Provide one separate 4" steel reinforcement safety gib mounted between door gibs, where not integrated with door gibs.
 5. Architectural metal cladding wraps around leading and trailing edge of panel and return a minimum of 1/2" on rear side of leading edge of panel at all floors.
- D. Sight Guards:
1. Same material, finish, and height as hoistway entrance door panels.

2. Construct without sharp edges.
 - E. Sills:
 1. PE1, PE2: Extruded aluminum.
 2. SE1: Extruded nickel silver.
 - F. Sill Supports:
 1. Structural or formed steel designed to support sill load.
 2. Design to eliminate need for grout under the sill.
 3. SE1: Provide 5" x 5" x 1/2" structural steel angle, extending full width of hoistway. Fasten to building structure at maximum 18" O.C.
 - G. Fascia, Platform Guards and Hanger Covers:
 1. 16-gauge furniture steel with Contractor's standard finish.
 2. Provide full height fascia, platform guards, and hanger covers where rear entrances are not provided.
 3. Provide front and/or rear fascia for express hoistway travel.
 - H. Struts and Headers:
 1. Provide support of all entrances to building structure including connections to building structure.
 2. Provide door open bumpers on entrances equipped with vertical struts.
 - I. Finish of Frames and Doors:
 1. Satin finish stainless-steel.
 2. Provide final painting requirements to General Contractor where factory prime finish is specified.
 - J. Hoistway Access:
 1. Hoistway Door Unlocking Device:
 - a. Provide unlocking device in door panel at all floors, with finish to match adjacent surface.
 2. Hoistway Access Switches:
 - a. Mount in entrance frame side jamb at top floor.
 - b. Provide switch faceplate.
- 2.10 PIT EQUIPMENT
- A. Buffers:
 1. Provide Oil type with blocking and support channels.
 2. Stencil car number on buffer.
 - B. Pit Access:
 1. Hoistway Access Key Switch:
 - a. Provide key switch at lowest terminal landing.
 - b. Mount in entrance frame side jamb.
 - c. Provide switch faceplate.
 2. Provide pit stop switches.
 - C. Counterweight Guard:

1. Metal guard in pit in front of counterweight where no compensation is provided or where there is no space greater than 20 inches between the compensation means, suspension means, counterweight rails, or guards.

2.11 CAR EQUIPMENT

- A. Frame:
 1. Welded or bolted or formed steel channel construction to meet load classification specified.
- B. Safety Device:
 1. Type "B," flexible guide clamp.
- C. Platform:
 1. Design and construct to accommodate load classification requirements.
 - a. PE1, PE2: Provide Class "A" construction for passenger elevators
 - b. SE1: Provide Class "C3" construction for service elevators
 2. The car platform consists of a steel frame with necessary steel stringers, all securely welded together.
 3. Isolate the passenger elevator platform.
 - a. The support frame includes rubber pads on which the platform rests.
 - b. No mechanical connections between platform and frame.
 4. Work Light Fixtures & AC Receptacles:
 - a. Provide permanent mounted work light fixtures below platform, complete with proper lamp guards.
- D. Platform Guard:
 1. Minimum 48" high, reinforced and braced to car platform front and rear with Manufacturer's standard finish
- E. Cartop Guard Rail:
 1. Provide a railing system provided on the outside perimeter of the car top on all sides where the horizontal distance between the edges of the car top and the adjacent hoistway enclosure exceeds 12 inches.
- F. Car Guides:
 1. Roller type with three or more spring dampened, sound-deadening rollers per shoe. Minimum 3 1/4" outside diameter.
- G. Cab Steadying Plates:
 1. Provide and install top of car steadying plates.
 2. Emphasis is placed on proper tension to car styles allowing minimal lateral movement of the cab.
 3. Steadying plates are isolated using non-metallic guides or rollers.
- H. Sills:
 1. One-piece extrusion with extension between car entrance columns to face of car front return.
 2. Extruded extension to match finish of sill.
 3. Cars PE, PE2: Aluminum.
 4. Car SE1: Nickel silver.

- I. Door Panels:
 - 1. Sandwich construction without binder angles.
 - 2. Provide one leading edges of doors with rubber astragals.
 - 3. Provide a minimum of two gibs per panel, one at leading and one at trailing edge with gibs in the sill groove entire length of door travel.
 - 4. Construct door panels with interlocking, stiffening ribs.
 - 5. Architectural metalcladding wraps around leading and trailing edge of panel and return a minimum of 1/2" on rear side of leading edge of panel.
- J. Door Hangers:
 - 1. Two-point suspension.
 - 2. Hanger roller with non-metallic surface and eccentric roller adjustment.
- K. Door Track:
 - 1. Bar or formed, cold-drawn removable steel track with smooth roller contact surface.
- L. Door Header:
 - 1. Construct of minimum 12-gauge steel, shape to provide stiffening flanges.
- M. Door Electrical Contact:
 - 1. Prohibit car operation unless car door is closed.
 - 2. Provide car door interlock to prevent opening of car doors outside the unlocking zone, where clearance between the car platform and hoistway enclosure exceeds code maximum on the loading side.
- N. Door Clutch:
 - 1. Heavy-duty clutch, linkage arms, vane assembly and pickup rollers or cams to provide positive, smooth, quiet door operation.
 - 2. Design clutch so car doors can be closed while hoistway doors remain open.
- O. Restricted Opening Device:
 - 1. Provide mechanical car-door restrictor to prevent opening of doors when outside unlocking zone.
 - 2. Plunger type restrictors are not applicable.
 - 3. Utilize mechanical angle to prevent door opening
- P. Door Operator:
 - 1. High speed, heavy-duty door operator capable of opening doors at no less than 2.5 fps.
 - 2. Accomplish reversal within 2½" of door movement.
 - 3. Provide solid-state door control with closed loop circuitry to constantly monitor and automatically adjust door operation based upon velocity, position, and motor current.
 - 4. Provide a minimum of four controller-based motion profiles, per floor, per door, to maintain consistent, smooth, and quiet door operation at all floors, regardless of door weight or varying air pressure.
- Q. Door Reversing Device:
 - 1. Infrared Reopening Device:
 - a. Black fully enclosed device with full screen infrared matrix or multiple beams extending vertically along leading edge of each door panel to minimum height of 74" above finished floor.
 - b. Reverse doors at normal opening speed if beams are obstructed while doors are closing, except during nudging operation.

- c. In event of device failure, provide for automatic shutdown of car at floor level with doors open.
 - 2. Nudging Operation:
 - a. After door close is obstructed for a predetermined time interval (minimum 20.0-25.0 seconds), warning signal sounds, and doors close with a maximum of 2.5 foot-pounds kinetic energy.
 - b. Door open button overrides nudging operation and reopen doors.
 - 3. Interrupted Beam Time:
 - a. When beams are interrupted during initial door opening, hold door open a minimum of 3.0 seconds.
 - b. When beams are interrupted after the initial 3.0 second hold open time, reduce remaining adjustable open time to 1.0-1.5 seconds after beams are reestablished.
 - 4. Differential Door Time:
 - a. Provide separate adjustable timers to vary door dwell time after stopping in response to calls.
 - b. Car Call:
 - 1) Hold open time adjustable between 3.0 and 5.0 seconds.
 - c. Hall Call:
 - 1) Hold open time adjustable between 5.0 and 8.0 seconds.
 - 2) Use hall call time when car responds to coincidental calls.
- R. Car Operating Panel:
 - 1. Passenger Cars:
 - a. One car operating panel without faceplate:
 - 1) Consisting of a metal box containing the vandal resistant operating fixtures, mounted behind the car swing front return panel.
 - b. Suitably identify floor buttons, alarm button, door open button, door close button and emergency push-to-call button with cast stainless tactile symbols recessed flush mounted.
 - c. Pushbuttons:
 - 1) Provide minimum 3/4" diameter raised or flush floor pushbuttons which illuminate to indicate call registration.
 - 2) Provide brushed stainless-steel buttons with illuminated LED halo.
 - 3) Include 5/8" high floor designation on face of pushbutton.
 - d. Locate operating controls no higher than 48" above the car floor; no lower than 35" for emergency push-to-call button and alarm button.
 - e. Locked Firefighters Operation Panel:
 - 1) For fire officer use and independent service only.
 - 2) Openable by the same key which operates the Fire Operation switch.
 - 3) Including the following features:
 - a) Phase II fire access switch.
 - b) Firefighters' visual indication.
 - c) Call cancel button.
 - d) Stop switch, manually operated.
 - e) Door open button.
 - f) Door close button.
 - g) Floors served.
 - f. Provide "door open" button to stop and reopen doors or hold doors in open position.
 - g. Provide "door close" button to activate door close cycle.
 - 1) Cycle does not begin until normal door dwell time for a car or hall call has expired, except firefighters' operation.
 - 2. Service Car:

- a. One car operating panel with faceplate:
 - 1) Consisting of a metal box containing the vandal resistant operating fixtures, mounted behind the car stationary front return panel.
 - 2) Faceplates are hinged and constructed of No. 4 satin finish stainless-steel.
- b. Suitably identify floor buttons, alarm button, door open button, door close button and emergency push-to-call button with cast stainless tactile symbols surface flush mounted.
- c. Pushbuttons:
 - 1) Provide minimum 3/4" diameter raised or flush floor pushbuttons which illuminate to indicate call registration.
 - 2) Provide brushed stainless-steel buttons with illuminated LED halo.
 - 3) Include 5/8" high floor designation on face of pushbutton.
- d. Locate operating controls no higher than 48" above the car floor; no lower than 35" for emergency push-to-call button and alarm button.
- e. Locked Firefighters Operation Panel:
 - 1) For fire officer use and independent service only.
 - 2) Openable by the same key which operates the Fire Operation switch.
 - 3) Including the following features:
 - a) Phase II fire access switch.
 - b) Firefighters' visual indication.
 - c) Call cancel button.
 - d) Stop switch, manually operated.
 - e) Door open button.
 - f) Door close button.
 - g) Floors served.
- f. Provide "door open" button to stop and reopen doors or hold doors in open position.
- g. Provide "door close" button to activate door close cycle.
 - 1) Cycle does not begin until normal door dwell time for a car or hall call has expired, except firefighters' operation.
- 3. Service Compartment:
 - a. Provide lockable service compartment with recessed flush door.
 - b. Door material and finish matches car return panel or car operating panel faceplate.
 - c. Inside surface of door contains an integral flush window for displaying the elevator operating permit.
 - d. Include the following controls in lockable service cabinet with function and operating positions identified by permanent signage or engraved legend:
 - 1) Access switch.
 - 2) Light switch.
 - 3) 4-position Exhaust blower switch.
 - 4) Independent service switch.
 - 5) Constant pressure test button for battery pack emergency lighting.
 - 6) 120-volt, AC, GFCI protected electrical convenience duplex outlet.
 - 7) Card reader override switch.
 - 8) Keyed stop switch.
- 4. Provide black filled, engraved, or approved etched signage as follows with approved size and font:
 - a. Phase II firefighters' operating instructions on inside face of firefighters' compartment door.
 - b. Red filled engraved firefighters' operation on outside face of compartment door.
 - c. Building identification car number on car operating panel.
 - d. Car capacity in pounds on service compartment door.
 - e. Loading classification and description on service compartment door.

- f. "No Smoking" on car operating panel.
- S. Car Top Control Station:
 - 1. Mount to provide safe access and utilization while standing on car top.
 - 2. Operating device contains Up and Down direction buttons, a Run button, an Inspection/Automatic switch and Emergency Stop switch.
 - 3. Operating device contains an audible and visible indicator that fire recall has been initiated.
 - 4. This station is fixed to the car crosshead or may be portable provided the extension cord and housing are permanently attached to the car crosshead.
 - 5. The car will be operated by constant pressure on the appropriate direction button and the Run button simultaneously.
 - 6. Normal operating devices will be inoperative while this device is in use.
- T. Emergency Audible Signaling:
 - 1. Provide on top of each elevator.
 - 2. Activation of the Alarm Button or Emergency Stop switch will cause Emergency Audible Signal.
 - 3. Provide auxiliary power supply to provide 1hr power in the event of normal power loss.
- U. Work Light and Duplex Plug Receptacles:
 - 1. GFCI protected outlet at top and bottom of car.
 - 2. Include on/off switch and lamp guard.
 - 3. Provide additional GFCI protected circuit and dedicated junction box on car top for installation of car CCTV
 - 4. Provide additional GFCI protected circuit and dedicated junction box on car top for installation of car digital video display.

2.12 CAR ENCLOSURE

- A. Passenger Elevators, PE1, PE2: Provide complete as specified herein.
 - 1. Shell:
 - a. Reinforced formed furniture steel panels with baked enamel interior finish.
 - b. Apply sound-deadening mastic to exterior.
 - c. Provide concealed ventilation cutouts.
 - 2. Canopy:
 - a. Reinforced formed furniture steel panels with lockable, contacted, hinged emergency exit.
 - b. Interior finish white color reflective baked enamel.
 - 3. Front and Rear (where applicable) Swing Return Panels and Integral Entrance Columns:
 - a. Reinforced furniture steel clad with satin stainless-steel.
 - b. Swing entire unit on substantial pivot points for service access to car operating panels.
 - c. Locate pivot points to provide full swing of return panel without interference with side wall finish or handrail.
 - d. Secure in closed position with concealed three-point latch.
 - e. Provide firefighters' and service compartments with recessed flush cover and cutouts for operating switches.
 - 4. Transom:
 - a. Reinforced furniture steel clad with satin stainless-steel full width of enclosure.
 - 5. Base:
 - a. Baked enamel with concealed ventilation cutouts.

6. Finish Floor Covering:
 - a. Furnished under other sections.
 7. Interior Wall Finish:
 - a. Removable panels faced and edged, with color core plastic laminate, color and finish as selected.
 8. Ventilation:
 - a. Forced Ventilation
 - 1) 3-speed blower mounted to car canopy.
 - 2) Exhaust blower meets noise and vibration criteria.
 9. Lighting:
 - a. Provide LED fixtures with wiring and hookup.
 - b. Coordinate with emergency lighting requirements.
 10. Suspended Ceiling:
 - a. Six-section satin finish stainless-steel panels with lighting cutouts in each panel.
 11. Handrails:
 - a. Minimum 1¼" diameter stainless-steel tubular grab bar with backing plates and captive nuts across side walls.
 - b. Bolt rails through car walls from back and mount on 1½" deep solid round stainless-steel standoff spacers no more than 18" O.C.
 - c. Provide at 32 in. above finished floor, as indicated on Architectural drawings.
 - d. Return handrail/guardrail ends to car walls.
 12. Pads and Buttons, All Cars:
 - a. Three-piece removable pads.
 - b. Two pads covering side walls and adjacent front returns and one covering rear wall.
 - c. Provide cutouts to access main car operating panel.
- B. Service Elevator: Provide complete as specified herein.
1. Shell:
 - a. Reinforced formed furniture steel panels with baked enamel interior finish.
 - b. Apply sound deadening mastic to exterior.
 - c. Provide concealed ventilation cutouts.
 2. Canopy:
 - a. Reinforced furniture steel formed panels with lockable, contacted, hinged emergency exit.
 - b. Interior finish white reflective baked enamel.
 3. Front Stationary Return Panel:
 - a. Reinforced furniture steel clad with satin finish stainless-steel.
 4. Entrance Columns and Transom:
 - a. Reinforced furniture steel clad with satin finish stainless-steel.
 5. Base:
 - a. Baked enamel with concealed ventilation cutouts.
 6. Finish Floor Covering:
 - a. Furnished under other sections.
 7. Interior Wall Finish:
 - a. Removable panels faced and edged, with color core plastic laminate, color and finish as selected.
 8. Ventilation:
 - a. Forced Ventilation
 - 1) 3-speed blower mounted to car canopy.
 - 2) Exhaust blower meets noise and vibration criteria.
 9. Lighting:

- a. LED fixture flush mounted in canopy with expanded metal protective diffuser and steel guard over fixtures on car top.
 - b. Provide protective LED covers.
- 10. Handrails/Guardrails:
 - a. Two rows.
 - b. Top handrail line minimum 1½" diameter stainless-steel grab bar with backing plates and captive nuts.
 - c. Lower guardrail line 4" x 3/8" solid stainless-steel flat stock bars mounted on both sides of the car.
 - d. Locate bottom guardrail line at 8" above car floor and handrail line at 32" above the car floor.
 - e. Bolt rails through car walls from back and mount on 1½" deep solid round stainless-steel standoff spacers no more than 18" O.C.
 - f. Return handrail/guardrail ends to car walls.
- 11. Pads and Buttons:
 - a. Removable pads.
 - b. Two pads covering side walls and adjacent front returns and one covering rear wall.
 - c. Provide cutouts to access main car operating panel and fire service panel.

2.13 HALL CONTROL STATIONS

- A. Pushbuttons:
 - 1. Provide one riser pushbutton risers.
 - 2. Provide flush mounted faceplates.
 - 3. Include pushbuttons for each direction of travel that illuminate to indicate call registration.
 - 4. Include variable message system at all evacuation and primary egress levels.
 - 5. Include engraved message and pictorial representation prohibiting use of elevator during fire or other emergency as part of faceplate.
 - 6. Pushbutton design matches car operating panel pushbuttons.
 - 7. Provide vandal resistant pushbutton and light assemblies.
 - 8. Provide LED illumination.
 - 9. Provide Phase I Fire Service key switch, engraved operating instructions and illuminating jewel.
 - 10. Provide communication check failure indication and silence key switch.
 - 11. Provide illuminating jewels indicating standby power status.
 - 12. Incorporate all items required by Code at the primary egress level into a single hall fixture.

2.14 SIGNALS

- A. Hall Direction Lantern, All Cars:
 - 1. Provide at each entrance to indicate travel direction of arriving car.
 - 2. Illuminate up or down LED lights and sound tone once for up and twice for down direction prior to car arrival at floor.
 - 3. Illuminate light until the car doors start to close.
 - 4. Sound level adjustable from 20-80 dBA measured at 5'-0" in front of hall control station and 3'-0" off floor.
 - 5. Provide advanced hall lantern notification to comply with ADA hall call notification time.
 - 6. Provide advanced predictive hall lantern notification to comply with ADA hall call notification time
 - 7. Provide adjustable car door dwell time to comply with ADA requirements relative to hall call notification time

8. Hall direction lenses are arrow shaped with faceplates.
 9. Lenses are minimum 2½" in their smallest dimension.
- B. Hall Position Indicator, All Cars:
1. Alpha-numeric digital indicator containing floor designations and direction arrows a minimum of 2½" high to indicate floor served and direction of car travel.
 2. Mount integral with hall lanterns at first floor.
 3. Provide only at the Primary landing.
 4. Provide vandal resistant indicator and light assemblies.
- C. Car Position Indicator:
1. Alpha-numeric digital indicator containing floor designations and direction arrows a minimum of 2" high to indicate floor served and direction of car travel.
 2. Locate fixture in car front return panel above each car operating panel.
 3. When a car leaves or passes a floor, illuminate indication representing position of car in hoistway.
 4. Illuminate proper direction arrow to indicate direction of travel.
 5. Provide multi-numeral vandal resistant indicator and light assemblies.
- D. Fixture Faceplate Material and Finish:
1. Satin stainless-steel all fixtures.
- E. Floor Passing Tone:
1. Provide an audible tone of no less than 20 decibels and frequency of no higher than 1500 Hz, to sound as the car passes or stops at a floor served.
- F. Voice Synthesizer:
1. Provide electronic device with easily reprogrammable message and female voice to announce car direction, floor, emergency exiting instructions.

2.15 COMMUNICATION

- A. Car Communication System:
1. Hands-Free Phone System:
 - a. Two-way communication instrument in car with automatic dialing, tracking, and recall features, with shielded wiring to car controller in control room.
 - b. Provide dialer with automatic rollover capability with minimum two numbers:
 - 1) Actuate two-way communication via "Help" button.
 - 2) Adjacent light jewel illuminates and flash when call is acknowledged.
 - 3) Button matches car operating panel pushbutton design.
 - 4) Provide "Help" button tactile symbol, engraved signage, and Tactile marking adjacent to button mounted integral with car front return panel.
 2. Emergency Personnel Communication:
 - a. Communication system is provided allowing emergency personnel to establish communications with each elevator individually.
 - b. Emergency Personnel Communication overrides any existing connection outside of building.
 - c. Adjacent light jewel illuminates and flashes when call is acknowledged.
 - d. Provide operating instructions.
 - e. On the same car operating panel as the phone push button, provide capability to communicate with and obtain responses from passengers.
 - f. Provide display video capability for entrapment assessment.

3. Communication for deaf, hearing and speech impaired:
 - a. On the same car operating panel as the phone push button, provide capability to communicate visually with and obtain responses from passengers, including those passengers who cannot communicate verbally or hear.
 - b. Provide shielded twisted pair wiring to communicate to control room network box.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Prior to beginning installation of equipment examine hoistway and control room areas.
- B. Verify no irregularities exist that affect execution of work specified.
- C. Verify electrical power location and characteristics in coordination with equipment requirements.
- D. Do not proceed with installation until work in place conforms to project requirements.

3.2 INSTALLATION

- A. Install all equipment in accordance with Contractor's instructions, referenced codes, specification, and approved submittals.
- B. Install control room equipment with clearances in accordance with referenced codes and specification.
- C. Install all equipment so it may be easily removed for maintenance and repair.
- D. Provide any required hoisting/safety beams.
- E. Install all equipment to afford maximum accessibility, safety, and continuity of operation.
- F. Remove oil, grease, scale, and other foreign matter from the following equipment and apply one coat of field-applied machinery enamel.
 1. All exposed equipment and metal work installed as part of this work which does not have architectural finish.
 2. Control room equipment, hoistway equipment including guide rails, guide rail brackets, and pit equipment.
 3. Neatly touch up damaged factory-painted surfaces with original paint color. Protect machine-finish surfaces against corrosion.
- G. Fill hoistway door frames, back boxes for hallway stations and signal devices, and sills.
- H. Clean all architectural finishes and replace or restore any surfaces damaged during construction to like new condition.

3.3 FIELD QUALITY CONTROL

- A. Acceptance Testing:
 1. On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by governing regulations and agencies.

2.

- B. Advise Contractor, Architect, and authorities having jurisdiction in advance of dates and times that tests are to be performed on elevators.
- C. Independent Testing by Owner's Consultant.

3.4 CONSTRUCTION TOLERANCES

- A. Install rails plumb and align vertically with tolerance of 1/16" in 100'-0".
 - 1. Secure joints without gaps and file any irregularities to a smooth surface.

3.5 ADJUSTING

- A. Static balance car to equalize pressure of guide shoes on guide rails.
 - 1. Dynamically balance car and counterweight.
- B. Lubricate all equipment in accordance with Contractor's instructions.
- C. Adjust motors, power conversion units, brakes, controllers, levelingswitches, limit switches, stopping switches, door operators, interlocks, and safety devices to achieve specified performance levels.

3.6 CLEANING

- A. Keep work areas orderly and free from debris during progress of project.
- B. Remove packaging materials on a daily basis.
- C. Remove all loose materials and filings resulting from work.
- D. Clean Control room equipment and floor.
- E. Clean hoistways, car, car enclosure, entrances, operating and signal fixtures.
- F. Clean pit equipment and floor.

3.7 DEMONSTRATION:

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate all aspects of elevators while in normal operation.
- B. Check operation of each elevator with Owner's personnel present before date of Substantial Completion and again not more than one month before end of warranty period.
 - 1. Determine that operation systems and devices are functioning properly.

3.8 PROTECTION

- A. Temporary Use: Comply with the following requirements for each elevator used for construction purposes:
 - 1. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.

2. Provide strippable protective film on entrance and car doors and frames.
3. Provide padded wood bumpers on entrance door frames covering jambs and frame faces.
4. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
5. Do not load elevators beyond their rated weight capacity.
6. Engage elevator Installer to provide full maintenance service.
 - a. Include preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation at rated speed and capacity.
 - b. Provide parts and supplies same as those used in the manufacture and installation of original equipment.
7. Engage Elevator Installer to restore damaged work, if any, so no evidence remains of correction.
 - a. Return items which cannot be refinished in the field to the shop, make required repairs, and refinish entire unit, or provide new units as required.
